Water Pump: Sealed ball bearing type. No lubrication required.

See "Water Pumps" in Plymouth Special Data

Temperature Gauge: Auto-Lite. Electric type.

Dash Unit - Auto-Lite 14333A.

Engine Unit - Auto-Lite 14405A.

See "Temperature Gauges" in Misc. Section.

CLUTCH

Borg & Beck. As follows

Engine	Model	Cover Assy.	Disc No.
318" Std	10A8	361463	382358
Fury Std	10 5A8	361461	382621
350" & All HD	11A8	361464	382626

See "Borg & Beck Clutches" in Clutch Section

Pedal Adjustment: Turn clutch release fork rod adjusting nut until 3/16" free movement of clutch fork outer end is obtained This adjustment will provide necessary 1" freeplay at pedal

Overcenter Spring Adjustment: Disconnect upper end of clutch pedal rod Move clutch pedal to floor and loosen overcenter spring adjusting nut Then tighten nut finger tight Now, with a wrench, tighten adjusting nut against spring bracket **7 full turns.** Reinstall pedal rod If heavier action desired, loosen nut 1 turn, if lighter action desired, tighten nut 1 turn

Removal· Disconnect propeller shaft, speedometer cable, parking brake cable, and gearshift control rods Remove transmission (See Synchro-mesh Transmission) Mark clutch cover and flywheel Remove bolts that hold clutch cover to flywheel, loosening each bolt a few turns (in succession) until cover is free Remove clutch disc and pressure plate assembly from clutch housing

SYNCHRO-MESH TRANSMISSION

Own. Helical gear, constant mesh, synchro-mesh (second & high), sliding gear (low & reverse)

See "Plymouth Synchro-mesh" in Transmission Section.

Transmission Controls: *See "Transmission Controls" in Transmission Section*

►*CAR TOWING CAUTION:* If car is to be towed long distances, disconnect propeller shaft at rear axle carrier.

►*TRANSMISSION PRODUCTION CHANGE* New transmission with differdnt ratios used in production approximately Feb 21 1958 Identified by following code letters on top of transmission case in front of cover Standard & Heavy Duty - LB Overdrive - LD *See "Plymouth Synchromesh" in Transmission Section*

Removal· Disconnect propeller shaft, speedometer cable, hand brake cable, and control rods If transmission is to be disassembled, apply hand brake to hold mainshaft while loosening flange nut This method will also prevent possible brinelling of bearings, or other damage

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

caused by pounding on wrench Remove transmission by pulling it straight back until pinion shaft clears clutch disc before lowering transmission This precaution will avoid bending clutch disc

OVERDRIVE

Warner Type R10. Planetary gear type with solenoid operation and accelerator pedal controlled kick-down
See "Plymouth Overdrive" in Transmission Section.
Overdrive Controls: *See "Overdrive Controls" in Transmission Section*

Removal: Same as for Synchro-mesh Transmission (above) after control wiring and cable have been disconnected

POWERFLITE TRANSMISSION

Torque Converter and hydraulically operated two speed planetary transmission.
See "PowerFlite" Transmission in Transmission Section.

►*PART THROTTLE DOWNSHIFT RUNAWAY CORRECTION:* Install new throttle valve and spring *See "PowerFlite Transmission" in Transmission Section*

►*PRODUCTION CHANGES AND REPLACEMENT PARTS CAUTION: See "PowerFlite" Transmission in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "PowerFlite" Transmission in Transmission Section.*

Lubrication: Check fluid level every 1000 miles, drain and refill every 20,000 miles Use only Automatic Transmission Fluid Type "A" *NOTE* - Under severe operating conditions, drain and refill at 10,000 mile intervals

Checking Fluid Level - *See TORQUEFLITE below*
Throttle Linkage Adjustment: *See CARBURETOR above*
►*OTHER POWERFLITE SERVICE DATA: See "PowerFlite" in Transmission Section.*

TORQUEFLITE TRANSMISSION

Torque Converter and hydraulically operated three speed planetary transmission.
See "TorqueFlite" Transmission in Transmission Section.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "TorqueFlite" Transmission in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "TorqueFlite" Transmission in Transmission Section.*

Lubrication: Check fluid level every 1000 miles, drain and refill every 20,000 miles with Automatic Transmission Fluid Type "A" *NOTE* - Under severe operating conditions, drain and refill at 10,000 mile intervals

Checking Fluid Level (Transmission Cold): It is preferred that transmission be checked when cold (room temperature). Idle engine and operate transmission in all ranges (press all buttons in turn), then check fluid level with engine idling and transmission in neutral. Fluid level should be between "L" mark and ½" below "L" mark. Add or drain fluid as necessary to maintain this level.

Checking Fluid Level (Transmission Hot): With engine idling and transmission in neutral fluid level should be between ½" above "L" mark and "F" mark, but never above the "F" mark. Add or drain fluid as necessary to maintain this level.

Throttle Linkage Adjustment: *See CARBURETOR above.*
►*OTHER "TORQUEFLITE" SERVICE DATA: See "TorqueFlite" Transmission in Transmission Section.*

UNIVERSALS

Detroit Universal. Ball & Trunnion type front, Cross type rear.
Rear Universal Joint Operating Angle - *See "Propeller Shaft Notes" in Plymouth Special Data.*

REAR AXLE

Own. Semi-floating with separate carrier and Hotchkiss drive.
See "Plymouth Hypoid" in Rear Axle Section.

►*"SURE GRIP" AXLE NOTE* Optional on all models (except cars with Overdrive, see table below) and similar in design to Power-Lock (Plate Clutch Type) Differential Identified by letter "S" stamped on carrier housing at axle ratio identification pad, and by a round aluminum tag attached to a carrier housing nut *See "Power-Lock Differential (Plate Clutch Type)" in Rear Axle Section*

►*BANJO HOUSING INSTALLATION NOTE* Check rear universal joint operating angle *See "Propeller Shaft Notes" in Plymouth Special Data*

Conventional Axle Ratios

Engine	Standard	Optional
318" Synchro-mesh	3.54-1 (39-11)	3.73-1, 3.91-1
318" Overdrive	3.91-1 (43-11)	
318" PowerFlite	3.31-1 (43-13)	3.73-1, 3.91-1
318" TorqueFlite	3.31-1 (43-13)	2.93-1, 3.15-1
350" S.M (Early)	3.73-1 (41-11)	
350" S.M (Later)	3.31-1 (43-13)	
350" TorqueFlite	3.31-1 (43-13)	2.93-1, 3.73-1

"Sure Grip" Axle Ratios

Engine	Standard	Optional
All Synchro-mesh	3.73-1 (41-11)	
318" PowerFlite	3.73-1 (41-11)	3.73-1 (41-11)
All TorqueFlite	3.31-1 (43-13)	3.73-1 (41-11)

Backlash - .006-.010".

Carrier Removal: Disconnect rear universal, remove axle shafts (see below), take out carrier capscrews, lift off carrier assembly.

Axle Shaft Removal: Remove wheel, drum, and hub assembly (use screw type hub puller—Tool C-845), block brake pedal, disconnect brake line at wheel cylinder, remove axle shaft key, install sleeve (Tool C-745) in oil seal, remove brake support (oil seal mounted in support), pull shaft and bearing (use C-499 Puller).

Wheel Bearing Adjustment: Shims between backing plate and axle housing. With wheel and hub removed, check endplay with dial indicator. To adjust, remove backing plate (see above), add or remove shims (furnished .010", .0125", .015", .030" thick equally at both wheels). **End Play** - .013-.018".

SHOCK ABSORBERS

"Oriflow". Direct-acting, hydraulic type. Serviced by replacement.

FRONT SUSPENSION

Independent. "Torsion-Aire" suspension with ball joint mounted steering knuckles and torsion bar front springs
See "Torsion-Aire" in Suspension & Wheel Alignment Section
Steering Axis Inclination - 6½° at 0° camber
Caster - **(Manual Steering)** Neg ¾°±½° **(Power Steering)** Pos ¾°±¾° *NOTE* - Set both sides at same dimension
Camber (Left Wheel) - Pos ¼°±¼°.(3/8° preferred).
Camber (Right Wheel) - 0°±¼° (0° preferred).
Toe-In - 3/32-5/32", 1/8" preferred
Toe-Out on Turns - Inner wheel 20°, outer wheel 18°46'

STEERING

Manual: Gemmer. Worm and three-tooth roller
See "Gemmer Worm & Roller" in Steering Section
Power Steering: New "Constant Control Full Time" power steering
See "Chrysler, DeSoto, Dodge & Plymouth Constant Control Power Steering" in Steering Section
►*"LUMPINESS", TYING-UP, NOISE TRANSMISSION, LOSS OF POWER CORRECTIONS & PARTS CHANGES FOR IMPROVED PERFORMANCE See "Chrysler, DeSoto, Dodge & Plymouth Constant Control Power Steering" in Steering Section*

Steering Linkage: *See "Steering Linkage" in Steering Section.*
Steering Wheel & Horn Button Removal: *See "Gemmer Worm & Roller" in Steering Section.*
Steering Gear Removal: *See "Gemmer Worm & Roller" in Steering Section.*

BRAKES

Service. Plymouth "Total-Contact" (Floating shoe) type.
See "Chrysler, DeSoto, Dodge, Plymouth Center-Plane & Total-Contact" Brakes in Brake Section.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Drum Diameter - 11" front & rear. *NOTE* - 12" brakes optional on police cars only.
Wheel Cylinder Diameter - 1 1/8".
Lining - Molded asbestos (bonded to shoe).
Length - 11½". **Width** - 2". **Thickness** - .20".
Braking Power - 60% front, 40% rear.
Clearance - Front Wheels - Turn each adjusting cam in direction of forward wheel rotation until shoe is solid against drum and wheel locked. Turn cams in opposite direction until wheel turns free.
Rear Wheels - Same as for front wheels except that forward shoe adjusting cams are rotated in direction of forward wheel rotation and rear shoe adjusting cams are rotated in direction of reverse wheel rotation.

Master Cylinder: On engine side of dash panel opposite base of brake pedal.

►*MASTER CYLINDER PRODUCTION CHANGE & FREE-PLAY ADJUSTMENT NOTE:* Later cars without power brakes have new master cylinder, Part No. 1829401, with built-in pedal stop to eliminate pedal freeplay adjustment.

Checking Fluid - Filler plug on top of master cylinder (on dash panel in engine compartment). Maintain level to within ½" of top of reservoir.
Removal - Disconnect pedal return spring, pushrod and brake tube at master cylinder. Disconnect stop light wires from switch and remove nuts and bolts that secure master cylinder to dash panel. Pull master cylinder straight out from dash panel.

Power Brakes: Bellows Assist type. Mounted on firewall and linked to upper end of brake pedal (used with standard master cylinder).

See "Chrysler, Plymouth Bellows Type Power Unit" in Brake Section.

Removal of Power Unit - Place wood wedge between power brake lever and forward edge of triangular hole in pedal bracket, to prevent trigger arm from extending beyond bracket. Remove attaching nuts, slide reinforcement plate off studs and remove unit from dash.

Parking Brake: On shaft at rear of transmission. 6" external contracting type used with Synchro-mesh Trans., 7" internal expanding type used with Automatic Trans.
Adjustment - *See "Brake Notes" in Plymouth Special Data.*

Parking Brake Lining

Lining	Width	Thickness	Length
6" Ext.	2"	5/32"	①
7" Int.	2"	5/32"	② 13.06"

① - One-piece 16.68", two-piece 15.38" (total).
② - Total both shoes.

MISC. MECHANICAL

Windshield Wipers: Auto-Lite Electric. EPW-4001 (Single Speed), EPV-4001A (Variable Speed).
See "Auto-Lite Electric Windshield Wipers" in Misc. Section.

Air Conditioning: Heater-Air Conditioning. *See "Air Conditioning" in Miscellaneous Section.*

Power Window Regulators: Electric type. Reversible type motor in each window. Controlled by door switch and master control switch.
See "Electric Window Regulators" in Misc. Section.

Power Seat Adjusters: Electric, 2-Way type.
See "Power Seat Adjusters" in Misc. Section.

Convertible Top Control: Electric-hydraulic type. *See "Power Top Controls" in Miscellaneous Section.*

MODEL IDENTIFICATION

Series	Model Identification
Savoy	MP1-L
Belvedere	MP1-M

SERIAL NUMBER: On plate attached to left side of upper cowl panel (engine side). *NOTE* - Number (example below) includes identification data as follows:

① ② ③ ④ ⑤

M 1 5 6 - 100001

① - Year model - 1959.

② - Car Make. 1 6 Cyl. Plymouth.

③ - Model Series. **3** - Savoy. **5** - Belvedere. **7** - Station Wagons. **8** - Taxi.

④ - Assembly Plant. **3** - Evansville. **4** - Los Angeles. **5** - Newark. **6** - Detroit. **8** - Valley Park.

⑤ - Beginning vehicle number.

ENGINE NUMBER: Stamped on boss on left side at front of cylinder block.

Starting Engine Number - M230-1001.

►*ENGINE NUMBER MARKS (Following Engine Number):*

"**A**" - All cylinders .020" oversize.

"**B**" - All crankshaft journals .010" undersize.

"**AB**" - Both above conditions exist.

TUNE-UP

►*COLD WEATHER HARD STARTING CORRECTION:* When caused by "Blued" ignition points in operation at temperatures of 20°F or less, *see "Regulator Replacement Note" under REGULATOR below.*

COMPRESSION PRESSURE: 120-150 lbs. at cranking speed (150 RPM). Maximum allowable variation between cylinders 10 lbs.

VACUUM READING: Steady 18-21" at idling speed.

VALVE TAPPET CLEARANCE: .010" (Intake & Exhaust) with engine hot and idling.

►*CONTINUOUS HIGH SPEED TAPPET CLEARANCE:* An additional .002" clearance for exhaust tappets is desirable.

MANIFOLD HEAT CONTROL: Thermostatic coil type. See that valve operates freely. When installing coil, spring should be installed so that about one full turn (355° wrap) is required to hook outer end around stop stud.

IGNITION

FIRING ORDER: 1-5-3-6-3-4.

SPARK PLUG GAP: .035".

Plugs - AR 51. 14 mm. Tighten to 30-32 ft. lbs.

COIL: Auto-Lite CAG-4001 (Std.), CAH-4001 (Hvy. Dty.).

Ignition Current - (CAG) 1.8 amps, idling, 2.4 amps. stopped. (CAG) 2.5 amps. idling, 3.1 amps. stopped.

Resistor - None used with standard coil. Auto-Lite PU-5001 used with H.D. coil. Test coil and resistor together.

DISTRIBUTOR: Auto-Lite IBR-4001 (Domestic). IBR-4002 (Canadian).

Condenser - Auto-Lite IAT-3076LA.

Capacity - .25-.285 mfd.

Contact Point Set - Auto-Lite No. IGW-3028BS.

Breaker Gap - .018-.022".

Cam Angl - 36°-42°.

Breaker Arm Spring Tension - 17-20 oz.

Rotation - Clockwise viewed from above.

Automatic Advance - IBR-4001

Degrees	Distr. RPM	Degrees	Eng. RPM
Start	350	0	700
1	460	2	920
6.5	1050	13	2100
7.5	1425	15	2850
8.5	1800	17	3600

Automatic Advance - IBR-4002

Degrees	Distr. RPM	Degrees	Eng. RPM
Start	350	0	700
1	440	2	880
5	800	10	1600
7	1300	14	2600
8	1550	16	3100

Vacuum Spark Control: Integral type.

Vacuum Advance - IBR-4001

Distr. Degrees	Eng. Degrees	Vacuum (" of Hg)
Start	0	6
1	2	6 7/8
5	10	10 1/2
8	16	13 3/4
9.5	19	16

Vacuum Advance - IBR-4002

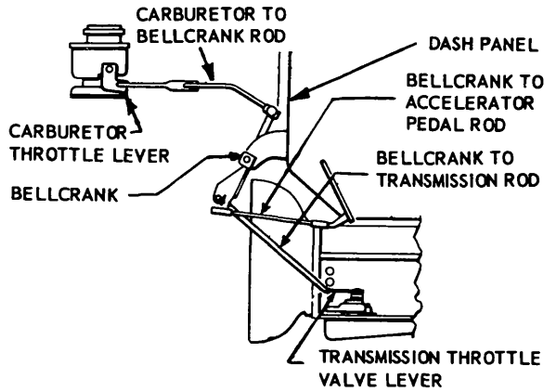
Distr. Degrees	Eng. Degrees	Vacuum (" of Hg)
Start	0	4 1/2
1	2	5 3/8
5	10	8 7/8
10	20	14 1/2
11	22	16

IGNITION TIMING

►*TIMING NOTE:* 6 Cyl. engines are designed to operate on a good grade of regular fuel.

Setting - 2.5° BTDC.

Timing Mark - Timing mark on vibration damper in line with correct degree mark on timing indicator on chain case cover. Indicator mark 0 to 10° BTDC.



CARBURETOR

►*CARBURETOR APPLICATION:* Carter single barrel carburetors used on all models.

►*HARD COLD STARTING (Cars with cross-over choke carburetors):* May be caused by choke vacuum unloader piston sticking and may be corrected by squirting carburetor cleaner, lacquer thinner, or alcohol through piston link opening in air horn. Operate valve to flush out gum formation.

►*THROTTLE LINKAGE ADJUSTMENT CAUTION:* Install or replace largest shim possible on flat area of accelerator bellcrank shaft (with clamp open), then tighten clamp securely to insure satisfactory shift pattern. Shim must be in place.

THROTTLE LINKAGE ADJUSTMENT (PowerFlite): Distance from heater housing-to-center of bellcrank ball stud should be 2¼" and length of linkage spring should be 8¼" with choke fully open and throttle off fast idle cam. To correct heater housing-to-bellcrank ball stud distance proceed as follows:

POWERFLITE THROTTLE LINKAGE

1) Adjust engine idle to 475-500 RPM with engine at operating temperature and carburetor off fast idle. Loosen locknuts on throttle rod above cylinder head and the rod at transmission.

2) Hold heater housing-to-bellcrank ball stud distance to 2¼" while adjusting throttle rod to produce 8¼" spring length.

3) Adjust accelerator pedal-to-bellcrank rod to hold pedal 115° from horizontal.

4) Adjust length of rod at transmission by holding transmission lever forward against its stop while tightening locknut on rod.

CARTER BBS (SINGLE)

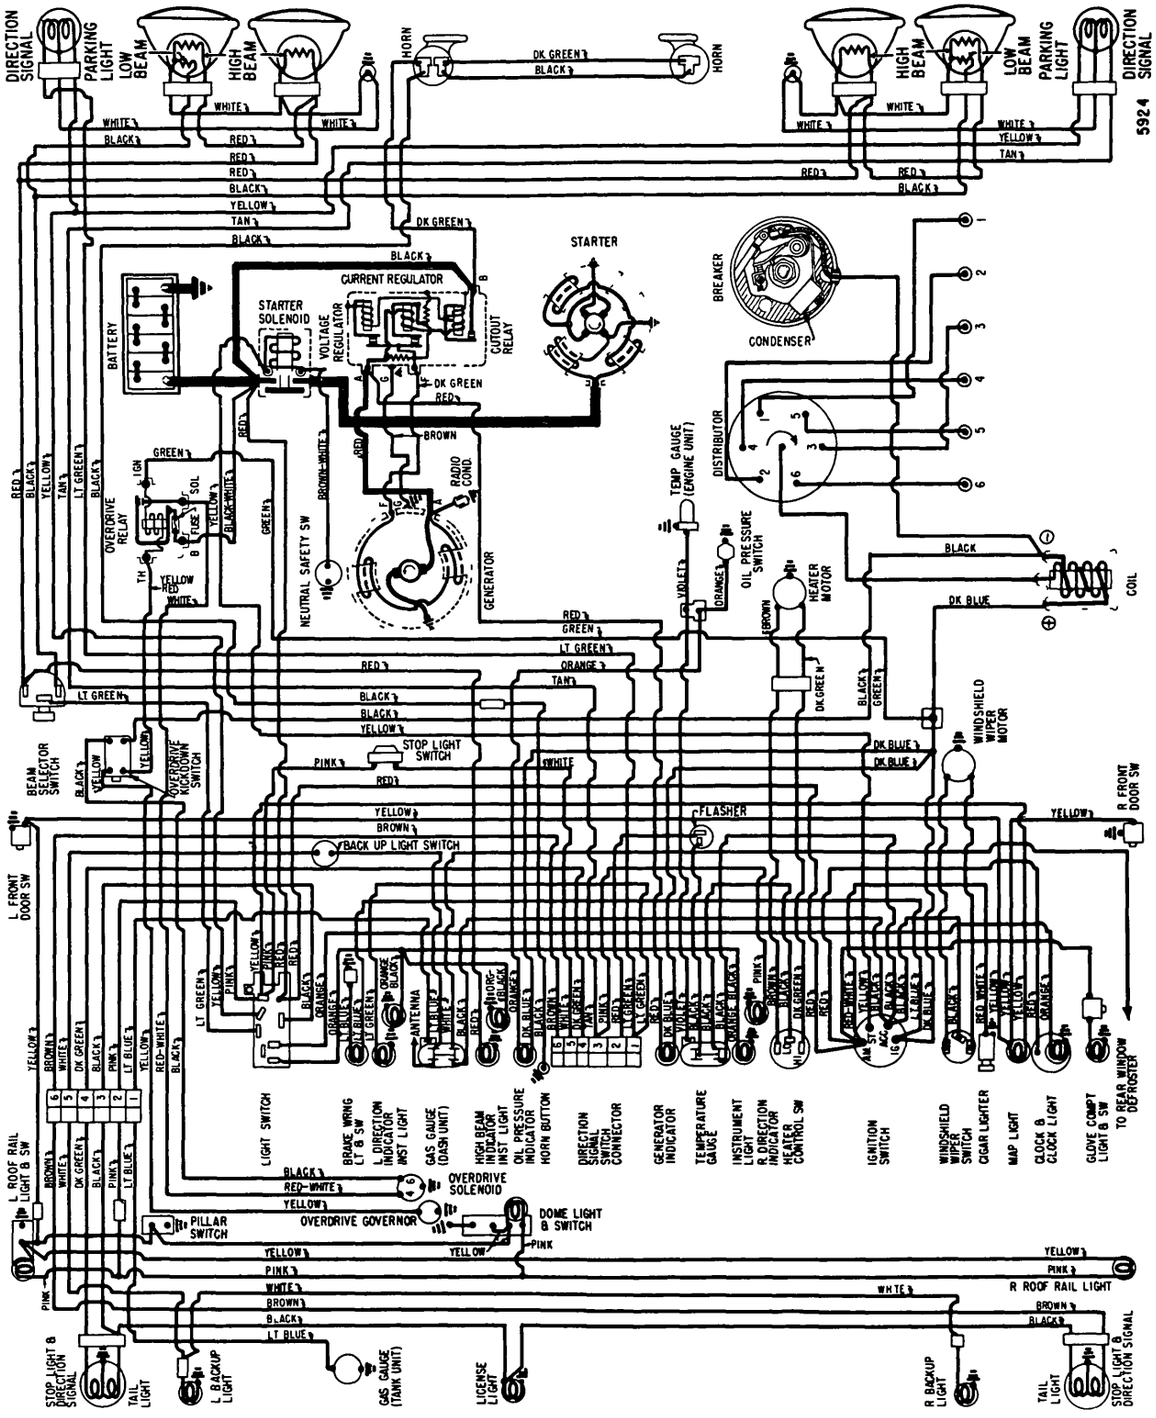
Transmission	Carter Carb. No.
Synchro-mesh	BBS-2567S
Overdrive	BBS-2568S
PowerFlite	BBS-2569S
Taxi (Synchro-mesh)	BBS-2410S
Taxi (PowerFlite)	BBS-2771S
City Traffic	BBS-2403S
Replacement	① BBS-2604S

① - For BBS-2567S, 2568S, 2569S.

Idle Setting - ½- 1¾ turns open (2403S; 2567S, 68S, 69S; 2604S), 1-2 turns open (2410S, 2771S).

Idle Speed - 450-500 RPM (Synchro-mesh & Overdrive), 475-500 RPM (PowerFlite - in Neutral).

Float Level - 7/32" (2567S, 68S, 69S; 2604S), 9/32" (2403S, 2410S, 2771S) from top of each float to top surface of body casting with float pin retainer removed and float pin at bottom of guide studs.



Accelerating Pump - Install connector rod in center hole of throttle lever (medium stroke).

Fast Idle: .016-.020" clearance between lower edge of throttle valve and carburetor bore with fast idle cam in fast idle position. Adjust by bending connector rod at lower angle (Tool T109-213).

Automatic Choke: Centered at index (all models).

Slow Closing Throttle Dashpot (PowerFlite): Loosen locknut and adjust dashpot unit so that dashpot plunger

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

shaft can be moved inward approximately 3/32" with throttle valve fully closed.

Overdrive Kickdown Switch: With throttle valve in wide open position, adjust hex nuts on switch to have 1/64-3/64" clearance between kickdown lever and switch stem guide

Throttle Linkage Adjustment (PowerFlite): *See CARBURETOR above*

►*OTHER DATA See "Carter BBS Carburetors" in Carburetion Section*

CARB. EQUIPMENT

Fuel Pump: Carter No 2609S (Fuel only)
Pressure - 6-7 lbs
See "Fuel Pumps" in Carburetion Section
Gasoline Gauge· Auto-Lite. Electric type
Dash Unit - Auto-Lite No 14755A
Tank Unit - Auto-Lite No 14675A (Exc Sub), No 14684A (Suburban)
See "Fuel Gauges" in Carburetion Section
Air Cleaner: Dry Filter Element type Clean every 5,000 miles, replace element every 15,000 miles
►*CLEANING CAUTION* Clean filter element by tapping and shaking to remove dust particles *DO NOT wash element in solvent or other liquids and DO NOT oil or lubricate*

BATTERY

Auto-Lite 11-HS-50. 12 volt, 9 plate, 50 ampere hour capacity (20 hr rate)
Battery Ground - Negative
Engine Ground - Left front of engine

STARTER

Auto-Lite MDU-6003. Armature MDL-2088.

►*NOISY STARTER OPERATION CORRECTION* Caused by deposits of foreign material on Bendix drive To correct, remove inspection plate at bottom of torque converter housing (Auto Trans) or clutch housing pan at bottom of clutch housing (Std Trans), and apply a few drops of No 10 oil Use pressure type oil can and 7" copper tubing extension If deposits are excessive, remove starter assembly, clean off rust and corrosion and lubricate shaft lightly with Part No 1643234 or No 1692689 Engine Oil Additive
Drive - Bendix "Folo-Thru" No A3596
Rotation - Counterclockwise at commutator end
Brush Spring Tension - 31-47 ozs

Performance Data

Torque	RPM	Volts	Amperes
0 ft lbs	5300	10 0	50
6 2 ft lbs	Lock	4 0	280

Starting Switch: Auto-Lite SAE-4001 (Std), SAE-4002 (Auto Trans) Magnetic switch controlled by Ignition and Starter Switch, plus Neutral Safety Switch on Automatic Transmissions
See 'Starter Controls" in Electrical Section

N utral Safety Switch Adjustment· *See 'PowerFlite Transmission" in Transmission Section*

GENERATOR

Aut -Lit . Used as follows:

Model	Generator	Armature
All Models (Std.).	GJM-8001A	GJC-2058F
All Models (Canada).	GJC-7012A	GJC-2030F
Spec. Equip.	GGA-6001AC	GFY-2101F
Taxi	GHM-8001B	GHM-2034F

Performance Data - GJM-8001A

Amperes	Volts	RPM
0	12.8	1150
35	15.0	2100

Performance Data - GJC-7012A

Amperes	Volts	RPM
0	12.8	1225-1325
30.0	15.0	2050-2250

Performance Data - GGA-6001AC

Amperes	Volts	RPM
4.0	14.6	950
40.0	14.6	1600
40.0	15.0	1600

Performance Data - GHM-8001B

Amperes	Volts	RPM
5.0	14.0	875
25.0	15.0	1350
30.0	15.0	1500

Rotation - Counterclockwise at commutator end.

Brush Spring Tension - 18-36 ozs. (GJM, GJC), 34-41 ozs. (GGA), 35-53 ozs. (GHM).

Field Current - 1.1-1.3 amperes (GGA, GHM); 1.2-1.3 amperes (GJC), 1.6-1.7 amperes (GJM) all at 10 Volts (70°).

Motoring Current - 3.9-4.3 amperes (GJM); 3.4-3.9 amperes (GJC), 3.0-3.5 amperes (GHM) with field terminal grounded to frame. 3.1-3.5 amperes (GGA with felt oil seal in drive end head), 2.3-2.6 amperes (GGA Others).

Belt Adjustment: With 5 lb. load applied midway between generator and water pump (generator), water pump and power steering pump (power steering), belt deflection should be as follows:

Belt	New Belt	Used Belt
Generator (Less Pwr. Strg.)	3/32"	5/32"
Generator (With Pwr. Strg.)	3/32"	7/32"
Power Steering	3/32"	5/32"

REGULATOR

Auto-Lite VAT-6201A (GGA), VRX-6201A (GHM,GJC); VRX-6301A (GJM).

►*VRX-6301A REGULATOR REPLACEMENT NOTE:* When hard starting at temperatures of 20°F or less is experienced and distributor breaker contact points are "Blued", replace early type Regulator with one that has a Code 11-N or higher stamped on base.

Cutout Relay

Cuts In - 12.6-13.6 volts.

Cuts Out - 3-5 amps. discharge current after a charge of 10 amps. (VAT), 7 amps. (VRX).

Contact Gap - .015" minimum.

Air Gap - .031-.034".

Voltag R gulat r

S tti ng - 14.5 volts charging at 7 amps. (VRX), 10 amps. (VAT) (80°F) or with .25 ohm resistor in series between regulator and battery.

Air Gap - .048-.052" (check at brass armature stop pin).

Checking & Adjusting - See *"Auto-Lite 12 Volt Regulators" in Electrical Section.*

Current Regulator

►*SETTING CAUTION: "Temperature Compensated" type. Set to following specifications at 70°F.*

Regulator	Test A - Operating Amperes	Test B
VAT-6201A	46	40 (38-42)
VRX-6201A	37	30 (28-32)
VRX-6301A	44	35 (33-37)

Test A - After 15 minutes operation charging at 10 amps. (VAT), 7 amps. (VRX).

Test B - After additional 15 minutes operation with current regulator operating and load applied to hold voltage down to 13.7-13.9 volts (VAT), 13.6-13.8 volts (VRX).

Air Gap - .048-.052".

Checking & Adjusting - See *"Auto-Lite 12 Volt Regulators" in Electrical Section.*

MISC. ELECTRICAL

Headlamps: Dual headlights (4-Headlight System). See *"4-Headlight Systems" in Electrical Section.*

Automatic Beam Changer: See *Electrical Section.*

Electronic Rear View Mirror: See *Electrical Section.*

Directional Signals: See *Electrical Section.*

Lighting Switch Removal: Push control knob and shaft to "OFF" position (full in). Depress button on top of switch and at the same time pull out control knob and shaft. Remove switch locking nut and remove switch assembly.

Stop Light Switch Location: On forward end of master cylinder.

LIGHTING CIRCUIT BREAKERS: Used as follows:

22.5 Ampere - Protects Headlamps, Headlamp Beam Indicator, and Parking Lamp. In headlight switch.

15 Ampere - Protects Tail, Stop, License Plate, Instrument and Dome Lights. In headlight switch.

5 Ampere - Protects Windshield Wiper (Single Speed)

6 Ampere - Protects Windshield Wiper (Variable Speed).

30 Ampere - Protects Window Lift and Seat Adjuster

FUSES: SFE-10 in clock lead

SFE-7.5 in Radio lead.

SFE-20 in rear unit of Air Conditioning.

ENGINE

ENGINE SPECIFICATIONS: 6 Cyl. "L" head.

Bore	Stroke	Displacement
3¼"	4 5/8"	230 Cu. In.
Compr. Ratio	**Rated HP**	**Developed HP**
8.0	25.4	132 at 3600 RPM

Compression & Vacuum Reading - See *TUNE-UP.*

OIL PAN REMOVAL: Drain engine oil. Disconnect pitman arm bracket. Remove dust shield and remove motor. Disconnect front motor mounts and raise engine approximately 2". Install wooden blocks under mounts and remove oil pan.

►*OIL PAN INTERFERENCE NOTE: If the oil pan touches right hand frame crossmember, install a 1/8" shim under right motor mount.*

CYLINDER HEAD: See *"Cylind r H ad & Manifolds" in Plymouth Special Data.*

TIGHTENING TORQUES: See *"Tight ning Specifications" in Plymouth Special Data.*

PISTONS

Aluminum Alloy, U-Slot, Tin-Plated.

►*CYLINDER BORE OVERSIZE CAUTION: Engin with letter "A" following engin number indicat s that cylinder bore is .020" Oversiz .*

Weight - 15.8 ozs. (piston only).

Removal - Piston and rods removed from above.

Fitting New Pistons: Clearanc - .0002-.0012" between piston skirt and cylinder wall ¼-¾" from bottom of piston. Pull to withdraw a ribbon feeler ½" wide and .002" thick placed at right angles to piston pin (piston inverted) should be 5-10 lbs.

Replacement Pistons: Std. .005", .020", .030", .040", .060" Oversize.

Installing Pistons: "U" slot away from valves.

PISTON PIN

Full floating type.

Diameter - .859". **Length** - 2.75".

Pin Fit in Piston - .0000-.0005". Double thumb push fit at room temperature (70°F).

Pin Fit in Rod - .0001-.0002". Thumb push fit at room temperature (70°F).

Replacement Pins: Furnished Std., .0006", .003", .008" Oversize. *NOTE* - Fitted pins furnished with new pistons.

PISTON RINGS

Ring	Width	End Gap	Sid Cl arance
Compr.(1)	.093"	.010-.020"	.0025-.004"
Compr.(2)	.093"	.010-.020"	.002-.0035"
Oil (3)	.155"	.010-.020"	.001-.0025"
Oil (4)	.155"	.010-.020"	.001-.003"

Replacement Rings: Std., .020", .030", .040", .060" Oversize.

Installing Rings: No. 1 compression ring with step on inner edge up. No. 2 compression ring with step on inner edge up (step down, if step on outer edge).

CONNECTING ROD

Length (Center-to-Center) - 7.8125".

Weight - 27.9 ozs.

Crankpin Journal Diameter - 2.0625". Maximum out of round and taper limits .001".

►*JOURNAL DIAMETER CAUTION (ONE OR MORE Journals Machined UNDERSIZE) See CRANKSHAFT below.*

Lower Bearings - Copper Bronze with dull finish when new and dull reddish color or copper speckled when used.

Cl arance - .0005-.0015".

Sid play - .006-.011".

CONTINUED ON NEXT PAGE

Form 12A

CONTINUED FROM PRECEDING PAGE

Bearing Adjustment: None. Replace bearings.
Replacement Bearings: Std., .001", .002", .003", .010", .012", .020", .030", .040" Undersize.
Installing Rods: Oil metering hole toward valve side of engine.

CRANKSHAFT

Journal Diameter: 2.4995-2.5005". Four bearings.
Bearing Type - Removable, precision type. Lead-base babbitt on steel, except thrust bearing, which is Tin-base babbitt on steel. No shims. *CAUTION:* Lower bearing halves are grooveless without oil hole. DO NOT install grooveless lower half in upper half position.
►*CRANKSHAFT JOURNAL UNDERSIZE CAUTION:* Engines with undersize journals identified as follows:
.010" UNDERSIZE (All Main & Connecting Rod Journals) - Letter "B" stamped with engine serial number indicates that ALL Main & Connecting Rod Journals are .010" Undersize.
.001" UNDERSIZE (ONE OR MORE Main & Connecting Rod Journals) - When replacing bearings, look for stamped number on center counterweight of crankshaft. An "M" or "R" followed by a number indicates that a main or connecting rod bearing has a thicker-wall bearing. For example "M2" and "R1" means that .001" thicker-wall bearing inserts are used on the No. 2 main bearing and the No. 1 connecting rod bearing.
Clearance - .0005-.0015".
End Thrust: Taken by flanged rear (No. 4) main bearing.
Endplay - .003-.007".
Replacement Bearings: Std., .001", .002", .010", .020", .030" Undersize.
Crankshaft Rear Oil Seal: *See "Crankshaft & Main Bearings" in Plymouth Special Data.*
Crankshaft Front Oil Seal: *See "Engine Front Cover" in Plymouth Special Data.*

CAMSHAFT

Journal Diameters - (1) 1.998-1.999", (2) 1.9665-1.9675", (3) 1.935-1.936", (4) 1.2475-1.2485".
Bearing Diameters - (1) 2.000-2.001", (2) 1.9685-1.9705", (3) 1.937-1.939, (4) 1.2475-1.2485"
Bearings - Removable, steel-backed, babbitt lined bushings, except No. 4 which is machined in crankcase.
Clearance - .001-.003". *NOTE* - If clearance exceeds .005" when checked by placing dial indicator on block with plunger on cam nearest a bearing and prying shaft back and forth, install a new camshaft for additional test. If clearance with new shaft exceeds .0035", install a new bearing
End Thrust: Taken by thrust plate behind camshaft sprocket hub. **Endplay** - .002-.006".
Timing Chain: **Width** - 1.02", **Pitch** - .500". **Length** - 48 links
Camshaft Removal: *See "Camshaft & Bearings" in Plymouth Special Data.*
Camshaft Setting: Sprockets marked. Mesh chain with sprockets so that "O" marks on sprockets are adjacent and in line with a straightedge across shaft centers
Engine Front Cover Installation: *See "Engine Front Cover" in Plymouth Special Data.*
Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Plymouth Special Data.*

VALVES

Tappet Clearance: .010" Intake and Exhaust, with engine hot and idling.
►*CONTINUOUS HIGH SPEED TAPPET CLEARANCE:* An additional .002" clearance for exhaust tappets is desirable.

Valves	Head Diam.	Stem Diam.	Length
Intake	1 17/32"	.340-.341"	4.84"
Exhaust	1 13/32"	.340-.341"	4.89"

Valves	Seat Angle	Lift	Stem Clearance
Intake	45°	.365"	.001-.003"
Exhaust	45°	.365"	.003-.005"

Valve Seat Width—1/16-3/32". Runout .0015" maximum.
►*VALVE SEAT INSERT CAUTION: See "Valve System" in Plymouth Special Data.*
Valve Guides: Remove from above. Press new guides in with upper end 7/8" below top of block, ream guides to inside diameter of .342-.343" (Intake), .344-.345" (Exhaust). *CAUTION—Guides must be installed with counterbore end UP on exhaust valves and counterbore end DOWN on intake valves.*
Valve Springs: Can be installed with closely coiled end at either top or bottom. *NOTE—Springs are available in several colors. Colors do not refer to spring tension but merely identify the manufacturer.*
Free Length—2".

Valve Spring Specifications

	Spring Pressure	Length
Valve Closed	40-45 lbs.	1-3/4"
Valve Open	110-120 lbs.	1-3/8"

Valve Lifters: Mushroom type (remove from below).
Stem Diameter—5/8". Ream holes from above (pilot in guide). Oversizes .001", .008", .030".
Lifter Clearance in Block: 0002" to 001"

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above
►*VALVE TIMING NOTE.* The following valve opening and closing points are with tappet clearance of 014". Reset to operating specifications after checking valve timing.
Intake Valve - Open 12° BTDC. Close 44° ALDC.
Exhaust Valve - Open 50° BLDC Close 6° ATDC.

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Plymouth Special Data.*
Crankcase Capacity: 5 quarts (refill). Add 1 qt. with filter change
Normal Oil Pressure - 40-50 lbs. at 1500 RPM.
Oil Pressure Relief Valve - Located on left side of cylinder block below starter.
►*RELIEF VALVE SPRING NOTE:* Three types of springs available. Replace with correct color spring *See "Oiling System" in Plymouth Special Data.*
Oil Pressure Indicator Switch: Auto-Lite No 14272A, located on left side of cylinder block at rear
Oil Pump: Rotor type. On right side of crankcase.
Overhaul - *See "Oiling System" in Plymouth Special Data.*
Oil Filter: By-pass type with shunt type oil circuits. When pressure relief valve is closed, it blocks oil return from filter. As pressure relief valve opens, oil is permitted to flow through filter and filtered oil returns to crankcase.
Filter Element - Install new filter element and cover gasket at 5,000 mile intervals (or earlier if required). Change oil at same time filter element is changed.
Crankcase Ventilation: Filter element in oil filter cap and air cleaner in crankcase ventilation outlet pipe.

COOLING

Water Capacity: 13 qts Add 1 qt for heater
Pressure Valve - Radiator filler cap Opens at 14 lbs
Thermostat: Pellet type located in cylinder head water outlet Opens at 157-162°F
Water Pump: Sealed bearing type No lubrication required
See "Water Pumps" in Plymouth Special Data.
Water Distribution Tube: *See "Cooling System" in Plymouth Special Data*
Temperature Gauge: **Auto-Lite.** Electric type
Dash Unit - Auto-Lite No 14754A
Engine Unit - Auto-Lite No 14405A
See "Temperature Gauges" in Miscellaneous Section.

CLUTCH

Borg & Beck. 9A7 No 361384 Std., 10A8 No. 361463 Heavy Duty **Auburn** No 100131-2 Optional without overdrive
Disc. No. Borg & Beck No 382649 (361384), 381758 (361463)
See "Borg & Beck" or "Auburn" Clutches in Clutch Section
Pedal Adjustment: Turn clutch release fork rod adjusting nut until 3/16" free movement of clutch fork outer end is obtained This adjustment will provide necessary 1" free play at pedal
Overcenter Spring Adjustment: Disconnect upper end of clutch pedal rod Move clutch pedal to floor and loosen overcenter spring adjusting nut Tighten adjusting nut finger tight Reconnect pedal rod, then tighten adjusting nut 5 **complete turns.** If heavier action desired, loosen nut 1 turn, if lighter action desired, tighten nut 1 turn
Overcenter Spring Adjuster Adjustment: To obtain least pedal effort, turn cushion up to point where pedal will NOT return the last 1" of travel from overcenter position to full return, then back off cushion from ½-1 full turn, so pedal will return completely to full return position. Check clutch for ease of operation and readjust as necessary.
Removal: Disconnect propeller shaft, speedometer cable, parking brake cable, and gearshift control rods. Remove transmission (See Synchro-mesh Transmission). Mark clutch cover and flywheel. Remove bolts that hold clutch cover to flywheel, loosening each bolt a few turns (in succession) until cover is free. Remove clutch disc and pressure plate assembly from clutch housing.

SYNCHRO-MESH TRANSMISSION

Own. Helical gear, constant mesh, synchro-mesh (second & high), sliding gear (low and reverse).

CONTINUED ON NEXT PAGE

Form 12B

CONTINUED FROM PRECEDING PAGE

S "Plymouth Synchro-mesh" in Transmission S ction

►*TRANSMISSION SHIFT COVER ASSEMBLY PRODUCTION CHANGE* Cars built after March 1959 will have new design cover which eliminates need for selective fitting of interlock sleeves *See 'Plymouth Synchro-mesh" in Transmission Section*

►*TAXICAB SYNCHRO MESH TRANSMISSION PRODUCTION CHANGE* Linkage interlock entered production May 1959 to hold low & reverse in Neutral when shifting into second and high *See 'Plymouth Synchro-mesh Transmission' in Transmission Section*

Transmission Controls: *See "Transmission Controls" in Transmission Section*

►*GEARSHIFT LEVER LUBRICATION NOTE* In heavy duty service where hard shifting is experienced, remove gearshift lever and apply MoPar Lubriplate to ball end and pivot-pin hole and area surrounding it. Repeat operation at 10,000 mile intervals

►*CAR TOWING CAUTION:* If car is to be towed long distances, disconnect propeller shaft at rear axle.

R moval: Disconnect propeller shaft, speedometer cable, hand brake cable and control rods If transmission is to be disassembled, apply hand brake to hold mainsnaft while loosening flange nut This method will also prevent possible brinelling of bearings, or other damage caused by pounding on wrench Remove transmission by pulling it straight back until pinion shaft clears clutch disc before lowering transmission This precaution will avoid bending clutch disc

OVERDRIVE

Warner Type R10. Planetary gear type with solenoid operation and accelerator pedal controlled kick-down *See "Plymouth Overdrive" in Transmission Section.*

Overdrive Controls: *See "Overdrive Controls" in Transmission Section*

R moval: Same as for Synchro-mesh Transmission (above) after control wiring and cable have been disconnected

POWERFLITE TRANSMISSION

Torque Converter and hydraulically operated two speed planetary transmission

See "PowerFlite" Transmission in Transmission Section

►*POWERFLITE BUZZING NOISE CORRECTION:* To correct noise that occurs while driving in reverse, install new Control Valve Part No 2124247 in converter

►*TESTING & TROUBLE SHOOTING See "PowerFlite" in Transmission Section*

Lubrication: Check fluid level every 1,000 miles, drain and refill every 10,000 miles for both standard and heavy duty operation This specification supersedes previous 20,000 mile drain interval. Use Automatic Transmission Fluid Type "A", Suffix "A"

Checking Fluid Level (Trans. Cold, Car not Driven): Oil level should be between Low (L) mark and bottom of dipstick.

Checking Fluid Level (Trans. Hot, Car Driven at Least 10 Miles): Oil level should be between a point ½" below the full mark and the full mark.

Throttl Linkage Adjustm nt: *See CARBURETOR above*

►*OTHER DATA: S "PowerFlit " in Transmission S cti n.*

UNIVERSALS

D tr it. Ball & Trunnion type front Cross type rear. **R ar Univ rsal J int Op rating Angl** - *S "Prop ller Shaft Notes" in Plymouth Special Data.*

REAR AXLE

Own. Semi-floating, Hypoid gear, with separate carrier and Hotchkiss drive *See "Plymouth Hypoid" in Rear Axle Section.*

►*SURE-GRIP AXLE NOTE* Optional in ratios listed in table and similar in design to Power-Lock (Plate Clutch Type) Differential. Identified by letter "S" stamped on carrier housing at axle ratio identification pad and by round aluminum tag (marked "Use Sure-Grip Lube") attached to carrier attaching bolt below filler plug. *See "Power-Lock Differential (Plate Clutch Type)" in Rear Axle Section.*

►*"SURE-GRIP" AXLE LUBRICANT NOTE:* Use only Mopar Sure-Grip Lubricant Part No 1879414.

►*BANJO HOUSING INSTALLATION NOTE* Check rear universal joint operating angle *See "Propeller Shaft Notes" in Plymouth Special Data*

Axle Ratios	Standard	Optional
Synchro-mesh	Ⓒ 3.73 (41-11)	3.9 (43-11), 4.1 (41-10)
Overdrive	4.1 (41-10)	3.9 (43-11)
PowerFlite	Ⓒ 3 73 (41-11)	. 3 9 (43-11)

Ⓒ - "Sure-Grip" ratio also.

Backlash - 006- 008"

Carrier Removal: Disconnect rear universal, remove axle shafts (see below), take out carrier capscrews, lift off carrier assembly

Axle Shaft Removal: Remove wheel, drum, and hub assembly (use screw type hub puller-Tool C-845), block brake pedal disconnect brake line at wheel cylinder, remove axle shaft key, install sleeve (Tool C-745) in oil seal, remove brake support (oil seal mounted in support) pull shaft and bearing (use C-499 Puller)

Wheel Bearing Adjustment: Shims between backing plate and axle housing With wheel and hub removed Check endplay with dial indicator To adjust, remove backing plate (see above) add or remove shims (furnished 010", 0125", 015" 030" thick (equally at both wheels) **End Play** - 013- 018"

SHOCK ABSORBERS

"Oriflow". Direct-acting, hydraulic type Serviced by replacement

Shock Absorbers (Plymouth No.)	Fr nt	Rear
Standard 1"	1881774	1879307
Heavy Duty 1"	1881775	1879306
Heavy Duty 1 3/8"		1881877

FRONT SUSPENSION

Independent. "Torsion-Aire" suspension with ball joints and torsion bar front springs *NOTE* - Caster and camber adjustment is controlled by eccentric cams operating in cam retainers welded to front and rear faces of upper control arm brackets. No shims are used. *See "Torsion-Aire" Suspensi n in Suspensi n & Whe l Alignment Section.*

Steering Axis Inclination - 6½° at 0° camber.

Caster - (Manual Steering) Neg ¾°±¾°, Neg ¾° preferred **(Power Steering)** Pos. ¾°±¾° Pos ¾° preferred *NOTE* - Caster should be as equal as possible on both sides of car

Camber (Left Wheel) - Pos ¼°±¼°, 3/8° preferred

Camber (Right Wheel) . 0°±¼° 0° preferred.

Toe-In - 3/32-5/32" 1/8" preferred

Toe-Out on Turns - With inner wheel at 20°, outer wheel should be 18°46'

STEERING

Manual: Gemmer - Worm and three-tooth roller.
See "Gemmer Worm & Roller" in Steering Secti n.

Power Steering: "Constant Control Full Time" power steering
See "Plymouth Constant C ntrol P w r Steering" in Steering Section.

►*POWER STEERING PRODUCTION CHANGE:* Gear housing and valve lever spring changed to increase valve travel and reduce valve leakage Use new spring and housing together and use with spring loaded valve lever steering gears identified by letter "J" or succeeding letters New housing No 2122041, new spring No 1822871 Gears with new housing and spring identified by letter "R" stamped on housing.

►*POWER STEERING OIL LEVEL CHECK* No dipstick used on later cars Oil level should be at bottom of filler neck (engine cold), halfway up filler neck (engine hot)

►*POWER STEERING FLUID CHANGE* New Power Steering Fluid Part No 2084329 recommended for additions and refills after overhaul on all Constant Control Power Steering Units

Steering Linkage: *See "Steering Linkag " in Steering Section*

Steering Wheel & Horn Butt n R m val: *S "G mmer Worm & Roller" or "Plymouth Constant Control Power Steering' in Steering Section*

Steering Gear Removal: *See "G mmer Worm & Roll r" or "Plymouth Constant Control" Power Steeringin Steering Section*

BRAKES & MISC. MECHANICAL

►*SEE PLYMOUTH V8 PAGES (FOLLOWING) FOR ALL BRAKES & MISC. MECHANICAL DATA.*

MODEL IDENTIFICATION

Series	Series Designation
Savoy	MP2-L
Belvedere	MP2-M
Fury	MP2-H
Sport Fury	MP2-P
Suburbans	MP2-L,M,H

SERIAL NUMBER: On plate attached to left side of upper cowl panel (engine side) *NOTE* - Number (example below) includes identification data as follows

① ② ③④ ⑤
M 2 3 6 100001

① - Year Model - 1959
② - Car Make - 2 V8 Plymouth
③ - Model Series 3 Savoy 5 Belvedere 6 Fury 7 Suburban 8 Taxi 9 Sport Fury
④ - Assembly Plant 3 Evansville 4 Los Angeles 5 Newark. 6 Detroit 8 Valley Park
⑤ - Beginning vehicle number

ENGINE NUMBER: On 318" Eng., number is stamped on left front face of cylinder block On 361" Eng., number is stamped on right side of cylinder block between coil and distributor

Starting Engine Number - (318") - MP8-1001 (361") ML361-1001.

►*ENGINE NUMBER MARKS (Following Engine Number)*
"A" - All cylinders 020" oversize
"B" - All crankshaft journals 010" undersize
'AB' - Both above conditions exist
"Malt se Cr ss" (3/8" High) - ONE OR MORE crankshaft journals 001" Undersize *See "Connecting Rods" and "Crankshaft" below*
"♦" (3/8" High) - One or more valve lifters 008" Oversize

TUNE-UP

►*COLD WEATHER HARD STARTING CORRECTION*· When caused by "Blued" ignition points in operation at temperatures of 20°F or less, *see "Regulator Replacement Note"* under REGULATOR *below*

COMPRESSION PRESSURE: (318") 125-165 lbs., (361") 150-180 lbs at cranking speed (150 RPM), with 15 lbs variation between cylinders (318"), 25 lbs (361")

VACUUM READING: 19 5 inches Steady at idling speed

VALVE TAPPET CLEARANCE: (318") 010" Intake, 018" Exhaust Hot and with engine idling (361") Zero lash Hydraulic lifters

MANIFOLD HEAT CONTROL: Automatic thermostatic type Located at right exhaust manifold (between manifold and gasket)

IGNITION

►*DISTRIBUTOR NOTE* Auto-Lite and Chrysler (Own make) distributors used *See DISTRIBUTOR below*

FIRING ORDER: 1-8-4-3-6-5-7-2

Cylinders - RIGHT BANK 2-4-6-8. LEFT BANK 1-3-5-7

SPARK PLUG GAP: 035" (All engines)

Spark Plugs - (318") Auto-Lite AR 42 (361") A-32 All 14 mm Tighten to 30-32 ft lbs *NOTE* - 361" Engine has standard A-32 spark plugs and resistance type spark plug cables that are identified by word "RADIO" AR-32 replaces A-32 used on early cars, until stock of A-32 can be made available

COIL· Auto-Lit CAH-4002.

Ignition Current - 2 5 amps idling, 3 1 amps stopped

Resistor - Auto-Lite PU-5001

►*COIL RESISTOR NOTE* Resistor is connected in lead from ignition switch to coil When testing coil, include resistor with coil

DISTRIBUTOR: Auto-Lite. Used as follows

Model	Auto-Lite No
Savoy, Belvedere (318" Std.)	IBP-4003F
(318" Pwr. Pkg.)	IBP-4003H
Canada	IBP-4003D
361" Golden Commando	IBS-4006C

Condenser - Auto-Lite IAT-3076LA **Capacity** 25- 285 mfd

Contact Point Set - Auto-Lite IBP-3028AS (IBP-4003F, H), IGW-3028JS (IBS-4006C)

Breaker Gap - 015–018" (IBP, IBS Distr.) Set maximum gap to 017"

Cam Angle - 29°±3° (IBP Distr.) with vacuum line disconnected 31-37° (IBS Distr.) with both sets of contacts operating together

Breaker Arm Spring Tension - 17-20 ozs

Rotation - Clockwise (IBP Distr.), Counterclockwise (IBS Distr.) viewed from above.

DISTRIBUTOR: Chrysler. Chrysler Part No 1838505-P (Stamped on side of body) replaced Auto-Lite IBP-4003F on 318" engine in March 1959 Automatic & Vacuum Advance Specifications are the same as for Auto-Lite IBP-4003F Only the condenser and bushings are interchangeable *CAUTION* - Use only High-resistance type secondary cable (Cable & Terminals Package Part No 2084427-P) with word "RADIO HR" imprinted on it DO NOT use this cable with Auto-Lite Distributor

►*CONTACT ASSEMBLY NOTE* Complete assembly furnished with spring tension precalibrated and points aligned To adjust spring tension, loosen inner terminal insulator nut to reposition spring

►*OVERHAUL CAUTION* Vertical surface below mounting flange is tapered so it is necessary to clamp distributor on ribbed surface of body to prevent damage to lower bushing

►*HOLD-DOWN CLAMP CAUTION* Use only Hold-Down Clamp Part No 1947612 P with clamp ends curved upward and DO NOT use this type clamp with Auto-Lite Distributor Use of wrong type clamp will prevent fine timing adjustment of Chrysler Distributor and will not provide sufficent clamping with Auto-Lite Distributor

Distributor Basic Timing & Drive Shaft Bushing: *See "Ignition Notes" in Plymouth Special Data*

IGNITION TIMING

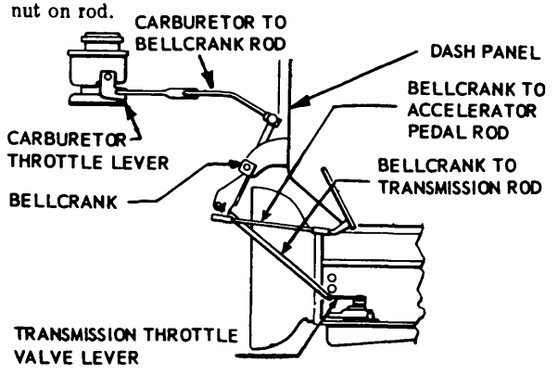
►*TIMING NOTE* V8 engines with 2-barrel carburetors are designed to operate on good grade of regular fuel. V8 engines with 4-barrel carburetors are designed to operate at peak efficiency with premium gasoline.

Setting - (318") 10° BTDC, Std & Pwr. Pkg (361") 7 5° BTDC

Timing Mark - Timing mark on vibration damper in line with correct degree mark on timing indicator on chain case cover Indicator marked 0 to 10° BTDC

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE



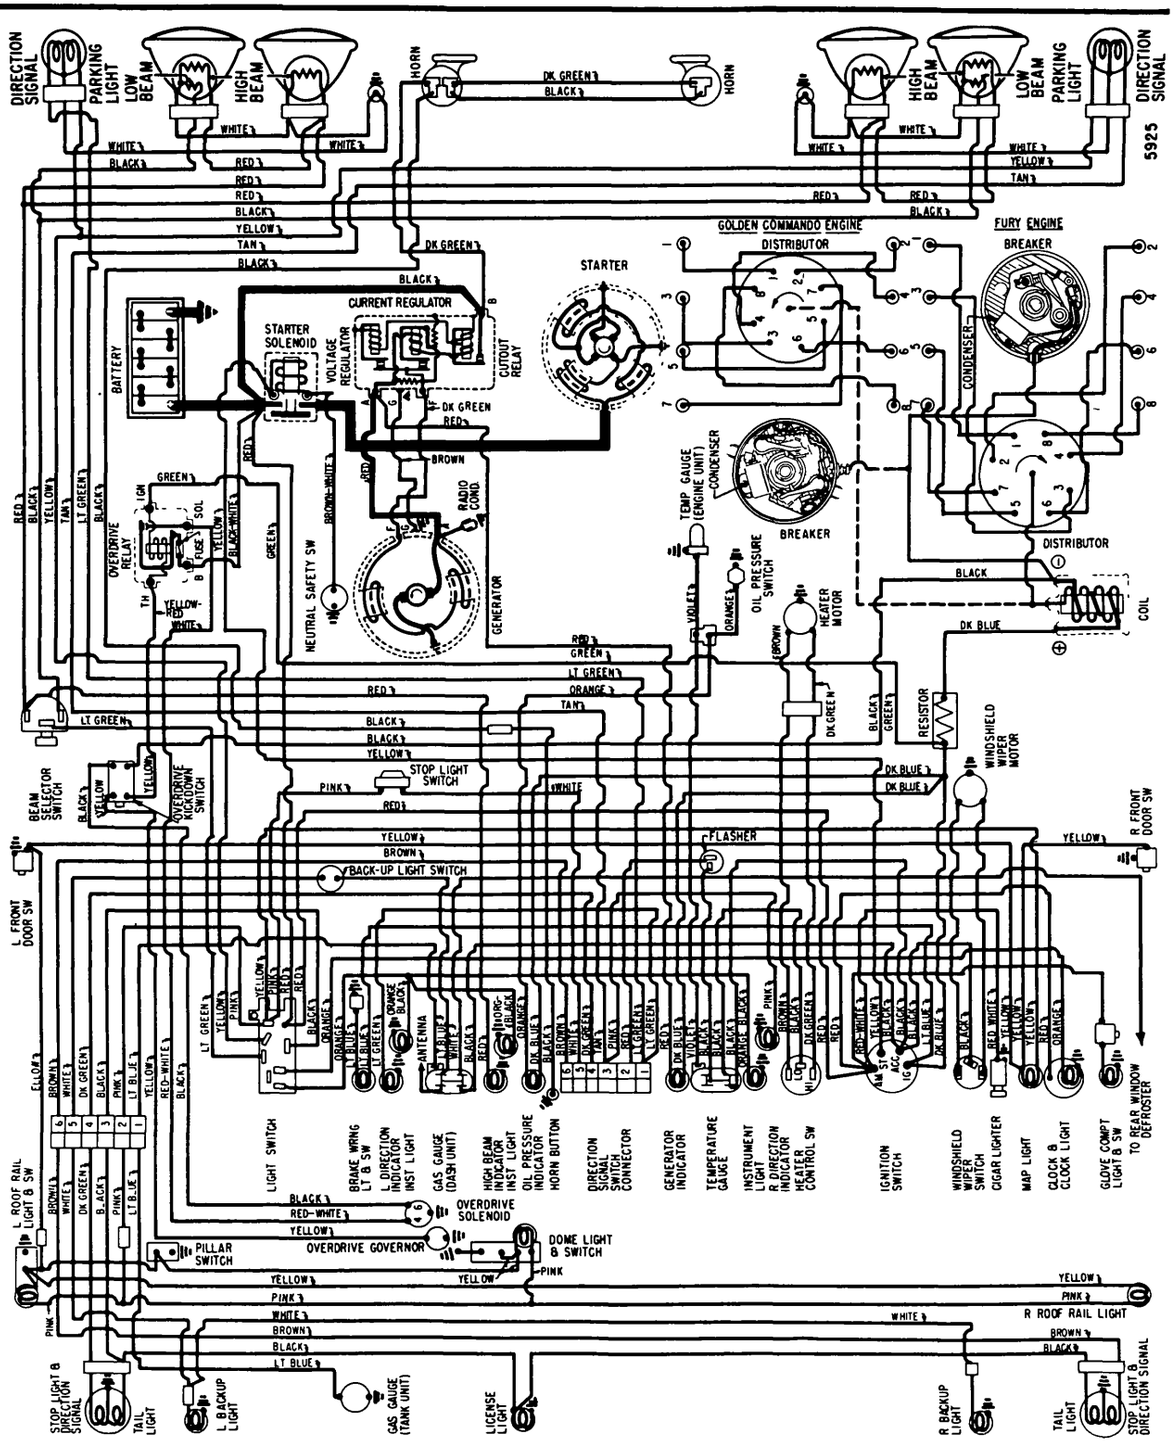
CARBURETOR

►*CARBURETOR APPLICATION: Carter BBD and Stromberg WW 2-Barrel carburetors used on 318" standard engine. Carter AFB 4-Barrel carburetors used on 318" Power Pack and 361" Golden Commando engines, optional on all other models.*

►*HARD COLD STARTING (Cars with cross-over choke carburetors):* May be caused by choke vacuum unloader piston sticking and may be corrected by squirting carburetor cleaner, lacquer thinner, or alcohol through piston link opening in air horn. Operate valve to flush out gum formation.

►*THROTTLE LINKAGE ADJUSTMENT NOTE:* Install or replace largest shim possible on flat area of accelerator bellcrank shaft (with clamp open), then tighten clamp securely to insure satisfactory shift pattern. Shim must be in place.

THROTTLE LINKAGE ADJUSTMENT (Auto. Trans.): Stop engine with carburetor off fast idle, disconnect transmission throttle rod at carburetor. Distance from dash to bellcrank should be 1/2-9/16" with rod held to full rear position. Correct distance by connecting throttle rod to carburetor and adjusting idle speed to 475-500 RPM with engine at operating temperature and off fast idle. Loosen transmission adjusting locknuts on transmission throttle rod and rod at transmission, then hold lever at correct distance from dash and adjust rodlength and tighten locknuts. *NOTE* - Accelerator pedal should be 115° from horizontal, measured from rear of pedal. If necessary, adjust accelerator rod under slanting toeboard. With distance correct, hold transmission lever forward against stop and adjust rod length then lock nut on rod.



POWERFLITE & TORQUEFLITE THROTTLE LINKAGE

CARTER BBD (Dual)

Model	Carter No.
318" Std. Eng. (S.M.Trans.)	BBD-2775S or 2864S
(O.D. Trans.)	BBD-2776S or 2865S
(Auto. Trans.)	BBD-2777S or 2866S
318" Replacement	BBD-2896S

►*AUTOMATIC CHOKE NOTE:* "Cross-Over" type choke used on all models.

Idl S tting - 1 1/8 turns open Adjust both screws alike Turn screws out for richer mixture

Idl Sp d - 450-500 RPM (Synchro-mesh & Overdrive), 475-500 RPM (PowerFlite & TorqueFlite)

Fl at L v l - 7/32" from top of float (at center) to top of main body with gasket removed and lip of float held firmly against needle valve Check with tool T-25569 To adjust, bend float lip

Acc l rating Pump - Normal setting, pump rod connected in center hole of throttle lever Inner hole for less fuel Outer hole for more fuel

Fast Idle: Turn throttle stopscrew out so that throttle valves completely closed Hold throttle valves closed, and back out fast idle screw until fast idle cam can be positioned with **first** step in line with fast idle screw, then turn screw in until it just contacts cam Turn in an additional 5½-7½ turns With fast idle cam held in this position, close choke valve until fast idle screw is against shoulder of last step (high step) on cam Measure choke valve opening by inserting a No 12 drill between upper edge of choke valve and air horn wall. If opening not correct, bend fast idle rod Fast idle Speed will be 1300 RPM with screw at last (high) step of cam and engine hot

Automatic Choke Setting (Cross-Over Type): Centered on index *NOTE - Choke is "Cross-Over" type mounted in manifold and linked to choke valve Choke assembly must be removed from manifold well for checking and adjusting*

Overdrive Kickdown Switch: With throttle valves wide open there should be 1/64-1/32" clearance between kickdown lever and switch stem guide.

Throttle Linkage Adjustment (Auto. Trans.): *See CARBURETOR above*

►*OTHER DATA: See "Stromberg WW (Dodge & Plymouth) Carburetors" in Carburetion Section*

Tank Unit - Auto-Lite No 14675A (Exc Suburban), No 14684A (Suburban)

S "Fu l Gauges in Carbur tion S ction

Air Cleaner: Dry Filter Element type Clean every 5,000 miles, replace element every 15,000 miles

►*CLEANING CAUTION* Clean filter element by tapping and shaking to remove dust particles *DO NOT wash element in solvent or other liquids and DO NOT oil or lubricate*

BATTERY

Auto-Lite. (318" Eng.) - 11-HS-60, 12 volt, 9 plate, 50 ampere hour capacity (20 hr rate)

(361" Golden Commando Eng.) - 11-HS-60, 12 volt, 11 plate, 60 ampere hour capacity (20 hr rate)

Battery Ground - Negative

Engine Ground - Left front of engine

STARTER

Auto-Lite MDU-6003 (Savoy & Belvedere), MDT-6001 (361' Golden Commando).

Armature - Auto-Lite No MDL-2088 (All)

►*NOISY STARTER OPERATION CORRECTION* Caused by deposits of foreign material on Bendix drive To correct, remove inspection plate at bottom of torque converter housing (Auto Trans), or clutch housing (Std Trans) and apply a few drops of No 10 oil Use pressure type oil can and 7" copper tubing extension If deposits are excessive, remove starter assembly, clean off rust and corrosion and lubricate shaft lightly with Part No 1643234 or 1692689 Engine Oil Additive

Drive - Bendix "Folo-Thru" No A3596

Rotation - Counterclockwise at commutator end.

Brush Spring Tension - 31-47 ozs (All)

Performance Data - MDT-6001

Torque	RPM	Volts	Amperes
0 ft lbs	3600	10 0	56
8 5 ft lbs	Lock	4 0	350

Performance Data - MDU-6003

Torque	RPM	Volts	Amperes
0 ft lbs.	5300	10 0	50
6 2 ft lbs	Lock	4 0	280

Starting Switch: Auto-Lite SAE-4001 (Std), SAE-4002 (Auto Trans) Magnetic switch controlled by Ignition and Starter Switch, plus Neutral Switch on Automatic Transmissions
See "Starter Controls" in Electrical Section

Neutral Safety Switch Adjustment *See "PowerFlite" or "TorqueFlite" in Transmission Section*

►*SPECIAL GENERATOR NOTE: Performance specifications apply for all generators within the following groups.*

Performance Data - GJC (Cold - 70°F)

Amperes	Volts	RPM
0.0	12.8	1225-1325
30.0	15.0	2050-2250

Performance Data - GJM (Cold - 70°F)

Amperes	Volts	RPM
0	12.8	1150
35	15.0	2100

Performance Data - GGA (Cold - 70°F)

Amperes	Volts	RPM
4.0	14.6	950
40.0	14.6	1600
40.0	15.0	1600

Performance Data - GHM (Cold - 70°F)

Amperes	Volts	RPM
5.0	14.0	875
25.0	15.0	1350
30.0	15.0	1500

Rotation - Counterclockwise at commutator end.

Brush Spring Tension - 18-36 ozs. (GJC, GJM); 34-41 ozs. (GGA); 35-53 ozs. (GHM).

Field Current - 1.2-1.3 amps. (GJC); 1.6-1.7 amps. (GJM); 1.1-1.3 amps. (GGA, GHM) at 10.0 volts (70°F).

Motoring Current - 3.4-3.9 amps. (GJC), 3.9-4.3 amps. (GJM); 2.3-2.6 amps. (GGA); 3.0-3.5 amps. (GHM) at 10.0 volts (70°F).

Belt Adjustment: Deflection with 5 lb. force applied as shown in table below. Place straightedge across pulleys to measure deflection.

Model	New	Used
318" Standard ℂ	5/32"	1/4"
Air Cond. ℂ	1/8"	1/4"
Air Susp. ℂ	5/16"	9/16"
361" Standard ℂ	1/8"	1/4"
Air Susp. ℂ	5/16"	9/16"

ℂ - Between generator and water pump.
ℂ - Between compressor and generator.

REGULATOR

Auto-Lite VAT-6201A (GGA); VRX-6201A (GHM, GJC); VRX-6301A (GJM).

►*VRX-6301A REGULATOR REPLACEMENT NOTE:* When hard starting at temperatures of 20°F or less is experienced and distributor breaker contact points are "Blued", replace early type Regulator with one that has Code 11-N or higher stamped on base.

Cutout Relay

Cuts In - 12.6-13.6 volts.

Cuts Out - 3.0-5.0 amperes discharge after a charge of 10 amperes (VAT), 7 amperes (VRX).

Contact Gap - .015" minimum.

Air Gap - .031-.034".

Voltage Regulator

Setting - 14.5 volts charging at 7 amps. (VRX), 10 amps. (VAT) at 80°F or with .25 ohm resistor in series between regulator and battery.

Air Gap - .048-.052" (check at brass armature stop pin).

Checking & Adjusting - *See "Auto-Lite 12-Volt Regulators" in Electrical Section.*

Current Regulator

►*SETTING CAUTION: "Temperature Compensated" type. Set to following specifications at 70°F.*

Regulator	Test A - Operating Amperes - Test B
VAT-6201A	46 — 40 (38-42)
VRX-6201A	37 — 30 (28-32)
VRX-6301A	44 — 35 (33-37)

Test A - After 15 minutes operation charging at 10 amps. (VAT), 7 Amps. (VRX).

Test B - After additional 15 minutes operation with current regulator operating-load applied to hold voltage down to 13.7-13.9 volts (VAT). 13.6-13.8 volts (VRX).

Air Gap - .048-.052".

Checking & Adjusting - *See "Auto-Lite 12-Volt Regulators" in Electrical Section.*

MISC. ELECTRICAL

Headlamps: Dual headlights (4-Headlight System). *See "4-Headlight Systems" in Electrical Section.*

Automatic Beam Changer: *See Electrical Section.*

Electronic Rear View Mirror: *See Electrical Section.*

Directional Signals: *See Electrical Section.*

Lighting Switch Removal: Push control knob and shaft to "OFF" position (full in). Depress button on top of switch and at the same time pull out control knob and shaft. Remove switch locking nut and remove switch assembly.

Stop Light Switch Location: On forward end of master cylinder.

LIGHTING CIRCUIT BREAKERS: Used as follows:

22.5 Ampere - Protects Headlamps, Headlamp Beam Indicator, and Parking Lamp. In headlight switch.

15 Ampere - Protects Tail, Stop, License Plate, Instrument and Dome Lights. In headlight switch.

5 Ampere - Protects Windshield Wiper (Single Speed).

6 Ampere - Protects Windshield Wiper (Variable Speed).

30 Ampere - Protects Window Lift and Seat Adjuster.

FUSES: SFE-10 - In Clock lead.

SFE-7.5 - In Radio lead.

SFE-20 - In rear unit of Air Conditioning.

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air conditioning equipment or lines for access to engine. See "Air Conditioning Service Cautions" in Miscellaneous Section.*

ENGINE SPECIFICATIONS: 318" (Standard, Fury, Sport Fury) Engine - 90° V8 with overhead valves similar in design to previous models.

361" (Golden Commando) Engine - 90° V8 with overhead valves located on outboard side of single rocker arm shaft. Engine block is recessed at front to form integral timing chain case and ignition distributor is located at front of engine.

Engine	Bore	Stroke	Displacement
318"	3.91"	3.31"	318 cu. in.
361"	4.12"	3.38"	361 cu. in.

Engine	Compr. Ratio	Rated HP	Develop. HP & RPM
318"	9.0	48.9	ℂ 230 at 4400
318"	9.0	48.9	ℂ 260 at 4400
361"	10.0	54.3	305 at 4600

ℂ - 2-barrel Carb. ℂ - Power Package.

Compression & Vacuum Reading - *See TUNE-UP.*

►***318" ENGINE CHAIN CASE COVER & GASKET CAUTION:*** New cast aluminum covers used on some engines require new gasket Nos. 1618685 (Chain case cover), 1676031 (Water Pump).

►*318" ENGINE CYLINDER HEAD GASKET REPLACEMENT CAUTION:* One-piece steel and laminated types used in production. Use only laminated type Part No. 1947354-P for replacement.

►*318" ENGINE OIL PAN NOISE CORRECTION:* Oil-pump suction screen may strike oil pan when engine temperature high. To correct, drain oil, then use long screwdriver or similar tool to increase clearance.

►*318" ENGINE TAPPING NOISE CORRECTION:* Caused by valve rocker arms or springs striking rocker arm cover. To correct, relocate cover or make small dimple (from inside cover) to increase clearance.

►*EARLY 318" HIGH SPEED TORSIONAL NOISE CORRECTION:* Engines with synchro-mesh transmissions prior to engine No. MP-126384 (Without Damper) can be corrected by the installation of the following parts:

Part	Part Number	Quantity
Fan Drive Pulley	ℂ 1821411	1
Vibration Damper	1947235	1
Damper Capscrew 2 ¼" long	1821414	1
Fan Drive Pulley Screw	180075	6
Fan Drive Pulley Lock Washer	120214	6
Timing Indicator	1947236	1

ℂ - On Power Steering Cars use Fan Drive Pulley No. 1855152.

►*361" ENGINE TAPPET NOISE, BEARING NOISE OR DELAYED OIL PRESSURE LIGHT OPERATION CORRECTION:* To correct, install Oil Filter Part No. 1851658-P, then use accurate oil gauge to check oil pressure. If pressure still low, remove oil pan, check for oil leaks (with oil leak detector). If condition still exists, remove oil pump and check it for scoring, dirt or improper operation of relief valve. When replacing pump, accurately torque capscrews to 35 inch lbs. only. Check installation of pump for binding by installing an old oil pump-and-distributor drive shaft (with gear removed and 4-5" hex bolt welded to extend shaft) in place of distributor. Relocate pump on block when torque required to turn shaft exceeds 12 in. ozs. Use new Oil Filter Base Assembly Part No. 2120866 (with new oil relief valve plunger) if oil pressure is still low. Replace complete pump with New Oil Pump Part No. 2120870 when complete pump is required.

CYLINDER HEAD: *See "Cylinder Head & Manifolds" in Plymouth Special Data.*

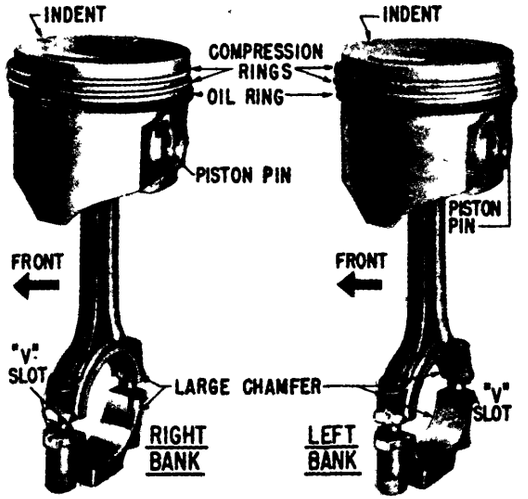
TIGHTENING TORQUES: *See "Tightening Specifications" in Plymouth Special Data.*

OIL PAN REMOVAL: Drain oil, then remove steering and idler arms, dust shield, and starter motor. Remove crankcase breather, and on cars with single exhaust system, remove crossover pipe. Disconnect motor mounts

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

and raise engine approximately 2". Support engine with wooden blocks placed under motor mounts.



►*OIL PAN NOISE CORRECTION (318" Eng.):* Oil-pump suction screen may strike oil pan when engine temperature high. To correct, drain oil, then use long screwdriver or similar tool to increase clearance.

PISTONS

Aluminum alloy, elliptically turned, tin-plated. Thermally controlled by steel band and horizontal slot (318"), by steel struts (361").

Weight - 21.0 ozs. (318"), 25.6 ozs. (361").

►*CYLINDER BORE OVERSIZE CAUTION:* Engines with letter "A" following engine have .020" oversize cylinder bore.

PLYMOUTH V8 PISTON & ROD ASSEMBLY

Clearance (318" Eng.) - .00075-.00125" on thrust side at top of skirt. With .0015" x ½" feeler gauge inserted between cylinder wall and piston, at thrust face, pull to withdraw feeler should be 5-10 lbs.

Clearance (361" Eng.) - .0005-.001" between thrust face of piston and cylinder wall, measured at top of piston skirt and half way down cylinder wall, crosswise to engine.

Removal: Pistons and rods removed from above.

Replacement Pistons: Std., .005", .020", .040" Oversize.

Installing Pistons: Notch in piston head must be toward front of engine. Assemble piston to rod with notch on same side as large chamfer on lower end of connecting rod (left bank cylinders 1-3-5-7) with notch on side opposite to large chamfer at lower end of connecting rod (right bank cylinders 2-4-6-8). *See Rod Installation.*

PISTON PIN

318" Engine - Floating type with lock ring at each end.

361" Engin - Tight press fit in connecting rod. Special removal and installation procedures are required.

Diameter - .984" (318"), 1.093" (361").

Length - 3.00 (318"), 3.56" (361").

Pin Fit in Piston (318") - .0000-.0005". Tight double thumb press fit at 70°F.

Pin Fit in Piston (361") - .00015-.00065". Light thumb press fit at 70°F.

Pin Fit in Rod (318") - .0001-.0004" (Selective). Tight thumb press fit at 70°F.

Pin Fit in Rod (361") - .0007-.0012" interference fit.

Piston Pin Removal & Installation (361") - *See "Piston Pins" in Plymouth Special Data.*

Replacement Pins: 318" Eng. - Std., .003", .008" Oversize. **361" Eng.** - Available only with new pistons.

PISTON RINGS

Compression rings are cast iron, low taper and twist, tin plated (318"), cast iron, standard taper and twist, tin plated (361"). Oil rings are cast iron, single piece units.

318" Standard Engine

Ring	Width	End Gap	Side Clearance
Compr. (Upper)	.0780"	.010-.020"	.0015-.003"
Compr. (Lower)	.0780"	.010-.020"	.001-.0025"
Oil	.186"	.010-.020"	.001-.003"

361" Golden Commando Engine

Ring	Width	End Gap	Side Clearance
Compr. (Upper)	.0780"	.013-.025"	.002-.0035"
Compr. (Lower)	.0780"	.013-.025"	.002-.0035"
Oil	.188"	.013-.025"	.0012-.0025"

Replacement Rings: Std., .020", .040" Oversize

Installing Rings: Install compression ring with mark "TOP" to top of piston.

CONNECTING ROD

Length (Center-to-Center) - 6.12" (318"), 6.36" (361").

Weight - 25.6 ozs. (318"), 28.6 ozs. (361").

Crankpin Journal Diameter - 2.125" (318"), 2.375" (361").

►*JOURNAL DIAMETER CAUTION (ONE OR MORE Journals Machined UNDERSIZE): See CRANKSHAFT below.*

Lower Bearings - 318" Eng. has copper bronze bearings with dull finish when new and dull reddish brown color or copper speckled when used. 361" Eng. has lead based babbitt on steel.

Clearance - .0005-.0015" (All).

Sideplay - .006-.014" (318"), .009-.017" (361").

Installing Rods: With piston correctly installed on connecting rod (see "Piston" above), larger chamfer on lower end of rod should be installed toward nearest crankshaft fillet. Oil groove in rod and bearing cap must be together.

Bearing Adjustment: None, replace bearings.

Replacement Bearings: Std., .001", .002", .003", .010", .012" Undersize.

CRANKSHAFT

Journal Diameter - 2.50" (318"), 2.63" (361").

►*CRANKSHAFT UNDERSIZE CAUTION: Engines with undersize journals identified as follows:*

.010" UNDERSIZE (ALL Main & Connecting Rod Journals) - Letter "B" following engine number indicates that ALL Main & Connecting Rod Journals are .010" Undersize.

.001" UNDERSIZE (ONE OR MORE Main & Connecting Rod Journals) - A "Maltese Cross" (3/8" high) stamped on engine numbering pad indicates that one or more connecting rod and main bearing journals are machined .001" undersize. Position of undersize journals is stamped on machined surface of a counterweight. Connecting rod journals will be identified by the letter "R" and main journals by letter "M". The number following letter "R" or "M" indicates journal number.

Bearings - Removable precision type. Tin-based babbitt on steel (No. 3 Thrust Bearing), Lead-based babbitt on steel (All Others).

Clearance - .0005-.0015".

Replacement Bearings: Furnished Std., .001", .002", .010" Undersize.

Bearing Interchangeability (318") - Numbers 1, 2 & 4 bearings are identical. Numbers 3 or 5 are not interchangeable. **(361" Eng.)** - Numbers 1,2,4 & 5 bearing sets are identical. Number 3 is not interchangeable.

►*BEARING REPLACEMENT CAUTION:* All bearing sets have grooveless lower half, without an oil feed hole. DO NOT install a grooveless lower half bearing in upper half position.

End Thrust: Taken by No. 3 (Center) main bearing.

Endplay - .002-.007".

Crankshaft Rear Main Bearing Oil Seal: *See "Crankshaft & Main Bearings" in Plymouth Special Data.*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Plymouth Special Data.*

CAMSHAFT

Journal Diameter - **(1)** 1.998-1.999". **(2)** 1.982-1.983". **(3)** 1.967-1.968". **(4)** 1.951-1.952". **(5)** 1.5605-1.5615 (318"), 1.748-1.749" (361").

Bearing Diameter - **(1)** 2.000-2.001". **(2)** 1.984-1.985". **(3)** 1.969-1.970". **(4)** 1.953-1.954". **(5)** 1.5625-1.5635" (318"), 1.750-1.751" (361").

►*CAMSHAFT IDENTIFICATION NOTE:* Stripe of colored paint is located at distributor drive-gear end between gear and No. 8 cylinder exhaust lobe. No paint indicates 318" engine with 2-barrel carburetor, white paint 318" engine with Power Package, blue paint 361" Golden Commando. Paint can be seen by removing distributor and rotating camshaft. White may appear yellow or green-colored.

►*CAMSHAFT SPROCKET AND TIMING CHAIN LUBRICATION NOTE:* Lower half of No. 1 Bearing is chamfered on left parting line edge which forms path for oil to crankshaft & camshaft sprockets in addition to oil seepage through bearing.

Bearings - Removable lead based babbitt on steel.

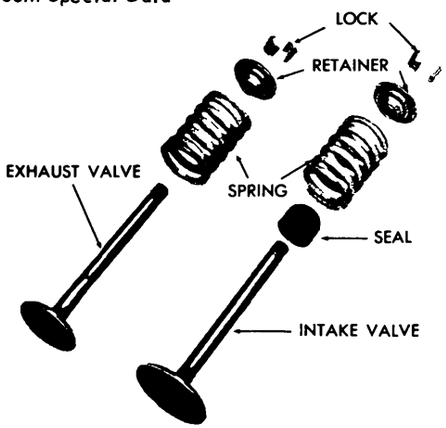
Clearance - .001-.003". Wear limit .005".

End Thrust: (318") - Taken by thrust plate behind camshaft sprocket hub. **(361")** - Taken by camshaft sprocket hub. Camshaft held to rear by design when running.

Timing Chain: (318") - Width .875". Pitch .38". Length 68 links.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE



Timing Chain: (361") - Width .875". Pitch .50". Length 50 links.

Camshaft Setting: Marks on sprockets should be adjacent and in line with straightedge across shaft centers.

Camshaft Removal: *See "Camshaft & Bearings" in Plymouth Special Data.*

Engine Front Cover (Removal & Installation): *See Plymouth Special Data.*

Engine Front Cover Oil Seal (Crankshaft Front Seal): *See Plymouth Special Data*

PLYMOUTH 318" V8 VALVE ASSEMBLY

VALVES

Tappet Clearance: (318") - .010" Intake, .018" Exhaust, Hot. **(361")** - Zero lash, hydraulic lifters.

318" Std. & Power Pack Eng.

Valve	Head Diameter	℄ Stem Diameter	Length
Intake	1 84"	372"	4 60"
Exhaust	1.56"	.371- 372"	4.58"
Valve	**Seat Angle**	**Lift**	**Stem Clearance**
Intake	45°	.390"	.002"
Exhaust	45°	.386"	.002"

361" Golden Commando Eng.

Valve	Head Diameter	℄ Stem Diameter	Length
Intake	2.08"	.372"	4.87"
Exhaust	1.74"	.371-.372"	4.88"
Valve	**Seat Angle**	**Lift**	**Stem Clearance**
Intake	45°	.390"	.002"
Exhaust	45°	.390"	.003"

℄ - Standard valves. Also 005", 015", 030" Oversize

Valve Seat Width - 1/16-3/32" (Intake), 3/64-1/16" (Exhaust).

Valve Stem Seal - Cup type seals used on all intake valves (All engines), on exhaust valves (361" Golden Commando engine).

Valve Springs: Single springs used on all engines

Spring Specifications (318" Engine)

	Pressure	Length
Valve Closed	68-76 lbs.	1 11/16"
Valve Open	160-172 lbs.	1 5/16"

Spring Specifications (361" Engine)

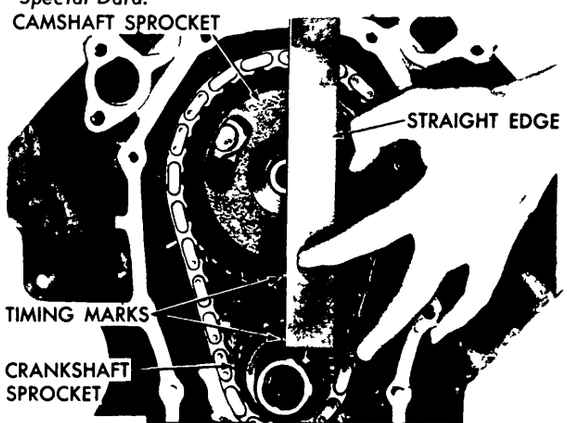
	Pressure	Length
Valve Closed	75-85 lbs.	1 55/64"
Valve Open	179-187 lbs.	1 15/32"

►*VALVE SPRING HEIGHT CAUTION:* If valves or seats are ground, check installed height of spring (from counterbore in head to lower surface of spring retainer). If height exceeds 1 11/16" (318" Eng.), 1 57/64" (361" Eng.), install 1/16" spacer under spring to bring height to limits 1 5/8"-1 11/16" (318" Eng.), 1 53/64"-1 57/64" (361" Eng.)

►*VALVE SPRING LOAD CAUTION:* Hydraulic lifter "fill-up" will restrict engine speed and cause valves to burn if spring loads are not maintained.

Valve Guides: Guides are cast integral with cylinder head. When clearance is excessive, ream guides and install oversize valves. Use Reamer C-3433 for .005", C-3430 for .015", C-3427 for .030". Use reamers in sequence.

►*OVERSIZE VALVE STEM IDENTIFICATION NOTE (318" Engine):* "I" (Intake), "E" (Exhaust) on boss above nearest appropriate valve guide indicates that valve is .005" Oversize



Valve Lifters: (318") - Barrel type mechanical with self-locking adjusting screw **(361")** Hydraulic.

Diameter - (All) .9040-.9045" **Clearance** .0005-.0015".

►*OVERSIZE LIFTER NOTE* "♦" mark on engine number pad indicates .008" oversize lifters.

Hydraulic Lifter Overhaul & Testing: *See "Valve System" in Plymouth Special Data.*

Rocker Arm Assembly: *See "Valve System" in Plymouth Special Data.*

PLYMOUTH V8 ENGINE VALVE TIMING MARKS

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

Valve Timing

318" Standard Engine

Intake - Open 17° BTDC. Close 47° ALDC.

Exhaust - Open 55° BLDC. Close 9° ATDC.

318" Power Pack Engine

Intake - Open 13° BTDC. Close 55° ALDC.

Exhaust - Open 51° BLDC. Close 17° ATDC.

361" Golden Commando Engine

Intake - Open 20° BTDC. Close 60° ALDC.

Exhaust - Open 58° BLDC. Close 22° ATDC.

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Plymouth Special Data.*

Crankcase Capacity: 5 qts. All engines. Add 1 qt. with filter change

Normal Oil Pressure - 45-65 lbs at 2000 RPM.

Oil Pressure Relief Valve - In oil pump body, see *"Oiling System" in Plymouth Special Data.*

Oil Pressure Indicator Switch: Auto-Lite No. 14272A, located at rear of cylinder block near the top.

Oil Pump (318"): Mounted on rear main bearing cap. Rotor type with strainer mounted on oil pump body. Strainer must be mounted parallel with bottom of cylinder block.

Oil Pump Overhaul - *See "Oiling System" in Plymouth Special Data.*

►*INSTALLATION NOTE:* Prime oil pump before installation on rear main bearing cap.

Oil Pump (361"): Rotor type. Mounted on cylinder block on lower left side near front of engine.

Oil Pump Overhaul - *See "Oiling System" in Plymouth Special Data.*

Oil Filter (318"): Shunt type. Filters only a portion of pump output. Replace element every 5,000 miles or sooner if needed

Oil Filter (361"): Full flow disposable type. Replace every 5,000 miles or sooner if needed

►*OIL FILTER INSTALLATION NOTE (361"):* Screw new filter on base until gasket on filter contacts base, then tighten **½-turn by hand.** DO NOT overtighten.

Crankcase Ventilation: Filter element in crankcase filler cap and breather tube in valve chamber cover **(318")**, in right rocker arm cover **(361")**. *NOTE* - Remove air cleaner in ventilator pipe (when so equipped), wash in kerosene and re-oil

COOLING

Water Capacity: 20 qts. **(318")**, 16 qts. **(361")**. Add 1 qt. for heater.

►*AIR CONDITIONER OPERATING CAUTION:* Engine cooling system must be protected to a temperature of 16°F (above zero) for summer operation.

Pressure Valve: 14 lb. radiator filler cap (All Models).

Thermostat: Pellet type. Located under water outlet connector. *NOTE* - 180°F thermostat standard on all V8 engines. Use 160°F thermostat for alcohol-type anti-freeze.

►*THERMOSTAT IDENTIFICATION NOTE:* Disregard the 160° mark shown on top surface of gasket flange on some thermostats. Correct 180° mark is located on bottom of pellet. This applies to double coil spring type thermostats

Water Pump: Sealed ball bearing, packless type. No lubrication required

See "Water Pumps" in Plymouth Special Data.

Temperature Gauge: Auto-Lite. Electric type.

Dash Unit - Auto-Lite No. 1475A.

Engine Unit - Auto-Lite No. 14405A.

See "Temperature Gauges" in Miscellaneous Section.

CONTINUED FROM PRECEDING PAGE

CLUTCH

Borg & Beck Single plate type
Se "Borg & Beck' Clutches in Clutch Section

Pedal Adjustm nt· Turn clutch release fork rod adjusting nut until 3/16" free movement of clutch fork outer end is obtained This adjustment will provide necessary 1" free play at pedal

Overcent r Spring Adjustment· Disconnect upper end of clutch pedal rod Move clutch pedal to floor and loosen overcenter spring adjusting nut Tighten adjusting nut finger tight Reconnect pedal rod, then tighten adjusting nut **7 compl t turns.** If heavier action desired, loosen nut 1 turn If lighter action desired, tighten nut 1 turn

Ov rc nt r Spring Adjust r Adjustment: To obtain least pedal effort, turn cushion up to point where pedal will NOT return the last 1" of travel from overcenter position to full return, then back off cushion from ½-1 full turn so pedal will return completely to full return position Check clutch for ease of operation and re-adjust as necessary

R moval· Disconnect propeller shaft, speedometer cable, parking brake, cable and gearshift control rods Remove transmission (See Synchro-mesh Transmission) Mark clutch cover and flywheel Remove bolts that hold clutch cover to flywheel, loosening each bolt a few turns (in succession) until cover is free Remove clutch disc and pressure plate assembly from clutch housing

SYNCHRO-MESH TRANSMISSION

Own Helical gear, constant mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse)
See "Plymouth Synchro-mesh" in Tr ansmission Section

Transmissi n Controls· *S e "Transmission Controls" in Transmission Section*

►*GEARSHIFT LEVER LUBRICATION NOTE* In heavy duty service where hard shifting is experienced, remove gearshift lever and apply Mopar Lubriplate to ball end and pivot-pin hole and area surrounding it Repeat operation at 10,000 mile intervals

►*TAXICAB SYNCHRO-MESH TRANSMISSION PRODUCTION CHANGE* Linkage interlock entered production May 1959 to hold low & reverse in neutral when shifting into second and high *See "Plymouth Synchro-mesh Transmission" in Transmission Section*

R moval: Disconnect propeller shaft, speedometer cable, hand brake cable, and control rods If transmission is to be disassembled, apply hand brake to hold mainshaft while loosening flange nut This method will also prevent possible brinelling of bearings, or other damage caused by pounding on wrench Remove transmission by pulling it straight back until pinion shaft clears clutch disc before lowering transmission This precaution will avoid bending clutch disc

OVERDRIVE

Warn r Typ R10. Planetary gear type with solenoid operation and accelerator pedal controlled kick-down
See "Plymouth Overdriv " in Transmission Section

Overdrive Controls· *See "Overdrive Controls" in Transmission Section*

R m val: Same as for Synchro-mesh Transmission (above) after control wiring and cable have been disconnected

POWERFLITE TRANSMISSION

Torque Converter and hydraulically operated two speed planetary transmission
See "PowerFlite" Transmission in Transmission Section

►*POWERFLITE BUZZING NOISE CORRECTION* To noise that occurs while driving in reverse, install new Control Valve Part No 2124247 in converter *See Power-Flite' Transmission in Transmission Section*

►*PRODUCTION CHANGES AND REPLACEMENT PARTS CAUTION See 'PowerFlite Transmission" in Transmission Section*

►*TESTING & TROUBLE SHOOTING See "PowerFlite Transmission" in Transmission Section*

Lubrication: Check fluid level every 1,000 miles, drain and refill every 10,000 miles, both standard and heavy duty operation This specification supersedes previous 20,000 mile drain interval Use Automatic Transmission Fluid Type "A", Suffix "A"

Checking Fluid Level (Trans. Cold, Car not Driven): Oil level to be between the low (L) mark and the bottom of dipstick

Checking Fluid Level (Trans. Hot, Car Driven at least 10 miles)· Oil level should be between ½" below full and full mark

Throttle Linkage Adjustment· *See CARBURETOR above*

►*OTHER DATA See "PowerFlite Transmissions" in Transmission Section*

TORQUEFLITE TRANSMISSION

Torque Converter and hydraulically operated three speed planetary transmission
See "TorqueFlite Transmission" in Transmission Section

►*TORQUEFLITE DRIVE SLEEVE RATTLE CORRECTION* To correct, install Service Package No 2084321 -P, containing modified front pump rotor drive sleeve, rubber "O" ring and cast iron ring *See "TorqueFlite Transmission' in Transmission Section*

►*TORQUEFLITE 2-3 UPSHIFT RATCHETING NOISE CORRECTION* Caused by incorrect assembly of clutch pack Reassemble with pressure plate at front of pack next to snap ring *See 'TorqueFlite Transmission" in Transmission Section*

►*TORQUEFLITE BUZZING NOISE CORRECTION* To correct noise that occurs while driving in reverse, install new Control Valve Part No 2124247 in converter

►*TORQUEFLITE VALVE BODY PRODUCTION CHANGE (To reduce possibility of leakage and to improve shift quality and endurance)* One-piece valve body entered production in June 1959 and identified by new Part Numbers stamped on transmission oil pan rail *See 'TorqueFlite Transmissions" in Transmission Section*

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION See "TorqueFlite Transmissions" in Transmission Section*

►*TESTING & TROUBLE SHOOTING See "TorqueFlite Transmission" in Transmission Section*

Lubrication: Check fluid level every 1,000 miles, drain and refill every 10,000 miles, both standard and heavy duty operation This specification supersedes previous 20,000 mile drain interval Use Automatic Transmission Fluid Type "A", Suffix "A"

Thr ttl Linkag Adjustm nt: *See CARBURETOR above*

►*OTHER DATA See "TorqueFlite Transmissions" in Transmission Section*

UNIVERSALS

Detroit. Ball & Trunnion type front Cross type rear
Rear Universal Joint Operating Angle – *See 'Propeller Shaft Notes" in Plymouth Special Data*

REAR AXLE

Own. Semi-floating, Hypoid gear, with separate carrier and Hotchkiss drive *See "Plymouth Hypoid" in Rear Axle Section*

►*SURE-GRIP AXLE NOTE* Optional in ratios listed in table below and similar in design to Power-Lock (Plate Clutch Type) Differential Identified by letter "S" stamped on carrier housing at axle ratio identification pad and a round aluminum tag (marked "Use Sure-Grip Lube") attached to carrier attaching bolt below filler plug *See "Power-Lock Differential (Plate Clutch Type)" in Rear Axle Section*

"SURE-GRIP" AXLE LUBRICANT NOTE - Use only Mopar Sure-Grip Lubricant Part No 1879414

►*BANJO HOUSING INSTALLATION NOTE* Check rear universal joint operating angle *See "Propeller Shaft Notes" in Plymouth Special Data*

Axle Ratios	Standard	Optional
MP2, MP2-P, S M	3 54(39-11)	①② 3 73(41-11)
O D	3 91(43-11)	
MP2(Golden Commando)	④ 3 31(43-13)	
MP2,MP2-P(PowerFlite)	3 31(43-13)	①② 3 73(41-11)
MP2,MP2-P(TorqueFlite)	2 93(41-14)	③ 3 31(43-13)
MP2(Golden Commando)	④ 3 31(43-13)	2 93(41-14)

① - Use with "Sure-Grip" only
② - Use 3 91 (43-11) in mountainous country
③ - Use 3 73(41-11) with "Sure-Grip"
④ - Also used with "Sure-Grip"

Backlash - 006- 008"

Carrier Removal: Disconnect rear universal, remove axle shafts (see below), take out carrier capscrews, lift off carrier assembly

Axle Shaft Removal: Remove wheel, drum, and hub assembly (use screw type hub puller – Tool C-845), block brake pedal, disconnect brake line at wheel cylinder, remove axle shaft key, install sleeve (Tool C-745) in oil seal, remove brake support (oil seal mounted in support), pull shaft and bearing (use C-499 Puller)

Wheel Bearing Adjustment: Shims between backing plate and axle housing With wheel and hub removed, check endplay with dial indicator To adjust, remove backing plate (see above), add or remove shims (furnished 005", 012", 030" thick) equally at both wheels
Endplay - 013- 018"

SHOCK ABSORBERS

"**Oriflow**". Direct-acting, hydraulic type Serviced by replacement

Shock Absorber (Plymouth No.)	Front	Rear
Standard 1"	1881774	1879307
Air Susp 1"		1879305
Hvy Duty 1"	1881775	1879306
Hvy Duty 1 3/8"		1881877

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

FRONT SUSPENSION

Independent. "Torsion-Aire" suspension with ball joints and torsion bar front springs *NOTE* - Caster and Camber adjustment is controlled by eccentric cams operating in cam retainers welded to front and rear faces of upper control arm brackets No shims used *See "Torsion-Aire" Suspension in Suspension & Wheel Alignment Section*

Steering Axis Inclination - 6½° at 0° camber
Caster - (Manual Steering) Neg ¾°±¾° Neg ¾° preferred
(Power Steering) Neg ¾°±¾° Pos ¾° preferred
NOTE - Caster should be equal as possible on both sides of car
Camber (Left Wheel) - Pos ¼°±¼° 3/8° preferred
Camber (Right Wheel) - 0°±¼°. 0° preferred
Toe-In - 3/32-5/32" 1/8" preferred
Toe-Out on Turns - With inner wheel at 20°, outer wheel should be 18°46'

AIR SUSPENSION

At rear only Air springs used in conjunction with conventional leaf springs Optional on all models *See "Plymouth Air Suspension" in Suspension & Wheel Alignment Section*

►*COMPRESSOR KNOCKING NOISE CORRECTION* Caused by end float in crankshaft Correct by installing Air Suspension Compressor Kit No 2084466 *See "Plymouth Air Suspension" in Suspension & Wheel Alignment Section*

STEERING

Manual: Gemmer - Worm and three-tooth roller
See "Gemmer Worm & Roller" in Steering Section

Power Steering· "Constant Control Full Time" Power Steering
See "Plymouth Constant Control Power Steering" in Steering Section

►*POWER STEERING FLUID CHANGE* New Power Steering Fluid Part No 2084329 recommended for additions or refills after overhaul, on all Constant Control Power Steering Units

►*POWER STEERING PRODUCTION CHANGE* Gear housing and valve lever spring changed to increase valve travel and reduce valve leakage Use new spring and housing together and use with spring loaded valve lever steering gears identified by letter "J" or succeeding letters New Housing No 2122041, New Spring No 1822871 Gears with new housing and spring identified by letter "R" stamped on housing

►*POWER STEERING OIL LEVEL CHECK* No dipstick used on later cars Oil level should be at bottom of filler neck (engine cold), half-way up filler neck (engine hot)

Steering Linkage: *See "Steering Linkage" in Steering Section*

Steering Wheel & Horn Button Removal: *See "Gemmer Worm & Roller" or "Plymouth Constant Control Power Steering" in Steering Section*

Steering Gear Removal: *See "Gemmer Worm & Roller" or "Plymouth Constant Control Power Steering" in Steering Section*

BRAKES

Service Plymouth "Total Contact" (Floating Shoe) type *See "Plymouth Center-Plane & Total Contact Brakes" in Brake Section*

►*BRAKE PRODUCTION CHANGE NOTE* New "Three Platform Total Contact Brakes" used in production on later cars These brakes have important design changes and parts for early and later brakes are **not** interchangeable
See "Plymouth Three Platform Total Contact Brakes" in Brake Section

Drum Diameter - 11" front and rear (Std), 12" (Special Equipment)
Wheel Cylinder Diameter - 1 1/8"
Lining - Molded asbestos, bonded to shoe
Length - 11 5" **Width** - 2" **Thickness** - 20"

►*LINING NOTE* When Special Equipment 12" Drums used, lining length is 12 6", width is 2 5", thickness is 20"

Braking Power - 60% front, 40% rear
Clearance - Front Wheels - Turn each adjusting cam in direction of forward wheel rotation until shoe is solid against drum and wheel is locked Turn cams in opposite direction until no drag is felt
Rear Wheels - Same as for front wheels except that forward shoe adjusting cams are rotated in direction of forward wheel rotation and rear shoe cams are rotated in direction of reverse wheel rotation

Master Cylinder: On engine side of dash panel

►*MASTER CYLINDER NOTE (Cars Without Power Brakes)* Master cylinder has a non-adjustable pushrod and the pedal stop is within the master cylinder eliminating need for adjustment No pedal return spring is used A service package consisting of piston-collar-rod-retainer and boot assembly is available for replacement of individual parts that are worn or damaged
Removal - Disconnect pushrod, brake tube and stop light switch leads Remove master cylinder to dash bolts Slide master cylinder straight out from dash

Power Brakes: Bellows Assist type Mounted on firewall and linked to upper end of brake pedal (used with standard master cylinder)

►*POWER BRAKE SQUEALING OR WHISTLING NOISE:* Install new vacuum check valve No 1944089 (Identified by a daub of white paint on flange of tube section) New valve is a "T" design which permits a single hose connection to reserve tank in place of the two hoses previously used To determine if old valve is faulty, check for looseness of suction tube flange in the valve assembly
See "Chrysler, Plymouth Bellows Type Power Unit" in Brake Section
Removal of Power Unit - Place wood wedge between power brake lever and forward edge of triangular hole in pedal bracket, to prevent trigger arm from extending beyond bracket Remove attaching nuts, slide reinforcement plate off studs and remove unit from dash

Parking Brake: On shaft at rear of transmission 6" external contracting type used with Synchro-mesh Trans , 7" internal expanding type used with Automatic Trans

Adjustment - *See "Brake Notes" in Plymouth Special Data*

Lining	Width	Thickness	Length
6" Ext	2"	5/32"	①
7" Int	2"	5/32"	② 13 06"

① - One-piece 16 68", two-piece 15 38" (total)
② - Total both shoes

MISC. MECHANICAL

Windshield Wipers: Auto-Lite Electric EPW-4001B (Single Speed), EPV-4001D (Variable Speed)
See "Auto-Lite Electric Windshield Wipers" in Miscellaneous Section

Air Conditioning: Heater-Air Conditioning *See "Plymouth Air Conditioning" in Miscellaneous Section*

►*AIR CONDITIONING FAILURE TO COOL CORRECTION (Early Cars)* Caused by underhood temperatures affecting expansion valve sensing bulb To correct, install Air Conditioning Refrigerant Tubing Insulation & Mounting Clamp Package Part No 2084287, *see "Plymouth Heater-Air Conditioning" in Miscellaneous Section*

Power Window Regulators· Electric type Reversible type motor in each window, controlled by door switch and master control switch *See "Electric Window Regulators" in Miscellaneous Section*

Power Seat Adjusters· Electric 2-Way type *See "Power Seat Adjusters' in Miscellaneous Section*

Convertible Top Control: Electric-hydraulic type *See "Power Top Controls" in Miscellaneous Section*

►*JACKING & HOISTING CAUTION Before jacking, hoisting, or working under car, see "Jacking & Hoisting Precautions" in Suspension & Wheel Alignment Section.*

MODEL IDENTIFICATION

Series	Series Identification
Savoy	PP1-L
Belvedere	PP1-M
Fury	PP1-H

SERIAL NUMBER: Stamped on plate attached to left front door hinge pillar post Number (example below) includes identification data

① ② ③ ④ ⑤
2 1 0 1 100001

① - Car Make **2** Plymouth 6 Cyl
② - Model Series **1** Savoy **2** Belvedere **3** Fury **5** Savoy Sta Wgn **6** Belvedere Sta Wgn **7** Fury Sta. Wgn **8** Taxi **9** Special
③ - Year **0** (1960)
④ - Assembly Plant **1** Plymouth (Detroit) **5** Los Angeles **6** Delaware **7** St Louis **8** Clairpointe **9** Canadian Plant
⑤ - Beginning vehicle number at each assembly plant

ENGINE NUMBER: Stamped on right side of block below cylinder head at front or rear of engine Number (example below) includes identification data

① ② ③ ④ ⑤
P 22 . . 8 1

① - Year - **P** (1960)
② - Displacement - 225 cu ins
③ - If this space blank, engine is standard **A** indicates all cylinders 020" Oversize **B** indicates all crankshaft journals 010" Undersize **AB** indicates both conditions
④ - Month Assembled **8** August, etc
⑤ - Day Assembled **1** 1st day of month, etc

TUNE-UP

COMPRESSION PRESSURE: 130-160 lbs at 150 RPM (plugs removed) Maximum variation between cylinders 15 lbs

VACUUM READING: 19 5" at idle speed

VALVE TAPPET CLEARANCE: 010" Intake, 020" Exhaust, Hot

MANIFOLD HEAT CONTROL: Thermostatic coil spring type Valve must operate freely When installing, coil spring should be installed so that about one full turn (355° wrap) is required to hook outer end around stop stud

IGNITION

FIRING ORDER: 1-5-3-6-2-4

SPARK PLUG GAP: 035"

Spark Plugs - Autolite AG52 Std (Use to replace AG42 used in early production), Autolite AG82 (Taxicab) "Long Reach" 14 mm type *NOTE* **- Plugs are installed in aluminum sleeves which serve as plug gaskets**

COIL: Autolite CAH-4001. (Service Coil Autolite 200575).
Ignition Current - 2 5 amps idling 3 1 amps stopped
Resistor - Autolite 201000 Connected in lead between ignition switch and coil Bypassed during cranking by second lead from ignition switch

►*ROUGH IDLE OR ENGINE STALLING CORRECTION* **Caused by loose terminal on lead at resistor Correct by increasing crimp on female terminal for more positive connection**

DISTRIBUTOR: Own. Chrysler No 2095270. Conventional type with centrifugal and vacuum advance
Condenser - Chrysler 1818757 **Capacity** 25- 285 mfd
Contact Point Set - Chrysler No 1838643
Breaker Gap - 017- 023"
Cam Angle - 36-42°
Breaker Arm Spring Tension - 17-21 5 ozs
Rotation - Clockwise viewed from above

Automatic Advance

Degrees Distr.	RPM	Degrees Eng.	RPM
Start	250-450	0	500-900
0-2	450	0-4	900
5 5-7 5	1000	11-15	2000
10 5-12 5	2200	21-25	4400

Vacuum Spark Control: Integral type

Vacuum Advance

Distr Degrees	Eng Degrees	Vacuum (" of Hg)
Start	0	4 9-6 9
4 5-7	9-14	9 5
7 8-10 3	15 6-20 6	12

IGNITION TIMING

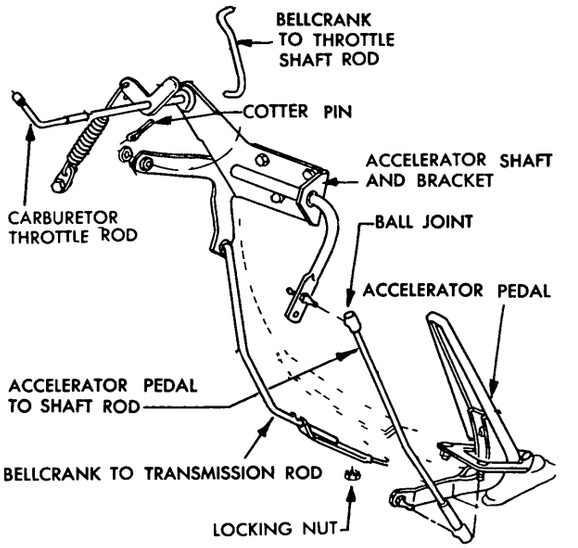
Setting - 2 5° BTDC (Synchromesh), 5° BTDC (Auto Trans)
Timing Mark - Align correct mark on chain case cover with mark on crankshaft pulley

CARBURETOR

►*CARBURETOR APPLICATION Carter BBS single barrel carburetor used*

►*HARD COLD STARTING (Cars with cross-over choke carburetors)* May be caused by choke vacuum unloader piston sticking and may be corrected by squirting carburetor cleaner, lacquer thinner, or alcohol through piston link opening in air horn Operate valve to flush out gum formation

►*HARD COLD START & WARM-UP CORRECTION.* May be caused by choke rod or choke shaft arm striking carburetor air cleaner To correct, remove air cleaner and install air cleaner mounting gaskets as required for sufficient clearance



►***POOR ENGINE IDLE PERFORMANCE (In congested traffic in hot weather, or after continuous highway driving at 60-70 MPH)*** **Check all of the following points Intake Manifold and Carburetor mounting for air leaks All vacuum operated accessories (power brakes, vacuum actuated switches, etc) for air leaks, adjust Tappet Clearance, set Ignition Timing, check carburetor linkage for free operation, adjust carburetor idle mixture and speed setting If above operations do not correct trouble, and a slight hesitation is experienced at 40-70 MPH on light acceleration, reposition air cleaner at 90° to right across valve cover**

THROTTLE LINKAGE ADJUSTMENT (AUTO. TRANS.): Bring engine to normal operating temperature with carburetor off fast idle cam and adjust idle speed to 500 RPM Loosen locknut at lower end of transmission throttle rod and move transmission throttle control lever forward until it stops Tighten locknut Adjust a spirit level protractor to 114° and place lengthwise on flat face of accelerator pedal With car level, disconnect accelerator pedal rod and adjust length of rod so bubble is centered in spirit level Connect rod

CARTER BBS

Carter BBS No. 2958S, SA, SB (Synchro-mesh), No. 2986S, SA, SB (Auto. Trans.), No. 3053S, SA (Taxicab). Single barrel, downdraft type with automatic choke

►*CARTER BBS No 2986S PRODUCTION CHANGE AND SERVICE RECOMMENDATION* Replace original step-up

TORQUEFLITE 6 THROTTLE LINKAGE

wire *See "Carter BBS Carburetors" in Carburetion Section*
Idle Setting - 1/8-1 1/2 turns open (Except 3053S, SA), 1-2 turns open (3053S, SA) With engine at normal operating temperature, adjust idle mixture screw for highest RPM, then turn mixture screw in until speed starts to drop Turn screw out just enough to recover engine speed that was lost Readjust idle speed screw for correct engine idle speed
Idle Speed - 550 RPM (Synchro-mesh), 500 RPM (Auto Trans in "N")
Float Level - 7/32" (2985S, SA, SB, 2586S, SA, SB), 9/32" (3053S, SA) between top of each float ridge at center of float and top surface of body casting To adjust, bend lip of float arm
Accelerating Pump - Install throttle connector rod in center hole (medium stroke) of throttle lever

Fast Idle Speed: 1200-1400 RPM with engine at normal operating temperature and fast idle speed screw (2985SB & 2986SB), idle speed screw (Others) on index mark of cam *NOTE - No adjustment necessary for fast idle on 2985S, SA, 2986S, SA, 3053S, SA carburetors On 2985SB & 2986SB carburetors, rotate fast idle screw as necessary to obtain proper engine speed*

CARB. EQUIPMENT

Fuel Pump: Carter M2996S Mechanical type
Pressure - 3½-5 lbs at 500 RPM
Fuel Filter: New disposable paper type located in fuel line between pump and carburetor Replace every 9000 miles
Gasoline Gauge: King-Seeley Electric "CV" (Constant Voltage) type with separate Voltage Regulator Chrysler No 2096883
Dash Unit - Chrysler No 1972344
Tank Unit - Chrysler No 2084272 (Suburban), No 2084062 (Others), No 2084063 (With Optional 23 Gal Tank) *See 'Fuel Gauges' in Carburetion Section*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Air Cleaner: Paper element type, clean every 5,000 miles, replace element every 15,000 miles More frequent servicing may be necessary under severe operation.

►*CLEANING CAUTION:* Remove filter element from housing Blow compressed air gently from inside out (2" away) to remove dust particles DO NOT tap these filters to loosen dirt or DO NOT immerse in any fluid.

ELECTRICAL

►*SEE PLYMOUTH V8 PAGES (FOLLOWING) FOR ALL BATTERY, STARTER, GENERATOR, REGULATOR & MISC. ELECTRICAL DATA.*

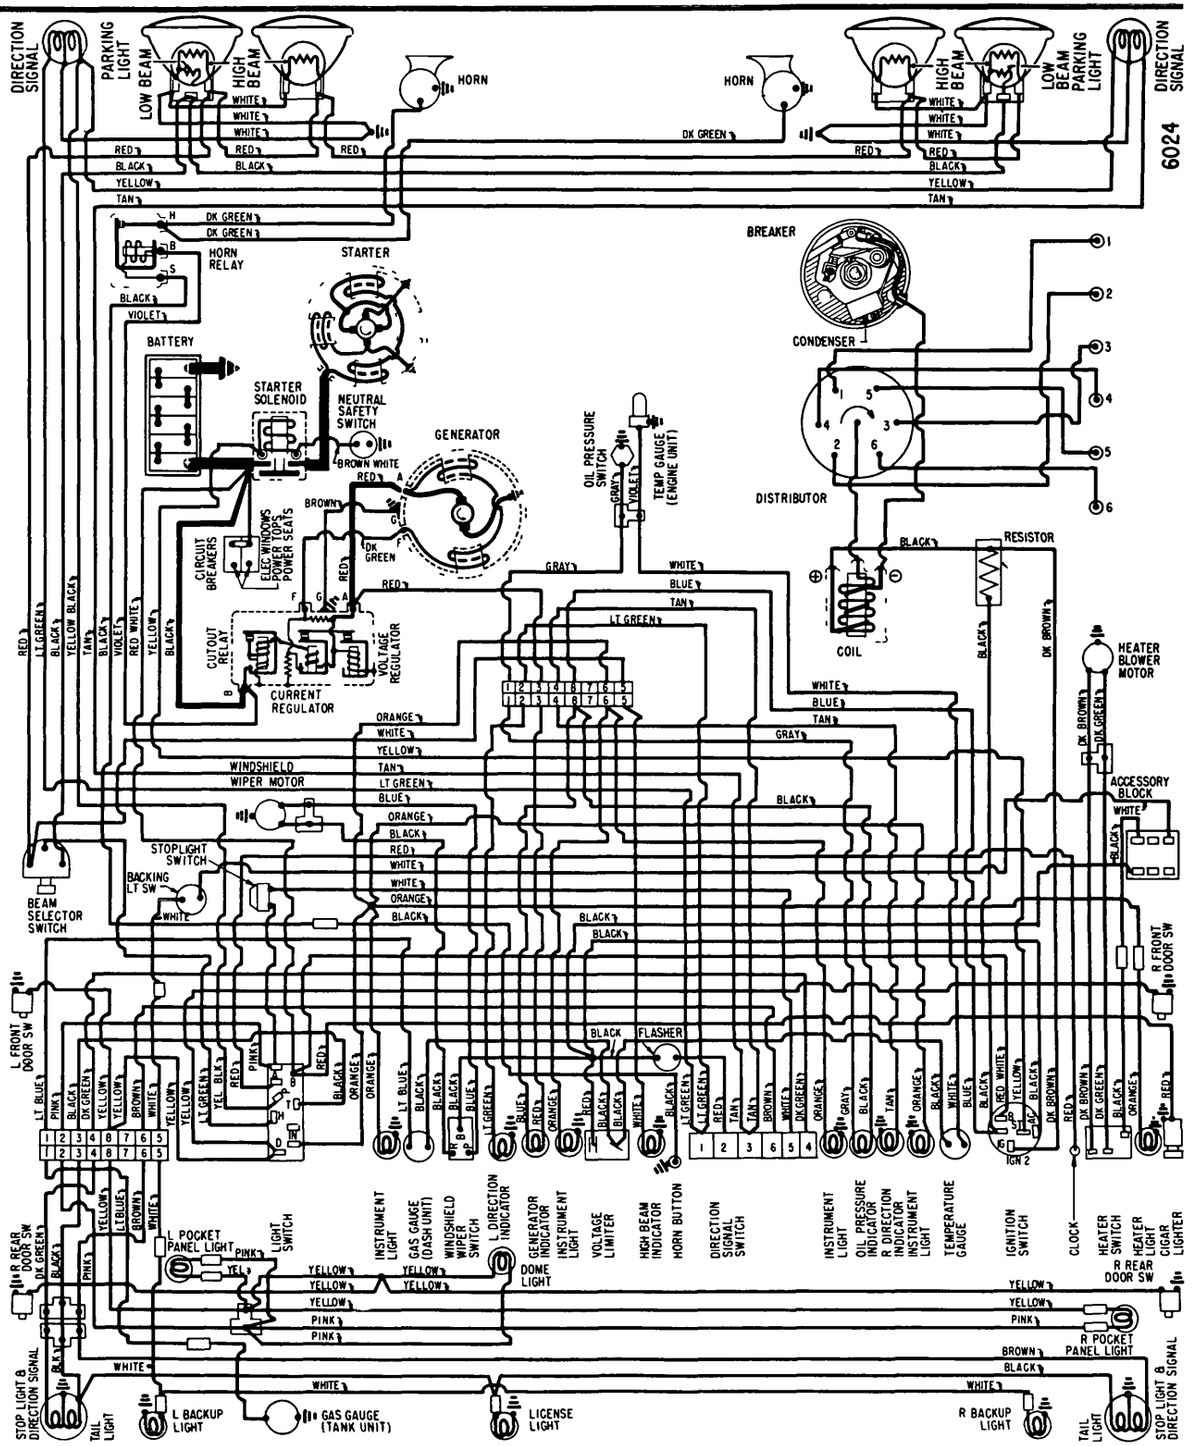
ENGINE

ENGINE SPECIFICATIONS: New "Inclined" Six Cylinder, Overhead valve type *NOTE* - Engine is inclined 30° to right when installed in chassis and bottom of oil pan correspondingly sloped so that it is parallel to the floor

Bore	Stroke	Displacement
3 40"	4 125"	225 cu ins
Compr. Ratio	**Rated HP**	**Developed HP**
8 5-1	27 74	145 at 4000 RPM

Compression & Vacuum Reading - *See TUNE-UP*

►*VALVE PUSHROD BENDING OR BREAKING:* May be caused by insufficient lubrication of valve train due to rear camshaft bearing turning in the block and cutting off the oil lead to the rocker arm shaft When replacing rear camshaft bearing, check for a sufficiently tight fit to prevent bearing turning in service If necessary coat outside diameter of bearing with a high tin-content solder before installation



►*LOW OR INTERMITTENT OIL PRESSURE OR LOSS OF OIL PRESSURE ON TURNS·* May be caused by incorrect positioning of oil pick-up tube and screen assembly in crankcase Can be checked through oil pan drain hole without removing pan Bottom of screen should be parallel with bottom of pan with approximately 1/8" clearance *See "Oil Pick-up Tube & Screen Position" under OIL PAN below*

OIL PAN: Removal - Remove tie rod at steering and idler arms Support engine and remove front engine mounting-to-frame bolts, disconnect and remove left side support (connecting converter housing and cylinder block) Raise engine approximately 2 inches Drain crankcase Remove oil pan bolts, lower pan and remove it toward the rear *CAUTION - Do not turn oil pick-up tube and strainer out of position*

Installation: Check position of oil pick-up tube and screen (see below) Install cork rail gaskets on block using sealer to hold them in position, install front rubber molded gasket on chain case cover Place oil pan in position and install attaching bolts, tighten bolts evenly to 200 **inch lbs** (supersedes original recommendation of 15 ft lbs) Install left side support and tighten bolts to 30 ft lbs Lower engine, install front engine mounting bolts and tighten to 85 ft lbs

►*OIL PICK-UP TUBE & SCREEN POSITION* With oil pan off, make certain that tube is tight in block Check position of screen by placing straightedge vertically in line with inner edge of cylinder block oil pan rail Dis-

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

tance from straightedge to nearest edge of screen should be 1 1/8". *See also "Low or Intermittent Oil Pressure" above.*

ENGINE REMOVAL: *See "Engine" in Plymouth Special Data.*

CYLINDER HEAD: *See "Cylinder Head & Manifold" in Plymouth Special Data.*

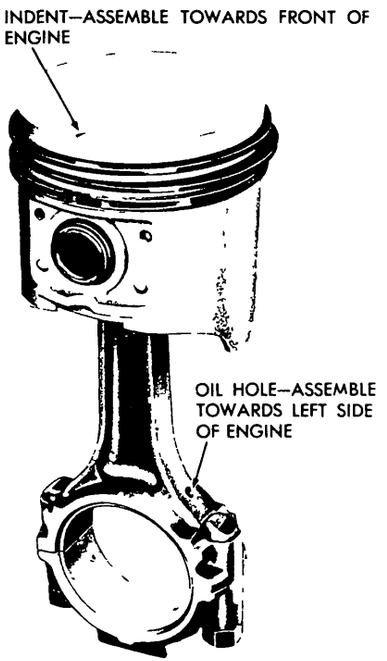
TIGHTENING TORQUES: *See "Tightening Specifications" in Plymouth Special Data.*

PISTONS

Aluminum alloy, cam ground, tin plated, slipper type skirt. Thermally controlled by steel struts.

►*OVERSIZE CYLINDER BORE CAUTION:* Letter "A" (A or AB) incorporated in Engine Number (see Engine Number under MODEL IDENTIFICATION above) indicates all cylinder bores and pistons are .020" Oversize.

Weight - 16.3 ozs.



Removal - Pistons and rods removed from above.

Clearance - .0005-.0015" at top of skirt.

Fitting New Pistons - Use micrometers with piston and cylinder bore clean and dry and at 70°F. Measure piston at top of skirt at right angles to pin hole, measure cylinder bore halfway down and at right angles to crankshaft.

Installing Pistons - Notch in piston head must be toward front of engine. *See Rod Installation.*

Replacement Pistons: Furnished with pins in Std. size and .005", .020", .040" Oversize. *NOTE* - All pistons are machined to same weight.

6 CYL. PISTON & ROD ASSEMBLY

PISTON PIN

Press fit in connecting rod.

Diameter - .9007-.9009". **Length** - 2.955-2.975".

Pin Fit in Piston - .00045-.00075" clearance. Pin should be sliding fit in piston at 70°F.

Pin Fit in Rod - .0007-.0012" Interference fit. Special procedure and tools used for removal & installation. *See "Piston Pins" in Plymouth Special Data.*

Replacement Pins: Std. size only. Furnished as an assembly with new pistons.

PISTON RINGS

Compression rings cast iron (No. 1 is chrome-plated, No. 2 is tin-plated). Oil ring is three-piece type with chrome-plated rails.

Ring	Width	End Gap	Side Clearance
Compr. (1 & 2)	.0775-.0780"	.010-.020"	.0015-.003"
Oil	.1860-.1865"	.015-.055"	.0010-.003"

Installing Rings - Mark "Top" on compression rings must be toward top of engine.

Replacement Rings: Furnished in sets for oversize ranges as follows: Std. to .009", .020" to .029",.040" to .049".

CONNECTING ROD

Length (Center-to-Center) - 6.699".

Weight - 27.34 ozs.

Crankpin Journal Diameter - 2.1865-2.1875". Taper and out-of-round limits .001".

►*JOURNAL DIAMETER CAUTION (ONE OR MORE Journals Machined UNDERSIZE): See CRANKSHAFT below.*

Pin Bore in Rod - .8995-.9000".

Clearance - .0005-.0015". Wear limit .0025".

Side Clearance - .006-.012".

Bearing Adjustment - None, replace bearings.

Installing Rods - Notch in head of piston must be to front of engine, oil squirt hole in lower end of rod must be toward left side of engine.

Replacement Bearings: Std. and .001", .002", .010", Undersize.

CRANKSHAFT

Journal Diameter - 2.7495-2.7505". Taper and out-of-round limit .001".

Bearing Type - Removable, precision type, lead-base babbitt on steel, exc. thrust bearing which is tin-based babbitt on steel.

►*CRANKSHAFT JOURNAL UNDERSIZE CAUTION: Engines with undersize journals identified as follows.*

.010" UNDERSIZE (All Main & Connecting Rod Journals) - Letter "B" (B or AB) incorporated in Engine Number (see Engine Number under MODEL IDENTIFICATION above) indicates that ALL Main and Connecting Rod Journals are .010" undersize

.001" UNDERSIZE (ONE OR MORE Main & Connecting Rod Journals) - Letter (M - Main Journal, R - Connecting Rod Journal) and Number (designates particular journal) stamped on center counterweight of crankshaft indicate that particular journal is .001" Undersize and fitted with .001" thicker wall bearing insert

►*MAIN BEARING NON-INTERCHANGEABILITY CAUTION:* Nos 1 & 2 upper bearings are chamfered along right inside edge at tab end and are interchangeable No 4 upper bearing is not chamfered and is NOT interchangeable with other bearings *(NOTE* - This bearing identified by blue marking on edge) No 3 upper and lower bearings are flanged and NOT interchangeable with other bearings **Upper** and **Lower** bearing halves are NOT interchangeable (upper bearings grooved, lower bearings plain). Nos 1, 2, 4 **lower** bearings are interchangeable *CAUTION - Use of No 1 or 2 upper bearing in No 4 position may cause oil leak, use of No. 4 upper bearing in No 1 position would prevent proper lubrication of timing chain and sprockets*

Clearance - .0005-.0015"

End Thrust - Taken by No. 3 (rear intermediate) flanged bearing. **Endplay** - .002-.007".

Replacement Bearings: Std. and .001", .002", .010", Undersize.

►*MAIN BEARING SERVICING NOTE:* Bearing caps are numbered and must be installed in correct position (not interchangeable).

Crankshaft Rear Main Bearing Oil Seal. *See "Crankshaft & Main Bearings" in Plymouth Special Data.*

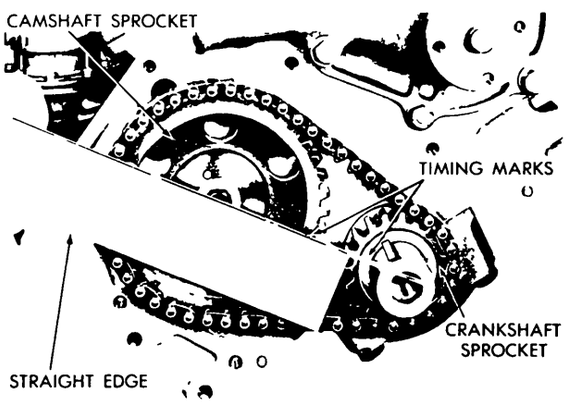
Crankshaft Front Oil Seal: *See "Engine Front Cover" in Plymouth Special Data.*

CAMSHAFT

Journal Diameters - **(1)** 1.998-1.999", **(2)** 1.982-1.983", **(3)** 1.967-1.968", **(4)** 1.951-1.952".

Bearings - Lead-based babbitt on steel.

Clearance - .001-.003". Wear limit .005".



End Thrust: Taken by rear face of sprocket hub on front face of block. No thrust plate used.

Timing Chain: Side guide type. Width .88", Pitch .50", Length 50 links. Replace chain when slack as measured on rim of camshaft sprocket exceeds 11/64" (hold crankshaft sprocket stationary, use torque wrench to turn camshaft sprocket in both directions applying 30 ft. lbs. turning torque if cylinder head installed, 15 ft. lbs. turning torque if head off).

Camshaft Removal: *See "Camshaft & Bearings" in Plymouth Special Data.*

Camshaft Setting: Marks on sprockets must be adjacent and in line with straightedge across shaft centers.

CONTINUED ON NEXT PAGE

6 CYL. ENGINE VALVE TIMING MARKS

CONTINUED FROM PRECEDING PAGE

Engine Front Cover Installation: *See "Engine Front Cover" in Plymouth Special Data.*

Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Plymouth Special Data.*

VALVES

►*INSUFFICIENT VALVE TRAIN LUBRICATION (Rocker Arms, Valve Stems, and Pushrods): See "Camshaft & Bearings" in Plymouth Special Data for inspection of rear camshaft bearing and oil passages in camshaft.*

Tappet Clearance: Initial setting with cold engine .012" Intake, .023" Exhaust. With engine at normal operating temperature and idling, set clearance to .010" Intake, .020" Exhaust.

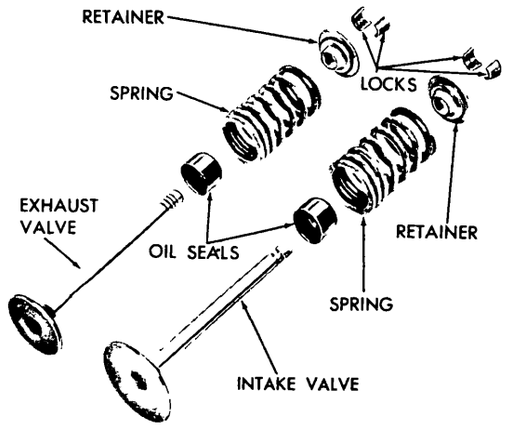
Valve	Head Diam.	① Stem Diam.	Length
Intake	1.615-1.625"	.372-.373"	4.774"
Exhaust	1.355-1.365"	.371-.372"	4.797"

Valve	Seat Angle ④	Lift	Stem Clearance
Intake	45°	.375"	② .001-.003"
Exhaust	45°	.360"	③ .002-.004"

① - Std. Also furnished .005", .015", .030" Oversize.
② - Wear Limit .004". ③ - Wear Limit .006".
④ - Valve face angle 45° (Int.), 47° (Exh.).

Valve Seat Width: 5/64-3/32" Int., 3/64-1/16" Exh.

Valve Stem Oil Seals: Cup type seals used on all valve stems (long seal on intake, short seal on exhaust).



Valve Guides: Integral with cylinder head. Ream valve guide holes for oversize valves if valve stem clearance is excessive. Valves with oversize stems furnished .005", .015", .030" Oversize. Use Reamer Tool No. C-3433 (.005" O.S.), C-3430 (.015" O.S.), C-3427 (.030" O.S.) in sequence.

Valve Springs: Free Length 2".

Valve Spring Specifications

Valve	Pressure	Length
Closed	68-76 lbs.	1 11/16"
Open	160-172 lbs.	1 5/16"

Valve Spring Installation - Valve spring ends must be square within 1/16". Check installed height of spring which must not exceed 1 11/16" (measure from face of spring seat in cylinder head to lower face of spring retainer). If height greater, install 1/16" spacer in head counterbore to bring spring height within limits of 1 5/8" to 1 11/16".

6 CYL. ENGINE VALVE ASSEMBLY

Valve Lifters: Barrel type, removed from above.

Rocker Arm Assembly: *See "Valve System" in Plymouth Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

Valve Timing Specifications

Intake Valves - Open at TDC. Close 52° ALDC.

Exhaust Valves - Open 40°BLDC. Close 8° ATDC.

Valve Timing Check - Remove rocker arm cover, mount dial indicator on cylinder head so that pointer contacts adjusting screw of No. 3 Intake Valve (6th. rocker arm from front of engine). Turn crankshaft until maximum valve lift is indicated on dial indicator. At this point, timing mark on damper should be in line with TDC mark on chain case cover. *NOTE* - If timing is off one tooth, maximum valve lift will occur approximately 27° before or after TDC.

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Plymouth Special Data.*

Crankcase Capacity: 4 qts. refill. Add 1 qt. for filter change.

Normal Oil Pressure: 45-60 lbs. at 40-50 MPH.

Oil Pressure Relief Valve - Located in Pump body.

►*RELIEF VALVE SPRING NOTE:* Three types of spring available. Replace with same color spring, see *"Oiling System" in Plymouth Special Data.*

Oil Pressure Indicator: Indicator light on Instrument panel operated by Oil Pressure Switch, Autolite No. 14272A. On oil pump on right side of block.

Oil Pump: Rotor type, on right side of crankcase.

Overhaul - *See "Oiling System" in Plymouth Special Data.*

Oil Filter: Full flow type. Replace filter element every 4,000 miles, to correspond with oil changes.

Crankcase Ventilation: Filter in oil filler cap (air intake) and outlet vent tube extending from rocker arm cover to lower right rear of engine. Wash filler cap filter in kerosene and re-oil every 5000 miles or more often in dusty areas.

COOLING

Water Capacity: 13 qt. Add 1 qt. for heater installation.

►*AIR CONDITIONER OPERATION CAUTION:* Engine cooling system must be protected to a temperature of 15°F (above zero) for summer operation.

►*FAN-RADIATOR CORE CLEARANCE CAUTION:* Clearance should be ⅜"± ⅛" Thinner fan spacer, Part No. 2120510 can be used to correct.

►*FAN BELT SLIPPING CORRECTION:* Install improved belt, Part No. 2129078.

Pressure Valve: 14 lb. radiator cap (All Models).

Thermostat: Pellet type. In water outlet connection on cylinder head. Starts to open at 177-182°F.

Water Pump: Sealed ball bearing, packless type. No lubrication required.

See "Water Pumps" in Plymouth Special Data.

Pump Removal - Drain cooling system. On Air Cond. cars, remove shroud and loosen fan belt and idler. Remove fan spacer and pulley. Remove retaining bolts and washers and remove pump.

Temperature Gauge: King-Seeley Electric "CV" (Constant Voltage) type with Separate Gauge Voltage Regulator Chrysler No. 2096883.

Dash Unit - Chrysler No. 1972345.

Engine Unit - Chrysler No. 2084459.

See "Temperature Gauges" in Misc Illan ous Section.

MISC. MECHANICAL

►*SEE PLYMOUTH V8 PAGES (FOLLOWING) FOR ALL CLUTCH, SYNCHRO-MESH TRANSMISSION, TORQUE-FLITE SIX, UNIVERSALS, REAR AXLE, SHOCK ABSORBERS, FRONT SUSPENSION, STEERING, BRAKES & MISC. MECHANICAL DATA.*

►*JACKING & HOISTING CAUTION: Before jacking, hoisting, or working under car, see "Jacking & Hoisting Precautions" in Suspension & Wheel Alignment Section.*

MODEL IDENTIFICATION

Model	Model Designation
Savoy	PP2-L
Belvedere	PP2-M
Fury	PP2-H

SERIAL NUMBER: Stamped on plate attached to left front door hinge pillar post. Number (example below) includes identification data.

①②③④ ⑤
3 1 0 1 100001

① - Car Make. **3** Plymouth V8.
② - Model Series. **1** Savoy. **2** Belvedere. **3** Fury. **5** Savoy Station Wagon. **6** Belvedere Station Wagon. **7** Fury Station Wagon. **8** Taxi. **9** Special.
③ - Year. **0** 1960.
④ - Assembly Plant. **1** Plymouth (Detroit). **2** Dodge (Detroit). **5** Los Angeles. **6** Delaware. **7** St. Louis. **9** Canadian Plant.
⑤ - Beginning vehicle number.

ENGINE NUMBER (Exc. 318" Engine): Stamped on boss on top right side of cylinder block just behind water pump. Number (example below) includes identification data.

① ② ③ ④ ⑤
P 36 ... 8 4

① - Year. **P** 1960.
② - Displacement. **36** 361 cu. ins. **38** 383 cu. ins.
③ - If this space blank, engine is standard. For identifying marks, see *"Engine Number Marks (All Engines)"* below.
④ - Month Assembled. **8** August, etc.
⑤ - Day Assembled. **4** 4th day, etc.

►*361" & 383" ENGINE NUMBER NOTE: Some early engines were marked with engine displacement followed by a serial number, similar to the type of marking used on 318" engines (below).*

318" Engine: Stamped on front face of left hand cylinder block. Number (example below) includes identification data.

① ② ③
P 318 1001

① - Year. **P** 1960.
② - Engine displacement.
③ - Beginning serial number.

►*318" ENGINE NUMBER NOTE: To identify marks following the engine number, see "Engine Number Marks (All Engines)" below.*

►*ENGINE NUMBER MARKS: Identified as follows:*
"A" - All cylinders .020" oversize.
"B" - All crankshaft journals .010" undersize.
"AB" - Both above conditions exist.
"Main Cross" (3/8" high) - ONE OR MORE crankshaft journals .001" undersize. See *"Connecting Rods"* and *"Crankshaft"* below.
♦ (3/8" high) - One or more valve lifters .008" oversize.

TUNE-UP

COMPRESSION PRESSURE: 125-165 lbs. (318" Eng.); 150-180 lbs. (361" & 383" Engs.). Maximum variation between cylinders 20 lbs. (318" Eng.), 30 lbs. (361" & 383" Engs.).

VACUUM READING: 19.5" at idle speed.

VALVE TAPPET CLEARANCE: Zero lash, hydraulic lifters, except as follows:
318" Engine - .010" Intake, .018" Exhaust, hot with engine idling.
383" Engine (Ram Manifold with Mechanical Lifters) - .016" Intake, .028" Exhaust, Cold.

MANIFOLD HEAT CONTROL: Thermostatically controlled valve located at exhaust manifold outlet on right side of engine. Valve must operate freely (lubricate with Special Lubricant, Part No. 1879318). To install coil spring, position shaft in extreme counterclockwise position. Place coil spring over shaft slot with outer end tongue in lower right hand position. Press inner end of coil into slot of shaft and seat firmly. Move outer end of coil spring one complete revolution counterclockwise and hook over stop stud.

►*RAM MANIFOLD HEAT CONTROL VALVE NOTE:* Two heat control valves used, one in each cylinder bank exhaust manifold outlet. When valve is closed, exhaust gases are diverted through bypass pipe around hot spot in intake manifold.

►*THERMOSTATIC COIL SPRING CHANGE TO CORRECT SPARK PLUG FOULING: See "Spark Plugs" below.*

IGNITION

FIRING ORDER: 1-8-4-3-6-5-7-2.
Cylinders - RIGHT BANK 2-4-6-8, LEFT BANK 1-3-5-7.

SPARK PLUG GAP: .035".
Spark Plugs - Autolite A42 (Std. Engines), A32 (High Perf. Engines). 14 mm. Torque to 30 ft. lbs.

►*SPARK PLUG FOULING CORRECTION (Early Ram Induction Engines):* Condition may occur under extended idle and low speed operations. To correct, install new later production manifold heat valve thermostatic spring, Part No. 2128933 (5 coils). Enlarge to 7/8" the hole in elbow which connects intake and exhaust manifolds (provides more heat to heat riser). Make sure both automatic chokes are operating correctly, that heat control valve stop arm is not bent, and that asbestos silencing pad at heat valve is not missing or worn through. *CAUTION - DO NOT use higher heat range spark plugs to correct this condition as severe engine damage will result.*

COIL: Autolite No. 200575.
Ignition Current - 2.5 amps. idling, 3.1 amps. stopped.
Resistor - Autolite 201000. Connected in lead between ignition switch and coil. Bypassed during cranking by second lead from ignition switch.

DISTRIBUTOR: Autolite. Used as follows:

Engine	Autolite Distributor No.
318" Synchro-mesh (2-Bbl.)	IBP-4003T
318" Auto. Trans. (2-Bbl.)	IBP-4003L
318" Power Pack (4-Bbl.)	IBP-4003P
361" & 383" (One or Two 4-Bbl.)	IBS-4006D
361" & 383" (Ram Induction)	IBS-4006E

NOTE - "IBS" distributors are double breaker type.
Condenser - Autolite IAT-3076LA. **Capacity** .25-.285 mfd.
Contact Point Set - Autolite IBP-3028AS (IBP Distr.), IGW-3028JS (IBS Distr.).
Breaker Gap - .015-.018". Set at .017".
Cam Angle (IBP Distr.) - 26-32°.

►*CAM ANGLE SETTING CAUTION (IBP Distributor):* Cam angle should be set with vacuum line disconnected.
Cam Angle (IBS Distr.) - 26-32° (single set of points), 31-37° (both sets operating together).
Breaker Arm Spring Tension - 17-20 ozs.
Rotation - Clockwise (IBP Distr.), Counterclockwise (IBS Distr.) viewed from above.

IGNITION TIMING

Engin	Setting
318" Synchro-mesh 2-Bbl.	①5° BTDC
318" Auto. Trans. 2-Bbl. or 4-Bbl.	①10° BTDC
361" 4-Bbl.	①10° BTDC
361" Ram Induction	②7.5° BTDC
383" One or Two 4-Bbl.	①12.5° BTDC
383" Ram Induction	②7.5° BTDC

① - At 500 RPM with vacuum line disconnected.

② - Set timing with vacuum line disconnected and engine idling below 600 RPM (transmission in neutral and air conditioning compressor off). After timing correctly set, readjust engine idle speed to 725-750 RPM.

Timing Mark (318" Eng.) - Graduation marks on crankshaft pulley and pointer on chain case cover. Align proper mark on pulley with pointer.

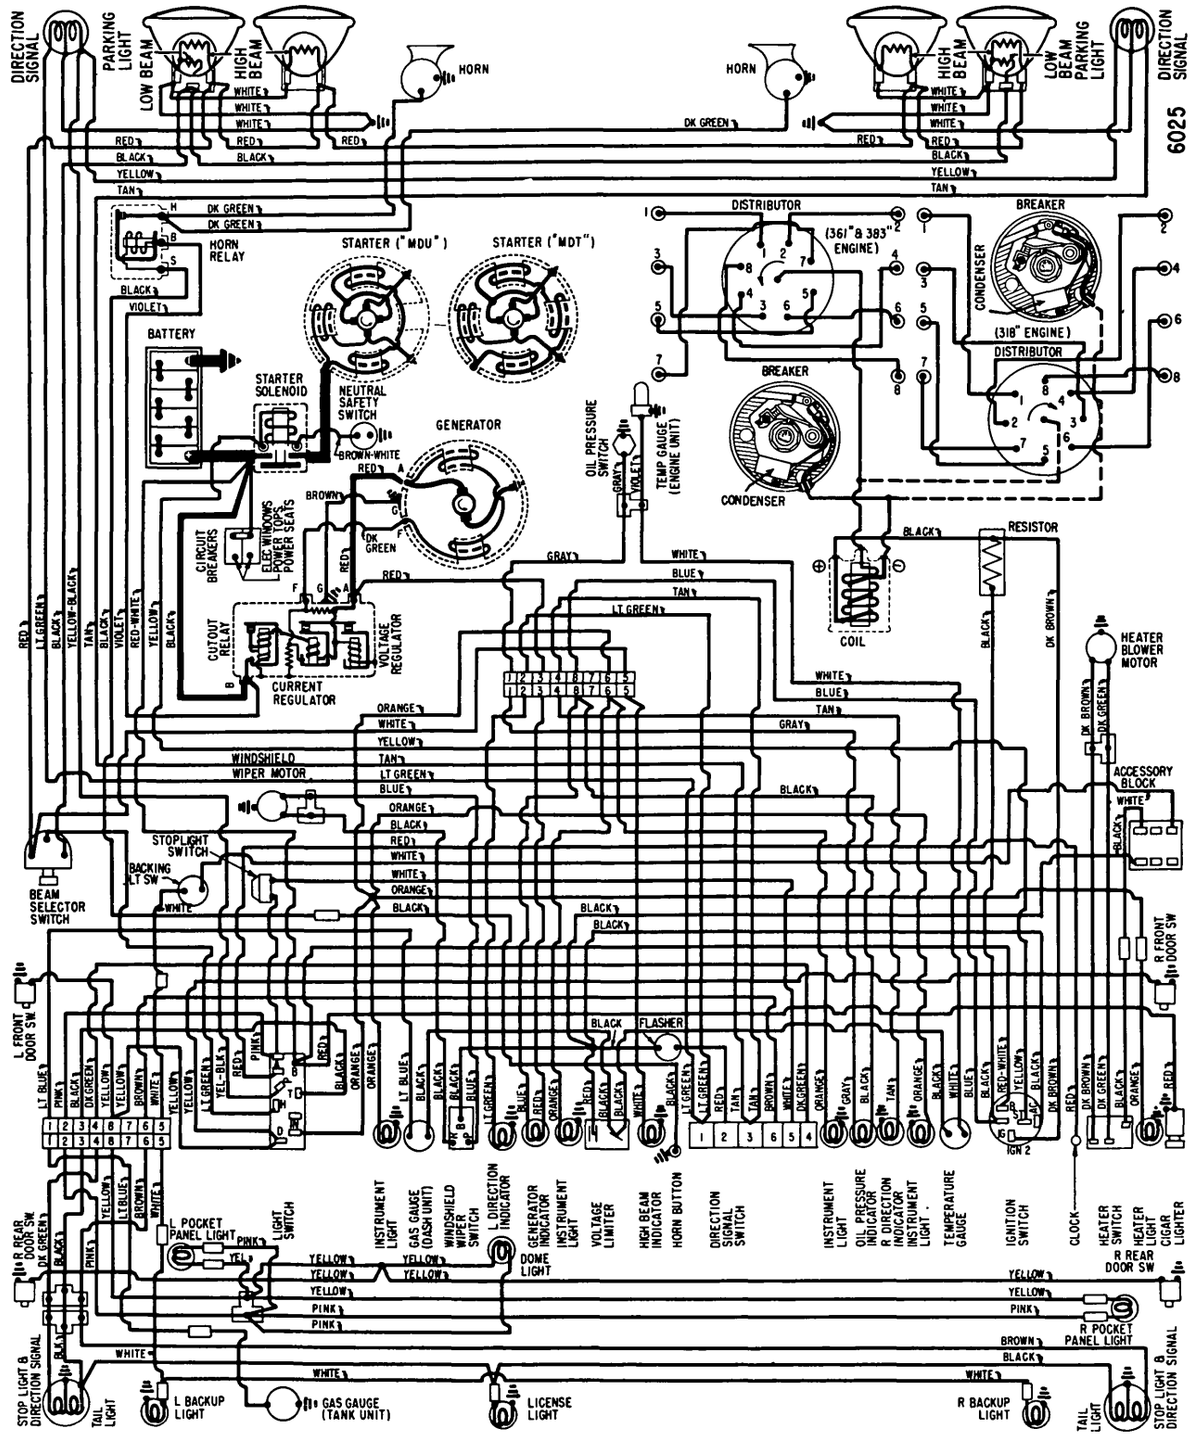
Timing Mark (361" & 383" Engs.) - Mark on vibration damper and graduations on indicator on timing chain cover. Align vibration damper mark with proper mark on indicator.

CARBURETOR

►*CARBURETOR APPLICATION: Carter & Stromberg carburetors used as follows:*

Engine	Carburetor
318" Std.	One Carter or Stromberg WW 2-Bbl.
318" Power Pack	One Carter AFB 4-Bbl.
361" & 383" Std.	One Carter AFB 4-Bbl.
383" High Performance	One Carter AFB 4-Bbl.
383" Two Carbs.	Two Carter AFB 4-Bbl.
361" & 383" Ram Induction	Two Carter AFB 4-Bbl.

►*HARD COLD STARTING (Cars with cross-over choke carburetors):* May be caused by choke vacuum unloader piston sticking and may be corrected by squirting carburetor cleaner, lacquer thinner, or alcohol through piston link opening in air horn. Operate valve to flush out gum formation.



►*EXCESSIVE ACCELERATOR PEDAL EFFORT CORRECTION (RAM INDUCTION ENGINES):* Install new accelerator return spring bracket, Part No. 2129668, and new return spring, Part No. 1320133, on both right and left carburetors.

THROTTLE LINKAGE ADJUSTMENT (EXC. RAM INDUCTION): With engine at operating temperature and idling at 475-500 RPM (carburetor off fast idle and transmission in "N"), stop engine, loosen locknuts on transmission throttle lever and on carburetor throttle rod. Insert a 3/16" diameter rod through holes in bellcrank and lever, hold transmission throttle lever forward against its stop and tighten locknut. Remove 3/16" diameter rod. Make sure carburetor throttle lever is off fast idle cam and against idle stopscrew and move carburetor throttle rod rearward until stopped by internal stop in transmission. Tighten locknut. Accelerator pedal should be at an angle of 114° to horizontal. To adjust, remove pedal end of bellcrank-to-pedal rod and adjust length of rod by loosening locknut at swivel end and rotating swivel.

THROTTLE LINKAGE ADJUSTMENT (WITH RAM INDUCTION): With engine at normal operating temperature (carburetor off fast idle and transmission in "N"), **proc d xactly as f ll ws:**

1) Loosen locknuts on transmission throttle rod and on bellcrank-to-accelerator shaft rod. Insert a 3/16" diameter rod into holes in accelerator shaft bracket and

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

lever Move transmission throttle lever forward against its stop and tighten transmission throttle rod locknut

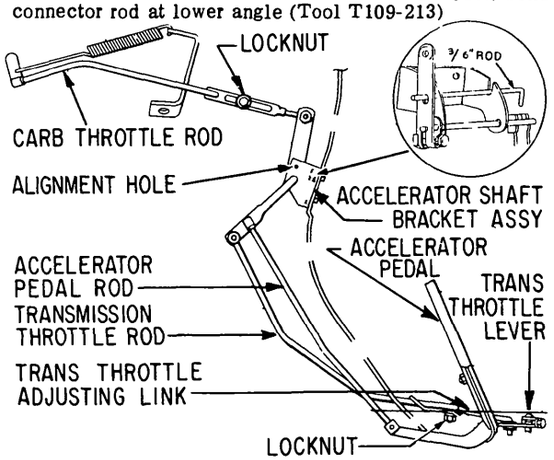
2) With accelerator pedal disconnected from accelerator shaft rod, adjust length of rod so accelerator pedal is 114° to horizontal measured on flat face of accelerator pedal Reconnect rod and remove 3/16" diameter rod from accelerator shaft bracket

3) Loosen locknuts on both right and left carburetor-to-bellcrank rods and back off anti-stall dashpot plunger sufficently so bellcrank will pivot (hold dashpot push-rod when turning setscrew to prevent damage to diaphragm) Pivot bellcrank so 3/16" diameter rod can be inserted through hole in bellcrank and into locating hole in intake manifold Make sure choke valves are open, fast idle cams released and throttle valves are closed on both carburetors Tighten carburetor-to-bellcrank rod locknuts and remove 3/16" diameter rod Now push adjusting link on bellcrank-to-accelerator shaft rod rearward until stop is felt and tighten locknut

4) Start engine and make sure idle speed of 725-750 RPM correctly set with transmission in "N" and air conditioning compressor "ON" Put transmission in "D" with parking brake applied and adjust anti-stall dashpot plunger so there is 010" clearance between dashpot plunger and bellcrank

CARTER BBD 2-BARREL

Cart r BBD, N . 2921S (Synchro-mesh), 2922S (Auto. Trans.).



►*MANIFOLD FUEL DISTRIBUTION Carburetor RIGHT barrel feeds Cyls 2-3-5-8, LEFT barrel feeds 1-4-6-7*

Idl S tting - ¼-1½ turns open Adjust both screws alike Turn screws out for richer mixture

Idle Spe d - 500 RPM (550 RPM on Air Cond Cars with Air Cond "ON"), with automatic transmission in "N" (neutral)

Fl at L v l - 9/32" (Gauge T109-239)from top of each float (at free end) to top surface of body casting To adjust, bend lip of float arm

Acc lerating Pump - Install connector rod in center hole (medium stroke) of throttle lever With throttle valves closed, distance between top of pump shaft and top of air horn should be 1 1/8"±1/64" To adjust, bend connector rod at lower angle (Tool T109-213)

THROTTLE LINKAGE (EXC RAM INDUCTION)

Fast Idl : 015" (Gauge T109-44) throttle valve opening or clearance between lower edge of valve and bore with adjusting screw on high step of fast idle cam

Fast Idle Cam Clearance - With choke valve closed and lug on fast idle cam contacting lip on choke shaft lever, center of fast idle screw should align with index mark on cam To adjust, bend lip on choke shaft lever

Fast Idle Speed - 1375-1425 RPM with fast idle screw at index mark on high step of fast idle cam

Automatic Choke: "Cross-Over" type Set on index

Throttle Linkage Adjustment: *See CARBURETOR above*

►*OTHER DATA See "Carter BBD Carburetors" in Carburetion Section.*

STROMBERG WW 2-BARREL

Stromberg WW. Code 15-41, A (Synchro-mesh), No. 15-42 (Auto. Trans.).

►*HESITATION OR STUMBLE ON LIGHT ACCELERATION CORRECTION (WW 15-42):* Install new main metering jets and main discharge nozzle *See "Stromberg WW (Buick, Dodge, Plymouth) Carburetors" in Carburetion Section*

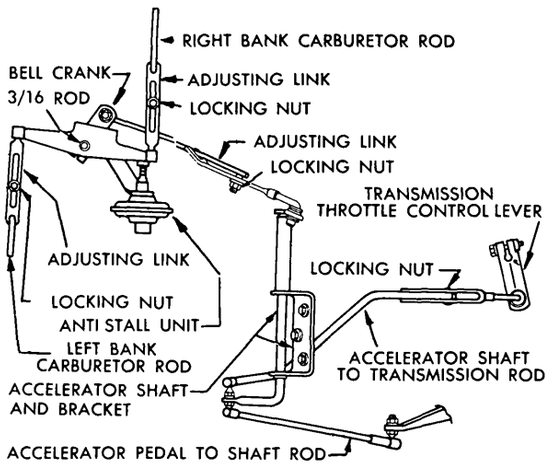
►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyls 2-3-5-8, LEFT barrel feeds 1-4-6-7*

Idle Setting - 1¼ turns open Adjust both screws alike Turn screws out for richer mixture

Idle Speed - 500 RPM (550 RPM on Air Cond Cars with Air Cond "ON"), with automatic transmission in "N" (Neutral)

Float Level - 7/32" from top of float (at center) to top of main body with gasket removed and lip of float held firmly against needle valve Check with Tool 73519 To adjust, bend float lip

Accelerating Pump - Normal setting, pump rod connected in center hole of throttle lever With choke valve open, pump travel should be 9/32-5/16" as throttle valves are moved from fully closed to wide open position To adjust, bend pump rod at lower angle (Tool T109-213)



Fast Idle: Turn throttle stopscrew out so that throttle valves are completely closed Hold throttle valves closed, and back out fast idle screw until fast idle cam can be positioned with fast idle screw on high step of cam against shoulder on cam Turn screw in until it just contacts cam, **th n turn scr w in an additi nal 8 turns.** With fast idle cam held in this position, close choke as far as possible with light pressure, check clearance between upper edge of choke valve and air horn wall using 13/64" drill rod If opening not correct, adjust by bending fast idle rod at upper bend

Fast Idle Speed - 1375-1425 RPM with fast idle screw on high step of fast idle cam

Automatic Choke: "Cross-Over" type Set at index

Throttle Linkage Adjustment: *See CARBURETOR above*

►*OTHER DATA· See "Stromberg WW (Buick, Dodge, Plymouth) Carburetors" in Carburetion Section.*

THROTTLE LINKAGE WITH RAM INDUCTION

CARTER AFB 4-BARREL
(Single Carburetor)

Engine	Carter No.
318" (Power Pack)	2925S

CARTER AFB 4-BARREL
(Ram Manifold Installation with Two Carbs.)

Carter AFB, No. 2903S. Two carburetors used, one at each side of engine

►*MANIFOLD FUEL DISTRIBUTION RIGHT carburetor feeds left bank cylinders, LEFT carburetor feeds right bank cylinders*

►*IDLE SPEED ADJUSTMENT NOTE: Idle Air Bypass screw on throttle body is used to adjust idle speed Throttle valves are normally closed on slow idle*

Idle Mixture & Speed Setting - Special procedure required to insure correct mixture and speed (idle air) screw settings *See "Carter AFB 4-Barrel Carburetors" in Carburetion Section*

Throttle Linkage & Carburetor Interconnecting Linkage Adjustments: *See CARBURETOR above.*

►*OTHER DATA See "Carter AFB 4-Barrel Carburetors" in Carburetion Section.*

CARTER AFB 4-BARREL
(Front & Rear Carburetors)

Carter AFB No. 2790S (Front), No. 2791S (Rear).

Interconnecting Linkage Adjustment - Both front and rear carburetor levers should operate freely and in same plane Correct either bent or damaged levers. *NOTE - Install interconnecting rod with slotted end connected to low r hol in front carburetor throttle lever and end connected at t p h l of r ar carburetor throttle lever* Hold r ar carburetor throttle wide open (choke in full

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

open position) and adjust slotted end of rod so front carburetor throttle valves will also be in wide open position Tighten locknut and check operation Interconnecting rod must rotate slightly on pivots without bind in any position

Idle Speed & Mixture Adjustment - Special procedure required to insure correct mixture and speed (Idle Air) screw settings *See "Carter AFB 4-Barrel Carburetors" in Carburetion Section*

Throttle Linkage Adjustment: *See CARBURETOR above*

►*OTHER DATA See "Carter AFB 4-Barrel Carburetors" in Carburetion Section*

CARB. EQUIPMENT

Fuel Pump: Carter. No. M2608S (318" Eng. Std.), No. M2611S (318" Eng. Air Cond.), No. M2769S (361" & 383" Eng.).

Fuel Pump Pressure - 5-7 lbs (318" Eng), 3½-5 lbs (361" & 383" Eng)

See "Fuel Pumps" in Carburetion Section

Fuel Filter: Located in carburetor inlet line Replace every 9000 miles or if clogged

Gasoline Gauge: King-Seeley Electric "CV" (Constant Voltage) type with separate Gauge Voltage Regulator, Chrysler No 2096883

Dash Unit - Chrysler No 1972344

Tank Unit - Chrysler No 2084272 (Suburban), No 2084062 (Others), No 2084063 (With Optional 23 Gal Tank)

See "Fuel Gauges" in Carburetion Section

Air Cleaner: Paper element type Clean every 5000 miles, replace element every 15,000 miles Service more often under severe operating conditions

►*CLEANING CAUTION·* Clean filter element by blowing out with compressed air from the inside surface of element Hold air nozzle 2" from element to avoid damage DO NOT oil, lubricate or wash element

BATTERY

6 Cyl. & 318" Eng. Autolite 11-HS-50 or Willard HO-11-50 or Gould 11-OE-50. 12 volt, 9 plate, 50 ampere hour capacity (20 hr rate)

361 & 383' Eng.: Autolite 11-HS-60 or Willard HO-11-60 or Gould 11-OE-60 12 volt, 11 plate, 60 ampere hour capacity (20 hr rate)

►*NOTE* 70 Amp battery optional on all models

Battery Ground - Negative

STARTER

Autolite No. MDT-7002 (6 Cyl.), No. MDU-7001 (318" Eng.), No. MDT-7001 (361" & 383" Eng.)

Armature - Autolite No 16-84 (MDT-7002), No 16-75 (MDU-7001 & MDT-7001)

Drive - Bendix "Folo-Thru" type

Rotation - Counterclockwise at commutator end

Brush Spring Tension - 31-47 ozs

Performance Data - MDT-7001, 7002

Torque	RPM	Volts	Amperes
0 ft lbs	3600	10 0	56
8 5 ft lbs	Lock	4 0	350

Performance Data - MDU-7001

Torque	RPM	Volts	Amperes
0 ft lbs	5300	10 0	50
6 2 ft lbs	Lock	4 0	280

Starting Switch: Chrysler No 1692658 (Synchro-mesh), No 1692659 (Auto Trans) Magnetic switch controlled by Ignition & Starter Switch No 2097628 Neutral Safety Switch No 1704283 mounted on transmission on automatic transmission cars

Neutral Safety Switch Adjustment - *See "TorqueFlite Six", "PowerFlite" and "TorqueFlite" in Transmission Section*

GENERATOR

Autolite. Used as follows

Model	Generator
Standard	GJM-8201A
Low Cut-In	GHM-8001B
Single Unit Air Cond	GJM.8202A
Dual Unit Air Cond	GHM-8002A
Heavy Duty Air Cond	GGA-6003F
Heavy Duty Without Air Cond	GGA-6003E

►*GENERATOR WIRING BURNING CORRECTION (318" Eng)* Make sure clips holding generator wiring near choke housing keep wires at least ½" from intake manifold

Performance Data - GJM (Cold - 70°F)

Amperes	Volts	RPM
0	12 8	1150
35	15 0	2100

Performance Data - GHM (Cold - 70°F)

Amperes	Volts	RPM
5 0	14 0	875
25 0	15 0	1350
30 0	15 0	1500

Performance Data - GGA (Cold - 70°F)

Amperes	Volts	RPM
4 0	14 6	950
40 0	14 6	1600
40 0	15 0	1600

Brush Spring Tension - 18-36 ozs (GJM) 35-53 ozs (GHM), 34-41 ozs (GGA)

Field Current - 1 6-1 7 amps (GJM) 1 1-1 3 amps (GHM & GGA) All at 10 0 volts and 70°F

Motoring Current - 3 3-3 7 amps (GJM), 3 0-3 5 amps (GHM), 2 3-2 6 amps (GGA) All at 10 0 volts and 70°F

Rotation - Counterclockwise at commutator end

Belt Adjustment: Deflection with 5 lb force applied as shown in table below Place straightedge across pulleys to measure deflection

	318" Eng.		361" & 383" Engs	
Belt	New	Used	New	Used
Gen (No A C)	5/32"	1/4"	5/32"	1/4"
Gen (A C)	1/8"	3/16"	1/4"	3/8"
Idler (Water Pump)	3/32"	3/16"	1/16"	1/8"

6 Cyl. Eng. - 1/8" new, 1/4" used

REGULATOR

Autolite. Used as follows

Regulator	Generator Type
VBO-4202C	GHM (30 Amp)
VBO-4202B	GJM (35 Amp)
VBO-4202A	GGA (40 Amp)

Cut Out Relay

Cuts In - 12 5-13 5 volts

Cuts Out - 3-5 amps discharge current after charging at 7 amps

Contact Gap - 015" minimum

Air Gap - 025- 027"

Voltage Regulator

Setting - 14 3-14 8 volts charging at 7 amperes and 80°F or with a 25 ohm resistor in series between regulator and battery

Air Gap - 048- 052" with contacts just opening (check at brass armature stop pin)

Checking & Adjusting - *See "Autolite 12-Volt Regulators" in Electrical Section*

Current Regulator

►*SETTING CAUTION "Temperature Compensated" type Set to following specifications at 70°F*

Regulator	Test A - Operating Amps - Test B
VBO-4202C	37 30 (28 32)
VBO-4202B	44 35 (33-37)
VBO-4202A	49 40 (38-42)

Test A - After 15 minutes operation charging at 7 amps

Test B - After additional 15 minutes operation with current regulator operating and load applied to hold voltage down to 13 6-13 8 volts

Air Gap - 048- 052" with contacts just opening (check at brass armature stop pin)

Checking & Adjusting - *See 'Autolite 12-Volt Regulators" in Electrical Section*

MISC. ELECTRICAL

Headlights: 4-Headlight System *See "4-Headlight Systems" in Electrical Section*

Direction Signals: *See Electrical Section*

Automatic Beam Changer· *See Electrical Section*

Electronic Rear View Mirror: *See Electrical Section*

Stop Light Switch Location: On forward end of brake master cylinder

CIRCUIT BREAKERS: 22.5 Ampere - Headlights, Parking lights, High Beam Indicator In headlight switch

15 Ampere - Tail, Stop, License, Instrument, Dome lights In headlight switch

6 Ampere - Variable speed windshield wiper & back-up lights On wiper motor

5 Ampere - Single speed windshield wiper & back-up lights On wiper motor

FUSES: 20 Ampere - Heater

20 Ampere - Air Conditioner (front)

20 Ampere - Air Conditioner (rear)

7.5 Ampere - Radio

2 Ampere - Clock

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION Use extreme care when disconnecting any part of air conditioning equipment or lines for access to engine S "Air Conditioning Service Cautions" in Miscellaneous Section*

ENGINE SPECIFICATIONS: Own. 90° V8, valve-in-head 318", 361" & 383" engines of same designs used previously *NOTE* - 383" engine is same design as 361" engine

►*RAM INDUCTION ENGINE NOTE These engines are same as standard 361" & 383" engines except for Ram Induction Manifold (two carburetors) and special camshaft*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

►*TWO CARBURETOR ENGINE NOTE· This 383" engine has two carburetors mounted front and rear on a single manifold Reference in following data will be to "2 Carbs"*

Engine	Bore	Stroke	Displacement
318"	3 910"	3 310"	318 cu ins
361"	4 125"	3 375"	361 cu ins
383"	4 250"	3 375"	383 cu ins

Engine	Compr.Ratio	Rated HP	Developed HP
318" (2-Bbl)	9 0-1	48 9	230 at 4400 RPM
318" (4-Bbl)	9 0-1	48 9	255 at 4400 RPM
361" (4-Bbl)	10 0-1	54 3	305 at 4800 RPM
361" (Ram Ind)	10 0-1	54 3	310 at 4800 RPM
383" (4-Bbl)	10 0-1	57 8	325 at 4600 RPM
383" (2 Carbs)	10 0-1	57 8	330 at 5200 RPM
383" (Ram Ind)	10 0-1	57 8	330 at 4800 RPM

Compression & Vacuum Reading - See *TUNE-UP*

►*318" ENGINE CHAIN CASE COVER & GASKET CAUTION* New cast aluminum covers used on some engines require new gasket Nos 1618685 (Chain case cover), 1676031 (Water Pump)

ENGINE REMOVAL: *See "Engine" in Plymouth Special Data*

CYLINDER HEAD & MANIFOLD: *See "Cylinder Head & Manifolds" in Plymouth Special Data*

TIGHTENING TORQUES: *See "Tightening Specifications" in Plymouth Special Data*

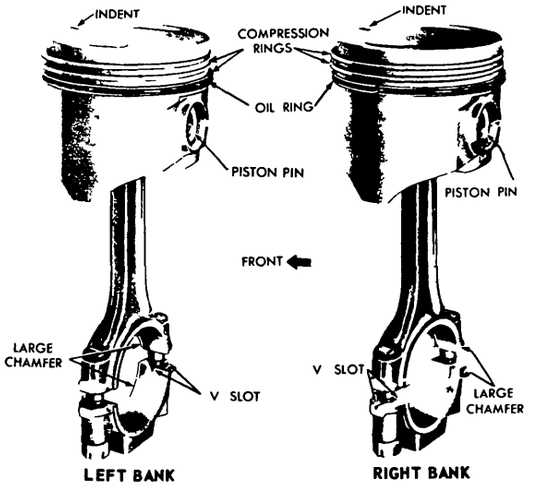
OIL PAN REMOVAL (318" Engine): Remove dipstick drain crankcase and disconnect steering linkage from steering arm Remove starter, exhaust crossover pipe and converter dust shield Disconnect front engine mounts and raise engine about 1¼" Remove oil pan bolts and remove pan, turning sideways to clear crossmember *NOTE* - When installing, bottom surface of oil strainer must be parallel to lower machined surface of cylinder block

OIL PAN REMOVAL (361" & 383" Engines): Disconnect battery Raise car and disconnect steering linkage from idler and steering arms Remove outlet breather pipe and disconnect exhaust pipe branches from both manifolds Remove exhaust pipe Drain crankcase and remove converter dust shield Remove oil pan bolts and remove pan, turning counterclockwise to clear oil screen and suction pipe *NOTE* - When installing, bottom surface of oil strainer must be on a horizontal plane with machined surface of cylinder block

PISTONS

Aluminum alloy, elliptically turned, tin-plated, thermally controlled by steel band (318"), steel struts (361" & 383")

►*CYLINDER BORE OVERSIZE NOTE Letter "A" within engine number indicates that cylinder bores are .020" Oversize*



Weight - 20 9 ozs (318"), 25 6 ozs (361"), 27 2 ozs (383")

Removal - Pistons and rods removed from above

Fitting New Pistons· Clearance (318") - 0005- 0015" on thrust side at top of skirt With .0015" x ½" feeler inserted between cylinder wall and piston at thrust face, pull to withdraw feeler should be 5-10 lbs

Clearance (361" & 383") - 0005- 0010" between thrust face of piston and cylinder wall, measured at top of skirt on piston, and halfway down cylinder wall, crosswise to engine

Installing Pistons. Notch in piston head must be toward front of engine Assemble piston to rod with notch on same side as large chamfer on lower end of connecting rod (left bank cylinders, 1-3-5-7), with notch on side opposite to large chamfer at lower end of connecting rod (right bank cylinders, 2-4-6-8) *See Rod Installation*

V8 ENGINE PISTON & ROD ASSEMBLY

Replacement Pistons: Furnished Std , .005", .020" & .040" Oversize with fitted pins

PISTON PIN

318" Engine - Floating type with lock ring at each end

361' & 383" Engines - Piston pin is tight press fit in connecting rod and special removal and installation procedures are required Piston pins are available only with new pistons

361" & 383" Engines - Piston pin is tight press fit in connecting rod and special removal and installation procedures are required Piston pins are availableonly with new pistons

Diameter - .9842" (318"), 1.0935-1.0937" (361" & 383")

Length - 2.995" (318"), 3.555-3.575" (361" & 383")

Clearance in Piston (318") - .0000- .0005" Thumb press fit at 70°F

Clearance in Piston (361" & 383") - .00045- .00075" Light thumb press fit at 70°F

Clearance in Rod (318") - .0001- .0004" (selective) Thumb press fit at 70°F

Clearance in Rod (361" & 383") - .0007- .0012" interference fit.

Piston Pin Removal & Installation (361" & 383") - *See "Piston Pins" in Plymouth Special Data*

Replacement Pins: Std , .003", .008" Oversize (318") Furnished only with new pistons (361" & 383")

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr (1 & 2)	.0775- .0780"	©	.0015- .0030"
Oil (3)	.1860- .1865"	©	.0010- .0030"

© - .010- .020" (318") .013- .025" (361" & 383")

Installing Rings: Install compression rings with "Top" mark toward top of piston

Replacement Rings: Furnished for oversize ranges of Std to .009", .020" to .029", .040" to .049"

CONNECTING ROD

Length (Center-to-Center) - 6.123" (318"), 6.356-6.360" (361" & 383")

Weight - 25 6 ozs (318"), 29 8 ozs (361" & 383")

Crankpin Journal Diameter - 2.124-2.125" (318"), 2.374-2.375" (361" & 383")

►*JOURNAL DIAMETER CAUTION (ONE OR MORE Journals Machined UNDERSIZE) See CRANKSHAFT below*

Lower Bearing - Removable precision type Bi-Metal Grid (318"), Lead base babbitt on steel (361" & 383")

Clearance - .0005- .0015" Wear limit .0025" All Engines

Sideplay - .006- .014" (318"), .009- .017" (361" & 383") Total for both rods

Installing Rods: With piston correctly installed on connecting rod (see PISTONS above), larger chamfer on lower end of rod should be installed toward nearest crankshaft journal fillet Oil grooves in rod and bearing cap must be together

Replacement Bearings: Std , & .001", .002", .003", .010", .012" Undersize

CRANKSHAFT

Journal Diameter - 2.4995-2.5005" (318"), 2.6245-2.6255" (361" & 383")

►*CRANKSHAFT JOURNAL UNDERSIZE CAUTION. Engines with undersize journals identified as follows*

.010' UNDERSIZE (ALL Main & Connecting Rod Journals) - Letter "B" within engine number and on a crankshaft counterweight indicates that ALL Main & Connecting Rod Journals are .010" Undersize

.001 UNDERSIZE (ONE OR MORE Main & Connecting Rod Journals) - A "Maltese Cross" (3/8" high) within engine number indicates that one or more connecting rod and main bearing journals are machined .001" undersize On 318" engine, position of undersize journals is stamped on No 6 counterweight On 361" and 383" engines position of undersize Main Journals is stamped on No 2 counterweight and position of undersize Connecting Rod Journals is stamped on No 3 counterweight Connecting rod journals will be identified by letter "R" and main journals by letter "M" The number following letter "R" or "M" indicates journal number

Bearings - Removable precision type Tin based babbitt on steel (No 3 thrust bearing) lead based babbitt on steel (Others)

Clearance - .0005- .0015" Wear limit .0025" All Engines

Replacement Bearings - Std & .001", .002", .003", .010", .012" Undersize

►*BEARING INTERCHANGEABILITY NOTE* Upper and lower halves of **any** bearing are **not** interchangeable No 3 bearing is not interchangeable with other bearings On 318" engine, No 5 bearing is not interchangeable with other bearings

End Thrust: Taken by flanged No 3 (center) main bearing

Endplay - .002- .007"

Crankshaft Rear Main Bearing Oil Seal: *See "Crankshaft & Main Bearings" in Plymouth Special Data*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Plymouth Special Data*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

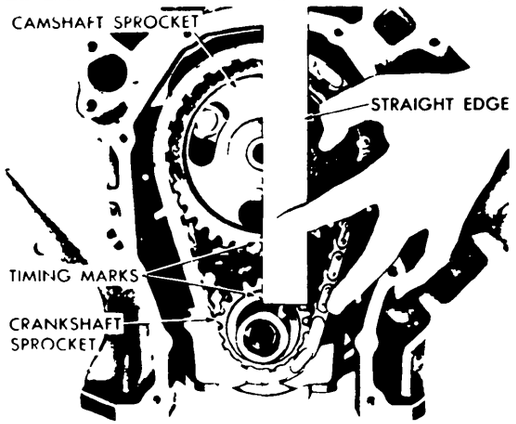
CAMSHAFT

►*CAMSHAFT USAGE NOTE· Various camshafts used depending on carburetion, lifters or other equipment See "Valves" and "Valve Timing" below for lift, spring and valve timing specifications*

Journal Diameter: (1) 1 998-1 999" (2) 1 982 1 983" (3) 1 967-1 968" (4) 1 951-1 952" (5) 1 5605-1 5615" (318"), 1 748-1 749" (361" & 383")

Bearing Diameter: (1) 2 000-2 001" (2) 1 984-1 985" (3) 1 969-1 970" (4) 1 953-1 954" (5) 1 5625-1 5635" (318"), 1 750-1 751" (361" & 383")

Bearings - Removable, lead base babbitt on steel
Clearance - 001- 003" Wear limit 005"
End Thrust (318"): Taken by thrust plate behind camshaft sprocket hub **Endplay** - 002- 006" Wear limit 010"
End Thrust (361" & 383"): Controlled by camshaft sprocket hub riding against front face of cylinder block
Timing Chain (318"): Width 1 02" **Pitch** 375" **Length** 68 links
Timing Chain (361" & 383"): Width 88" **Pitch** .50" **Length** 50 links
Camshaft Setting: Marks on both sprockets adjacent and in line with straightedge across shaft centers
Camshaft Removal: *See "Camshaft & Bearings" in Plymouth Special Data*
Engine Front Cover Removal: *See "Engine Front Cover" in Plymouth Special Data*
Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Plymouth Special Data*



VALVES

Tappet Clearance: 318" 010" Intake, 018" Exhaust, hot and idling **383" With Ram Ind. & Mech. Lifters** 016" Intake, 028" Exhaust, Cold **All Others** Zero lash, hydraulic lifters

318" Engine

Valve	Head Diam.	⑥ Stem Diam.	Length
Intake	1 844"	372- 373"	4 60"
Exhaust	1 563"	371- 372"	4 54"

Valve	Seat Angle	Lift	Stem Clearance
Intake	45°	①	001- 003"
Exhaust	45°	②	002- 004"

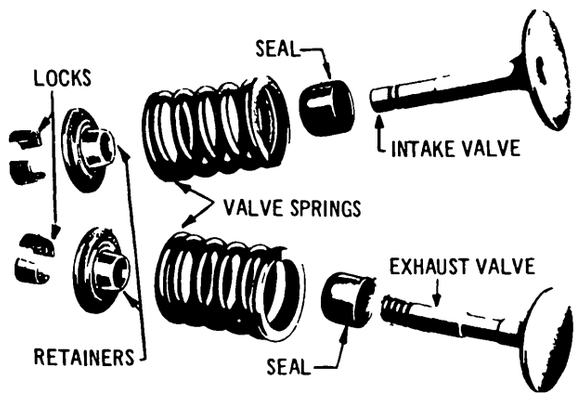
V8 ENGINE VALVE TIMING MARKS

361" & 383" Engines

Valve	Head Diam.	⑥ Stem Diam.	Length
Intake	③	372- 373"	4 87"
Exhaust	1 60"	371- 372"	4 89"

Valve	Seat Angle	Lift	Stem Clearance
Intake	45°	430"④	001- 003"
Exhaust	45°	430"⑤	002- 004"

① - 370" (2-Bbl Carb), 390" (4-Bbl Carb)
② - 368" (2-Bbl Carb), 390" (4-Bbl Carb)
③ - 1 95" (361" Eng), 2 08" (383" Eng)
④ - 449" on 383" Eng with Ram Induction & Mechanical lifters
⑤ - 454" on 383" Eng with Ram Induction& Mechanical lifters
⑥ - Standard valves Also 005", 015", 030" Oversize
Valve Seat Width - 060- 085" Intake, 040- 060" Exhaust
Valve Stem Oil Seal - Cup type seals used on all intake valves (All engines), on exhaust valves (361" & 383" engines only)
►*VALVE GRINDING CAUTION* Check valve height in head after grinding valve using Tool C-3648 If valve tip exceeds maximum (end of cylindrical gauge), grind tip down to approach, but do not go below minimum height (slotted area on gauge)
Valve Springs: Damper spring used inside valve springs on all 361" and 383" engines



Spring Specifications (318" Engine)

Valve	Pressure	Length
Closed	78-88 lbs	1 69"
Open	170-184 lbs	1 31"

Spring Specifications (361" & 383" Engines)

Valve	Pressure	Length
Closed	95-105 lbs	1 86"
Open	205 lbs	1 43"

Spring Free Length - 2 34" (361" & 383" Engines)
►*VALVE SPRING HEIGHT CAUTION* If valves or seats are ground, check installed height of spring (from counterbore in head to lower surface of spring retainer) If height exceeds 1 11/16" (318"), 1 57/64" (361" & 383"), install 1/16" spacer under spring to bring height within limits (1 11/16" for 318", 1 53/64-1 57/64" for 361" & 383")
►*VALVE SPRING LOAD CAUTION* Hydraulic valve lifter "fill-up" will restrict engine speed and cause valves to burn if spring loads are not maintained

V8 361" & 383" ENGINE VALVE ASSEMBLY

Spring Installation (361" & 383"): Install all springs with closed coil end toward cylinder head

►*CAUTION·* Spring ends must be square within 1/16" (all engines)

Valve Guides: Guides are cast integral with cylinder head When clearance is excessive, ream guides and install valves with oversize stems Valves furnished with 005", .015" & 030" oversize stems Use Tool C-3433 (379- 380"), C-3427 (404- 405") to ream guides in progressive steps of 005", 015" & 030"

►*OVERSIZE VALVE STEM IDENTIFICATION NOTE (318" Eng):* "I" or "E" on boss above nearest appropriate valve guide indicates that valve stem is 005" Oversize

►*PUSHROD INSTALLATION CAUTION·* Small diameter end of pushrod must seat in lifter Large diameter end must contact rocker arm Improper installation will cause valves to be held open partially

Hydraulic Valve Lifters: Used on 361" & 383" engines except some 383" Police Engines with Ram Induction which have mechanical lifters

►*OVERSIZE LIFTER NOTE·* A "♦" on engine serial number pad indicates that lifters are 008" Oversize If only certain lifters are oversize, the diamond will be placed on lifter boss facing engine centerline. These oversize lifters will also have notches on top surface of lifter body

Diameter - 9040- 9045" **Clearance** - 0005- 0018"
Replacement Lifters - Furnished Std & 001", 008", 030" Oversizes
Lifter Overhaul & Testing - *See "Valve System" in Plymouth Special Data.*
Rocker Arm Assembly: *See "Valve System" in Plymouth Special Data*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

① Valve Timing Specifications

(318" Engine With 2-Bbl. Carb.)
Intake Valves - Open 17° BTDC Close 47° ALDC
Exhaust Valves - Open 55° BLDC Close 9° ATDC

(318" Engine With 4-Bbl. Carb.)
Intake Valves - Open 13° BTDC Close 55° ALDC
Exhaust Valves - Open 51° BLDC Close 17° ATDC

(361" & 383" Engines With 4-Bbl. Carb.)
(383" Engine With 2 Carbs.)
Intake Valves - Open 24° BTDC Close 64° ALDC
Exhaust Valves - Open 64° BLDC Close 24° ATDC

(361" & 383" Ram Induction, Hydraulic Lifters)
Intake Valves - Open 20° BTDC Close 68° ALDC
Exhaust Valves - Open 60° BLDC Close 28° ATDC

(383" Eng , Ram Induction & Mechanical Lifters)
Intake Valves - Open 25° BTDC Close 79° ALDC
Exhaust Valves - Open 74° BLDC Close 30° ATDC
① - With valve train solid

Valve Timing Check (318"): Rotate crankshaft until No 6 exhaust valve is closing and No 6 intake valve is opening Install a dial indicator on No 1 intake valve so indicator pointer contacts spring retainer as nearly

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

perpendicular as possible. Turn No. 1 intake valve adjusting screw in one full turn. Adjust indicator to zero. Turn crankshaft clockwise until valve has lifted .033" (2-Bbl.), .024" (4-Bbl.). Timing on timing indicator should read from 10° BTDC to 2° ATDC.

Valve Timing Check (361" & 383"): Rotate crankshaft until No. 6 exhaust valve is closing and No. 6 intake valve is opening. Insert a ¼" spacer between rocker arm pad and stem tip of No. 1 intake valve (second valve on left bank). Install dial indicator so pointer contacts valve spring retainer as nearly perpendicular as possible. Allow spring load to bleed lifter down to provide a solid lifter. Turn crankshaft in normal running direction until valve has lifted as shown in table below. Timing on timing indicator should read from 10° BTDC to 2° ATDC. *CAUTION - Remove spacer before turning crankshaft any further in normal direction.*

Valve Timing Check Specifications

Engine	Valve Lift
361" (4-Bbl.)	.025"
361" (Ram Induction)	.025"
383" (One 4-Bbl. or 2 Carbs.)	.025"
383" (Ram Induction)	.025"

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Plymouth Special Data.*

►*OIL PRESSURE RELIEF VALVE OR OIL PAN NOISE CORRECTION (361" & 383"):* Noise may be a chattering or tapping noise heard or felt in oil pan. If loosening oil pressure relief valve retaining nut or removing valve spring affects noise, install new oil filter element, Part No. 1851658, and make sure drain-back valve is free *(see "Oil Filter" below).*

Crankcase Capacity: 5 qts. refill, 6 qts. with filter change.

Normal Oil Pressure: 45-65 lbs. at 40-50 MPH.

Oil Pressure Relief Valve - Mounted in oil pump. For various springs used, see *"Oiling System" in Plymouth Special Data.*

Oil Pressure Indicator: Warning light on instrument panel operated by Oil Pressure Switch, Part No. 1818830 (Autolite No. 14272A).

Oil Pump (318"): Mounted on rear main bearing cap. Rotor type with strainer mounted on pump body. Strainer must be installed parallel with bottom of cylinder block.

Pump Overhaul - See *"Oiling System" in Plymouth Special Data.*

Oil Pump (361" & 383"): Rotor type mounted on cylinder block at lower left front side of engine.

Pump Overhaul - See *"Oiling System" in Plymouth Special Data.*

Oil Filter (318"): Partial flow type. Replace filter element every 4000 miles to coincide with engine oil change.

Oil Filter (361" & 383"): Full flow disposable type. Replace filter every 4000 miles to coincide with engine oil change.

►*OIL FILTER REPLACEMENT CAUTION (361" & 383"):* Use only Filter, Part No. 1851658, for service replacement. Before installing, make sure drain-back valve is free by unseating valve with a blunt instrument inserted in four holes in oil filter base.

►*OIL FILTER INSTALLATION CAUTION (361" & 383"):* Screw new filter on base until gasket contacts base. **Tighten ½-turn additional by hand.** DO NOT overtighten.

Crankcase Ventilation: Filter element in crankcase filler cap and breather tube in right valve rocker cover. Clean filter in filler cap every 5000 miles or sooner under heavy dust conditions.

COOLING

Water Capacity: 20 qts. (318"). 16 qts. (361" & 383"). Add 1 qt. for heater.

►*AIR CONDITIONING OPERATING CAUTION:* Engine cooling system must be protected to a temperature of 15°F for summer operation.

Pressure Valve: 14 lb. (Std.), 16 lb. (Air Cond.) radiator filler cap used on all models.

Thermostat: Pellet type. Located in water outlet housing. Standard 180° thermostat, Part No. 1674602, starts to open at 177-182°F. Designed for use with permanent type anti-freeze. Optional 160° thermostat, Part No. 1734957, also available.

Water Pump: Sealed ball bearing type. No lubrication required.

See *"Water Pumps" in Plymouth Special Data.*

Fluid Fan Drive: Used on air conditioned cars. See *"Cooling System" in Plymouth Special Data.*

Temperature Gauge: King-Seeley Electric "CV" (Constant Voltage) type with separate Gauge Voltage Regulator, Chrysler No. 2096883.

Dash Unit - Chrysler No. 1972345.

Engine Unit - Chrysler No. 2084459.

See *"Temperature Gauges" in Miscellaneous Section.*

CLUTCH

Borg & Beck or Auburn. Used as follows: *NOTE - Semi-centrifugal type used on V8 cars.*

Engine	Clutch Make	Clutch Model
6 Cyl. Std.	Auburn	100131-4
6 Cyl. Std.	Borg & Beck	9A7
6 Cyl. H.D. & Taxi	Borg & Beck	10A5
318" Std.	Borg & Beck	10¼A8WW
318" Optl. & 361"	Borg & Beck	10.5A8WW
383"	Borg & Beck	11A8WW

See *"Auburn" or "Borg & Beck" in Clutch Section.*

►*CLUTCH VIBRATION OR GEAR RATTLE CORRECTION (Early 6 Cyl.):* May be noticeable at 20-30 MPH. To correct, install new clutch disc, Part No. 2200061, having 6 light blue springs. Later cars have this disc.

Pedal Freeplay Adjustment: Adjust self-locking nut on fork rod to provide 5/32" free movement at fork-to-pushrod connecting pin. This will provide correct 1-1¼" pedal freeplay.

Over-Center Spring Adjustment: Release clutch pedal rod from clutch pedal and depress clutch pedal to floor. Back off over-center spring adjusting nut until free of "C" link and then tighten nut until it just contacts "C" link. Turn nut 3 turns tighter (9¼" clutch), 5 turns tighter (10", 10½", 11" clutch) with pedal still depressed. Reconnect clutch pedal to pedal rod and check pedal effort. There should be 25 lbs. effort to produce a 5" pedal stroke (1-1¼" from floor) and 10-12 lbs. on return stroke. If effort too high, tighten adjusting nut; if too low, loosen nut. Initial effort required to start pedal moving should be 5-7 lbs. If more than 7 lbs., screw in over-center spring stopscrew and rubber bumper (below and at right angle to "C" link and spring). If pedal hangs up at about 1" of travel, screw bumper out. Tighten locknut.

Clutch Removal: Remove transmission (see below) and clutch housing pan. Pull out release bearing and sleeve. Mark cover and flywheel for reassembly. Loosen clutch attaching bolts in succession a few turns at a time to relieve tension. Remove clutch assembly.

SYNCHRO-MESH TRANSMISSION

Used as follows:

6 Cylinder - Own. New "Synchroshift" type with helical cut gears.

V8 Std. - Own. Same design as used previously.

V8 Heavy Duty - Warner Model T-85. 3-speed constant mesh, all helical gear type.

See Dodge and Warner Synchro-mesh Transmissions in Transmission Section.

Transmission Controls: *See "Transmission Controls" in Transmission Section.*

Lubricant Capacity - 6 Cyl. 5 pints (supersedes previous specification of 2¾ pints). **Std. V8** 2¾ pints. **Heavy Duty V8** 3½ pints.

Removal: Drain lubricant, disconnect propeller shaft, speedometer cable and housing and gearshift rods. Disconnect parking brake cable. *CAUTION - On 6 Cyl., remove speedometer cable by hand as pinion comes out with cable (do not crush housing).* Disconnect back-up light switch wires. Install Engine Support Fixture C-3806 (6 Cyl.), C-3487 (V8), so hooks are firmly in holes in frame side member with support against underside of oil pan flange. With fixture supporting engine, raise engine slightly and disconnect rear support. On 6 Cyl., remove crossmember. On all cars, support transmission and remove transmission attaching bolts. Remove transmission by sliding to rear so pinion shaft clears clutch. *NOTE* - On V8 cars, crossmember is removed with transmission.

AUTOMATIC TRANSMISSION

TorqueFlite Six of new design used on 6 Cyl. Cars only. **PowerFlite & TorqueFlite** of same designs used previously used on V8 Cars.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "TorqueFlite Six", "PowerFlite", and "TorqueFlite" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "TorqueFlite Six", "PowerFlite", and "TorqueFlite" in Transmission Section.*

Lubrication: Check fluid level every 1000 miles, drain and refill every 10,000 miles or sooner if used in heavy duty service.

Checking Fluid Level (TorqueFlite Six): *NOTE - Following specifications supersede all previous instructions.* Bring engine and transmission to normal operating temperature with parking brake applied. Push selector buttons in turn to assure fluid distribution and check fluid in "N" (engine idling). Fluid level should be between "F" mark and 5/8" **above** "F" mark on dipstick. *NOTE* - If fluid checked with transmission cold, oil level should be at "F" mark. *Use only Automatic Transmission Fluid Type "A", Suffix "A".*

Checking Fluid Level (PowerFlite & TorqueFlite): Bring engine and transmission to normal operating temperature with parking brake applied. Push selector buttons in turn to assure fluid distribution and check fluid in "N" (engine idling). Maintain fluid level at (or slightly be-

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

low) "F" mark on dipstick. *NOTE* - If fluid checked with transmission cold, maintain fluid level at (or slightly below) "L" mark. *Use only Automatic Transmission Fluid Type "A", Suffix "A".*

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "TorqueFlite Six", "PowerFlite", and "TorqueFlite" in Transmission Section.*

UNIVERSALS

Detroit Universals. Ball & Trunnion front, Cross rear.
Rear Universal Joint Operating Angle - *See "Propeller Shaft Notes" in Plymouth Special Data.*

REAR AXLE

Own. Semi-floating, hypoid gear with Hotchkiss Drive. *NOTE* - "Sure-Grip" differential optional.
See "Plymouth Hypoid" and "Power-Lock Differential (Plate Clutch Type)" in Rear Axle Section.

►*REAR AXLE KNOCKING OR CHUCKLING NOISE CORRECTION (Early Cars): See "Plymouth Hypoid" in Rear Axle Section.*

►*DIFFERENTIAL TYPE & RATIO IDENTIFICATION NOTE:* Ratio stamped on identification pad on carrier housing. "Sure-Grip" differential identified by letter "S" stamped on this pad or by a metal tag marked "Use Sure-Grip Lube" attached to a carrier housing bolt.

►*"SURE-GRIP" AXLE SHAFT CAUTION:* Axle shaft used with "Sure-Grip" differential is 1/8" shorter than standard axle shaft. DO NOT interchange shafts.

Axle Ratios: As follows: *NOTE* - All ratios except 3.90-1 and 3.91-1 are available with "Sure-Grip".

Engine & Trans. ①	Standard Ratio	Optional Ratio
6 Cyl. S-M	3.54-1 (39-11)	3.90-1 (39-10)
6 Cyl. T-F	3.31-1 (43-13)	3.54-1 (39-11)
318" S-M	3.54-1 (39-11)	3.91-1 (43-11)
318" P-F	3.31-1 (43-13)	3.54-1 (39-11)
318" T-F	2.93-1 (41-14)	② 3.31-1 (43-13)
361" S-M	3.31-1 (43-13)	3.54-1 (39-11)
361" T-F ③	2.93-1 (41-14)	② 3.31-1 (43-13)
383" S-M ④	3.54-1 (39-11)	⑤⑥
383" T-F ④	3.31-1 (43-13)	⑦⑥

① - **S-M** Synchro-mesh. **P-F** PowerFlite. **T-F** TorqueFlite.
② - Or 3.54-1. ③ - One 4-Bbl. or Ram Induction.
④ - Max. Performance Engines (One 4-Bbl., 2 Carbs., Ram Induction with Hydr. or Mech. Lifters).
⑤ - With Conventional and "Sure-Grip": 2.93-1, 3.31-1.
⑥ - With "Sure-Grip" only: 4.1-1 (41-10), 4.3-1 (43-10), 4.56-1 (41-9), 4.89-1 (44-9), 3.15-1 (41-13).
⑦ - With Conventional and "Sure-Grip": 2.93-1, 3.54-1.
Backlash - .006-.008".

Axle Shaft Removal: Remove wheel and hub and drum assembly (use Puller C-845). *CAUTION - Do not strike end of axle shaft or use "knock-off" type puller.* Block brake pedal and disconnect brake line at wheel cylinder. Remove axle shaft key. Remove brake support and dust shield (use Oil Seal Installing Sleeve C-745 to protect outer seal). Remove shim pack. Remove axle shaft with Puller C-499. *NOTE* - Remove shaft bearings with Puller C-293-13, inner oil seals with Puller C-637 and brake dust shield outer seal with Driver C-3565.

Carrier Assembly Removal: Remove axle shafts (see above). Disconnect propeller shaft at rear universal joint. Drain lubricant. Remove attaching bolts and remove carrier.

Wheel Bearing Adjustment: Controlled by axle shaft end-play adjustment. *See "Plymouth Hypoid" in Rear Axle Section.*
Axle Shaft Endplay - .013-.023".

SHOCK ABSORBERS

Oriflow. Direct acting, hydraulic. Serviced by replacement.

►*SHOCK ABSORBER MOUNTING NOISE CORRECTION:* On front shock absorber, lower mounting bolt may have short threads preventing "U" mounting bracket from gripping lower bushing. To correct, install a washer between bracket and nut and tighten nut to 55 ft. lbs. On rear shock absorber, upper mounting stud may be loose at body attachment. To correct, inspect stud and nut threads for damage and tighten nut to 70 ft. lbs. *NOTE - If above procedure does not correct noise, install new type shock absorbers (see below).*

►*SHOCK ABSORBER REPLACEMENT NOTE: Use only shock absorbers listed below for service replacement and to correct noise.*

Replacement Shock Absorbers

Shock Absorber	Package No.	①Identification No.
Front Std. ②	2240353	2206506
Rear Std. ②	2240358	2206508
Front Heavy Duty	2240356	2206504
Rear Heavy Duty	2240360	2206510

① - Stamped on shock absorber base.
② - Includes Suburbans.

FRONT SUSPENSION

"Torsion-Aire" type of same design used previously with eccentric cam adjustment for caster and camber. *See "Torsion-Aire Suspension" in Suspension & Wheel Alignment Section.*
Steering Axis Inclination - 5½-7½°.
Caster (Manual Steering) - Neg. ½°± ½°.
Caster (Power Steering) - Pos. ¾°±½°.
Camber (Right Wheel) - Pos. 1/8°±1/4°. Pos. 1/8° preferred. **(Left Wheel)** - Pos. 3/8°±1/4°. Pos. 3/8° preferred.
Toe-In - 3/32-5/32". 1/8" preferred.
Toe-Out on Turns - With outer wheel at 20°, inner wheel should be at 20½-22½°.

Wheel Bearing Adjustment: Tighten adjusting nut to 180 **inch-lbs.** torque while rotating wheel. Position nut lock on nut with slots in line with cotter pin hole in spindle and then back off nut and nut lock 1½ slots (cotter pin holes will be covered). Remove nut lock and reposition on nut so slot lines up with cotter pin hole and install cotter pin. *CAUTION - Do not turn adjusting nut.*

STEERING

Manual: Gemmer. Worm & three-tooth roller.
See "Gemmer Worm & Roller" in Steering Section.

►*STEERING GEAR PRODUCTION CHANGE:* Later cars have flexible coupling in steering gear tube. *See "Gemmer Worm & Roller" in Steering Section.*

►*STICKY OR HARD STEERING, OR POOR RETURNABILITY CORRECTION:* May be caused by steering column jacket bearing being out of place. *See "Gemmer Worm & Roller" or "Plymouth Constant Control Power Steering" in Steering Section.*

►*HARD STEERING OR GEAR BINDING CORRECTION (Manual Steering):* May be caused by cross shaft adjusting screw retaining snap ring being unseated. *See "Gemmer Worm & Roller" in Steering Section.*

►*STEERING CENTER LINK-OIL PAN INTERFERENCE CORRECTION (361" & 383"):* Make sure power steering and manual steering pitman arms are not interchanged. Center-to-center length of pitman arms (between attaching holes) is as follows: Manual Steering 5 3/8", Power Steering 6 1/2".

Power Steering: Constant Control Full Time type of same design used previously.
See "Plymouth Constant Control Power Steering" in Steering Section.

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Gemmer Worm & Roller" or "Plymouth Constant Control Power Steering" in Steering Section.*

Steering Gear Removal: *See "Gemmer Worm & Roller" or "Plymouth Constant Control Power Steering" in Steering Section.*

BRAKES

Service: Three Platform Total Contact type of same design used previously.
See "Plymouth Three Platform Total Contact Brakes" in Brake Section.

►*BRAKE DRAGGING, IMPROPER RELEASE OR PULL CORRECTION:* May be caused by lining contacting drum (burrs or paint on dust shield platforms) or improper return spring tension. *See "Plymouth Three Platform Total Contact Brakes" in Brake Section.*

►*OVAL PISTON TYPE POWER UNIT "THUMP" CORRECTION (Early Cars):* Noise occurs when brakes released. *See "Plymouth Oval Piston Power Unit" in Brake Section.*

Drum Diameter - 11" front & rear. (12" front & rear optional on high performance engine packages).
Wheel Cylinder Diameter - 1 1/8" front & rear. Two single acting cylinders used on front, one double acting cylinder used at rear.
Lining - Molded asbestos bonded to shoe.

Lining Width	Front	Rear
6 Cyl. & 318" (Suburban)	2½"	2"
6 Cyl. & 318" (Others)	2"	2"
361" & 383" Engines	2½"	2½"

Lining Length - 11½" (11" brakes), 12.6" (12" brakes).
Lining Thickness - 11/64".
Braking Power - 60% front, 40% rear.
Clearance - With wheel locked against drum, back off adjusting cam until no drag is felt.

Master Cylinder: On engine side of firewall opposite base of brake pedal.

►*MASTER CYLINDER NOTE (Cars Without Power Brakes):* Master cylinder has a non-adjustable push-rod and the pedal stop is within the master cylinder eliminating need for adjustment. No pedal return spring is used. A service package consisting of piston-collar-rod-retainer and boot assembly is available.

►*BRAKE PEDAL & PUSHROD CAUTION:* Never pull brake pedal back beyond piston stop in master cylinder. A pull of 50 lbs. could pull pushrod off piston.

Checking Fluid Level - Master cylinder cover is used as a filler cap.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Removal: Disconnect pushrod, brake tube and stop light switch wires. Remove attaching bolts and remove cylinder.

Power Brakes: "Oval Piston" or "Bellows" type power units used. Mounted on firewall and linked to upper end of brake pedal. Used with adjustable pushrod type master cylinder.

See "Plymouth Bellows Power Unit" or "Plymouth Oval Piston Power Unit" in Brake Section.

Pedal Free play Adjustment - *See "Plymouth Bellows Power Unit" or "Plymouth Oval Piston Power Unit" in Brake Section.*

Removal: Place a wedge between power lever and bracket to prevent damage to trigger arm. Scribe mark power unit and mounting bracket, and mounting bracket and firewall. Disconnect vacuum hose from power unit. Remove master cylinder (see above). Remove mounting bracket attaching bolts and remove power unit and bracket assembly.

Parking Brake: Transmission mounted type. 6" external contracting and 7" internal expanding types used. Foot-operated lever applies brake.

Adjustment - *See "Brake Notes" in Plymouth Special Data.*

Lining	Width	Thickness	Length
External type	2"	5/32"	16.68"
Internal type	2"	5/32"	©6.53"

© - Per shoe (2 shoes).

MISC. MECHANICAL

Windshield Wiper: Autolite electric, single or variable speed. *See "Windshield Wipers" in Miscellaneous Section.*

Air Conditioning: Heater-Air Conditioning. *See "Plymouth Air Conditioning" in Miscellaneous Section.*

Power Top Control: Electric-Hydraulic type. *See "Power Top Controls" in Miscellaneous Section.*

Power Window Regulators: Electric type. *See "Electric Window Regulators" in Miscellaneous Section.*

Power Seat Adjuster: 6-Way electric type. *See "Power Seat Controls" in Miscellaneous Section.*

Door Locks: Vacuum type. *See "Vacuum Door Locks" in Miscellaneous Section.*

►*JACKING & HOISTING CAUTION: Before jacking, hoisting, or working under car, see "Jacking & Hoisting Precautions" in Suspension & Wheel Alignment Section.*

►*"HYPER PACK ENGINE" NOTE:* This Powerpack equipment available on Sedans consists of High Compression Engine, Special Camshaft, 4–Barrel Carburetor, and other equipment items. Specifications for this model are designated as "Hyper Pack" in following data.

MODEL IDENTIFICATION

Series	Series Designation
V–100	QX1–L
V–200	QX1–H

SERIAL NUMBER: Stamped on plate attached to left front door hinge pillar post. Number (example below) includes identification data.

① ② ③ ④ ⑤
1 1 0 2 100001

① - Car Make. 1 Valiant.
② - Model Series. 1 Deluxe QX1–L. 3 Custom QX1–H. 4 Deluxe Suburban QX1–L. 5 Custom Suburban QX1–H.
③ - Year – 1960.
④ - Assembly Plant. 1 Plymouth (Detroit). 2 Dodge (Detroit). 5 Los Angeles. 6 Delaware. 7 St. Louis. 8 Clairpointe. 9 Canadian Plant.
⑤ - Beginning vehicle number at each assembly plant.

ENGINE NUMBER: Stamped on boss on left side of cylinder block just below head at front or rear of engine (two bosses provided on each block). Number (example below) includes identification data.

① ② ③ ④ ⑤
P 17 . . . 8 1

① - Year – 1960.
② - Displacement – 170 cu. ins.
③ - If this space blank, engine is standard. **A** indicates all cylinders .020". Oversize **B** indicates all crankshaft journals .010" Undersize. **AB** indicates both conditions.
④ - Month Assembled. 8 August, etc.
⑤ - Day Assembled. 1 1st day of month, etc.

TUNE-UP

COMPRESSION PRESSURE: 130–161 lbs. at 150 RPM (Std. Engine) with plugs removed. Maximum variation between cylinders 15 lbs.

VACUUM READING: Steady 19.5" at idling speed.

VALVE TAPPET CLEARANCE: .010" Intake, .020" Exhaust, HOT.

MANIFOLD HEAT CONTROL: Thermostatic coil spring type. Valve must operate freely. When installing assembly, coil spring should be installed so that approximately one full turn (355° wrap) required to hook outer end on stop stud.

IGNITION

FIRING ORDER: 1–5–3–6–2–4.

SPARK PLUG GAP: .035" (Std. Eng.), .015–.020" (Hyper Pack).

Spark Plugs - Autolite AG52 Std. (Use to replace AG42 used in early production), Autolite AG203 (Hyper Pack), Autolite AG82 (Taxicab - when used in Metropolitan areas only). "Long Reach" 14 mm. type. *NOTE* - Plugs are installed in aluminum sleeves which serve as plug gaskets.

►*PLUG REMOVAL & INSTALLATION NOTE:* Plugs are installed in aluminum tubes which serve as plug gaskets.

COIL: Autolite CAH–4001.

Ignition Current – 2.5 amps. idling, 3.1 amps. stopped.

Resistor – Autolite 201004. Connected in lead between ignition switch and coil. Bypassed during cranking by second lead from ignition switch.

►*ROUGH IDLE OR ENGINE STALLING CORRECTION:* Caused by loose terminal on lead at resistor. Correct by increasing crimp on female terminal for more positive connection.

DISTRIBUTOR: Own. Chrysler No. 1889750 (Std. Eng.), 2095550 (Hyper Pack) Conventional type with centrifugal advance (All), and vacuum advance (No. 1889750 only). *NOTE* – Distributor 2095550 is "double breaker" type.
Condenser – Chrysler 1818757. **Capacity** .25–.285 mfd.
Contact Point Set – Chrysler 1838643 (1889750 Distr.).
Breaker Gap – .017–.023".
Cam Angle – 36–42° (1889750 Distr. & one set of points on 2095550), 48–54° (2095550 Distr. with both sets of points operating together).
Breaker Arm Spring Tension – 17–21.5 ozs.
Rotation – Clockwise viewed from above.

Automatic Advance – 1889750

Degrees	Distr. RPM	Degrees	Eng. RPM
Start	325–475	0	650–950
0–2.5	475	0–5	950
6–8	820	12–16	1640
11.5–13.5	1925	23–27	3850

Automatic Advance – 2095550

Degrees	Distr. RPM	Degrees	Eng. RPM
Start	425–575	0	850–1150
0–6.5	575	0–13	1150
5–7	800	10–14	1600
11.5–13.5	3400	23–27	6800

Vacuum Advance: Integral type. *NOTE* – Not used on 2095550 distributor.

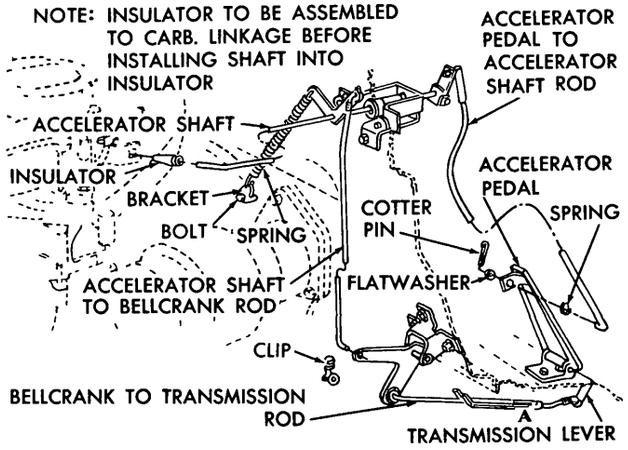
Vacuum Advance – 1889750

Distr. Degrees	Eng. Degrees	Vacuum (" of Hg)
Start	0	4.7–7.1
5.5–8	11–16	11
9.5–12.5	19–25	14.5

IGNITION TIMING

Engine	Std. Ingition Setting
Std. Engine	5° BTDC at 500 RPM
Hyper Pack	11° BTDC at 700 RPM

►*TIMING NOTE:* Set timing with engine idling at correct RPM with vacuum line disconnected.
Timing Mark – Align mark on crankshaft pulley with correct mark of scale on timing chain cover.



CARBURETOR

►*CARBURETOR APPLICATION: (Std. Engine) – One Carter BBS single barrel carburetor with automatic choke. (Hyper Pack Engine) – Carter AFB 4–Barrel carburetor with manual choke control.*

►*HARD COLD STARTING (Cars with Cross-Over Choke Carburetors):* May be caused by choke vacuum unloader piston sticking. Squirt carburetor cleaner, lacquer thinner, or alcohol through piston link opening in air horn. Operate choke valve to flush out gum formations.

►*HARD COLD START & WARM-UP CORRECTION:* May be caused by choke rod or choke shaft arm striking carburetor air cleaner. To correct, remove air cleaner and install air cleaner mounting gaskets as required for sufficient clearance.

►*POOR ENGINE IDLE PERFORMANCE (In congested traffic in hot weather, or after continuous highway driving at 60–70 MPH):* Check all of the following points: Intake Manifold and Carburetor mounting for air leaks, All vacuum operated accessories (power brakes, vacuum actuated switches, etc.) for air leaks, adjust Tappet Clearance, set Ignition Timing, check carburetor

TORQUEFLITE 6 THROTTLE LINKAGE

linkage for free operation, adjust carburetor idle mixture and speed setting. If above operations do not correct trouble, and a slight hesitation is experienced at 40–70 MPH. on light acceleration, reposition air cleaner at 90° to right across valve cover.

Throttle Linkage Adjustment (Aut. Trans. Cars): Adjust engine idle speed (see below). With engine at operating temperature, and throttle stopscrew on low step of fast idle cam, loosen locknut and move transmission throttle control lever forward until it stops, tighten locknut. Set protractor at 115° and place protractor lengthwise on flat surface of accelerator pedal. Disconnect accelerator pedal rod and adjust length of rod so that pedal will be in correct 115° position when rod connected, reconnect rod.

CARTER BBS

Carter BBS No. 2900S (Synchro-mesh), No. 2901S (Aut. Trans.), No. 3053S, SA (Taxicab). Single barrel downdraft type with automatic choke.

►*IDLE SETTING CAUTION:* Alternator is capable of charging battery at idle speeds and **headlights should be turned on when setting idle speed.** This will compensate for alternator load.

Idle Setting - Initial setting ¼–1½ turns open (2900S & 2901S), 1-2 turns open (3053S, SA). With engine at normal operating temperature, adjust idle mixture screw for highest RPM, then turn mixture screw in until speed starts to drop. Turn screw out just enough to recover engine speed that was lost. Readjust idle speed screw for correct engine idle speed.
Idle Speed - 550 RPM (Synchro-mesh), 500 RPM (Auto. Trans. in "N"). *Set idle speed with headlights turned on.*
Float Level - 7/32" (2900S & 2901S), 9/32" (3053S,SA) between top of each float ridge at center of float and top surface of body casting. To adjust, bend lip of float arm.
Accelerating Pump - Install throttle connector rod in center hole (medium stroke) of throttle lever.
Fast Idle Speed: 1200-1400 RPM with engine at normal operating temperature and idle speed screw on index

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

mark of cam. *No adjustment necessary, fast idle speed will be correct when slow idle correctly set.*

Automatic Choke: "Cross-Over" type. Set at index.

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Carter BBS Carburetors" in Carburetion Section.*

CARTER AFB

Carter AFB No. 3083S. Four barrel downdraft type with manual choke.

Idle Speed - 700 RPM with headlights turned on.

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Carter AFB 4-Barrel Carburetors" in Carburetion Section.*

CARB. EQUIPMENT

Fuel Pump: Carter M2996S.

Pressure - 3½-5 lbs. at 500 RPM.

See "Fuel Pumps" in Carburetion Section.

Fuel Filter: Replaceable unit on suction end of fuel line in fuel tank.

Gasoline Gauge: Constant Voltage type with voltage regulator inside Temperature Gauge.

Dash Unit - Chrysler No. 2076317.

Tank Unit - Chrysler No. 2076362.

See "Fuel Gauges" in Carburetion Section.

Air Cleaner: Dry filter element type. Clean every 5000 miles, replace element every 15,000 miles. More frequent servicing may be necessary under severe operation.

►*CLEANING CAUTION:* Clean filter element by using compressed air (hold nozzle 2" from element), applying air from inside outward. DO NOT tap these filters to loosen grit or DO NOT immerse in any fluid.

BATTERY

Gould 11-OE-50. 12 volt, 9 plate, 50 ampere hour capacity (20 hr. rate).

Battery Ground - Negative, to engine support bracket.

►*BATTERY FILLER CAP CAUTION:* To prevent hood corrosion, special spray restricting vent caps must be used.

STARTER

Autolite. (Std. Eng.) MDT-7009. (Hyper Pack Eng.) MDT-7002.

Drive - Bendix "Folo-Thru" type.

Rotation - Counterclockwise at commutator end.

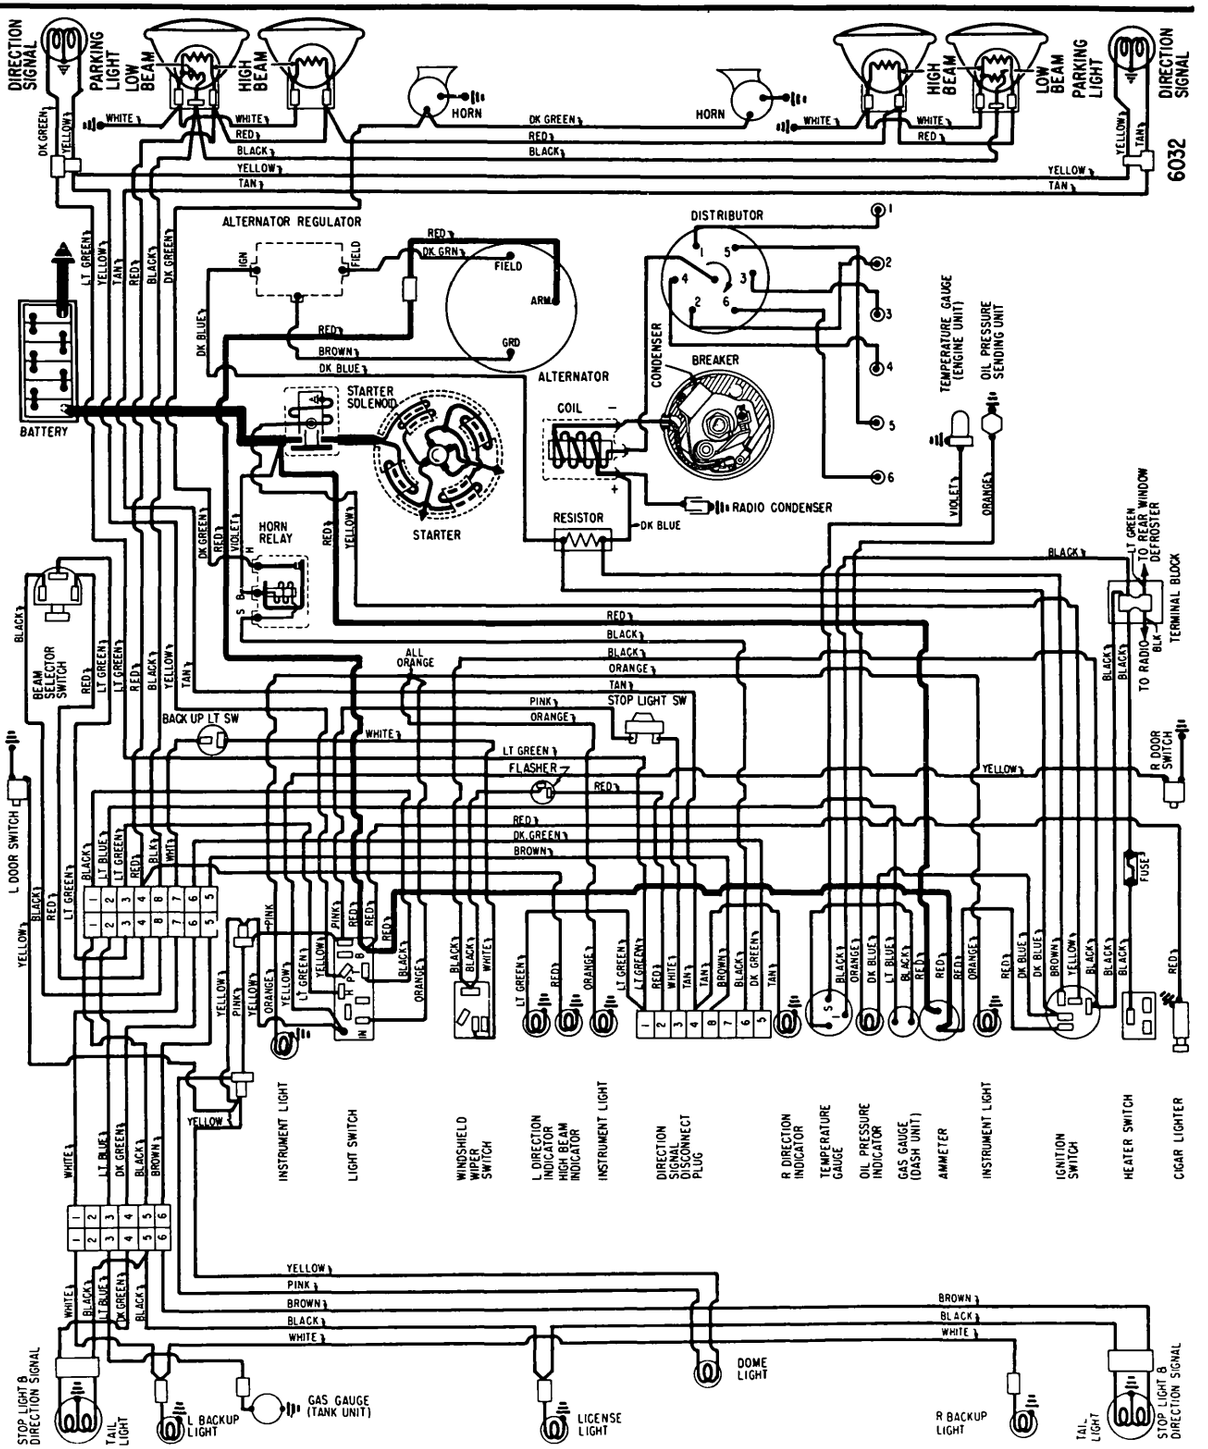
Brush Spring Tension - 31-47 ozs.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	3600	10.0	56
8.5 ft. lbs.	Lock	4.0	350

Starting Switch: Magnetic switch, Chrysler No. 2095329 (Synchro-mesh), No. 2095330 (Auto. Trans.), controlled by Ignition Switch. Neutral Safety Switch No. 1704283 on transmission case used on Auto. Trans. cars.

Neutral Safety Switch Adjustment: *See "TorqueFlite Six" in Transmission Section.*



ALTERNATOR

►*EXCESSIVE OR CONTINUOUS AMMETER FLUCTUATION (Cars with Alternators): See "Chrysler Alternator" in Electrical Section for tests and corrections.*

►*BATTERY CHARGING OR STARTING CAR WITH AUXILIARY BATTERY & JUMPER LEADS CAUTION:* Damaged circuits may result from reversed polarity or excessive voltage. *See "Chrysler Alternator" in Electrical Section for correct procedures.*

►*ALTERNATOR ERRATIC OPERATION & ABNORMAL BRUSH WEAR CORRECTION (Manual Steering Cars):*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Caused by engine oil entering unit from unused upper rear hole in engine block at rear of alternator. To correct, apply sealer to a 3/8" x 3/4" SAE bolt and insert into hole with a copper washer under bolt head.

Own. (Std. Eng.) Chrysler No. 2095060, (Hyper Pack Eng.) Chrysler No. 2095557. Three phase A.C. unit with full-wave rectifier. *NOTE* - Rectifier units built in the alternator.

Rotation - Clockwise at drive end.
Rated Output - 35 amperes.

Performance Data

Amperes	Volts	Engine RPM
28 minimum	14.6	1250
33 minimum	15.0	2200

Checking & Adjusting - *See "Chrysler Alternator & Regulator" in Electrical Section.*

Belt Adjustment: With 10 lb. load, deflection should be: **(Without Power Steering)** - ½" midway between water pump and alternator.
(With Power Steering) - Two belts. 1) 3/16" midway between water pump and power steering pump. **2)** 1/4" midway between power steering pump and alternator.

REGULATOR

Own. Chrysler No. 1889960 (All Models). Field control type (no Cutout Relay or Current Regulator).

►*REGULATOR REPLACEMENT NOTE (Early Cars):* Regulator on early Detroit built cars (Before No. 112948) has been replaced by improved regulator identified by three resistors (located on underside of base). This new regulator has improved regulating resistance to provide increased contact life.
Checking & Adjusting - *See "Chrysler Alternator & Regulator" in Electrical Section.*

MISC. ELECTRICAL

Headlights: Dual headlights (4-Headlight System). *See "4-Headlight Systems" in Electrical Section.*
Direction Signals: *See Electrical Section.*
Instrument Cluster Servicing: Disconnect battery ground cable. Remove lighting switch knob, see Lighting Switch below. Remove four instrument cluster attaching screws, pull top of cluster forward. Disconnect speedometer cable and all connectors at instruments and switches. Lift cluster out.
Speedometer Removal: After cluster removed (above), speedometer head can be removed from cluster.
Lighting Switch Removal: With switch knob in full "IN" position, depress spring-loaded retainer on switch body to release knob stem, pull knob and stem out. Remove switch retaining bezel, remove switch from instrument panel and disconnect wires.
Stop Light Switch Location: On forward end of master cylinder.
CIRCUIT BREAKERS: 22.5 Ampere - Headlights, Tail lights, High Beam Indicator. On headlight switch.
15 Ampere - Parking, Stop, License, Instrument, Dome, & Glove Box lights. On headlight switch.
6 Ampere - Variable speed windshield wiper.
5 Amp r - Single speed windshield wiper.
NOTE - Back-up lights protected by windshield wiper circuit breaker.
FUSES: 20 Amp r - Heater, in feed line.

ENGINE

ENGINE SPECIFICATIONS: New "Inclined" Six Cylinder, Overhead valve type. *NOTE* - Engine is inclined 30° to right when installed in chassis and oil pan correspondingly sloped with bottom of oil pan parallel to floor.

►*"HYPER PACK" ENGINE NOTE:* This engine has higher compression ratio, special camshaft and different valve timing, and other special features as listed below. *NOTE* – Premium fuel must be used in this engine.

Engine	Bore	Stroke	Displacement
All	3.40"	3.125"	170 cu. ins.

Engine	Compr. Ratio	Rated HP	Developed HP
Std.	8.5—1	27.7	101 at 4400 RPM
Hyper Pack	10.5—1	27.7	148 at 5200 RPM

Compression & Vacuum Reading - *See TUNE-UP.*

►*VALVE PUSHROD BENDING OR BREAKING:* May be caused by insufficient lubrication of valve train due to rear camshaft bearing turning in the block and cutting off the oil lead to the rocker arm shaft. When replacing rear camshaft bearing, check for a sufficiently tight fit to prevent bearing turning in service. If necessary, coat outside diameter of bearing with a high tin-content solder before installation.

►*LOW OR INTERMITTENT OIL PRESSURE OR LOSS OF OIL PRESSURE ON TURNS:* May be caused by incorrect positioning of oil pick-up tube and screen assembly in crankcase. Can be checked through oil pan drain hole without removing pan. Bottom of screen should be parallel with bottom of pan with approximately 1/8" clearance. *See "Oil Pick-up Tube & Screen Position" under OIL PAN below.*

►*OIL LEAKAGE AT REAR CAMSHAFT BEARING CORE PLUG:* May be caused by oil accumulation in recess behind camshaft rear bearing journal. *See "Camshaft & Bearings" in Valiant Special Data.*

OIL PAN: Removal - Remove tie rod at steering and idler arms. Support engine and remove front engine mounting-to-frame bolts, disconnect and remove left side support (connecting converter housing and cylinder block). Raise engine approximately 2 inches. Drain crankcase. Remove oil pan bolts, lower pan and remove it toward the rear. *CAUTION - Do not turn oil pick-up tube and strainer out of position.*
Installation: Check position of oil pick-up tube and screen (see below). Install cork rail gaskets on block using sealer to hold them in position, install front rubber molded gasket on chain case cover. Place oil pan in position and install attaching bolts, tighten bolts evenly to 200 **inch lbs.** (supersedes original recommendation of 15 ft. lbs.). Install left side support and tighten bolts to 30 ft. lbs. Lower engine, install front engine mounting bolts and tighten to 85 ft. lbs.

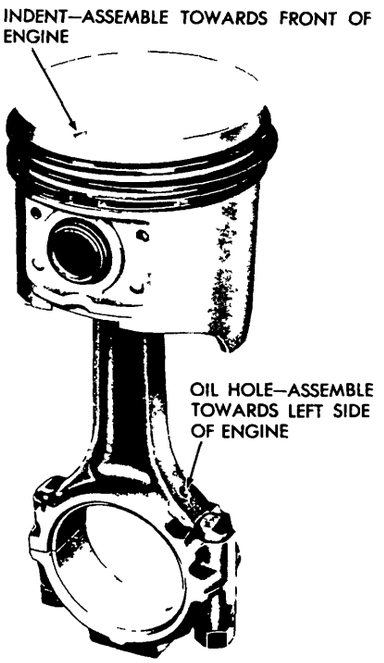
►*OIL PICK-UP TUBE & SCREEN POSITION:* With oil pan off, make certain that tube is tight in block. Check position of screen by placing straightedge vertically in line with inner edge of cylinder block oil pan rail. Distance from straightedge to nearest edge of screen should be 1 1/8". *See also "Low or Intermittent Oil Pressure" above.*

ENGINE REMOVAL: *See Valiant Special Data.*
CYLINDER HEAD: *See "Cylinder Head & Manifold" in Valiant Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Valiant Special Data.*

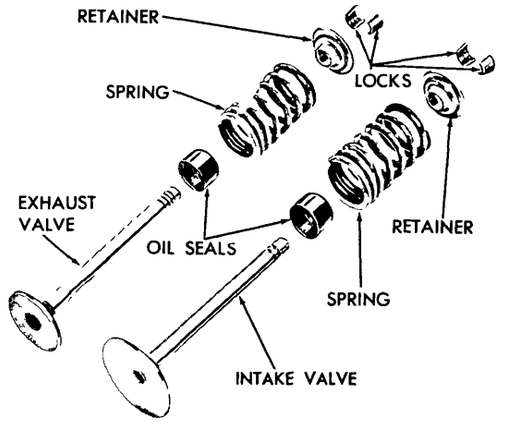
PISTONS

Aluminum alloy, cam ground, tin plated, slipper type skirt. Thermally controlled by steel struts.



►*OVERSIZE CYLINDER BORE CAUTION:* Letter "A" (A or AB) incorporated in Engine Number (see Engine Number under MODEL IDENTIFICATION above) indicates all cylinder bores and pistons are .020" Oversize.

Weight - (Std. Eng.) 16.4 ozs. **(Hyper Pack Eng.)** 17.2-17.6 ozs.
Removal - Pistons and rods removed from above.
Clearance - .0005-.0015" at top of skirt.
Fitting New Pistons - Use micrometers with piston and cylinder bore clean and dry and at 70°F. Measure piston at top of skirt at right angles to pin hole, measure cylinder bore halfway down and at right angles to crankshaft.
Installing Pistons - Notch in piston head must be toward front of engine. *See Rod Installation.*
Replacement Pistons: Furnished with pins in Std. size and .005", 020", .040" Oversize. *NOTE* - All pistons are machined to same weight.



PISTON PIN

Press fit in connecting rod.
Diameter - .9007-.9009". **Length** - 2.955-2.975".
Pin Fit in Piston - .00045-.00075" clearance. Pin should be sliding fit in piston at 70°F.

CONTINUED ON NEXT PAGE

VALIANT PISTON & ROD ASSEMBLY

VALIANT VALVE ASSEMBLY

CONTINUED FROM PRECEDING PAGE

Pin Fit in Rod - .0007-.0012" interference fit. Special procedure and tools used for removal & installation. *See "Piston Pins" in Valiant Special Data.*

Replacement Pins: Std. size only. Furnished as an assembly with new pistons.

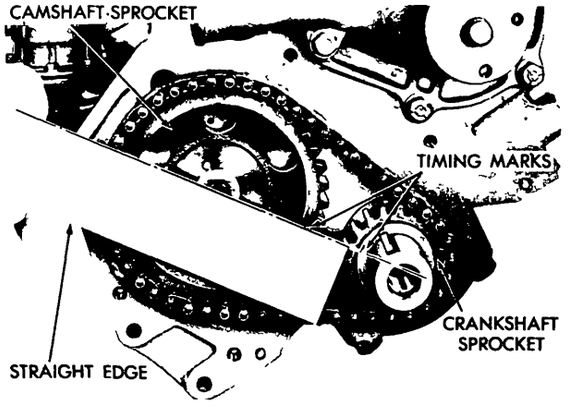
PISTON RINGS

►*PISTON RING CAUTION: Special rings used for Hyper Pack.*

(Std. Engine) – Compression rings cast iron, tin-plated. Oil ring cast iron with low tension hump type expander. **(Hyper Pack Engine)** – Compression rings cast iron (No. 1 Chrome-plated, No. 2 tin-plated). Oil ring is same as Std. Engine.

Ring	Width	End Gap	Side Clearance
Compr. (1&2)	.0775–.0780	.010–.020	.0015–.003"
Oil	.1860–.1865	.010–.020	.0010–.003"

Installing Rings - Mark "TOP" on compression rings must be upward.



Replacement Rings: Furnished in sets for following oversize ranges: Std. to .009", .020" to .029", .040" to .049".

CONNECTING ROD

Length (Cent-to-Cent) - 5.705-5.709".
Weight - 26.8 ozs.
Journal Diameter - 2.1865-2.1875". Out-of-round limits .001".
►*JOURNAL DIAMETER CAUTION (ONE OR MORE Journals Machined UNDERSIZE): See CRANKSHAFT below.*
Pin Bore in Rod - .8995-.9000".
Clearance - .0005-.0015". Wear limit .0025".
Side Clearance - .006-.012".
Bearing Adjustment - None, replace bearings.

Installing Rods: Notch in head of piston must be toward front of engine and oil squirt hole in lower end of rod must be toward left side of engine.

Replacement Bearings: Std. and .001", .002", .010" Undersize.

VALIANT VALVE TIMING MARKS

CRANKSHAFT

Journal Diameter - 2.7495-2.7505". Out-of-round limits .001".

►*CRANKSHAFT JOURNAL UNDERSIZE CAUTION: Engines with undersize journals identified as follows:* **.010" UNDERSIZE (All Main & Connecting Rod Journals)** - Letter "B" (B or AB) incorporated in Engine Number (see Engine Number under MODEL IDENTIFICATION above) indicates that ALL Main and Connecting Rod Journals are .010" undersize.
.001" UNDERSIZE (ONE OR MORE Main & Connecting Rod Journals) - Letter (M - Main Journal, R - Connecting Rod Journal) and Number (designates particular journal) stamped on center counterweight of crankshaft indicate that particular journal is .001" Undersize and fitted with .001" thicker wall bearing insert.

►*MAIN BEARING NON-INTERCHANGEABILITY CAUTION:* Nos. 1 & 2 **upper** bearings are chamfered along right inside edge at tab end and are interchangeable. No. 4 **upper** bearing is not chamfered and is NOT interchangeable with other bearings. *(NOTE* - This bearing identified by blue marking on edge). No. 3 **upper** and **lower** bearings are flanged and NOT interchangeable with other bearings. **Upper** and **lower** bearing halves are NOT interchangeable (upper bearings grooved, lower bearings plain). Nos. 1, 2, 4 **lower** bearings are interchangeable. *CAUTION - Use of No. 1 or 2 upper bearing in No. 4 position may cause oil leak, use of No. 4 upper bearing in No. 1 position would prevent proper lubrication of timing chain and sprockets.*

Clearance - .0005-.0015".
End Thrust - Taken by No. 3 (rear intermediate) flanged bearing. **Endplay** - .002-.007".

►*MAIN BEARING SERVICING NOTE:* Bearing caps are numbered and must be installed in correct position (not interchangeable).

Replacement Bearings: Std. and .001", .002", .010" Undersize.

Crankshaft Rear Main Bearing Oil Seal: *See "Crankshaft & Main Bearings" in Valiant Special Data.*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Valiant Special Data.*

CAMSHAFT

Journal Diameters - **(1)** 1.998-1.999", **(2)** 1.982-1.983", **(3)** 1.967-1.968", **(4)** 1.951-1.952".
Bearings - Lead based babbitt on steel.
Clearance - .001-.003". Wear limit .005".
End Thrust - Taken by rear face of sprocket hub on front face of block. No thrustplate used.
Camshaft Setting - Marks on sprockets must be adjacent and in line with straightedge across shaft centers.

Timing Chain: Side guide type. Width .88", Pitch .50", Length 50 links. Replace chain when slack as measured on rim of camshaft sprocket exceeds 11/64" (hold crankshaft sprocket stationary, use torque wrench to turn camshaft sprocket in both directions applying 30 ft. lbs. turning torque if cylinder head installed, 15 ft. lbs. turning torque if head off).

Camshaft Removal: *See "Camshaft & Bearings" in Valiant Special Data.*

Engine Front Cover Installation: *See "Engine Front Cover" in Valiant Special Data.*

Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Valiant Special Data.*

VALVES

►*INSUFFICIENT VALVE TRAIN LUBRICATION (Rocker Arms, Valve Stems and Pushrods): See "Camshaft & Bearings" in Valiant Special Data for inspection of rear camshaft bearing and oil passages in camshaft.*

Tappet Clearance: Initial setting with cold engine .012" (Intake), .023" (Exhaust). With engine at normal operating temperature and idling, set clearance to .010" (Intake), .020" (Exhaust).

Valve	Head Diam.	① Stem Diam.	Length
Intake	1.615–1.625"	.372–.373" Std	4.774"
Exhaust	1.355–1.365"	.371–.372" Std	4.797"

Valve	Seat Angle	Lift	Stem Clearance
Intake	45°	②	④ .001–.003"
Exhaust	45° ⑥	③	⑤ .002–.004"

① - Also furnished .005", .015", .030" Oversize.
② - .375" (Std. Engine), .430" (Hyper Pack).
③ - .360" (Std. Engine), .430" (Hyper Pack).
④ - Wear limit .004". ⑤ - Wear limit .006".
⑥ - Valve face angle 47°

Valve Seat Width - 5/64-3/32" Intake, 3/64-1/16" Exhaust.
Valve Stem Oil Seals - Cup type seals used on all valve stems (long seal on intake valves, short seal on exhaust).

Valve Guides: Integral with cylinder head. Ream valve guide holes for oversize valves if valve stem clearance is excessive. Valves with oversize stems furnished .005", .015", .030" oversize. Ream guides for next oversize using reamer, Tool C-3433 (.005"), C-3430 (.015"), C-3427 (.030").

Valve Springs: *NOTE* - Double springs (Inner & Outer) used on Hyper Pack Engines.
Free Length - 2".

Valve Spring Specifications (Std. Engine)

Valve	Pressure	Length
Closed	68–76 lbs.	1 11/16"
Open	160–172 lbs.	1 5/16"

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

(Hyper Pack Engine)

	Inner Spring		① Outer Spring	
	Pressure	Length	Pressure	Length
Closed	30 lbs.	1.56"	90 lbs.	1.66"
Open	77 lbs.	1.13"	227 lbs.	1.22"

① - Check with spring dampers removed.

Valve Spring Installation - Valve spring ends must be square within 1/16". Check installed height of spring which must not exceed 1 11/16" (measure from face of spring seat in cylinder head to lower face of spring retainer). If height greater, install 1/16" spacer in head counterbore to bring spring height within limits of 1 5/8" to 1 11/16".

Valve Lifters: Barrel type. Remove from above.

Rocker Arm Assembly: *See "Valve System" in Valiant Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

Valve Timing Specifications

(Std. Engine)

Intake Valves – Open 8° BTDC. Close 44° ALDC.
Exhaust Valves – Open 48° BLDC. Close at TDC.

(Hyper Pack Engines)

Intake Valves – Open 22° BTDC. Close 74° ALDC.
Exhaust Valves – Open 66° BLDC. Close 22° ATDC.

Valve Timing Check (Std. Engine) – Remove rocker arm cover, mount dial indicator on cylinder head so that pointer contacts adjusting screw of No. 3 Intake Valve (6th. rocker arm from front of engine). Turn crankshaft until maximum lift is indicated on dial indicator. At this point, timing mark on damper should be in line with 15° BTDC point on timing mark on chain case cover. *NOTE* – If timing is off one tooth, maximum valve lift will occur approximately 27° before or after this point.

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Valiant Special Data.*

Crankcase Capacity: 4 qts. refill. Add 1 qt. with filter change.

Normal Oil Pressure: 45-60 lbs. at 40-50 MPH.

Oil Pressure Relief Valve - Located in pump body.

►*RELIEF VALVE SPRING NOTE:* Three types of spring available. Replace with same color spring. *See "Oiling System" in Valiant Special Data.*

Oil Pressure Indicator: Indicator light on instrument panel operated by Oil Pressure Switch, Auto-Lite No. 14272A, on right side of block on oil pump body.

Oil Pump: Rotor type, on right side of crankcase.

Overhaul - *See "Oiling System" in Valiant Special Data.*

Oil Filter: Full flow type. Replace filter element every 4,000 miles, to correspond with oil changes. *NOTE* - Be sure to unseat drain back valve in base of filter using blunt tool.

Crankcase Ventilation: Filter in oil filler cap and outlet vent tube from rocker arm cover down to right rear of engine. Wash filler cap filter in kerosene every oil change or more often in dusty areas and reoil.

COOLING

Water Capacity: 13 qt. Add 1 qt. for heater installation.

Pressure Valve: 14 lb. radiator cap (All Models).

Thermostat: Pellet type. *CAUTION* - Use only No. 2129205 identified by "jiggle" pin in bleed hole.

Water Pump: Sealed ball bearing, packless type. No lubrication required.
See "Water Pump" in Valiant Special Data.

Pump Removal - Drain cooling system. Loosen alternator adjusting strap and push alternator toward engine. Remove fan, spacer, pulley and belt. Remove inlet and heater hoses and clamp from by-pass hose. Remove water pump body down and off by-pass hose.

Temperature Gauge: Constant voltage type with voltage regulator inside gauge. *NOTE* - "A" terminal on gauge is constant-voltage feed terminal for gasoline gauge.

Dash Unit - Chrysler No. 2076319.

Engine Unit - Chrysler No. 2084459.

See "Temperature Gauges" in Miscellaneous Section.

CLUTCH

Borg & Beck. 9A7 (9 1/8") Std., 10" Optional.

Cover No. - Borg & Beck No. 361521 (9A7).

Disc No. - Borg & Beck No. 383045 (9A7).

See "Borg & Beck" in Clutch Section.

Pedal Adjustment: Adjust self-locking nut on fork rod to provide 5/32" free movement at fork-to-pushrod connecting pin. This adjustment will provide necessary 1" free travel at pedal.

Removal: Raise car and remove transmission, *see Transmission Removal below.* Remove clutch housing pan. Disconnect clutch linkage and retracting spring at clutch fork. Remove clutch fork from release sleeve and bearing assembly. Mark cover and flywheel for reassembly and remove six cover attaching bolts. Remove cover and clutch plate.

SYNCHRO-MESH TRANSMISSION

Own. New "Synchroshift" transmission with helical cut gears.
See "Dodge, Plymouth, Valiant (Synchroshift) Transmission" in Transmission Section.

Gearshift Linkage Adjustment: *See "Dodge, Plymouth, Valiant (Synchroshift) Transmission" in Transmission Section.*

Removal: Drain lubricant, disconnect propeller shaft, speedometer cable and housing and gearshift rods. Disconnect parking brake control cable. Remove speedometer cable by hand (pinion comes out with cable). *CAUTION - Do not crush housing.* Remove back-up light switch (if so equipped). Install engine Fixture C-3806 hooks firmly into holes in frame side member with support ends up against oil pan flange. Adjust fixture to support engine. Raise engine slightly and remove rear support attaching bolts and remove crossmember. Support transmission, remove transmission to clutch housing bolts, slide transmission rearward to clear pinion shaft. Lower transmission and remove from beneath car.

Capacity - 5 pts. This supersedes previous specification of 2¾ pints.

TORQUEFLITE TRANSMISSION

New 3-speed automatic transmission with torque converter.
See "TorqueFlite Six Transmission" in Transmission Section.

►*LOCKING IN PARKED POSITION NOTE:* Caused by incorrect cable installation or adjustment. *See "TorqueFlite Six Transmission" in Transmission Section.*

►*OIL LEAK AT PARKING SPRAG CABLE CORRECTION:* Caused by damaged or undersize "O" ring. *See "TorqueFlite Six Transmission" in Transmission Section.*

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "TorqueFlite Six Transmission" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "TorqueFlite Six Transmission" in Transmission Section.*

Lubrication: Check fluid level every 1000 miles, drain and refill every 2 years or 21,000 miles, whichever occurs first. *NOTE* - For heavy duty operation, drain and refill every 10,000 miles.

Checking Fluid Level - Bring engine and transmission to normal operating temperature with parking brake applied. Push all selector buttons in turn to assure fluid distribution and check fluid level in "N". Maintain fluid level between "F" mark and 5/8" above "F" mark on dipstick. *NOTE* - If fluid checked with transmission cold, oil level should be at "F" mark. *Use only Automatic Transmission Fluid Type "A", Suffix "A".*

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "TorqueFlite Six Transmission" in Transmission Section.*

UNIVERSALS

Detroit Universals. Ball & Trunnion front, Cross rear.

Rear Universal Joint Operating Angle - *See "Propeller Shaft Notes" in Valiant Special Data.*

REAR AXLE

Own. Semi-floating, hypoid gear type with differential carrier integral with rear axle housing.
See "Valiant Rear Axle" in Rear Axle Section.

Axle Ratios - Used as follows:

Model	Synchro-mesh	Auto. Trans.
Std. Engine	3.55-1 (39-11) ①	②3.23-1 (42-13)
Hyper Pack Engine	③	③

① - 3.23 (42-13) Optl. ② - 3.55 (39-11) Optl.
③ - 3.23 (42-13), 3.55 (39-11), 3.90 (39-10) Optl.

Backlash - .004-.006".

Axle Shaft Removal: Remove wheel and drum. Disconnect brake line at wheel cylinder. Work through axle shaft flange to remove retainer nuts and use Puller C-3725 to pull axle shaft and rear brake assembly. Carefully remove brake assembly from axle shaft without damaging seal contact area. Remove seal from housing. Use same tool to remove bearing from axle shaft (when necessary to replace bearing). Removal damages bearing.

Rear Axle Assembly Removal: Raise car and support body at front of rear wheels. Block brake pedal up. Remove rear wheels and disconnect hydraulic flex line. Disconnect parking brake cable at transmission and propeller shaft at yoke. Remove spring clips (U bolts) and shock absorbers. Remove assembly from beneath car.

SHOCK ABSORBERS

Oriflow. Direct acting, hydraulic type. Serviced by replacement.

►*SHOCK ABSORBER NOISE CORRECTION & PRODUCTION CHANGE:* Use only later type production

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

shock absorbers listed below to eliminate noise and for service replacement.

Replacement Shock Absorbers

Model	Package No.	①Shock Absorber No.
Front Std.	2240316	2201572
Front H.D.	2240364	2206514
Rear Std.	2240317	2201575
Rear H.D.	2240365	2206516

① - Stamped on base of shock absorber.

FRONT SUSPENSION

"Torsion-Aire" type similar to design used on other models except that Height Adjustment is made at torsion bar front anchors which are part of lower control arms (rear anchors integral with engine support member). *See "Valiant Torsion Bar Front Suspension" in Suspension & Wheel Alignment Section.*

Steering Axis Inclination – 7½° at 0° camber.

Caster – **(Manual Steering)** Neg. ½°±½°. **(Power Steering)** Pos. ¾°±½°. *NOTE* – Caster should be set as nearly equal as possible on both sides of car with a maximum differential of ¾° and driver's side less positive.

Camber – **(Right Wheel)** Pos. 1/8°±¼° with Pos. 1/8° preferred. **(Left Wheel)** Pos. 3/8°±¼° with Pos. 3/8° preferred.

►*CASTER & CAMBER ADJUSTING NOTE:* Adjusting bolts and cams provided at inner end of upper control arms and adjustment is same as for other Chrysler models.

Toe-In – 1/8"±1/32" with 1/8" preferred.

Toe-Out on Turns – With inner wheel at 20°, outer wheel should be 17°40'.

Wheel Bearing Adjustment: Tighten adjusting nut to 180 **In. Lbs.** torque while rotating wheel, position nut lock on adjusting nut with slots in line with cotter pin hole in spindle, then back off nut and nut lock 1½ slots (cotter pin hole will be covered). Remove nut lock and reposition on nut so slots line up with cotter pin hole, install cotter pin. *CAUTION - Do not disturb adjusting nut.*

STEERING

Manual: Saginaw Ball Bearing Worm & Nut type. *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

►*STEERING COLUMN JACKET-TO-STEERING COLUMN SEAL CLAMP NOTE:* Clamp omitted on cars built before Serial No. 103796. Install 1¾" screw type hose clamp around seal at bottom of steering column jacket after filling two seal lips with wheel bearing grease.

Power Steering: Constant Control Full Time power steering, similar to unit used on other Chrysler models except for smaller size. *See "Valiant Constant Control Power Steering" in Steering Section.*

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Saginaw Ball Bearing Worm & Nut" and "Valiant Constant Constant Control Power Steering" in Steering Section.*

Steering Gear Removal: *See "Saginaw Ball Bearing Worm & Nut" and "Valiant Constant Control Power Steering" in Steering Section.*

BRAKES

Bendix Hydraulic, single anchor, Duo-Servo type. Parking brake pedal applies rear wheel service brakes. *See "Bendix Hydraulic Single Anchor" Brakes in Brake Section.*

►*HYPER PACK BRAKE NOTE:* Brake lining is Full Metallic or Ceramic Metallic type. Finned aluminum drums with cast iron liner are optional.

Drum Diameter – 9" front & rear.

Master Cylinder – 1.00" (Std. Eng.), 1.125" (Hyper Pack).

Wheel Cylinders – 1.00" Front, .8125" Rear (All Models).

Braking Power - 60% front, 40% rear.

Clearance - Turn adjusting wheel to expand shoes until slight drag is felt, then back off wheel 10-12 notches. Wheel should be free with no drag.

Lining – Molded Asbestos (Std. Engine), Full Metallic or Ceramic Metallic (Hyper Pack). Riveted to shoes.

Lining Width & Length
(Std. Engine)

Shoe	Frt. Wheel	Rear Wheel
Primary	2.25"x7.658"	2.0"x7.658"
Secondary	2.50"x9.818"	2.0"x9.818"

(Hyper Pack – Full Metallic)

Shoe	Frt. Wheel	Rear Wheel
All Shoes ①	1.25"x1.625"	1.0"x1.625"

(Hyper Pack – Ceramic-Metallic)

Shoe	Frt. Wheel	Rear Wheel
All Shoes ②	2.5"x1.75"	2.0"x1.75"

① - 6 Segments (Primary), 10 segments (Secondary).
② - 3 segments (Primary), 4 segments (Secondary).

Lining Thickness – .20" (Std. Eng.), .19" (Hyper Pack - all lining).

Master Cylinder: On engine side of firewall directly above steering column.

►*MASTER CYLINDER NOTE (Cars Without Power Brakes):* Master cylinder has a non-adjustable pushrod and a pedal stop within the master cylinder eliminating need for adjustment. No pedal return spring is used. A service package consisting of Piston-collar-rod-retainer and boot assembly is available for replacement.

Checking Fluid Level - Filler plug at top of master cylinder (on dash panel in engine compartment).

Removal - Disconnect pushrod, brake tube and stop light switch leads. Remove master cylinder to dash bolts. Slide master cylinder straight out from dash.

►*REMOVAL CAUTION:* Never pull brake pedal back beyond piston stop in master cylinder. A pull of 50 lbs. could disengage pushrod from piston.

Power Brakes: Bendix Hydraulic (Disc) Reaction type Power Unit. Mounted on firewall with pushrod connected to brake pedal linkage. Adjustable type pushrod used in master cylinder. *See "Bendix Hydraulic (Disc) Reaction Type Power Unit" in Brake Section.*

Removal - Disconnect vacuum line from vacuum cylinder, and hydraulic line from master cylinder and remove stop light switch wires. Disconnect pushrod from pedal linkage and remove four power unit-to-bracket attaching nuts. Remove unit from car.

MISC. MECHANICAL

Windshield Wiper: Autolite Electric. No. EPW-4002 (Single Speed), ERQ-4001 (Variable Speed). *See "Autolite Electric Windshield Wipers" in Miscellaneous Section.*

TIGHTENING SPECIFICATIONS

	Ft. Lbs.
Cylinder Head Bolts ©	65-75
Exhaust Manifold Bolts	13-18
Oil Pan Bolts	7-9
Main Bearing Cap Bolts	65-75
Flywheel	75-85
Vibration Damper or Pulley	45-55
Connecting Rod Cap Bolts	19-24
Camshaft Sprocket	35-45
Camshaft Thrust Plate	12-15
Rocker Shaft Support Bracket	30-35
Rocker Arm Cover	3-5
Engine Front Cover	7-9
Water Pump	23-28
Oil Pump	23-28
Flywheel Housing	40-50
Transmission Mounting	32-36

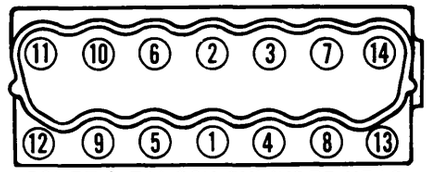
© - See Cylinder Head Installation (below) for head tightening procedure Three different torque applications must be made

ENGINE

ENGINE REMOVAL: *NOTE* - Engine only is removed Do not remove transmission Proceed as follows

1) Remove hood, drain cooling system and crankcase, remove air cleaner and disconnect battery ground cable Remove radiator, drive belt, fan and pulley Disconnect heater hoses at water pump and at carburetor heater spacer outlet, generator and starter wires at units, accelerator rod and choke control cable at carburetor

2) Disconnect windshield wiper hose at vacuum pump Remove fuel pump bowl and disconnect flexible fuel line from tank line (plug tank line) Disconnect primary wire at coil and oil and temperature sending unit wires at units Remove starter and dust seal



3) Disconnect clutch retracting spring and remove equalizer shaft and arm bracket from underbody rail Remove flywheel or converter upper retaining bolts (accessible through floor pan) and disconnect exhaust pipe from manifold Disconnect engine mounts and remove flywheel or converter housing cover Remove flywheel housing lower bolts (synchro-mesh), disconnect converter from flywheel and remove converter housing lower bolts (auto trans)

4) Support transmission and flywheel or converter, attach lifting hooks under exhaust manifold, remove engine

CYLINDER HEAD & MANIFOLD

CYLINDER HEAD: Removal - Drain cooling system, disconnect battery ground cable, remove air cleaner Disconnect all lines, hoses, and controls from cylinder head Remove valve rocker cover Back off all valve tappet adjusting screws to remove load from rocker arms, loosen rocker arm shaft retaining bolts and remove rocker arm shaft as an assembly Remove pushrods in sequence so that they can be reinstalled in same positions Remove front and rear bolts on manifold side of head and install guide studs in these holes (see Note below) Remove remaining head bolts and lift head off

GUIDE STUD NOTE - Guide studs can be made from 7/16" x 6" bolts by cutting off head, tapering end, and slotting for screwdriver engagement Threads on studs should not exceed 3/8-1/2" in length

COMET & FALCON CYLINDER HEAD

Installation: Clean head and block gasket surfaces, apply head gasket sealer to both sides of new head gasket and position gasket over guide studs in block Install cylinder head over guides and see that exhaust manifold studs engage muffler inlet pipe Coat end bolts on right side of cylinder head with water resistant sealer, install all bolts in head Tighten cylinder head bolts in **three** successive steps in order shown in diagram as follows **1st Step** - 55 ft lbs **2nd Step** - 65 ft lbs **3rd Step** - 75 ft lbs *After final tightening do not disturb bolts* Complete reassembly and note the following points Apply Lubriplate to valve stem tips and rocker arm pads Make certain that oil holes in rocker arm shaft face downward Coat one side of cover gasket with oil resistant sealer and assemble gasket with this side next to cover

PISTON PINS

►*TOOL T60K-6135-A MODIFICATION NOTE:* To prevent damage to piston when Detail 2 of tool seats against piston pin boss, grind a 1/16" - 45° chamfer around outer edge of Detail 2

REMOVAL: Press pin out of piston and connecting rod using vise and wrench with tool shown in illustration, or with arbor press using Tool 6135-J (see illustration)

INSTALLATION: Press pin into piston and connecting rod until Detail 2 is seated firmly in Detail 1 using vise and wrench with tool shown in illustration, or arbor press and Tool 6135-J (see illustration)

CRANKSHAFT & MAIN BEARINGS

►*MAIN BEARING CAP INSTALLATION NOTE:* Caps numbered 1 (front) through 4 (rear) and should be installed in correct position with arrow on cap pointing toward front of engine

CRANKSHAFT THRUST BEARING ALIGNMENT: Align thrust surfaces by tightening cap bolts finger tight, then pry crankshaft forward and pry bearing cap rearward Tighten cap bolts before relieving pressure on shaft

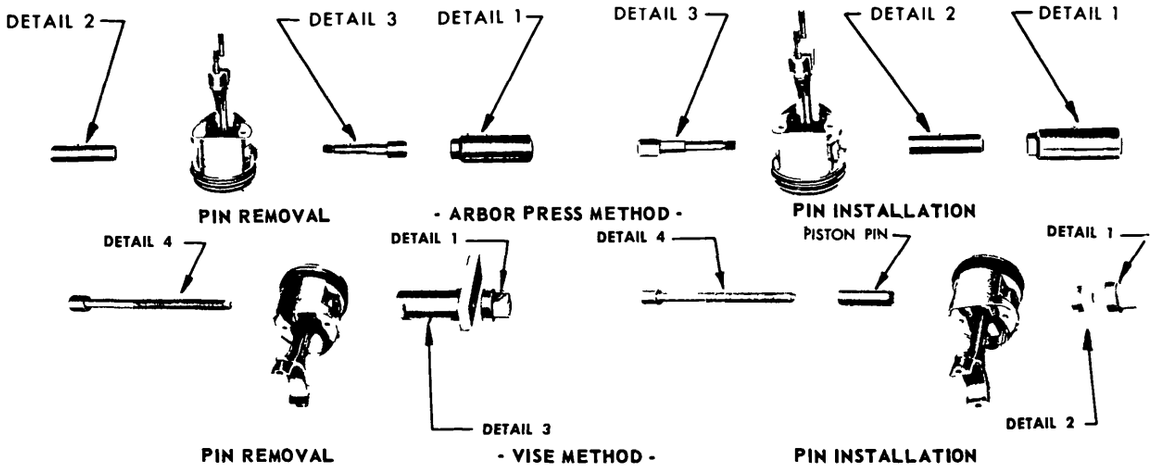
REAR MAIN BEARING OIL SEAL: *NOTE* - To replace upper oil seal, crankshaft must be removed from block,

Cap & Side Seal Installation: Install new cap seal in cap with Tool T60K-6701-A and cut ends of seal flush with cap Install bearing cap Dip side seals in light engine oil (DO NOT use sealer, seals are designed to expand with oil) and install immediately into grooves It may be necessary to drive seals in place the last ½" of travel DO NOT cut off ends of seals

Testing Seal Installation - To check vertical seal installation for leaks, squirt a few drops of oil into parting lines between cap and cylinder block from the outside Blow compressed air against seals from the inside of block If air bubbles appear in oil, it is an indication of oil leakage

ENGINE FRONT COVER

ENGINE FRONT COVER: Removal - Drain cooling system and crankcase Remove radiator Remove drive belt, fan and pulley, and crankshaft pulley Remove front cover and gasket (crankcase ventilation tube attached by one front cover bolt) Remove oil pan(s *Car Model pages) NOTE - Oil pan must be removed as proper gasket seal can be made at installation*



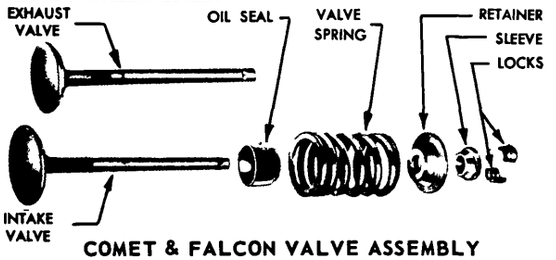
Installation: Apply sealer to cover gasket and place gasket on cover Install cover with Tool T60K-6019-A (crankcase ventilation tube attached by one cover bolt) Install crankshaft pulley Install oil pan, fan and pulley, drive belt, and radiator

FRONT COVER OIL SEAL: Drive out old seal with a punch and clean recess Coat new seal with grease and drive in until fully seated in recess in cover Make sure spring is positioned properly in seal

CAMSHAFT & BEARINGS

CAMSHAFT BEARING REPLACEMENT: *NOTE - No 4 bearing not interchangeable with other bearings* When installing, No 1 bearing must be pressed 100- 140" below front face of bearing bore Press other bearings in and align oil supply holes Install new camshaft rear bearing bore plug

CONTINUED ON NEXT PAGE



CONTINUED FROM PRECEDING PAGE

VALVE SYSTEM

ROTATABLE VALVES: "Rotatable" type valves operate directly in valve guide in cylinder head and are removed and installed as follows:

Valv Rem val: Compress valve spring (Tool 6513-EE) and remove retainer locks. Remove sleeve, spring retainer, spring, stem seal, and valve.

Valve A s mbly Installati n: Lubricate valve guide and stem with engine oil and apply Lubriplate to stem tip. Install each valve into guide from which removed. Install new seal with cup side down toward valve guide boss. Install valve spring with damper (closed) coil down, spring retainer and sleeve. Compress spring and install retainer locks.

COMET & FALCON VALVE ASSEMBLY

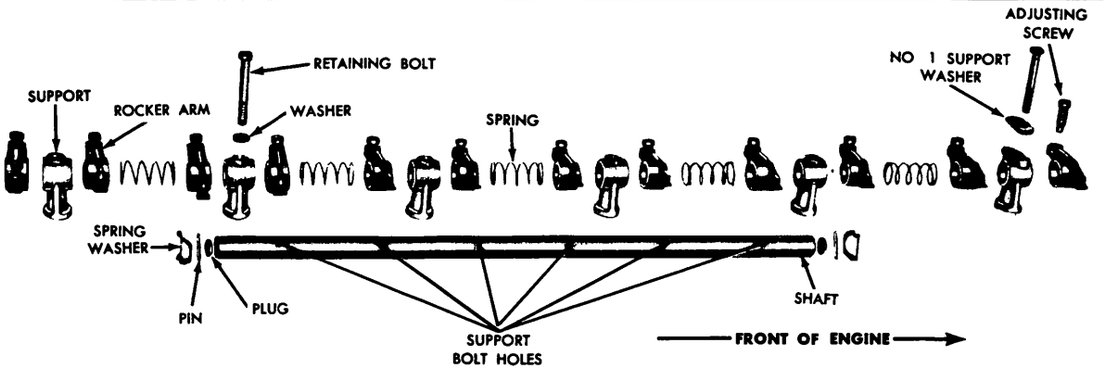
ROCKER ARMS

ROCKER ARM SHAFT: Removal - Remove rocker arm cover and back off valve lash adjusting screws to relieve spring load. Loosen rocker shaft retaining bolts and remove shaft as an assembly.

Disass mbly: Remove pin and spring washer from each end of shaft. Slide rocker arm, springs, and supports off shaft. If shaft end plugs to be removed, pierce plug on one end and remove and drive out opposite plug with rod.

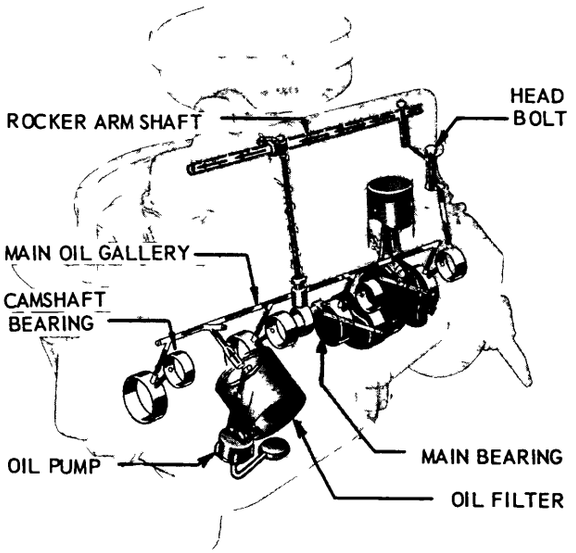
R ass mbly: Install plugs in shaft with cup side out. Install all parts in same order as removed, making sure oil holes in shaft face downward.

Installation: Reverse removal procedure and be sure oil holes in shaft face downward.



OILING SYSTEM

ENGINE LUBRICATION

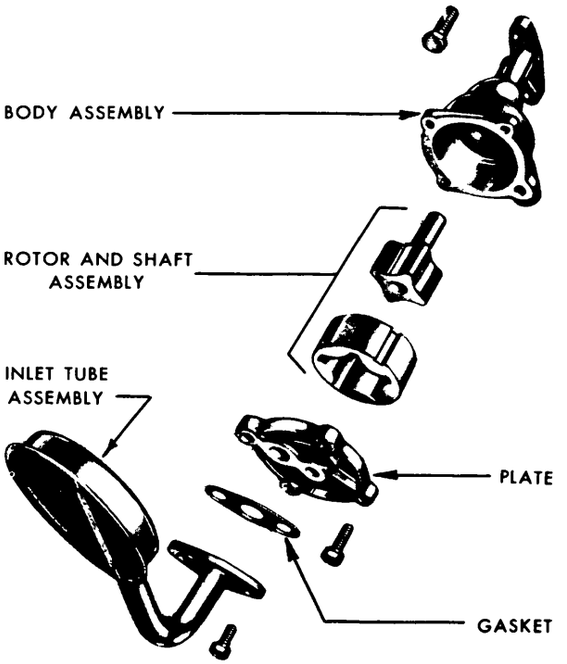


ENGINE LUBRICATION: Force feed type with oil supplied under full pressure to all crankshaft, connecting rod, and camshaft bearings. Oil under reduced pressure (metered by camshaft bearing) lubricates distributor drive gear and valve mechanism on cylinder head. All other parts are lubricated by oil spray or splash.

OPERATION: Rotor type oil pump mounted in crankcase at left front corner of engine. Pump draws oil through fixed strainer and intake pipe mounted on pump cover and delivers oil to full flow type filter mounted externally on front left side of crankcase. From the filter, oil passes through transverse passage to main oil gallery extending along full length of engine block directly above the camshaft. Oil is distributed through main oil gallery as follows:

Crankshaft & Camshaft Bearings - Oil passages in crankcase webs supply oil from main gallery to each crankshaft bearing and then up to corresponding camshaft bearing. Distributor drive gear is lubricated from front camshaft bearing.

COMET & FALCON ROCKER ARM ASSEMBLY



COMET & FALCON ENGINE OILING SYSTEM

Connecting Rod Bearings - Crankshaft is drilled and each connecting rod bearing is lubricated through passage from adjacent main bearing. Oil groove in main bearings provide continuous flow of oil to connecting rod bearings.

Pistons & Pins - Lubricated by oil spray thrown on cylinder walls from oil hole on right side of rod when this hole registers with oil hole in connecting rod journal.

Timing Chain & Sprockets - Lubricated by splash from oil pan.

Rocker Arms, Pushrods & Valve Stems - Oil from rear camshaft bearing flows through vertical passage in block and around left rear corner cylinder head bolt to oil port at rear rocker arm shaft bracket pad. Oil then flows around this bracket bolt to hollow rocker arm shaft, and is distributed to each rocker arm for rocker arm, pushrod, and valve tip lubrication. Excess oil is discharged from rocker arm shaft at front shaft bracket. Oil from rocker chamber runs down pushrods to lubricate pushrod seat and lifter and drains back into the oil pan through cored openings in the block.

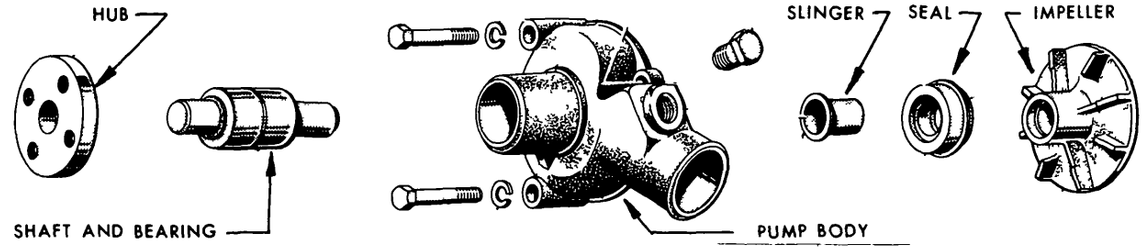
COMET & FALCON OIL PUMP

OIL FILTER: Full flow type. Mounted externally on left front corner of engine. Filter has integral bypass valve and anti-drain back diaphragm.

OIL PUMP

OIL PUMP: Removal - Remove oil pan, pick-up tube and screen assembly and oil pump retaining bolts. Remove pump.

CONTINUED ON NEXT PAGE



CONTINUED FROM PRECEDING PAGE

Disass mbly: Remove inlet tube and gasket, cover, inner rotor and shaft assembly, and outer race. Pull pressure relief valve cap out by means of a self-tapping screw threaded into cap. Remove spring and plunger.

Inspection: Clean all parts in solvent and dry. Check all parts for chips, damage or wear. If cover worn, scored or scratched, replace. Outer race-to-housing clearance should be .006-.011". Install inner rotor and shaft into housing and place straightedge across housing and rotor and outer race. Clearance should be .0010-.0035". Drive shaft-to-housing bearing clearance should be .0015-.0029" (measure O.D. of shaft and I.D. of housing bearing). Relief valve spring tension should be 8.6-9.5 lbs. at 1.078" and relief valve piston-to-bore clearance should be .0015-.0029". *NOTE - Outer race, inner rotor and shaft assembly are replaced as an assembly only.*

Reassembly: Oil all parts. Install relief valve piston, spring, and new cap. Install outer race, inner rotor and shaft and cover. Tighten cover screws to 6-9 ft. lbs. Install inlet tube.

Installation: Reverse removal procedure.

COMET & FALCON WATER PUMP

COOLING SYSTEM
WATER PUMP

WATER PUMP: Removal - Drain cooling system, disconnect radiator lower hose at pump, remove drive belt, fan, and pump pulley. Disconnect heater hose at pump and remove pump.

Disassembly: Remove hub from shaft (Tool 7675-N) and press shaft and bearing assembly out of housing with an arbor press and Tool T52L-8501-DAD-19. Remove impeller from shaft (Tool OTC-952 placed under impeller to give proper support).

Reassembly: Make sure slinger installed on new shaft in same relative position as slinger on old shaft (install with Tool T52L-8501-DAD-18). There should be .220" between slinger and bearing. Coat outer diameter of bearing with grease and press into housing with arbor press and Tool T52L-8501-DAD-19 (support housing with Tool T60K-8512-A). Apply waterproof sealer to seal and press into housing (support housing with T52L-8501-DAD-16 and use T52L-8501-DAD-17 or 18 between press ram and seal). Coat rubbing face of impeller with grease and press shaft into impeller (place impeller in T60K-8512-A and insert this assembly into T52L-8501-DAD so it will support housing). *NOTE - Pump housing should just touch adapter ring. DO NOT put excessive pressure on shaft as bearing will be damaged. Impeller-to-housing clearance should be .005-.0025".* Turn setscrew in fixture plate so it touches shaft and press hub on shaft until distance from face of housing to top surface of hub is 3.94".

Installation: Reverse removal procedure.

►*JACKING & HOISTING CAUTION Before jacking or hoisting car, see "Jacking & Hoisting Precautions" in Suspension & Wheel Alignment Section.*

MODEL IDENTIFICATION

SERIAL NUMBER: Stamped on patent plate on rear face of left front door inner panel Number (example below) includes identification data

① ② ③ ④ ⑤
0 H 01 S 800001

① - Year **0** 1960
② - Assembly Plant **H** Lorain **K** Kansas City **R** San Jose **T** Metuchen
③ - Body Series *See table below*
④- Engine **S** Std Engine **D** Low Compression Engine
⑤ - Beginning vehicle number at each assembly plant

Body Series Identification

Series	Code Number
2-Door Sedan	01
4-Door Sedan	02
2-Door Station Wagon	06
4 Door Station Wagon	07

ENGINE IDENTIFICATION NUMBER: Stamped on top surface of block on front left side near crankcase breather pipe Designates Engine Plant, Year, Month & Day of manufacture, and Inspector's identification Not used for licensing

TUNE-UP

►*PART THROTTLE (ROAD LOAD) SURGE CORRECTION* This condition may be caused by factors other than carburetor As an initial step, perform a complete tune-up operation, checking valve lash, spark plug gap, timing, distributor condition and performance (broken advance springs, defective vacuum unit diaphragm, vacuum line leak), carburetor fuel level and idle mixture adjustments, loose carburetor spark valve, and vacuum leaks in windshield wiper or vacuum pump circuit If condition not corrected by performing all the the steps listed above, carbutetor should be modified *See 'Holley Visi-Flo Carburetors" in Carburetion Section*

COMPRESSION PRESSURE: 170 lbs ± 20 lbs Maximum variation between cylinders 10 lbs

VACUUM READING: Steady 18" at specified idling speed

VALVE TAPPET CLEARANCE: .016" All Valves. Use step-type feeler gauge (.015" GO, 017" NO GO) If clearance set with engine cold, reset after operating engine for 30 minutes at 1200 RPM to stabilize temperature Set clearance with engine idling *NOTE - Above specifications supersede any previous specifications.*

►*SELF LOCKING TAPPET CLEARANCE ADJUSTING SCREW NOTE* Torque required to turn screw must be 3 ft lbs minimum Replace screw or screw and rocker arm if less "interference" noted

MANIFOLD HEAT CONTROL: Intake manifold cast integrally with head end has "hot spot" at lower center section where exhaust manifold clamped in place In addition, an engine coolant heated spacer is located between carburetor and intake manifold to prevent carburetor throttle valve icing (forward fitting on spacer connected to heater connection on cylinder head, rear fitting connected to heater) Hot water to heater core flows through this spacer *NOTE* - On cars without heater, hose connections to spacer are omitted

IGNITION

FIRING ORDER: 1-5-3-6-2-4
SPARK PLUG GAP: 032- 036"
Spark Plugs - Champion F-14-Y or 870. 18 mm. Torque to 15-20 ft lbs *NOTE* - Plugs have tapered seat and do not require a gasket Correct torque is important
COIL: Ford No. B6A-12029-B.
Ignition Current - 2 5 amps idling, 4 5 amps stopped
Resistor - Ford No COLF-12250-B Resistance wire (pink color) in harness 1 30-1 40 ohms at 75°F
►*COIL RESISTOR NOTE* Resistance wire is connected between ignition switch and dash panel connector and is bypassed during cranking by lead from starter switch to connector
DISTRIBUTOR: Ford No. CODF-12127-A (Synchro-mesh), CODF-12127-B (Auto. Trans.). Loadomatic type of same design used on previous Ford Six cars

See "Ford Loadomatic Distributors" in Electrical Section.

Condenser - Ford 7RA-12300-C **Capacity** 21- 25 mfd
Contact Point Set - Ford No FAA-12171-A
Breaker Gap - 024- 026" **Cam Angle** - 35-38°
Breaker Arm Spring Tension - 17-20 ozs
Rotation - Clockwise viewed from above

Advance Performance
►With Distributor On Test Stand

①CODF-12127-A			②CODF-12127-B		
Distr Degrees	Vacuum (" Hg)	Distr RPM	Distr Degrees	Vacuum (" Hg)	Distr RPM
0	0 33	400	0	0 65	700
½-1½	0 78	600	1¼-2¼	1 27	1000
3½-4½	1 30	800	4¾-5¾	2 93	1600
10-11¼	3 45	1400	5¾-7	3 94	2000
12½-13¾	5 00	1800			
12¾-14	5 35	2000			

① – Set test stand to 0° at 300 RPM & 0" of Hg
② – Set test stand to 0° at 600 RPM & 48" of Hg

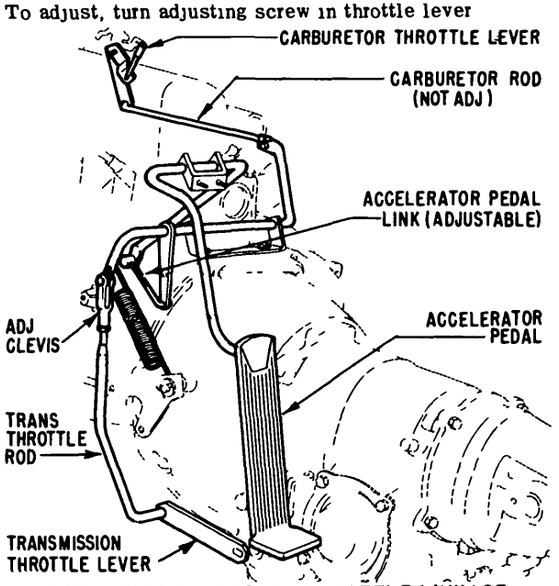
►*DISTRIBUTOR INSTALLATION CAUTION:* Intermediate drive shaft must engage seat in oil pump shaft fully If necessary, turn engine over with starter after distributor drive gear partially engaged to insure full engagement of the intermediate shaft

IGNITION TIMING

Transmission	Std. Setting
Synchro-mesh	2° BTDC
Automatic	10° BTDC

NOTE - Allowable range 2-10° BTDC Set timing with engine idling and vacuum line disconnected
Timing Mark - Notch in crankshaft pulley and timing pointer on left side of chain case cover Pointer marked "TDC", "2", "6", "10" to indicate advance Align pulley notch with correct mark on pointer

CARBURETOR



►*CARBURETOR APPLICATION: Holley "Visi-Flo" single barrel carburetor used on all models*

►*ACCELERATOR PEDAL FAILURE TO RETURN TO IDLE CORRECTION* May be caused by interference between accelerator shaft lever and converter housing. To correct, bend lever outward to obtain ½" clearance between end of lever and housing

Thr ttl Linkag Adjustm nt (Synchr -m sh Cars): After carburetor idle speed correctly set, adjust carburetor connecting link for accelerator pedal height of 4 5/16" from top of pedal pad to floor mat with carburetor throttle valve closed

Thr ttl Linkag Adjustm nt (Aut . Trans. Cars): Make sure idle speed of 475-500 RPM in "D" correctly set, anti-stall dashpot correctly adjusted, engine warm, and carburetor at hot idle position. Disconnect throttle control rod at its clevis and push rod downward so transmission throttle lever is against stop in transmission Hold pressure on rod and adjust length of throttle control rod so clevis pin fits freely, then turn clevis 3½ turns clockwise to lengthen rod Connect rod Accelerator pedal height should be 4" from top front corner of pedal to floor mat To adjust, turn threaded trunnion on accelerator connecting link *Make final adjustment using pressure method as follows.* Connect a tachometer to engine, remove valve cap from schrader valve at bracket near throttle control rod and attach pressure gauge, Tool 77820-B, with adapter, Tool 77820-C, to pressure tube With parking brake set and transmission in "D", accelerate to 1200 RPM (engine at normal operating temperature) If pressure below 55 lbs , shorten throttle control rod If pressure above 60 lbs , lengthen rod *CAUTION - If correct pressure cannot be secured within 2½ turn range either way from preliminary setting, other transmission trouble is indicated*

Anti-Stall Dashpot Adjustment: With carburetor hot or slow idle speed correctly adjusted, hold throttle valve closed Fully depress dashpot plunger and check clearance between end of plunger and adjusting screw in throttle lever This clearance should be 130- 150" To adjust, turn adjusting screw in throttle lever

AUTOMATIC TRANSMISSION THROTTLE LINKAGE

Model	HOLLEY "VISI-FLO" ①Carburetor No.
Synchro-mesh Early (Man Choke)	CODE-9510-A
Synchro-mesh Late (Man Choke)	CODE-9510-C
Synchro-mesh Later (Auto Choke)	CIKE- 9510-A
Auto Trans Early (Man Choke)	CODE-9510-B
Auto Trans Late (Man Choke)	CODE-9510-D
Auto Trans Later (Auto Choke)	CIKE-9510-B

① - Stamped on main body fuel inlet boss

CONTINUED ON NEXT PAGE

Form 13B

CONTINUED FROM PRECEDING PAGE

►*FAST IDLE SPEED REDUCTION PROCEDURE FOR HOT WEATHER OPERATION:* Use second step of fast idle cam for adjustment *See "Holley Visi-Flo Carburetors" in Carburetion Section.*

►*HESITATION ON ACCELERATION CORRECTION:* May be caused by accelerator pump plunger sticking in its bore. *See "Holley Visi-Flo Carburetors" in Carburetion Section.*

Idle Setting - Initial setting 1-1½ turns open With engine at normal operating temperature, adjust idle speed, then turn mixture adjusting screw in until engine runs roughly from lean mixture, then turn screw out until engine begins to roll from rich mixture, finally turn screw in until engine runs smoothly Favor a slightly rich mixture Recheck idle speed

Idle Speed - 500-525 RPM in Neutral (Synchro-mesh), 475-500 RPM in Drive (Auto Trans).

Fuel Level - 23/32"±1/32" below power valve mounting surface (remove power valve and use Tool T52L-9550-AEE) Fuel should touch end of longer pin but should not touch shorter pin

Accelerating Pump Setting - Connect link in **inner** hole of throttle lever for average or hot weather operation, **uter** hole for cold weather operation

Fast Idle: No adjustment required (will be correct when throttle stopscrew adjusted for correct hot or slow idle speed)

Automatic Choke Setting: At Index.

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Holley Visi-Flo Carburetors" in Carburetion Section.*

CARB. EQUIPMENT

Fuel Pump: Ford No CODE-9350-C (fuel & vacuum), No. CODE - 9350-D (fuel only).

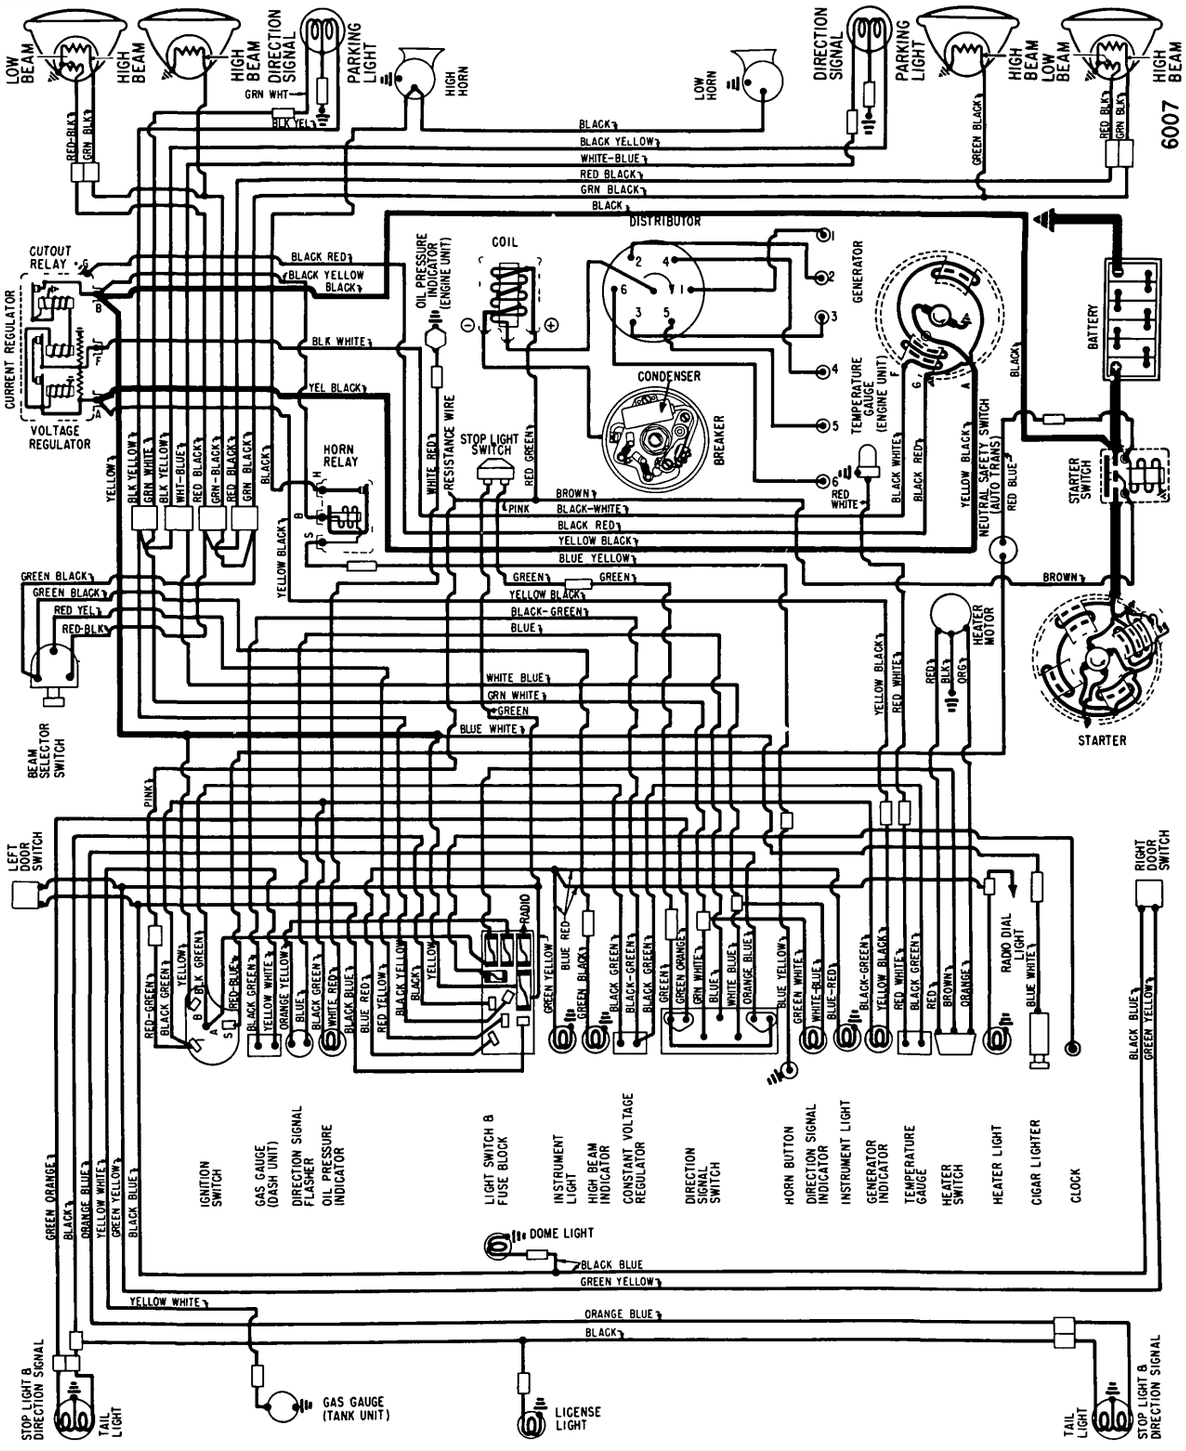
Fuel Pump Pressure - 3.5-5.5 lbs. at 500 RPM.

See "Fuel Pumps" in Carburetion Section.

Gasoline Gauge: King-Seeley Electric "CV" (Constant Voltage) with gauge voltage regulator Ford No. B9MF-10804-A

Dash Unit - Ford No CIKF-9280-A

Tank Unit - Ford No CODZ-9275-C (4-Door Station Wagon), No CODZ-9275-A (Others).



See "Fuel Gauges" in Carburetion Section.

Air Cleaner: Dry filter element type Clean every 4000 miles, replace every 20,000 miles. Service more often under severe dust conditions.

►*AIR CLEANER INSTALLATION & INTERCHANGEABILITY CAUTIONS (AUTOMATIC CHOKE CARBS.).* Air Cleaner, Part No CIKE-9600-A, used on carburetors with automatic choke is **not** interchangeable with air cleaner used on other carburetors Install this air cleaner with locating notch in carburetor and mating tab in air cleaner engaged and top cover mark "Front" to front of car with air horn pointed to left side of engine

►*CLEANING CAUTION:* Clean filter element by shaking or tapping squarely on a flat surface If compressed air used, direct stream against inside of element (reversed from normal air flow). *DO NOT wash element in solvent or other liquids and DO NOT oil or lubricate*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

BATTERY

Ford No. CODZ-10654-A (Std.). 12 volt, 9 plate, 40 ampere hour capacity (20 hr. rate).
Ford No. CODZ-10654-B (Optl.). 12 volt, 9 plate, 55 ampere hour capacity (20 hr. rate).
NOTE - Batteries listed are dry type for service replacement.
Battery Ground - Negative, to right front corner of cylinder head.

STARTER

Ford No. CODF-11001-A (Starter & Drive Assy.).
Armature - Ford No. CODF-11005-A.
Drive - Ford No. CODF-11350-A. Solenoid pinion shift.
NOTE - New design drive with solenoid wound on one pole piece. *See "Comet & Falcon Starter Drive" in Electrical Section.*
Rotation - Counterclockwise at commutator end.
Brush Spring Tension - 48-56 ozs.
Cranking Speed - 250-290 RPM, 190 amperes max.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	℄	12.0	70
15.5 ft. lbs.		5.0	670

℄ - With starter on engine and engine idling.

Starting Switch: Magnetic type, Ford No. B6A-11450-A, controlled by ignition switch.
Neutral Safety Switch (Auto. Trans.): Ford No. CODF-7A217-A (without back-up lights), No. CIKF-7A217-A (with back-up lights).
Adjustment - *See "Comet 2-Speed Automatic Transmission" in Transmission Section.*

GENERATOR

Ford No. CODF-10002-C. Armature - Ford B6A-10005-C.
NOTE - When used with 30 amp. regulator, generator identified by Ford No. CODF-10002-D.

Performance Data

Generator	Amperes	Gen. RPM
CODF-10002-C	25	2450
CODF-10002-C	30	2550

Brush Spring Tension - 32-40 ozs.
Field Current - 1.2-1.8 amps. at 12.0 volts (hot).
Rotation - Counterclockwise at commutator end.
Belt Adjustment: ½" deflection midway between generator and water pump pulleys with light thumb pressure.

REGULATOR

Ford No. CODF-10505-A (25 Amp.), B7A-10505-B (30 Amp.).
See "Comet Regulators" in Electrical Section.
►*SETTING CAUTION: "Temperature Compensated" type. Set to following specifications at 75°F.*

Cutout Relay

Cuts In - 12.4-13.2 volts.
Cuts Out - 3-7 amperes discharge current.

Vibrator Regulator

Setting - 14.6-15.4 volts at ambient temperature of 75°F.

Current Regulator

Setting - 23-27 amps. (CODF-10505-A), 28-32 amps. (B7A-10505-B).

MISC. ELECTRICAL

►*INOPERATIVE TURN SIGNAL, AUXILIARY LAMP, OR FUEL GAUGE CORRECTION:* May be caused by wiring harness under left front door sill being grounded by scuff plate retaining screw. To correct, remove scuff plate and filler plate. Repair wiring harness. Bend tab on filler plate downward to 45° angle and reinstall with wiring on top of tab. Install scuff plate.
Headlights: 4-headlight system. *See "4-Headlight Systems" in Electrical Section.*
Direction Signals: *See Electrical Section.*
►*DIRECTION SIGNAL CANCELS TOO SOON CORRECTION:* May be caused by distorted signal switch plate. To correct, clamp switch plate shaft in a vise and bend plate downward toward vise 1/16".
Stop Light Switch Location: On forward end of brake master cylinder.
Lighting Switch: New type with blade type terminals. Wire connector for switch is a fuse-junction block, making switch and fuse block one unit.
Removal - Disconnect battery. Remove switch control knob and shaft by pressing release button on switch housing with knob in OFF position, then turn shaft slightly and withdraw. Remove switch bezel nut using Tool 17470-N-51, remove switch from behind instrument panel, disconnect fuse panel by pulling it off switch.
CIRCUIT BREAKERS: 18 Ampere - Headlight circuit. Part of lighting switch.
12 Ampere - Electric windshield wiper. Behind instrument panel on right side of ignition switch.
FUSES: *Located on fuse junction block on lighting switch.*
15 Ampere - Parking, Tail, Dome & Instrument lights.
14 Ampere - Direction Signals & Back-up Lights.
14 Ampere - Heater blower.
7.5 Ampere - Radio.
Cigar Lighter - Sulphur disc on back of lighter.

ENGINE

ENGINE SPECIFICATIONS: Own. 6 Cyl., valve-in-head.
NOTE - All specifications below are for the "S" engine.

Bore	Stroke	Displacement
3.50"	2.50"	144 cu. ins.
Compr. Ratio	**Rated HP**	**Developed HP**
8.7-1	29.4	90 at 4200 RPM

Compression & Vacuum Reading - *See TUNE-UP.*
►*ENGINE VIBRATION AT 30-38 MPH CORRECTION:* Vibration is similar to loose vibration damper or flywheel but may be caused by improper torque of generator mounting or adjusting arm bolts. To correct, loosen these bolts and retorque to 23-28 ft. lbs.
►*ENGINE COMPARTMENT NOISE CORRECTION:* Noise is similar to connecting rod knock and may be caused by fuel pump pulsations producing a "hydraulic hammer" condition. To isolate knock, pinch flexible line between fuel pump and fuel tank (engine idling). If noise stops, install Fuel Pump Air Dome, Part No. EAD-9414-A, at fuel inlet fitting at pump using necessary fittings.
►*OTHER ENGINE DATA: See Falcon Car Pages for other engine data and note the following:*
Replacement Pistons: Also furnished .003" Oversize.

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Comet Special Data.*
Crankcase Capacity: 3½ qts. refill, add 1 qt. with filter change.
Normal Oil Pressure: 35-55 lbs. (hot) at 2000 RPM.
Pressure Regulator Valve - In pump body, not adjustable.
Oil Pressure Indicator - Indicator light on instrument panel operated by engine unit, Ford No. B6A-9278-B.
Oil Pump: Rotor type pump located in crankcase.
Pump Overhaul - *See "Oil Pump" in Comet Special Data.*
Oil Filter: Full flow type. Replace filter element every 4000 miles when engine oil changed.
Crankcase Ventilation: Filter in oil filler cap (inlet), and outlet pipe at front of block on left side.

COOLING

►*THERMOSTAT REPLACEMENT NOTE:* Replace early type thermostat "R-59" or "S-59" stamped on upper pellet with later type stamped "T-59". If rocker cover front bolt boss extends into water passage at thermostat opening causing improper thermostat operation, remove just enough of bottom end of boss to provide proper clearance.
►*HIGH TEMPERATURE INDICATOR READING CORRECTION:* Make sure later type engine unit, Part No. CODF-10884-A (identified by daub of green paint), installed.
Water Capacity: 8½ qts. Add 1 qt. for heater.
Pressure Valve: Ford No. B8A-8100-A. 12-15 lbs. radiator filler cap.
Thermostat: Ford No. CODE-8575-A (157-162°) standard, No. CODE-8575-B (175-180°) for use with permanent antifreeze.
►*THERMOSTAT INSTALLATION NOTE:* Coolant elbow gasket must be placed on cylinder head before thermostat installed. Install thermostat with copper pellet (element) toward engine side of passage.
Water Pump: Packless, sealed ball bearing type.
See "Water Pump" in Comet Special Data.
Temperature Gauge: King-Seeley Electric "CV" (Constant Voltage) with gauge voltage regulator Ford No. B9MF-10804-A.
Temperature Gauge Dash Unit: Ford No. CIKF-10883-A.
Temperature Gauge Engine Unit: Ford No. B7A-10884-A.
See "Temperature Gauges" in Miscellaneous Section.

CLUTCH

Long Model 8½, No. 260013. Single plate, dry disc type. Ford No. CODD-7563-B (Cover Assy.), No. CODD-7550-A (Disc).
►*NOTE: Clutch serviced as an assembly only.*
►*CLUTCH PEDAL INCOMPLETE RETURN CORRECTION:* May be caused by interference between equalizer rod and seal retainer in passenger compartment. To correct, reposition seal retainer so rubber seal is centralized around rod. Apply silicone lubricant to equalizer rod and lubricate equalizer bar.
►*SHUDDER OR CHATTER IN REVERSE CORRECTION:* Make sure clutch is adjusted correctly and that latest type Equalizer Bar, No. CODD-7528-B, and Release Rod, No. CODD-7521-B, are installed. New release rod has .62" offset (was straight). New equalizer bar has 1.20" distance from rod lever to end of bar (was .58").
►*HIGH GEAR VIBRATION CORRECTION:* Vibration occurs in high gear at 28-32 MPH and may be caused by loose clutch disc vibration damper hub. To correct, replace clutch disc.
►*RELEASE BEARING REPLACEMENT NOTE:* Replace release bearing whenever clutch cover assembly is re-

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

placed or whenever clutch disc is replaced because of heat.

Pedal Adjustm nt: *Mak all adjustments in order as follows:*

1) Clutch Pedal Assist (Overcenter) Spring - Measure distance from rear face of pedal support to end of assist spring retainer (eye bolt to which spring is attached). This distance should be 1 3/16". Adjust by turning retainer nut.

►*SPRING SQUEAK CORRECTION:* Can be corrected by insulating spring ends. Remove spring, slide 1½" long insulating sleeve (No. 8A-14455-B wire terminal insulating sleeve) over each hook end of spring, reinstall spring and adjust as above.

2) Pedal Total Travel - Should be 6-6½". Adjust by loosening mounting bolt and shifting pedal bumper and bracket assembly (mounting bolt hole is slotted).

3) Pedal Freeplay - Should be 7/8-1 1/8" (from released position to point where release bearing just contacts clutch levers). To adjust, loosen adjusting nut on lower end of clutch pedal rod and change position of rod in equalizer bar lever. Tighten both nuts after adjustment completed.

R moval: Remove transmission (see below), starter motor and dust seal. Unhook release lever retracting spring and disconnect the pedal-to-equalizer rod at equalizer bar. Remove release bearing and hub assembly. Remove flywheel housing dust cover and flywheel housing. Remove clutch.

SYNCHRO-MESH TRANSMISSION

Own. Helical gear, constant mesh, synchro-mesh (second & high), sliding gear (low & reverse).

See "Comet Synchro-mesh" in Transmission Section.

►*HIGH GEAR VIBRATION CORRECTION: See CLUTCH above.*

Transmission Control: *See "Transmission Controls" in Transmission Section.*

R moval: Raise car and remove propeller shaft. Insert Seal Replacer 7657-G into extension housing opening to prevent lubricant leakage. Disconnect speedometer cable and gear shift rods at transmission Disconnect engine rear support and raise engine slightly at flywheel housing. Remove Tool 7657-G and remove transmission.

AUTOMATIC TRANSMISSION

Two-Speed Automatic Transmission with torque converter.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Comet 2-Speed Automatic Transmission" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Comet 2-Speed Automatic Transmission" in Transmission Section.*

Lubrication: Check fluid level every 1000 miles. Drain and refill every 24,000 miles. **Use only Comet Automatic Transmission Fluid B9L-19A509 or Automatic Transmission Fluid Type A, Suffix A.**

Checking Fluid Level - With transmission at normal operating temperature, move selector lever through all ranges to assure fluid distribution, then place lever in "P" position. With engine idling, maintain fluid at "F" (full) mark on dipstick.

Throttl Linkag Adjustm nt: *S e CARBURETOR ab v .*

►*OTHER DATA: S "C m t 2-Sp d Aut matic Transmission" in Transmissi n S cti n.*

UNIVERSALS

Mechanics. Needle bearing type.

►*CAUTION:* Rear universal joint companion flange nut controls pinion bearing preload (must be adjusted whenever nut is loosened). *See "Comet Rear Axle" in Rear Axle Section.*

►*REAR UNIVERSAL JOINT INSTALLATION CAUTION:* To eliminate possibility of early failure, the bearing retaining strap must be correctly positioned in cast recess in rear axle flange.

REAR AXLE

Own. Integral carrier type, semi-floating, hypoid gear, with Hotchkiss Drive. *See "Comet Rear Axle" in Rear Axle Section.*

►*REAR AXLE PRODUCTION CHANGES, PARTS REPLACEMENT, ADJUSTMENT & OVERHAUL CAUTIONS: Four different rear axle housings have been used in production. For identification, parts replacement, overhaul and adjustment, see "Comet Rear Axle" in Rear Axle Section.*

Axle Ratios - 3.10-1 (31-10), 3.50-1 (35-10), 3.56-1 (32-9), 3.89-1 (35-9).

►*AXLE RATIO IDENTIFICATION:* Code number or letter stamped on patent plate under AXLE as follows:

Ratio	Code	Ratio	Code
3.56-1	1	3.10-1	3
3.89-1	2	3.50-1	J

Backlash - .008-.012". *Supersedes previous specification of .004-.009".*

Axle Shaft Removal: Remove wheel, back off rear brake shoe adjustment. Take off nuts securing brake drum to axle shaft flange and remove drum. Working through hole in axle shaft flange, remove nuts on wheel bearing retainer studs, pull axle shaft assembly out of housing. *CAUTION* - Do not disturb brake backing plate (install one nut to hold plate in place).

►*WHEEL BEARING NOTE:* Bearing is pressed on axle shaft and retained by retainer pressed on shaft against bearing. Remove retainer by nicking with a chisel at several points. DO NOT remove bearing unless new bearing being installed.

►*AXLE SHAFT SEAL INSTALLATION CAUTION: Use only Seal installer T60K-1177-B to install seal.*

Axle Assembly Removal: Support car on underbody and drain lubricant by loosening cover. Disconnect propeller shaft at pinion flange. Disconnect shock absorbers at lower end. Remove axle shafts (see above). Remove brake "T" fitting from axle housing and brake line from clip on housing. Remove brake backing plates from axle housing and tie out of way. Support housing, remove spring clip nuts and plates. Remove axle assembly.

SHOCK ABSORBERS

Direct acting, non-adjustable. Serviced by replacement.

►*REAR SHOCK ABSORBER REMOVAL NOTE:* Upper retaining nut removed through access hole in trunk.

Replacement Shock Absorbers

Model	Front	Rear
Sedans	CIKY-18124-A	COAZ-18125-G
Station Wagons	CODZ-18124-A	CODZ-18125-C

FRONT SUSPENSION

Ind p ndent. "Ball Joint" type with direct acting shock absorbers mounted within coil springs.

Se "Com t Front Susp nsion" in Suspension & Wheel Alignm nt Section.

►*FRONT SPRING NOISE CORRECTION:* This is a metallic noise audible in dash panel area and is caused by interference between upper two coils of front springs. To correct, install a 2" length of 5/8" heater hose on second coil of spring 90° clockwise from tapered end of spring when viewed from above.

►*NOTE: Following specifications for Cast r, Camb r, and Toe-In supersede previous specifications.*

Caster - 0° to Pos. 1°. Pos. ½° preferred. Maximum variation between wheels ½° (¼° preferred).

Camber - 0° to Pos. 1°. Pos. ½° preferred. Maximum variation between wheels ½° (¼° preferred).

Toe-In - 1/4-5/16". 9/32" preferred.

Toe-Out on Turns - Outer wheel 20°, inner wheel 20¾°.

Wheel Bearing Adjustment: Tighten adjusting nut to 11-14 ft. lbs. torque while rotating front wheel hub and drum assembly, then back off adjusting nut at least 1/8 turn but not more than 1/4 turn until nearest slot in nut is aligned with cotter pin hole in spindle, install cotter pin.

STEERING

►*1960 COMET STEERING POOR RECOVERING-TO-STRAIGHT AHEAD POSITION:* Loosen idler arm retaining nut and retighten to 45-60 ft. lbs. *CAUTION - Do not exceed 60 ft. lbs.*

Own. Recirculating ball worm and nut.
See "Saginaw Ball Bearing Worm & Nut" in Steering Section.

Steering Linkage: *See "Steering Linkag " in Steering Section.*

Steering Wheel & Horn Button R moval: *See "Saginaw Ball Bearing Worm & Nut" in Steering S ction.*

Steering Gear Removal: *See "Saginaw Ball B aring Worm & Nut" in Steering Section.*

BRAKES

Ford-Bendix Hydraulic. Parking lever applies rear wheel service brakes.
See "Ford-Bendix Hydraulic Brak s" in Brak Section.

►*BRAKE "CLUNK" NOISE CORRECTION:* Noise is heard during brake application and may be caused by insufficient lubrication on backing plate edges, anchor pin-to-brake shoe contact area, and shoe contact buttons on wheel cylinder pistons. To correct, apply lubriplate to these areas.

Drum Diameter - 9" front & rear.

Wheel Cylinder Diameter - 1.062" Front (Sedans), .875" Front (Sta. Wgn.); .8125" Rear (Sedans), .937⅝" Rear (Sta. Wgn.).

Brake Lining Width & Length

Shoe	Front Wheel	R ar Wheel
Primary ...	2¼" x 7.34"	℄ 1½" x 7.34"
Secondary .. ..2¼" x 9.375"		℄ 1½" x 9.375"

℄ - 2¼" on Station Wagons.

Master Cylinder: Located on engine side of firewall.

Checking Fluid - Maintain level within ¼" of top.

Removal - Free boot from pushrod end of cylinder, disconnect brake lines and stop light wires, take out retaining bolts and remove master cylinder.

MISC. MECHANICAL

Windshield Wipers: Vacuum or Electric type with Link & Crank Arm linkage.

See "Windshield Wipers" in Miscellan ous Section.

Tail Gat Wind w (Stati n Wag n): Electric type. *See "Comet & Falcon Tail Gate Power Window" in Miscellaneous Section.*

►*JACKING & HOISTING CAUTION· Before jacking, hoisting, or working under car, see "Jacking & Hoisting Precautions" in Suspension & Wheel Alignment Section*

MODEL IDENTIFICATION

Model	Series
2-Door & 4-Door Sedans	10
Station Wagon & Ranchero	20

SERIAL NUMBER· Stamped on patent plate on rear face of left front door inner panel *NOTE* - Number (example below) includes identification data as indicated

① ② ③ ④ ⑤
0 H 12 S 100001

① - Year **0** 1960
② - Assembly Plant See Assembly Plant table below
③ - Model First digit designates Series **1** Series 10 **2** Series 20 Second digit designates Body Type See Body Type table below
④ - Engine **S** - Std Engine **D** - Low Compression Engine (for 84 Octane fuel)
⑤ - Consecutive unit number

Ass mbly Plant
H - Lorain, **K** - Kansas City, **R** - San Jose, **T** - Metuchen

B dy Type Designation

Model	2-Door	4-Door
Sedan (Series 10)	11	12
Station Wagon (Series 20)	21	22
Ranchero (Series 20)	29	

ENGINE IDENTIFICATION NUMBER· Stamped on top of block on front left side near crankcase breather pipe Designates Engine Plant, Year Month & Day of manufacture and Inspector's Identification Not used for licensing

TUNE-UP

►*ENGINE SURGE OR LOSS OF POWER CORRECTION* This condition is caused by other factors than carburetor, and the following points should be checked and corrected when this trouble is experienced

Fu l Supply - Check flexible line at fuel pump for swelling and deterioration restricting fuel flow and replace with current improved type No B9AA-9288-A Check fuel pump filter and replace early type paper filter with screen type filter No B6T-9365-B Check fuel tank vent If clogged by road splash, relocate vent by drilling ½" hole in rear cross sill 6" from right hand end and 5/8" from forward edge of sill Cut 2" off end of vent tube and insert tube and grommet in this new hole

Distributor - Check for correct spring installation and advance performance Check vacuum unit for leaking diaphragm or leak in vacuum line Check distributor rotor for correct position of rotor contact *See Distributor*

Coil & Spark Plug Wiring - Check for voltage leak at spark plug wires and coil high tension lead If leak exists replace wiring harness with No CODF-18811-B

Igniti n Timing - Check and adjust timing for octane rating of fuel used *See Ignition Timing*

C oling Syst m Th rm stat - Check operation and replace if operating range incorrect or if early type used Check cylinder head thermostat passage for obstruction caused by rocker cover front bolt boss *See Cooling*

COMPRESSION PRESSURE 170 lbs ± 20 lbs Maximum variation between cylinders 10 lbs

VACUUM READING: Steady 18" at specified idling speed

VALVE TAPPET CLEARANCE: 016" All Valves Use step-type feeler gauge (015" GO, 017" NO GO) If tappet clearance set with engine cold, reset clearance after operating engine for 30 minutes at 1200 RPM to stabilize temperature Set clearance with engine idling

►*SELF-LOCKING TAPPET CLEARANCE ADJUSTING SCREW NOTE* Torque required to turn screw must be 3 ft lbs minimum Replace screw or screw and rocker arm if less "interference" noted

MANIFOLD HEAT CONTROL: Intake manifold cast integrally with head and has "hot spot" at lower center section where exhaust manifold clamped in place In addition an engine coolant heated spacer is located between carburetor and intake manifold to prevent carburetor throttle valve icing (forward fitting on spacer connected to heater connection on cylinder head rear fitting connected to heater) Hot water to heater core flows through this spacer *NOTE* - On cars without heater, hose connections to spacer are omitted

IGNITION

FIRING ORDER: 1-5-3-6-2-4

SPARK PLUG GAP 032 036"

Spark Plugs - Champion F 14 Y or 870 18 mm Torque to 15 20 ft lbs *NOTE* Plugs have tapered seat and do not require a gasket Correct torque is important

COIL· Ford No B6A-12029-B

Ignition Current - 2 5 amps idling 4 5 amps stopped

Resistor - Ford No COLF 12250 B Resistance wire (pink color) in harness 1 30 1 40 ohms at 75°F

►*COIL RESISTOR NOTE* Resistance wire is connected between ignition switch and dash panel connector and is bypassed during cranking by lead from starter switch to connector

DISTRIBUTOR: Ford No CODF-12127-A (Synchro-mesh), CODF-12127-B (Auto Trans) Loadomatic type of same design used on previous Ford Six cars

See "Ford Loadomatic Distributors" in Electrical Section

►*DISTRIBUTOR ROTOR CHECKING NOTE* On distributors not marked by daub of yellow paint on cap inspect rotor for improperly formed spring contact which may cause engine miss due to air gap between contact and cap Rework spring as necessary so that contact surface is Flush to 040" above top of rotor

Condenser - Ford 7RA 12300 C **Capacity** 21 25 mfd
Contact Point Set - Ford No FAA 12171 A
Breaker Gap - 024 026"
Cam Angle - 35 38°
Breaker Arm Spring Tension - 17 20 ozs
Rotation Clockwise viewed from above

Advance Performance
►With Distributor On Test Stand

①CODF-12127-A			②CODF-12127-B		
Distr Degrees	Vacuum (" Hg)	Distr RPM	Distr Degrees	Vacuum (" Hg)	Distr RPM
0	0 33	400	0	0 65	700
½-1½	0 78	600	1¼-2¼	1 27	1000
3½-4½	1 30	800	4¾-5¾	2 93	1600
10-11¼	3 45	1400	5¾-7	3 94	2000
12½-13¾	5 00	1800			
12¾-14	5 35	2000			

① – Set test stand to 0° at 300 RPM & 0" of Hg
② – Set test stand to 0° at 600 RPM & 48" of Hg

►*DISTRIBUTOR INSTALLATION CAUTION* Intermediate drive shaft must engage seat in oil pump shaft fully If necessary, turn engine over with starter after distributor drive gear partially engaged to insure full engagement of the intermediate shaft

IGNITION TIMING

Engine	Std Setting
Synchro-mesh & Overdrive	2° BTDC
Fordomatic	6° BTDC

NOTE - Allowable range 2-10° BTDC Set timing with engine idling and vacuum line disconnected

►*TIMING SETTING FOR FUEL OCTANE RATING* Set timing within allowable 2-10° range for octane rating of fuel as follows

Fuel Octane	Setting	Fuel Octane	Setting
92	2°BTDC	96	6°BTDC
93	3°BTDC	97	8°BTDC
94	4°BTDC	98	9°BTDC
95	5°BTDC	99	10°BTDC

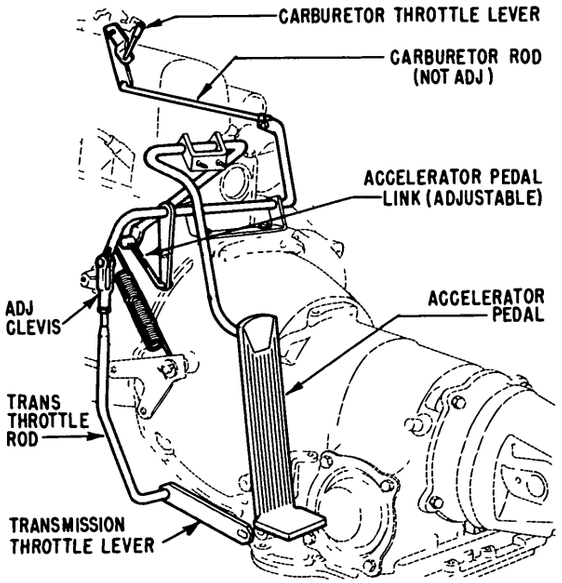
Timing Mark - Timing pointer on left side of chain case cover marked "O" at TDC point with marks at 2° increments to 10° BTDC point or with lines at other intermediate points indicated by stamped degree figures Align correct mark on pointer with notch in rim of crankshaft pulley

CARBURETOR

►*CARBURETOR APPLICATION Holley 'Visi Flo' (1 Barrel) carburetor with manual choke control used on all engines*

►*EXCESSIVE ACCELERATOR PEDAL EFFORT CORRECTION & DASHPOT SPECIFICATION CHANGE* To correct high accelerator pedal effort, use later production accelerator return spring, Part No CODD-9737-E (20½ coils - Synchro-mesh) No CODD-9737-D (22¼ coils - Fordomatic) *Dashpot clearance with new spring should be 130- 150 '*

Throttle Linkage Adjustment (Synchro-mesh Cars)· After carburetor idle speed correctly set adjust carburetor connecting link for accelerator pedal height of 4 3/16" (from top of pedal pad to floor mat) with carburetor throttle valve closed



Throttle Linkage Adjustment (Fordomatic Cars) With engine hot or slow idle speed correctly adjusted (see Carburetor data below) and Anti Stall Dashpot adjustment correct disconnect upper end of transmission throttle control rod from accelerator cross shaft Push control rod downward to hold transmission throttle lever against stop in transmission case and make certain carburetor throttle valve in closed position with throttle stopscrew against its stop Adjust clevis on upper end of throttle control rod so that clevis pin is a free fit in cross shaft then **shorten rod by turning cl vis 3½ turns clockwise** connect rod Adjust accelerator pedal height by turning connecting link between accelerator pedal rod and cross shaft lever for pedal height of 4¼" above floor pan *Make final adjustment using pressure method as follows* Connect pressure gauge at 1/8" pipe plug hole on left side of transmission case connect engine tachometer apply brakes Operate engine with selector lever in "D" range increase engine speed to 1200 RPM and note gauge reading Pressure should be 78 82 lbs If pressure below 78 lbs **sh rt n** transmission throttle control rod not more than 2½ turns if pressure above 82 lbs **l ngthen**

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

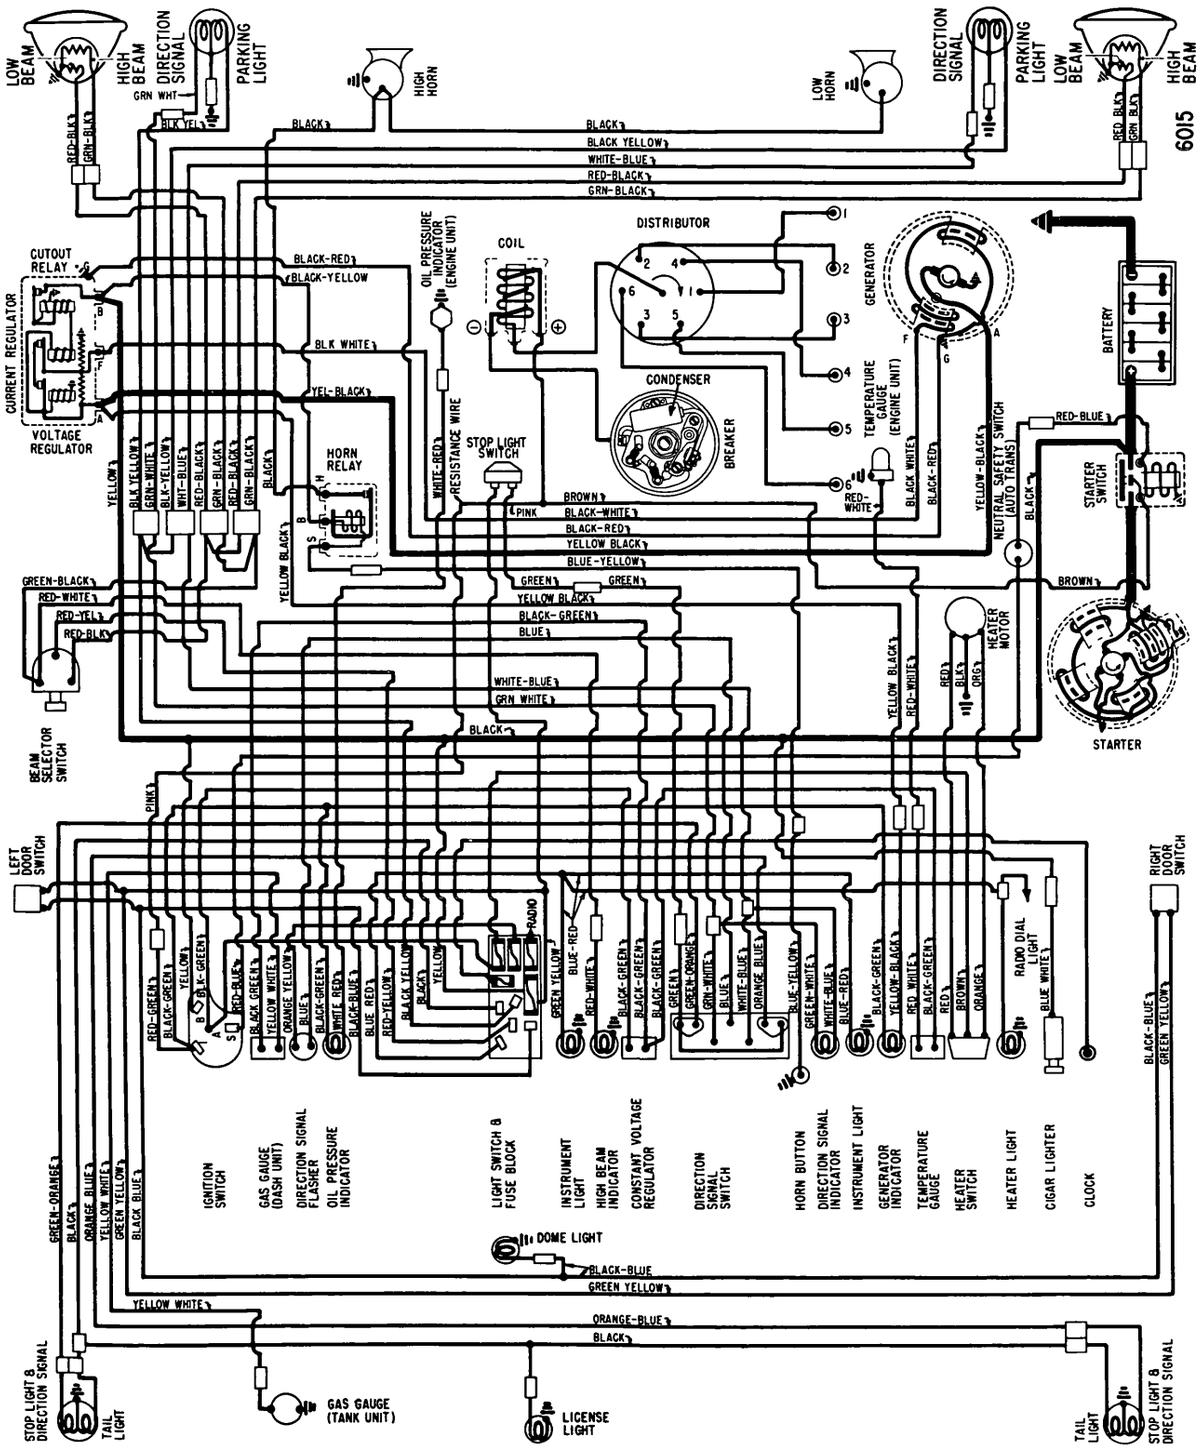
control rod not more than 2½ turns. *CAUTION - If correct pressure cannot be secured within above range (2½ turns either way from preliminary setting), other transmission trouble is indicated.*

Anti-Stall Dashpot Adjustment: With carburetor hot or slow idle speed correctly adjusted, hold throttle valve closed. Fully depress dashpot plunger and check clearance between end of plunger and throttle lever. This clearance should be .060-.090" (early cars), .130-.150" (later cars with new accelerator pedal retracting spring - see above). Adjust by loosening locknut and turning dashpot in bracket.

FORDOMATIC THROTTLE LINKAGE

HOLLEY "VISI-FLO"

Model	①Carburetor No.
Synchro-mesh (Early)	②CODE-9510-A
Synchro-mesh (Later)	CODE-9510-C
Fordomatic (Early)	CODE-9510-B
Fordomatic (Later)	CODE-9510-D



① - Stamped on main body fuel inlet boss.
② - Replace with CODE-9510-C.

Idle Setting - Initial setting 1-1½ turns open. With engine at normal operating temperature, adjust idle speed, then turn mixture adjusting screw in until engine runs roughly from lean mixture, then turn screw out until engine begins to roll from rich mixture, finally turn screw in until engine runs smoothly. Favor a slightly rich mixture. Recheck idle speed.

Idle Speed - 500-525 RPM in Neutral (Synchro-mesh Cars), 475-500 RPM in Drive (Fordomatic Cars).

Fuel Level - 23/32"±1/32" below power valve mounting surface (remove power valve and use Tool T52L-9550-AEE). Fuel should touch end of longer pin but should not touch shorter pin.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Acc l rating Pump Setting - Connect link in inn r hole of throttle lever for average or hot weather operation, ut r hole for cold weather operation

Fast Idl : No adjustment required (will be correct when throttle stopscrew adjusted for correct hot or slow idle speed)

Thr ttl Linkag Adjustm nt: *See CARBURETOR above*

►*OTHER DATA: S "Holl y Visi-Flo Carburetors" in Carbur tion S ction.*

CARB. EQUIPMENT

Fu l Pump: Ford No. CODE-9350-A (fuel & vacuum).

Fu l Pump Pr ssur - 3.5-5 5 lbs at 500 RPM.

Se "Fu l Pumps" in Carburetion Section

FUEL FILTER: Located at fuel outlet fitting of fuel pump Cannot be cleaned Replace at 12,000 mile intervals

Gas lin Gaug : King-Seeley Electric "CV" (Constant Voltage) with gauge voltage regulator Ford No. B9MF-10804-A.

Dash Unit - Ford No. CODF-9280-B.

Tank Unit - Ford No. CODF-9A294-A

S "Fu l Gauges" in Carburetion Section

Air Clean r: Dry filter element type Clean every 6000 miles, replace every 24,000 miles

►*CLEANING CAUTION*· Clean filter element by shaking or tapping squarely on a flat surface If compressed air used, direct stream against inside of element (reversed from normal air flow) *DO NOT wash element in solvent or oth r liquids and DO NOT oil or lubricate*

BATTERY

F rd N . CODZ-10654-A (Std.). 12 volt, 9 plate, 40 ampere hour capacity (20 hr rate)

F rd N . CODZ-10654-B (Optl.). 12 volt, 9 plate, 55 ampere hour capacity (20 hr rate)

NOTE - Batt ri s list d are dry type for service replac m nt

Batt ry Gr und - Negative, to right front corner of cylinder head

STARTER

F rd N . CODF-11001-A (Starter & Drive Assy.).

Armatur - Ford No CODF-11005-A

Driv - Ford No CODF-11350-A. Solenoid pinion shift

NOTE - New design drive with solenoid wound on one pole piece *See "Comet & Falcon Starter Drive" in El ctrical Section*

R tati n - Counterclockwise at commutator end

Brush Spring T nsi n - 48-56 ozs

Cranking Sp d - 250-290 RPM, 190 amperes max

P rformance Data

Torque	RPM	Volts	Amperes
0 ft lbs	①	12 0	70
15 5 ft lbs		5 0	670

① - With starter on engine and engine idling

Starting Switch: Magnetic type, Ford No B6A-11450-A, controlled by ignition switch

N utral Saf ty Switch (Aut . Trans): Ford No COAF-7A247-A

Adjustm nt - *S e "Falcon 2-Speed Automatic Transmission" in Transmission Section*

GENERATOR

F rd N . CODF-10002-C Armatur - Ford B6A-10005-C

NOTE - When used with 30 amp regulator, generator identified by Ford No CODF-10002-D

P rf rmanc Data

Generator	Amperes	Gen RPM
CODF-10002-C	25	2450
CODF-10002-C	30	2550

Brush Spring Tension - 32-40 ozs

Field Current - 1.2-1.8 amps. at 12 0 volts (hot).

Rotation - Counterclockwise at commutator end

Belt Adjustment: ½" deflection midway between generator and water pump pulleys with light thumb pressure.

REGULATOR

Ford No. CODF-10505-A (25 Amp.), B7A-10505-B (30 Amp.).

See "Falcon Regulators" in Electrical Section

►*SETTING CAUTION· "Temperature Compensated" type Set to following specifications at 75°F*

Cutout Relay

Cuts In - 12 4-13. 2 volts

Cuts Out - 3-7 amperes discharge current

Voltage Regulator

Setting - 14.6-15.4 volts at ambient temperature of 75°F

Current Regulator

Setting - 23-27 amps (CODF-10505-A), 28-32 amps (B7A-10505-B).

MISC. ELECTRICAL

►*IGNITION SWITCH BINDING CORRECTION* If switch fails to return to ON position after engine starts, remove lock cylinder and clean all burrs from inside flat surface of switch bezel and apply lubriplate to this surface

Headlights: Two headlights, one in each fender

Direction Signals: *See Electrical Section*

Stop Light Switch Location: On forward end of brake master cylinder

Lighting Switch: New type with blade type terminals Wire connector for switch is a fuse-junction block, making switch and fuse block one unit

Removal - Disconnect battery Remove switch control knob and shaft by pressing release button on switch housing with knob in OFF position, then turn shaft slightly and withdraw Remove switch bezel nut using Tool 17470-N-51, remove switch from behind instrument panel disconnect fuse panel by pulling it off switch

CIRCUIT BREAKER: 12 Ampere - Integral with lighting switch Protects headlights

FUSES: Located on fuse junction block on lighting switch

15 Ampere - Parking, Rear & Dome lights

14 Ampere - Direction Signals

14 Ampere - Heater Blower

7 5 Ampere - Radio

1 Ampere - Clock

ENGINE

ENGINE SPECIFICATIONS: Own 6 Cyl , valve-in-head

NOTE - All specifications below are for the "S" Engine

Bore	Stroke	Displacement
3 50"	2 50"	144 cu. ins
Compr Ratio	**Rated HP**	**Developed HP**
8 7-1	29 4	90 at 4200 RPM

Compr ssi n & Vacuum Reading - *Se TUNE-UP*

CYLINDER HEAD: *See "Cylinder Head & Manifolds" in Falcon Special Data*

TIGHTENING TORQUES: *S e "Tightening Specifications" in Falc n Special Data*

ENGINE REMOVAL: *S "Engin " in Falcon Sp cial Data*

OIL PAN REMOVAL: Drain crankcase and remove oil level dipstick Remove retaining nuts and washers from both front engine mount-to-support bracket studs. Raise front of engine with a jack (use wooden block on oil pan) and support engine on 2" wood blocks placed between each engine front support and support bracket. Remove stabilizer bar-to-underbody retaining nuts and pull stabilizer bar downward. Remove oil pan retaining bolts, turn crankshaft as necessary for clearance and remove oil pan

PISTONS

Solid skirt type with three rings.

Removal - Pistons and rods removed from above.

Fitting New Pistons: Clearance 0021-.0027" at bottom of skirt Wear limit .005". Check clearance with ½" wide feeler gauge inserted between piston and cylinder wall at right angle to pin (piston inverted and top of piston 1½" below top of cylinder). Pull on 003" feeler should be 6½ lbs. (minimum clearance), 3¾ lbs. (maximum clearance)

Replacement Pistons: Furnished Std (2 sizes, coded Red & Blue) & 020", 030", .040", .060" Oversize. Furnished with fitted pins

Installing Pistons: Notch on piston head should be toward front of engine *See Rod Installation*

PISTON & ROD ASSEMBLY

PISTON PIN

Press fit in connecting rod, no locking device used.

Diameter - 9120- 9123" (rod hole diameter 9107-9112")

Length - 3 010-3 030"

Pin Fit in Piston - 0001- 0003" Wear limit 0008"

Pin Removal & Installation - *See "Piston Pins" in Falcon Special Data*

Replacement Pins: Furnished in assembly with new pistons *See "Replacement Pistons" above*

PISTON RINGS

Top compression ring is chrome plated, lower compression ring is phosphate coated Oil ring is three-piece type with chrome plated rails

Ring	Width	End Gap	Side Clearanc
Compr (1& 2)	0775- 0780"	010- 025" ①	002- 0035"
Oil (3)	1880- 1890"	② 015- 062"	③

① - Wear limit 006" ② - Side sealing type ③ - Snug

Replacement Rings: Std & 020", 030", 040", 060" Oversize

CONNECTING ROD

Journal Diameter - 2 1236-2 1240" (Code Red), 2 1232-2 1236" (Code Blue) Taper wear limit 001", Out-of-round wear limit 0006"

Cl aranc - 0006- 0025"

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Side Clearance - .007-.0105". Wear limit .014".
Installing Rods - Numbers on rods and caps must be on same side and installed in same numbered cylinder. Oil squirt hole should be toward right side of engine on all rods and notch in piston head toward front of engine.
Replacement Bearings: Furnished Std. (2 sizes Red-.0564-.0574"; Blue - .0573-.0578"), & .002", .010", .020", .030" Undersize.

CRANKSHAFT

Journal Diameter - 2.2486-2.2490" (Code Red), 2.2482-2.2486" (Code Blue). Taper wear limit .001", Out-of-round wear limit .0006".
Bearings - Steel backed copper lead alloy.
Clearance - .0005-.0025".
Replacement Bearings: Furnished Std. (2 sizes: Red - .0754-.0759"; Blue - .0758-.0763"), & .002", .010", .020", .030" Undersize.
End Thrust: Taken by No. 3 main bearing.
Thrust Bearing Alignment - *See "Crankshaft & Main Bearings" in Falcon Special Data.*
Endplay - .004-.008". Wear limit .012".
Crankshaft Rear Oil Seal Installation: *See "Crankshaft & Main Bearings" in Falcon Special Data.*
Crankshaft Front Oil Seal Installation: *See "Engine Front Cover" in Falcon Special Data.*
►*OIL SLINGER NOTE:* A crankshaft front oil slinger is incorporated in front of crankshaft sprocket to reduce oil leakage at front oil seal.

CAMSHAFT

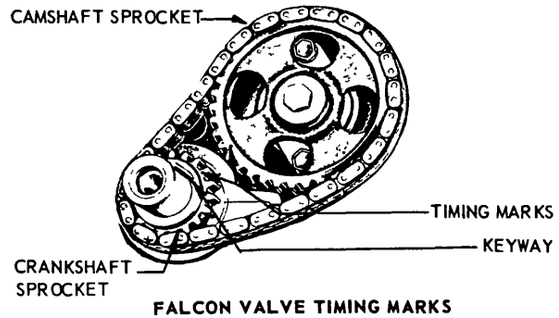
Journal Diameter - 1.8095-1.8105".
Clearance - .001-.003". Wear limit .006".
End Thrust: .003-.007". Wear limit .012". Thrust taken by thrust plate and spacer behind camshaft sprocket.
Replacement Bearings: Finished bearings furnished Std. & .015" Undersize. *CAUTION* - No. 4 bearing is **not** interchangeable with other bearings.
Camshaft Bearing Replacement - *See "Camshaft & Bearings" in Falcon Special Data.*
Camshaft Setting: Marks on both sprockets must be adjacent and in line with straightedge across shaft centers.
Timing Chain: Side guide type. Replace chain when side deflection exceeds ½" on slack side (establish reference mark on block with sprocket turned so that all slack removed, then turn sprocket in opposite direction so that slack is present, measure deflection by pressing out on chain midway between sprockets).
Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Falcon Special Data.*
Engine Front Cover Removal: *See "Engine Front Cover" in Falcon Special Data.*

VALVES

Tappet Clearance: .016" All Valves, Hot. *See TUNE-UP.*

Valve	Head Diameter	①Stem Diameter
Intake	1.462-1.472"	.3100-.3107" Std.
Exhaust	1.261-1.271"	.3090-.3097" Std.

Valve	Seat Angle	②Lift	Stem Clearance
Intake	45°③	.2405"	④.0008-.0025"
Exhaust	45°③	.2395"	⑤.0018-.0035"



① - Also furnished .003", .015", .030" Oversize.
② - Cam Lobe Lift. Max. allowable lift loss .005".
③ - Seat Angle in head. Valve Face Angle 44°.
④ - Wear limit .0045". ⑤ - Wear limit .0055".

►*ROTATABLE VALVE NOTE:* All valves are rotatable type. *See "Valve System" in Falcon Special Data.*
Valve Seat Width - .070-.090" All Valves.
Valve Stem Oil Seals - Cup type seals installed on all valve stems below upper spring retainer.
Valve Springs: Free Length - 2.00" approximately.

Valve Spring Specifications

Valve	Pressure	Length
Closed	①48-56 lbs.	1.585"
Open	②112-122 lbs.	1.22"

① - Wear limit 40 lbs. at 1.585".
② - Wear limit 101 lbs. at 1.22".
►*VALVE SPRING INSTALLATION NOTE:* Valve spring ends must be square within 1/16". Install springs with damper (closed) coil end down toward head. Check installed height of spring which must not exceed 1 39/64" (from surface of cylinder head spring pad to underside of spring retainer). If height greater, install .030" spacers as necessary on head under spring to bring height within limits of 1 9/16-1 39/64". *CAUTION - Do not install spacers in excess of this recommendation (will overstress springs and overload camshaft lobes).*
Valve Guides: Integral with cylinder head. When stem-to-guide clearance exceeds maximum (see table above), ream guides and install oversize valves. *See "Valve System" in Falcon Special Data.*
Valve Lifters: Barrel type. Remove from above after removing cylinder head.
Clearance - .0005-.0020". Wear limit .004".
Rocker Arm Assembly: *See "Valve System" in Falcon Special Data.*

FALCON VALVE TIMING MARKS

VALVE TIMING

►*VALVE TIMING CHECKING NOTE:* Checking timing by use of quadrant on pulley not recommended by manufacturer. *See "Camshaft Setting" under CAMSHAFT for alignment of sprocket marks, and "Lift" under VALVES for checking of camshaft lobe wear.*

Valve Timing Specifications

Intake Valves - Open 15°①BTDC. Close 37°②ALDC.
Exhaust Valves - Open 45°③BLDC. Close 7°④ATDC.
① - Camlift .0122". ② - Camlift .0152".
③ - Camlift .0119". ④ - Camlift .0142.

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Falcon Special Data.*
Crankcase Capacity: 3½ qts. refill, add 1 qt. with filter change.
Normal Oil Pressure: 35-55 lbs. (hot) at 2000 RPM.
Pressure Regulator Valve - In pump body,not adjustable.
Oil Pressure Indicator - Indicator light on instrument panel operated by engine unit, Ford No. B6A-9278-B.
Oil Pump: Rotor type pump located in crankcase.
Pump Overhaul - *See "Oil Pump" in Falcon Special Data.*
Oil Filter: Full flow type. Replace filter element every 4000 miles when engine oil changed.
Crankcase Ventilation: Filter in oil filler cap (inlet), and outlet pipe at front of block on left side.

COOLING

►*THERMOSTAT REPLACEMENT NOTE:* Replace early type thermostat "R-59" or "S-59" stamped on upper pellet with later type stamped "T-59". If rocker cover front bolt boss extends into water passage at thermostat opening causing improper thermostat operation, remove just enough of bottom end of boss to provide proper clearance.
►*HIGH TEMPERATURE INDICATOR READING CORRECTION:* Make sure later type engine unit, Part No. CODF-10884-A (identified by daub of green paint), installed.
Water Capacity: 8½ qts. Add 1 qt. for heater.
Pressure Valve: Ford No. B8A-8100-A. 12-15 lbs. radiator filler cap.
Thermostat: Ford No. CODE-8575-A (157-162°) standard, No. CODE-8575-B (175-180°) for use with permanent antifreeze.
►*THERMOSTAT INSTALLATION NOTE:* Coolant elbow gasket must be placed on cylinder head before thermostat installed. Install thermostat with copper pellet (element) toward engine side of passage.
Water Pump: Packless, sealed ball bearing type. *See "Water Pump" in Falcon Special Data.*
Temperature Gauge: King-Seeley Electric "CV" (Constant Voltage) with gauge voltage regulator Ford No. B9MF-10804-A.
Dash Unit - Ford No. CODF-10883-B.
Engine Unit - Ford No. FEG-10884-B1 (Early), No. CODF-10884-A (Later). *Use only CODF-10884-A for service replacement.*
See "Temperature Gauges" in Miscellaneous Section.

CLUTCH

Long Model 8½, No. 260013. Single plate, dry disc type. Ford No. CODD-7563-B (Cover Assy.), No. CODD-7550-A (Disc).
►*NOTE: Clutch serviced as an assembly only.*
►*SHUDDER OR CHATTER IN REVERSE CORRECTION:* Make sure clutch is adjusted correctly and that latest type Equalizer Bar, No. CODD-7528-B and Release Rod, No. CODD-7521-B, are installed. New release rod has .62" offset (was straight). New equalizer bar has 1.20" distance from rod lever to end of bar (was .58").
Pedal Adjustment: *Make all adjustments in order as follows:*
1) Clutch Pedal Assist (Overcenter) Spring - Measure distance from rear face of pedal support to end of assist spring retainer (eye bolt to which spring is attached). This distance should be 1 3/16". Adjust by turning retainer nut.
2) Pedal Total Travel - Should be 6-6½". Adjust by loosening mounting bolt and shifting pedal bumper and bracket assembly (mounting bolt hole is slotted).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

3) P dal Fr play - Should be 7/8-1 1/8" (from released position to point where release bearing just contacts clutch levers) To adjust, loosen adjusting nut on lower end of clutch pedal rod and change position of rod in equalizer bar lever. Tighten both nuts after adjustment completed.

R m val: Remove starter and rubber dust ring. Remove propeller shaft and place Tool T60K-7657-A in transmission output shaft to prevent leakage. Disconnect speedometer cable, remove extension housing-to-support bolts, muffler support bracket bolts and disconnect shift rods at transmission shift levers. Raise engine slightly (from under oil pan, using a wooden block to protect pan) and remove transmission-to-flywheel housing bolts. Let front of transmission drop slightly, remove tool from output shaft, and slide transmission back and let rest on frame crossmember. Disconnect pedal retracting spring and equalizer rod from equalizer bar. Remove clutch hub and release bearing assembly. Remove flywheel housing dust cover and housing and remove clutch pressure plate and disc.

SYNCHRO-MESH TRANSMISSION

Own. Helical gear, constant mesh, synchro-mesh (second & high), sliding gear (low & reverse).
S "Falcon Synchro-m sh" in Transmission Section.

►*HARD SHIFT OR GEAR JUMP-OUT CORRECTION:* May be caused by flat type transmission shift levers being installed. To correct, make sure both shift levers are offset type.

Transmissi n C ntr l: *S e "Transmission Controls" in Transmission S ction.*

R m val: Raise car and remove propeller shaft. Insert Tool T60K-7657-A into transmission output shaft to prevent leakage. Disconnect speedometer cable from extension housing and gear shift rods from transmission levers. Remove extension housing-to-rear support bolts and muffler bracket bolts. Raise engine slightly at flywheel. Remove transmission mounting bolts and insert guide pins into lower bolt holes. Remove tool from output shaft and move transmission rearward to clear input shaft and guide pins. Remove transmission.

AUTOMATIC TRANSMISSION

Two-Speed Automatic Transmission with torque converter.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: S "Falcon 2-Speed Automatic Transmission" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Falcon 2-Sp d Automatic Transmission" in Transmission S ction.*

Lubricati n: Check fluid level every 1000 miles. Drain and refill every 24,000 miles. **Use only Ford Automatic Transmissi n Fluid B8A-19582-A or Automatic Transmissi n Fluid Typ A, Suffix A.**

Ch cking Fluid L v l - With transmission at normal operating temperature, move selector lever through all ranges to assure fluid distribution, then place lever in "P" position. With engine idling, maintain fluid at "F" (full) mark on dipstick.

Thr ttl Linkag Adjustm nt: *S CARBURETOR abov .*

►*OTHER DATA: S "Falcon 2-Sp ed Automatic Transmission" in Transmission S ction.*

UNIVERSALS

M chanics. Needle bearing type.

►*CAUTION:* Rear universal joint companion flange nut controls pinion bearing preload (must be adjusted whenever nut is loosened). *See "Falcon Rear Axle" in Rear Axle Section.*

►*REAR UNIVERSAL JOINT INSTALLATION CAUTION:* To eliminate possibility of early failure, the bearing retaining strap must be correctly positioned in cast recess in rear axle flange prior to tightening attaching "U" bolts.

REAR AXLE

Own. Integral carrier type, semi-floating, hypoid, with Hotchkiss Drive. *See "Falcon Rear Axle" in Rear Axle Section.*

►*REAR AXLE PRODUCTION CHANGES, PARTS REPLACEMENT, ADJUSTMENT & OVERHAUL CAUTIONS: Four different rear axle housings have been used in production. For identification, parts replacement, overhaul, and adjustment, see "Falcon Rear Axle" in Rear Axle Section.*

Axle Ratios - 3.10-1 (31-10), 3.50-1 (35-10), 3.56-1 (32-9), 3.89-1 (35-9).

►*AXLE RATIO IDENTIFICATION:* Code number or letter stamped on patent plate under AXLE as follows:

Ratio	Code	Ratio	Code
3.56-1	1	3.10-1	3
3.89-1	2	3.50-1	J

Backlash - .008-.012". *Supersedes previous specification of .004-.009".*

Axle Shaft Removal: Remove wheel, back off rear brake shoe adjustment. Take off nuts securing brake drum to axle shaft flange and remove drum. Working through hole in axle shaft flange, remove nuts on wheel bearing retainer studs, pull axle shaft assembly out of housing. *CAUTION* - Do not disturb brake backing plate (install one nut to hold plate in place).

►*WHEEL BEARING NOTE:* Bearing is pressed on axle shaft and retained by retainer pressed on shaft against bearing. Remove retainer by nicking with a chisel at several points. DO NOT remove bearing unless new bearing being installed.

►*AXLE SHAFT SEAL INSTALLATION CAUTION: Use only Seal installer T60K-1177-B to install seal as seal will be distorted and leak if any other method used.*

Axle Assembly Removal: Support car on underbody and drain lubricant by loosening cover. Disconnect propeller shaft at pinion flange. Disconnect shock absorbers at lower end. Remove axle shafts (see above). Remove brake "T" fitting from axle housing and brake line from clip on housing. Remove brake backing plates from axle housing and tie out of way. Support housing, remove spring clip nuts and plates. Remove axle assembly.

SHOCK ABSORBERS

Direct acting, non-adjustable. Serviced by replacement.

►*REAR SHOCK ABSORBER REMOVAL NOTE:* Upper retaining nut removed through access hole in trunk.

Replacement Shock Absorbers

M d l	Fr nt	Rear
Sedans (Std.)	CODZ-18124-A	COAZ-18125-G
Sedans (H.D.)	CODZ-18124-D	CODZ-18125-E
Station Wagon	CODZ-18124-A	CODZ-18125-C
Ranchero	CODZ-18124-A	CODZ-18125-D

FRONT SUSPENSION

Ind p nd nt. "Ball Joint" type with direct acting shock absorbers mounted within coil springs.
Se "Falcon Front Susp nsion" in Susp nsion & Whe l Alignment Section.

Caster - 0° to Pos. 1°. 0° preferred.

Camber - 0° to Pos. 1° Pos. ½° preferred. Maximum variation between wheels ½° (¼°maximum variation preferred)

Toe-In - 5/32-7/32". 5/32" preferred.

Toe-Out on Turns - Outer wheel 20°, inner wheel 20¾°.

Wheel Bearing Adjustment: Tighten adjusting nut to 11-14 ft. lbs. torque while rotating front wheel hub and drum assembly, then back off adjusting nut at least 1/8 turn but not more than 1/4 turn until nearest slot in nut is aligned with cotter pin hole in spindle, install cotter pin.

STEERING

Own. Recirculating ball worm and nut.
See "Saginaw Ball Bearing Worm & Nut" in Ste ring Section.

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

Steering Gear Removal: *See "Saginaw Ball Bearing W rm & Nut" in Steering Section.*

BRAKES

Ford-Bendix Hydraulic. Parking lever applies rear wheel service brakes.
See "Ford-Bendix Hydraulic Brakes" in Brake Secti n.

►*BRAKE DRAG CORRECTION:* If brakes properly adjusted, condition may be caused by insufficient master cylinder pushrod clearance. Inspect through master cylinder cover to see if primary cup uncovers compensating port. If not, adjust pushrod yoke eccentric bolt so pushrod is in extreme rear position. If port still restricted, cut 1/8-1/4" from pointed end of brake pedal rubber bumper.

Drum Diameter - 9" front and rear.

Wheel Cylinder Diameter - 1.062" front, .8125" rear.

Brake Lining Width & Length

Shoe	Front Wheel	Rear Whe l
Primary	2¼" x 7.34"	Ⓒ 1½" x 7.34"
Secondary	2¼" x 9.375"	Ⓒ 1½" x 9.375"

Ⓒ - 2¼" on Station Wagons.

Brake Pedal Freeplay: 5/16-7/16".

Master Cylinder: Located on engine side of firewall.

Checking Fluid - Maintain fluid level to within ½" of top.

Removal - Disconnect rubber boot from pushrod end of master cylinder, brake lines from brake fitting, and stop light wires. Remove retaining bolts and remove master cylinder.

MISC. MECHANICAL

Windshield Wipers: Vacuum type with Link & Arm linkage.
S e "Windshield Wip rs" in Misc llan ous S cti n.

Tail Gat Wind w (Stati n Wag n): Electric type. *S "Com t & Falcon Tail Gat Pow r Window" in Misc l-laneous S ction.*

TIGHTENING SPECIFICATIONS

ENGINE

►*1955 LINCOLN ENGINE OVERHAUL CAUTION (Engines identified by yellow paint at water outlet connection housing):* Approximately 600 engines at close of 1955 production have special parts listed below which are not identical with regular engine parts *Observe the following cautions when working on these engines·*

Special Engine Parts

Part	Part No
Crankshaft	EAM-6303-B
Main Bearing (Rear)	① EAM-6331-J ② EAM-6331-K
(Frt & Int)	① EAM-6333-J ② EAM-6333-K
(Center)	① EAM-6337-J, ② EAM-6337-K
Rear Oil Seal	EAM-6701-A
Piston Pin	EAM-6135-A or D

①—Marked RED ②—Marked BLUE

Crankshaft & Main Bearings—Crankshaft main bearing journal diameters are 0005" smaller (increasing clearance from 0007- 0029" to 0015- 0033") and the main bearings listed above must be used with this crankshaft

Piston Pin—Pins are heavier but they can be intermixed and used in any engine

Crankshaft Rear Oil Seal—This seal is approximately 012" less in thickness than regular engine seal but can be used with either crankshaft

1954 6 CYL. PASS. CARS

ENGINE REMOVAL: 1) Remove propeller shaft and loosen transmission rear support bolts On Fordomatic cars, disconnect manual control linkage and remove accelerator cross shaft Disconnect gearshift and clutch release rods and retracting spring Release equalizer bar support and let equalizer hang on frame Remove speedometer cable, overdrive control cable and lever, and solenoid wires
2) Remove hood, radiator and heater motor Disconnect all hoses, fuel lines and wires, then remove air cleaner and tape carb opening closed
3) Disconnect exhaust pipe and remove front engine support bolts Lift engine up and forward to remove it from chassis

1955-60 CYL. PASS. CARS

ENGINE REMOVAL: *NOTE - Unnecessary to remove transmission Procedure below is for removal of engine only* Drain cooling system and crankcase Disconnect all wires, cables, and hoses from engine units (also disconnect and plug automatic transmission oil cooler lines at radiator) Remove radiator and air cleaner Disconnect accelerator and throttle linkage (tie accelerator bracket to dash) Disconnect exhaust manifold, remove starter and automatic transmission filler tube bracket Remove engine rear plate upper right bolt and disconnect clutch linkage (remove bracket from rear of engine) Remove flywheel or converter housing cover Remove flywheel-to-converter nuts and hold converter in housing Disconnect flywheel or converter housing from engine, support transmission and remove rest of engine rear plate bolts Disconnect engine front mounts and remove engine

1954-57 EDSEL, FORD, MERCURY V8 PASS. MODELS

ENGINE REMOVAL: On synchro-mesh cars remove equalizer bar support and bushing and transmission-to-flywheel housing screws Support transmission on jack On Fordomatic cars, disconnect transmission linkage remove converter housing lower cover converter-to-flywheel bolts and converter-to-engine block bolts *NOTE - Access to some bolts is through floor pan plugs* Remove hood and radiator assembly Drain crankcase On Power Steering Cars, disconnect power steering pump bracket and secure pump to fender Disconnect all fuel and vacuum lines, throttle linkage, choke cable and remove fan Disconnect all wires Place front of car on stands, release manifolds, throttle linkage splash shields and remove filter and splash aprons On Thunderbird, it is necessary to remove both steady rest brackets from engine On Air Conditioned cars see "Air Conditioning Service Cautions" before removing any lines Remove engine front steady rest and left engine support Disconnect right engine support Raise and pull engine away from transmission and remove from chassis

1958-60 EDSEL, FORD V8 PASS MODELS (292, 333,352 ENGINES)

ENGINE REMOVAL On 332 352 engines it is necessary to remove hood and coil On all engines remove radiator and drain crankcase Remove air cleaner fuel and vacuum lines heater hoses and all wires Disconnect accelerator rod assembly On Thunderbirds disconnect tachometer drive gear from distributor and remove windshield washer and power brake lines On Air Conditioned Cars disconnect magnetic clutch wire and isolate compressor On Power Booster Fan Cars remove fan and clutch assembly drive pulley and belt On all engines disconnect Power Steering Bracket (wire pump to fender apron) Remove distributor cap and turn coil

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

to one side. Remove flywheel or converter housing-to-engine upper bolts. Raise car, remove starter and dust shield (and filler tube on Auto. Trans. Cars). Disconnect exhaust pipes and engine left insulator. Support transmission on jack. On synchro-mesh cars, remove flywheel housing inspection cover, clutch retracting spring, release bracket and flywheel housing-to-engine lower bolts. Remove oil filter. On Auto Trans. Cars, remove converter lower access cover and cover assembly and disconnect converter-to-flywheel nuts. Secure converter in housing. Remove converter housing lower bolts, cooler lines retainer clip (at right insulator bracket). Raise engine slightly and remove right insulator. Pull engine from transmission and remove from car.

1960 THUNDERBIRD (430" ENGINE)

ENGINE REMOVAL: *NOTE - Engine and transmission removed as an ass mbly.* Drain cooling system and crankcase. Remove hood, air intake duct and air cleaner assembly, and radiator. Disconnect all wires, cables, lines, and hoses from engine. Disconnect accelerator and throttle linkage (remove accelerator cross shaft bracket). Remove crankcase ventilation tube (press fit in block). Disconnect muffler inlet pipes from exhaust manifolds. Remove idler arm bracket bolts and lower drag link assembly. Remove engine front support insulators (support engine). Disconnect transmission manual shift rod and speedometer cable (plug transmission). Remove propeller shaft and engine rear support retainer. Install ½ x 14 thread eyebolts in boss at rear of each exhaust manifold, attach lifting bracket and sling (Tool T53L-300-A) to eyebolts and raise engine. Remove engine rear support crossmember and remove engine.

1959-60 MERCURY MODELS (312" ENGINE)

ENGINE REMOVAL: Remove hood. Drain and remove radiator. Remove air cleaner, fan assembly and battery. Disconnect fuel and vacuum lines and all wires. Disconnect carburetor control shaft rod and remove accelerator shaft assembly from transmission control shaft and wire control shaft to dash. On Power Steering Cars, remove pump and secure it out of way. *NOTE - DO NOT disturb lines.* On Power Booster Fan Cars, remove clutch and fan assembly and pulley from water pump. On all cars, remove engine upper splash shields. Remove starter and dust shield. Disconnect exhaust lines. Disconnect clutch release lever rod and clutch release bracket. On Auto. Trans. Cars, disconnect oil transfer line mounting bracket and remove linkage splash shield. Remove converter housing front access cover, and converter lower housing-to-block screws. Remove front insulator assemblies, oil filter, and place jack under transmission. On synchro-mesh cars, remove flywheel lower housing-to-block screws. On Auto. Trans. Cars, remove upper converter housing-to-block screws. Raise engine slightly and push it forward to clear dash, then remove from chassis.

1958-60 MERCURY MODELS (EXC. 312")

ENGINE REMOVAL: Drain cooling system, remove radiator, air cleaner and air inlet duct assembly. Disconnect all fuel and vacuum lines, hoses, and wires. Remove dipstick and tube. On Auto. Trans. Cars, disconnect accelerator shaft to control shaft rod and transmission control shaft rod and remove accelerator shaft bushing. On Synchro-mesh Cars, disconnect accelerator shaft spring, carburetor to transmission control shaft rod, and remove accelerator shaft plastic bushing. Remove wiring loom from clips on rocker cover and remove washer mounting bracket, fan, spacer, pump pulley, and drive belts. On Power Booster Fan Cars, remove fan, and clutch assembly, drive pulley and belts. Raise car, remove front splash shields, transmission linkage splash shields, road draft tube and loosen generator adjusting bracket and push generator against block. Remove exhaust pipe (muffler to manifold). Remove starter and seal, flywheel housing cover and disconnect clutch linkage and slide bracket and two-piece socket from release equalizer bar assembly. On Auto. Trans. Cars, remove converter housing access cover, converter to flywheel nuts, lower housing to block screws and oil transfer line bracket. Remove lower flywheel housing-to-block screws, engine insulator to frame nuts. On Power Steering Cars, remove pump reservoir (drain lines) and secure to fender. Lower car and place a jack under transmission. On Auto. Trans. Cars, remove converter or flywheel housing to block screws. Raise engine and remove from chassis. *CAUTION - DO NOT let torque converter move forward with engine.*

1954-55 LINCOLN MODELS

ENGINE REMOVAL: Disconnect battery, remove hood, radiator, air cleaner, and blower motor assembly. Disconnect all hoses, fuel and vacuum lines, throttle and accelerator linkage and remove "Z" bar from dash. Raise car, drain engine and transmission oil, disconnect exhaust pipe at manifold and remove propeller shaft and throttle and manual control rods. Remove oil filter and engine mounts. Let engine rest on crossmember. Raise engine and remove detachable crossmember. Guide engine to right to clear oil pump and remove from chassis.

1956-57 LINCOLN & CONTINENTAL

ENGINE REMOVAL: Disconnect battery, drain cooling system and remove hood. Remove defroster blower motor and duct assembly. Remove air cleaner and duct as an assembly. Disconnect fuel and vacuum lines and remove hoses, fan, pump pulley and belts. Disconnect all wires, tachometer drive cable and remove power steering pump (wire pipe to hood hinge). Remove carburetor control rod and shaft assembly (wire shaft and bracket to dash). Raise car, remove starter and disconnect exhaust pipes. Remove radiator splash shields, drain engine and remove oil filter, and throttle linkage splash pan. Remove converter cover housing-to-block screws. Remove converter cover and converter to flywheel bolts. Lower car and place jack under transmission. Remove radio speaker and converter housing-to-block screws (through access holes in dash panel). Remove front engine support capscrews. Raise and push engine forward to clear dash and guide engine out of chassis.

1958-60 LINCOLN CONTINENTAL

ENGINE REMOVAL: Remove battery, carrier and bracket. Drain cooling system and remove hood. Disconnect fuel and vacuum lines, hoses, and all electrical wires. Disconnect accelerator control shaft assembly and bracket and remove air cleaner and radiator (on Air Cond. Cars, it will be necessary to first disconnect condenser-receiver assembly, high and low pressure lines at fittings, and remove condenser-receiver, compressor and lines). Release wiring harness from clips. Raise car, drain transmission and replace tube. Remove propeller shaft. Disconnect brake equalizer from lever and remove lever and speedometer cable assembly. Remove rear engine support (necessary to remove rebound insulator to support plate nut, raise transmission with jack and turn support 90° to remove it). Remove linkage splash shield and road draft tube. Disconnect manual shift rod, exhaust crossover pipe and exhaust pipes. Remove front engine supports and lower car. Remove radiator grille, braces, hook hinges and radiator-fender apron supports. Disconnect wiring harness at radiator-fender apron support and remove grille assembly. Disconnect power steering lines and support them to prevent fluid loss. Raise engine with transmission and guide it out of chassis.

1954-56 FORD TRUCKS

ENGINE REMOVAL: Remove hood, fan shroud and bracket assembly, radiator, fan and belts. Disconnect wires, hoses, fuel lines, choke control cable, hand throttle, accelerator rod and spring. Remove air cleaner and tape carburetor opening closed. Disconnect exhaust pipe. Remove clutch return spring and transmission-to-flywheel housing bolts. Support transmission on jack and remove engine. *See additional items required for "Parcel Delivery", "Cab Over Engine" and "Fordomatic" equipped models.*

Parcel Delivery - On 1954 models, remove engine compartment rear cover and latch open front cover. Use lifting bracket with arm of crane through door, and support weight of engine. Remove engine support nuts and remove transmission to flywheel housing bolts. Support transmission on jack and move engine forward to clear transmission main shaft and maneuver it through door. On 1955-56 models, remove drivers seat and support. Remove clutch pedal plate, brake pedal pad, and remove pedal opening plate and slide it over pedal rod. Remove dimmer switch and drop it through floor. Disconnect accelerator pedal. Remove left floor plate. Remove master cylinder inspection cover, center plate nuts and bolts and loosen crossmember reinforcing plate from wheel housing. Remove center plate, then remove one reinforcing plate-to-crossmember bolt at end of body crossmember. Remove engine cover and base plate assembly. On Fordomatic equipped trucks, disconnect selector rods and remove emergency brake cable hold-down bracket. Pull emergency brake cable out of way and remove speedometer cable. Remove propeller shaft. Use portable crane with arm through door and maneuver engine out through door.

Cab Over Engine - Remove floor pan over engine, and remove dash panel. Remove filter lines. Remove one front wheel. Remove radiator grille assembly and radiator support with radiator. Remove engine front support bolts. On V8 engines, remove generator, carburetor, and filler pipe and fuel pump. Use portable crane to support weight of engine and remove transmission to flywheel housing bolts. On 6 Cyl. engine,

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

proceed same as for V8 except it is unnecessary to remove generator, carburetor, filler pipe and fuel pump.

1957-60 FORD TRUCKS

ENGINE REMOVAL: Conventional Trucks & School Bus. *NOTE - For Courier & Ranchero, see Passenger Cars.* Remove hood, drain cooling system and crankcase. Remove air cleaner, fan, spacer, belt, radiator and shroud. Release air from reservoir and disconnect lines. Disconnect fuel and vacuum lines, all hoses, wires and choke control, then remove starter and dust seal, exhaust pipes and engine front insulator bolts. On Power Steering Trucks, disconnect lines at left frame sidemember, pump reservoir and pump housing. On Synchro-mesh and Overdrive Trucks, disconnect accelerator rod assembly, throttle control cable and clamp at governor (4-Bbl. Carb.). Remove clutch return spring (HD Eng.), flywheel housing inspection cover and housing bolts. On Auto. Trans. Trucks, disconnect accelerator rod at mounting bracket, transmission cover plate with accelerator assembly. Disconnect cooler lines. Support transmission on jack. Raise engine slightly and pull it from transmission.

Cab Forward Trucks: Same as Conventional Trucks except for releasing cab lock and tilting cab forward.

Parcel Delivery Trucks: *NOTE - Engine and transmission are removed as an assembly.* Drain cooling system and crankcase. Remove drivers seat, master cylinder inspection cover, steering column cover plate, left wheelhouse panel, and center floor plate. Disconnect accelerator linkage at pedal and all wires from headlight dimmer switch. Disconnect right side of engine rear cover from right wheelhouse panel, rear flange of engine rear cover from crossmember and center floor plate from bracket. Remove engine rear cover plate (wedge frame gussets open so plate will clear slots). Remove crossmember and air cleaner. Disconnect all wires, cable lines, and hoses from engine and transmission (remove radiator hoses, hand brake cable and bracket). Disconnect engine from front mounts and exhaust pipes at manifolds. Remove air cleaner stud. Disconnect engine rear support, front universal joint, transmission shift rods and clutch slave cylinder hose. Use a floor crane and remove engine and transmission assembly.

ENGINE MOUNTINGS

1954-56 MODELS (EXCEPT THUNDERBIRD)

ENGINE FRONT STEADY REST REMOVAL & INSTALLATION: Removal – On 8 cylinder engine, drain cooling system, remove radiator, fan, drive belts, and crankshaft damper. All engines, remove two clamp bolts at front of steady rest bracket. Remove spacer bolt that retains insulators in bracket. Remove three bolts (6 Cyl.), four bolts (8 Cyl.) that secure bracket to engine and remove bracket.

Installation – Install bracket on front engine cover, tighten bolts to 23-28 ft. lbs. torque. Install, but do not tighten insulators, spacer bolts, and clamp bolts. If necessary, center spacer bolt in frame bracket by shifting engine mounts in frame brackets. Tighten spacer bolts to 20-25 ft. lbs. torque. Make sure engine weight is not transferred to insulators, then tighten clamp bolts 25-30 ft. lbs. torque. On 8 Cylinder engines, install crankshaft damper, drive belts, and radiator.

1956 THUNDERBIRD

ENGINE STEADY REST REMOVAL, ASSEMBLY & ADJUSTMENT: Removal – Remove upper and lower bracket retaining bolts and remove steady rests as assemblies.

Assembly – Assemble bottom nut, washer, insulator and bracket on the upper end of rod. Install the top insulator washer, and nut on the upper end of rod. Assemble top washer, bushing, and bracket on lower end of rod. Install bottom washer, bushing, washer, and nut on lower end of rod.

Installation & Adjustment – Install assembly in car and tighten bracket bolts to 30-35 ft. lbs. torque. **Adjust insulators as follows:** Loosen lower rod and upper nuts on both steady rests. Let engine seek its own level position. Turn lower rod assembly nut, washer and insulator of each steady rest up against lower (chassis) support bracket. Tighten lower nut until overall dimension of insulator with retainer is 1.29-1.33". Turn lower nut, washer, and insulator at top of each rod assembly up against the engine support bracket, so dimension of lower retainer and insulator is 1.08", then turn upper nut, washer and insulator at top of rod assembly down against engine support bracket until dimension of this insulator is .77". Overall dimension of top portion of rod assembly should be 1.97-2.02".

1957 THUNDERBIRD

ENGINE FRONT SUPPORT: Removal - Remove insulator nut and bolt, and insulator. Remove insulator to bracket bolts and nuts. Jack up engine, remove insulator assembly and spacer.

Installation - Position spacer and insulator assembly and lower engine Install insulator bolt, lower insulator and nut Tighten nut to 85-95 ft. lbs. Install insulator assembly to bracket bolts, flat washer lockwasher and tighten nuts to 45-50 ft. lbs.

1957 THUNDERBIRD

ENGINE STEADY REST: Removal - Remove nut washer, and bushing from lower end of steady rest rod Remove upper bracket bolts, remove assembly from engine.

Disassembly - Remove lower bushing and washer; nut, washer and insulator and bracket from top of rod. Remove remaining insulator washer and nut from top of rod.

Assembly - Install bottom nut, washer insulator and bracket on upper end of rod. Install top insulator, washer, and nut on upper end of rod. Install top bushing and washer on lower end of rod.

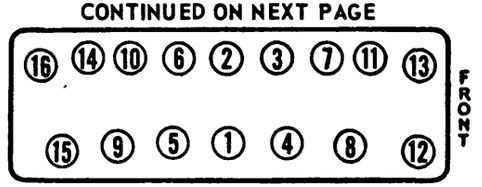
Installation - Install assembly in car, tighten engine bracket bolts to 30-35 ft. lbs. Install bottom washers, bushing and nut on lower end of rod.

Adjustment - With both engine and frame brackets in place and tightened, loosen lower and upper nuts on both steady rests. Let engine seek its own level position, then turn lower nut, washer, and insulator (each side of engine) up against lower (chassis) support bracket, tighten lower nut until distance from washer to washer (at lower end) is 1.29-1.33". Turn lower nut, washer, and insulator (at upper end) up against engine support until distance from lower washer to bracket is 1.08" then turn upper nut, washer and insulator down against bracket until distance from upper washer to bracket is .77". Total distance, washer to washer, (at upper bracket) should be 1.97-2.02".

CYLINDER HEAD & MANIFOLD

TIGHTENING TORQUES: *S "Tightening Sp cifications" above.*

1954-55 FORD 6 CYL. MODELS



CYLINDER HEAD: *NOTE* - Guide studs can be made up by cutting head off a 7/16"-14 x 6" bolt, tapering end, and cutting a screwdriver slot so that it can be turned into cylinder block hole.

Installation: Coat NEW cylinder head gasket on both sides with special head gasket sealer No. 8A-19554, install gasket on block. Install the two end pushrods and install guide studs in two diagonally opposite end bolt holes. Lower the cylinder head over the guide studs and pushrods. *(CAUTION*–Slide head down carefully and guide pushrod through head). Coat threads of all cylinder head bolts lightly with water resistant sealer, install two bolts at opposite ends of head to hold head gasket in position, remove guide studs, install remaining head bolts. Tighten all head bolts evenly to 75 ft. lbs. torque in correct sequence (see Cylinder Head Diagram). Install all pushrods and assemble rocker arms (see Rocker Arm Data). Recheck cylinder head bolts after engine has reached normal operating temperature and again after 1000 miles of operation.

1956-57 FORD 6 CYL. MODELS

Installation - Apply coating of cylinder head gasket sealer to both sides of gasket, position gasket over guide studs, place cylinder head over guides and lower carefully. Coat threads of each bolt with small amount of water resistant sealer, install two bolts at opposite ends of head to hold gasket in place and remove guide studs. Install balance of bolts, tighten bolts in sequence as shown in diagram, as follows: Tighten to 50 ft. lbs. (Cold) in proper sequence, then 65 ft. lbs. (Cold) in proper sequence. Install pushrods in proper locations, position rocker arm assembly on head and install oil drain line, clip and retaining screw on No. 1 bracket. Make sure line enters shaft locating hole. Position oil feed line on No. 6 bracket, with lower end of line, "O" ring seal in oil supply counterbore, then install bolt. Tighten all retaining bolts to 45-55 ft. lbs. torque. Make preliminary (Cold) valve lash adjustment. Install manifolds, lines, and wires. Connect wiper hose, battery cable and fill cooling system Remove tape from air horn, connect choke wire start and run engine at 1200 RPM for approximately 30 minutes. Tighten cylinder head bolts in proper sequence to 75 ft. lbs. (Hot), recheck valve lash and engine idle as necessary.

CONTINUED ON NEXT PAGE

VERHEAD VALVE 6 CYLINDER HEAD

CONTINUED FROM PRECEDING PAGE

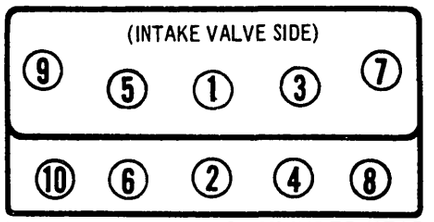
1958-60 FORD 6 CYL. MODELS

Installati n - Apply a thin coating of cylinder head gasket sealer to both sides of new gasket, position gasket over guide studs, place cylinder head over guides and lower carefully. Coat threads of each bolt with small amount of water resistant sealer, install two bolts at opposite ends of head to hold gasket in place and remove guide studs. Install balance of bolts and tighten all bolts in sequence shown in diagram in three steps as follows: 1) Tighten all bolts in sequence to 55 ft. lbs. 2) Tighten all bolts in sequence to 65 ft. lbs. 3) Finally tighten all bolts in sequence to 75 ft. lbs. *CAUTION - After completing the three steps, DO NOT DISTURB cylind r head bolts.* Install rocker arm shaft assembly on head and oil outlet line, bracket and retaining screw on No. 1 support. *NOTE* - Oil line must enter shaft locating hole. Install new "O" ring seal on lower end of oil inlet line, position line of No. 6 support with "O" ring seal in oil supply counterbore then install bracket and support bolt. Tighten rocker arm bolts to specifications.

1954-60 V8 MODELS

►*CYLINDER HEAD TIGHTENING NOTE:* Use cylinder head wrench S-8663-A on all bolts except No. 10 on right hand head Use a 11/16" socket, 1 5/16" long, plus an SX-5 extension on right hand No. 10 bolt. On Fordomatic cars, force extension from top of manifold past oil level tube to get socket on bolt head

►*1954 LINCOLN & MERCURY SERVICE REPLACEMENT CYLINDER HEAD NOTE:* Cylinder Head Part Nos. EAD-6049-G (LINCOLN), B4A-6049-E (MERCURY) are adaptable to either 14 mm. or 18 mm spark plugs. Spark plug holes are drilled and tapped for 18 mm spark plugs and a special adapter Part No. B5A-6060-A (LINCOLN), B4A-6060-A (MERCURY), is provided so that 14 mm plugs may be used. Adapter can be installed by threading plug into adapter, then installing assembly in cylinder head and torquing to specifications which is sufficient to seal adapter in place.



Installation - Apply a coating of cylinder head gasket sealer to both sides of gasket and place gasket over dowels with the words "Front" to front of engine, and "Top" up. Be sure that holes in gasket match holes in cylinder head. Tighten bolts in sequence shown in diagram, to specifications shown in table below. First two steps, with engine c ld, third and final step after engine has been operated to bring it to operating temperature. *F r R ck r Arm Installation, see Rocker Arms (b low).*

Cylinder Head Torque

Engin	Ft. Lbs.	1 Step	2 Step	3 Step
239,256,272,292,312"		55	65	ℂ75
332,341,352,361,371.5,383"		70	80	90
368" Plain Bolt		70	80	90
368" "FT" on Bolt Head		80	95	105
410,430"		85	95	105

ℂ - 85 ft. lbs. 292" Heavy Duty.

INTAKE MANIFOLD: (292,312") R m val - Drain cooling system and remove air cleaner Disconnect fuel line at carburetor and vacuum line at distributor and intake

OVERHEAD VALVE V8 CYLINDER HEAD

manifold Remove vacuum lines at vacuum pump and windshield wiper and remove assembly Disconnect throttle rod at shaft and bracket assembly and remove them from intake manifold Disconnect coil wires at coil heater inlet hose and vacuum control line at water control valve Disconnect upper radiator hose and bypass hose Remove manifold retaining bolts, nuts and four clamps and remove manifold, carburetor, and coil as an assembly

Installation - Use new gasket, place manifold on engine block aligning holes in gaskets with cylinder head tapped holes. Position manifold clamps, install retaining bolts and nuts and tighten to specifications (work from center to ends) Install throttle rod and shaft and bracket assembly to intake manifold

INTAKE MANIFOLD: (332,352,361") Removal - Drain cooling system and remove radiator supply tank Disconnect all linkage, cables, lines, wires, and hoses from intake manifold and units attached to manifold Disconnect crankcase ventilation tube from manifold Remove rocker arm covers Remove rocker arms and pushrods *(see 'Rocker Arms" below for special procedure)* Remove distributor Remove intake manifold (eye bolts with 5/16 - 18 threads may be installed in rocker arm cover screw holes at diagonal corners of manifold for lifting hook and sling attachment)

Installation: Coat seal surfaces of cylinder head and manifold with oil resistant sealer and position seals and gaskets on cylinder heads and block (gasket must rest on head gasket tabs) Position intake manifold (insert distributor temporarily) **and make sure seals are in place.** Tighten manifold attaching bolts to specifications, working from center of manifold Reverse removal procedure to complete installation *NOTE* - To prevent crossfire between No 7 and No 8 cylinders, position No 7 spark plug wire in first position (front of engine) in bracket on rocker arm cover Wire order should be 7, 5, 6, 8 from front of engine

INTAKE MANIFOLD (383,410,430") Removal - Drain radiator, remove battery ground, carburetor air cleaner, choke heat tube, heater hoses, temperature bulb wire, fuel line at pump bowl, vacuum line at distributor and high tension wires. Remove distributor cap and wires as an assembly. Loosen hose at intake manifold and disconnect upper hose at outlet connection. Remove wires from loom clip and coil, and hoses from manifold. Disconnect accelerator shaft spring and kickdown rod and transmission rod. Remove coil and bracket assembly, intake manifold screws, manifold and gasket.

Installation - Reverse removal procedure and note the following: Manifold gaskets are interchangeable and word "FRONT" must be toward front of engine. Spark plug wires for left bank must be properly located to prevent crossfire between No. 7 and No. 8 wires.

ORIGINAL BORE & PISTONS

ORIGINAL PRODUCTION ENGINE BORE & PISTON SIZES: Standard bore in eight grades (covers range shown in table below) with .0003" range in each grade. Standard pistons in three grades (Red, Blue and .003" O.S.) with .0006" range in each grade.

Engine	Bore Range	Piston Rang
223"	3.6250-3.6274"	3.6236-3.6266"
292"	3.7500-3.7524"	3.7486-3.7516"
332,352"	4.0000-4.0024"	3.9983-4.0013"
430"	4.3000-4.3024"	4.2983-4.3013"
361"	4.0500-4.0524"	4.0483-4.0513"

PISTONS

ALL ENGINES

FITTING PISTONS: To check piston fit in cylinder and to determine clearance between piston and cylinder walls, position a length of ½" wide feeler stock (see table below for feeler thickness) between inverted piston and cylinder wall 90° from piston pin holes. Hold piston in bore so bottom of piston skirt is about 1½" below top of block and piston pin bore is parallel to crankshaft. *NOTE - Feeler must extend entire length of piston.* Pull feeler from cylinder and note reading on Piston Pull Scale, Tool FLM-6110-A. Refer to table below for clearance indicated.

Lbs. Pull	Clearance (Using following ½" wide feelers) .002" Feeler	.0025" Feeler	.003" Feeler	.004" Feeler	.0045" Feeler
0	.0025"	003"	.0035"	.0045"	005"
1	.0023"	.0028"	.0033"	.0043"	0048"
2	002"	.0026"	.0031"	0041"	.0046"
3	.0018"	.0023"	.0028"	0039"	.0044"
4	.0015"	.0021"	.0026"	.0037"	.0043"
5	.0013"	.0018"	.0024"	.0035"	0041"
6	.001"	.0016"	.0022"	.0033"	0038"
7	.0007"	.0014"	.0019"	.0031"	.0037"
8		.0012"	.0017"	.0029"	.0035"
9		0008"	0014"	.0027"	.0033"
10			.0013"	.0025"	.0031"
11			001"	.0023"	.0028"
12			.0008"	.0021"	
13				.0019"	
14				0017"	

PISTON PINS

(383,410,430" ENGINE)

REMOVAL: Press or pull pin out of piston and connecting rod assembly with Piston Pin Remover and Replacer Set, Tool 6135-F, using arbor press or vise and wrench as shown in illustration.

INSTALLATION: Press or pull pin into piston and connecting rod with Tool 6135-F and an arbor press or vise and wrench as shown in illustration. Pin must be ¼" beyond face of piston boss. Then check pin fit by installing all parts of Tool 6135-F for vise installation and place in vise. Turn nut with a torque wrench until pilot (Part No. 2 of tool) bottoms in anvil (Part No. 1 of tool). Minimum torque required to seat pilot is 20 ft. lbs. If less torque required, replace connecting rod.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

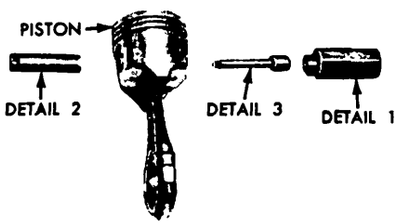
CRANKSHAFT & MAIN BEARINGS

ALL ENGINES

►*1956 CRANKSHAFT & CRANKSHAFT FRONT OIL SLINGER PRODUCTION CHANGE (To improve seals):* New crankshafts with integral rear oil slingers are used in production on 6 and V8 engines. A Front Oil Slinger, Ford No. B6A-6310-A (6 Cyl. Engine), No. B6A-6310-B (All V8 Engines) can be installed to improve crankshaft front oil seal operation. *6 CYL. ENGINE CAUTION* - New Cylinder Front Cover, Ford No. B6A-6019-A must be used when this front oil slinger is installed.

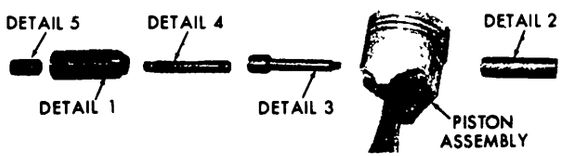
►*INSTALLATION OF CRANKSHAFT WITH INTEGRAL REAR OIL SLINGER & USE OF FRONT OIL SLINGER ON 1954-56 ENGINES:* New type crankshaft with integral rear oil slinger and separate front oil slinger can be installed on previous engine models as follows:

1954-56 6 Cyl. "223" Engine – Crankshaft No. B6A-6303-E, Front Oil Slinger No. B6A-6310-A. *NOTE* - New Cylinder Front Cover No. B6A-6019-A must be used with this front slinger.



1954-55 V8 "239" & "256" Truck Engines – Crankshaft Front Oil Slinger No. B6A-6310-B.

1955-56 V8 "272", "292", & "312" Engines – Crankshaft No. B6A-6303-D (272 & 292 Engines), No. B6A-6303-C (312 Engine), Front Oil Slinger No. B6A-6310-B.



1956 368" Engine - Crankshaft No. ECU-6303-B, Front Oil Slinger No. B6Q-6310-B, Cylinder Front Cover No. B6Q-6059-C. *NOTE* - New Front Cylinder Cover must be used with front oil slinger.

1954-55 317.5", 341" Engines - Front Oil Slinger B6Q-6310-B and Cylinder Front Cover No. B6Q-6059-C. *NOTE* - Both these parts must be used together.

►*1958-60 383" and 430" ENGINE MAIN BEARING BOLT SERVICE REPLACEMENT NOTE:* To prevent loss of torque on main bearing bolts, install bolts, Part No. 374237-S. These new bolts have a 13/16" head (across flats), replacing bolts having 3/4" head. It is recommended that at any time main bearing bolts are removed later type bolts should be installed

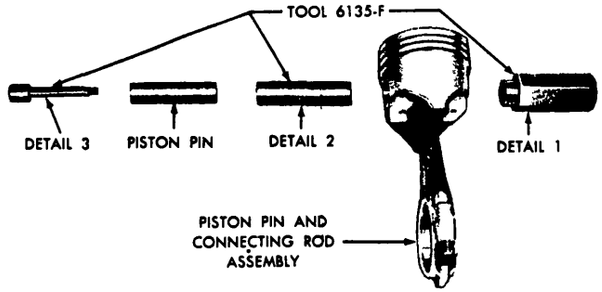
PIN REMOVAL (IN ARBOR PRESS)

PIN REMOVAL (IN VISE)

ALL ENGINES

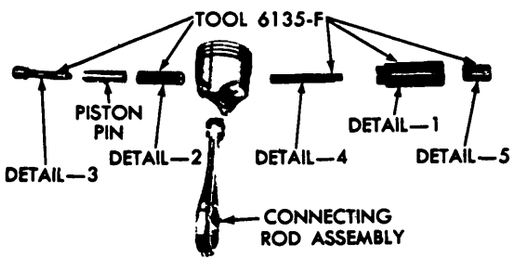
CRANKSHAFT THRUST BEARING ALIGNMENT: Install No 1, 2 & 4 main bearing caps and torque to specifications. Install No. 3 main bearing cap with bolts finger tight. Pry crankshaft forward against upper half of No. 3 main bearing, pry No. 3 main bearing cap to rear to align thrust surfaces of both halves, and tighten bolts, while holding shaft forward and cap to rear, to torque specifications. Check crankshaft end play.

1954-60 6 CYL. MODELS



REAR MAIN BEARING OIL SEALS: *NOTE*–Crankshaft seal is installed in groove in block and in seal retainer (directly behind rear main bearing).

Seal Installation: With crankshaft out, install new journal oil seal in cylinder block (Tool T52L-6701-AGD). Cylinder block journal seal and retaining cap journal seal must be cut flush without any frayed edges overlapping. Install a new journal oil seal in oil seal retainer cap (Tool T52L-6701-AGD). Install new retainer cap-to-cylinder block seals. Install main bearing caps and inserts. Lubricate seals with grease to reduce friction, then install retainer in cylinder block.



Testing Seal Installation: Check retainer-to-cylinder block seal for leaks. Squirt a few drops of oil into seal corners on outside of cylinder block. Blow compressed air into seal corners from inside block. If air bubbles appear in oil, remove seal retainer. Be sure all mating surfaces are clean. Install new seals and repeat air test.

1954-60 V8 MODELS

►*OVERSIZE REAR MAIN BEARING SEAL NOTE:* When rear main bearing seal does not compress firmly when forced into block and cap (cause of oil leak) install an oversize seal, Part No. B6Q-6336-A. released for service. DO NOT USE oversize seal unless inspection shows that standard seal does not seal opening properly.

PIN INSTALLATION (IN ARBOR PRESS)

PIN INSTALLATION (IN VISE)

REAR MAIN BEARING OIL SEALS: *NOTE* - Crankshaft seal is installed in groove in block and in seal retainer (directly behind rear main bearing) or in rear main bearing cap. Retainer or cap is sealed in block by special sealing strips inserted in grooves in sides of retainer or cap.

Seal Installation: With crankshaft out, install new oil seal in block with special tool to drive it in place (see table below). Cut surplus seal flush with parting surface. Repeat operation on bearing cap or retainer. Use Tool 6335 or 6336-A1 to hold side seals in place while installing retainer. On later cars without seal retainer, dip seals in engine oil and quickly install them. *NOTE - It may be necessary to drive them in place the last ½" of travel.* DO NOT use sealer on side seals. They will expand when in contact with engine oil.

Testing Seal Installation: Same as for 6 Cyl. above.

Rear Main Bearing Seal Tool Tabl

Crankshaft Diam.	Tool N.
2.4980-2.4986"	T52L-6701-AGD
2.6235-2.6243"	6701-A
2.7484-2.7492"	6701C or T58P-6701-A
2.8994-2.9002"	6701-B

ENGINE FRONT COVER

►*1958-59 332" & 361" ENGINE NOISE CORRECTION:* If a high frequency squealing noise or whine at low or idle speeds is encountered, determine if the noise is emanating from engine front cover by operating engine and prying against front cover with a large screwdriver. If this eliminates the noise, correct as follows: Use a rocker arm cover stud seal, Part No. B9A-6570-A, and a flat washer (.45" I.D. x 1" O.D.), Part No. UP-354149-S8 sandwiched together (washer installed over boss on seal). Install this assembly between cylinder block front cover and water pump backing plate, positioning it in the resonating area or in line with camshaft thrust button contact area. If necessary use a thicker washer so the assembly is wedged in position.

6 CYL. PASS. & TRUCK MODELS

ENGINE FRONT COVER: Removal - Remove radiator, crankshaft damper, two front oil pan screws, and loosen remaining pan screws. On 1958 and later models disconnect heater hose and generator arm from front cover and remove water pump. All models, remove cover to block screws and remove cover.

Installation - Reverse removal procedure, using new gasket properly coated with sealer.

Front Cover Oil Seal: Drive out old seal with pin punch. Coat new seal with grease and use Tool T52L-6700-BEE to locate it properly. *NOTE* - Seal must be seated in recess and spring must be located on outside of seal.

V8 PASS. & TRUCK MODELS

ENGINE FRONT COVER: Removal - Remove radiator, drive belts, fan and pulley assembly, crankshaft damper (use Tool 6306-AG). Release and move generator mounting bracket out of way. Disconnect Power Steering pump and secure it out of way. Remove fuel and

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

vacuum lines from fuel pump and remove fuel pump and pushrod. On Air Conditioned Cars, move condenser brackets out of way but DO NOT disconnect lines. On Thunderbird, remove engine front support. On Trucks, it is necessary to support front of engine, remove insulator bolts, raise engine remove support bracket. On P-Series Trucks, remove grille, head and parking lights, wind deflector and weather strip as an assembly. On all Models, remove front cover-to-block and oil pan screws and remove water pump and front cover as an assembly.

Installati n - Reverse removal procedure and note the following: Place slinger on crankshaft with cup side to rear when facing engine. Use sealer on new gasket and install cover with gasket on engine but do not tighten screws. Place proper alignment tool over crankshaft (see table below). Hold tool inward while tightening cover screws to specifications.

Fr nt C ver Aligning Tool Nos.

Engine	Tool No.
239,256"	T52L-6059-AAE
272,292,312"	T52L-6059-AEE
332,352,361,410"	T58P-6019-A or 6059-C
317.5, 341"	6059
383, 430"	6059-A, 6059-B
368"	6059-A

CAMSHAFT & BEARINGS

►*1958 CAMSHAFT KNOCK OR WHINE CORRECTION (Early 332 & 352 Engine):* Install Service Kit B8A-6275-A consisting of a Thrust Button, Thrust Button spring, Thrust Button spring retainer clip, 7/16-14 bolt, and flat washer. Rework early cover by removing button retainer with chisel and polishing burrs off of button contact surface. New type cover Part No. B8A-6019-B requires use of new type button and spring.

1956-57 6 CYL. MODELS

CAMSHAFT REMOVAL: Remove air cleaner, tape air horn closed, remove distributor cap. Disconnect high tension wire from coil and spark plug wires, remove fuel pump. Disconnect primary coil wire from engine clip and remove pushrod cover. Remove rocker arm assemblies, pushrods (in sequence), radiator support bar, radiator, and grille assembly. Remove fan belt, vibration dampener, oil pan to cylinder block two front bolts, engine front cover. Turn crankshaft until timing marks on sprockets are 12 link pins apart on drive side, and remove camshaft sprocket bolt. Mark distributor housing and cylinder block for position of rotor and housing reinstallation, and remove distributor. Remove sprockets and timing chain woodruff key camshaft thrust washer. Turn camshaft and raise lifters off lobes and secure with clips. Draw camshaft out carefully so as not to damage bearings.

1958-60 6 CYL. MODELS

CAMSHAFT REMOVAL: Remove cylinder front cover (see above). Remove dipstick, ventilation tube, stabilizer bar, flywheel housing inspection cover and oil pan. Remove air cleaner (tape carburetor air horn closed). Remove valve rocker arm cover, rocker arm shaft assembly then remove pushrods in sequence. Disconnect primary and high tension wire at coil, vacuum line and primary wire at distributor, spark plug wires at plugs and remove distributor cap with high tension wires as an assembly. Remove ignition wires from clip on valve pushrod cover and remove cover then remove fuel pump. Remove crankshaft front oil slinger, turn engine until timing marks on sprockets are 12 pins apart on drive side of chain. Remove camshaft sprocket retaining bolt and washer, scribe line on distributor housing and cylinder block to mark position of rotor and distributor housing for reinstallation, then remove distributor. Remove sprockets and timing chain, woodruff key and camshaft thrust washer. Turn camshaft until tappets can be lifted up with a magnet or fingers and hold them clear of camshaft lobes with clothes pins or clips. Carefully remove camshaft from front of engine.

1956-60 V8 MODELS (272,292,312,368")

CAMSHAFT REMOVAL: Drain cooling system and crankcase, remove air cleaner, intake manifold, carburetor, and coil as an assembly. Remove radiator, fuel pump, drive belts, fan, spacer, pulley, crankshaft dampener, cylinder front cover, stabilizer bar, and oil pan. Turn engine so timing marks on sprockets are 12 pins apart on timing chain. Remove distributor cap, scribe line on distributor housing and cylinder block to mark position of rotor and distributor housing for reinstallation, then remove distributor. Remove timing chain and sprockets, camshaft thrust washer, and woodruff key. Remove rocker arm covers and gaskets then back off valve tappet adjusting screws ¼ turn and remove rocker arm shaft assemblies. Remove valve pushrods in sequence and remove valve pushrod chamber cover. Turn camshaft until lifters can be lifted with magnet or fingers to clear camshaft lobes and secure them with clothes pins or clips. Carefully remove camshaft.

1958-60 V8 MODELS (332,352,361,383,410,430")

CAMSHAFT REMOVAL: 1) Remove engine front cover, see "Engine Front Cover Removal", then remove oil slinger from crankshaft.

2) Turn crankshaft to bring timing marks on sprockets adjacent and in line across shaft centers and remove fuel pump eccentric to camshaft screws, sprockets and timing chain.

3) Remove intake manifold, see "Intake Manifold Removal" then remove rocker arm covers, rocker arm assemblies, (loosen screws alternately to relieve spring tension), then remove pushrods (keep pushrods separate for reinstallation).

4) Remove distributor carefully from block and valve pushrod chamber cover. Remove pushrod cover (lift up at front then pull forward and up).

5) Remove hydraulic lifters (keep lifters in order for reinstallation) and withdraw camshaft, being careful not to damage bearing surfaces.

TIMING CHAIN

►*1958 CHAIN NOISE CORRECTION (332, 352 Eng.):* Caused by inadequate lubrication, misaligned camshaft gear locating pin or loose timing gear and fuel pump eccentric. Correct inadequate lubrication by installing Oil Gallery Plug (Jiggle Pin type) Part No. B8A-6026-A. Correct misalignment by relocating pin so gear has no runout and retention bolt head is square against fuel pump eccentric. Correct loose gear by tapping out retaining bolt hole in camshaft with bottoming tap (7/16"-14) to add three additional threads, then install longer bolt (370301-S8) and tighten to specifications.

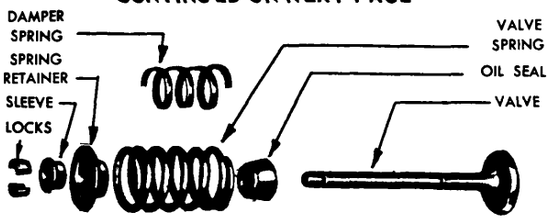
VALVE SYSTEM

1954-60 6 CYL. & V8 MODELS

►*1959 332", 352", 361" ENGINE INTAKE & EXHAUST VALVE REPLACEMENT CAUTION:* On engines using cylinder heads identified with the number B8AE-6090-B stamped in ¼" letters on end faces of head, intake and exhaust valves are .032" shorter than valves previously used. On engines identified as above, use only exhaust valves, Part No. COAE-6505-A,B,C,D, and intake valves, Part No. COAE-6507-E,F,G,H.

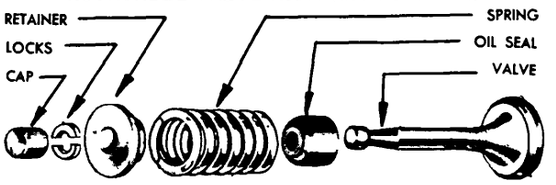
ALL ENGINES

ROTATABLE VALVES: Valves operate directly in valve guide holes in cylinder head. Remove and install as follows:



Valve Removal: Use Tool 6513-EE to compress valve springs. Remove all parts of assembly.

Valve Installation: Lubricate valve guides and stems with engine oil. Apply Lubriplate to valve stem tip. Install all parts in same order as removed, making sure closed coil end of valve spring is toward cylinder head and damper spring, if used, is not caught in valve spring.



V8 TRUCK EXHAUST VALVES (H.D. ENGINE)

FREE TURNING VALVE CAP CLEARANCE CHECK: Clearance between end of valve stem and inside surface of cap with valve locks and spring retainer installed should be .0002-.004" measured with Tool 6513-CE-2. Lap open end of cap if clearance more than .004".

CONTINUED ON NEXT PAGE

ROTATABLE VALVE ASSY. (WITH DAMPER)

FREE-TURNING VALVE ASSY.

CONTINUED FROM PRECEDING PAGE

EXHAUST VALVE SEAT INSERT INSTALLATION: Counterbore the recess in head about .001-.002" below old counterbore depth to clean recess. Clean all chips and oil from recess. Chill new oversize insert and tool in dry ice for ½ hour. Place insert on tool with small radius on outer edge facing outward, pilot tool in guide and drive insert into recess until fully seated. DO NOT peen around insert. Reface insert. *CAUTION - Installation must be made quickly after tool and insert removed from dry ice.*

1954-56 6 CYL. & V8 ENGINES (EXC. 272" ECR HVY. DTY.)

►*EXHAUST VALVE STEM DIAMETER CHANGE FOR INCREASED STEM CLEARANCE (Overhead Valve Eng.):* Exhaust valve stem diameter decreased .0005" for increased stem to guide clearance. New Valve sizes are as follows:

Exhaust Valves

Size	Stem Diameter
Std. (Red)	.3400 - .3405"
Std. (Green)	.3405 - .3410"
.003" (Oversize)	.3430 - .3440"
.015" (Oversize)	.3555 - .3560"
.030" (Oversize)	.3700 - .3710"

1954-60 6 CYL. & V8 MODELS

VALVE STEM CLEARANCE CHECK: Install clearance checking tool (see Note below) on valve stem until seated. Tighten knurled setscrew firmly and let valve fall away until tool contacts upper surface of valve guide. Place dial indicator with flat tip against center part of tool spherical section at 90° to valve stem. Move tool on an axis at right angle to rocker shaft. Divide dial indicator reading by 2 (extension factor of tool) to give valve stem clearance. If clearance excessive, ream guides and install valves with oversize stems.

►*VALVE STEM CLEARANCE TOOL NOTE:* Use clearance Tool S-8680-B (6 Cyl. & Y V8 Engines), S-8680-A or 6505-F (All Other Engines).

OVERSIZE VALVE STEM INSTALLATION: Use special reamer (see Tool Table below) to ream cylinder head valve guides for oversize valve stems. Reamers are furnished in .003", .015", .030" Oversize, with standard .003", and .015" pilots respectively. Use reamers in sequence when reaming from standard to oversize. Regrind valve seats and reface valves after reaming guides.

Reamer Tool No.	Nominal Stem Diam.
6085 or T52L-6085-AEE	.3400"
6085-H or T58P-6085-B	.3700"
T56T-6085-B	.4600"

1954-56 MODELS (EXC. CARS WITH HYDRAULIC LIFTERS)

►*INSTALLATION OF SELF-LOCKING TAPPET ADJUSTING SCREWS IN EARLIER ENGINES (1954-56):* When installing self-locking screws to replace earlier type (with locknut), all parts listed below must be installed as a unit:

1956 Engines – Self-locking Tappet Adjusting Screws Part No. B6A-6549-C AND Valve Rocker Arms Part No. B6A-6564-C.

1954-55 Engines – Self-locking Tappet Adjusting Screws Part No. B6A-6549-C must be used with NEW Valve Rocker Arms Part No. B6A-6564-D and NEW Valve Push Rods Part No. B6A-6565-B.

VALVE TAPPET ADJUSTMENT

6 CYL. & V8 239, 256, 272, 292, 312" ENGINES

INITIAL VALVE LASH ADJUSTMENT (After Overhaul): Check rocker arm adjusting screw for proper setting. Torque required to turn screw after interference noted must be 3 ft. lbs. minimum. Replace adjusting screw or rocker arm if necessary.

6 Cylinder - Adjust intake and exhaust valves of each cylinder in firing order (1-5-3-6-2-4) with piston at TDC of compression stroke.

239,256,272,292,312" V8 - 1) Place No. 1 piston at TDC of compression stroke. Adjust the following valve clearances: No. 1,4,5 Exhaust; No. 1,2,7 Intake.

2) Turn crankshaft ½-turn or 180° (No. 4 piston at TDC) and adjust following valves: No. 6 & 8 Exhaust; No. 4 & 5 Intake.

3) Turn crankshaft ¾-turn or 270° from second position above (No. 3 piston at TDC) and adjust following valves: No. 2, 3, 7 Exhaust; No. 3, 6, 8 Intake.

All Engines - *Make final clearance check, see TUNE-UP on Car or Truck Model Pages.*

332 & 352" ENGINES

INITIAL VALVE LASH ADJUSTMENT (After Overhaul): Check rocker arm adjusting screw for proper setting. Torque required to turn screw after interference felt must be 3 ft. lbs. minimum. Replace adjusting screw or rocker arm if necessary. Chalk mark vibration damper at approximately 90° intervals starting with TDC (4 quarters). Proceed as follows:

1) With No. 1 piston at TDC of compression stroke, adjust following valve clearances: No. 1,4,5 Exhaust, No. 1,7,8 Intake.

2)Rotate crankshaft 180° (No. 4 piston at TDC) and adjust following valve clearances: No. 2, 6 Exhaust, No. 4, 5 Intake.

3) Rotate crankshaft 270° or 3/4 turn from 180° (No. 3 piston on TDC) and adjust following valve clearances: No. 3,7,8 Exhaust, No. 2,3,6 Intake.

HYDRAULIC LIFTERS

1954-60 MODELS

HYDRAULIC VALVE LIFTERS: Lifters are "barrel" type integral units with a flat, disc type check valve.

►*CAUTION:* Observe the following cautions when servicing hydraulic lifters: 1) Lifters must be installed in bores from which they were removed. 2) DO NOT intermix parts of one lifter with parts of any other lifter. 3) Absolute cleanliness must be observed to keep lifters free of lint, dust, or other foreign material.

Removal: Remove rocker arm covers, rocker arm assemblies, pushrods, intake manifold, and pushrod cover (on some models it is necessary to remove distributor to remove pushrod cover). Remove lifters from bores in block.

Disassembly: Immerse all lifters in solvent to remove all varnish and carbon deposits. DO NOT CUT OR SCRAPE CARBON FROM LIFTER. Remove lock ring from top of assembly and remove pushrod seat, plunger, valve disc assembly and spring from body. *CAUTION - Disassemble one lifter at a time to avoid intermixing parts.*

Reassembly: Place plunger upside down, insert disc valve in position over hole in bottom of plunger, add spring on top of disc, then position valve spring retainer over disc and spring and push retainer into place on plunger. Place plunger spring and plunger (open end up) into lifter body and install lock ring.

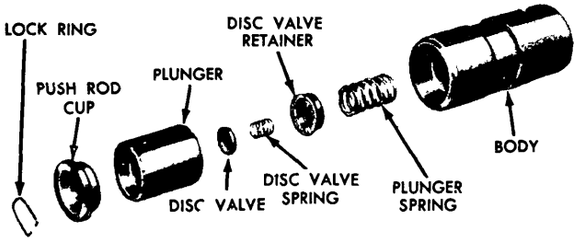
Testing: Use Lifter Tester Tool 6500-E. Place lifter with plunger facing upward in tester, add fluid to bring level above lifter. *CAUTION–DO NOT USE KEROSENE.* Place a 5/16" steel ball in plunger cup and adjust length of ram so pointer is in line with starting line when ram just contacts lifter plunger. Work lifter up and down to fill lifter, then repeat until all air bubbles are removed. Measure time required for weight and ram to move pointer from starting line to stop mark. A lifter is satisfactory when time required is a minimum of 8 seconds or maximum of 45 seconds. *NOTE* - Drain lifter before installation as a dry lifter will fill quicker when engine started. Do not run engine faster than fast idle speed until lifters are completely filled.

1954-57 V8 MODELS

INITIAL VALVE CLEARANCE ADJUSTMENT: To insure valve being on the low side of cam, make all adjustments in the following sequence, and with No. 1 & No. 6 pistons in the indicated position.

No. 1 Piston at TDC (Compression Stroke) - Adjust No. 1 In. & Ex., No. 2 In. & Ex., No. 5 In. & Ex., No. 7 In., No. 4 Ex.

No. 6 Piston at TDC (Compression Stroke) - Adjust No. 6 In. & Ex., No. 3 In. & Ex., No. 7 Ex., No. 8 In. & Ex., No. 4 In.



Adjustment - Turn valve adjusting screw clockwise while moving pushrod up and down until all slack is removed. *CAUTION - Plunger unit of hydraulic lifter should not be forced down into body during this operation.* With all slack removed, turn adjusting screw an additional 2½ turns. Hold adjusting screw, tighten locknut to 30-35 ft. lbs. *NOTE* - If lifter is noisy in

CONTINUED ON NEXT PAGE

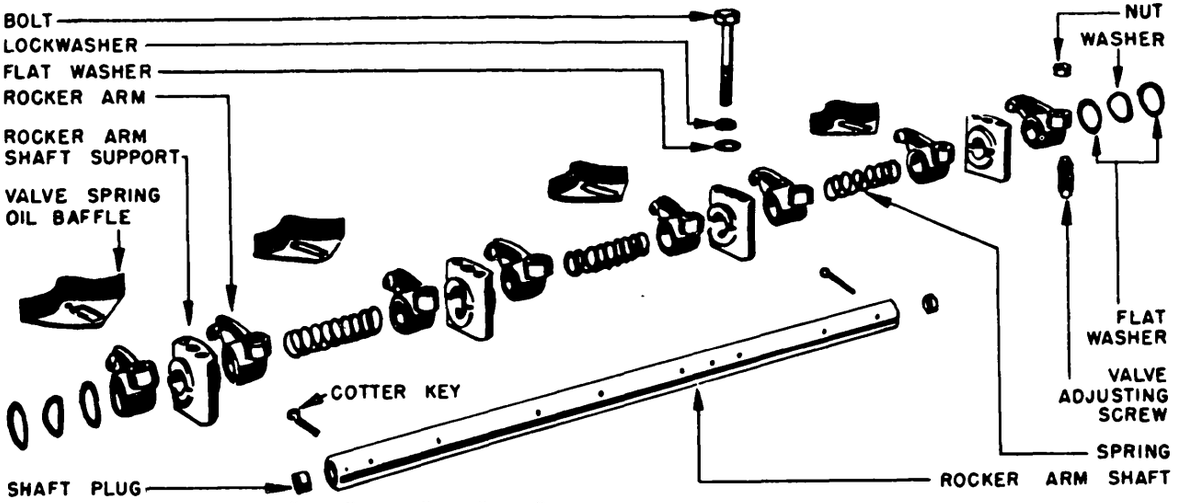
CONTINUED FROM PRECEDING PAGE

operation, adjustment can be varied by turning adjusting screw ±¼ turn from original 2½ turn setting. Repeat operation on all valves.

Later Models - Self-locking adjusting screws used with a tension of 7-15 ft. lbs. Replace rocker arm when tension reduced to 3 ft. lbs. Turn adjusting screw clockwise and proceed the same as for early models.

V8 ENGINE HYDRAULIC VALVE LIFTER

1958-60 V8 MODELS



Hydraulic Lifter Operating Range: Clearances shown in table below are for yearly models as specified. Check clearance, by inserting correct thickness feeler gauge between valve stem and rocker, as follows:

1) Rotate engine to TDC on No. 1 cylinder on compression stroke. Insert the **minimum clearance** thickness feeler gauge, after bleeding down hydraulic lifter on No. 1, 4, 5, 8 exhausts and No. 1, 3, 7 and 8 intakes. When this gauge enters, old pushrod can be used. If this gauge will not enter, install shorter pushrod. If the **maximum clearance** thickness gauge will enter it indicates **A)** A pushrod that is too short, **B)** Excessive wear or poor machining of valve stem, **C)** Camshaft lobe worn below specifications.

2) Rotate engine to TDC on No. 6 cylinder, compression stroke. Check clearance after bleeding down hydraulic lifter in No. 2,3,6,7 exhausts, and No. 2,4,5 and 6 intakes. Follow procedure given in step No. 1.

►*MAXIMUM CLEARANCE NOTE:* Replace all parts found worn or defective in items "B" & "C". If all parts checked are OK, install a longer pushrod.

Model	Operating Range Limits
Edsel (1958)	.062-.1875"
Edsel (1959-60)	.078-.218"
Ford (1958-59)	.062-.1875"
Ford (1960)	.078-.218"
Lincoln (1958)	.062-.1875"
Lincoln (1959-60)	.078-.218"
Mercury (1958-60)	.078-.218"

V8 239", 256", 317.5", 341", 368" ENGINE ROCKER ARM ASSEMBLY

ROCKER ARMS

1954-60 6 CYL. MODELS

ROCKER ARMS: Removal - Remove rocker arm cover, capscrew and bracket from No. 6 rocker arm support, pull inlet line out of support, then pull it out of block with pliers, being careful not to damage line. Remove capscrew from No. 1 rocker arm support, remove oil outlet line and bracket. Loosen all rocker arm adjusting screws to remove valve spring load then remove rocker arm shaft assembly.

Disassembly - Remove cotter pins from each end of rocker arm shaft, remove flat washers and spring washers, slide rocker arms, springs, and supports off shaft. Mark parts for reinstallation. *NOTE* - If necessary to remove plugs from shaft, drill or pierce one end, drive out opposite end with steel rod then drive out pierced plug.

Reassembly - Oil all parts with engine oil. Replace end plugs with blunt tool (cup side out). Install flat washer, spring washer, another flat washer and a cotter pin on one end of shaft then install rocker arms, supports, and springs (see diagram). *NOTE* - Be sure oil holes in shaft are facing downward. Install remaining flat washers with spring washer between them and install cotter pin.

1954-60 V8 MODELS

ROCKER ARMS: Removal - Mechanical Lifters - Remove rocker arm cover, then back off adjusting screws to release spring tension then remove rocker arm assembly.

Hydraulic Lifters - Crank engine to bring No. 1 piston at TDC on compression stroke. Rotate crankshaft dampener an additional 45° (Symbol XX on dampener). Start at No. 4 cylinder and loosen right valve rocker arm shaft support bolts in sequence two turns at a time (start with No. 5 cylinder on left rocker arm shaft support bolts) then remove rocker arm shaft assembly and oil baffle plate

Disassembly – Remove cotter pin from each end of rocker shaft, remove flat washers and spring washers, slide rocker arms, springs and brackets off shaft. *NOTE* - Oil tubes must go in same bracket from which they were removed. Identify parts for correct reassembly. Remove plugs from each end of shaft. *NOTE* - Plugs are interference fit. To remove, drill or pierce plug at one end, then force out other plug with steel rod, then force out first plug.

Reassembly – Oil all parts with engine oil. Drive new plugs in each end of shaft with cup side out, using a blunt tool. Install a flat washer, spring washer, another flat washer, and a cotter pin on end of shaft. Install rocker arms, support brackets, and springs in order shown in diagram. *NOTE* - Oil holes in shaft must face downward. Complete assembly by installing remaining washers with spring washer between them and install cotter key.

►*SPARK PLUG FOULING & EXH. SMOKING CORRECTION (383", 430" ENGINES): Caused by rocker arm shaft* hold-down bolt holes drilled through cylinder head allowing oil to seep into intake chamber. Check by removing rocker arm assemblies, holding carburetor primary throttle and choke plates open and applying air pressure to holes. If air escapes from carburetor throat, holes are drilled through head. Correct by installing new studs to replace bolts. Use long studs, Part No. 371972-S, for oil feed and return holes; short studs, Part No. 371971-S, for other holes.

►*1958 ROCKER SHAFT INSTALLATION (332, 352):* Install shaft with oil feed hole down (toward cylinder head), to insure proper lubrication of rocker arms and adjusting screws.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

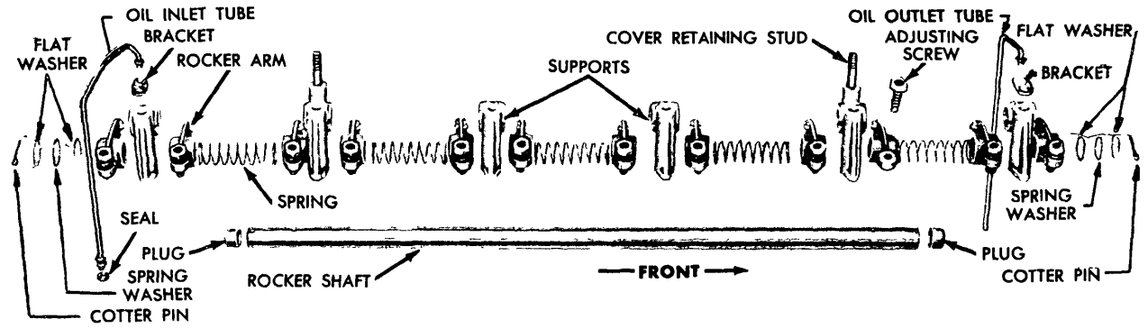
►*1958 ROCKER LUBRICATION CORRECTION (332, 352, with Rocker Arm Adjusting Screws)*: Position of oil groove must match hole in Rocker Arm Shaft and groove must be 1/32" wide and .003-.004" deep. Correct position of groove in old lifter or replace with lifter that has proper groove, in correct position. Groove should run from 10 O'clock position around 180° counterclockwise when rocker arm in held with adjusting screw to left side. Groove must be over lubrication hole in bottom or rocker arm shaft.

►*1954-55 ROCKER ARM COVER & GASKET PRODUCTION CHANGE & INSTALLATION CAUTION:* New rocker arm cover (B5A-6582-A) and cover gasket (B5A-6584-A) are now available for service. New gasket has greater resistance to shrinkage than those previously used. New cover does not have inner retaining flange for gasket. New type rocker arm cover to be used on 1954 "239" and "256" Engines. Gasket can be used on 1954-55 "239" and "256" Engines. To install new gaskets (.040" thicker than old type) on 1954 "239" and "256" Engines with old type gasket, replace studs with new longer studs (ED-354052-S) to compensate for increased gasket thickness. If new studs not available, old studs (354052-S) should be backed out approximately two turns to allow for thread engagement of nuts. New type nuts (354526-S8) which are threaded completely through should be used to prevent bottoming of stud in nut and provide adequate pressure on gasket. Cement gasket to cover. Apply Sealing Compound (8A-19554-B) to gasket, and allow compound to become tacky before positioning gasket to cover.

OILING SYSTEM

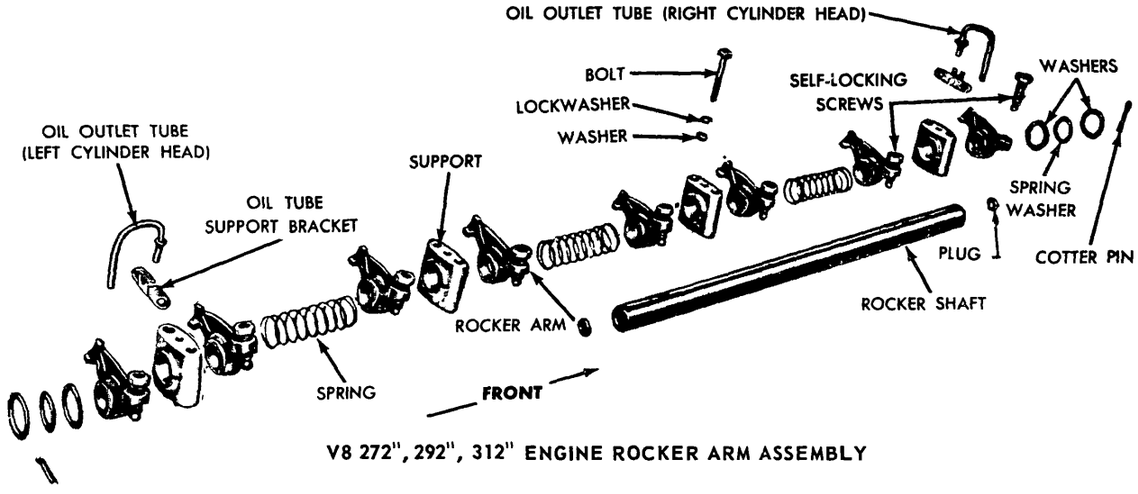
ENGINE LUBRICATION

1954-60 6 CYL. MODELS



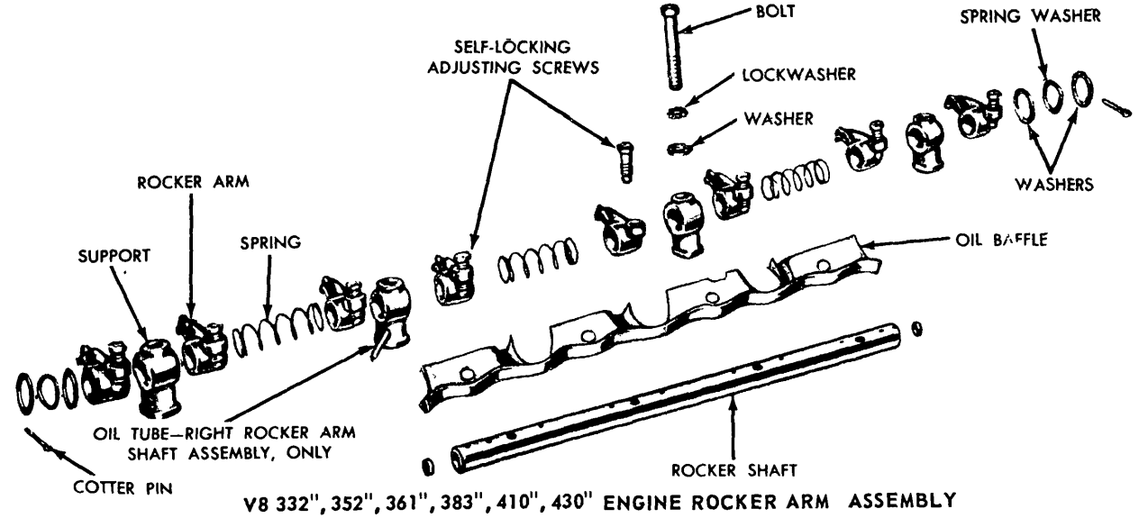
DESCRIPTION: Force feed type with oil supplied under full pressure to all crankshaft, connecting rod, and camshaft bearings. Oil metered by No. 3 camshaft bearing lubricates rocker arms, pushrods, and valve stems. All other parts are lubricated by oil spray or directed oil return flow.

OPERATION: Gear type oil pump mounted in crankcase on right hand side draws oil through fixed oil inlet and strainer mounted on pump cover and delivers all oil through a passage in the pump body and crankcase wall to the oil filter intake port (filter mounted on pad on right side of crankcase). Filter outlet port on filter pad is connected to main oil gallery by a vertical passage and cross-passage in the block. Main oil gallery extends along right side of crankcase and oil is distributed from this gallery as follows:



Crankshaft & Camshaft Bearings - Lubricated by drilled passages in each crankcase web through which oil is supplied from main oil gallery to each crankshaft bearing. A transverse passage connects this passage with each camshaft bearing.

C nnecting R ds - Crankshaft is drilled and each connecting rod bearing is lubricated from adjacent main bearing.



CONTINUED ON NEXT PAGE

6 CYLINDER OVERHEAD VALVE ROCKER ARM ASSEMBLY

V8 272", 292", 312" ENGINE ROCKER ARM ASSEMBLY

V8 332", 352", 361", 383", 410", 430" ENGINE ROCKER ARM ASSEMBLY

CONTINUED FROM PRECEDING PAGE

Pistons & Pins - Lubricated by oil spray thrown on cylinder walls from drilled hole in connecting rod when this hole lines up with connecting rod bearing lubricating hole.

Timing Chain & Sprockets - Lubricated through drilled passage in front end of block which directs oil from front camshaft bearing to crankshaft sprocket (camshaft journal has flat which registers with bearing supply oil hole and timing chain lubrication hole once in each revolution). Oil slinger on front end of crankshaft also throws oil onto chain.

Rocker Arms, Pushrods, & Valves - Drilled passage in No. 3 (rear intermediate) camshaft journal feeds oil at reduced pressure to drilled passage in block. A tube extending up through block and cylinder head directs this oil to the No. 6 (rear) rocker shaft bracket and into the hollow rocker arm shaft. Oil then flows through drilled passages in rocker arm to lubricate rocker arm bushing, pushrod socket and valve tip. Oil drainage from rocker arm drains down pushrods for valve lifter lubrication (below). Excess oil from rocker arm shaft flows through outlet pipe at No. 1 (front) rocker shaft bracket. This pipe terminates at drilled hole in lifter chamber directly above distributor driveshaft for distributor and drive gear lubrication (see below).

Valve Lifter & Fuel Pump Eccentric - Oil drainage from rocker arm flows down pushrods into lifter chamber for valve lifter and pushrod seat lubrication. A drilled hole in the lifter chamber floor directly above fuel pump eccentric on camshaft provides lubrication for the eccentric. A return hole at rear of lifter chamber allows oil to drain back into the crankcase.

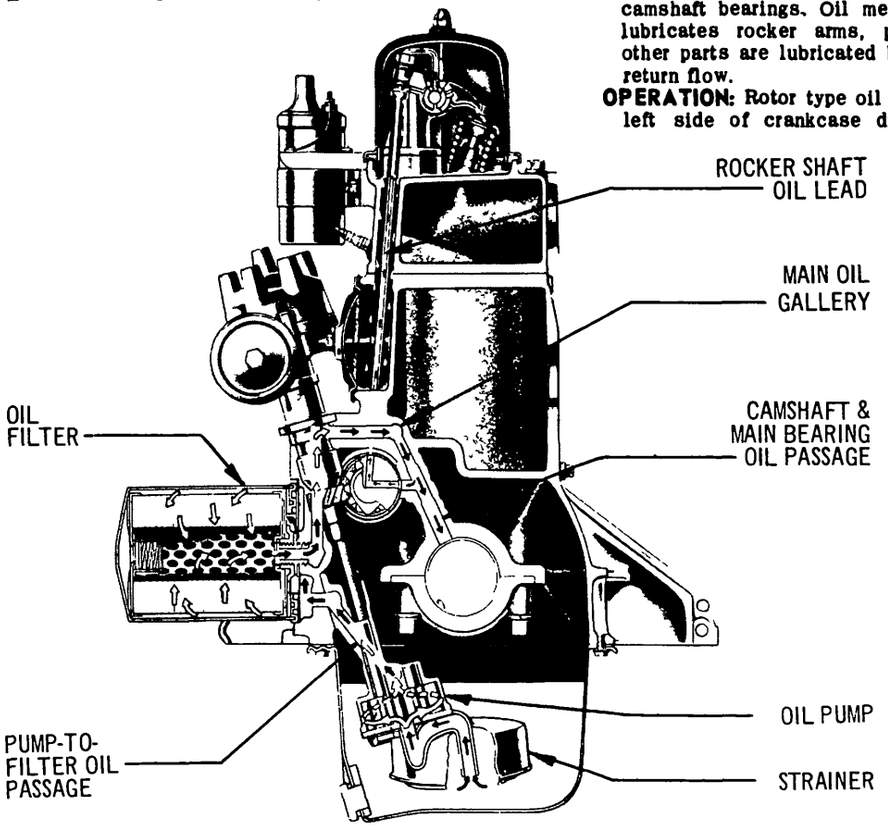
Distributor & Drive Gear - Oil return pipe from rocker arm shaft terminates at drilled hole in lifter chamber. This hole is directly above distributor drive gear on camshaft and gears are lubricated by this return oil. A transverse passage in the block at the oil return pipe location in the lifter chamber directs drain oil to relieved section of distributor housing. Oil holes in housing direct oil to distributor lower bushing and drive gear.

OIL FILTER: Full-flow type mounted on pad on right side of crankcase. Relief valve in filter assures engine lubrication if filter element clogged. An anti-drainback diaphragm in the filter mounting recess traps oil in filter to insure quick oil circulation when engine is started up.

1954-60 239, 256, 272, 292, 312" ENGINES

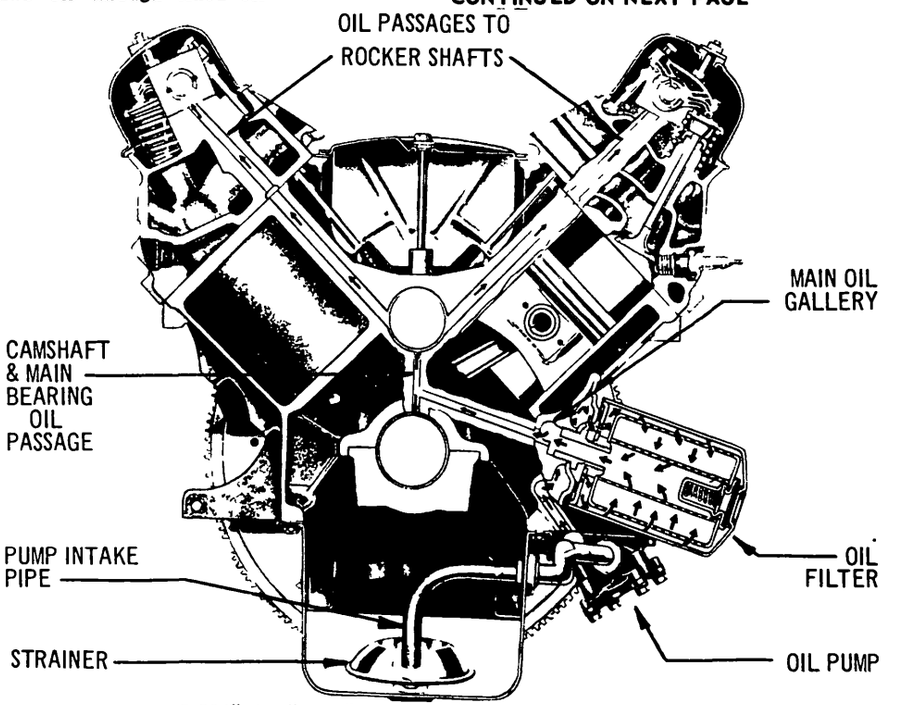
DESCRIPTION: Force feed type with oil supplied under full pressure to all crankshaft, connecting rod, and camshaft bearings. Oil metered by camshaft bearings lubricates rocker arms, pushrods, and valves. All other parts are lubricated by oil spray or directed oil return flow.

OPERATION: Rotor type oil pump mounted externally on left side of crankcase draws oil through fixed oil strainer in oil pan and external oil pipe (passes through or attached to side of oil pan) and delivers all oil through a port in the pump mounting base and passages in crankcase to oil filter intake port (filter mounted on pad on left side of crankcase). Filter outlet port on crankcase connects directly with main oil gallery extending along left side of crankcase. Oil is distributed from this main oil gallery as follows:



Crankshaft & Camshaft Bearings - Lubricated by drilled passage in each crankcase web through which oil is supplied from main oil gallery to intersecting passage leading to corresponding main and camshaft bearings.

Connecting Rod Bearings - Crankshaft is drilled and each connecting rod bearing is lubricated from adjacent main bearing.



Pistons & Pins - Lubricated by oil spray thrown on cylinder walls from drilled hole in side of connecting rod lower end when this hole lines up with oil hole in crankpin.

Rocker Arms, Pushrods & Valves - Drilled passages in block at No. 3 camshaft bearing extend up through block and matching passages in cylinder heads (with offset formed by channel on lower face of head) and oil then flows up through drilled passage in No. 2 rocker shaft support bracket (Right Bank), No. 3 rocker shaft support bracket (Left Bank) to hollow rocker arm shaft. Oil holes in shaft and rocker arm provide lubrication for rocker arm bushing, pushrod ball end and valve tip. Oil drainage from rocker arm drains down pushrods for valve lifter lubrication (below). Excess oil from rocker shaft flows through outlet pipe at No. 1 rocker shaft

CONTINUED ON NEXT PAGE

6 CYL. ENGINE OILING SYSTEM

V8 239", 256", 272", 292", 312" ENGINE OILING SYSTEM

CONTINUED FROM PRECEDING PAGE

bracket (Right Bank), No. 4 rocker shaft bracket (Left Bank) for timing chain and distributor lubrication (see below).

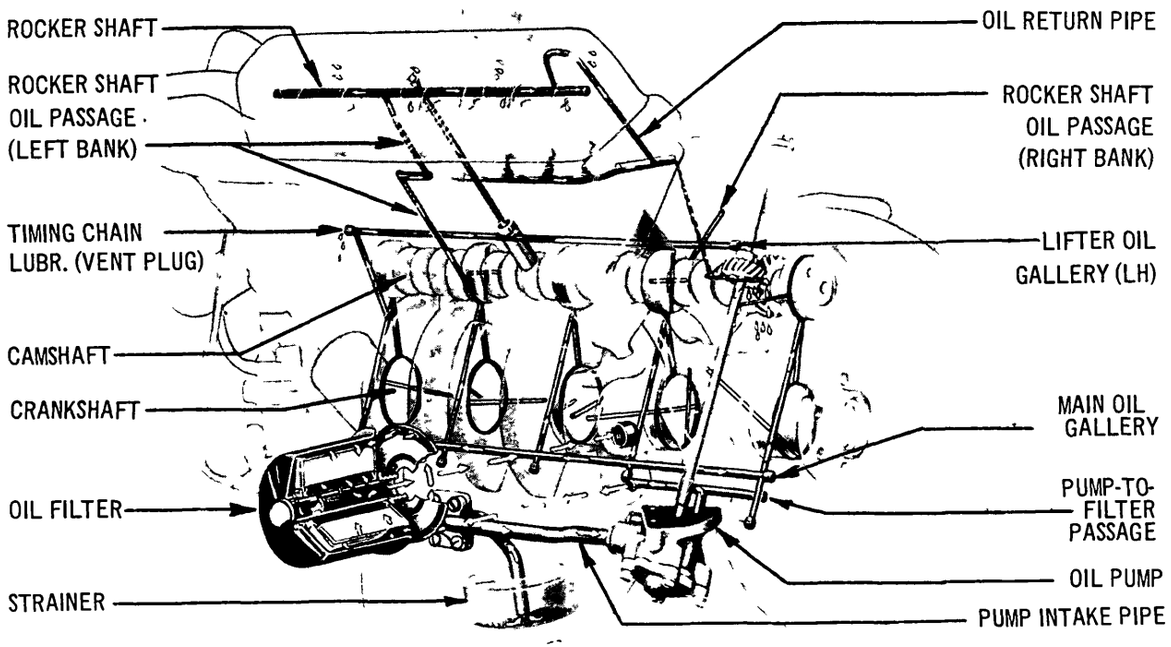
Valve Lifters & Pushrod Seats - Oil drainage from rocker arm flows down pushrods into lifter chamber for valve lifter and pushrod seat lubrication. Oil for this purpose is also supplied by rocker shaft outlet pipes which terminate in lifter chamber. Oil in lifter chamber is returned to oil pan through large opening at rear of chamber. This oil lubricates distributor drive gear.

Distributor, Intermediate Shaft & Bushing - Lubricated by oil supplied through drilled passage from No. 5 camshaft bearing (camshaft journal is drilled and oil flows through this passage from camshaft bearing oil hole to distributor oil passage). *NOTE* - Distributor drive gear is lubricated by oil return from lifter chamber to oil pan through large opening at rear of lifter chamber.

Timing Chain & Sprockets - Oil return from right bank rocker chamber (outlet pipe at No. 1 rocker shaft bracket) is channeled by trough in lifter chamber to hole in front cylinder block wall through which the oil is directed on timing chain and sprockets. Oil slinger on crankshaft (not used on all models) also throws oil on timing chain.

OIL FILTER: Full-flow type mounted on pad on left side of crankcase. Relief valve in filter assures engine lubrication if filter element clogged. An anti-drainback diaphragm in the filter mounting recess traps oil in filter to insure quick oil circulation when the engine is started up.

317.5, 341, 368" LINCOLN ENGINES



DESCRIPTION: Force feed type with oil supplied under full pressure to all crankshaft, connecting rod, and camshaft bearings and to hydraulic valve lifters. Oil metered by camshaft bearings lubricates rocker arms, pushrods, and valves. Other parts are lubricated by oil spray or directed oil return flow.

OPERATION: Gear type oil pump mounted externally on left rear of crankcase draws oil through fixed oil strainer in oil pan and external oil pipe (attached to side of oil pan) and delivers oil through a port in the pump mounting base and passages in crankcase to oil filter intake port (filter mounted on pad on left side of crankcase above oil pump). Filter outlet port on crankcase connects directly with main oil gallery extending along left side of crankcase. At No. 1 main bearing cross-passage, an intersecting passage connects with the left bank hydraulic lifter oil gallery. Right bank hydraulic lifter gallery is fed by a vertical passage from No. 2 main bearing. Oil is distributed from these oil galleries as follows:

Crankshaft & Camshaft Bearings - Lubricated by drilled passage in each crankcase web connecting main oil gallery with a vertical passage to corresponding camshaft and main bearings (these passages join at a point just below camshaft bearing).

Connecting Rod Bearings - Crankshaft is drilled and each connecting rod bearing is lubricated from adjacent main bearing.

Pistons & Pins - Lubricated by oil spray thrown on cylinder walls from drilled hole in connecting rod when this hole lines up with connecting rod bearing oil hole.

LINCOLN V8 317.5", 341", 368" ENGINE OILING SYSTEM

Camshaft Thrust Plunger & Fuel Pump Eccentric - Spring-loaded, hydraulically actuated thrust plug in forward end of camshaft is supplied with oil through drilled passages in camshaft front journal and hub when this passage lines up with camshaft front bearing oil hole. A side passage in the hub provides lubrication for fuel pump eccentric sleeve. *NOTE - Oil bleeding past the plunger and eccentric sleeve lubricates timing chain and sprockets.*

Hydraulic Valve Lifters - Lifter oil galleries intersect lifter bores and lifters are supplied with oil directly from these galleries. A vent plug at forward end of each lifter oil gallery (in timing chain case) allows air to escape so that no air can reach lifters. *NOTE - Oil passing through vent plugs lubricates timing chain and sprockets.*

Rocker Arms, Pushrods & Valves - Drilled passages in block at No. 2 camshaft bearing (for right bank), No. 4 camshaft bearing (for left bank) extend up through block and matching passages in cylinder head (with offset formed by channel in lower face of head). Oil is supplied to these passages by metering passage in camshaft journal (oil flows through passages when camshaft oil holes line up). Oil then flows up through drilled passage in No. 3 rocker shaft bracket (right bank), No. 2 rocker shaft bracket (left bank) and into hollow rocker shaft. Oil holes in shaft and rocker arm provide lubrication for rocker arm bushing, pushrod socket, and valve tip. Excess oil from rocker shafts flows through outlet pipe at No. 1 rocker shaft bracket (right bank), No. 4 rocker shaft bracket (left bank) which direct the oil back to the lifter chamber. Oil in lifter chamber drains back into oil pan through large hole at rear of lifter chamber. This oil lubricates distributor drive gear.

Distributor Intermediate Shaft - Lubricated by oil supplied through drilled passage from No. 5 camshaft bearing (camshaft journal is drilled and oil flows from camshaft bearing oil hole). *NOTE - Distributor drive gear is lubricated by oil return from lifter chamber*

Timing Chain & Sprockets - Oil from camshaft thrust plunger and hydraulic lifter oil gallery vent plugs *(see above)* is collected in trough on engine front plate and directed on timing chain and sprockets

OIL FILTER: Full-flow type mounted on pad on left side of crankcase above oil pump Relief valve in filter assures engine lubrication if filter element clogged.

332, 352, 361" V8 ENGINES

DESCRIPTION: Force feed type with oil supplied under full pressure to all crankshaft, connecting rod, and camshaft bearings, hydraulic valve lifters, and rocker arms. All other parts are lubricated by oil spray or directed oil return flow.

OPERATION: Rotor type oil pump mounted in crankcase draws oil through fixed intake pipe and oil strainer mounted on pump body and delivers oil through passage in crankcase to oil filter inlet port on filter mounting pad. From the filter, oil flows through transverse passages in the front wall of the cylinder block to forward end of main oil gallery which extends the entire length of the crankcase in the floor of the lifter chamber. At a point near the rear of the engine, cross-passages

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

connect the main gallery with the right and left valve lifter galleries which extend along the length of the crankcase in line with the valve lifters. Oil is distributed through these galleries as follows:

Crankshaft & Camshaft B arings - Front camshaft and crankshaft bearings are lubricated directly from the oil filter outlet passage (vertical passage in front cylinder wall between bearings intersects the filter cross-passage). **Oth r** camshaft and crankshaft bearings are lubricated through vertical passage in crankcase web at each bearing which extends down from main oil gallery to corresponding camshaft and crankshaft bearings (camshaft bearing bore in block is grooved to permit oil flow around bearing and on to the crankshaft bearing).

Connecting Rod B arings - Crankshaft is drilled and each connecting rod bearing is lubricated through passage from adjacent main bearing.

Pistons & Pins - Lubricated by oil spray thrown on cylinder wall by connecting rod of the same cylinder in opposite bank. Spray hole consists of a slot in parting face of rod bearing cap through which oil is sprayed when this slot lines up with oil hole in crankpin. *NOTE - Rods must be installed with this slot upward toward camshaft to ff ct this cross-lubrication.*

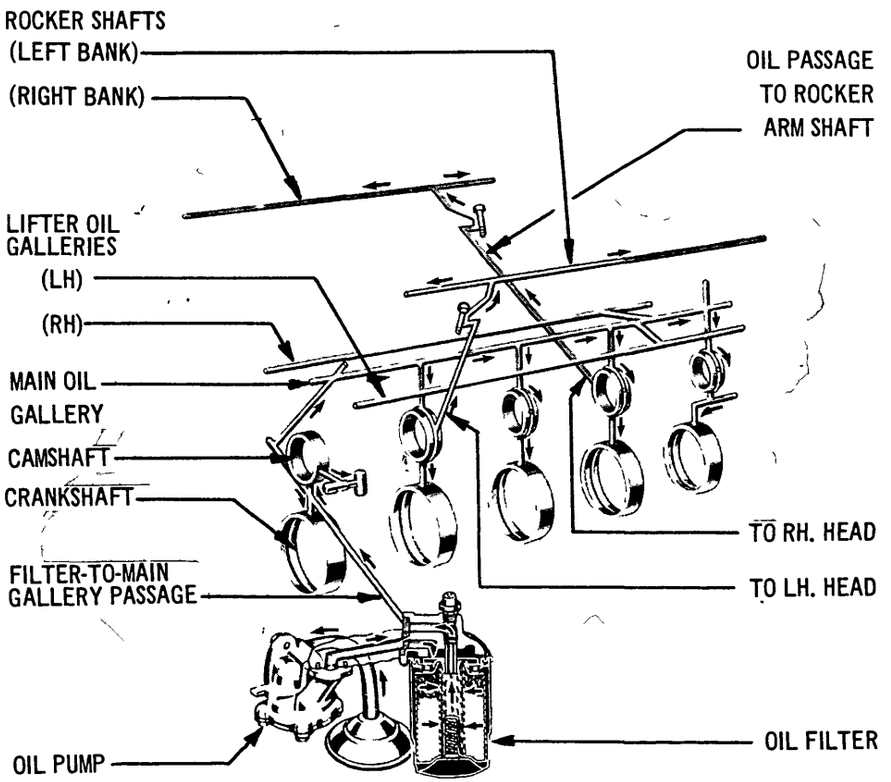
Valv Lift rs - Right and left lifter oil galleries intersect lifter bores and lifters are supplied with oil directly from these galleries.

Rocker Arms, Pushrods & Valves - Drilled passages in block at No. 2 camshaft bearing (left bank), No. 4 camshaft bearing (right bank) extends up through block and matching passages in cylinder head (passage in head is around one cylinder head bolt with offset channel in lower face of head to connect this bolt hole with passage in block). An angle passage in the head connects cylinder head bolt hole with rocker shaft support bolt hole (No. 2 support bracket for left bank , No. 3 bracket for right bank). Oil then flows up around bracket bolt and through an angle passage into the hollow rocker arm shaft. Oil holes in shaft and arm provide lubrication for rocker arm bushings, pushrod ends and valve tips (baffle under rocker shaft assembly shields valve stems from oil splash). Oil drainage down pushrods lubricates pushrod seat in lifter. Excess oil in rocker chamber is returned to oil pan through drain holes at each end of cylinder head and in lifter chamber.

Timing Chain & Sprockets - Plug at forward end of main oil gallery has vent hole and jiggle pin to vent air trapped in gallery. Oil passing through this vent lubricates timing chain and sprockets.

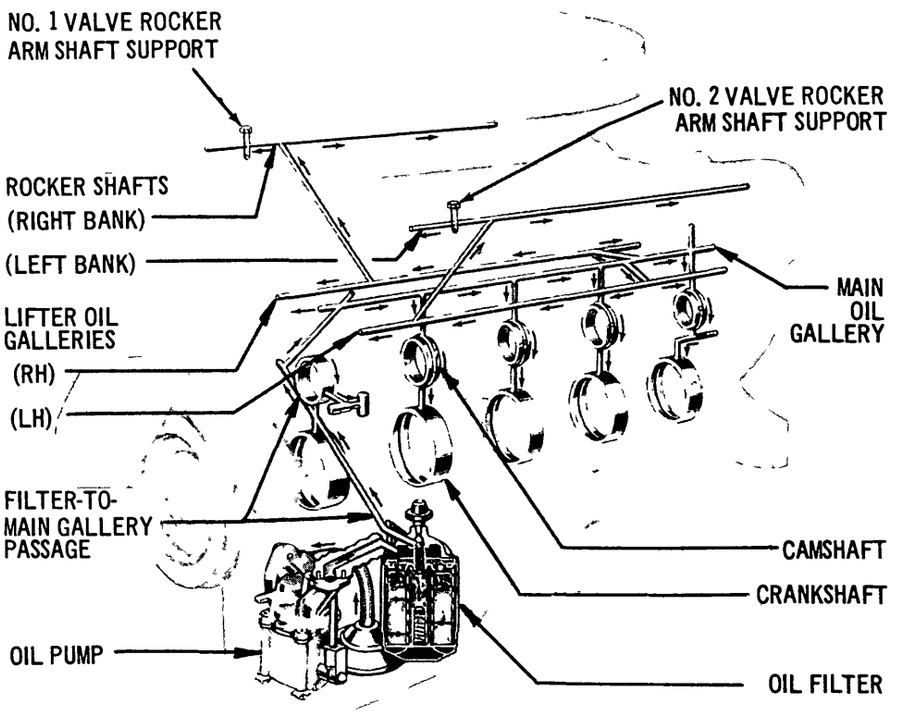
Distributor & Driv G ar - Lubricated through cross-passage from No. 1 camshaft bearing (see illustration).

OIL FILTER: Full flow type mounted on adapter at right front of crankcase. Relief valve in filter assures engine lubrication if filter element clogged.



383, 410, 430" V8 ENGINES

DESCRIPTION: *Oiling system for these engines is same as for the V8 332", 352" & 361" Engines (see above) except for the following details:*



Crankshaft & Camshaft Bearings - All bearings are lubricated through vertical passages from main oil gallery (oil flow from filter is direct to main oil gallery).

Rocker Arms, Pushrods, & Valves - Drilled passages in block lead from right and left lifter oil galleries and connect with matching passages in cylinder head (passage in head is around one cylinder head bolt with offset channel in lower face of head to connect passage in block with this bolt hole). An angle passage in the head connects the cylinder head bolt with the rocker shaft support bracket hole (No. 1 support bracket for right bank, No. 2 bracket for left bank). Oil then flows up around bracket bolt and through angle passage in bracket into hollow rocker arm shaft. Oil holes in shaft and arm provide lubrication for rocker arm bush-

CONTINUED ON NEXT PAGE

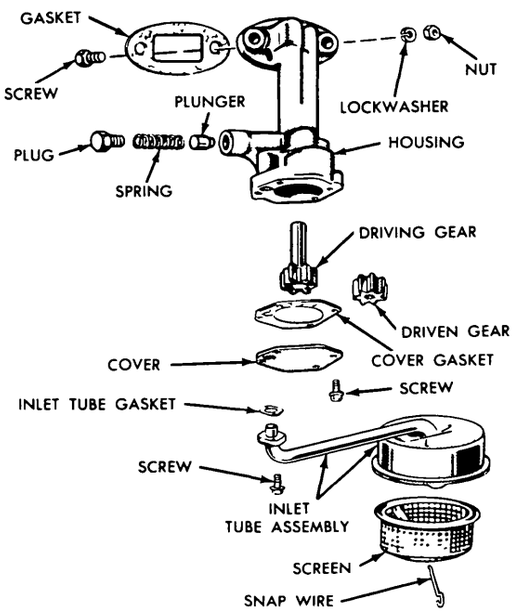
V8 332", 352", 361" ENGINE OILING SYSTEM

V8 383", 410", 430" ENGINE OILING SYSTEM

CONTINUED FROM PRECEDING PAGE

ings, pushrod ends and valve tips. Oil drainage down pushrods lubricates pushrod seat in lifter. Excess oil in rocker chamber drains back into lifter chamber through holes at front and rear lower corners of head.

Timing Chain & Sprockets - Oil draining from front camshaft bearing flows onto thrust face of camshaft sprocket and is sprayed on timing chain and crankshaft sprocket.



OIL FILTER
1957 MODELS

Disposable Filter Original Installation - Remove and discard original filter. Install Gasket EAA-6838-A (coat gasket with light grease) and Adapter ECG-66391-A; in adapter recess in cylinder block (mark Top on adapter must be upward) install Oil Filter Mounting Bolt Insert No. ECG-6890-A and tighten insert to 50-75 ft. lbs. torque. *(CAUTION* - DO NOT allow adapter to rotate). Install Disposable Filter Assembly MHK-6714-A as follows:

Disposable Filter Replacement - Coat gasket face of filter with oil thread filter on insert by hand until gasket contacts adapter face, then tighten filter an additional one-half turn *(CAUTION* - DO NOT overtighten). Run engine and check for leaks.

OIL PUMP
1954-60 6 CYL. MODELS

►*1954-59 6 CYL. ENGINE SERVICE REPLACEMENT OIL PUMP AND OIL PUMP RELIEF VALVE NOTE:* To correct relief valve sticking, install new relief valve, Part No. B9AE-6674-D, or new pump assemblies, Part No. B4AE-6621-B (1954), B9AE-6621-C (1955-59).

6 CYL. ENGINE OIL PUMP

NOTE - Do not use the old type relief valve, Part No. EAA-6663-D, in the later type pumps.

OIL PUMP: Gear type oil pump mounted in crankcase in line with distributor. Pump driven by means of a hex driven shaft. Shaft pinned in end of distributor drive shaft by a roll pin, and other end seats in end of oil pump drive shaft. Pressure relief valve is incorporated in oil pump housing.

Removal: Remove distributor, oil level indicator, and oil pan. Remove two nuts and lockwashers retaining pump to cylinder block. Remove pump and gasket.

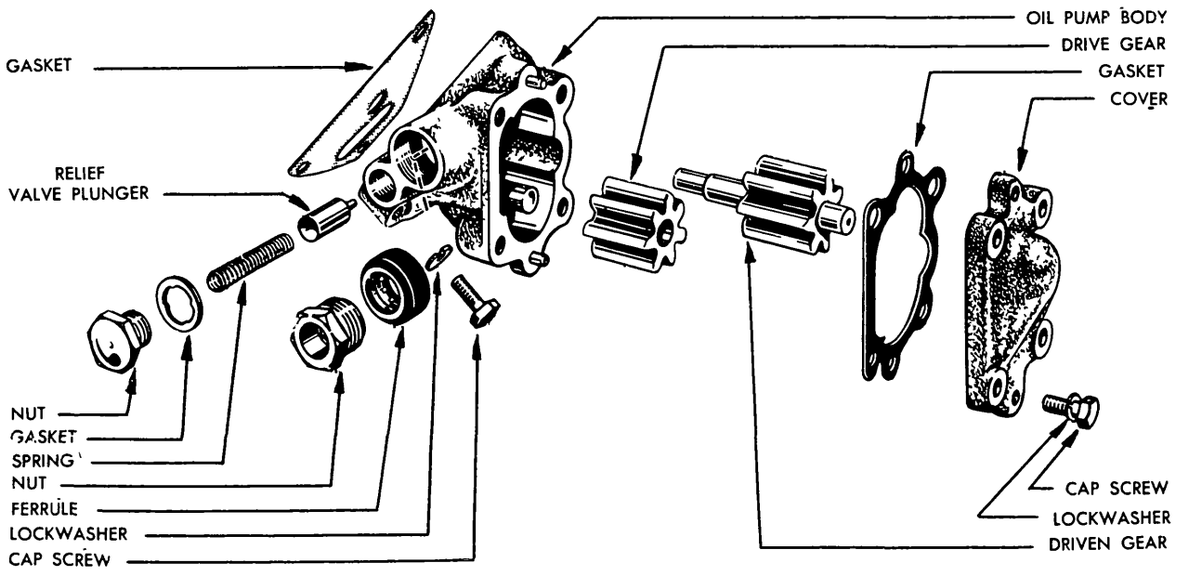
Disassembly: Remove oil pump cover, inlet tube assemblies and gasket then remove snap ring wire retaining screen in inlet tube assembly and remove screen. Push oil pump drive shaft and drive gear assembly from housing and remove driven gear. Remove oil pressure relief valve chamber plug, spring and plunger.

Inspection: Wash all parts in solvent and dry them thoroughly. Use a brush to clean inside of pump housing and pressure relief bore. Be sure all dirt and chips are removed. Remove all old gasket material from pump body and cover. Check pump gear teeth for wear or damage. Relief valve spring tension should be 9.76-9.84 lbs. when compressed to a length of 1.56". Gear end clearance should be .003-.006" (pump assembled). Driven gear to shaft clearance should be .001-.002". Gear to housing radial clearance should be .0015-.006". Replace worn parts when clearance excessive.

Reassembly: Apply engine oil to all moving parts. Install relief valve plunger, spring, and plug and tighten to 33-38 ft. lbs. Slide drive gear and shaft assembly into housing. Install driven gear. Apply sealer to both sides of gasket. Install gasket and cover with screws loose. Secure screen in place with retainer and install inlet tube gasket and inlet tube assembly on pump cover. Now tighten cover retaining screws to 12-15 ft. lbs., and check pump for free rotation.

Installation: Place new gasket on retaining bolts, slide pump mounting flange over retaining bolts, install lockwashers and nuts. Install oil pan, fill crankcase. Run engine and check oil pump pressure.

1954-56 V8 MODELS



OIL PUMP: Gear type pump mounted on left hand side of crankcase and driven by intermediate shaft from distributor shaft. Pressure relief valve in oil pump housing

Removal: Remove oil pump inlet pipe (NOTE—Early type inlet pipes were connected to oil pan with a flange connector. Later type pipes are one-piece, and are part of oil pump screen cover assembly and should be disconnected at oil pump). Remove capscrews and lockwashers securing pump to engine block. Remove pump and gasket, and the intermediate shaft (if shaft comes out with pump).

Disassembly: Remove capscrews retaining pump cover to body and remove cover plate and gasket. Do not tap pump drive shaft to drive cover off pump. Remove oil pump gear and shaft assembly and oil pump idler gear. Remove oil pressure relief valve plug, gasket, spring and plunger.

Inspection: Check oil pump housing for cracks or excessive wear. Pump shaft should have free running fit without excessive play in pump housing (clearance is .0001-.0024"). Check pump gear teeth for scratches and wear. Check compression of relief

V8 239", 256", 317.5", 341", 368" ENGINE OIL PUMP

CONTINUED FROM PRECEDING PAGE

valve spring which should be 10 82-10.90 lbs. at 1.40". Replace any worn or defective parts.

Reassembly: Oil all parts thoroughly. Install oil pressure relief valve plunger, spring, cover plug, and gasket. Install idler gear and oil pump gear and shaft assembly. Install cover plate with new gasket, and tighten cover plate screws to 12-15 ft. lbs. torque. Check pump shaft endplay with a dial indicator which should be 0015- 0055".

Installation: Reverse removal procedure using a new gasket between pump mounting flange and engine.

1956-60 V8 MODELS
V8 272, 292, 312, 332, 352, 361" ENGINES

►*272, 292, 312" ENGINE OIL PUMP INTERMEDIATE SHAFT INSTALLATION CAUTION:* To prevent intermediate shaft from becoming disengaged when distributor is removed, position retaining washer on intermediate shaft so it is 1.40" from blunt end of shaft. Retaining washer can be tightened on shaft by laying washer on a flat surface and bending the internal prongs slightly with a hammer.

►*OIL PUMP GASKET INSTALLATION CAUTION:* DO NOT USE gear type oil pump gasket on rotor type oil pump. Use only Gasket No. B6Q-6659-A on V8 rotor type oil pumps.

►*OIL PUMP PRODUCTION CHANGE (272,292,312" ENGINES):* New oil pump B9TE-6600-A with cast iron cover (to reduce galling) and with revised relief valve spring (to standardize pressures to 45-65 lbs.), released for service for 1955-59 models.

►*OIL PUMP PRODUCTION CHANGE (332,352,361"ENG.):* New cast iron cover plate, Part No. B8A-6616-C, used to prevent galling or scoring by inner rotor. Use new plate for service replacement. New oil pump, Part No. B8A-6600-B, with new cover plate used on later cars.

OIL PUMP: Rotor type. Mounted externally on left rear outside of crankcase (Exc. 332, 352, 361"), at front inside crankcase (332,352, 361"), driven by distributor intermediate drive shaft. Oil pressure relief valve installed in pump body, not adjustable.

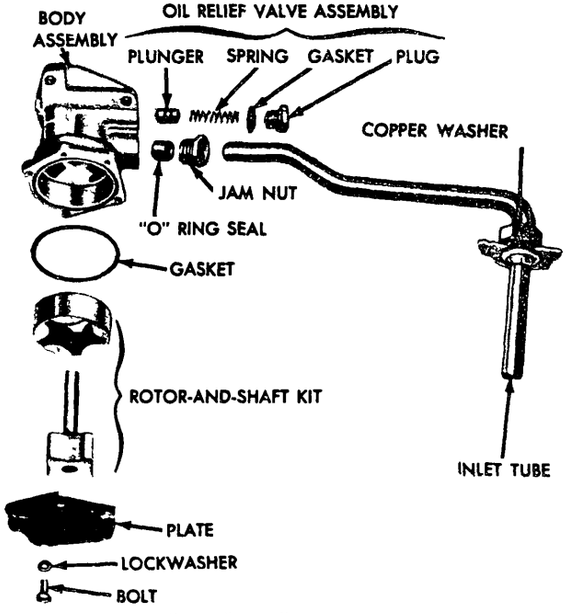
Removal: (Exc. 332, 352, 361") - Disconnect oil inlet tube at pump and remove "O" ring seal. Loosen tube at pan. Remove pump-to-block retaining screws, remove pump, intermediate drive shaft and gasket.

(332, 352, 361") - Remove oil pan (see car pages), then remove oil pump retaining bolts and remove oil pump and inlet tube as an assembly. Remove oil pump drive shaft.

Disassembly: (Exc. 332, 352, 361") - Remove cover screws, cover and "O" ring assembly. Remove inner rotor and shaft, then remove outer race Remove oil pressure relief valve chamber plug, gasket, spring and plunger.

(332, 352, 361") - Remove oil inlet tube from pump, remove gasket Remove cover screws and cover. Remove inner rotor and shaft assembly then remove outer race. Use threaded sheet metal screw to remove oil pressure relief valve chamber cap, then remove spring and plunger

Inspection: Wash all parts in solvent and dry thoroughly. Use brush to clean inside of pump housing and pressure relief chamber. Be sure all dirt and chips are removed. Check inside of pump housing and outer race and rotor for excessive wear or damage. Check mating surface of cover for wear. If worn, scored or grooved, replace cover. Check clearance between cover and rotor and outer race with straightedge across housing (.0015-.003" for 332,352,361", .001-.0035" for others). Relief valve spring tension should be as shown in table below. Outer race, shaft and rotor are replaceable only as an assembly.



Relief Valve Spring Tension

Model	Lbs. Pressure
1957-58 272, 292, 312 Pass Cars	9.2-10.4 at 0.80"
1958 332, 352 Pass. Cars	8.6-9.5 at 1.078"
1957-58 272 Truck	10.86 at 1.40"
1958 292 Truck	9-2-10.4 at 0.80"
1958-59 383 & 430"	8.6-9.5 at 1.078"
1959-60 292"	8.7-9.9 at 1.71"
1959 332 & 352"	8.6-9.5 at 1.078"
1960 352"	9.0-9.6 at 1.53"

Assembly: Lubricate all parts with engine oil. Install relief valve plunger, spring, and plug with new gasket. Install outer race and inner rotor and shaft assembly. On 332 & 352 pumps, install cover and tighten screws to 6-9 ft. lbs. then position new gasket and oil inlet tube on oil pump and install upper bolt loosely. Do not install bottom bolt at this time. On all other pumps, install "O" ring seal in groove in pump body and install cover and tighten screws to 12-15 ft. lbs.

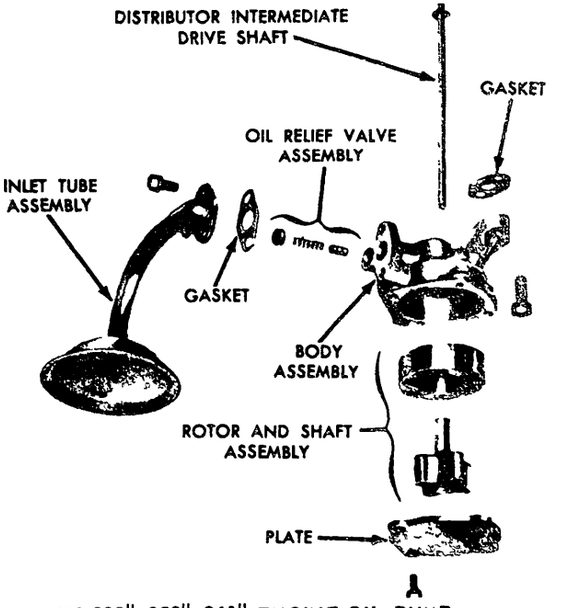
Installation: (Exc. 332, 352) - Install "O" ring seal on oil pump end of oil inlet pipe and then install tube and seal in pump. Insert intermediate shaft into oil pump drive shaft. Position new gasket on pump housing and install pump and shaft as an assembly. *CAUTION - Do not force pump into position but rotate intermediate shaft to new position.* Tighten retaining screws

Installation: (332, 352) - Insert oil pump drive shaft into oil pump. Position new gasket on pump housing and install pump and shaft assembly. *CAUTION - Do not force pump into position but rotate drive shaft to new position.* Tighten oil pump mounting screws to specifications and swing inlet oil pipe so it will clear oil pan. Position new gasket on oil pan, place oil pan assembly on frame crossmember then position oil pump inlet tube in place and install lower bolt and tighten upper bolt.

V8 272", 292", 312" ENGINE OIL PUMP

1958-60 V8 MODELS
(383,410,430" ENGINES)
ROTOR TYPE OIL & VANE TYPE VACUUM PUMP

►*1958-60 383" & 430" ENGINES OIL PUMP PRESSURE RELIEF VALVE AND SPRING PRODUCTION CHANGE & SERVICE REPLACEMENT NOTE:* In the event of low oil pressure and worn bearings (cars operated at high speed), inspect relief valve plug (in area that contacts relief valve spring) for excessive wear. If worn, replace with plug Part No. COAE-6A616-A and spring, Part No. COME-6670-A.



Removal: Remove oil pan, then remove oil inlet pipe and screen assembly and gasket. On oil-vacuum equipped cars, disconnect vacuum inlet line at fitting on cylinder block. Remove oil pump or oil-vacuum pump assembly, gasket, and distributor intermediate shaft from cylinder block.

Disassembly: Oil Pump Assembly - 1) Remove cover to oil pump screws and washers and remove cover.

2) Remove outer rotor and rotor-shaft assembly from oil pump housing.

3) Remove relief valve plug (use self tapping screw in plug oil relief hole and pry plug from opening). Remove spring and relief valve from housing.

CONTINUED ON NEXT PAGE

V8 332", 352", 361" ENGINE OIL PUMP

CONTINUED FROM PRECEDING PAGE

Disassembly: Oil-Vacuum Pump Assembly - 1) Disconnect vacuum inlet pipe from vacuum pump body, then remove vacuum pump assembly-to-oil pump screws and two locking plates.

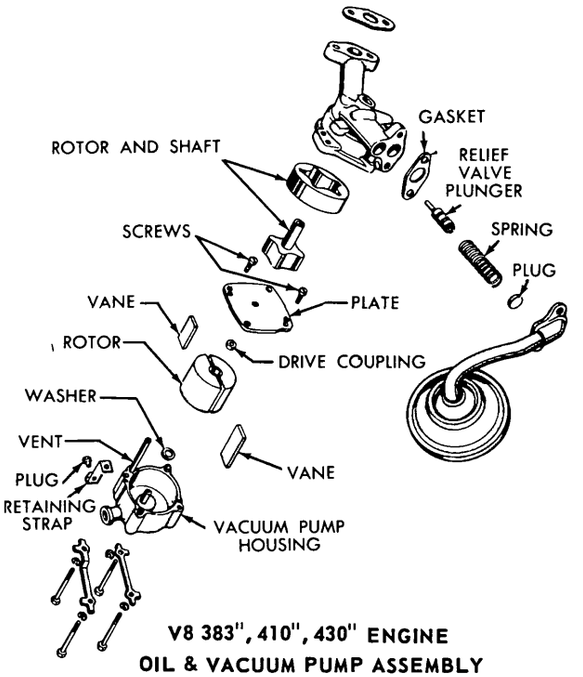
2) Scribe mark on cover plate and vacuum pump. Remove vacuum-oil pump cover plate, eccentric rotor, and vanes as an assembly. DO NOT drop vanes or lose springs or pins.

3) Proceed as in items 1 and 2 in "Oil Pump Assembly"

Cleaning & Inspection: Oil Pump or Oil & Vacuum Pump - Wash all parts in cleaning solvent. Use brush to clean all dirt and foreign material from pump housing, pressure relief valve chamber and vacuum pump housing. Check all parts for excessive wear or damage. *NOTE - Outer rotor and rotor-shaft are replaced as a unit.* If cover mating surface worn, scored, or grooved, it should be replaced. Replace vacuum pump unit if cover is damaged. Relief valve spring tension should be 8.6-9.5 lbs. when compressed to 1.078" (1958-59), 9.0-9.6 lbs. when compressed to 1.53" (1960). Relief valve clearance should be .0015-.0029" and valve should be a snug fit in bore without bind. Oil pump outer rotor to housing clearance should be .004-.011". Clearance between pump body and rotors (when assembled in housing) should be .0015-.003". Rotor shaft to housing clearance should be .0015-.0029" (difference between shaft diameter and bore in housing). *NOTE* - When clearances between housing and rotors are not within specifications, replace outer rotor and rotor-shaft, oil pump housing, or replace oil pump assembly. Check vacuum pump parts for scores, wear, or damage. Replace vacuum pump unit if parts damaged. Replace intermediate shaft if broken, bent, or worn excessively.

Assembly: Oil Pump - 1) Install relief valve, spring and plug. Press plug inward until seated, then stake in place.

2) Install outer rotor and rotor-shaft assembly in housing, then install plate with four lockwashers and screws.



Assembly: Oil-Vacuum Pump Assembly - 1) Install relief valve, spring and plug. Press plug inward until seated, then stake it in place.

2) Install rotor and rotor-shaft in housing, insert spring and guide pin in rotor of vacuum pump, then slide two vanes in rotor slots. *NOTE* - Guide pins must engage hole in each vane.

3) Compress vanes in rotor and insert assembly in housing with drive lug seat toward open end of vacuum housing.

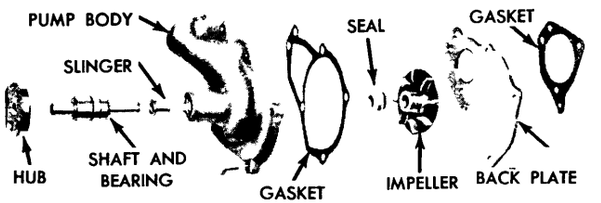
4) Position drive lug in vacuum pump rotor, add cover plate on vacuum pump housing (oil groove facing upward) over dowels and install screws. Install vacuum pump to oil pump with four screws and two lock plates. Connect, but do not tighten, inlet tube to vacuum pump housing.

►*OIL PUMP & OIL-VACUUM PUMP PARTS REPLACEMENT CAUTION:* Due to differences in parts (except housing, relief valve, spring and plug), the two oil pump applications are not interchangeable.

V8 383", 410", 430" ENGINE
OIL & VACUUM PUMP ASSEMBLY

Installation: All Pumps - Install distributor intermediate shaft in oil pump rotor-shaft. *NOTE* - Use proper length shaft (oil pump or oil-vacuum pump) and insert in position in distributor shaft hex bore with internal toothed lockwasher in place on upper end (to hold shaft in position when distributor removed), then secure pump to cylinder block. *CAUTION - Be sure gasket is properly installed.* With OIL-VACUUM pump, connect vacuum pump inlet fittings. Place oil inlet pipe gasket on oil pump housing (use sealer on gasket). Loosely install oil inlet pipe and screen assembly on oil pump with upper mounting screw.

COOLING SYSTEM



WATER PUMP

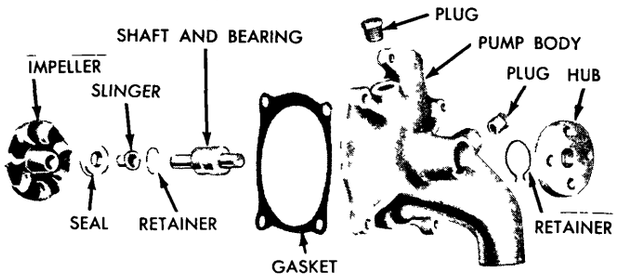
(6 CYL. PASS. CARS & TRUCKS)

TYPE: Packless type with double row ball bearing shaft.

OVERHAUL: Disassembly - Press shaft out of hub (1954-57), pull hub off shaft with Tool 7675-N (1958-60), remove snap ring retaining bearing in housing. Press shaft out of impeller and pump body with Tool T52L-8501-DAD and drift smaller than shaft in diammeter. Press out pump seal with Tool T52L-8501-DAD (1954-56), and Detail 19 (1957-60).

Reassembly - Clean off any gasket material on mounting surface of pump. Install new seal in pump housing with Tool T52L-8501-DD-17 (1954-55), T52L-8501-DAD (1956) and Detail 16 & 18 (1957-60). Install water slinger on bearing and shaft assembly with Tool T52-8501-DAD and Detail 18 so flanged end of slinger is 1.94" from end of shaft. Replace impeller if worn or damaged. Coat seal rubbing surface of impeller lightly with grease. Press shaft into impeller. *CAUTION - Press shaft into impeller just far enough so pump housing lightly touches face of insert ring. If excessive pressure exerted on shaft after rear face of housing contacts ring, pump bearing will be damaged.* Impeller to pump body clearance should be .020-.030" after pressing on impeller. Tighten setscrew in bottom of fixture plate until screw touches end of shaft. Do not lift pump body off fixture plate. Install snap ring in housing. Press water pump hub on shaft until dimension from inner face of hub to machined surface of pump housing is 4.24" (1954-57), 4.520" (1958-60).

6 CYL. ENGINE WATER PUMP



V8 MODELS
(239, 256, 272, 292, 312" ENGINES)

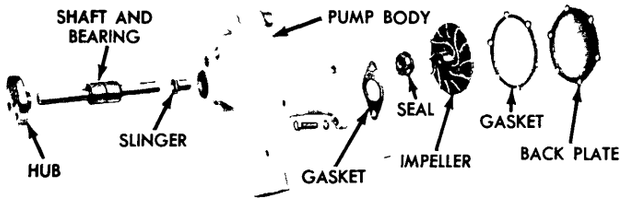
DESCRIPTION: Pre-packed, double row ball bearing type requiring no additional lubrication. Shaft and bearing assembly held in position with snap rings at front and inside housing. Seal is a unit containing graphite seal washer and neoprene shaft seal and spring. Seal assembly must be replaced each time pump is disassembled. A slinger is also provided to protect bearing assembly.

OVERHAUL: Disassembly - Remove hub from impeller shaft. Remove snap ring from front of housing and press shaft out of the impeller and pump body with Tool T52L-8501-DAD and drift smaller in diameter than shaft. Press out pump seal with Tool T52L-8501-DAD and Detail 19. If slinger is damaged, mark its position on shaft then remove slinger. Remove snap ring from housing bore.

Assembly - Remove gasket material from mounting surface and install a new snap ring in bore of housing. Install new slinger on shaft (use locating marks on old shaft for location on new shaft). Apply a light film of water proof sealer on new seal and press seal into

CONTINUED ON NEXT PAGE

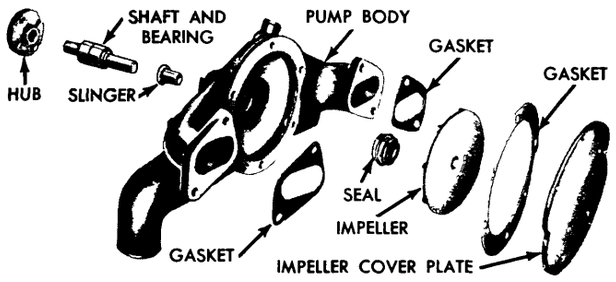
V8 239", 256", 272", 292", 312" ENGINE WATER PUMP



CONTINUED FROM PRECEDING PAGE

housing. Coat outer diameter of bearing with grease and press shaft and bearing into housing from front end (*CAUTION* - Press on bearing outer race only) until bearing just touches inner snap ring, then install front snap ring. Replace impeller if worn or damaged. Coat rubbing surface of impeller with grease and press on shaft until distance from outer surface of impeller to machined surface of housing is .030-.040". Use straightedge and feeler gauge to check clearance. Press hub on shaft until distance from front surface of hub to rear machined surface of housing is 4.480".

V8 MODELS (332, 352, 361" ENGINES)



DESCRIPTION: Pre-packed double row ball bearing type requiring no additional lubrication. Seal assembly is a unit containing graphite seal washer and neoprene shaft seal and spring (seal assembly must be replaced each time pump is disassembled). A slinger is also provided to protect the bearing assembly.

OVERHAUL: Disassembly - Remove back plate and gasket, then use suitable puller to remove hub from shaft. Position pump on an arbor press to press shaft off the impeller and out of housing. Press seal out of housing.

V8 332", 352", 361" ENGINE WATER PUMP

Assembly - Remove all gasket material from mounting surfaces of pump and cylinder block. Install new slinger on new bearing and shaft assembly in same relative position as on old shaft. Apply a light film of water proof sealer on new seal and press seal into housing. Coat outer diameter of bearing with grease and press shaft and bearing into housing, pressing on outer race of bearing only, until outer face of bearing is flush with outer face of housing. Coat seal rubbing surface of impeller lightly with grease and press it on shaft until clearance between flat surface of impeller to machined surface of housing is .080-.090" (Use straightedge and feeler gauge). Place hub over shaft and support impeller end of assembly so pressure is against the shaft and press hub on shaft until distance from front face of hub to machined mounting surface of housing is 8.650".

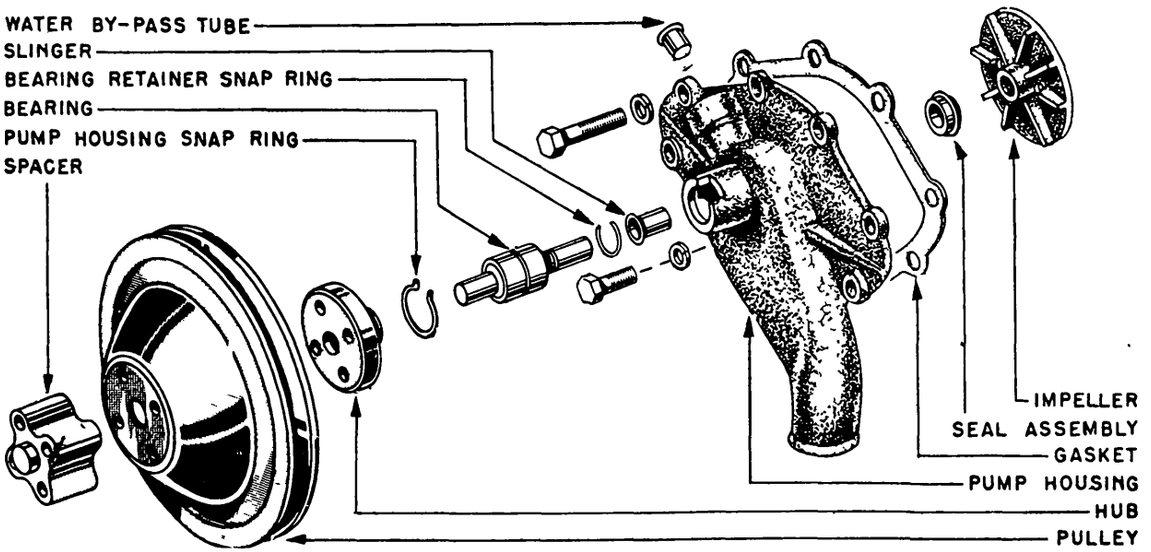
V8 383", 410", 430" ENGINE WATER PUMP

V8 MODELS (383, 410, 430" ENGINES)

DESCRIPTION: Pre-packed, double row ball bearing type requiring no additional lubrication. Seal is a unit containing a graphite seal washer and a neoprene shaft seal and spring. Seal is serviced as an assembly and must be replaced each time pump is disassembled.

Disassembly - Remove back cover and gasket and pulley hub. Place pump (impeller side down) on arbor press. Use Tool 8530 (1½" diameter bearing), 8501-F6M (1 3/16" diameter bearing) over shaft and against bearing to press shaft and bearing assembly, seal, and impeller from pump as a unit.

Assembly - *NOTE - Use new gaskets, seal, shaft and bearing assembly.* Use recessed end of Tool 8501-18 over seal to press seal onto seat. Support pump on arbor press, position shaft and bearing assembly in water pump with slinger facing downward. Press shaft-bearing and slinger assembly into pump housing until bearing is flush with hub edge of housing. Place hub on shaft and bearing assembly. Place pump assembly on press with steel block supporting shaft and bearing assembly and use Tool 8501-F6M or Tool 8530 to press hub on shaft until distance from pulley mounting face of hub to mounting face of water pump legs is 6.404-6.424". Place pump assembly on press with hub end of shaft resting on steel plate and use Tool 8501-F6M or Tool 8530 to carefully press impeller on shaft assembly until rear flat face of the impeller is .095-.105" below back mounting face of water pump housing. Check with .095" feeler gauge between flat face of impeller and straightedge placed across cover mounting face. Install back cover.



V8 MODELS (317.5, 341, 368" ENGINES)

DESCRIPTION: Packless type with sealed double row ball bearing shaft (shaft serves as inner race for bearing). Bearings are permanently lubricated and require no additional attention in service. Shaft retained by locking ring in pump body.

OVERHAUL: Disassembly - Remove snap ring from groove in front of pump housing directly behind hub. *(NOTE - If pump has pressed steel pulley, remove pulley first, then remove snap ring).* Using arbor press, piece of bar stock having smaller diameter than pump shaft, and Tool 8501-DD-21 with three pins installed in tool, press shaft and bearing assembly and pulley from impeller. Remove impeller. Press shaft and bearing assembly and hub from housing. Using Tool 8501-DD-16 and piece of bar stock, press shaft and bearing assembly from hub. With Tool 8501-DD-19, press seal and sleeve assembly from pump housing. *NOTE - It is not necessary to remove snap ring in center of pump housing.*

Reassembly - Coat all surfaces of pump lightly with cup grease. Install shaft and bearing assembly in pump housing using Tool 8501-DD-19. *CAUTION - When pressing shaft into housing, stop applying pressure when resistance is felt or snap ring inside housing will be broken.* Install snap ring at front of housing to retain shaft and bearing assembly. Using Tool 8501-DD-17 or DD-18, depending on type of seal and sleeve assembly used, and Tool 8501-DD-16, install seal and sleeve assembly into housing. Remove pins from Tool 8501-21 and turn tool upside down. Place Tool 8501-DD-22 in center of Tool 8501-21 and place both tools on arbor press. Lower adjusting screw in center of tool by turning counterclockwise. Install impeller on shaft assembly and set pump on tool so impeller is in tool recess. Press downward on shaft until pump body

CONTINUED ON NEXT PAGE

V8 317.5", 341", 368" ENGINE WATER PUMP

CONTINUED FROM PRECEDING PAGE

makes light contact with tool. This automatically sets impeller-to-housing clearance (.025-.035"). Turn screw in Tool 8501-DD-21 clockwise until it contacts the shaft assembly. Using Tool 8501-DD-19, install water pump pulley hub. *NOTE* - It is necessary that distance from lower surface of pump pulley to machined surface of housing be maintained as near 3 15/16" (1954-55), 5.340" (1956-57) as possible. This will assure correct pulley alignment.

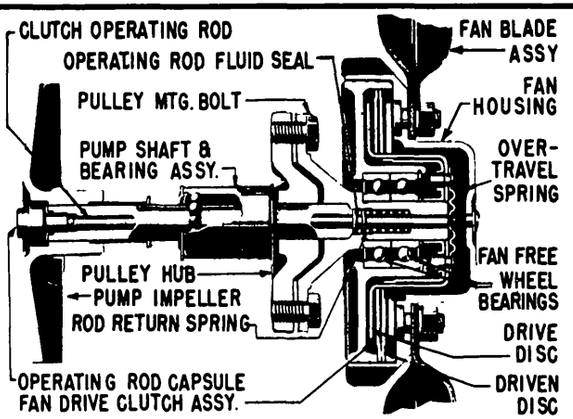
POWER BOOSTER FAN

1957 MERCURY MODELS

DESCRIPTION & OPERATION: This "Power Surge" Fan is a completely automatic unit built-in the fan hub and water pump shaft. The fan blade and hub assembly is mounted on two ball bearings on the pulley hub which allow the fan to "free-wheel" when the clutch is disengaged. The clutch assembly consists of a drive disc (on the end of the pulley hub) and a driven disc (in the fan hub). Clutch is engaged by an operating rod extending through the pump shaft which is actuated by a capsule in the center of the pump impeller. As the water temperature increases, the capsule extends to engage the fan drive clutch causing the fan to be positively driven by the engine. Whenever the engine is at normal temperature or below (with the operating capsule not extended), the rod return spring moves the rod toward the impeller and disengages the clutch.

1958-60 LINCOLN & MERCURY MODELS

POWER BOOSTER FAN: Consists of a rotor (enclosed in housing to which fan is bolted) and driven by shaft secured to water pump flange. Housing is filled with special silicone oil which provides drive for fan through a plastic rotor. This unit designed to provide driving force for maximum fan operation at low speeds and to limit top speeds of fan at higher engine speeds.



Checking Drive Unit: 1:1 ratio should occur at approximately 1200 RPM (1958 Mercury), 2400 RPM (1959 Lincoln, 1959-60 Mercury) 2700 RPM (1960 Lincoln). Check by marking units with chalk and using a timing light. Speed of fan and damper is the same when both components are "stopped" by timing light. If this stoppage occurs at engine speed less than specified above, the power booster clutch is operating below minimum and must be replaced with a new clutch unit.

FUEL SYSTEM NOTES

383, 410, 430" ENGINES

CARBURETOR AIR INTAKE DUCT ASSEMBLY (WITH THERMOSTAT CONTROL): Thermostatically controlled valve in air intake duct assembly should be fully closed when engine is cold (for air intake from rear "heated" opening), and should start to open as engine warms up and be fully open when engine reaches operating temperature (for air intake from outside through left radiator side air deflector). If valve does not operate satisfactorily, remove duct assembly and test operation of valve as follows:

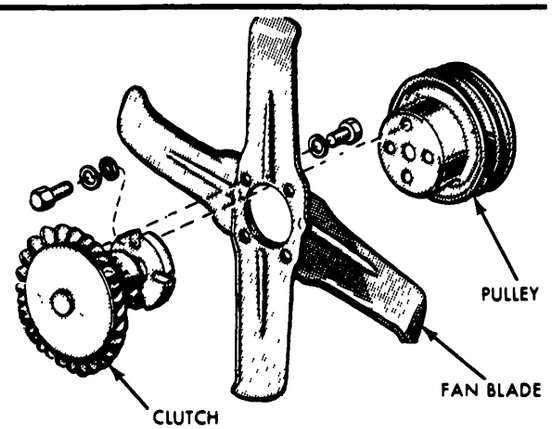
Duct Assembly Removal: Loosen clampscrew and slide flexible hose off end of duct. Remove wing nut retaining air cleaner on carburetor, remove nut and washer retaining duct assembly on bracket. Loosen two clampscrews and slide duct assembly from air cleaner.

1957 POWER BOOSTER FAN

Testing: Place duct assembly in a pan of water at temperature below specification shown in table for "Closed". *NOTE - Thermostat must be covered by water.* Valve should be in "heat on" position. Heat water slowly. Valve should start to open at "Start Open" temperature. *NOTE - If valve does not start to open at this temperature, hold temperature for eight minutes before discarding thermostat as defective.* Increase water temperature to "Wide Open" specification. Valve should be wide open at "Heat Off" position. *NOTE - If valve not open, hold this temperature for eight minutes before discarding thermostat as defective.* If valve operation not satisfactory remove thermostat and spring assembly and check valve shaft for binding. If valve moves freely, replace thermostat and duct assembly. If valve does not operate correctly adjust thermostat rod as follows:

Adjustment: Increase rod length to move valve toward "heat off" position, decrease rod length to move valve toward "heat on" position.

Test Specifications



Model	"Closed"	"Start Open"	"Wide Open"
Edsel (1958)	80°F	95°F	105°F
Ford T'Brd (1960)	75°F	95°F	100°F
Lincoln (1956-57)	65°F	75°F	100°F
(1958-59)	65°F	85°F	100°F
(1960)	75°F	85°F	100°F
Mercury (1957)	75°F	85°F	105°F
(1958-60)	75°F	85°F	100°F

PROPELLER SHAFT NOTES

1960 LINCOLN & MERCURY MODELS

PROPELLER SHAFT ANGLE: *NOTE* - Vibration or "shudder" upon fast acceleration, or when coasting using engine as a brake, may be caused by either rear axle being loose in springs or by excessive propeller shaft angle. Propeller shaft angle is the result of Pinion Nose Angle in relation to Riding Height with "U" bolt nuts tight.

Pinion Nose Angle - Place vehicle on known level surface that will allow access to rear axle pinion nose. Drill a small hole in common protractor at exact center of base (0°) line, and insert a line through hole with a light weight attached for bob. Place base of protractor vertically against front face of pinion housing and read where lines crosses scale.

1958-60 POWER BOOSTER FAN

Riding Heights - Place vehicle on smooth level floor. Inflate tires to specifications, fill gas tank and remove all passengers and baggage load. Jounce vehicle to obtain normal position. Measure perpendicular distance from axle housing to frame (Lincoln), to kick-up on underbody side member (Mercury). Distance should be as shown in table below.

Model	Normal Riding Height
Lincoln	6 19/32"±½"
Mercury (Exc. Sta. Wgn. & Park Lane)	① 7.10"
Mercury (Sta. Wgn. & Park Lane)	② 6.80"

① - 6.60" Min., 7.50" Max. ② - 6.40" Min., 7.15" Max.

Riding Height	Pinion Nose Angle Lincoln	Mercury
7 inches	0°	1¼° upward
6½ inches	½° down	1° upward
6 inches	1° down	½° upward
5½ inches	1½° down	¼° upward

① - Allowable Tolerance ½° up or down.

Check Pinion Nose Angle with Riding Height as shown in table above. When Nose Angle does not correspond with Riding Height, remove rear axle "U" bolt nuts and install a 1° or a 2° taper shim between each rear axle spring seat and spring and tighten "U" bolt nuts to 40-50 ft. lbs. *CAUTION* - DO NOT STACK tapered shims. When more than 2° correction is required, replace rear axle housing.

TRANSMISSION NOTES

► *1955-56 PREMATURE GEAR TOOTH WEAR CORRECTION:* When interference between gear shift and clutch rods result in improper gear engagement and excessive gear tooth wear, install parts as follows:

Conventional Trans.

B6A-7326-C Rod (2nd and High).
B6A-7521-A Rod (Clutch Release).
B6A-7515-A Lever (Clutch Release) ①
B6A-7542-A Bracket (Clutch Retracting Spring) ②

Overdrive

B6A-7328-B Rod (Low and Reverse).
B6A-7326-B Rod (2nd and High).
B6A-7515-A Lever (Clutch Release) ①
B6A-7542-A Bracket (Clutch Retracting Spring) ②

① – 1954-56. ② – 1954-55.

CARBURETOR

Ford No. EBP-9510-A (Except Fordomatic), EBP-9510-B (With Fordomatic). "Visi-flo", single barrel

►*1955 ACCELERATOR LINKAGE CORRECTION (To Permit Full Accelerator Travel):* Bend upper arm of accelerator assembly so that it moves on a 6" radius (distance between center of accelerator shaft-carburetor rod pivot point hole and center line of straight portion of accelerator should be 2 9/64")

►*1955 STANDARD & OVERDRIVE TRANSMISSION ACCELERATOR BELL CRANK-TO-CARBURETOR ROD ASSEMBLY PRODUCTION CHANGE (To Correct Difficult Idle Adjustment)* If difficulty encountered in adjusting idle, check to see if car equipped with new rod assembly, Part No TRAA-9772-A (has phosphate-dark-finish) Old rod assembly, Part No AB-9772-A, had cadmium plated finish

Idle Setting—Initial setting 1½ turns open Set for highest steady vacuum reading with engine at normal operating temperature, or midway between missing and rolling points Turn screw out for richer mixture

Idle Speed (1954)—475-500 RPM (Std & O D) 440-460 RPM (Fordomatic) with selector lever in "N"

Idle Speed (1955)—475-500 RPM (Std & O D) 450-475 RPM (Fordomatic) with selector lever in "N"

Fuel Level—11/16 ±1/32" below power valve mounting surface (Tool T52L-9550-AEE) *See "Ford Visi-flo" in Carburetor Section of Manual.*

Accelerating Pump: Inner hole for normal or hot weather, outer hole for cold weather operation (holes located in throttle lever Shift pump link as required)

Fast Idle: Integral type operated by choke valve No adjustment required

Throttle Linkage Adjustment (Fordomatic Cars): With selector lever in "N" position and engine at normal operating temperature set engine idle speed at 440-460 RPM (1954 Models), 450-475 RPM (1955 Models) Adjust Anti-stall Dashpot then turn engine off Remove clevis pin from upper end of transmission control rod (at cross shaft) Pull gently upward on throttle control rod to hold transmission lever against its internal stop Rotate rod clevis for free entry of clevis pin into holes in clevis and cross shaft lever Lengthen control rod by rotating clevis 2½ turns counterclockwise Connect control rod to cross shaft lever Road Test car and if band or clutch slippage evident **increase rod length to 3 turns of clevis but do not exceed 3½ turns** Check transmission for kick-down action and if found to be incorrect disconnect accelerator connecting link from cross shaft lever and adjust pedal height by turning the threaded trunnion on connecting link until top surface of accelerator pedal is 4 5/16" (1954) 4 9/16" (1955) from floor

Anti-Stall Dashpot (Fordomatic Cars): First adjust engine idle speed then turn engine off. Loosen dashpot adjusting screw locknut. Hold throttle in closed position and turn dashpot adjusting screw out (counterclockwise) until head of adjusting screw pushes the dashpot rod up to the end of its travel. Turn dashpot screw in (clockwise) 1½-2 turns to obtain .045-.064" clearance, Tighten locknut

►*OTHER DATA See Ford "Visi-flo" in Carburetor Section*

Fuel Pump Pressure 4 5 lbs at 900 RPM

CARB. EQUIPMENT

►*FUEL TANK FILTER CAUTION:* If particles of foreign material found in fuel pump or carburetor on units built prior to February 1, 1955, particles should be examined very closely (with magnifying glass and strong light). If particles clear or cream colored, short, and thread-like pieces, they are probably from a damaged fuel tank filter To correct, replace fuel tank.

Fuel Pump (1954): Ford No. EAA-9250-E, Fuel only Except Fordomatic & Overdrive Cars), **EBP-9250-A,** Fuel & Vacuum (Fordomatic & Overdrive Cars)

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Fu l Pump (1955): Ford N . B5A-9350-A, Fuel only (Except Fordomatic & Overdrive Cars); **B5A-9350-B,** Fuel & Vacuum (Fordomatic & Overdrive Cars)

Fuel Pump Pressure—4-5 lbs at 900 RPM

See "Fuel Pumps" in Carburetion Equipment Section.

Gasoline Gauge: King-Seeley Electric.

Dash Unit (1954)—Ford No FAG-9280-A.
Dash Unit (1955)—Ford No B5A-9280-A
Tank Unit (1954)—Ford No FAA-9275-A (Except Sta Wgn. & Sedan Delivery) No FAA-9275-B (Sta. Wgn & Sedan Delivery)
Tank Unit (1955)—Ford No B5A-9275-A (Exc Sta. Wgn & Sedan Delivery) B5A-9275-B (Sta Wgn & Sedan Delivery)

S e "Fuel Gauges" in Carburetion Equipment Section.

BATTERY

Ford No. FDA-10655-A. 6 volt, 17 plate, 90 ampere hour capacity (20 hr. rate).
Battery Ground—Positive (+) to engine.
Engine Ground—Cylinder head to dash.

STARTER

Ford No. FAC-11002-B (1954); FAC-11002-G (1955). Armature—Ford No. 52-11005 (FAC-11002-B), **FAC-11005-B** (FAC-11002-G)

Drive—Ford No. 1CM-11350-C. Bendix "Folo-Thru" type.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—48-5€ ozs.
Cranking Speed—115-125 RPM.

Performance Data—FAC-11002-B

Torque	RPM	Volts	Amperes
0 ft lbs	①	6 0	70
16 ft lbs.	Lock		700

Performance Data—FAC-11002-G

Torque	RPM	Volts	Amperes
0 ft. lbs.	①	6.0	70
14 ft. lbs .	Lock		700

①—With starter on engine and engine running.

Starting Switch: Ford No. FAB-11450-B. Mounted on left front fender apron and controlled by Ignition Switch. *NOTE*—A Neutral Safety Switch is used on all models with Fordomatic.

Fordomatic Neutral Safety Switch: Ford No FAC-15812-C (1954), B5A-15812-A (1955)
Adjustment—*See "Fordomatic & Mercomatic" in Transmission Section*

GENERATOR

F rd No. FAA-10002-B. Armature—0A-10005-A.

►*GENERATOR BELT WEAR & IMPROPER CHARGING RATE CAUTION·* If either of these two conditions are encountered, check to make sure an 8-Cyl. generator is not being used.

►*GENERATOR BELT NOISE CORRECTION.* To make sure noise is coming from belt, squrt a few drops of hydraulic fluid on belt driving surface. If noise or whine disappears, belt is at fault and should be replaced with plain type belt, Part No B5A-8620-B In some cases, removal of paint in generator pulley groove has stopped noise without belt replacement.

Performance Data

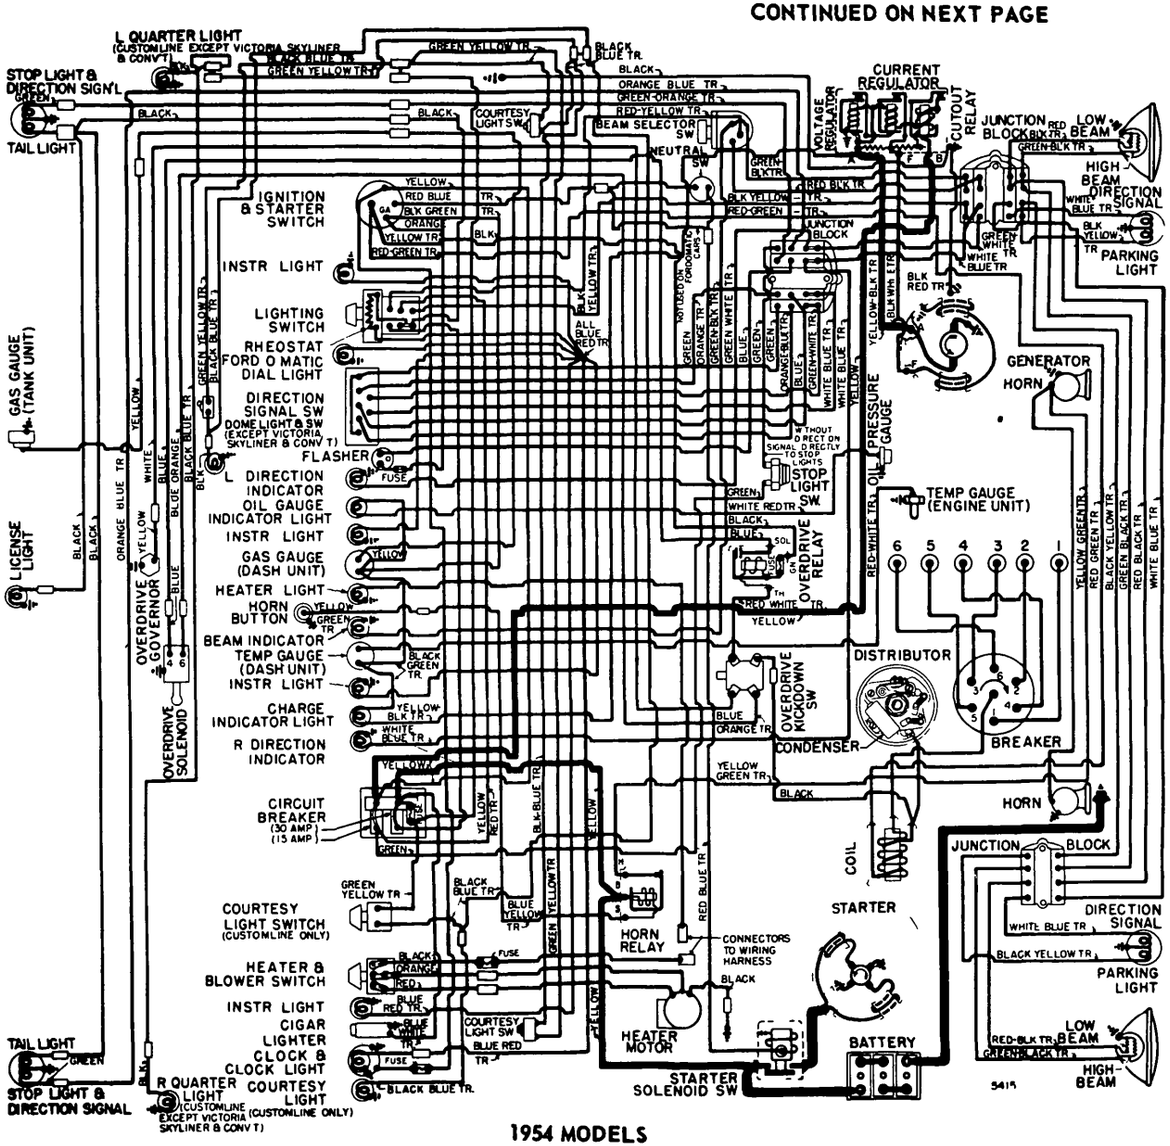
Generator	Amperes	Eng. RPM
FAA-10002-B	35 ①	850

①—See Regulator for maximum charging rate.

Brush Spring Tension—30 ozs.
Field Current—1½-2½ amperes at 6.0 volts.
Rotation—Counter-clockwise at commutator end.

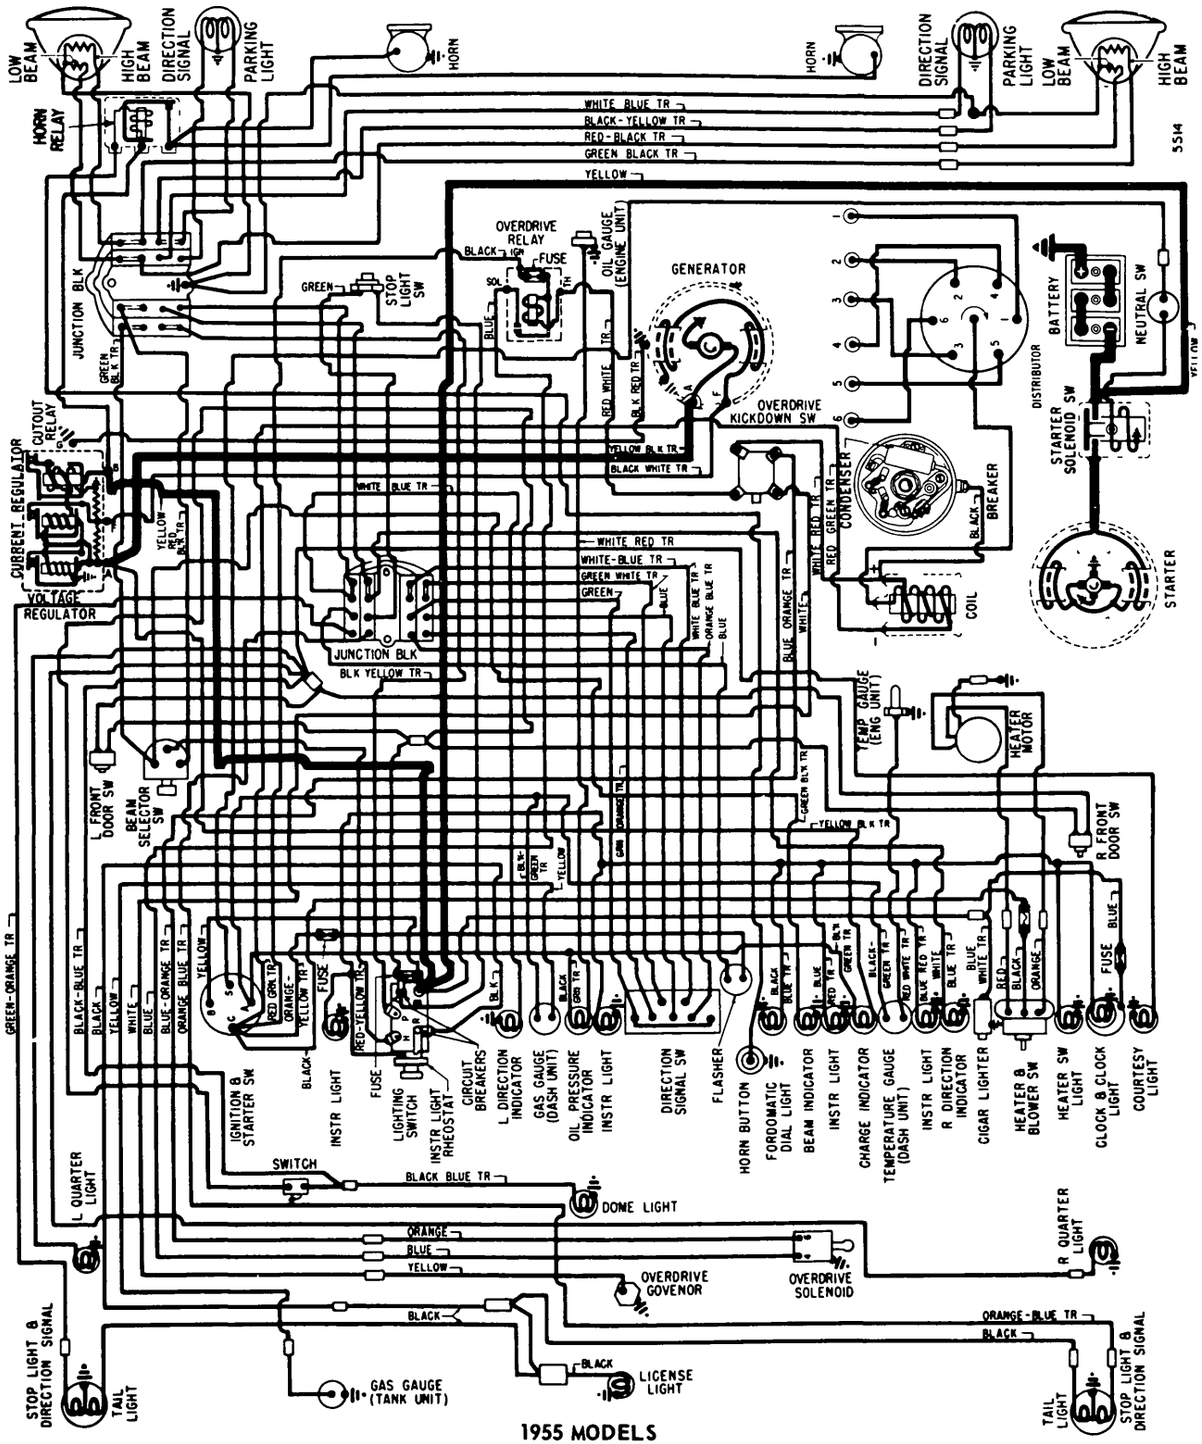
B lt Adjustm nt: ¼" belt deflection midway between generator and pump pulleys with normal thumb pressure.

REGULATOR



Ford No. FAC-10505-A

►*SETTING NOTE* Settings below are for regulator at NORMAL OPERATING TEMPERATURE (after ½ hour operation) with room temperature at 70°-80 ° F.



Cutout R lay

Cuts In—6.0-6.6 volts.

CONTINUED ON NEXT PAGE

1954 MODELS

1955 MODELS

CONTINUED FROM PRECEDING PAGE

►*CUTOUT RELAY AIR GAP CHECK:* With cover off regulator, manually close cutout contacts. Measure air gap between armature and core. This dimension should be .009-.013". Air gap with contacts open should be .012-.020". If either or both of these dimensions are not up to specifications, regulator is defective and should be replaced.

Voltage Regulator

Setting—7.4-7.8 volts.
Checking & Adjusting—See *Electrical Equip. Section.*

Current Regulator

Setting—34-38 amperes.
Checking & Adjusting—See *Electrical Equip. Section.*

MISC. ELECTRICAL

►*1955 BACK-UP LIGHT SWITCH BRACKET INSTALLATION CAUTION:* Change in steering gear shift rod on late production cars affects installation of back-up light switch bracket, Part B5A-15517-A. To install this bracket, bend upward to prevent switch from bottoming when gear shift lever in reverse position. New bracket, Part No B5A-15517-B, is included in new kit, Part No B5A-15517-B, however, some kits will be released with old bracket.

►*1954 DIRECTIONAL SIGNAL BURNING OUT CORRECTION:* Replace 14 amp. fuse with a 9 amp fuse by making a 3/16" long spacer from ¼" copper tubing. Cut spacer lengthwise and place on wire so that it will be between bottom of fuse holder and spring. Press sides of spacer together with pliers

Headlamps: Sealed Beam. See *Electrical Equip. Section.*

Direction Signal: See *Electrical Equipment Section.*

Lighting Switch Removal: With control knob in the "OFF" position, press the spring release button on switch housing, turn shaft slightly and pull it out of switch. Unscrew mounting nut with Tool 17470-N. Remove switch and disconnect all wires.

Stop Light Switch Location: On forward end of brake master cylinder (Conventional Brakes), and on top of booster assembly (Power Brakes). Master cylinder located on firewall in engine compartment.

FUSES: Located as indicated below.

Direction Signal—14 amp. (1954), 15 amp. (1955). In fuse holder between ignition switch and flasher. *1954 NOTE—See "Directional Signal Flasher Burning Out CORRECTION" above.*

Interior Lights—14 ampere On lighting switch
Overdrive—30 amps., on overdrive relay.
Cigar Lighter—Special fuse in lighter base.
Clock—3 amps., in clock lead.
Heater—14 amps., in blower switch wire.

LIGHTING CIRCUIT BREAKERS: On headlight switch. Combination headlight switch, circuit breaker, and fuse assembly used. One circuit breaker protects headlight circuit and second circuit breaker protects instrument, parking, stop and tail light circuits The 14 ampere fuse protects interior lighting circuit

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

HORNS: (1954)—Ford No. FAC-13832-E or F (High pitch), FAB-13833-F or G (Low pitch). Dual horns operated by relay.

HORNS: (1955)—Ford No. B5A-13832-C (High pitch), B5A-13833-C (Low pitch). Dual horns operated by relay.

Horn Current—12-14 amps at 6.2-7.2 volts.

Horn Relay: Ford No. FAA-13853-A.

ENGINE

ENGINE SPECIFICATIONS: 6 Cyl. Valve-in-head.

Bore—3.62". **Stroke**—3.60".

Displacement—223 cu. in. **Rated H.P.**—31.5.

Developed Horsepower—115 at 3900 RPM (1954). 120 at 4000 RPM (1955).

Compression Ratio—7.2-1 (1954). 7.5-1 (1955).

Compression & Vacuum Reading—*See TUNE-UP.*

►*1955 CAMSHAFT OR VALVE SPRING REPLACEMENT CAUTION:* Approximately 2000 1955 models were released with 1956 type camshafts installed. If valve springs or camshaft to be replaced, correct parts must be installed *See "Camshaft" (below) for identification and parts replacement.*

►*1955 OIL BATH AIR CLEANER INTERFERENCE WITH HOOD CORRECTION: On early production cars* Oil Bath Air Cleaner interfered with hood To correct, cut out 2½" long x 7/16" deep section out of top of air cleaner at point of interference with hood. Cars after November 13, 1954 have hoods corrected. If replacement cleaner B5A-9600-F installed on unrevised hood cars, correction will have to be made since service cleaners have not been reworked.

►*1955 DRIVE SHAFT-TO-FRAME INTERFERENCE NOTE & CORRECTION (Conv.):* On early production units, drive shaft may strike bottom of clearance hole in frame "X" member after vehicle passes over a severe bump. Current production is installing three shims and longer bolts (7/16"—20 x 1⅛") between engine rear support and "X" member to prevent interference, and can be installed on early units. *NOTE—If shims removed during repair operation, make sure they are reinstalled.*

►*1955 FUEL LINE (TOO LONG) CORRECTION:* All early production units should be checked for too long a fuel line causing sharp bend in flexible line installed at forward end of fuel line. To correct, bend forward end of fuel line outward, and increase radius of bend in flexible line. Drill a 7/32" hole in No. 2 crossmember. Install a clip, Part No. 8A-14588 and screw, Part No. 31498-58, to secure fuel line to No. 2 crossmember.

CYLINDER HEAD: *See "Cylinder Head & Manifold" in Ford Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Ford Special Data.*

OIL PAN REMOVAL: Drain crankcase, remove oil dipstick Drain coolant from engine and radiator. Disconnect upper radiator hose at engine Remove engine front support bolts Remove engine steady rest Raise front end of engine about 2" Remove left and right engine splash aprons Block engine and lower engine on block Remove flywheel housing inspection cover Remove oil pan retaining screws, remove pan and gasket.

PISTONS

Autothermic type. Solid skirt with three rings above pin.

Removal—Pistons and rods removed from above.

Fitting New Pistons: Use ½" feeler gauge inserted between piston and cylinder wall at right angles to pin on thrust side. Feeler thickness as follows:

New Piston in New Bore—.0015" feeler. 5-10 lbs. pull.

New Piston in Used Bore—.002" feeler. 5-10 lbs. pull.

Used Piston in Used Bore—.0025" feeler. 5-10 lbs. pull.

Replacement Pistons: Standard size, .020", .030", .040", .060" Oversize. Pistons furnished only with fitted pins.

Installing Pistons: Install with small indentation in head toward FRONT of engine.

PISTON PINS

Floating type with lock rings at each end.

Diameter— 9120- 9123" **Length**—3 016-3.030".

Pin Fit in Piston— 0001- 0003" Hand push fit at 70°F.

Pin Fit in Rod Bushing—.0001-.0003" clearance. New pin should not fall through bushing of own weight.

Replacement Pins: Standard size, .001", .002" Oversize.

PISTON RINGS

►*SPECIAL SERVICE PISTON RING SET (To reduce Possibility of Excessive Oil Consumption): Special Piston Ring Set, Ford Part No. B4A-6148-AAA furnished as service replacement in addition to standard "Expander and "Snap Ring" type sets.*

Ring	Width	End Gap	Side Clearance
Compr. #1	3/32"	.010-.027"	.002-.0035"
Compr. #2	3/32"	.010-.027"	.002-.0035"
Oil	3/16"	.010-.027"	.0015-.003"

Replacement Rings: Standard size, .020", .030", .040", .060" Oversize.

►*REPLACEMENT PISTON RING NOTE:* "Snap-Type" rings furnished in Std. size only. "Expander" type furnished in all above oversizes. *See "Special Service Piston Ring Set" above.*

CONNECTING RODS

Crankpin Journal Diameter—2.2980-2.2988".

Lower Bearings—Steel backed, copper lead alloy lined type. Upper and lower halves interchangeable.

Clearance—.0005-.0023" (1954), .0004-.0023" (1955)

Side Clearance—.005-.007".

Replacement Bearings: Standard size, (4 sizes marked **red** & **blue** for selective fitting) and .010", .020", .030", Undersize.

Installing Rods: Install rod in piston so that squirt hole is to **right** when indentation on top of piston is toward front of engine

CRANKSHAFT

►*1954 CRANKSHAFT & FLYWHEEL PRODUCTION CHANGE:* Later type parts are interchangeable with previous parts except that later crankshaft cannot be used with early flywheel unless inner edge of flywheel bore is chamfered 1/16" x 45° to eliminate flywheel-to-crankshaft interference. Use a bearing scraper to chamfer

Journal Diameter—2.4980-2.4988". Max. wear limits .0015", taper .001".

Bearings—Steel backed, copper lead alloy lined.

Clearance— 0005- 0025' (No 1, 2, 3), 001-.0029' (No 4)

Replacement Bearings: Standard size, (4 sizes marked **red** & **blue** for selective fitting) and .010", .020", .030" Undersize.

End Thrust: Taken on rear intermediate bearing (# 3).

Thrust Bearing Alignment—*See "Crankshaft & Main Bearings" in Ford Special Data.*

Endplay—.004-.008".

Crankshaft Rear Oil Seal Installation: *See "Crankshaft & Main Bearings" in Ford Special Data.*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Ford Special Data.*

CAMSHAFT

►*1955 CAMSHAFT & VALVE SPRING REPLACEMENT CAUTION:* When replacing either camshaft or valve springs on Late 1955 models, replacement parts must match the original parts exactly Approximately 2000 Late 1955 models were equipped with 1956 type camshafts and valve springs. THESE PARTS ARE NOT INTERCHANGEABLE WITH STANDARD PRODUCTION 1955 PARTS. If replacement parts are not available, install 1955 camshaft, Part No B5A-6250-B and valve springs, Part No EAA-6513A. 1955 camshafts can be identified by a cam lobe lift of .242" (.273" on 1956 type) 1955 valve springs have 7½ coils with lower coil closely spaced. 1956 valve springs have 7 equally spaced coils Use of mismatched camshafts and springs may result in early failure of camshaft and/or valve flutter at high speeds

Journal Diameter—1.9255-1.9265".

Clearance— 001-.003" (new). .005" (worn limit).

End Thrust—Taken by plate on forward end of block (between camshaft sprocket and shoulder on shaft).

Endplay— 003- 007".

Replacement Camshaft Bearings: Finished bearings furnished Standard, and .015" Undersize. *CAUTION—Rear intermediate (#3) bearing not interchangeable with other bearings.*

Camshaft Removal & Installation: *See "Camshaft & Bearings" in Ford Special Data.*

Timing Chain: Side-guide type. Length 56 links.

►*REPLACEMENT NOTE:* Replace chain and sprockets when deflection on slack side exceeds ½" (take up all slack on driving side, measure slack on opposite side).

Camshaft Setting: Sprockets marked by "O" at one tooth Mesh chain so that there are 12 pins between "O" marks

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

►*CAMSHAFT SPROCKET SPACER INSTALLATION CAUTION:* If spacer, Part No EBE-6265-A, installed backwards, it will allow an excessive amount of end-play. Chamfer on inside diameter of spacer must be t ward No 1 camshaft bearing journal.

Engin Fr nt C ver Oil Seal (Crankshaft Front Seal): *S "Engin Fr nt C v r" in Ford Special Data.*

VALVES

►*EXHAUST VALVE STEM DIAMETER CHANGE (Production & S rvic R plac ment Valves): Stem diameter d cr as d. 0005" for greater stem clearance in guide. S "Valve Syst m" in Ford Special Data.*

Tappet Cl arance: .015" (Intake). .019" (Exhaust) with engine at operating temperature.

Valve	H ad Diam.	① Stem Diam.	Length
Intake	1 785"	.3415"	5.02"
Exhaust	1 515"	3405"	5.02"

Valv	Seat Angl	② Lift	Stem Clearance
Intake	45°	.340"	002 ' max
Exhaust	45°	.340"	003" max

①—Valves furnished with .003", .015", .030" Oversize stems for service replacement. *See "Valve Guides" in Ford Special Data.*

②—Minimum lift for checking camshaft lobe wear.

Valv Seat Width—.066-.084" (Intake). .087-.109" (Exhaust).

►*ROTATABLE VALVE NOTE All valves are rotatable type. See "Valve System" in Ford Special Data.*

Valv St m Oil S als—"Umbrella" type oil seals used on intake and exhaust valve stems. Seals are installed with cupped side down on valve stem at at guide boss on cylinder head. *Install new seals whenever valves removed or when seals become loose on stem.*

►*VALVE STEM OIL SEAL INSTALLATION CAUTION:* New valve stem oil seal, Part No B5A-6571-A, has been released and **should be used to service V8 engines nly.** Old seal, Part No EAA-6571-C, should be used to service only 6-cylinder engines

Valv Springs: Install with closed coil end toward cylinder head.

►*1955 VALVE SPRING REPLACEMENT CAUTION: S "1955 Camshaft & Valve Spring Replacement Caution" und r "Camshaft" above.*

	Valv Spring Specifications Pr ssur	Length
Valve Closed	54-62 lbs.	1.821"
Valve Open	124-140 lbs.	1.505"

Valv Guid s: Integral with cylinder head. When stem-to-guide clearance exceeds maximum (.002" Intake, .003" Exhaust), ream guides and install oversize valves *S e "Valve System" in Ford Special Data.*

Valv Lift rs: Mushroom type. Removed from below with camshaft removed.

Rock r Arm Ass mbly: *S "Valve System" in Ford Special Data.*

VALVE TIMING

S e "Camshaft Setting" under CAMSHAFT above.

►*VALVE TIMING NOTE* The following valve opening and closing points are with camlift as indicated

Intak Valv s— Open 13° ①BTDC. Close 68° ①ALDC.
Exhaust Valv s—Open 55° ②BLDC. Close 22° ②ATDC.

①—Camlift .013 '. ②—Camlift 016"

Valve Timing Check: *See "Camshaft Setting" under CAMSHAFT above.* Remove rocker chamber cover Turn engine over until No 1 intake tappet is on heel of No 1 intake cam lobe. Back off No 1 intake valve adjusting screw, push rocker arm to one side, then install dial indicator Zero dial indicator, then rotate engine slowly until desired lift (013") obtained Compare degrees on pulley with specifications (13°). If not within specifications, check for bent timing pointer by bringing No. 1 piston to TDC and see if timing pointer aligned with TDC mark on vibration damper. If pointer not at fault, check timing chain, camshaft sprocket, camshaft, vibration damper, and crankshaft in order of accessibility

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Ford Special Data.*

Crankcase Capacity: 4 qts. (refill), 5 qts. (when new filter installed).

Normal Oil Pressure: 45 lbs. at 2000 RPM.

Pressure Regulator Valve—In pump body, not adjustable.

Oil Pressure Indicator—Indicator light on instrument panel, operated by Engine Unit—Ford No. FDA-9278-A (Stamped #7 on Hex.). Lights when ignition switch turned on, goes out when engine starts and pump operates.

Oil Pump: Gear type pump located in crankcase.

►*1955 OIL PUMP PRODUCTION CHANGE & PARTS INSTALLATION CAUTION:* New oil pump assembly intermediate shaft and body plate released for service Parts not interchangeable with those of previous type pump *See "Oiling System" in Ford Special Data.*

Pump Overhaul—*See "Oil Pump" in Ford Special Data.*

Oil Filter: Full-flow type (Std. Equip.) with pressure relief valve in center filter bolt. Replace filter element at 4000-5000 miles or when oil becomes dirty or polluted.

Replacement Filter Element—Ford No. B2A-6731-A (Kit includes new gaskets).

►*CAUTION—This special Full-flow filter element must be used for replacement (use of by-pass type element would restrict oil flow and result in insufficient engine lubrication.*

►*FILTER INSTALLATION CAUTION & OIL LEAKAGE CORRECTION: See "Oiling System" in Ford Special Data.*

Crankcase Ventilation: Filter in oil filler cap (inlet) with outlet pipe in rear of crankcase on right side of engine.

COOLING

Water Capacity: 15 qts. (without heater). 16 qts. (with heater).

Pressure Valve: Ford LA-8100-A (marked "13" or "14") Radiator filler cap Opens at 12-15 lbs *CAUTION—* If replacement required use 12-15 lb type

Therm stat: Ford No. EAA-8575-A. Mounted inside water outlet elbow in cylinder head. (Stamped 160 on operating cylinder) 160° type. Part No. EAA-8575-B (180°) can be used for permanent anti-freeze.

Wat r Pump: Packless, sealed ball bearing type. *Se "Wat r Pumps" in Ford Sp cial Data.*

Temperatur Gaug : King-Seeley Electric.

Dash Unit—Ford No FDA-10883-A (1954). B5A-10883-A (1955)

Engine Unit—Ford No. 1A-10884-A.

See "Temperature Gauges" in Miscellaneous Section.

CLUTCH

Long Model 9½ CF-TS. Ford No. 1A-7563-A.
See "Long Clutches" in Clutch Section.

►*1954 CLUTCH RELEASE BEARING NOISE CORRECTION:* Check release bearing hub shoulder for a second "step" that prevents bearing from seating properly. Correct by replacing hub

►*1954 CLUTCH GRATING NOISE CORRECTION:* Retracting spring reversed and rubbing on steering housing. Long end of spring should be toward front of car.

Clutch Disc No.—Ford No. 8HA-7550-B.

Pedal Adjustment: If total pedal travel is less than 3/8" or more than 6 5/8", reposition pedal bumper until until travel is within limits.

Pedal Free Travel—1 1/8-1 3/8". Loosen clutch pedal release rod locknut (lower end) and turn adjusting nut for correct free travel, tighten locknut.

►*PEDAL FREE TRAVEL ADJUSTMENT CAUTION:* Normal action of pressure plate centrifugal weights at high engine speed will take up approximately ¾" of specified free travel Check free travel when engine is operated at high speed and see if approximately ½" of free travel is left. Insufficient free travel will cause release bearing to rotate at all times and will result in early bearing failure.

Removal: Remove transmission (see Transmission Removal below), and slide clutch release bearing off clutch release lever. Disconnect clutch pedal release rod from clutch release lever assembly. Remove clutch release equalizer bar bracket from flywheel housing and remove equalizer bar. Remove split bronze bushing from bracket and then remove flywheel housing. Install Tool 7563 and remove clutch pressure plate assembly (if tool not available, clutch may be released by backing off the attaching bolts evenly). Remove clutch release bearing from hub with an arbor press.

SYNCHRO-MESH TRANSMISSION

Own. Helical gear, constant mesh, synchro-mesh (second & high), sliding gear (low & reverse).
See "Ford Synchro-mesh" in Transmission Section

►*INTERMEDIATE & HIGH GEAR JUMP-OUT CORRECTION: See "Ford Synchro-mesh" in Transmission Section.*

►*LOW GEAR JUMP-OUT CORRECTION (Due to Insufficient Clearance):* To correct, remove side cover, grind corner of detent boss to provide sufficient clearance between shift cam and detent boss.

►*GEAR CLASHING CORRECTION (Shifting from Neutral-to-Low or R v rs):* Check operation by depressing clutch pedal and allowing sufficient time for input shaft to stop rotating If clashing still occurs,

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

check fit of clutch disc hub on input shaft If it binds on shaft, apply lapping compound to input sh ft and lap hub to shaft If condition continues to exist, it will be necessary to select-fit clutch disc and input shaft *CAUTION–Reducing clutch free-play below specified limit will not correct condition*

Transmission Control: *See "Transmission Control" in Transmission Section.*

Removal: Disconnect gearshift linkage at transmission. Remove speedometer cable and gear. Disconnect drive shaft at transmission and remove the capscrews attaching transmission extension to rear engine support. Place a support under engine and remove the frame cross member and rear engine support. Remove transmission-to-flywheel housing capscrews and install two guide pins. Pull transmission back until main drive gear splines clear housing, and lower transmission from car.

OVERDRIVE

Warner Model AS4-R10F. Solenoid operated type, with governor control and throttle operated kick-down. No Lock-Out Switch used.

See "Warner R10 Overdrive" in Transmission Section.

Overdrive Control: *See "Overdrive Control" in Transmission Section.*

Removal: Same as for Synchro-mesh Transmission (above) after disconnecting control cable and wiring.

FORDOMATIC TRANSMISSION

Torque converter and three speed automatic transmission with hydraulic control and mechanical parking lock.

See "Fordomatic & Mercomatic" in Transmission Section.

►*FORDOMATIC "WHISTLING NOISE" CORRECTION. This condition may occur during normal engine operation. See "Fordomatic & Mercomatic" in Transmission Section.*

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION See "Fordomatic & Mercomatic" in Transmission Section*

►*TESTING & TROUBLE SHOOTING See "Fordomatic & Mercomatic" in Transmission Section.*

Lubrication–Check transmission oil level every 1000 miles and maintain oil level at "Full" mark on dipstick. Drain & refill every 15,000 miles. **Use only Automatic Transmission Fluid, Type A.**

Checking Fluid Level–Apply parking brakes, place transmission selector lever in "N" position, run engine at idle speed for approximately four minutes. With parking brake applied and engine running at slow idle, move selector lever to "P" (Parking) position. When engine and transmission have reached normal operating temperature, move selector lever through all positions to assure fluid distribution throughout transmission. Return selector lever to "P" position. Raise hood, clean dirt away from fluid level cap, remove indicator. Wipe indicator clean and insert in tube (make sure indicator is pushed down all the way). Remove indicator and read level. Add sufficient fluid to raise level to full mark on indicator. Replace indicator.

►*OTHER FORDOMATIC SERVICE DATA: See "Fordomatic & Mercomatic" in Transmission Section.*

UNIVERSALS

Mechanics. Needle bearing type

►*CAUTION (All Cars Except Station Wagon & Sedan Delivery) Rear universal joint companion flange nut controls pinion bearing pre-load (must be adjusted whenever nut is loosened). See "Ford & Mercury (Separate Carrier Type) Hypoid" in Rear Axle Section.*

REAR AXLE

PASSENGER CARS

Own. Separate Carrier, semi-floating hypoid, with Hotchkiss drive.

►*NOTE: Axle not same as Station Wagon & Sedan Delivery.*

See "Ford & Mercury (Separate Carrier Type) Hypoid" in Rear Axle Section.

1954 Ratios

Standard Transmission–3 90-1 (39 10)
Overdrive Transmission–4 10-1 (41-10)
Fordomatic Transmission–3 31-1 (43-13). ①

①–3.54-1 (39-11) Optional

1955 Ratios

Standard Transmission–3 89-1 (35-9)
Overdrive Transmission–4 11-1 (37-9)
Fordomatic Transmission–3 30-1 (33-10) ①

①–3 55-1 (32-9) Optional

Backlash–.003-.008".

Axle Shaft Removal: Remove wheel, take off drum. Remove four axle retainer locking type nuts (work through opening in axle shaft flange). Use Puller No. 4235-N and pull shaft (do not disturb brake backing plate or damage wheel bearing oil seal). Replace one nut to secure brake backing plate

Carrier Assembly Removal: Disconnect rear universal. Remove axle shafts (see above). Remove carrier from housing.

Wheel Bearing Adjustment: None required.

SEDAN DEL. & STATION WGN.

Own. Integral Carrier, semi-floating hypoid, with Hotchkiss drive.

►*NOTE: Axle not same as passenger cars.*

See "Lincoln, Mercury, Ford (Integral Carrier)" in Rear Axle Section.

Ratios

Standard Transmission–4.09-1 (45-11).
Overdrive Transmission–4.27-1 (47-11).
Fordomatic Transmission–3.54-1 (39-11).

Axle Shaft Removal: Same as Pass. Cars (above).

Rear Axle Assembly Removal: Raise rear of car and disconnect rear universal. Remove axle shafts. Disconnect brake lines at "T" on left side of axle housing. Disconnect hand brake cable, shock absorbers, spring U-bolts and shackles. Remove axle housing assembly from car.

SHOCK ABSORBERS

Direct acting, non-adjustable. Service by replacement.

1954 Models

Model	Front	Rear
Pass Cars (Std)	B4A-18124-D	B4A-18125-A
Pass Cars (Hvy Duty)	B4A-18124-F	B4A-18125-C
Sta Wgn & Sed Del.	B4A-18124-E	B4A-18125-B

1955 Models

Model	Front①	①Rear
Pass Cars (Std)	B5A-18124-A	B5A-18125-A
Pass. Cars (Hvy Duty)	B5A-18124-C	B5A-18125-C
Sta. Wgn & Sed Del	B5A-18124-C	B5A-18125-D

①–Furnished in kits which include shock absorber mounting bushings.

FRONT SUSPENSION

Independent. "Ball Joint" suspension with direct acting shock absorbers mounted within front coil springs.

See "Lincoln, Mercury, Ford (Ball-Joint)" in Front Suspension Section.

►*LOWER ARM BUMPER INSTALLATION* Right and left hand bumpers are different and must be installed in the correct position. Damage to suspension system will result if installed incorrectly. **Bumpers when installed should point slightly inboard.**

Kingpin Inclination–0° minimum, 7° maximum, crosswise.

Caster–0° to Pos 1° (1954) Pos ¼° to Pos 1¼° (1955) Maximum variation between wheels ½°

Camber–Pos. ¼° to Pos. 1¼°. Maximum variation between wheels ¼°.

Toe-In–1/16" to 1/8".

STEERING

Manual: Own (Gemmer 305 Design). Worm & Roller type. *See "Gemmer Worm & Roller (Type 305)" in Steering Section.*

Power Steering: Ford-Mercury Linkage type. Used in conjunction with standard type steering gear.

See "Ford & Mercury Bendix" in Steering Section.

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Gemmer Worm & Roller (Type 305)" in Steering Section.*

Steering Gear Removal: *See "Gemmer Worm & Roller (Type 305)" in Steering Section.*

CONTINUED ON NEXT PAGE

Form 14A

CONTINUED FROM PRECEDING PAGE

BRAKES

Ford-Bendix Hydraulic (Single Anchor-with eccentric on front wheels, with eccentric on rear wheels). Hand lever applies rear wheel service brakes. *See "Ford, Lincoln, Mercury Bendix" in Brake Section.*

►*1955 FORD & THUNDERBIRD BRAKE LINING & REPLACEMENT CAUTION:* Later cars have "shorter" Primary Shoe Brake Lining and modified brake shoes to reduce any tendency toward pulling or diving when brakes applied. *See "Ford Bendix" in Brake Section for installation cautions.*

►*1955 FRONT WHEEL ADJUSTMENT NOTE: Eccentric has been moved from secondary shoe to primary shoe. Adjustment procedures are different for 1954 and 1955 models. See "Ford, Lincoln, Mercury Bendix" in Brake Section.*

►*1955 PARKING BRAKE "FIX" CORRECTION:* A new parking brake cable equalizer, Part No. B5A-2111-A, is available to correct permanent set of early brake cable equalizer. Before installing on a convertible, cut 1 5/8" from each end of equalizer.

►*1954 BRAKE DRUM INTERFERENCE CORRECTION (Sta. Wgn. & Sed. Del.):* Interference occurs between drum lugs and hand hole flange on wheel and does not allow wheel to seat flat against face of drum. Correct by grinding off outer edge of lugs (3) on an angle of 60° to braking surface of drum. *CAUTION–Do not grind corner of drum.*

Drum Diameter–10" (1954 Pass. Cars, Exc. Sta. Wgn. & Sed Del.) .11" (1954 Sta. Wgn. & Sed. Del. 1955 Pass. Cars, Sta. Wgn. & Sed. Del.).

Wheel Cylinder Diameter–1 1/8" (Front–All); 7/8" (Rear–Pass. Cars). 15/16" (Rear–Sta. Wgn.).

Lining Specifications

Car Model	Width	Thickness	Length
Pass. Car (Fr. Pri.)	2¼"	3/16"	10.84"
Pass. Car (Fr.Sec.)	2¼"	15/64"	10.84"
Pass. Car (Rear-All)	1¾"	3/16"	10.84"
Sta.Wgn.,Sed.Del. (Fr.Pri.)	①	7/32"	9.28"
Sta.Wgn.,Sed.Del. (Fr.Sec.)	①	7/32"	11.94"
Sta.Wgn.,Sed.Del. (Rr.Pri.)	②	7/32"	9.28"
Sta.Wgn.,Sed.Del. (Rr. Sec.)	②	7/32"	11.94"

①–2" (1954). 2¼" (1955). ②–1¾" (1954). 2" (1955).

Clearance–.010" at each end of both primary and secondary shoes. Maximum variation .003". *See Adjustment Change above.*

Brake Pedal Free Play Adjustment: ¼-7/16". If play not correct after brake adjustment, loosen locknut on the eccentric bolt that attaches brake pedal assembly to master cylinder pushrod, rotate eccentric bolt for desired clearance.

Standard Master Cylinder: Located on engine side of fire wall.

Checking Fluid–Maintain fluid level to within ½" of top of reservoir.

Removal–Disconnect brake line from master cylinder and depress brake pedal a few times to force out fluid. Disconnect wires leading to stop light switch, and remove eccentric bolt attaching master cylinder pushrod to brake pedal. Remove cap screws and lock washers attaching master cylinder to firewall.

Power Brakes: Midland Hy-Power Unit mounted on left side of car in engine compartment and connected in hydraulic brake line between master cylinder and wheel cylinders. There are no mechanical connections and adjustments are required.
See "Midland Power Unit" in Brake Section.

Checking Fluid–Same as for manual brakes (above).

Removal of Power Unit–Depress brake pedal a few times to remove all vacuum from system. Disconnect hydraulic lines at the power unit and remove wires from brake stop light switch. Remove power unit to mounting bracket bolts and lockwashers and remove the power unit.

MISC. MECHANICAL

Windshield Wipers: Vacuum link and crank arm type. *See "Windshield Wipers" in Miscellaneous Section.*

Power Window Regulators: Reversible motor in each window. *See "Electric Window Regulators" in Miscellaneous Section.*

►*POWER WINDOW REGULATOR RELAY FLUTTER CORRECTION See "Power Window Regulators" in Miscellaneous Section*

Power Top Control: Electric-Hydraulic with reversible pump motor. *See "Power Top Controls" in Miscellaneous Section.*

Power Seat Adjusters: Electric screw and jack type with individual motors and transmissions for vertical and horizontal adjustment. *See "Power Seat Adjusters" in Miscellaneous Section.*

Form 14B

MODEL IDENTIFICATION

VEHICLE NUMBER: Stamped on patent plate attached to left front door pillar and stamped on top of frame right-hand front cross member-to-side member reinforcement.
First Number—100001 up.

►*VEHICLE NUMBER NOTE:* Vehicle number (example *U4FG100001*) includes following identification data

Eng. Type ①	Year ②	Assy. Plant	Body Style ③	Serial No.
U	4	See Below	See Below	100001 up

①—**A**—6 Cyl. 223 cu. in. engine; **U**—8 Cyl. 239 cu. in. engine; **P**—8 Cyl. 256 cu. in. engine (Special Law Enforcement).

②—Last digit of model year.

③—**C**—Sunliner; **F**—Skyliner, **R**—Ranch Wagon (Customline); **S**—Sedan Delivery; **T**—Fordor (Crestline); **V**—Victoria; **W**—Ranch Wagon (Mainliner); **X**—Country Sedan; **Y**—Country Squire; **G**—All Others (Tudor, Fordor, Coupe—Mainline & Customline).

Assembly Plant Designation

A—Atlanta	**F**—Dearborn	**M**—Memphis
B—Buffalo	**G**—Chicago	**N**—Norfolk
C—Chester	**H**—Highland Park	**P**—St. Paul
D—Dallas	**K**—Kansas City	**R**—Richmond
E—Edgewater	**L**—Long Beach	**S**—Somerville
	U—Louisville	

TUNE-UP

COMPRESSION PRESSURE: 130 lbs. at cranking speed.

VACUUM READING: 18-21" idling at 500 RPM.

VALVE TAPPET CLEARANCE: .019" (intake & exhaust), with engine at normal operating temperature.
Tappet Adjustment—*See "Valve System" in Ford Special Data.*

MANIFOLD HEAT CONTROL: Automatic thermostatic type with counterweight. Valve on cars with single exhaust system is located on front end of right hand exhaust manifold. Cars with dual exhaust system, the valve is located in rear end of left hand exhaust manifold. Thermostat spring installed with ¾ turn-windup and hooked over stop pin. NOTE—When valve installed, stop pin should be at top.

►*MANIFOLD HEAT CONTROL VALVE CHANGE (To improve fuel distribution and minimize stalling due to icing):* New 1955 Manifold Heat Control Valve, No. B5A-9685-D, can be installed. Valve has increased spring tension and will provide more exhaust gas heat.

IGNITION

FIRING ORDER: 1-5-4-8-6-3-7-2.
Cylinders—RIGHT BANK 1-2-3-4, LEFT BANK 5-6-7-8.

SPARK PLUG GAP: .033-.037".
Spark Plugs—Champion H-10 14mm. Use Champion H-11 for slow or stop-and-go driving.

COIL: Ford No. 8BA-12029.
Ignition Current—2.75-3.0 amperes (idling), 5.0-5.5 amperes (stopped).

DISTRIBUTOR: Ford No. FAE-12127-A.
Condenser—FAB-12300-A. **Capacity**—.21-.25 mfd.
Contact Point Set—Ford No. FAB-12171-A (Std.). FAB-12171-B (Heavy Duty).
Breaker Gap—.014-.016".
Cam Angle—26-28° (58-63% dwell idling).
Breaker Arm Spring Tension—17-20 ozs.
Rotation—Counter-clockwise viewed from above.

Advance Performance
►With Distributor on Test Stand

Distr. Degrees	Vacuum (" of HG)	Dist. RPM
0	0	200
3¾-4¾	0.72	500
10-11	2.20	1000
12½-13½	3.46	1500
14-15½	4.40	2000

►*DISTRIBUTOR INSTALLATION CAUTION: Be sure oil pump tang engages slot in distributor shaft.*

IGNITION TIMING

►*TIMING CAUTION: Timing is different on Synchro-mesh and Fordomatic Drive Cars.*
Setting (Fordomatic Cars)—6° BTDC.
Setting (Synchro-mesh Trans. Cars)—3° BTDC. NOTE—Timing on synchro-mesh cars can be set up to 6° providing higher octane rating gasoline is used.
Timing Mark—On crankshaft pulley and pointer on front engine cover. Align pointer and timing mark. NOTE—Six timing marks (0°-2°-4°-6°-8°-10° BTDC) on dampener. Wide mark represents TDC.

CARBURETOR

Ford No. EBU-9510-E. Dual down-draft type. NOTE—Anti-stall dashpot used on Fordomatic Cars.

►*CARBURETOR INSTALLATION CAUTION:* Tighten carburetor hold-down bolts evenly to 12-15 ft. lbs. torque. Tightening one bolt completely would result in compressing spacer and cracking carburetor throttle body.

►*ACCELERATOR PEDAL ALIGNMENT NOTE: Clearance between brake pedal and accelerator pedal should be 1¾". If not correct, install one or two flat washers on left hand accelerator pedal bracket-to-floor pan bolt.*

►*ENGINE STALLING AT IDLE SPEED CORRECTION:* If engine stalls at idle speed when idle mixture setting is known to be correct, deviate from the specifications as follows:
Turn each idle mixture screw **out** 1/8th turn at a time until engine speed is reduced 25 RPM., then turn screw **in** until specified idle speed is obtained.
Idle Setting—Approximately one turn open. Set both screws for highest steady vacuum reading and highest engine RPM.
Idle Speed—475-500 RPM., (Std. Trans.). 445-455 RPM., (Fordomatic Trans.) with selector lever in "N" position.

Float Level: 1.275-1.305". Measured from bottom of float to underside of bowl cover with needle valve seated. Use Gauge No. T52L—9510AHD.

Accelerating Pump: Center hole average setting. Inner hole for hot weather, Outer for cold weather.

Fast Idle: Integral type. Operated by choke valve lever. No adjustment required.

Anti-Stall Dashpot (Fordomatic Cars): First adjust engine idle speed then turn engine off. Loosen dashpot adjusting screw locknut. Hold throttle in closed position and turn dashpot adjusting screw out (counter-clockwise) until head of adjusting screw pushes the dashpot rod up to the end of its travel. Turn dashpot screw in (clockwise) 1½-2 turns to obtain .045-.064" clearance. Tighten locknut.

Throttle Linkage Adjustment (Fordomatic Cars): *See "Fordomatic & Mercomatic" in Transmission Section.*

►*OTHER DATA: See "Holley-Ford Carburetors" in Carburetor Section.*

Fuel Pump Pressure: 4-5 lbs.

CARB. EQUIPMENT

Fuel Pump: Ford No. EAN-9350-A, Fuel only (Except Fordomatic & Overdrive Cars). EBY-9350-A, Fuel & Vacuum (Fordomatic & Overdrive Cars.)
Pressure—4-5 lbs.
See "Fuel Pumps" in Carburetion Equipment Section.

Gasoline Gauge: King-Seeley Electric.
Dash Unit—Ford No. FAG-9280-A.
Tank Unit—Ford No. FAA-9275-A (Exc. Sta. Wgn. & Sedan Delivery). No. FAA-9275-B (Sta. Wgn. & Sedan Delivery).
See "Fuel Gauges" in Carburetion Equipment Section.

BATTERY

Ford No. FDA-10655-A. 6 volt, 17 plate, 90 ampere hour capacity (20 hr. rate).
Battery Ground—Positive (+) to cylinder head.
Engine Ground—Cylinder head to dash.

STARTER

Ford No. FAC-11002-B. Armature—No. 52-11005.

►*STARTER DRIVE INTERFERENCE WITH FLYWHEEL RING GEAR (FORDOMATIC CARS):* Identified by coarse grinding noise when starting, and a wear pattern at bottom lands of drive gear. To correct, install starter, leaving mounting bolts loose. Insert edge of pry bar between starter flange and engine block, and pry starter away from block. Hold in this position and tighten bolts securely. If not corrected in this manner, it may be necessary to replace converter housing.

►*STARTER SEAL INTERFERENCE WITH FLYWHEEL CORRECTION (FORDOMATIC CARS):* Identified by coarse grinding sound or a "ticking" noise (similar to a loose tappet) when engine is running. Correct by installing a new starter seal.
Drive—Ford No. 1CM-11350-C. Bendix "Folo-Thru".
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—48-56 ozs.
Cranking Speed—100 RPM.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	①	6.0	70
16 ft. lbs.	Lock		700

①—With starter on engine and engine running.

►*STARTER INSTALLATION CAUTION:* Tighten top and bottom flange bolts first, then tighten the center or outer flange bolt. This will avoid misalignment and prevent noisy starter operation.

Starting Switch: Ford No. FAB-11450-B. Mounted on left front fender apron and controlled by Ignition Switch. NOTE—A Neutral Safety Switch is used on all models with Fordomatic.

Fordomatic Neutral Safety Switch: Ford No. FAC-15812-C
Adjustment—*See "Fordomatic & Mercomatic" in Transmission Section.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

GENERATOR

Ford No. FBC-10002-A. Armature—FBC-10005-A.

►*GENERATOR BELT WEAR & IMPROPER CHARGING RATE CAUTION:* If either of these two conditions are encountered, check to make sure a 6 Cyl. generator is not being used.

Performance Data

Generator	Amperes	Eng. RPM.
FBC-10002-A	35①	900

①—See Regulator for maximum charging rate.

Brush Spring Tension—30 ozs.
Field Current—1½-2½ amperes at 6.0 volts.
Rotation—Counter-clockwise at commutator end.

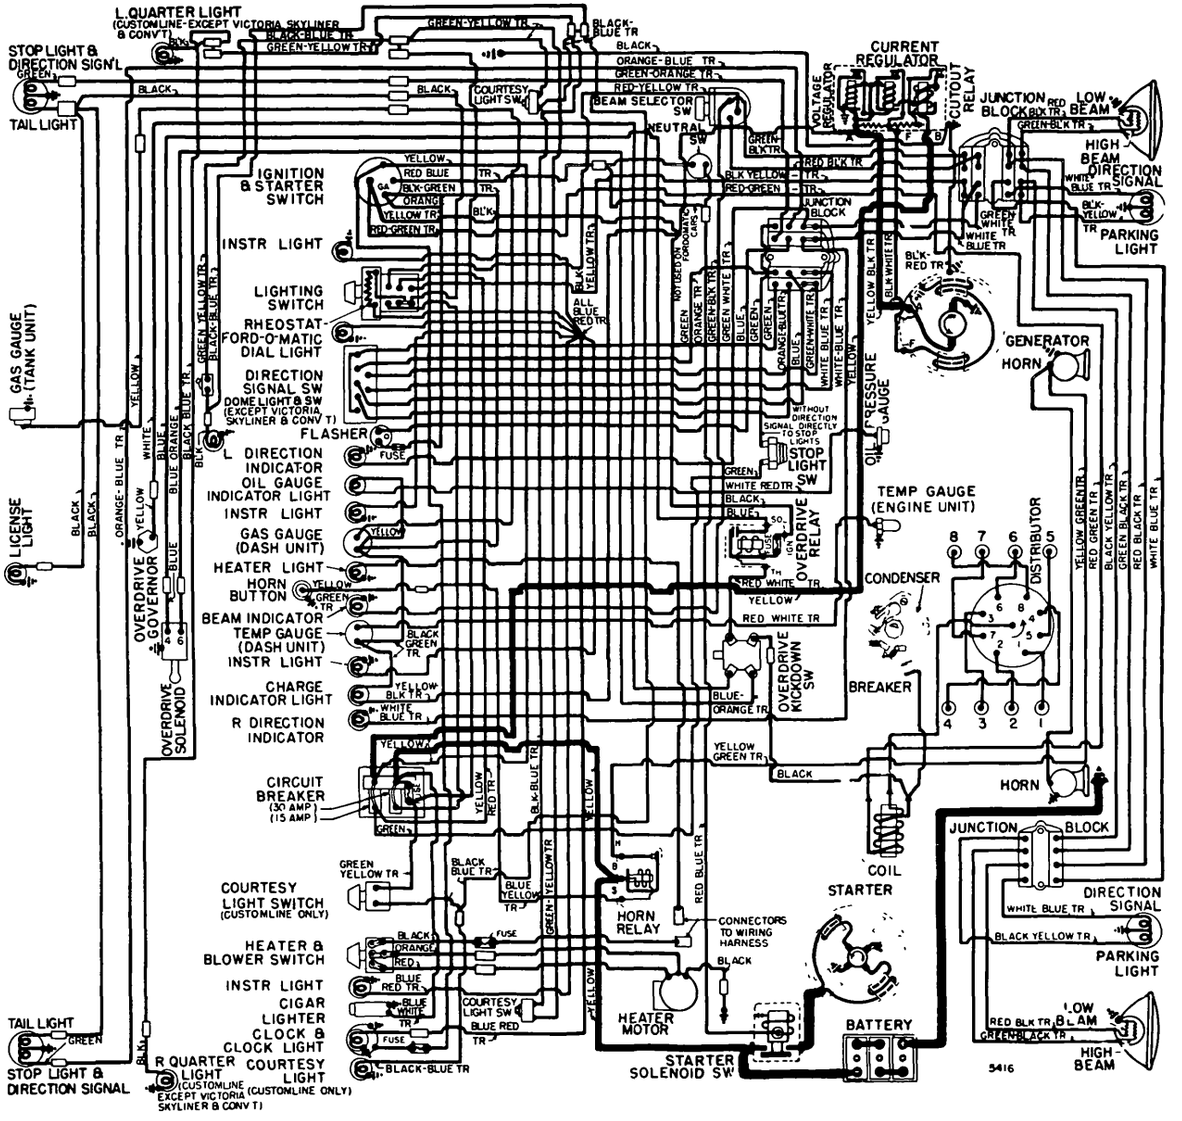
Belt Adjustment: ¼" belt deflection midway between generator and pump pulleys with normal thumb pressure.

REGULATOR

Ford No. FAC-10505-A.

►*SETTING NOTE:* Settings below are for regulator at NORMAL OPERATING TEMPERATURE (after ½ hour operation) with room temperature at 70-80°.

Cutout Relay



Cuts In—6.0-6.6 volts.

Voltage Regulator

Setting—7.5-7.8 volts.
Checking & Adjusting—*See Electrical Equip. Section.*

Current Regulator

Setting—34-38 amperes.
Checking & Adjusting—*See Electrical Equip. Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Equip. Section.*
Direction Signal: *See Electrical Equipment Section.*

►*DIRECTION SIGNAL FLASHER BURNING OUT CORRECTION:* Replace 14 amp. fuse with a 9 amp. fuse by making a 3/16" long spacer from ¼" copper tubing. Cut spacer lengthwise and place on wire so it will be between bottom of fuse holder and spring. Press sides of spacer together with pliers.

Lighting Switch Removal: With control knob in the "OFF" position, press the spring release button on switch housing, turn shaft slightly and pull it out of switch. Unscrew mounting nut with Tool 17470-N. Remove switch and disconnect all wires.

Stop Light Switch Location: On forward end of brake master cylinder (Conventional Brakes), and on top of brake booster assembly (Power Brakes). Master cylinder located on firewall in engine compartment.

FUSES: Located as indicated below:
Interior Lights—14 amps., on main circuit breaker.
Direction Signal—14 amps., in fuse holder between ignition switch and flasher. *NOTE—See "Direction Signal Flasher Burning Out Correction" above.*
Overdrive—30 amps., on overdrive relay.
Cigar Lighter—Special fuse in lighter base.
Clock—3 amps., in clock lead.
Heater—14 amps., in blower switch wire.

CIRCUIT BREAKERS: Two circuit breakers on a single panel located behind instrument panel. Upper circuit breaker protects tail & stop light circuits, and lower circuit breaker protects headlamp circuit.

HORNS: Ford No. FAC-13832-E or F (High Pitch), FAB-13833-F or G (Low Pitch). Dual horns operated by relay.
Horn Current—13 amps. (high pitch), 14 amps. (low pitch).
Horn Relay: Ford No. FAA-13853-A.

ENGINE

►*ENGINE FRONT COVER OIL LEAK CORRECTION:* Install gasket Part No. B4A-6020-A (.020" thicker than previous gasket), to correct oil leaks or whenever front cover is removed. Coat both sides of gasket with sealing compound.

►*CYLINDER HEAD PRODUCTION CHANGE:* A new cylinder head, Part No. B4A-6049-A or EBU-6090-B, identified by EBU-6090-B cast in side and top of head, used in later production cars. *CAUTION—LATER TYPE GASKET MUST BE USED WITH THIS HEAD. See "Cylinder Head Gasket Caution" below.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

ENGINE SPECIFICATIONS: Own 90° V8.
Bore—3.50". **Stroke**—3.10"
Displacement—239 cu. in. **Rated H.P.**—39.2.
Developed Horsepower—130 at 4200 RPM.
Compression Ratio—7.2-1.
Compression & Vacuum Reading—*See Tune-Up.*

CYLINDER HEAD: *See Ford Special Data.*

►*CYLINDER HEAD GASKET CAUTION:* Later type gasket Part No. B4A-6051-A (identified by **elongated core hole** sealing area on outer edge of gasket on piston side between center piston holes), can be used with either early or late type heads. Early gasket Part No. EBU-6051-E (identified by **round hole** sealing area in same location as above), must NOT be used with later type head.

►*CYLINDER HEAD GASKET INSTALLATION CAUTION:* Gaskets are stamped on one side with the words "RIGHT FRONT". When installing gasket on **right hand** side of cylinder block, wording should be **upward** and toward front of engine. When installing on **left hand** side, wording should be **downward** and toward front of engine.

TIGHTENING TORQUES: *See Ford Special Data.*

ENGINE REMOVAL: *See Ford Special Data.*

OIL PAN REMOVAL: *NOTE—Later type oil pan has single piece oil pump screen cover and inlet tube assembly.* To remove oil pan rotate engine to place #1 piston on TDC. Drain oil and remove engine front splash pans and oil pan-to-oil pump pipe (early type pans), disconnect oil pipe at oil pump (later type pans). On Fordomatic Transmission cars, remove converter housing dust cover. Remove oil pan.

PISTONS

Autothermic type. Solid skirt with three rings above pin.
Removal—Pistons and rods removed from above.

Fitting New Pistons: Use ½" feeler gauge inserted between piston and cylinder wall at right angles to pin on thrust side. Feeler thickness as follows
New Piston in New Bore—.0015" feeler. 5-10 lbs. pull.
New Piston in Used Bore—.002" feeler. 5-10 lbs. pull.
Used Piston in Used Bore—.0025" feeler. 5-10 lbs. pull.

Replacement Pistons: Standard size, .020", .030", .040", .060" Oversize. Pistons furnished only with fitted pins.

Installing Pistons: Install with small indentation in head toward FRONT of engine.

PISTON PINS

Floating type with lock rings at each end.
Diameter—.9120-.9123". **Length**—2.9820".
Pin Fit in Piston—Hand push fit at 70° F.
Pin Fit in Rod Bushing—.0001-.0003" clearance. New pin should not fall through of own weight.

Replacement Pins: Standard size, .001", .002" Oversize.

PISTON RINGS

►*SPECIAL SERVICE PISTON RING SETS (To Reduce Possibility of Excessive Oil Consumption):* The following "Special Service" piston ring sets are available in addition to the "Expander" & "Snap Ring" type service replacement rings B4A-6149-ABA (Pass. Cars only), has "Unitized" oil ring. B4A-6149-ACA (Pass. Cars & Trucks) has "Steel Section" oil ring. B4A-6149-ADA (Pass. Car & Truck) has "Steel Rail" oil ring.

Ring	Width	End Gap	Side Clearance
Compr. #1	3/32"	.010-.027"	.002-.0035"
Compr. #2	3/32"	.010-.027"	.002-.0035"
Oil	3/16"	.010-.027"	.0015-.003"

Replacement Rings: Standard size, .020", .030", .040", .060" Oversize.

►*REPLACEMENT PISTON RING NOTE:* "Snap-Type" rings furnished in Std. size only. "Expander" type furnished in all above oversizes *See "Special Service Piston Ring Sets" above.*

CONNECTING RODS

►*1954 V8 CONNECTING ROD & BEARING PRODUCTION CHANGE & REPLACEMENT PARTS CAUTION* Late-production connecting rods have an oil hole (for cylinder lubrication) located on the same side as the bearing notch. Early type bearings, with one oil hole MUST NOT BE USED with the later type rod. Later type bearings may be used with either the old or new rod as they have two oil holes and will fit either rod.
Length—6 21/64". **Weight**—24.06 ozs.
Crankpin Journal Diameter—2.1880-2.1888".
Lower Bearing—Steel backed, copper lead alloy lined type. Upper and lower halves interchangeable.
Clearance—.0005-.0021".
Side Clearance—.006-.016" (two rods).

Replacement Bearings: Standard size (4 sizes marked **red** & **blue** for selective fitting) and .010", .020", .030" Undersize.

Installing Rods: Oil squirt hole in rod toward camshaft side of bore on all rods. Numbers on rods and bearing cap should be together and installed in same numbered cylinder.

CRANKSHAFT

►*CRANKSHAFT & FLYWHEEL PRODUCTION CHANGE:* Later type parts are interchangeable with previous parts except that later crankshaft cannot be used with early flywheel unless inner edge of bore in flywheel is chamfered 1/16" x 45° to eliminate crankshaft-to-flywheel interference. This operation can be accomplished with a bearing scraper.
Journal Diameter—2.4980-2.4988". Max. wear limits .0015", taper .001".
Bearings—Steel backed, copper lead alloy lined.

Replacement Bearings: Standard size, (4 sizes marked **red** & **blue** for selective fitting) and .010", .020", .030" Undersize.

End Thrust: Taken by No. 3 main bearing. Replace bearing if endplay excessive.
Thrust Bearing Alignment—*See "Crankshaft & Main Bearings" in Ford Special Data.*
Endplay—.002-.006".

Crankshaft Rear Oil Seal Installation: *See "Crankshaft & Main Bearings" in Ford Special Data.*

►*CRANKSHAFT REAR BEARING OIL SEAL PRODUCTION CHANGE: New type oil seal and oil seal retainer used in later production and is not interchangable with early engines. See Ford Special Data.*

CAMSHAFT

►*1954 239" & 256" ENGINE CAMSHAFT BEARING CHANGE (To prevent oil starvation due to improperly installed front bearing)* On engines equipped with the "ECE" camshaft, new front camshaft bearings have been released for service replacement (Part No. B4C-6261-A, Standard B4C-6261-B, .015" undersize). The later bearings have a slot instead of a 1/8" diameter oil hole. When installing the new bearing make sure that the slot is aligned with hole in cylinder block bore and that the bearing is pressed .005-.020" into cylinder block camshaft bearing bore to eliminate interference with camshaft thrust plate.
Journal Diameter—1.9255-1.9265" (new), 1.924" (worn limit)
Clearance—.001-.003" (new), .005" (worn limit)

End Thrust: Taken by plate on forward end of block (between camshaft sprocket and shoulder on block).
Endplay—.003-.006".

Replacement Camshaft Bearings: Finished bearings furnished Standard, .015" Undersize. *CAUTION—Oil holes in bearings must be lined up correctly. See Ford Special Data.*

Camshaft Removal & Installation: *See "Camshaft & Bearings" in Ford Special Data.*

Timing Chain Side-guide type. Length 56 links.

►*REPLACEMENT NOTE* Replace chain and sprockets when deflection on slack side exceeds ½" (take up all slack on driving side, measure slack on opposite side).

Camshaft Setting: *(NOTE—Two types of timing chains used which have different index marks).* **"Brass disc"** type has a brass link pin washer which should be placed next to marked camshaft sprocket tooth (away from opposite sprocket). **"Punched link"** type has a hole punched in center of link which should index with marked tooth on camshaft sprocket. Place #1 piston on TDC (firing position). Place timing chain over camshaft and crankshaft sprockets, making sure that timing marks on sprockets are lined up adjacent to marks on timing chain. Align camshaft and crankshaft keys so that both timing chain sprockets and timing chain can be installed simultaneously.

VALVES

►*1954 VALVE PUSHROD BENDING & ROCKER ARM BREAKAGE CORRECTION* If this condition is encountered at sustained speed over 40-50 MPH, check the guide clearance on the valve in question. The clearance should be .001"-.002" (intake), and .002"-.003" (exhaust). The above condition is usually encountered when less than minimum clearance is provided. Ream valve guides as necessary to provide proper clearance.

►*EXHAUST VALVE STEM DIAMETER CHANGE (Production & Service Replacement Valves): Stem diameter decreased .0005" for greater clearance in guide. See "Valve System" in Ford Special Data.*

Tappet Clearance: .019" (Intake & Exhaust), with engine at normal operating temperature. *NOTE—Valve tappet clearance on truck engines is different.*

Tappet Adjustment—*See "Valve System" in Ford Special Data.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Valv	Head Diam.	①St m Diam.	L ngth
Intake	1 652"	3415"	5 02"
Exhaust	1.515"	.3405"	5.02"

Valv	S at Angl	②Lift	Stem Clearance
Intake	45°	.345"	.004" max.
Exhaust	45°	.345"	.005" max.

①—Valves furnished with .003", .015", .030" Oversize stems for service replacement. See "Valve System" in Ford Special Data.

②--Minimum lift for checking camshaft lobe wear.

Valv Seat Width—.060-.070" (Intake). .070-.080" (Exhaust).

►*ROTATABLE VALVE NOTE All valves are rotatable type. Se "Valve System" in Ford Special Data.*

Valv St m Oil Seals—"Umbrella" type oil seals used on intake & exhaust valve stems. Seals are installed with cupped side down on valve stem at guide boss on cylinder head. *Install new seals whenever valves remov d or when s als become loose on valve stems.*

Valv Springs: Install with closed coil end toward cylinder head.

Valv Spring Specifications

	Pressure	Length
Valve Closed	54-62 lbs.	1 821"
Valve Open	124-140 lbs.	1.505"

Valv Guid s: Integral with cylinder head. When stem-to-guide clearance exceeds maximum (.004" Intake, .005" Exhaust), ream guides and install oversize valves. *S "Valv System" in Ford Special Data.*

Valv Lift rs: Mushroom type. Removed from below with camshaft removed.

►*1954 V8 ENGINE TAPPET REPLACEMENT CAUTION·* The cast iron tappet, Part No. EAA-6500-C should no longer be used as service replacement on V8 engines as these tappets may contribute to camshaft lobe wear Install tappet, Part No EAA-6500-D (steel forging) which can be identified by forging marks on outer edge of tappet foot The tappet foot is 140" thick as compared to 220" thickness of the cast iron tappet foot

R ck r Arm Ass mbly: *See "Valve System" in Ford Sp cial Data.*

►*ROCKER ARM COVER OIL LEAKAGE CORRECTION·* Cover may be slightly shallow requiring the use of an additional washer under the acorn nut to firmly seat cover on cylinder head.

VALVE TIMING

S e "Camshaft S tting" under CAMSHAFT above.

Intak Valv s—Open 8° BTDC. Close 44° ALDC.

Exhaust Valv s—Open 47° BLDC. Close 5° ATDC.

OILING SYSTEM

►*ENGINE OILING SYSTEM See "Engine Lubrication" under OILING SYSTEM in Ford Special Data*

►*1954 239" & 256" ENGINE SERVICE REPLACEMENT OIL PUMP CHANGE & INSTALLATION CAUTION·* A new pump, Part No. EAM-6600-A, with steel gears is available for service replacement The pump is furnished in Kit No B5A-6600-C which includes a pump and spring When installing pump on these engines, remove the Relief Valve Spring from the pump and replace it with the spring, Part No. EBU-6670-A, found in the box

►*1954 V8 ENGINE OIL PUMP FAILURE CORRECTION (Due to oil pan-to-oil pump tube seal breaking off)·* In some cases the tube is too short and when the retaining nut is tightened excessively, the seal is squeezed over the edge of the tube which cuts to seal Always lubricate the seal with engine oil prior to installation, and tighten the retaining nut just enough to ensure against leakage

Crankcase Capacity: 5 qts. (refill)

Normal Oil Pressure: 45-55 lbs. at 30-40 MPH

Pressure Regulator Valve—In pump body, not adjustable.

Oil Pressure Indicator—Indicator light on instrument panel, operated by Engine Unit—Ford No. FDA-9278-A (Stamped #7 on Hex.) Lights when ignition switch turned on, goes out when engine starts and pump operates.

Oil Pump: Gear type pump located on left side of engine crankcase, driven by distributor drive gear.

Pump Overhaul—*See "Oil Pump" in Ford Special Data.*

Oil Filter: Full-flow type (Std. Equip.) with pressure relief valve in center filter bolt. Replace filter element at 4000-5000 miles or when oil becomes dirty or polluted.

Replacement Filter Element—Ford No. B2A-6731-A (Kit includes new gaskets).

►*CAUTION: This special Full-flow filter element must be used for replacement(use of by-pass type element would restrict oil flow and result in insufficient engine lubrication.*

►*FILTER INSTALLATION CAUTION & OIL LEAKAGE CORRECTION· See "Oiling System" in Ford Special Data*

Crankcase Ventilation: Filter in oil filler cap (inlet) with outlet pipe in rear of crankcase on right side of engine.

►*CRANKCASE VENTILATOR OIL LEAKAGE CORRECTION* Install gasket, Part No. B4A-6872-A, which is a firmer type neoprene gasket and will not distort when tightened.

COOLING

►*TEMPERATURE GAUGE FALSE READING CORRECTION* In cases where heat indicator shows a reading higher than actual water temperature, check water temperature gauge bulb on engine to see that it is not contacting a casting flash inside cylinder head. Remove flashing with a rat tail file.

►*RESTRICTED WATER PUMP BY-PASS CAUTION* A restricted or blocked passage caused by casting flash will retard or decrease the flow of water in engine when thermostat is closed. Check for this condition by listening for a gurgling sound when engine is stopped after a short period of operation. If noise is heard, remove water by-pass tube and inspect for a restricted opening in water pump housing. If necessary, remove pump and drill opening with a 19/32" drill.

Water Capacity: 20 qts. (without heater), 21 qts. (with heater).

Pressure Valve: Ford No. 1M-8100-A. Radiator filler cap cap (7# type), opens at 6¼-7¾ lbs.

Th rm stat: Ford No. B4A-8575-A (160°), No. B4A-8575-B (180° used with permanent anti-freeze). Mounted inside water outlet elbow on forward end of intake manifold. *NOTE—Th abov thermostat replaces type formerly us d.*

Wat r Pump: Packless, sealed ball bearing type.

See "Water Pumps" in Ford Special Data

Temperature Gauge: King-Seeley Electric.

Dash Unit—Ford No. FDA-10883-A.

Engine Unit—Ford No. 1A-10884-A.

Temperature Bulb Sleeve Removal—Thread adapter handle of tool T50T-100-A into sleeve. Tighten locknut against sleeve, then pull sleeve with sliding hammer.

See "Temperature Gauges" in Miscellaneous Section.

CLUTCH

Long Model 9½ CF-TS. Ford No. 1A-7563-A.

See "Long Clutches" in Clutch Section.

►*CLUTCH RELEASE BEARING NOISE CORRECTION: Check release bearing hub shoulder for a second "st p" that prevents bearing from seating properly. Corr ct by replacing hub.*

►*CLUTCH GRATING NOISE CORRECTION:* Retracting spring reversed and rubbing on steering housing. Long end of spring should be toward front of car.

Clutch Disc No.—Ford No. 8HA-7550-B.

Pedal Adjustment: If total pedal travel is less than 6 3/8" or more than 6 5/8", reposition pedal bumper until travel is within limits.

Pedal Free Travel—7/8-1 1/8". Loosen clutch pedal release rod locknut (lower end) and turn adjusting nut for correct free travel, tighten locknut.

Removal: Remove transmission (see Transmission Removal below), and slide clutch release bearing off clutch release lever. Disconnect clutch pedal release rod from clutch release lever assembly. Remove clutch release equalizer bar bracket from flywheel housing and remove equalizer bar. Remove split bronze bushing from bracket and then remove flywheel housing. Install Tool 7563 and remove clutch pressure plate assembly (if tool not available, clutch may be released by backing off the attaching bolts evenly). Remove clutch release bearing from hub with an arbor press.

SYNCHRO-MESH TRANSMISSION

Own. Helical gear, constant mesh, synchro-mesh (second & high), sliding gear (low & reverse).

See "Ford Synchro-mesh" in Transmission Section.

Transmission Control: *See "Transmission Controls" in Transmission Section.*

►*GEAR CLASHING CORRECTION (Shifting from Neutral-to-Low or Reverse):* Check operation by depressing clutch pedal and allowing sufficient time for input shaft to stop rotating. If clash still occurs, check fit of clutch disc hub on input shaft. If it binds on shaft, apply lapping compound to input shaft and lap hub to shaft. If condition continues to exist, it will be necessary to select-fit clutch disc and input shaft. *CAUTION—Reducing clutch free-play below specified limits will not correct condition.*

Transmission Control: *See "Transmission Control" in Transmission Section.*

R m val: Disconnect rear universal, slide propeller shaft out of transmission. Disconnect clutch, transmission

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

and speedometer linkage. Support rear of engine and disconnect rear engine mounting from frame. Take out 4 transmission-to-flywheel housing capscrews and remove transmission.

OVERDRIVE

Warner Model A54-R10F. Solenoid operated type, with governor control and throttle operated kick-down. Lock-out Switch not used on this model.

See "Warner R10 Overdrive" in Transmission Section.

Overdrive Control: *See "Overdrive Control" in Transmission Section.*

Removal: Same as for Synchro-mesh Transmission (above) after disconnecting control cable and wiring.

FORDOMATIC TRANSMISSION

Torque converter and three speed automatic transmission with hydraulic control and mechanical parking lock.

►*FORDOMATIC "WHISTLING" NOISE CORRECTION: This condition may occur during normal engine operation. See "Fordomatic & Mercomatic" in Transmission Section.*

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Fordomatic & Mercomatic" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Fordomatic & Mercomatic" in Transmission Section.*

Lubrication—Check transmission oil level every 1000 miles and maintain oil level at "Full" mark on dipstick. Drain & refill every 15,000 miles. **Use only Automatic Transmission Fluid Type A.**

Checking Fluid Level—Apply parking brakes, place transmission selector lever in "N" (Neutral) position, run engine at idle speed for approximately four minutes. With engine and transmission at normal operating temperature and idling, move selector lever through all positions to distribute fluid through transmission. Return selector lever to "P", check fluid level on dipstick in filler cap in engine compartment. Maintain level at "Full" mark on dipstick.

►*OTHER FORDOMATIC SERVICE DATA: See "Fordomatic & Mercomatic" in Transmission Section.*

UNIVERSALS

Mechanics. Roller bearing type.

►*CAUTION (All Cars Except Station Wagon & Sedan Delivery): Rear universal joint companion flange nut controls pinion bearing pre-load (must be adjusted whenever nut is loosened). See "Ford & Mercury (Separate Carrier)" in Rear Axle Section.*

REAR AXLE

PASSENGER CARS

Own. Separate Carrier, semi-floating hypoid, with Hotchkiss drive.

See "Ford & Mercury (Separate Carrier)" in Rear Axle Section.

Ratios

Standard Transmission—3.90-1 (39-10).
Overdrive Transmission—4.10-1 (41-10).
Fordomatic Transmission—3.31-1 (43-13). ①

①—3.54-1 (39-11) Optional.

►*AXLE CARRIER & GEAR RATIO IDENTIFICATION: Carrier housing stamped with ring gear & pinion gear ratio (10/39 for 3.90-1 ratio, etc.).*

Backlash—.003-.008".

Axle Shaft Removal: Remove wheel, take off drum, Remove four axle retainer locking type nuts (work through opening in axle shaft flange). Use Puller No. 4235-N and pull shaft (do not disturb brake backing plate or damage wheel bearing oil seal). Replace one nut to secure brake backing plate.

Carrier Assembly Removal: Disconnect rear universal. Remove axle shaft (see above). Remove carrier from housing.

Wheel Bearing Adjustment: None required.

SEDAN DEL. & STATION WGN.

Own. Integral Carrier. Semi-floating hypoid, with Hotchkiss drive.

See "Lincoln, Mercury, Ford (Integral Carrier)" in Rear Axle Section.

Ratios

Standard Transmission—4.09-1(45-11).
Overdrive Transmission—4.27-1 (47-11).
Fordomatic Transmission—3.54-1 (39-11).

Axle Shaft Removal: Same as Pass. Cars (above).

Rear Axle Assembly Removal: Raise rear end of car and disconnect rear universal. Remove axle shafts. Disconnect brake lines at "T" on left side of axle housing. Disconnect hand brake cable, shock absorbers, spring U-bolts and shackles. Remove axle housing assembly from car.

SHOCK ABSORBERS

Direct acting, non-adjustable. Service by replacement.

Model	Front	Rear
Pass. Cars (Std.)	B4A-18124-D	B4A-18125-A
Pass. Cars (Hvy. Duty)	B4A-18124-F	B4A-18125-C
Sta. Wgn. & Sed. Del.	B4A-18124-E	B4A-18125-B

FRONT SUSPENSION

Independent. "Ball Joint" suspension with direct acting shock absorbers mounted within front coil springs. *See "Lincoln, Mercury, Ford (Ball-Joint)" in Front Suspension Section.*

►*LOWER ARM BUMPER INSTALLATION CAUTION:* Right and left hand bumpers are different and must be installed in the correct position.

Kingpin Inclination—6° minimum, 7° maximum, crosswise.

Caster—0° to Pos. 1°. Maximum variation between wheels ½°

Camber—Pos. ¼° to Pos. 1¼°. Maximum variation between wheels ¼°.

Toe-In—1/16" to 1/8".

STEERING

MANUAL: Own (Gemmer 305 Design). Worm & Roller type. *See "Gemmer Worm & Roller (Type 305)" in Steering Section.*

Power Steering: Ford-Mercury Linkage type. Used in conjunction with standard type steering gear.

See "Ford & Mercury Power Unit" in Steering Section.

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Gemmer Worm & Roller (Type 305)" in Steering Section.*

Steering Gear Removal: *See "Gemmer Worm & Roller (Type 305)" in Steering Section.*

BRAKES

Ford-Bendix Hydraulic (Single anchor—with eccentric on front wheels, without eccentric on rear wheels). Hand lever applies rear wheel service brakes. *See "Ford, Lincoln, Mercury Bendix" in Brake Section.*

►*BRAKE DRUM INTERFERENCE (Sta. Wgn. & Sed. Del.):* Interference occurs between drum lugs and hand hold flange on wheel and does not allow wheel to seat flat against face of drum. Correct by grinding off outer edge of lugs (3) at an angle of 60° to braking surface of drum. *CAUTION—Do not grind corner of drum.*

Drums—Diameter 10" (Pass. Cars). 11" (Sta. Wgn. & Sed. Del.).

Wheel Cyl. Diameter—1 1/8" (Front). 7/8" (Rear).

Lining—Molded type riveted to shoe.

Width—2¼" (Front, Pass Cars.). 2" (Front, Sta. Wgn. & Sed. Del.). 1¾" (Rear, All Models).

Thickness—(Pass. Cars) 3/16" (Exc. Front Whl. Secondary). 15/64" (Front Whl. Secondary). **Sta. Wgn. & Sed. Del. 7/32"** (All Shoes).

Length—10.84" (Pass. Cars—All Shoes). 9.28" (All Primary Shoes—Sta. Wgn. & Sed. Del.). 11.94" (All Secondary Shoes—Sta. Wgn. & Sed. Del.).

Clearance—.010" at each end of both primary and secondary shoes. Maximum variation .003".

Brake Pedal Free Play Adjustment: 1/4-7/16". If play not correct after brake adjustment, loosen lock nut on the eccentric bolt attaching brake pedal to master cylinder pushrod, rotate eccentric bolt.

Standard Master Cylinder: On engine side of firewall.

Checking Fluid—Maintain fluid level to within ½" of top of reservoir.

Removal—Disconnect brake line from brake master cylinder and depress brake pedal a few times to force out fluid. Disconnect wires leading to stop light switch, and remove eccentric bolt attaching master cylinder pushrod to brake pedal. Remove capscrews and lock washers attaching master cylinder to firewall.

Power Brakes: Midland Hy-Power Unit mounted on left side of car in engine compartment and connected in hydraulic brake line.

See "Midland Power Unit" in Brake Section.

Removal of Power Unit—Depress brake pedal a few times to remove all vacuum from system. Disconnect hydraulic lines at the power unit and remove wires from brake stop light switch. Remove power unit to mounting bracket bolts and lockwashers.

MISC. MECHANICAL

Windshield Wipers: Vacuum link and crank arm type. *See "Windshield Wipers" in Miscellaneous Section.*

Window Regulators: Reversible motor in each window. Two types used. *See "Electric Window Regulators" in Miscellaneous Section.*

Power Top Control: Electric Hydraulic with reversible pump motor. *See "Power Top Controls" in Miscellaneous Section.*

Power Seat Adjusters: Electric screw and jack type *See Miscellaneous Section for complete data.*

►*AIR CONDITIONED CAR SERVICE CAUTION Before disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous S ction.*

MODEL IDENTIFICATION

VEHICLE NUMBER: Stamped on patent plate attached to left front body pillar below upper hinge opening
First Numb r—100001

►*VEHICLE NUMBER NOTE* Vehicle number (example *P5FV100001*) includes following identification data

Eng. Typ ①	Y ar②	Assy. Plant	Body Style③	Serial No.
P	5	See below	See below	100001 up

①—**A**—6 Cyl 223 cu in engine, **U**—8 Cyl 272 cu in. engine, **P**—8 Cyl 292 cu in engine (Special Law Enforcement & Thunderbird)
②—Last digit of model year
③—**C**—Sunliner, **F**—Skyliner, **H**—Thunderbird, **R**—Ranch Wagon, **S**—Sedan Delivery, **T**—Fordor & Tudor (Fair lane), **V**—Victoria, **W**—Special Body (Solid top), **X**—Country Sedan, **Y**—Country Squire, **G**—All Other (Fordor, Tudor, Mainline & Customline).

Ass mbly Plant Designation

A—Atlanta	**F**—Dearborn	**N**—Norfolk
B—Buffalo	**G**—Chicago	**P**—St. Paul
C—Chester	**K**—Kansas City	**R**—Richmond
D—Dallas	**L**—Long Beach	**S**—Somerville
E—Edgewater	**M**—Memphis	**U**—Louisville

TUNE-UP

►*FORD & THUNDERBIRD V8 ENGINE ROUGH IDLE· Can usually be corr cted by this procedure*
1) Tapp t Cl aranc Adjustment—Adjust using "GO" and "NO GO" gauges (below)
2) High T nsi n Coil & Spark Plug Cable Installati n—If wires loosen at coil and plug connections, check location of pressure relief hole in boot. If hole too low, pierce new .062" hole in side of boot 1/2-3/4" above lower edge of boot
3) Carbur t r Fu l Level—Check for fluctuations caused by burrs or rough spots on float hinge or pin, worn or ridged fuel inlet needle or seat and leakage, or incorrect float setting *See "Holley (Ford) Dual" and "Holl y (Ford, Lincoln, Mercury) 4-Barrel" in Carbur tion S ction for checking procedure and float and fuel lev l specifications.*

COMPRESSION PRESSURE: 130 lbs (Except Special), 140 lbs. (Special)

VACUUM READING: 18-21" idling at 500 RPM

VALVE TAPPET CLEARANCE· .019" (intake & exhaust), with engine at normal operating temperature. *NOTE*—Adjust with engine hot and idling, use .018" feeler as "GO", .020" feeler as "NO GO" gauge. This will insure tappet clearance being .019"±.001".
Tapp t Adjustm nt· *See "Valve System" in Ford Special Data*

MANIFOLD HEAT CONTROL: Automatic thermostatic type Located at front end of right exhaust manifold (Single Exhaust), rear end of left exhaust manifold (Dual Exhaust) Install spring with ¾ turn windup. *NOTE*—Stop pin should be at top with valve installed.

►*MANIFOLD HEAT CONTROL PRODUCTION CHANGE* **(272 Engin with Singl Exhaust):** New Manifold Heat Control Valve, No B5A-9658-D can be installed. Valve has increased spring tension and will improve fuel distribution and minimize stalling (due to icing) by providing more exhaust gas heat

IGNITION

FIRING ORDER: 1-5-4-8-6-3-7-2.
Cylinders—RIGHT BANK 1-2-3-4, LEFT BANK 5-6-7-8.
SPARK PLUG GAP: .032-.036"
Spark Plug—Champion 870. 18mm Special

►*SPARK PLUG CAUTION· Spark plug is new type with tapered seat and does not require a sealing gasket. It is important that plugs tightened to 15-20 ft. lbs.*

COIL: Ford 8BA-12029. On engine at distributor.
Ignition Current—3.0 amps idling, 5.0 stopped.

DISTRIBUTOR: Ford. Used as follows:

	Distributor No.
272 (Std.-2-barrel Carb.)	B5A-12127-B
272 (Special—4-Barrel Carb.)①	③ FEC-12127-A
272 (Special—4-Barrel Carb.)②	⑨ B5A-12127-F
292 (Interceptor)①	③ B5S-12127-D
292 (Interceptor)②	⑨ B5S-12127-E

①—Early Cars ②—Later Cars. ③—See Distributor Modification (below) ⑨—Modified Distributors (with new spring combination for the Distributor Modification.

►*DISTRIBUTOR MODIFICATION & PRODUCTION CHANGE (Distr Nos. FEC-12127-A & B5S-12127-D on Early 272 Special & Interceptor 292 Engines):* To minimize detonation, particularly in areas where fuel octane rating is below average, above distributors can be modified by replacing secondary spring (nearest vacuum chamber) with new spring No 8EQ-12225, and recalibrating distributor advance as indicated in MODIFIED Advance Performance Table below *NOTE*—Later B5A-12127-F & B5S-12127-E Distributors have this new spring and MODIFIED advance performance

►*CAUTION:* Above modification must NOT be made on 272 Std. Engine Distr. B5A-12127-B (will result in excessive spark advance and cause detonation).
Condenser—Ford FAB-12300-A. **Capacity** .21-.25 mfd.
Contact Point Set—Ford FAB-12171-A (B5A-12127-B Distr.), FAB-12171-B (All Others)
Breaker Gap—.014-.016".
Cam Angle—26-28½°.
Breaker Arm Spring Tension—17-20 ozs.
Rotation—Counter-clockwise viewed from above.

Advance Performance
Distributor No. B5A-12127-B
►With Distributor on Test Stand

Distr. Degrees	Vacuum ("of HG)	Distr. RPM
0	15	300
1½-2½	4.40	500
9½-10½	1.58	1000
12¾-14	3.13	1500
15¼-16½	4.60	2000

Distr. FEC-12127-A & B5S-12127-D (Orig.)
►With Distributor on Test Stand

Distr. Degrees	Vacuum (" of HG)	Distr. RPM
0	0	200
½-1½	19	300

9½-10½	1.27	1200
11¼-12¼	1.59	1500
14-15¼	2.19	2000

►*DISTRIBUTOR INSTALLATION CAUTION: Make sur oil pump intermediate shaft properly engages distributor shaft. It may be necessary to turn over the engin with starter, after distributor drive gear is partially engaged, to engage distributor intermediate shaft.*

IGNITION TIMING

►*TIMING CAUTION: Timing is different on Synchromesh and Fordomatic Drive Cars.*
Setting (Fordomatic Cars)—6° BTDC.
Setting (Synchro-mesh Trans. Cars)—3° BTDC. NOTE—Timing on synchro-mesh cars can be set up to 6° providing higher octane rating gasoline is used.
Timing Mark—On crankshaft pulley and pointer on front engine cover Align pointer and timing mark. NOTE—six timing marks (0°-2°-4°-6°-8°-10°-BTDC) on dampener Wide mark represents TDC

CARBURETOR

►*FORDOMATIC THROTTLE LINKAGE PRODUCTION CHANGE & NO DOWNSHIFT CORRECTION (Early Cars)* To correct "No Downshift" condition on cars built prior to January 12, 1955, a new transmission control shaft-to-accelerator rod, Part No B5A-9784-F, and a new control shaft, Part No B5S-77230-F, are available. New parts eliminate bend or twist in bellcrank portion of transmission control shaft and bracket assembly Cars built after January 12, 1955 have new parts installed

►*THUNDERBIRD ACCELERATOR ASSEMBLY PRODUCTION CHANGE (To Correct Permanent Set)* New accelerator assembly, Part No B5S-9725-B, available to replace assembly, Part No B5S-9725-A, which was found to take a permanent set under operating load conditions

►*CARBURETOR APPLICATION Two-barrel and four-barrel carburetors used on 272 Cu. In. Engine. Four-barrel carburetors used on 292 Cu. In. Engine.*

►*ACCELERATOR ROD-TO-BELL CRANK CONNECTING LINK CORRECTION (To Prevent Linkage Disconnection)·* Install a No. 10 lockwasher, Part No. 34803-S7, between lock nut and accelerator rod New rods which incorporate this change and which have improved design ball end sockets are available

Anti-Stall Dashpot (Fordomatic Cars): First adjust engine idle speed then turn engine off. Loosen dashpot adjusting screw locknut. Hold throttle in closed position and turn dashpot adjusting screw out (counter-clockwise) until head of adjusting screw pushes the dashpot rod up to the end of its travel. Turn dashpot screw in (clockwise) 1½-2 turns to obtain .045-.064" clearance.
Throttl Linkag Adjustm nt (F rdomatic Cars): With selector lever in "N" position and engine at normal operating temperature, set idle speed to 450-475 RPM.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Adjust Anti-Stall Dashpot, then turn engine off. Disconnect transmission throttle control rod from accelerator assembly lever on engine and insert a locking pin (¼" drill rod) through adjusting holes in lever and assembly. Adjust length of link between assembly and carburetor throttle valve lever to close lever against its stop. Adjust accelerator assembly connecting link (assembly-to-cross shaft link) to obtain a pedal height of 3 11/16" (Exc Ford Interceptor, Special & Thunderbird), 3 9/16" (Interceptor & Special), & 4½" (Thunderbird) Remove locking pin Pull gently on transmission throttle control rod to hold transmission lever against its internal stop Rotate clevis on upper end of rod until clevis fits freely on pin on accelerator assembly lever, **then lengthen rod by turning clevis three turns counter-clockwise.** Install throttle control rod on lever Hold lever in alignment to prevent binding, and tighten locknut Road test car, and if band or clutch slippage evident, **increase rod length to 3½ turns of clevis but do not exceed 4 turns.**

NOTE–Connecting link between cross shaft and lever must be parallel to center line of engine. Adjust as necessary by rotating adjusting screw in lever.

FORD TWO-BARREL

Transmission	Ford Carb. No.
Std & Overdrive	B5A-9510-J
Fordomatic	B5A-9510-K

►*MANIFOLD FUEL DISTRIBUTION Carburetor RIGHT barrel feeds Cyl. 2-3-5-8, LEFT barrel 1-4-6-7*

Idle Setting–Initial setting 1½ turns open Setboth screws alike. Set for highest steady vacuum reading with engine at normal operating temperature, or midway between rolling and missing points Turn screws out for richer mixture

Idle Speed–475-500 RPM. (Std & O.D.), 450-475 RPM. (Fordomatic) with selector lever in Neutral "N"

Float Level–1.275-1.305" measured from flange surface of air horn (near each end), to bottom side of float (not soldered seam) To correct float setting, bend float lever arm up or down.

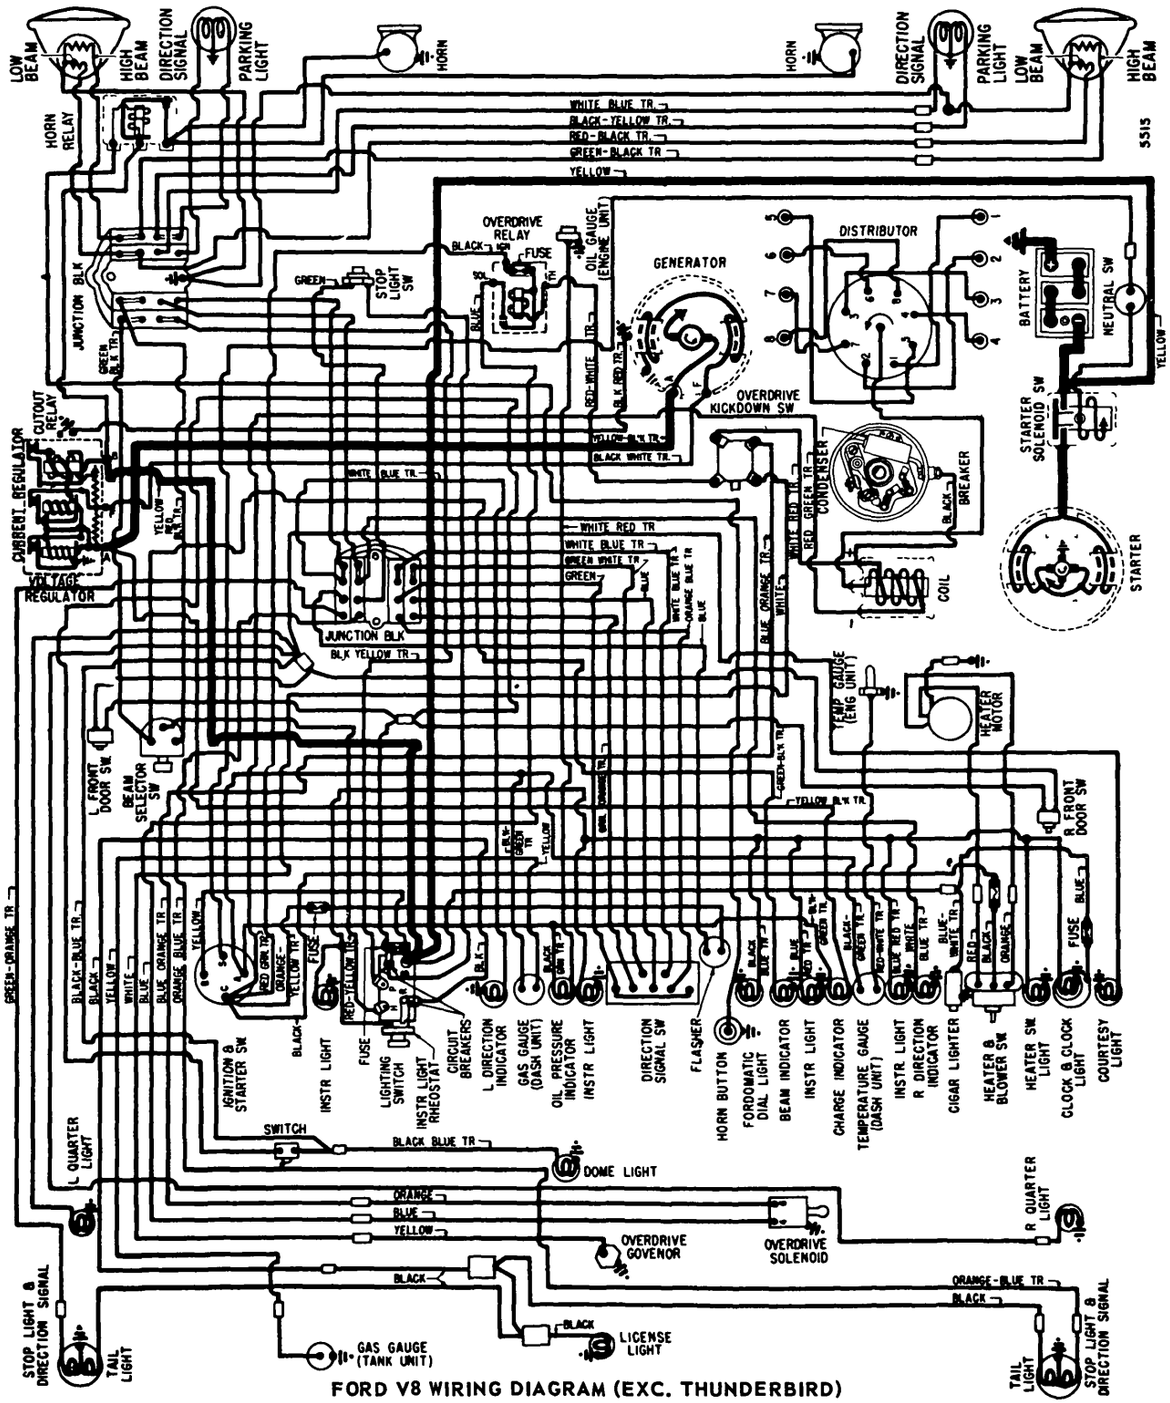
Accelerating Pump: Center hole average setting. Inner hole for hot weather, Outer for cold weather.

Fast Idle: Integral type. Operated by choke valve lever. No adjustment required.

Throttle Linkage & Anti-Stall Dashpot Adjustment: *See CARBURETOR above.*

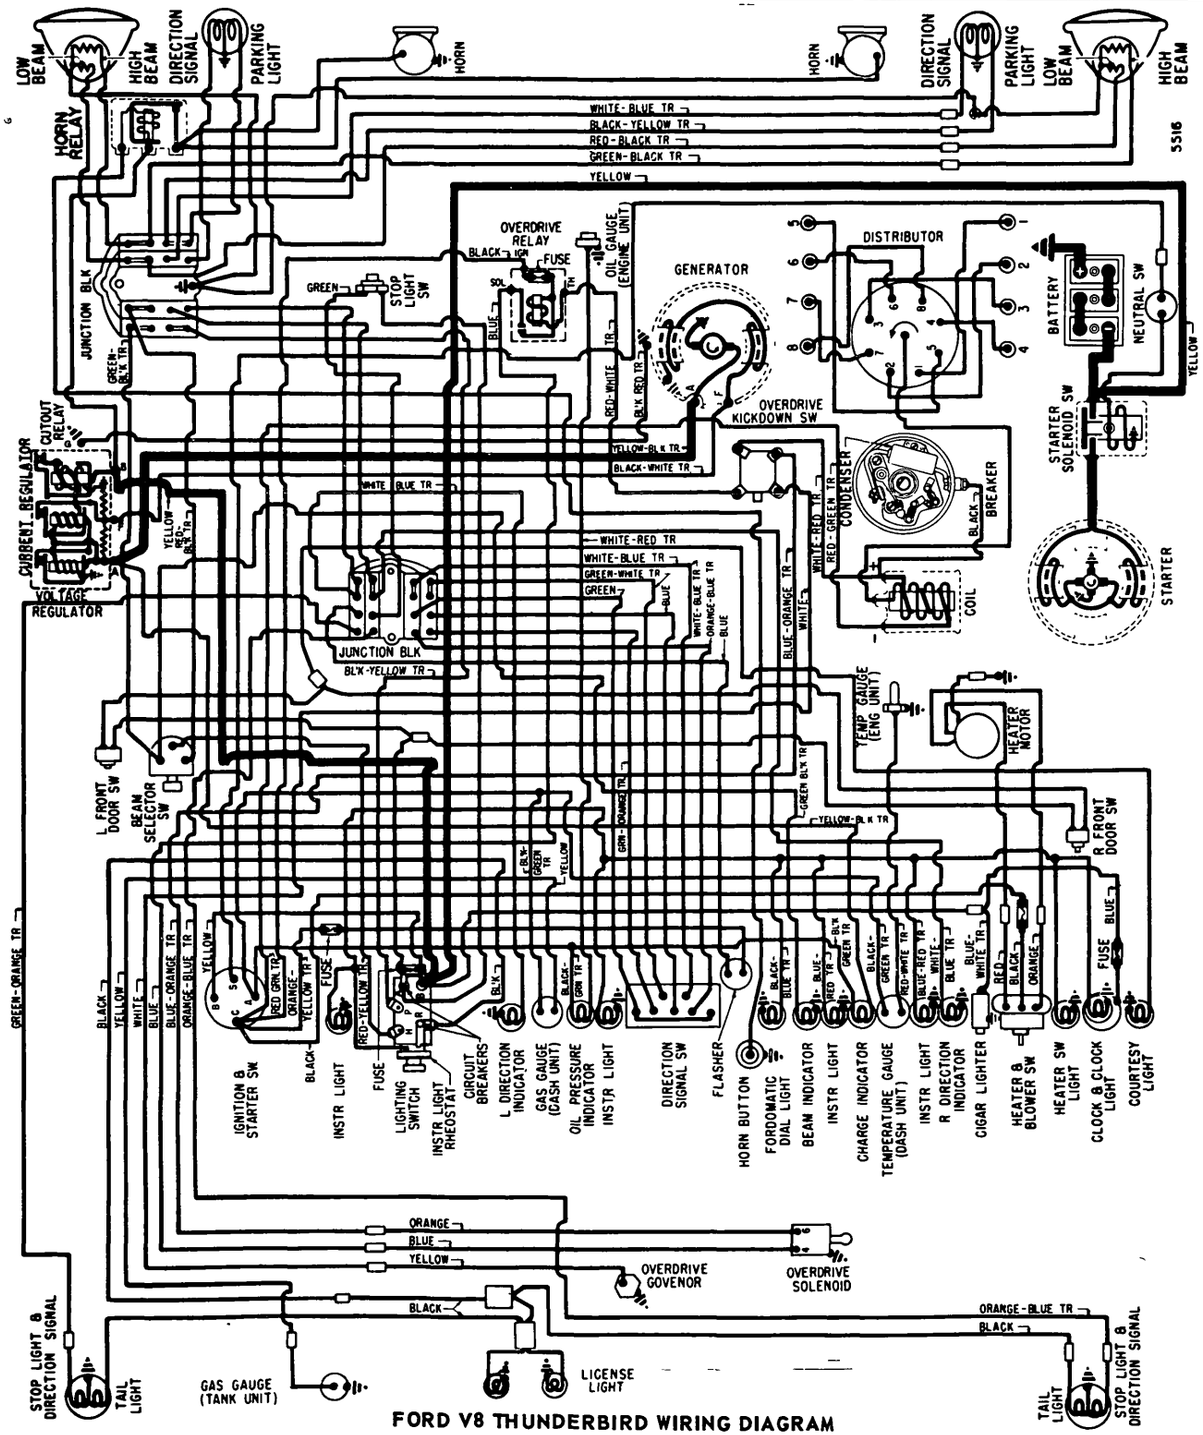
►*OTHER DATA: See "Holley-Ford Carburetors" in Carburetor Section*

Fuel Pump Pressure: 4-5 lbs. at 900 RPM.



FORD FOUR-BARREL

Transmission	Ford Carb. No.
Std & Overdrive (Early) .	B5A-9510-G
Fordomatic (Early)	B5A-9510-H
Std. & Overdrive (Later) ①	B5A-9510-M
Fordomatic (Later) ①	B5A-9510-N
All Transmissions (Latest) ②	B5A-9510-B



①–When used on 292 Eng. use air cleaner screw, Part No. B5S-9813-A (same as installed on old carburetor).

②–Have leaner etting, accomplished by redesigned idle tube assemblies, nozzle bar air bleeds, main jets,

FORD V8 WIRING DIAGRAM (EXC. THUNDERBIRD)

FORD V8 THUNDERBIRD WIRING DIAGRAM

CONTINUED FROM PRECEDING PAGE

some main body drillings, and changed accelerator nozzles. New carburetor units identified by suffix "-5" either stamped or cast in side of main body following ECG model identification. *See "Ford, Lincoln, Mercury Centri-Quad 4-Barrel" in Carburetor Section.*

►***MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyl.2-3-5-8, LEFT barrels 1-4-6-7.***

►*ROUGH ENGINE IDLE CORRECTION: See Tune-Up above.*

►*CARBURETOR ICING CORRECTION:* On early cars, Radiator Upper Air Deflector, No. B5A-8327-A, can be installed to restrict cold air entering engine compartment (this deflector installed in production beginning May, 1955). *CAUTION*—Deflector should be removed during summer months in extremely hot temperatures to avoid possibility of engine overheating.

►*CHOKE VALVE BIND CORRECTION (First Cars): See "Ford Lincoln, Mercury Centri-Quad" Carburetor in Carburetor Section.*

►*CARBURETOR INSTALLATION CAUTION (First Cars):* Care must be taken not to dislodge choke air inlet tube washer in carburetor throttle body which may be carried into engine combustion chamber. *See "Ford, Lincoln, Mercury Centri-Quad 4-Barrel" in Carburetor Section.*

Idle Setting—1¼ turns open (B5A-9510-G, H), 1/2-5/8 turn open (B5A-9510-M, N). Set both screws alike. Set for highest steady vacuum reading with engine at normal operating temperature, or midway between missing and rolling points. Turn screws out for richer mixture.

Idle Speed—475-500 RPM (Std. & O.D.), 450-475 RPM. (Fordomatic Pass. Car), 475-500 RPM (Fordomatic Interceptor) with selector lever in Neutral "N".

Throttle Linkage & Anti-Stall Dashpot Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Ford, Lincoln, Mercury Centri-Quad 4-Barrel" in Carburetor Section.*

CARB. EQUIPMENT

►*FUEL TANK FILTER CAUTION:* If particles of foreign material found in fuel pump or carburetor on units built prior to February 1, 1955 are clear or cream colored, short, and thread like; they are probably from damaged fuel tank filter. Replace tank.

Fuel Pump: Fuel Only - Ford B5A-9350-C (Exc. Thunderbird), B5S-9350-A (Thunderbird). **Fuel & Vacuum** (Fordomatic & Overdrive Cars) B5A-9350-D (Exc. Thunderbird), B5S-9350-B (Thunderbird).
Pressure—4-5 lbs. at 900 RPM.
See "Fuel Pumps" in Carburetion Equipment Section.

Gasoline Gauge: King-Seeley Electric.
Dash Unit—Ford B5A-9280-A.
Tank Unit—Ford B5A-9275-A (Exc. Sta. Wgn. & Sedan Del.). B5A-9275-B (Sta. Wgn. & Sedan Del.).
See "Fuel Gauges" in Carburetion Equipment Section.

BATTERY

Ford N. FDA-10655-A (Exc. Thunderbird), 01A-10655-A (Thunderbird). 6 Volt, 17 Plate, 90 Ampere Hour Capacity (20 hour rate).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Battery Ground—Positive (+) to cylinder head
Engine Ground—Cylinder head to dash

STARTER

Ford FAC-11002-G. Armature—FAC-11005-B.
Drive—Ford 1CM-11350-C Bendix "Folo-thru" type.
Rotation—Counter-clockwise at commutator end
Brush Spring Tension—48-56 ozs
Cranking Speed— 115-125 RPM

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs	①	6 0	70
14 ft lbs.	Lock		700

①—With starter on engine and engine running

►*STARTER INSTALLATION CAUTION.* Make certain that rubber seal properly positioned (can be held in place with rubber cement)

Starting Switch: Ford No FAB-11450-B. Mounted on left front fender apron and controlled by Ignition Switch

Neutral Safety Switch: Ford B5A-15812-A (Exc. Thunderbird), B5S-15812-B (Thunderbird)

Adjustment—*See "Fordomatic & Mercomatic" in Transmission Section.*

GENERATOR

Ford FBC-10002-A (272 Eng.), **B5S-10002-A** (292 Eng.). **Armature**—FBC-10005-A

►*GENERATOR BELT NOISE CORRECTION:* To make sure noise is coming from belt, squirt a few drops of hydraulic fluid on belt driving surface If noise or whine disappears, replace belt with plain type No. B5A-8620-B belt.

Performance Data

Generator	Amperes ①	Eng RPM
FBC-10002-A	35	850
B5S-10002-A	40	850

①—See Regulator for maximum charging rate.

Brush Spring Tension—30 ozs.
Field Current—1 5-2.5 amperes at 6 0 volts
Rotation—Counter-clockwise at commutator end.

►*THUNDERBIRD GENERATOR REMOVAL PROCEDURE (To Prevent Loss of Coolant):* Disconnect generator leads, remove two nuts from generator mounting bolts and capscrew from adjusting bracket. Remove fan belt. Remove capscrew attaching support bracket to front of generator mounting bracket. Remove top capscrew attaching main generator mounting bracket to engine front cover, and loosen lower capscrew about two full turns. Remove capscrew attaching front of generator to main generator mounting. *(NOTE*—Do not remove lower capscrew as it is tapped into water jacket and coolant will be lost). Swing generator up to let bracket pivot outboard on its lower mounting capscrew enough to permit removal of rear generator mounting bolt. Remove generator. *CAUTION*—If generator not immediately installed, tighten lower capscrew to prevent possible loss of coolant

Belt Adjustment: ¼" belt deflection midway between generator and pump pulleys with normal thumb pressure.

REGULATOR

Ford FAC-10505-A (FBC-10002-A Gen.), **FAD-10505-A** (B5S-10002-A Gen.).

Cut out Relay

Cuts In—6.0-6.6 volts.

►*CUTOUT RELAY AIR GAP CHECK:* With cover off regulator, manually close cut-out contacts. Measure air gap between armature and core. The dimension should be .009-.013". Air gap with contacts open should be .012-.020". If either or both of these dimensions are not up to specifications, regulator is defective.

Voltage Regulator

Setting—7 4-7.8 volts.
Checking & Adjusting—*See Electrical Equip. Section.*

Current Regulator

Setting—33-37 amperes (FAC-10505-A Reg.), 38-42 amperes (FAD-10505-A Reg.).
Checking & Adjusting—*See Electrical Equip. Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam *See Electrical Equip. Section.*
Direction Signal: *See Electrical Equipment Section.*
Lighting Switch Removal: With control knob in the "OFF" position, press the spring release button on switch housing, turn shaft slightly and pull it out of switch, Unscrew mounting nut with Tool 17470-N
Stop Light Switch Location: On forward end of brake master cylinder (Conventional Brakes), and on top of brake booster assembly (Power Brakes).

FUSES: Located as indicated below
Interior Lights—14 amps. on lighting switch.
Direction Signal—14 amps , in fuse holder between ignition switch and flasher
Overdrive—30 amps , on overdrive relay.
Cigar Lighter—Special fuse in lighter base.
Clock—3 amps , in clock lead
Heater—14 amps , in blower switch wire

LIGHTING CIRCUIT BREAKERS: On Lighting Switch. Combination headlight switch circuit breaker and fuse assembly used One circuit breaker protects headlight circuit and second circuit breaker protects instrument lights, parking lights and stop and tail light circuits

HORNS: Ford B5A-13832-C (High Pitch), B5A-13833-C (Low Pitch). Dual horns operated by relay
Horn Relay—Ford FAA-13853-A.

►*BACK-UP LIGHT SWITCH BRACKET INSTALLATION CAUTION.* Change in steering gear shift rod on late production cars affects installation of back-up light switch bracket, Part No B5A-15517-A. To install this bracket, bend upward to prevent switch from bottoming when gear shift lever in reverse position New bracket, Part No B5A-15517-B, is included in new kit, Part No B5A-18276-B However, some new kits will be released with old bracket

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Before disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section.*

ENGINE SPECIFICATIONS: 90° V8

Engine	Bore	Stroke	Displmnt.	Rated HP
272 Eng	3 62"	3 30"	272 cu ins	42 0
292 Eng	3 75'	3 30"	292 cu ins	45 0

Engine	Compr. Ratio	Developed HP
272 Exc Special	7 6-1	162 at 4400 RPM
272 Special	8 5-1	182 at 4400 RPM
292 Interceptor	7 6-1	188 at 4400 RPM
T-Bird (Exc. Fordomatic)	8.1-1	193 at 4400 RPM
T-Bird (Fordomatic)	8.5-1	198 at 4400 RPM

Compression & Vacuum Reading—*See TUNE-UP.*

CYLINDER HEAD: *See "Cylinder Head & Manifold" in Ford Special Data*

►*CYLINDER HEAD IDENTIFICATION:* Identified by number cast in top of head In addition, 292 Eng. Interceptor has ECK cast in recess in head gasket surface. Identification as follows:

Engine	Compr. Ratio	Casting No.
272 Standard	7.6-1	ECL-6090-A
292 Thunderbird Std.	8 1-1	ECL-6090-A
272 Special (Early)	8 5-1	①ECL-6090-B
272 Special (Later)	8.5-1	ECG-6090-A
292 Thunderbird Fordomatic	8 5-1	①ECL-6090-B
292 Interceptor (Early)	7 6-1	ECL-6090-B
292 Interceptor (Later)	7 6-1	ECK-6090-B

①—These two heads identified from each other by measuring thickness of either of two center machine locating pads (directly beneath No 2 & No 3 spark plug holes on right bank, below No 6 & No 7 holes on left bank) Thicknesses are .964-.966" on 272 Special, 999-1 001" 292 Thunderbird

►*DRIVE SHAFT-TO-FRAME INTERFERENCE CAUTION & CORRECTION (CONVERTIBLE):* On early production units, drive shaft may strike bottom of clearance hole in frame "X" member after vehicle passes over severe bump. Current production is installing three shims and longer bolts (7/16'-20" x 1½") between engine rear support and "X" member to prevent interference, and can be installed on early units. *NOTE*—If shims removed during repair operation, make sure they are reinstalled.

TIGHTENING TORQUES: *See "Tightening Specifications" in Ford Special Data.*

ENGINE REMOVAL: *See "Engine" in Ford Special Data.*

OIL PAN REMOVAL: Drain crankcase. Remove engine front splash pans. Disconnect oil pump inlet tube at oil pump Remove oil pan retaining screws and remove oil pan *(NOTE*—No. 1 cylinder must be on TDC before oil pan can be removed) Remove nut securing oil pump inlet tube to oil pan, then remove oil pump screen and inlet tube assembly from oil pan

PISTONS

Autothermic type. Solid skirt with three rings above pin.
Removal—Pistons and rods removed from above.
Fitting New Pistons: Use ½" feeler gauge inserted between piston and cylinder wall at right angles to pin on thrust side. Feeler thickness as follows.
New Piston in New Bore—.0015" feeler. 5-10 lbs. pull.
New Piston in Used Bore—.002" feeler. 5-10 lbs. pull.
Used Piston in Used Bore—.0025" feeler. 5-10 lbs. pull.
Replacement Pistons: Standard size, .020", .030", .040", .060" Oversize. Pistons furnished only with fitted pins.
Installing Pistons: Install with small indentation in head toward FRONT of engine.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

PISTON PINS

Floating type with lock rings at each end.
Diam t r—.9120-.9123". **L ngth**—3.016-3.030".
Pin Fit in Piston—Hand push fit at 70°F.
Pin Fit in R d Bushing—.0001-.0003" clearance. New pin should not fall through of own weight.
R plac m nt Pins: Standard size, .001", .002" Oversize.

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr. #1	3/32"	.010-.027"	.002-.0035"
Compr. #2	3/32"	.010-.027"	.002-.0035"
Oil	3/16"	.010-.027"	.0015-.003"

R plac m nt Rings: Standard size, .020", .030", .040", .060" Oversize.

►*REPLACEMENT PISTON RING NOTE:* "Snap type" rings furnished in standard size only, "Steel section type" in all above oversizes.

CONNECTING RODS

Crankpin J urnal Diam t r—2.1880-2.1888".
L wer B aring—Steel backed, copper lead alloy lined type. Upper and lower halves interchangeable.
Cl aranc —.0008-.0027".
Sid Cl aranc —.006-.016" (two rods).
R plac m nt B arings: Standard size (4 sizes marked r d & blu for selective fitting) and .010", .020", .030" Undersize.
Installing R ds: Rod bearing lock slot in rod should be toward outside of engine "V". When installing rod and piston assembly in engine indentation on top of piston head should be to front of engine, and numbers on rod and cap should be to left (left bank) and to right (right bank).

CRANKSHAFT

J urnal Diam t r—2.4980-2.4988". Max. wear limits .0015", taper .001".
B arings—Steel backed, copper lead alloy lined.
R plac ment B arings: Standard size, (4 sizes marked r d & blu for selective fitting) and .010", .020", .030" Undersize.
End Thrust: Taken by No. 3 main bearing. Replace bearing if endplay excessive.
Thrust B aring Alignm nt—*See "Crankshaft & Main B arings" in Ford Special Data.*
Endplay—.002-.006".
Crankshaft R ar Oil Seal Installation: *See "Crankshaft & Main B arings" in Ford Special Data.*
Crankshaft Fr nt Oil S al Installation: *See "Engine Front Cov r" in Ford Sp cial Data.*

CAMSHAFT

J urnal Diam t r—1.9255"-1.9265" (new), 1.924"(worn limit).
Clearanc —.001-.003" (new), .005" (worn limit).
End Thrust: Taken by plate on forward end of block(between camshaft sprocket and shoulder on block).
Endplay—.003-.007".
R plac m nt Camshaft Bearings: Finished bearings furnished Standard, .015" Undersize. *CAUTION—Oil holes in b arings must b lin d up c rr ctly. S Ford Sp cial Data.*
Camshaft R m val - S *"Camshaft & B arings" in Ford Sp cial Data.*
Timing Chain: Side-guide type. Length 56 links.
►*REPLACEMENT NOTE:* Replace chain and sprockets when deflection on slack side exceeds ½" (take up all slack on driving side, measure slack on opposite side).
►*CAMSHAFT SPROCKET SPACER INSTALLATION CAUTION:* If spacer, Part No. EBE-6265-A, installed backwards, it will allow an excessive amount of endplay. Inside diameter of spacer has a chamfer on one side and this chamfered side should be installed toward No. 1 camshaft bearing journal.
Camshaft Setting: Sprockets marked by "O" at one tooth. Mesh chain so that there are 12 pins between "O" mark s.
Engine Front Cover Oil Seal (Crankshaft Front Seal) Installation: *See "Engine Front Cover" in Ford Special Data.*

VALVES

►*EXHAUST VALVE STEM DIAMETER CHANGE (Production & Service Replacement Valves): Stem diameter decreased .0005" for greater stem clearance in guide. See "Valve System" in Ford Special Data.*
Tappet Clearance: .019" (Intake & Exhaust), with engine at normal operating temperature. *NOTE—Valve tappet clearance on truck engines is different.*
Tappet Adjustment- *See "Valve System" in Ford Special Data.*

Valve	Head Diam.	Stem Diam.①	Length
Intake	1.785"	.3415"	5.02"
Exhaust	1.515"	.3405"	5.02"
Valve	**S eat Angle**	**Lift②**	**Stem Clearance**
Intake	45°	.345"	.002" max.
Exhaust	45°	.345"	.003" max.

①—Valves furnished with .003", .015", .030" oversize stems for service replacement. *See "Valve Guides" in Ford Special Data.*
②—Minimum lift for checking camshaft lobe wear.
Valve Seat Width—.060-.070" (Intake). .070-.080" (Exhaust).
►*ROTATABLE VALVE NOTE: All valves are rotatable type. See "Valve System" in Ford Special Data.*
Valve Stem Oil Seals—"Umbrella" type oil seals used on intake & exhaust valve stems. Seals are installed with cupped side down on valve stem at guide boss on cylinder head. *Install new seals whenever valves removed or when seals become loose on valve stems.*
►*VALVE STEM OIL SEAL PRODUCTION CHANGE & INSTALLATION CAUTION:* New valve stem oil seal (Part No. B5A-6571-A) is being installed in production and is available for service. Skirt length has been increased .100" to seal a greater area of valve stem from oil splash. Also, seal will minimize amount of oil permitted to enter combustion chamber via stem-to-valve guide clearance. *When servicing engines with old type seal, new seal should be used.*
Valve Springs: Install with closed coil end toward cylinder head. **Free Length**—2.11-2.13".

Valv Spring Sp cificati ns	Pr ssure	L ngth
Valve Closed	54-62 lbs.	1.821"
Valve Open	124-140 lbs.	1.505"

Valv Guid s: Integral with cylinder head. When stem-to-guide clearance exceeds maximum (See table above), ream guides and install oversize valve. *S "Valv Guides" in Ford Special Data.*
Valve Lifters: Mushroom type. Removed from below with camshaft removed.
►*VALVE LIFTER INSTALLATION CAUTION:* Cast iron tappet, Part No. EAA-6500-C, should no longer be used as service replacement on 8-cylinder engines as these tappets may contribute to cam lobe wear. Use steel tappet, Part No. EAA-6500-D. Cast iron tappet has smooth molded appearance on unmachined portion of tappet foot. Tappet foot is .220" thick. Steel tappet has forging marks on outer edge of tappet foot and is .140" thick.
Rocker Arm Assembly: *See "Valve System" in Ford Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.
►*VALVE TIMING NOTE:* The following valve opening and closing points are with camlift as indicated.
Intake Valves—Open 12° ①BTDC. Close 54° ② ALDC.
Exhaust Valves—Open 58° ③BLDC. Close 8° ④ ATDC.
①—Camlift .016". ②—Camlift .019". ③—Camlift .014". ④—Camlift .018".
Valve Timing Check: *See "Camshaft Setting" und r CAMSHAFT above.* Remove right-hand rocker chamber cover. Turn engine over until No. 1 intake tappet is on heel of No. 1 intake cam lobe. Back off No. 1 intake valve adjusting screw push rocker arm to one side, then install dial indicator. Zero dial indicator, then rotate engine slowly until desired lift (.016") obtained. Compare degrees on pulley with specifications (12°). If not within specifications check for bent timing pointer by bringing No. 1 piston to TDC and see if timing pointer aligned with TDC mark on crankshaft pulley. If pointer not at fault, check timing chain, camshaft sprocket, camshaft, crankshaft pulley, and crankshaft in order of accessibility.

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Ford Special Datd.*
Crankcase Capacity: 5 qts. (refill). Add 1 qt. when filter changed.
Normal Oil Pressure: 45-55 lbs. at 30-40 MPH.
Pressure Regulator Valve—In pump body, not adjustable.
Oil Pressure Indicator—Indicator light on instrument panel, operated by Engine Unit—Ford No. FDA-9278-A (Stamped No. 7 on Hex.). Lights when ignition switch turned on, goes out when engine starts.
Oil Pump: Gear type pump located on left side of engine crankcase, driven by distributor drive gear.
Pump Overhaul—*See "Oiling System" in Ford Special Data.*
►*OIL PUMP LEAK CORRECTION:* On some oil pumps, oil pump cover bolt holes may be tapped into gear cavity of pump causing oil-leak past threads and out between bolt and pump cover. To correct, remove cover bolts. Coat threads of bolts with Sealing Compound, Part No. 8A-19554-B. Install bolts.
►*OIL PAN-TO-PUMP TUBE SEAL INSTALLATION CAUTION:* Pump failures have been encountered due

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

to pieces of oil pan-to-oil pump seal (Part No. B4A-6698-A) breaking off and lodging between oil pump gears. In some cases, oil inlet tube is too short. As a result, when retaining nut is tightened excessively, seal is squeezed over edge of tube which cuts seal. *Always lubricate seal with engine oil prior to installation, and tighten retaining nut just enough to insure against leakage.*

Oil Filter: Full-flow type (Std. Equip.) with pressure relief valve in center filter bolt. Replace filter element at 4000-5000 miles or when oil dirty or polluted.

Filter Element Installation—*See "Oiling System" in Ford Special Data.*

Replacement Filter Element—Ford No. B2A-6731-A (Kit includes new gaskets).

►*CAUTION: This special Full-flow filter element must be used for replacement (use of by-pass type element would restrict oil flow and result in insufficient engine lubrication.*

►*BRAKE LINE INTERFERENCE WITH OIL FILTER CORRECTION:* Clip, Part No. B4A-2244-A, and attaching screw, Part No. 39883-S7, now available to secure brake line to rear side of No. 2 crossmember. On vehicles not equipped with additional clip (now used in production), and on which interference is encountered proceed with installation of additional clip as follows: Locate and mark spot on No. 2 crossmember 4½" to left, and 4 15/16" up from center of existing clip at left hand rear side of crossmember. Drill 9/32" hole at this spot. Position brake line on crossmember, and secure line with clip and screw. *NOTE*—Brake line will move far enough to permit installation without bending or crimping line.

Crankcase Ventilation: Filter in oil filler cap (inlet) with outlet pipe in rear of crankcase on right side of engine.

►*CRANKCASE VENTILATION GASKET INSTALLATION CAUTION:* On some units gasket (B4A-6872-A) may have been installed upside down causing leak at gasket location. Bolt center line is 5/64" below center line of gasket.

COOLING

Water Capacity: 20 qts. (without heater), 21 qts. (with heater).

Pressure Valve: Ford LA-8100-A, 12-15 lbs. (marked "13" or "14"). *CAUTION*—If replacement required use 12-15 lb. type. Radiator filler cap.

Thermostat: Ford No. B4A-8575-A (160°), No. B4A-8575-B (180° used with permanent anti-freeze). Mounted inside water outlet elbow on forward end of intake manifold. *NOTE—The above thermostat replaces type formerly used.*

Water Pump: Packless, sealed ball bearing type.
See "Water Pump" in Ford Special Data.

Temperature Gauge: King-Seeley Electric.
Dash Unit—Ford No. B5A-10883-A.
Engine Unit—Ford No. 1A-10884-A.

Temperature Bulb Sl v R m val: Thread adapter handle of tool T50T-100-A. into sleeve. Tighten locknut against sleeve, then pull sleeve with sliding hammer.
Se "T mp ratur Gaug s" in Misc llan ous Section.

CLUTCH

L ng M d l 10NC F rd N . B5A-7563-A (F rd Std.), 11CF F rd N . B5S-7563-A (Thunderbird Std., F rd HD.).
See "Long Clutches" in Clutch Section.

►*ENGINE VIBRATION CORRECTION (Due to Improper Clutch Disc Friction-Lag):* Vibration noted on some cars equipped with Standard and Overdrive Transmissions. To help this condition, install service clutch disc, Part No. B5A-7550-A, which has proper friction-lag characteristics. *NOTE*—Only disc should be replaced. Repairs to transmission or replacement of clutch pressure plate have proven of little value in correcting condition.

Clutch Disc No.—(B5A-7563-A Clutch) B5A-7550-A, (B5S-7563-A Clutch) B5S-7550-A.

Pedal Adjustment: If total pedal travel is less than 6 3/8" or more than 6 5/8", reposition pedal bumper until travel is within limits.

Pedal Free Travel—1 1/8-1 3/8". Loosen lock nut on clutch pedal release rod, turn adjusting nut until correct travel is reached.

Removal: Remove transmission (see Transmission Removal below), and slide clutch release bearing off clutch release lever. Disconnect clutch pedal release rod from clutch release lever assembly. Remove clutch release equalizer bar bracket from flywheel housing and remove equalizer bar. Remove split bronze bushing from bracket and then remove flywheel housing. Install Tool 7563 and remove clutch pressure plate assembly (if tool not available, clutch may be released by backing off the attaching bolts evenly). Remove clutch release bearing from hub with an arbor press.

SYNCHRO-MESH TRANSMISSION

Own. Helical gear, constant mesh, synchro-mesh (second & high), sliding gear (low & reverse).
See "Ford Synchro-mesh" in Transmission Section.

Transmission Control: *See "Transmission Controls" in Transmission Section.*

►*INTERMEDIATE & HIGH GEAR JUMP-OUT CORRECTION: See "Ford Synchro-mesh" in Transmission Section.*

►*STANDARD & OVERDRIVE TRANSMISSION INSTALLATION CAUTION:* 292 Eng. Police Interceptor uses Lincoln-Mercury Transmissions which are not interchangeable with Ford Transmissions.

►*TRANSMISSION GEARSHIFT ROD BIND CORRECTION (Interceptor):* To correct, weld 5/16" flat washer (Part No. 44722-S8) on each rod 5/8" from end.

►*SYNCHRO-MESH LOWGEAR JUMP-OUT CORRECTION (Due to Insufficient Clearance):* To correct, remove side cover, and grind corner of detent boss to provide sufficient clearance between shift cam and detent boss.

Removal: Drain transmission, disconnect gear shift linkage at transmission. Remove speedometer cable and gear, remove drive shaft. Remove bolts which hold transmission extension to engine rear support. Remove frame cross-member and engine rear support. Remove bolts and lock washers which attach transmission to clutch housing, then install two guide pins. Move transmission assembly to rear until input shaft splines clear clutch housing, then lower transmission and pull forward to remove from car.

OVERDRIVE

Warn r Mod l AS4-R10F. Solenoid operated type, with governor control and throttle operated kick-down. Lock-out Switch not used on this model.
See "Warner R10 Overdriv " in Transmissi n S ction.

Overdrive Control: *See "Ov rdriv Control" in Transmission Section.*

Removal: Same as for Synchro-mesh Transmission (above) after disconnecting control cable and wiring.

FORDOMATIC TRANSMISSION

Torque converter and three speed automatic transmission with hydraulic control and mechanical parking lock. *See "Fordomatic & Mercomatic" in Transmission Section.*

►*FORDOMATIC "WHISTLING" NOISE CORRECTION: This condition may occur during normal engin operation. See "Fordomatic & M rcomatic" in Transmission Section.*

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Fordomatic & M rcomatic" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: S "Fordomatic & Mercomatic" in Transmission S ction.*

Lubrication—Check transmission oil level every 1000 miles and maintain oil level at "Full" mark on dipstick. Drain & refill every 15,000 miles. **Us nly Automatic Transmission Fluid Type A.**

Checking Fluid Level: With selector lever in "N" (Neutral) and emergency brake applied, run engine approximately four minutes at idle speed. Check to see that emergency brake is applied and that engine is on slow idle, move selector lever to the "P" (Park) position.

(*NOTE*—When engine and transmission are at normal operating temperature, move selector lever through all ranges to assure fluid distribution throughout transmission). Raise hood and wipe top of oil level indicator. Remove indicator and read fluid level. Add Automatic Transmission Fluid "Type A" if necessary to bring fluid level to "Full" mark on indicator. Replace fluid level indicator.

THROTTLE LINKAGE ADJUSTMENT: *S Carbur tor above.*

►*OTHER "FORDOMATIC" SERVICE DATA: S "Fordomatic & Mercomatic" in Transmission S ction.*

UNIVERSALS

Mechanics. Needle bearing type.

►*CAUTION: (All Cars Exc pt Station Wagon & Sedan Del. & Interceptor): Rear Universal joint companion flange nut controls pinion b aring pre-load (must b adjusted whenever nut is loos n d). S "Ford & Mercury (Separate Carrier)" in R ar Axle Section.*

REAR AXLE

PASSENGER CARS

Own. Separate Carrier, semi-floating hypoid, with Hotchkiss drive.

►*NOTE: Axl not sam as Station Wagon & Sedan D liv ry. S "Ford & M rcury (S parat Carrier)" in R ar Axle S ction.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Rati s	Standard	Ov rdriv	F rd matic
V8 Cars	3.78-1	.3.89-1	3 55-1, 3.30-1

►*RATIO, DRIVE GEAR & DIFFERENTIAL CASE IDENTIFICATION:* Refer to following table for identification:

G ar Rati	Differ ntial Cas Color	Drive Gear No. (on Edge of Gear)
3 89-1	Black	AD-4210-B
3 78-1	Black	AG-4210-A
3 55-1	Red	AF-4210-B
3 30-1	Gray	AF-4210-A

Backlash—.003-.008"

Axl Shaft R m val: Remove wheel, take off drum. Remove four axle retainer locking type nuts (work through opening in axle shaft flange). Use Puller No. 4235-N (7600-C on Thunderbird) and pull shaft (do not disturb brake backing plate or damage oil seal)

Carri r Ass mbly.R moval: Drain lubricant from rear axle housing. Remove carrier-to-housing nuts, then remove identification tag (ratio) and set it aside for reference during assembly of axle. Remove carrier assembly from axle housing

STA. WGN., SED. DEL. & THUNDERBIRD

Own. Integral Carrier, semi-floating hypoid, with Hotchkiss drive.

►*NOTE: Axl ass mbly not same as passenger cars. S "Lincoln, M rcury, Ford (Integral Carrier)" in R ar Axle S ction.*

Rati s:	Standard	Overdrive	Fordomatic

FRONT SUSPENSION

Ind pend nt. "Ball Joint" suspension with direct acting shock absorbers mounted within front coil springs *S "Lincoln, Mercury, Ford (Ball-Joint)" in Front Suspension S ction.*

►*LOWER ARM BUMPER INSTALLATION CAUTION* Right and left hand bumpers are different and must be installed in the correct position Damage to suspension will result if installed incorrectly **Bump rs wh n installed sh uld p int slightly inboard.**

Kingpin Inclinati n—6° minimum, 7° maximum, crosswise

Cast r—Pos. ½° to Pos. 1½°. Maximum variations between wheels ½°

Camb r—Pos. ¼° to Pos. 1¼°. Maximum variation between wheels ¼°.

Toe-In—1/16" to 1/8".

STEERING

Manual: Own (Gemmer 305 Design). Worm & Roller type.
See "Gemmer Worm & Roller (Type 305)" in Steering Section.

Power Steering: Ford-Mercury Linkage type. Used in junction with standard steering gear.
See "Ford & Mercury Bendix" in Steering Section.

Pump Belt Adjustment: Install torque wrench on pump pulley bolt. Check torque required to slip pulley against belt friction. If torque is not 14-16 ft. lbs. adjustment is required. To adjust, position a heavy duty 1½" "C" clamp with bottom against lower side of pump support bracket and top of clamp resting on pump bracket at its center. Loosen four pump attaching bolts until pump body may be repositioned by tightening "C" clamp. Tighten "C" clamp until torque of 14-16 ft. lbs. is required to slide pump pulley. (*NOTE*—Hold final torque as close as possible to upper limit). Tighten pump attaching bolts, remove "C" clamp, and make a final check of pulley sliding torque.

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Gemmer Worm & Roller (Type 305)" in Steering Section.*

Steering Gear Removal: *See "Gemmer Worm & Roller (Type 305)" in Steering Section.*

BRAKES

Ford-Bendix Hydraulic (Single Anchor—with eccentric on front wheels, without eccentric on rear wheels). Hand lever applies rear wheel service brakes.
See "Ford Lincoln, Mercury Bendix" in Brake Section.

►*1955 FORD & THUNDERBIRD BRAKE LINING & REPLACEMENT CAUTION·* Later cars have "shorter" Primary Shoe Brake Lining and modified brake shoes to reduce any tendency toward pulling or diving. *See "Ford, Lincoln, Mercury Bendix" in Brake Section.*

►*FRONT WHEEL ADJUSTMENT CHANGE:* Eccentric has been moved from secondary shoe to primary shoe. Initial adjustments made on primary instead of secondary shoe

►*BRAKE LINE INTERFERENCE WITH OIL FILTER CORRECTION See "Oil Filter" under CILING SYSTEM above*

►*PARKING BRAKE "FIX" CORRECTION* New parking brake equalizer, Part No B5A-2119-A, available to correct permanent set of early cable equalizer, Part No 8A-2119-A Before installing on a convertible, cut 1 5/8' from each end of equalizer

Drum Diameter—11' front and rear. Maximum boring limit 11 06'

Wheel Cyl. Diameter—1 1/8' (Front—All), 7/8" (Rear-Pass Car), 15/16' (Rear—Sta Wgn & Sed Del)

Lining—Molded type riveted to shoe

Lining Width - (Exc. Thunderbird) 2¼" (Front All), 7/8" (Pass Car Rear), 15/16" (Sta Wgn & Sed Del Rear)

(Thund rbird) 1¾" (Front-Primary), 2½" (Front-Secondary), 1¾" (Rear All)

Lining Thickn ss—3/16" (Exc. Front Whl. Secondary—Pass. Car), 15/64" (Front Whl. Secondary—Pass. Car), 7/32" (All Shoes—Sta. Wgn. & Sed. Del.).

Lining Length—10.84" (All Shoes—Pass. Car), 9.28" (Primary Shoes—Sta. Wgn. & Sed. Del.), 11.94' (Secondary Shoes—Sta. Wgn. & Sed. Del.).

Clearance—.010" at each end of both primary and secondary shoes. Maximum variation .003" (Adjusting screws backed off 10-12 notches from point where shoes drag on drum. *See Adjustment Change abov .*

Brake Pedal Free Play Adjustment: 1/4-7/16'. If play not correct after brake adjustment, loosen lock nut on the eccentric bolt attaching brake pedal to master cylinder pushrod, rotate eccentric bolt for clearance.

►*BRAKE PEDAL PRODUCTION CHANGE.* New brake pedal (Part No B5S-2455-B) is being installed in production to provide greater clearance between brake and accelerator pedals. Clearance with new pedal is 1¾" as compared with 1¼" with old pedal. If greater clearance desired, new pedal should be installed

Standard Master Cylinder: Located on engine side of firewall.

Checking Fluid—Maintain fluid level to within ½" of top of reservoir.

Removal—Disconnect brake line from brake master cylinder and depress brake pedal a few times to force out fluid. Disconnect wires leading to stop light switch, and remove eccentric bolt attaching master cylinder pushrod to brake pedal. Remove capscrews and lock washers attaching master cylinder to firewall.

Power Brakes: Midland Hy-Power Unit mounted on left side of car in engine compartment and connected in hydraulic brake line between master cylinder and wheel cylinder. There are no mechanical connections and no adjustments are required.
See "Midland Power Unit" in Brake Section

Checking Brake Fluid—Same as for manual brakes

Removal of Power Unit—Depress brake pedal a few times to remove all vacuum from system. Disconnect hydraulic lines at the power unit and remove wires from brake stop light switch. Remove power unit to mounting bracket bolts and lockwashers and remove the power unit.

MISC. MECHANICAL

Windshield Wipers: Vacuum link and crank arm type. *See "Windshield Wipers" in Miscellaneous Section.*

Power Window Regulators: Reversible motor in each window *See "Electric Window Regulators" in Miscellaneous Section.*

►*POWER WINDOW REGULATOR RELAY "FLUTTER" CORRECTION: See "Power Window Regulators" in Miscellaneous Section*

Power Top Control: Electric Hydraulic with reversible pump motor. *See "Power Top Controls" in Miscellaneous Section.*

Power Seat Adjusters: Electric screw and jack type with individual motors and transmissions for vertical and horizontal adjustment. *S "Pow r S at Adjust rs" in Misc llan ous S cti n.*

Air C nditi ning: *See F rd "S l ctAir " in Miscellaneous S cti n.*

MODEL IDENTIFICATION

VEHICLE NUMBER: On Rating Plate attached to glove box door, Vehicle Number is also Engine Number.
First Number—10001 up.

►*ENGINE IDENTIFICATION NOTE: Three engines used, and for identification purposes in the following Ford Truck pages, reference is made to each engine by piston displacement, "223", "239", "256". See "Vehicle Number Note" following.*

►*VEHICLE NUMBER NOTE: Vehicle number (example *F10D5A 10001*) includes identification in the following sequence.*

Serial Code①	Engine Symbol②	Model Year③	Assy. Plant	Serial Number
F-10	D	5	See below	10001 Up

①—See Model & Serial Code Table below.
②—**D**—6 Cyl. 223 cu. in. O.H.V. engine. **V**—8 Cyl. 239 cu. in. O.H.V. engine **Z**—8 Cyl. 256 cu. in. O.H.V. engine.
③—Last digit of model year.

Models & Serial Codes

Model	Serial Code	Model	Serial Code
F-100 Conv.	F-10	F-600 Conv.	F-60

TUNE-UP

COMPRESSION PRESSURE: At cranking speed.

Engine	1954	1955
223"	120 lbs	125 lbs.
239"	130 lbs.	130 lbs.
256"	115 lbs. ①	125 lbs.

①—With early type camshaft 120 lbs. with later type camshaft *See "Camshaft" below for identification.*

VACUUM READING: Steady 18-21" at idling speed.

VALVE TAPPET CLEARANCE: 223" Engine—.015" (Intake), .019" (Exhaust). **239" & 256" Engines**—.016" (Intake), .018" (Exhaust). With engine at normal operating temperature.

MANIFOLD HEAT CONTROL (239 Eng.): Automatic thermostatic type with counterweight Valve is open at top when engine cold. Install thermostat spring with ¾ turn wind-up and hook over stop pin.

►*256 ENG. MANIFOLD HEAT CONTROL INSTALLATION (For Cold Weather Operation): See "Manifold Heat Control" in Ford Special Data.*

►*MANIFOLD HEAT CONTROL PRODUCTION CHANGE (239 & 256 Engs. with Single Exhaust):* To minimize engine stalling (due to carburetor icing) and to improve fuel distribution by directing more exhaust gases through crossover passage in intake manifolds, a new manifold heat control valve, Part No. B5A-9685-D, has been released for V8 engines with single exhaust. New valve has bi-metal thermostat spring that holds valve closed for a longer period of time.

IGNITION

FIRING ORDER: 6 Cyl. Engines—1-5-3-6-2-4. **8 Cyl. Engines**—1-5-4-8-6-3-7-2.
Cylinders—RIGHT BANK 1-2-3-4. LEFT BANK 5-6-7-8.

SPARK PLUG GAP: 025-.029" (Champion H-9 or H-10). .028-.032" (Champion 860)
Spark Plugs (1954)—Champion H-9. 14mm. Use Champion H-10 for slow or stop-and-go driving. Tighten to 25-30 ft. lbs.
Spark Plugs (1955)—Champion 860. 18mm. Special. Tighten to 15-20 ft. lbs.

►*1955 SPARK PLUG CAUTION: Spark plug is new type with tapered seat and does not require a sealing gasket. It is important that plug be torqued to 15-20 ft. lbs.*

COIL: Ford No. 8BA-12029.
Ignition Current—2.75-3.0 amperes (idling), 5.0-5.5 amperes (stopped).

DISTRIBUTOR: Ford Part Numbers as listed below.

Engine	1954	1955
223"	FAA-12127-C	B5A-12127-C
239"	FAE-12127-A①	B5C-12127-B
239"	B4A-12127-A②	B5C-12127-B
256"	FAD-12127-B	FAD-12127-B

①—13 tooth distributor gear, used with EBU-6250-B camshaft. ②—14 tooth distributor gear, used with B4T-6250-A camshaft.
Contact Point Set—Ford No. FAB-12171-A (Std.). FAB-12171-B (Heavy Duty).
Breaker Gap—.014-.016".
Cam Angle—36-38° (223" Engine). 26-28½° (239" & 256" Engines). 58-63% idling.
Breaker Arm Spring Tension—17-20 ozs.
Rotation—Clockwise (223" Engine). Counter-clockwise 239" & 256" Engines).

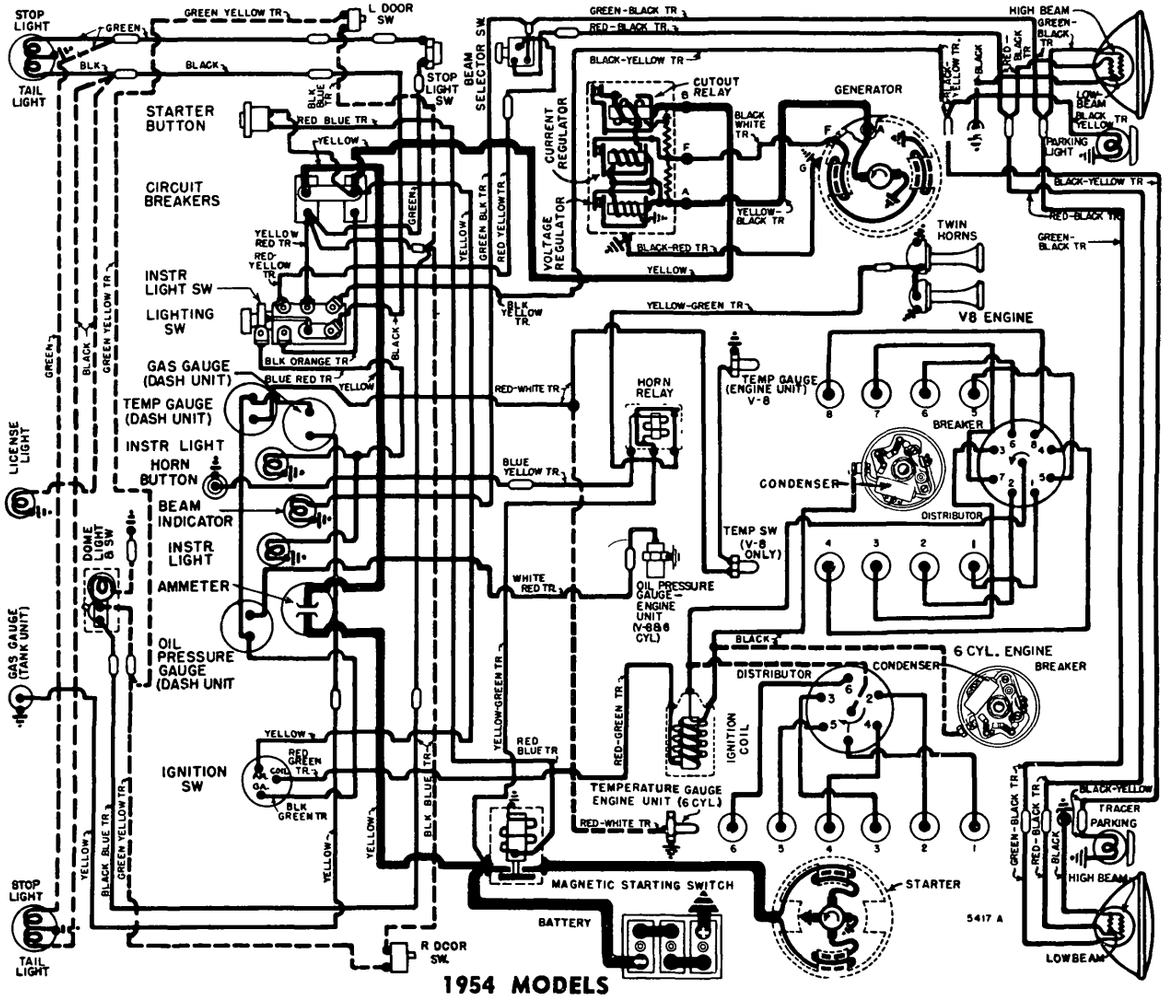
IGNITION TIMING
Setting—5° BTDC (223" Engine). 10° BTDC (239" & 256" Engines).
223" Engine Timing Mark—Rubber type dampener has 5 marks. The long mark represents TDC, and each succeeding mark 3°, 5°, 7°, 9° BTDC. Pointer located on front cover.
239" & 256" Engine Timing Mark—Crankshaft pulley grooved at 10° point. Pointer bolted to water pump cover.

CARBURETOR

ANTI-STALL DASHPOT ADJUSTMENT: First adjust engine idle speed then turn engine off. Loosen dashpot adjusting screw locknut. Hold throttle in closed position and turn dashpot adjusting screw out (counter-clockwise) until head of adjusting screw pushes dashpot up to the end of its travel. Turn dashpot screw in (clockwise) 1½-2 turns to obtain .045-.064" clearance. Tighten locknut.



THROTTLE LINKAGE ADJUSTMENT (1954-55 6 CYL. FORDOMATIC TRUCKS): With selector lever in "N" position and engine at normal operating temperature, set engine idle speed at 440-460 RPM (1954 Models), 450-475 RPM. (1955 Models). Adjust Anti-stall Dashpot, (for Adjustment, see above) then turn engine off. Remove clevis pin from upper end of transmission control rod (at cross shaft). Pull gently upward on throttle control rod to hold transmission lever against its internal stop. Rotate rod clevis for free entry of clevis pin into holes in clevis and cross shaft lever. Length-

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

en control rod by rotating clevis 2½ turns counter-clockwise. Connect control rod to cross shaft lever. Road test truck and if band or clutch slippage evident, **increas rod l ngth to 3 turns of clevis but do not exce d 3½ turns.** Check transmission for kickdown action. If there is no action, loosen the accelerator stop bolts lock nut located under the accelerator pedal and adjust the stop bolt height until kickdown action is obtained.

THROTTLE LINKAGE ADJUSTMENT (1954-55 FORDOMATIC TRUCKS): Adjust idle speed and Anti-stall dashpot same as for 6 Cylinder models (above). Position Throttle Linkage Adjustment Tool T54L-77230-A on clean surface of accelerator mounting bracket. Lower pin of tool should freely enter hole in accelerator assembly lever. If pin does not enter hole in lever, loosen carburetor connecting link barrel locknut and rotate barrel until pin enters hole freely (with carburetor throttle valve lever against its stop). Tighten link barrel locknuts. Remove clevis pin from upper end of transmission throttle control rod at cross shaft. Pull upward gently on throttle control rod to hold transmission lever against its internal stop. Rotate rod clevis for free entry of clevis pin into holes in clevis and cross shaft lever. **Lengthen control rod by rotating clevis 3 turns counter-clockwise.** Connect control rod to cross shaft. Road test car and if band or clutch slippage is evident, **increase rod length to 3½ turns of clevis but do not exceed 4 turns.** *NOTE*– Connecting link between cross shaft and lever must be parallel to centerline of engine. Adjust as necessary by rotating adjusting screw lever. If height of accelerator pedal stop bolt prevents obtaining kickdown, loosen the accelerator pedal stop bolt jam nut and adjust stop bolt height sufficiently to provide kickdown.

1954 MODELS

CARBURETOR (223" ENGINE)

Ford No. EBR-9510-A (Except Fordomatic), EBP-9510-B (With Fordomatic).

Idle Setting–Approximately one turn open. Set for highest steady vacuum reading with engine at normal operating temperature, or midway between missing and rolling point. Turn screw out for richer mixture.

Idle Speed–475-500 RPM (Exc. Fordomatic), 450-475 (Fordomatic) with selector lever in Neutral "N".

Float Level: *See "Ford Visi-flo" in Carburetor Section*

Fuel Level–Flush to 1/16" below top edge of float hinge bracket in bowl. To adjust, remove bowl cover, bend float tab which contacts float needle spring.

►*NOTE: Fuel level can be checked through glass bowl cover without disturbing carburetor.*

Accelerating Pump: Inner hole for normal or hot weather, outer hole for cold weather operation (holes located in throttle lever. Shift pump link as required).

Fast Idle: Integral type. Operated by choke valve. No adjustment required.

Anti-Stall Dashpot Adjustment: *See "Carburetor" abov .*

Throttle Linkage Adjustment (Fordomatic Trucks): *S e "Carburetor" above.*

►*OTHER DATA: See "Ford Visi-flo" Carburetor in Carburetor Section.*

Fuel Pump Pressure: 4-5 lbs.

CARBURETOR (239"-ENGINE)

Ford No. EBV-9510-H. Dual down-draft type with manual choke.

►*FORDOMATIC NOTE: Anti-stall dashpot used on trucks with Fordomatic Transmission.*

Idle Setting–Approximately 1½ turns open from lightly seated position. Set both screws for highest steady vacuum reading and highest engine RPM.

Idle Speed–475-500 RPM (Exc. Fordomatic), 450-475 RPM (Fordomatic) with selector lever in Neutral.

Float Level: With throttle body inverted, distance between bottom of float and flanged surface of air horn should be 1.275-1.305". Use Float Level Gauge T52L-9510-AHD.

Accelerating Pump: Center hole average setting. Inner hole for hot weather, outer hole for cold weather.

Fast Idle: No adjustment required.

Anti-Stall Dashpot Adjustment: *See "Carburetor" above.*

Throttle Linkage Adjustment: *See "Carburetor" above.*

►*OTHER DATA: See "Holley-Ford Carburetors" in Carburetor Section.*

Fuel Pump Pressure: 4-5 lbs.

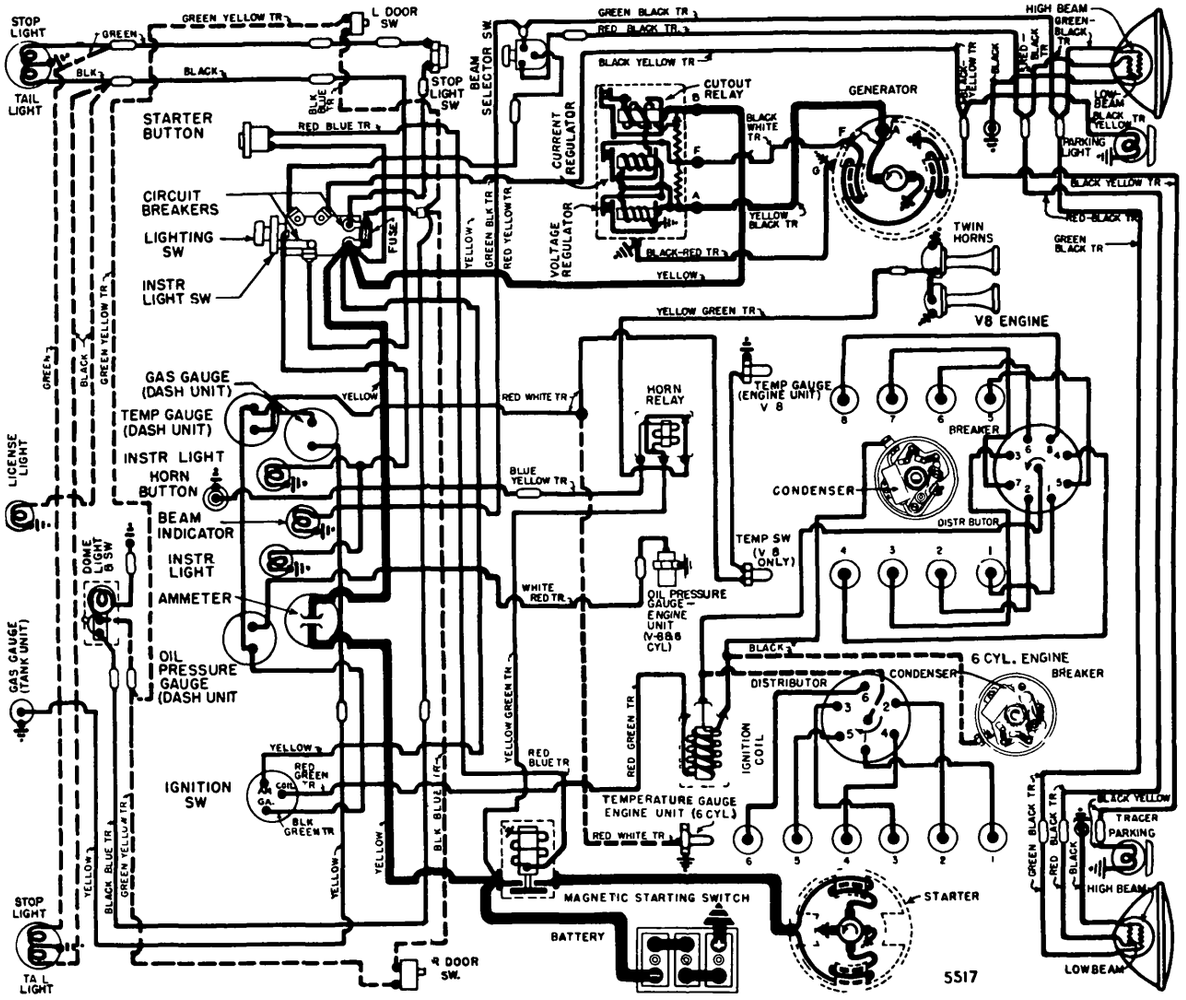
CARBURETOR (256" ENGINE)

Ford No. EBZ-9510-C (1954); B4T-9410-A (Early 1955), B4T-9510-A (Late 1955). Dual "Concentric" downdraft type with manual choke control, governor actuating assembly, and "depopper" valve.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Idle Setting—Approximately 1/2 turns open from lightly seated position Set both screws for highest steady vacuum reading and highest engine RPM
Idle Speed—450-500 RPM *See "Depopper Valve" Adjustment below*



Fuel Level: ½"±1/32" below top edge of bowl with fuel pump pressure at 4-5 lbs. Use Fuel Level Gauge 9550-B to check fuel level, placing gauge squarely on top of main body so that gauge pins extend down into bowl. Fuel should be at least as high as longer GO pin but must not touch shorter NO GO pin Adjust by bending tab on float lever which contacts intake needle

Accelerating Pump: Center hole average setting. Inner hole for hot weather, outer hole for cold weather.

Fast Idle: No adjustment required.

D p pper Valve Adjustment: Turn depopper valve adjusting screw until it is lightly seated *(CAUTION—* Do not force adjusting screw) With depopper valve seated, adjust engine idle speed, with the stop screw, to 450-500 RPM Adjust idle mixture screws (see above) then decrease engine idle speed to 300 RPM (do not disturb idle mixture screws) Turn depopper valve adjusting screw out until engine idle speed comes up to 450-500 RPM If engine will not maintain a steady idle speed and has a tendency to roll, turn spring tension setscrews (directly opposite valve adjusting screw) "in" against piston spring until a steady idle is obtained *(CAUTION—*Do not turn spring tension screw in more than is necessary to attain a smooth idle) Readjust idle mixture with idle adjusting screw If engine RPM increased, reset idle speed to 450-500 RPM with depopper valve adjusting screws *NOTE*—If satisfactory adjustment cannot be made, disassemble and clean

►*OTHER DATA: See "Ford Truck Dual Conc ntric Type" in Carburetor Section*

CYLINDER HEAD: *See Ford Special Data.*
TIGHTENING TORQUES: *See Ford Special Data.*
ENGINE REMOVAL: *See Ford Special Data.*
OIL PAN REMOVAL (223" Engine): Drain crankcase. Pull dipstick out of tube Remove oil pan retaining screws, remove pan and gasket
OIL PAN REMOVAL (239" & 256" Engines): *CAUTION—Place #1 piston on top dead center before removing oil pan.* Drain crankcase and remove engine front splash pans, then remove oil pump-to-oil pan tube. On Ford-omatic equipped trucks, remove converter housing dust cover. Remove oil pan.

223" 6 CYL. ENGINE
(See Engine Specifications Above)

See 1954-55 Ford 6 Passenger Car Pages Engine is similar to those used in 1954-55 Pass Cars and all passenger cars engine data applies to truck engines

►*1955 OIL PUMP PRODUCTION CHANGE & PARTS INSTALLATION CAUTION (223" Engin):* New oil pump assembly, intermediate shaft, and body plate released for service Parts not interchangeable with those of previous type pump *S "Oiling System" in Ford Special Data*

239" & 256" ENGINES
(See Engine Specifications Above)

See 1954 Ford V8 Passenger Car Pages. Engine is similar to those used in 1954 Pass. Cars, and all passenger car engine data applies to truck engines EXCEPT AS NOTED BELOW.

►*1954 239" ENG CAMSHAFT PRODUCTION CHANGES*· First type camshaft Part No EBU-6250-A (13 tooth distributor drive gear, and 2 0500-2 0510" diameter bearing journals), replaced by camshaft, Part No B4A-6250-A (with 14 tooth distributor drive gear, and 1 9255-1 9265" diameter bearing journals) The B4A-6250-A camshaft was replaced in later production with camshaft Part No B4T-6250-A (with 14 tooth distributor drive gear and 1 9255-1 9265" diameter bearing journals) The B4T-6250-A camshaft is identified by "14" stamped on front end, or "ECE" cast into shaft

►*1954 256 ' ENG CAMSHAFT PRODUCTION CHANGE*· Early type camshaft, Part No EBY-6250-A replaced in production with Part No B4T-6250-A. Later type camshaft is identified by "14" stamped on front end of shaft, or "ECE" cast into shaft 256" Engines with later type camshaft have a blue or white daub of paint on right or left side of block Engines with early camshafts have a daub of orange paint on right or left side of block. *CAUTION—Valve Timing, Valve Lift, and Compression Pressures are different with early and late type camshafts See data below for differences*

►*1954 V8 ENGINE CONNECTING ROD & BEARING PRODUCTION CHANGE & REPLACEMENT PARTS CAUTION*· Late 1954 production connecting rods have an oil hole (for cylinder lubrication) located on same side as the bearing notch Early type bearings, with one oil hole, MUST NOT BE USED with the later type rod Later type bearings may be used with either the old or new rod as they have two oil holes and will fit either rod.

►*1954 239" & 256" ENGINE CAMSHAFT BEARING CHANGE (To prevent oil starvation due to improperly installed front bearing)* On engines equipped with camshafts (marked "14" on end, or "ECE" cast into shaft), new front bearings have been released for service replacement, Part No. B4C-6261-A Standard, B4C-6261-B (.015" undersize) The later type bearings have a slot instead of a 1/8" diameter oil hole When installing the new bearing, make sure that the slot is aligned with hole in cylinder bore and that bearing is pressed .005- .020" into cylinder block camshaft bearing bore to eliminate interference with camshaft thrust plate

►*1954 239" & 256" ENGINE ROCKER ARM ADJUSTING NOTE:* On engines equipped with B4T-6250-A camshaft, (marked "14" on end of shaft, or "ECE" cast into shaft), it may be found in some cases that the rocker arm adjusting screws are too short to provide proper tappet adjustment and still maintain the neces-

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

sary amount of thread contact. If necessary new adjusting screws, Part No. EAA-6549-B should be installed. The new screws are .060" longer when measured from end to center of the socket, than the old screw.

►*1954 239" & 256" ENGINE OIL PUMP SERVICE REPLACEMENT CHANGE & INSTALLATION CAUTION:* A new oil pump, Part No. EAM-6600-A, with steel gears is available for service replacement. The pump is furnished in Kit No. B5A-6600-C which includes a pump and spring. When installing pump on these engines, remove the Relief Valve Spring from the pump and install spring, Part No. EBU-6670-A.

►*1954 V8 ENGINE TAPPET REPLACEMENT CAUTION:* The cast iron tappet, Part No. EAA-6500-C should no longer be used as a service replacement on V8 engines as these tappets may contribute to camshaft lobe wear. Install tappet, Part No. EAA-6500-D (Steel forging) which can be identified by forging marks on outer edge of tappet foot. The tappet foot is .140" (steel forging), .220" (cast iron).

►*239" & 256" TRUCK ENGINE OIL PAN BAFFLE INSTALLATION (To Prevent Loss of Oil Pressure on Sudden Brake Stops):* Fabricate a baffle plate from hot rolled, low carbon, oil hardened steel (.042" thick) to fit the inside of the oil pan at a point 7 11/16" (239" engine), 9 7/8" (256" engine), from rear of pan. The baffle should be 3 9/16" high with the lower corners trimmed off on a 27/32" radius (this will allow oil to flow between both sides of the baffle). Allow 11/16" of material at side and bottom which must be turned at right angles on a 3/16" radius. Tack weld baffle to oil pan securely at sides and bottom.

VALVES:	Head Diam.	Stem Diam①	Length
Intake	②	③	5.02"
Exhaust	1.515"	④	5.02"

Valve	Seat Angle	Lift⑤	Stem Clearance
Intake	45°	.345"	.002" max.
Exhaust	45°	.345"	.003" max.

①—Valves furnished with .003", .015", .030" oversize stems for service replacement.

②—1.652" (239" engine), 1.785" (256" engine).

③—Two standard sizes for selective fitting (Red-.3415-.3420" & Green-.3420-.3425").

④—Two standard sizes for selective fitting (Red-.3405-.3410" & Green-.3410-.3415").

⑤—All models except 1954 256" Engine with EBY-6250-A camshaft. Valve lift for models with the EBY-6250-A camshaft is: .345-.350" (Intake), .339-.343" (Exhaust). *See "1954 256" Engine Camshaft Production Change" above.*

►*256" ENGINE VALVE SEAT INSERT NOTE:* Valve seat inserts used on exhaust valves in production and furnished for service replacement in Std. size, and .020" oversize. *See "Valve System" in Ford Special Data.*

VALVE LIFTERS: *INSTALLATION CAUTION*—Cast iron tappet, Part No. EAA-6500-C, should no longer be used as service replacement on V8 engines as these tappets may contribute to camshaft wear. Use steel tappet, Part No. EAA-6500-D. Cast iron tappet has smooth molded appearance on unmachined portion of tappet foot. Tappet foot is .220" thick. Steel tappet has forging marks on outer edge of tappet foot and is .140" thick.

VALVE TIMING: *NOTE*—The following valve opening and closing points are with camlift as indicated in following table.

Valve Timing
(EBY-6250-A Camshaft)①

Intake Valves—Open 15°②BTDC. Close 67°③ALDC.
Exhaust Valves—Open 57°④BLDC. Close 19°⑤ATDC.

Valve Timing
(Except Trucks with EBY-6250-A Camshaft)①

Intake Valves—Open 8°④BTDC. Close 44°⑥ALDC.
Exhaust Valves—Open 47°④BLDC. Close 5°⑥ATDC.

①—See 1954 256" Engine Camshaft Production Change above.

Camlift—②—.016". ③—.018". ④—.015".⑤—.017".⑥—.019".

Valve Timing Check: Remove right hand rocker chamber cover. Turn engine over until No. 1 intake tappet is on heel of No. 1 intake cam lobe. Back off No. 1 intake valve adjusting screw, push rocker arm to one side, then install dial indicator. Zero dial indicator, then rotate engine slowly until desired lift (.015") obtained. Compare degrees on pulley with specifications (8°). If not within specifications check for bent timing pointer by bringing No. 1 piston to TDC and see if timing pointer is aligned with TDC mark on crankshaft pulley. If pointer not at fault, check timing chain, camshaft sprocket, crankshaft pulley and crankshaft in order of accessibility.

►*CAMSHAFT SPROCKET SPACER INSTALLATION CAUTION (V8 Eng.):* If spacer, Part No. EBE-6265-A, is installed backwards, it will allow an excessive amount of endplay. Inside diameter of spacer has a chamfer on one side and this chamfered side should be installed toward No. 1 camshaft bearing journal.

VALVE TAPPET CLEARANCE: .016" (Intake), .018" (Exhaust). With engine at normal operating temperature.

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Ford Special Data.*

►*F-100 TRUCK OIL PRESSURE INDICATOR:* Indicator light on instrument panel operated by engine unit. Lights when ignition switch turned on, goes out when engine starts and oil pump operates. *All other truck models have an oil pressure indicator gauge on instrument panel.*

►*1955 223" ENGINE OIL PUMP PRODUCTION CHANGE & PARTS INSTALLATION CAUTION:* New oil pump assembly, intermediate shaft, and body plate released for service. Parts not interchangeable with those of previous type pumps. *See "Oiling System" in Ford Special Data.*

►*CRANKCASE VENTILATION GASKET INSTALLATION CAUTION (V8 Eng.):* On some units gasket, Part No. B4A-6872-A, may have been installed upside down causing leak at gasket location. Bolt center line is 5/64" below center line of gasket.

Crankcas Capacity: 5 qts. (223 & 239 Eng.), 6 qts. (256 Eng.). 1 qt. addtl. when filter element changed.

N rmal Oil Pr ssur : 45 lbs. at 2000 RPM. (223 Eng.), 45-55 lbs. at 30-40 MPH. (239 & 256 Eng.).

Pressure Regulator Valve: In oil pump body. Not adjustable. *NOTE*—Valve spring pressure should be 9.82 lbs. at 1.56" (223 Eng.), 10.86 lbs. at 1.40" (239 & 256 Eng.).

Oil Pressure Indicator: *See Note above for F100 Trucks.* King-Seeley Electric type.

Dash Unit—Ford No. FAE-9273A (Exc. Par. Del.), 1C-9273A (Parcel Delivery).

Engine Unit—Ford No. 41A-9278 (All).

See "King-Seeley Gauges" in Miscellaneous Section.

Oil Pump: Gear type pump mounted in crankcase (223 Eng.), on left side of crankcase (239 & 256" Eng.).

Pump Overhaul—*See "Oil Pump" in Ford Special Data.*

Oil Filter: Full-flow (Std. Equip.) with pressure relief valve in center filter bolt. Replace filter element at 4000-5000 miles or when oil becomes dirty or polluted.

Replacement Filter Element—Ford No. B2A-6731-A (Kit includes new gaskets).

►*CAUTION:* This special Full-flow filter element must be used for replacement (use of by-pass type element would restrict oil flow and result in insufficient engine lubrication.

►*FILTER INSTALLATION CAUTION & OIL LEAKAGE CORRECTION: See "Oiling System" in Ford Special Data.*

Crankcase Ventilation: Filter in oil filler cap (inlet) with outlet pipe in rear of crankcase on right side of engine.

COOLING

►*TEMPERATURE GAUGE FALSE READING CORRECTION (8 CYL. ENGINES):* In cases where heat indicator shows a reading higher than actual water temperature, check water temperature gauge bulb on engine to see that it is not contacting a casting flash inside cylinder head. Remove flashing with a rat tail file.

►*RESTRICTED WATER BY-PASS CAUTION (8 CYL. ENGINES):* A restricted or blocked passage caused by casting flash will decrease flow of water in engine when thermostat is closed. Check for this condition by listening for a gurgling sound when engine is stopped after a short period of operation. If noise is heard, remove water by-pass tube and inspect for a restricted opening in water pump housing. If necessary, remove pump and drill opening with a 19/32" drill.

Water Capacity (Without Heat r): 18½ qts. (223" Engine), 22 qts. (239" Engine), 22½ qts. (256" Engine).

Pressure Valve: Ford No. 1T-8100-A. Radiator filler cap (opens at 4 lbs.).

Thermostat: Ford No. EAG-8575-A (147-152°). No. EBR-8575-A (167-173°). Mounted inside water outlet elbow.

►*THERMOSTAT INSTALLATION (V8 Engin s): Install th rmostat with word "TOP" in uppermost position.*

Wat r Pump: Packless, sealed ball bearing type.

See "Water Pumps" in Ford Sp cial Data.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

T mp ratur Gaug : King-Seeley Electric type.
Dash Unit—Ford No. FAE-10883-A.
Engin Unit—Ford No. 8A-10884.
T mp rature Bulb Sl ve Removal (V8 Engines)—Thread adapter handle of tool T50T-100-A into sleeve. Tighten locknut against sleeve, then pull sleeve with sliding hammer.
S "T mp rature Gaug s" in Miscellaneous Section.

CLUTCH

L ng M d l 10CF, N . L5222 (F-100, F-250)—Ford No. AE-7563-A. Models with 3-Speed Transmission.
L ng M d l 11CF, N . L1440 (Std. All Other Models and F-100, F-250 with 4-Speed Transmission)—Ford No. 51-7563-A.
L ng Mod l 11CF, N . L1478 (Heavy Duty All Models Exc pt F-100, F-250)—Ford No. 8MTH-7563-A.
S "Long" in Clutch S ction.

Clutch Disc—Use with cover assembly as follows:

L ng N .	F rd N .	Cover Assembly
CD870	59T-7550-A①	Ford No. 51-7563-A
CD606	51A-7550-A	Ford No. AE-7563-A
CD887	TDAA-7550-A	Ford No. 8MTH-7563-A
CD607	TDAA-7550-A	Ford No. 51-7563-A

①—Replaced by Ford No. 81T-7550.

P dal Adjustm nt: 1 1/8-1 3/8" free travel. Adjusting clevis provided. at forward end of connecting rod between pedal shaft and equalizer shaft.

►*PEDAL FREE TRAVEL ADJUSTMENT CAUTION:* Normal action of pressure plate centrifugal weights at high engine speed will take up approximately ¾" of specified free travel. Check fre e travel when engine is operated at high speed and see if approximately ½" of free travel is left. Insufficient free travel will cause release bearing to rotate at all times and will result in early bearing failure.

R moval: Disconnect clutch pedal retracting spring from clutch release lever. Remove lock nut and adjusting nut from release lever rod, then remove rod. Remove transmission assembly from clutch housing (see below). Remove clutch release bearing and hub frcm release lever. Mark pressure plate and cover assembly and flywheel so that parts may be reinstalled in same relative positions. Loosen pressure plate and cover assembly-to-flywheel bolts until pressure plate springs are expanded, then remove bolts. Remove pressure plate and cover assembly and clutch disc assembly through opening in bottom of clutch housing. Remove pilot bearing from flywheel with Tool 7600-E.

TRANSMISSION

►*239" ENGINE HARD SHIFTING CORRECTION (ALL TRANSMISSIONS):* If hard shifting occurs with truck standing and clutch completely disengaged, pilot bearing bore in crankshaft may not be deep enough. This locks transmission input shaft to crankshaft and makes it almost impossible to shift transmission. To correct, grind approximately 1/8" off pilot bearing end of input shaft to provide clearance between end of shaft and counterbore in crankshaft.

3-SPEED (LIGHT DUTY)

Own. 3-Speed, all helical gear. Constant mesh, synchro-mesh (second & high), sliding gear (low & reverse). Steering column shift standard.
See "Ford Truck 3-Speed (Light Duty)" in Transmission Section.

►*INTERMEDIATE & HIGH GEAR JUMP-OUT CORRECTION:* See *"Ford Synchro-mesh" in Transmission Section.*

Removal: Remove floor mat and floor plate. Loosen two nuts that secure top of transmissfon to clutch housing studs. Raise truck, then drain lubricant from transmission. Disconnect the drive shaft from the transmission. If truck equipped with band-type parking brake, disconnect brake cable at brake and at gear shift housing. Disconnect gear shift linkage at transmission, then disconnect clutch pedal retracting spring from clutch release lever. Remove bolts and lockwashers which attach clutch release equalizer bar anchor bracket to transmission. Disconnect speedometer cable from transmission. Remove dust cover from bottom of clutch housing. Position transmission jack under transmission. Remove two top nuts, two bottom bolts, and lockwashers that secure transmission to clutch housing. Move transmission to rear until input shaft splines clear clutch housing. Be careful not to allow clutch release bearing and hub to drop out of release lever fork. Lower transmission to floor.

3-SPEED (HEAVY DUTY)

Own. 3-Speed, helical gear (second & high), spur gear (low & reverse). Constant mesh, synchro-mesh (second & high), sliding gear (low & reverse). Steering column shift standard.
See "Ford Truck 3-Speed (Heavy Duty)" in Transmission Section.

Removal: Same as for 3-Speed (Light Duty) above.

4-SPEED

Own. 4-Speed, Constant mesh, synchro-mesh (second, third & high). Helical gears used for second, third & high. Spur gears used for low & reverse. Center, floor mounted gear shift lever standard.
See "Ford Truck 4-Speed (Synchro-mesh)" in Transmission Section.

Removal: Same as for 3-Speed (Light Duty) above and note following: *If hoist not used, it may be necessary to remove gear shift lever assembly and lever housing before transmission can be removed from truck.* Disconnect drive shaft, or coupling shaft, at parking brake drum. If truck equipped with coupling shaft support, disconnect support bracket from support plate, then remove coupling shaft.

OVERDRIVE

Warner Model AS4-R10F. Overdrive with solenoid operated (no centrifugal pawls) with governor control and throttle operated kick-down. There is no lockout switch on this unit.
See "Warner R10 Overdrive" in Transmission Section.

Overdriv Contr ls: *See "Overdrive Controls" in Transmission Section.*

Removal: Same as for 3-Speed Synchro-mesh Transmission (above), after disconnecting control cable and wiring.

FORDOMATIC TRANSMISSION

Torque converter and three speed automatic transmission with hydraulic control and mechanical parking lock.
See "Fordomatic & Mercomatic" in Transmission Section.

►*1955 F-100 TRUCK FORDOMATIC OIL COOLER PRODUCTION CHANGE:* The Fordomatic oil cooler discontinued in production after May 1955. A by-pass tube assembly is being used in place of the oil cooler.

►*FORDOMATIC WHISTLING NOISE CORRECTION: This condition may occur during normal engine operation. See "Fordomatic & Mercomatic" in Transmission Section.*

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Fordomatic & Mercomatic" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Fordomatic & Mercomatic" in Transmission Section.*

Lubrication—Check transmission oil every 1000 miles and maintain fluid level at "Full" mark on dipstick. Drain & refill every 15,000 miles. Use only Automatic Transmission Fluid Type A.

Checking Fluid Level—Apply parking brakes, place transmission selector lever in "N" (neutral) position, run engine at idle speed for approximately four minutes. With parking brake applied and engine running at slow idle, move selector lever to "P" (parking) position. When engine and transmission have reached normal operating temperature, move selector lever through all positions to assure fluid distribution throughout transmission. Return selector lever to "P" position. Raise hood, clean dirt away from fluid level cap, remove indicator. Wipe clean and insert in tube (make sure indicator is pushed all the way down). Remove indicator and read level. Add sufficient fluid to raise level to full mark on indicator. Replace indicator.

►*OTHER FORDOMATIC SERVICE DATA: See "Fordomatic & Mercomatic" in Transmission Section.*

UNIVERSALS

Spicer. Needle bearing type.

►*UNIVERSAL JOINT INSTALLATION CAUTION: Make sure that all universal joint yokes in drive line are in the same plane to avoid drive line unbalance.*

Coupling Shaft Center Bearing: Consists of cushion mounted ball bearing bolted to underside of frame intermediate cross member. Bearing is mounted on end of coupling shaft in a sleeve with felt retainer on each end and bearing baffle on front end.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

REAR AXLE

SEMI-FLOATING

Own. Semi-floating, hypoid gear with Hotchkiss drive. *NOTE*—Same axle as used in Station Wagon & Sedan Delivery.

See "Ford & Mercury (Separate Carrier Type) Hypoid" in Rear Axle Section.

Ratios—As follows:
Standard—3.92-1 (47-12).
Optional—4.27-1 (47-11).
Overdrive—4.09-1 (45-11).
Fordomatic—3.92-1 (47-12).

Backlash—.003-.008". Shim adjustment.

Axle Shaft Removal: Remove wheel, take off drum. Remove four axle retainer nuts (work through opening in axle shaft flange). Use Puller No. 4235 and pull shaft (do not disturb brake backing plate or damage wheel bearing oil seal).

Axle Assembly Removal: Raise rear of truck, then disconnect hydraulic brake hose from hydraulic brake line at rear axle. Disconnect parking brake cable from equalizer rod, then remove screws which attach brake cable brackets to frame crossmember. Disconnect drive shaft at rear axle universal joint flange. Remove nuts from rear spring clips (U-bolts), then remove spring clips. Loosen shock absorber stud nuts and move shock absorbers out of way. Roll axle assembly away from truck, remove wheels.

Wheel Bearing Adjustment: None required in service.

FULL-FLOATING

Own. Full floating hypoid gear with Hotchkiss drive.

Model	Rear Axle Type
F-250 Conventional (Early)	① Split Housing
P-350 Parcel Del. (Early)	① Split Housing
F-250 Conventional (Later)	Integral Housing
P-350 Parcel Del. (Later)	Integral Housing
F-350 Conventional	② (Heavy Duty) Split Housing
F-500, F-600 (All Models)	Banjo Housing

①—Drive pinion bearings pressed in axle housing.
②—Drive pinion bearings pressed in sleeve and bolted to axle housing.

See Various Types of Ford Rear Axles in Rear Axle Section.

Axle Ratios

Model	Ratio
F-250 Conv.	4.86-1 (34-7), 5.83-1 (35-6) ①
P-350 Par. Del.	4.86-1 (34-7), 5.83-1 (35-6) ①
F-350 Conv.	5.14-1 (36-7), 5.83-1 (35-6) ②
F-500 (All).	5.29-1 (27-7), 6.2-1 (31-5), 6.8-1 (34-5) ③
F-600 (All).	7.2-1 (36-5), 6.2-1 (31-5), 6.8-1 (34-5) ④

①—.008-.013" backlash. ②—.004-.018" backlash.
③—.006-.012" backlash. ④—.006- .016" backlash.

Axle Shaft Removal: Drain lubricant from axle housing, then remove axle shaft stud nuts and washers. Tap center of axle shaft flanges to loosen tapered dowels, then remove dowels. Remove axle shafts from housing, remove hub and drum assemblies.

Axle Assembly Removal: Loosen wheel and stud nuts, then raise rear of vehicle. Disconnect hydraulic brake hose from hydraulic brake pipe. Disconnect drive shaft at rear universal joint flange, remove spring clips (U bolts), roll axle from under car and remove wheels.

Wheel Bearing Adjustment: Remove axle shafts (see above), use special bearing adjusting wrench and remove bearing locknut (outer nut), and lockwasher. Adjust bearings by turning bearing adjusting nut (inner nut) up until tight then backing off 1/8 turn. Install bearing lockwasher. (*NOTE*—If adjusting nut equipped with dowel, make sure lockwasher fits over dowel). Install bearing locknut and draw nut up tight. If flange type lockwasher is used, bend one flange over adjusting nut and one flange over locknut. Install axle shaft and lower vehicle.

TWO-SPEED

Own. Electrically operated shift, Two-speed, Full-floating spur gear planetary unit (reduction gearing). Spiral bevel gear final drive.

See "Ford Truck Two-Speed" in Rear Axle Section.

Ratio—5.83-1 (Direct Speed), 8.11-1 (Second Speed). 6.33-1 (Direct Speed), 8.81-1 (Second Speed).

Backlash—.006-.016".

Removal: Same as for standard axle (above) after removal of wiring harness.

SHOCK ABSORBERS

Direct acting hydraulic. Shock absorbers are sealed units and are not adjustable or refillable.

►*REPLACEMENT SHOCK ABSORBER NOTE: Shocks are supplied for service replacement in kits consisting of shock absorber and necessary bushings.*

►*SHOCK ABSORBER APPLICATION NOTE:* Front and rear shocks are standard equipment on all F-100, F-250, & P-350 (Parcel Delivery). Front shocks only are standard on F-350. Front and rear shocks are optional on all other models.

1954 Replacement Shock Absorbers

B, F-500, 600	B3T-18124-A
B, C, F-500, 600	B3T-18125-A

FRONT SUSPENSION

Conventional "I" beam section front axle with Reverse-Elliott ends and semi-elliptic springs.

Kingpin Inclination—4° ±½°.

Caster—(F-100, F-250) 3° to 4°, (Others) 3° to 5°. ½° maximum variation between wheels.

Camber—¼° to 1°. ½° maximum variation between wheels.

Toe-In—0-1/16".

STEERING

Own. (Gemmer 305 & 335 D sign). Worm-and-roller types with push-pull adjustment.

►*F-100, 250 DRAG LINK INSTALLATION CAUTION:* Due to design of drag link (THAA-3305-A) it is possible to install link in a reverse position causing steering interference. When properly installed, offset end of drag link is attached to sector shaft arm, and lubrication fittings will be at bottom side of link.

See "Gemmer Worm-and-Roller Types" in Steering Gear Section.

Steering Wheel & Horn Button Removal: *See "Gemmer Worm & Roller (Type 305 & 335)" in Steering Section.*

Steering Gear Removal: *See "Gemmer Worm & Roller (Type 305 & 335)" in Steering Section.*

BRAKES

Brake types are as listed in application table below. Hand lever applies rear wheel service brakes on F-100 only (independent shaft brake on other models).

►*1954 F-100 TRUCK REAR WHEEL SKIDDING CORRECTION:* If rear wheel skidding on severe brake application (no load) is encountered, replace both rear wheel cylinders with Ford No. 8A-2261 and 8A-2262. These are passenger car type cylinders and are smaller than original truck cylinders. *CAUTION—Right and left wheel cylinders must be replaced.*

►*1955 F-500 BRAKE PRODUCTION CHANGE:* Effective approximately April 13, 1955 all F-500 Series trucks will be equipped with larger rear wheel brakes previously used on these models with 2-Speed Rear Axles. See tables below.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

►*1955 F-500 & F-600 REAR WHEEL BRAKE CYLINDER LEAK CORRECTION (Due to Excessive Depth of Counterbore)* To correct, install two 91A-2152 gaskets between brake pipe and wheel cylinder body

Brake Type Application

Truck Model	Front	Rear
F-100	Duo-Servo	Duo-Servo
F,P-250,F-350	Uni-Servo	Duo-Servo
F,B,C,P-500,F,B,C-600	Uni-Servo	2 Cyl.

Uni-Servo - Ford-Bendix. Single anchor. Wheel cylinder actuates primary shoe Ratchet adjusting screw.

See "Ford-Bendix Uni-Servo Hydraulic" in Brake Section.

Duo-Servo - Ford-Bendix. Single anchor, self energizing. Wheel cylinders actuates both shoes Ratchet adjusting screw.

See "Ford-Bendix Hydraulic" in Brake Section.

Two-Cylinder Type—Two wheel cylinders in each brake assembly.

See "Ford Truck Two Cylinder" in Brake Section.

F-600 All Models	13 61/64"	15 11/32"

①—Single Speed Axle

Clearance—Brake lining to drum clearance different as follows

Uni-Servo & Duo-Servo— 010" clearance measured 1½" from each end of secondary shoe

Two-Cylinder Type—.025" from brake shoe to gauge surface on brake plate

Hand Brake (Except F-100): External contracting type consisting of a brake drum bolted to transmission main shaft companion flange, and an external contracting band mounted on rear of transmission

Adjustment—On cable controlled parking brakes, move lever to full released position On transmission mounted parking brake levers, set lever to first notch. Observe position of cam to make sure flat portion is resting on brake band bracket If cam not flat with bracket, remove clevis pin from upper part of cam, adjust clevis rod to allow flat portion to rest on brake band bracket Install clevis and cotter pins Remove lock wire from anchor adjusting screw, turn adjusting screw clockwise until 010" clearance is established between brake lining and drum at anchor bracket Loosen locknut on adjusting screw from lower half of brake band. Adjust for .010" clearance between lining and drum at lower half of brake band Tighten locknut Turn upper band adjusting rod nut until 010" clearance is established between upper half of band and drum Re-install lockwire in anchor adjusting screw

Hand Brake Drum Diameter—(F-250, 350) 8', (Others) 7 13/16'

Hand Brake Lining

Series	Length	Width	Thickness
F-250, 350	24 5/8"	2'	5/32'
P-350, 500①	23 5/64"	2½'	1/4"
B, C, F-500, 600	24 5/8"	2½'	1/4'

①—Three-piece lining used

Brake Pedal Free Play Adjustment: 3/16-3/8". Adjust free play by loosening brake pedal-to-master cylinder push rod and rotating rod to obtain correct free play. Tighten lock nut while holding push rod securely.

Standard Master Cylinder: Located on bracket attached to left frame side member below brake pedal.

Checking Fluid—Maintain fluid level to within ½" of top of reservoir.

Removal—Disconnect brake lines from master cylinder and depress brake pedal a few times to empty master cylinder. Remove brake pedal return spring from brake pedal clevis pin and remove clevis pin. Disconnect stop light switch wires at switch. Remove assembly from bracket.

Power Brakes: Midland or Hydrovac unit mounted in various positions depending on truck model and connected in hydraulic brake line between master cylinder and wheel cylinders There are no mechanical connections and adjustments are not required

See "Midland" or "Hydrovac" Power Units in Brake Section.

Checking Brake Fluid—Same as for manual brakes (above)

Removal of Power Unit—Depress brake pedal several times to remove all vacuum from system Loosen brake power unit air inlet tube clamp and remove tube Disconnect master cylinder to power unit hydraulic line at power unit Disconnect vacuum tube at power unit. If stop light switch located on brake power unit, disconnect wires Remove mounting bracket bolts and power unit.

MODEL IDENTIFICATION

VEHICLE NUMBER: Stamped on patent plate on left front body pillar.
First Number—100001.

►*VEHICLE NUMBER NOTE:* Vehicle number (example *A6FS 100001*) includes following identification data in sequence:

Eng. Type①	Year②	Assy. Plant	Body Style③	Serial No.
A	6	See below	See below	100001 up

①—**A**—6 Cyl., 223 cu. in. engine; **M**—8 Cyl., 292 cu. in. engine; **P**—8 Cyl., 312 cu. in. engine (Thunderbird & & Interceptor); **U**—8 Cyl., 272 cu. in. engine.

②—Last digit of model year.

③—**C**—Sunliner (Conv.); **F**—Victoria (Fairlane 4-Dr.) **H**—Thunderbird; **R**—Ranch Wagon (Customline); **S**—Sedan Delivery; **T**—Fordor & Tudor (Fairlane); **V**—Victoria (2-Dr.); **W**—Crown Victoria; **X**—Country Sedan; **Y**—Country Squire; **G**—All others (Fordor, Tudor—Mainline & Customline).

Assembly Plant Designation

A—Atlanta	**F**—Dearborn	**N**—Norfolk
B—Buffalo	**G**—Chicago	**P**—St. Paul
C—Chester	**K**—Kansas City	**R**—San Jose
D—Dallas	**L**—Long Beach	**S**—Somerville
E—Mahwah	**M**—Memphis	**U**—Louisville

TUNE-UP

►*SUDDEN ENGINE STOPPAGE CORRECTION:* Inspect distributor primary terminal wire assembly Ford No. B6A-12216-A for defective welds at brass terminals.

COMPRESSION PRESSURE: 150 lbs. at cranking speed. Maximum variation between cylinders 10 lbs.

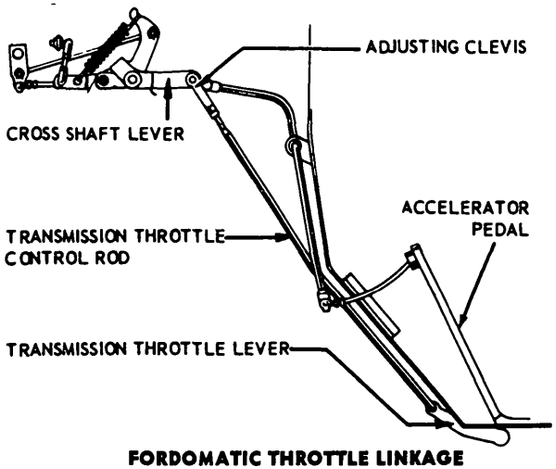
VACUUM READING: Steady 18-19" idling at 475-500 RPM in neutral.

VALVE TAPPET CLEARANCE: .019" Intake and Exhaust (Hot & Cold).

MANIFOLD HEAT CONTROL: Automatic thermostatic type with counterweight. Valve is closed when engine is at normal operating temperature and *running at slow idle,* and opens when *operating at high RPM.* Spring is installed with ¾ turn wind-up and hooked over stop pin.

IGNITION

FIRING ORDER: 1-5-3-6-2-4.



SPARK PLUG GAP: .032-.036".

Spark Plugs—Champion 870. 18mm.

►*SPARK PLUG CAUTION:* Spark plug has tapered seat and does not require a sealing gasket. It is important that plugs be torque tightened within the range 15-20 ft. lbs.

COIL: Ford No. B6A-12029-B. *12 Volt.*
Ignition Current—2.5 amps. idling, 4.5 amps. stopped. **Resistor—Ford B6A-12250-B** (Early), **B6A-12250-C** (Later). Mounted next to coil.

►*IGNITION RESISTOR PRODUCTION CHANGES:* Two types of resistors, Ford No. B6A-12250-C used in production to replace original resistor B6A-12250-B. First type replacement identified by copper flashing on heads of rivets which support elements. A piece of fibre glass is cemented to inside channel of support bracket.

FORDOMATIC THROTTLE LINKAGE

Second type has sheet metal cover snapped over channel and rivets are cadmium plated. Replace original type when servicing ignition system.

►*COIL RESISTOR NOTE:* Resistor is connected in lead from ignition switch to coil. Resistor is by-passed during cranking by a lead from starter solenoid to battery terminal of coil.

DISTRIBUTOR: Ford No. B6A-12127-E. *12 Volt.*

►*DISTRIBUTOR DIAPHRAGM PRODUCTION CHANGE:* A new distributor diaphragm, Ford No. B6A-12370-B, used on all engines after Nov. 15, 1955, and is available for replacement of all B6A-12370-A diaphragms. It can be identified by a die cast end cover in place of stamped cover and incorporates new type material in secondary diaphragm giving it much greater strength.
Condenser—Ford 7RA-12300-C. **Capacity**—.21-.25 mfd.
Contact Point Set—Ford FAA-12171-A.
Breaker Gap—.024-.026".
Cam Angle—35-38°.
Breaker Arm Spring Tension—17-20 ozs.
Rotation—Clockwise viewed from above.

Advance Performance
►With Distributor on Test Stand

Distr. Degrees	Vacuum (" of HG)	Distr. RPM
0	0	200
0±½	18	300
¼-1¼	32	400
1¾-2¾	50	500
8-9¼	2.59	1200
10¾-11¾	4.22	1600
13-14½	6.00	2000

►*DISTRIBUTOR INSTALLATION CAUTION:* Be sure oil pump intermediate shaft engages the seat in the oil pump. It may be necessary to turn over the engine with starter after distributor drive gear is partially engaged, in order to engage intermediate shaft fully in oil pump.

Initial Distributor Timing: Set engine crankshaft so that No. 1 cylinder is at TDC after compression stroke (with timing mark in line with pointer). Install distributor so that rotor points to the No. 1 spark plug wire terminal in distributor cap.

IGNITION TIMING

Setting—4° BTDC (Std.), 6° BTDC (Fordomatic) with engine idling at 475 RPM and vacuum line disconnected. *See Initial Distributor Timing above. NOTE*—Maximum initial timing recommended is 6° BTDC (Std.) and 8° BTDC (Fordomatic).
Timing Mark—Vibration damper marked "TDC", and "3", "5", "7", "9" degrees BTDC. Align correct mark with pointer on cylinder front cover.

CARBURETOR

Ford No. B6A-9510-H (Exc. Fordomatic), B6A-9510-G (Fordomatic). "Visi-flo", single barrel.

►*CARBURETOR MAIN METERING JETS PRODUCTION CHANGE:* For main metering jets used in production starting approximately June 1st, 1956 *See "Ford Visi-Flo" in Carburetion Section.*
Initial Setting – Initial setting 1 turn open. Turn adjusting screw in until engine begins to run roughly from lean mixture, then turn screw out until engine begins to roll from rich mixture. Turn screw in until engine runs smoothly. Favor a slightly rich mixture.
Idle Speed – 475-500 RPM (Std. & O.D.), 475-500 RPM (Fordomatic) with selector lever in Neutral with 425-450 RPM final check with selector lever in Dr. range.
Fuel Level – 11/16" ± 1/32" below power valve mounting surface. (Tool T52L-9550-AEE) *See "Ford Visi-fl" in Carburetion Section.*
Accelerating Pump: Inner hole for average or hot weather operation, outer hole for cold weather operation.
Fast Idle: Integral type operated by choke valve. No adjustment required.
Throttle Linkage Adjustment (Ford matic Cars): Adjust engine idle speed to 475-500 RPM with selector lever in "N" position and engine at normal operating temperature. Adjust anti-stall dashpot (see below). Remove cotter pin and clevis pin from upper end of throttle control rod. Pull upward firmly but gently on throttle control rod to hold transmission lever against its internal stop. Rotate throttle rod clevis until pin enters holes in the clevis and the accelerator assembly shaft. Lengthen throttle control rod by rotating clevis 2½ turns counter-clockwise. Assemble throttle control rod to accelerator assembly shaft with clevis pin and cotter pin. Adjust accelerator pedal height by turning threaded trunnion on accelerator connecting link until top surface of accelerator pedal is 4 9/16" from floor pan. Check throttle linkage, and relieve any binding conditions. Road test car. If band or clutch slippage is evident, increase rod length to 3 turns, *but do not exceed 3½ turns of the clevis.*
Anti-Stall Dashpot (Fordomatic Cars): Adjust engine idle speed to 475-500 RPM with selector lever in "N" position and engine at normal operating temperature. Loosen dashpot adjusting screw locknut. Hold throttle in closed position, and turn dashpot adjusting screw out (counter-clockwise) until head of screw pushes dashpot rod up to the end of its travel. Turn dashpot adjusting screw in (clockwise) 1½-2 turns to obtain a clearance of .045-.064" between rod and screw head. After adjustment made, tighten adjusting screw locknut.
Fuel Pump Pressure: 4-5 lbs. at 500 RPM.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

CARB. EQUIPMENT

Fuel Pump: **F rd B5A-9350-A,** Fuel only (Except Fordomatic & Overdrive Cars), **B5A-9350-B,** Fuel & Vacuum (Fordomatic & Overdrive Cars).
Fu l Pump Pr ssur – 4-5 lbs. at 500 RPM.
See "Fuel Pumps" in Carburetion Section.
Gasoline Gauge: King-Seeley Electric.
Dash Unit – Ford B6A-9280-D.
Tank Unit – Ford B6A-9275-C (Exc. Sta. Wgn. & Sed. Del.). Ford B6A-9275-B (Sta. Wgn. & Sed. Del.).
See "Fuel Gauges" in Carburetion Section.

BATTERY

Ford N . B6A-10655-C. *12 Volt,* 11 plate, 55 Ampere hour capacity, or **B6A-10655-E.** *12 Volt,* 13 plate, 70 Ampere hour capacity.
Battery Gr und – Negative to engine block.
► *CAUTION: This is reversed from previous models.*
Engin Gr und – Cylinder head to dash.

STARTER

F rd N . B6A-11002-A. *12 Volt.* **Armature**–B6A-11005-A.
► *IMPULSE STARTING (Back-Up Light Equipped Cars) CORRECTION:* Before replacing neutral safety switch to correct short between light and solenoid terminals causing engine to start, interchange leads at switch. Connect longest lead (beyond taped portion of harness) to "A" terminal and short lead to "B" terminal.
Drive – Ford 1CM-11350-C. Bendix "Folo-Thru".
R tation – Counter-clockwise at commutator end.
Brush Spring Tensi n – 48-56 ozs.
Cranking Speed – 150-180 RPM with engine warm.

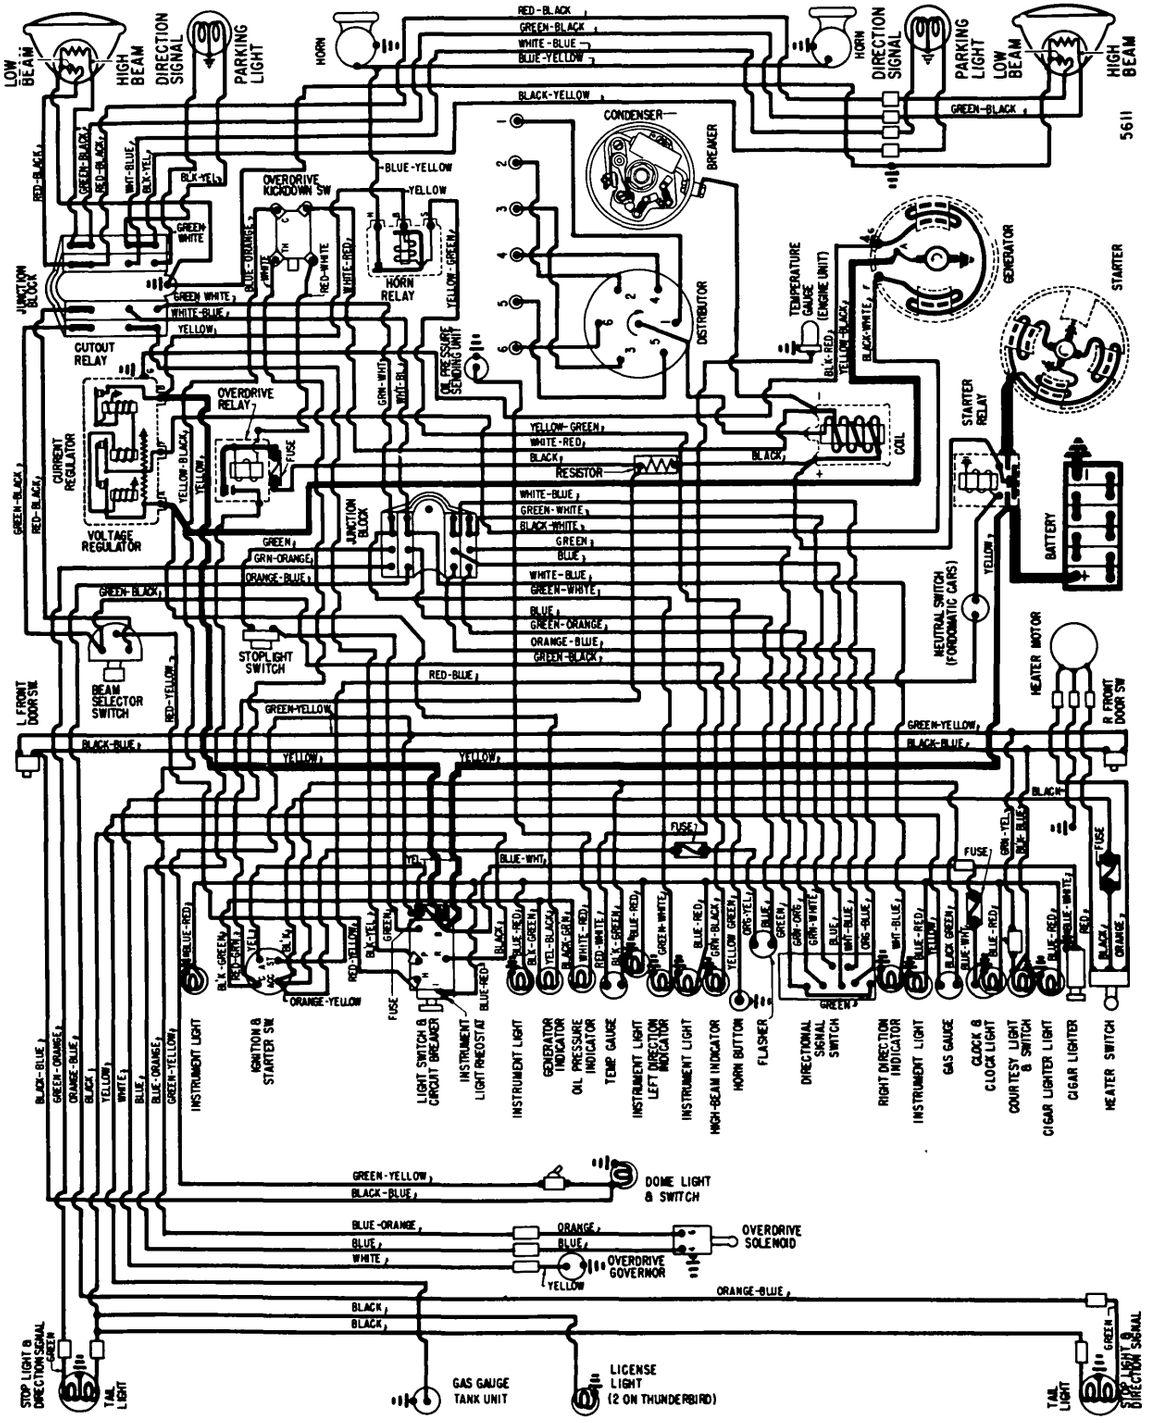
Perf rmance Data.

Torque	RPM	Volts	Amperes
0 ft. lbs.	①	12.0	120′
	150-180 ②		190 max.

① – With starter on engine and engine idling.
② – Cranking speed with engine warm.

Starting Switch: Magnetic type, Ford No. B6A-11450-A. Starter Switch is controlled by ignition switch. *NOTE -* Neutral Safety Switch used on Fordomatic transmission cars.
F rdomatic Neutral Safety Switch: Ford No. FAC-15812-C.
Adjustment – *See "Fordomatic & Mercomatic" in Transmission Section.*

GENERATOR



Ford N .B6A-10002-A, *12 Volt.* **Armature** – B6A-10005-A.
► *GENERATOR INDICATOR LIGHT (Idle Speed) CORRECTION:* When generator light comes "ON" when engine idles, install a 75 ohm, 25 Watt resistor (Vitreous enamel type with eyelets moulded into resistor body), at terminal "A" of regulator in series with indicator light wire (Yellow with black tracer). Adjust engine idle speed to high limit. *NOTE -* Light will now have lower illumination than oil indicator light.

Performance Data

Amperes ①	Eng. RPM
30	1250

① – See Regulator for maximum charging rate.
Brush Spring T nsion – 26-34 ozs.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Field Current – 1.4-1.6 amperes at 12.0 volts.
Rotation – Counter-clockwise at commutator end.
Belt Adjustment: ¼" belt deflection midway between generator and pump pulleys with normal thumb pressure.

REGULATOR

Ford No. B6A-10505-A. *12 Volt.*

► *SETTING CAUTION: "Temperature Compensated" type. Set to following specifications at 75° F., ambient (engine compartment) temperature, after ½ hour operation in vehicle, or after regulator heated and stabilized.*

Cutout Relay

Cuts In – 12.0-12.8 volts.

Voltage Regulator

Setting – 14.6-15.4 volts.
Checking & Adjusting – *See Electrical Section.*

Current Regulator

Setting – 28-32 amperes.
Checking & Adjusting – *See Electrical Section.*

MISC. ELECTRICAL

► *DOME LIGHT FAILURE (High Voltage) CORRECTION:* When dome lights fail due to high voltage, remove head light switch, remove dome light wire from switch (green wire with yellow tracer) and install 1.5 Ohm, 5-Watt vitreous enamel resistor in dome light circuit.

Head Lamps: Sealed Beam. *See Electrical Section.*

Directional Signals: *See Electrical Section.*

Lighting Switch Removal: With control knob in "OFF" position, press spring release button on switch housing, turn shaft slightly and pull it out of switch. Unscrew mounting nut with Tool 17470-N. Remove switch and disconnect all wires.

Stop Light Switch Location: On forward end of brake master cylinder (Conventional Brakes), on top of booster assembly (Power Brakes). Master cylinder located on firewall in engine compartment.

FUSES: Located as follows:
Interior Lights – 7.5 ampere. On lighting switch.
Overdrive – 15 ampere on overdrive relay.
Cigar Lighter – Special fuse in lighter base.
Clock – 3 amps. in clock lead.
Heater – 7.5 amps. in blower switch lead.

Turn Signal Fuse – 7.5 amps. In flasher to switch lead.

CIRCUIT BREAKERS: On headlight switch. Combination headlight switch, circuit breaker, and fuse assembly used. One circuit breaker protects headlight circuit and second circuit breaker protects instrument, parking, stop and tail light circuits.

► *1956 CIGAR LIGHTER CAUTION:* 12 volt socket and element smaller than 6 volt. 12 volt socket has ink mark stamped on it for identification. DO NOT use 12 volt element in 6 volt socket as heated element will eject onto front seat.

HORNS: (Except West Coast). Ford B5T-13832-B (High Pitch), B5T-13833-B (Low Pitch). *12 Volt.*
(West Coast Only). Ford B6A-13832-A (High Pitch), use bracket Ford No. B6A-13830-A, Ford B6A-13833-A (Low Pitch), use bracket Ford No. B6A-13831-A. *12 Volt.*
Horn Current – 9.2-9.6 amperes at 12-12.6 volts.
Horn Relay: Ford No. 2G-13853-A.

ENGINE

ENGINE SPECIFICATIONS: 6 Cyl. Valve-in-head.

Bore	Stroke	Displacement
3.62"	3.60"	223 cu. ins.
Compr. Ratio	**Rated HP**	**Developed HP**
8.0-1	31.54	137 at 4200 RPM

Compression & Vacuum Reading – *See TUNE-UP.*

► *CRANKSHAFT OIL SEAL LEAK CORRECTION:* For application of new type front oil slinger and crankshaft with integral oil slinger, *See "Crankshaft & Main Bearings" in Ford Special Data.*

CYLINDER HEAD: *See "Cylinder Head & Manifold" in Ford Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Ford Special Data.*

ENGINE REMOVAL: *See "Engine" in Ford Special Data.*

OIL PAN REMOVAL: Drain crankcase. Remove oil level indicator. Remove engine left and right front splash aprons. Remove flywheel housing inspection cover. Remove oil pan retaining screws and remove pan.

PISTONS

Autothermic type. Solid skirt with three rings above pin.
Removal – Pistons and rods removed from above.
Fitting New Pistons: Use ½" feeler gauge inserted between piston and cylinder wall at right angles to pin on thrust side. Feeler thickness as follows:
New Piston in New Bore – .0015" feeler. 5-10 lbs. pull.
New Piston in Used Bore – .002" feeler. 5-10 lbs. pull.
Used Piston in Used Bore – .0025" feeler. 5-10 lbs. pull.
Replacement Pistons: Standard size, .020", .030", .040", .060" Oversize. Pistons furnished only with fitted pins.
Installing Pistons: Install with small indentation in head toward FRONT of engine.

PISTON PINS

Floating type with lock rings at each end.

► *1955-56 PISTON PIN INSTALLATION CAUTION:* New B5A-6135-A Pin used in 1956 cars is heavier than the EAA-6135-B Pin used in 1955. *The two pins should not be mixed in any one engine assembly as a vibration or unbalanced condition may result.* New pin can be identified from old pin by machining of the ends. Old pin may be almost flush or chamfered at the internal diameter. New pin will have either a recessed internal diameter as though the ends of the pin were spot faced, or will not be completely drilled through.
Diameter – .9120-.9123". **Length** – 3.016-3.030".
Pin Fit in Piston – .0001-.0008". Hand push fit at 70° F.
Pin Fit in Rod Bushing – .0001-.0008" clearance. Selective fit. Light thumb press fit at 70° F.
Replacement Pins: Standard and .001" and .002" Oversize.

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr. (1 & 2)	3/32"	.010-.027"	.006"
Oil (3)	3/16"	.015-.062"	

Replacement Rings: Standard, .020", .030", .040" and .060" Oversize.

► *REPLACEMENT PISTON RING NOTE:* "Snap Type" rings furnished in Std. size only. "Expander Type" furnished in all oversizes above. "Steel Section Type" furnished in Standard, .020" and .030" Oversize.

CONNECTING RODS

Journal Diameter – 2.2980-2.2988".
Clearance – .0033" maximum.
Side Clearance – .012" maximum.
Replacement Bearings: Standard size (4 sizes marked **Red & Blue** for selective fitting) and .010", .020", .030", Undersize.
Installing Rods: Install rod in piston so that squirt hole is to right when indentation on top of piston is toward front of engine.

CRANKSHAFT

► *CRANKSHAFT PRODUCTION CHANGE: See "Crankshaft Oil Seal Leak Correction" under ENGINE above.*
Journal Diameter – 2.4980-2.4988". Four Bearings.
Bearings – Steel backed, copper lead alloy, or lead babbitt.
Clearance – .0031" maximum (lead babbit bearings), .0035" (copper lead bearings).
Replacement Bearings: Standard size, (4 sizes marked **Red** or **Blue** for selective fitting) and .010", .020", .030" Undersize.
End Thrust: Taken on rear intermediate No. 3 bearing.
Thrust Bearing Alignment – *See "Crankshaft & Main Bearings" in Ford Special Data.*
End Play – .012" maximum.
Crankshaft Rear Oil Seal Installation: *See "Crankshaft & Main Bearings" in Ford Special Data.*
Crankshaft Front Oil Seal: *See "Engine Front Cover" in Ford Special Data.*

► *OIL SLINGER NOTE:* A crankshaft front oil slinger is incorporated on all cars and truck engines to reduce oil leakage at front oil seal. Slinger is held in place by crankshaft pulley and cylinder front cover. To remove slinger, remove cylinder front cover and slide slinger off crankshaft.

CAMSHAFT

Journal Diameter – 1.9255-1.9265".
Clearance – .006".
End Thrust: Taken by thrust plate and spacer (between camshaft sprocket and shoulder on camshaft). *NOTE* - Chamfer on inside of spacer must be to the rear in assembly.
End Play – .012".
Replacement Bearings: Finished bearings furnished Standard and .015" Undersize. *CAUTION* - Rear intermediate (No. 3) bearing not interchangeable with other bearings.
Camshaft Removal & Installation: *See "Camshaft & Bearings" in Ford Special Data.*
Timing Chain: Side-guide type. Length 56 links.

► *REPLACEMENT NOTE:* Replace chain and sprockets when deflection on slack side exceeds ½" (take up all slack on driving side, measure slack on opposite side). Remove and install chain endless as a unit with both sprockets.
Camshaft Setting: Sprockets marked by "O" at one tooth. Mesh chain so that there are 12 pins between "O" marks on driving side of chain.
Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Ford Special Data.*
Engine Front Cover Removal: *See "Engine Front Cover" in Ford Special Data.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

VALVES

Tappet Clearance: .019" Intake & Exhaust (Hot or Cold).

Valve	Head Diameter	Stem Diameter ℄
Intake	1.775-1.785"	② .3415-.3420" or ③ .3420-.3425"
Exhaust	1.505-1.515"	② .3400-.3405" or ③ .3405-.3410"

Valve	Seat Angl	Lift ④	Stem Clearance
Intake	45°	.268" min.	.004" max.
Exhaust	45°	.268" min.	.006" max.

① — Furnished with .003",.015",.030" oversize stems. See *"Valve System" in Ford Special Data.*

② — Color coded RED. Use with RED valve guide.

③ — Color coded GREEN. Use with GREEN valve guide.

④ — Cam lobe lift service limit.

►*EXHAUST VALVE STEM DIAMETER PRODUCTION CHANGE: Stem diameter decreased .0005" for increased stem-to-guide clearance to minimize valve sticking. See "Valve System" in Ford Special Data.*

Valve Seat Width – .060.,080" (Intake), .070-.090" (Exhaust).

►*ROTATABLE VALVE NOTE:* All valves are rotatable type. *See "Valve System" in Ford Special Data.*

Valve Stem Oil Seals – "Umbrella" type oil seals used on intake and exhaust valve stems. Seals are installed with cupped side down on valve stem at guide boss on cylinder head. *Install new seals whenever valves removed or when seals become loose on stem.*

Valve Springs: Install with closed coil end toward cylinder head.

Free Length – 2.09" approximately.

Valve Spring Specifications

	Pressure	Length
Valve closed	64-79 lbs.	1.780"
Valve open	145-177 lbs.	1.390"

►*VALVE SPRING INSTALLATION NOTE:* Measure valve spring assembled height from machined surface of cylinder head spring pad to spring retainer contact surface. If assembled height is 1 13/16" or greater, install .030" spacer between cylinder head valve spring pad and valve spring to bring assembled height to recommended dimension of 1 25/32-1 13/16". *CAUTION* - Use of spacers in excess of recommendations will result in overstressing valve springs and lead to excessive load loss and spring breakage.

Valve Guides Integral with cylinder head. When stem-to-guide clearance exceeds maximum (see table above), ream guides and install oversize valves. *See "Valve System" in Ford Special Data.*

Valve Lifters: Mushroom type. Removed from below with camshaft out.

Rocker Arm Assembly: *See "Valve System" in Ford Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

►*VALVE TIMING NOTE The following valve opening and closing points are with camlift as indicated.*

Intake Valves–Open 24° ℄ BTDC. Close 46° ② ALDC

Exhaust Valves–Open 68° ℄ BLDC. Close 2° ② ATDC

① – Camlift .016". ② – Camlift .019".

Valve Timing Check – Remove rocker arm cover. Back off No. 1 intake valve adjusting screw, slide rocker arm assembly to one side. With push rod in lifter socket, install dial indicator to indicate push rod movement. Turn engine slowly until cam lobe contacts lifter. Zero indicator and continue to turn crankshaft until .016" (desired lift) is obtained. Timing indicator on pulley should read 24° BTDC.

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Ford Special Data.*

Crankcase Capacity. 4 qts. (refill), 5 qts. (when filter changed).

Normal Oil Pressure: 45-50 lbs. at 2000 RPM.

Pressure Regulator Valve–In pump body, not adjustable.

Oil Pressure Indicator – Indicator light on instrument panel, operated by Engine Unit – Ford No. FDA-9278-A (Stamped No. 7 on Hex.). Lights when ignition switch turned on, goes out when engine starts and pump operates.

Oil Pump: Gear type pump located in crankcase, in line with distributor.

►*OIL PUMP CAUTION: New type oil pump has aluminum body. Use extreme care when servicing to prevent damaging body.*

Pump Overhaul: *See "Oil Pump" in Ford Special Data.*

Oil Filter: Full-flow type (Std. Equip.) with pressure relief valve in center filter bolt. Replace filter element at 4000-5000 miles or when oil becomes dirty or polluted.

Replacement Filter Element – Ford No. B2A-6731-A (Kit includes new gaskets).

►*CAUTION: This special Full-flow filter element must be used for replacement (use of by-pass type element would restrict oil flow and result in insufficient engine lubrication). See "Oil Filter" in Ford Special Data.*

Crankcase Ventilation: Filter in oil filler cap (inlet) with outlet pipe in rear of crankcase at left side of engine.

COOLING

Water Capacity: 14.5 qts., add 1 qt. for heater.

►*LOSS OF COOLANT CORRECTION:* Lower generator mounting bracket bolt holes are tapped into cylinder water jacket. For loss of water at this point, or when replacing bolts, apply a good coating of waterproof sealer.

Pressure Valve: Ford LA-8100-A Radiator filler cap. Opens at 12-15 lbs. *CAUTION* - If replacement required use 12-15 lb. type.

Thermostat: Ford No. EAA-8575-A (157-162°) standard. Ford EAA-8575-B, (177-182 lb.) for use with permanent anti-freeze.

Water Pump: Packless, sealed ball bearing type.

See "Water Pumps" in Ford Special Data

Temperature Gauge King-Seeley Electric.

Dash Unit – Ford No. B6A-10883-A.

Engine Unit – Ford No. B6A-10884-A.

See "Temperature Gauges" in Miscellaneous Section.

CLUTCH

Long Model 9½ CF, No. 268594. Semi-centrifugal type.

►*HEAVY DUTY CLUTCH PRODUCTION CHANGE:* Heavy duty clutch Ford No. B6A-7563-A, incorporating oil slinger, and release bearing incorporating lubrication fitting now used in production. New heavy duty clutch disc Ford No. B6A-7550-A released for service. *See "Long Clutches" in Clutch Section.*

Clutch Disc – Long No. 288824.

Pedal Adjustment. If total pedal travel is less than 6 3/8" or more than 6 5/8", reposition pedal bumper and bracket until correct travel is within limits. Adjust assist spring link to give assist spring length of 6 5/8" when clutch is fully released.

Pedal Free Travel – 1 1/8 - 1 3/8". Loosen locknut on clutch pedal release rod, turn adjusting nut until correct travel is reached. *NOTE* - Check free travel by operating engine at 3000 RPM with transmission in neutral position. There should be a minimum of ½" free travel under these conditions. Readjust as necessary.

Removal: Remove transmission (see Transmission removal below), and slide clutch release bearing off clutch release lever. Disconnect clutch pedal release rod from clutch release lever assembly. Remove clutch release equalizer bar bracket from flywheel & clutch housing and remove equalizer bar. Remove split bronze bushing from bracket and then remove flywheel housing. Install Tool 7563 and remove clutch pressure plate assembly (if tool not available, clutch may be released by backing off the attaching bolts evenly).

SYNCHRO-MESH TRANSMISSION

Own. Helical gear, constant mesh, synchro-mesh (second & high), sliding gear (low & reverse).

►*PREMATURE GEAR TOOTH WEAR CORRECTION.* Caused by incorrect gear engagement, *See "Transmission Control Notes" in Ford Special Data.*

►*SYNCHRO-MESH & OVERDRIVE THREE SPEED TRANSMISSION GEAR REPLACEMENT CAUTION:* Shot peened gears used in 1956 models. Shot peened gears can be used in past model transmissions. DO NOT use past model gears in 1956 transmission.

See "Ford Synchro-mesh" in Transmission Section.

Transmission Control: *See "Transmission Controls" in Transmission Section.*

Removal: Disconnect gearshift linkage at transmission. Remove speedometer cable and gear. Disconnect drive shaft at transmission and remove the capscrews attaching transmission extension to rear engine support. Place a support under engine and remove the frame cross member and rear engine support. Remove transmission-to-flywheel housing capscrews and install two guide pins. Pull transmission back until main drive gear splines clear housing, and lower transmission from car.

OVERDRIVE

Warner Model AS4-R10F. Solenoid operated type, with governor control and throttle operated kick-down. No Lock-Out Switch used.

See "Warner R10 Overdrive" in Transmission Section.

Overdrive Control: *See "Overdrive Control" in Transmission Section.*

Removal: Same as for Synchro-mesh Transmission (above) after disconnecting control cable and wiring.

FORDOMATIC TRANSMISSION

Torque converter and three speed automatic transmission with hydraulic control and mechanical parking lock. *See "Fordomatic & Mercomatic" in Transmission Sect.*

►*FORDOMATIC PRODUCTION CHANGES:* For improved Throttle Control Inner Lever Installation, change in Pressure Regulator Valve Body, and new location of pressure take off plug, *See "Fordomatic & Mercomatic"*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

in Transmission Section.

► *FORDOMATIC "LOCK-UP" CORRECTION (1955-56 Cars & Trucks):* Caused by cross leakage in front servo piston. *See "Fordomatic & Mercomatic" in Transmission Section.*

► *PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Fordomatic & Mercomatic" in Transmission Section.*

► *TESTING & TROUBLE SHOOTING: See "Fordomatic & Mercomatic" in Transmission Section.*

Lubrication – Check transmission oil level every 1000 miles and maintain oil level at "Full" mark on dipstick. Drain & refill every 15,000 miles.

Checking Fluid Level – Apply parking brakes, place transmission selector lever in "N" position, run engine at idle speed for approximately four minutes. With parking brake applied and engine running at slow idle, move selector lever to "P" (Parking) position. When engine and transmission have reached normal operating temperature, move selector lever through all positions to assure fluid distribution throughout transmission. Return selector lever to "P" position. Raise hood, clean dirt away from fluid level cap, remove indicator. Wipe indicator clean and insert in tube (make sure indicator is pushed down all the way). Remove indicator and read level. Add sufficient fluid to raise level to full mark on indicator. Replace indicator.

► *FORDOMATIC TRANSMISSION FLUID CHANGE CAUTION:* New type oil is green colored, similar to engine oil. DO NOT USE IT IMPROPERLY. "Type A" (reddish brown) may be used when adding oil to transmission

Throttle Linkage Adjustment: *See CARBURETOR above.*

► *OTHER FORDOMATIC SERVICE DATA: See "Fordomatic & Mercomatic" in Transmission Section.*

UNIVERSALS

Mechanics. Needle bearing type.

► *CAUTION (All Cars Except Station Wagon & Sedan Delivery): Rear universal joint companion flange nut controls pinion bearing pre-load (must be adjusted whenever nut is loosened).*

REAR AXLE

PASSENGER CARS

Own. Separate Carrier, semi-floating hypoid, with Hotchkiss drive.
See "Ford & Mercury (Separate Carrier Type) Hypoid" in Rear Axle Section.

► *LUBRICATION BAFFLE NOTE:* 1956 rear axle housing has lubrication baffle, held in place by two housing bolts, for directing lubricant to differential side bearings. Recommended for installation on earlier models. Ford No. B5A-4018-A.

Axle Ratios

Synchro-mesh	Overdrive	Fordomatic
3.89-1 (35-9)	4.11-1 (37-9)	Ⓒ 3.22-1 (29-9)

Ⓒ – 3.55-1 (32-9) Optl.

► *RATIO, DRIVE GEAR & DIFFERENTIAL CASE IDENTIFICATION: See Ford V8 Data following.*

Backlash – .003-.008".

Axle Shaft Removal: Remove wheel, take off drum. Remove four axle retainer locking type nuts (work through opening in axle shaft flange). Use Puller No. 4235-N and pull shaft (do not disturb brake backing plate or damage wheel bearing oil seal). Replace one nut to secure brake backing plate.

Carrier Assembly Removal: Disconnect rear universal. Remove axle shafts (see above). Remove carrier from housing.

STA WGN. & SED. DEL.

Own. Integral Carrier, semi-floating hypoid, with Hotchkiss drive.
See "Lincoln, Mercury, Ford (Integral Carrier)" in Rear Axle Section.

Ratios

Standard Transmission – 4.09-1 (45-11).
Overdrive Transmission – 4.27-1 (47-11).
Fordomatic Transmission – 3.54-1 (46-13).

Axle Shaft Removal: Same as Pass. Cars (above).

Rear Axle Assembly Removal: Remove hub caps, loosen wheel stud nuts, raise car at rear and disconnect hydraulic brake hose from brake line at rear axle. Disconnect parking brake cable from equalizer rod, remove cable assembly from frame brackets. Remove wheels, disconnect drive drive at rear axle universal joint flange. Remove "U" bolts. Remove assembly from under car.

SHOCK ABSORBERS

Direct acting, non-adjustable. Service by replacement.

Model	Ⓒ Front	Ⓒ Rear
Pass. Cars (Std.)	B5A-18124-A	B5A-18125-A
Pass. Cars (Hvy. Duty)	B5A-18124-D	B5A-18125-C
Sta. Wgn. & Sed. Del.		B5A-18125-D

Ⓒ – Furnished in kits which include shock absorber mounting bushings.

► *SHOCK ABSORBERS (1955-56 Taxi Cabs) PRODUCTION CHANGE:* Export type shock absorbers used in production as standard equipment, in place of heavy duty type on taxi cab units to eliminate "bottoming".

FRONT SUSPENSION

Independent. "Ball Joint" suspension with direct acting shock absorbers mounted within front coil springs.
See "Lincoln, Mercury, Ford (Ball Joint)" in Suspensions and Wheel Alignment Section.

Kingpin Inclination – 6 - 7° crosswise.
Caster – Pos. ½° to Pos. 1½°
Camber – Pos. ¼° to Pos. 1¼°.
Toe-In – 1/16" to 1/8".

► *TOE-IN ADJUSTMENT NOTE:* When checking toe-in on cars with Power Steering, engine should be running so that power steering control valve will be centered.

STEERING

Manual: Own (Gemmer 305 Design). Worm & Roller type.
See "Gemmer Worm & Roller (3 tooth)" in Steering Sect.

Power Steering: Ford-Mercury Bendix Linkage type.
See "Ford & Mercury Bendix" in Steering Section.

► *STEERING ARM INTERFERENCE (Power Steering Cars):* To correct interference between steering connecting rod clamps and/or bolts with power steering control valve, *See "Ford & Mercury Bendix Linkage Power Steering" in Steering Section.*

► *POWER STEERING BELT SQUEAL CORRECTION:* When belt slippage or squeal cannot be corrected by belt adjustment, install new pulley, Ford No. B6A-33556-A, and new solid type belt, Ford No. B6A-33558-A.

Steering Linkage: *See "Steering Linkage" in Steering Sect.*

Steering Wheel & Horn Button Removal: *See "Gemmer Worm & Roller (3 tooth)" in Steering Section.*

Steering Gear Removal: *See "Gemmer Worm & Roller (3 tooth)" in Steering Section.*

BRAKES

Ford-Bendix Hydraulic. Hand lever applies rear wheel service brakes.
See "Ford, Lincoln, Mercury Bendix" in Brake Section.

► *BRAKE DESIGN CHANGES:* Front wheel brakes do not have eccentric and front and rear anchor pins are fixed (No adjustment).

Drum Diameter – 11" front and rear.

Wheel Cylinder Diameter – 1 1/8" (Front - All), 7/8" (Rear - Pass. Cars), 15/16" (Rear - Sta. Wgn. & Sed. Del.).

Lining Specifications

Passenger Car

Lining	Width	Thickness	Length
Front Primary	2¼"	3/16"	10 27/32"
Front Secondary	2¼"	15/64"	10 27/32"
Rear - All	1¾"	3/16"	10 27/32"

Sedan Delivery & Station Wagon

Lining	Width	Thickness	Length
Front Primary	2¼"	7/32"	9 9/32"
Front Secondary	2¼"	7/32"	11 15/16"
Rear Primary	2"	7/32"	9 9/32"
Rear Secondary	2"	7/32"	11 15/16"

Clearance – Adjusting screw backed off 10 to 12 notches from point where shoes are tight against drum.

Brake Pedal Free Play Adjustment: 5/16" to 7/16". If play not correct after brake adjustment, loosen locknut on the eccentric bolt that attaches brake pedal assembly to master cylinder pushrod, rotate eccentric bolt for desired clearance.

Standard Master Cylinder: on engine side of firewall.

Checking Fluid – Maintain fluid level to within ½" of top of reservoir.

Removal – Disconnect brake line from master cylinder and depress brake pedal a few times to force out fluid. Disconnect wires leading to stop light switch, and remove eccentric bolt attaching master cylinder pushrod to brake pedal. Remove capscrews and lockwashers attaching master cylinder to firewall.

Power Brakes: Midland Hy-Power Unit mounted on left side of car in engine compartment and connected in hydraulic brake line between master cylinder and wheel cylinders. There are no mechanical connections and no adjustments are required.
See "Midland Power Unit" in Brake Section.

Checking Fluid – Same as for manual brakes (above).

Removal of Power Unit – Depress brake pedal a few times to remove all vacuum from system. Disconnect hydraulic lines at the power unit and remove wires from brake stop light switch. Remove power unit to mounting bracket bolts and lockwashers and remove the power unit.

MISC. MECHANICAL

Windshield Wipers: Vacuum link and crank arm type. *See "Windshield Wipers" in Miscellaneous Section.*

Power Window Regulators: Reversible motor in each window. *See "Electric Window Regulators" in Misc. Sect.*

Power Top Control: Electric-Hydraulic with reversible pump motor. *See "Power Top Controls" in Misc. Sect.*

Power Seat Adjusters: "Fourway" Electric Screw and jack type with individual motors and transmissions for vertical and horizontal adjustment. *See "Power Seat Adjusters" in Miscellaneous Section.*

►*AIR CONDITIONED CAR SERVICE CAUTION· Us extrem care when disconn cting any part of air conditioning equipm nt or lines. See "Air Conditioning Servic Cautions" in Miscellaneous Section.*

MODEL IDENTIFICATION

VEHICLE NUMBER: Stamped on patent plate, on left front body pillar (V8 Pass. Cars), on dash panel in engine compartment (Thunderbird).
First Numb r—100001

►*VEHICLE NUMBER NOTE:* Vehicle number (Example *M6FS 100001*) includes following identification data in sequence

Eng Typ ①	Y ar ②	Assy Plant	Body Style③	Serial No
M	6	See below	See below	100001 up

①—**A**—6 Cyl , 223 cu in engine, **M**—8 Cyl , 292 cu in engine, **P**—8 Cyl , 312 cu in engine (Thunderbird & Interceptor) **U**—8 Cyl , 272 cu in engine
②—Last digit of model year
③—**C**—Sunliner (Conv), **F**—Victoria (Fairlane 4-Dr), **H**—Thunderbird, **R**—Ranch Wagon (Customline), **S**—Sedan Delivery, **T**—Tudor & Fordor (Fairlane), **V**—Victoria (2-Dr), **W**—Crown Victoria, **X**—Country Sedan, **Y**—Country Squire, **G**—All others (Fordor Tudor—Mainline & Customline)

Ass mbly Plant Designation

TUNE-UP

►*SUDDEN ENGINE STOPPAGE CORRECTION.* Inspect distributor primary terminal wire assembly Ford No. B6A-12216-A for defective welds at brass terminals.

COMPRESSION PRESSURE At cranking speed, compression pressures are as follows

Engine	Compr Ratio	Compr. Press
272 cu in	8 0-1	160 lbs
272 cu in	8 4-1	165 lbs
292 cu in	8 0-1	155 lbs
292 cu in	8 4-1	160 lbs
312 cu in	8 0-1	155 lbs
312 cu in	8 4-1	160 lbs
312 cu in	9 0-1	165 lbs

VACUUM READING. 19-20" at 475-500 RPM in neutral

VALVE TAPPET CLEARANCE: 019" Intake and Exhaust (Hot & Cold)
Tapp t Adjustm nt· S *"Valve System" in Ford Special Data*

MANIFOLD HEAT CONTROL: Automatic thermostatic type with counterweight Valve on cars with single exhaust system is located between front end of right hand exhaust manifold and crossover pipe Valve on cars with dual exhaust system is located between rear end of right hand exhaust manifold and muffler inlet pipe Thermostat spring is installed with a ¾ turn wind-up and hooked over stop pin *Valve is closed when engine is at normal operating temperature and running at slow idl , and opens when operating at high RPM*

►*DUAL EXHAUST NOTE* When valve closed most exhaust gases are discharged through left hand exhaust pipe

►*LUBRICATION NOTE* Use lock lubricant Ford No. B6Q-19587-A at shaft and spring bearing positions.

IGNITION

FIRING ORDER· 1-5-4-8-6-3-7-2
Cylinders—RIGHT BANK 1-2-3-4 LEFT BANK 5-6-7-8

SPARK PLUG GAP: 032- 036"
Spark Plugs—Champion 870 18mm

►*SPARK PLUG CAUTION* Spark plug has tapered seat and does not require a sealing gasket It is important that plugs be torque tightened within range 15-20 ft lbs

►*SPARK PLUG MISFIRING CORRECTION* If misfiring occurs between No. 6 and No. 8 cylinders, interchange No. 5 and No. 6 spark plug wire positions in all insulator blocks and separator blocks on left side of engine.

COIL: Ford No. B6A-12029-B. *12 Volt.*
Ignition Current — 2.5 amps. idling, 4.5 amps. stopped.
Resistor — Ford B6A-12250-B, (Early), B6A-12250-C, (Later). Mounted next to coil. *See changes following.*

►*IGNITION RESISTOR PRODUCTION CHANGES·* Two types of resistors Ford No. B6A-12250-C used in production to replace original resistor B6A-12250-B. First type replacement identified by copper flashing on heads of rivets which support elements. A piece of fibre glass is cemented to inside channel of support bracket. Second type replacement has sheet metal cover snapped over channel and rivets are cadmium plated. Replace original type when servicing ignition system.

►*COIL RESISTOR NOTE* Resistor is connected in lead from ignition switch to coil Resistor is by-passed during cranking by a lead from starter solenoid to battery terminal of coil

DISTRIBUTOR· Ford No. B6A-12127-A (272 Eng with 2-Barrel Carb), **B6A-12127-B** (272, 292, & 312 Engs with 4-Barrel Carb) *12 Volt* New double diaphragm, pressure type with separate vacuum lines to manifold and carburetor used with cars equipped with 4-Barrel Carburetors

►*DISTRIBUTOR DIAPHRAGM PRODUCTION CHANGE·* A new distributor diaphragm Ford No. B6A-12370-B used on all engines after Nov. 15th, 1955, and is available for replacement of all B6A-12370-A diaphragms. It can be identified by the die cast end cover in place of stamped cover and it incorporates new type material in secondary diaphragm giving it much greater strength.

►*POOR ACCELERATION OR ROUGH IDLE CORRECTION (Due to Distributor Diaphragm Leaking on Cars Equipped With 4-Barrel Carbs)* Check for leaks as follows Disconnect carburetor and manifold fittings at diaphragm Attach screw-in adapter from distributor stroboscope to primary diaphragm (large fitting) Adjust distributor stroboscope vacuum pump to a steady reading of 20" of vacuum Connect hose to primary diaphragm fitting If reading less than 20" of vacuum one or both diaphragms are leaking and should be replaced If readings hold at 20" of vacuum, further check for small pin holes in the diaphragm by adjusting distributor stroboscope vacuum pump to obtain a steady 3-5" of vacuum Again connect hose to primary diaphragm fitting If a steady reading is not maintained, one or both diaphragms are leaking and should be replaced New diaphragm assemblies, Part No B6A-12370-D should be checked at both vacuum settings before installation
Condenser—Ford FAB-12300-A **Capacity**— 21- 25 mfd
Contact Point Set—Ford FAB-12171-B
Breaker Gap— 014- 016"
Cam Angle — 26-28° ± 5°.
Breaker Arm Spring Tension—17-20 ozs
Rotation—Counter-clockwise viewed from above

Advance Performance—B6A-12127-A
►With Distributor on Test Stand

Distr	Degrees	Vacuum (" of HG)	Distr	RPM
0		0		200
0±½		15		300
¼-1¼		28		400
6½-7½		.96		800
11½-12¾		2 21		1200
14½-15½		3 41		1600
16-17¼		4 60		2000

Advance Performance—B6A-12127-B
►With Distributor on Test Stand

Distr	Degrees	Vacuum (" of HG)	Distr	RPM
0		0		200
0±½		16		300
0-1		29		400
5½-6½		88		800
8½-9½		1 27		1200
11-12		1 73		1600
13-14¼		2 19		2000

►*DISTRIBUTOR INSTALLATION CAUTION:* Be sure distributor shaft engages oil pump intermediate hex shaft If may be necessary to turn engine over with starter after the distributor drive gear is partially engaged, in order to engage the intermediate shaft

Initial Distributor Timing Remove No 1 spark plug Hold thumb over spark plug hole until piston starts up on compression Slowly "bump" engine over with starter until timing mark is aligned with pointer Find No 1 spark plug socket in distributor cap and fit distributor cap to distributor housing Mark distributor housing to indicate No 1 spark plug wire position Position rotor approximately 20° counter-clockwise from mark made on distributor housing Engage distributor drive gear and install distributor in engine

IGNITION TIMING

Setting—3° BTDC (Std), 6° BTDC (Fordomatic) with engine idling at 475 RPM and vacuum line disconnected (2-Barrel Carb) PRIMARY (inner diaphragm) vacuum line disconnected (4-Barrel Carb) *See Initial Distributor Timing above NOTE*—Maximum initial timing recommended is 6° BTDC (Std) 8° BTDC (272,292 Eng. Fordomatic), 6° BTDC (312 Eng. Fordomatic).

Timing Mark—Vibration damper marked "TDC" and "2", "4" "6" "8" "10" degrees BTDC Align correct mark with pointer (bolted to water pump)

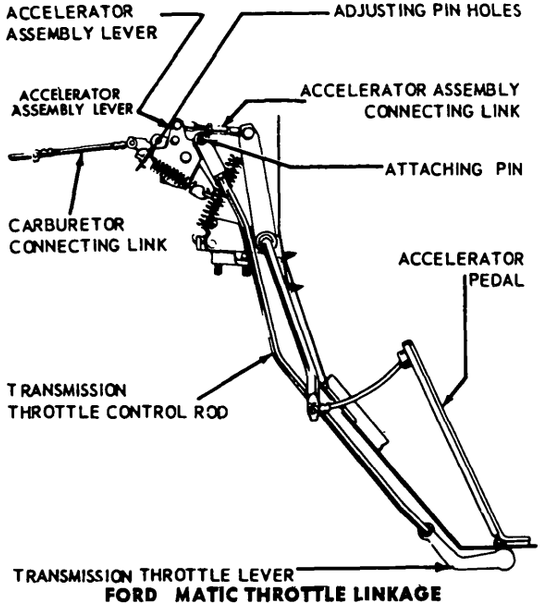
CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

CARBURETOR

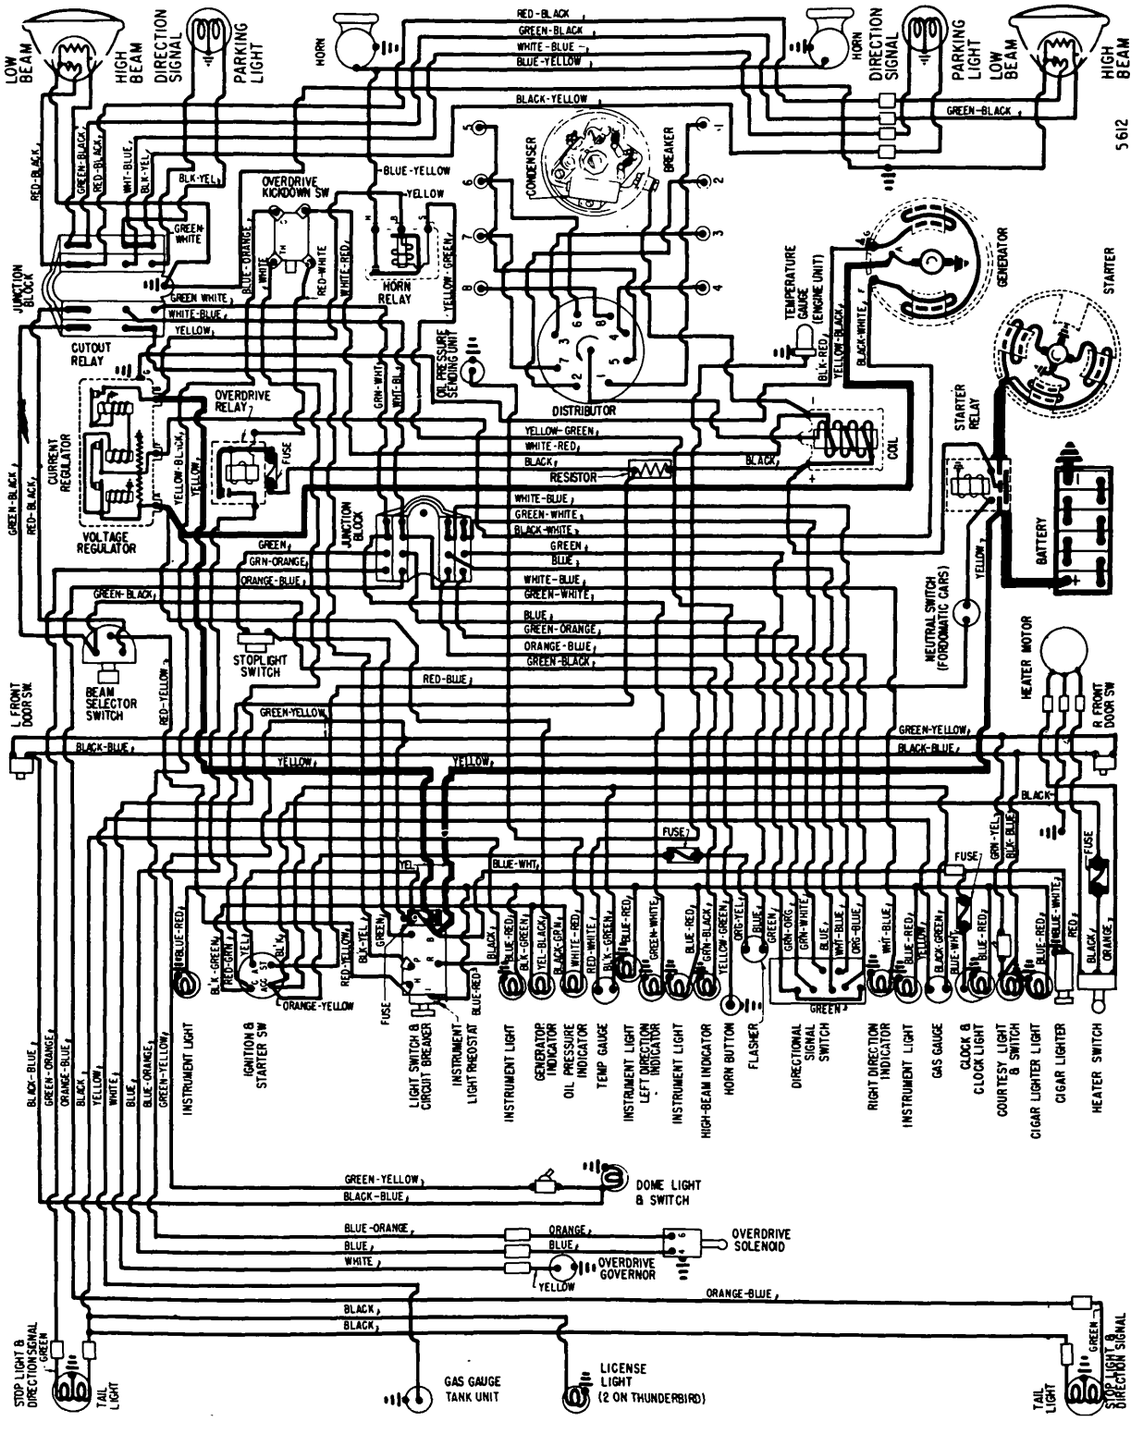
►*CARBURETOR APPLICATION: Two-barrel Carburetors used on 272 cu. in. engine. Four-barrel Carburetors used on 292 and 312 cu. in. engines.*

►*WIDE OPEN THROTTLE INTERFERENCE CORRECTION (272 Eng.):* Interference with intake manifold may prevent accelerator assembly bar from traveling to wide open position. To correct, bend forward upper end if accelerator assembly bar.



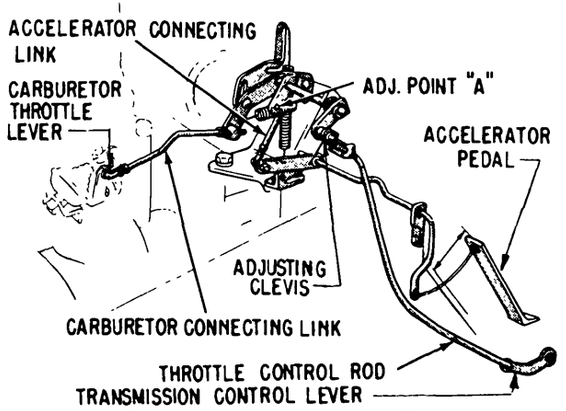
►*HARD STARTING (272 Pass. Car Eng.) CORRECTION:* New choke thermostat with the new bi-metal spring Ford No. B6A-9848-D, identification mark "56F1" can be installed to replace early choke thermostats with identifications either "56F" or "56D".

►*ACCELERATOR PUMP PISTON ROD STICKING CORRECTION (272 Eng.):* When this rod sticks or binds, install new rod Ford B6A-9531-A, identified by deep blue color. Old rod was zinc plated. Free carburetor of burrs or foreign material when installing new rod.

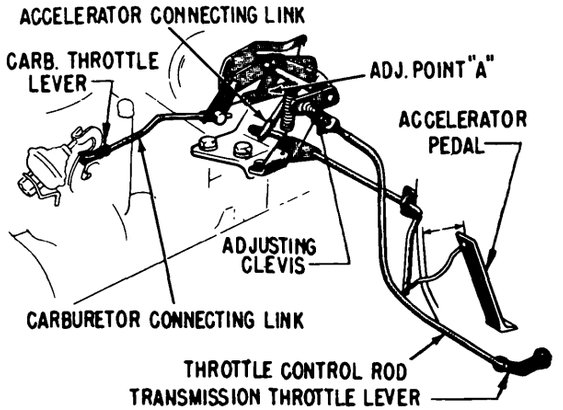


►*ACCELERATOR ASSEMBLY BAR INTERFERENCE CORRECTION:* For elimination of bind or interference (Std. & O.D. Trans.) between bar and distributor diaphragm vacuum line or intake manifold. *See "Ford Dual Downdraft Carburetors" in Carburetion Section.*

Throttle Linkage Adjustment (Fordomatic Cars): Set hand brake and adjust engine idle speed to 475-500 RPM with engine at normal operating temperature and transmission in "N" (Neutral) position. *Make sure that fast idle cam is in slow position.* Adjust anti-stall dashpot (see below). Turn engine off. Disconnect throttle control rod from accelerator assembly. Insert a



CONTINUED ON NEXT PAGE



FORD MATIC THROTTLE LINKAGE (2-BARREL CARBURET R)

CONTINUED FROM PRECEDING PAGE

FORDOMATIC THROTTLE LINKAGE (4-BARREL CARBURETOR)

FORDOMATIC THROTTLE LINKAGE (THUNDERBIRD)

locking pin (¼" drill rod) through holes in lever and assembly. Adjust length of carburetor connecting link to close carburetor against its stop. Adjust the accelerator assembly connecting link to obtain a pedal height of 3 11/16" (cars with 2-barrel carburetors), 3 9/16" (cars with 4-barrel carburetors except Thunderbird cars), 4 1/4" (Thunderbird Cars). Remove locking pin and check alignment. Pin must re-enter freely. Remove locking pin and adjust throttle control rod. Pull upward gently but firmly on rod to hold transmission lever against its internal stop. Rotate clevis until clevis freely fits pin on accelerator assembly lever. Lengthen throttle control rod by rotating clevis 3 turns counter-clockwise. Assemble throttle control rod to the accelerator assembly lever. Hold clevis in alignment to prevent binding, tighten locknut. Check throttle linkage, and relieve any binding conditions. Road Test car. If band or clutch slippage is evident, increase length of the throttle control rod to 3½ turns, but d n t xc ed f ur turns f th cl vis. On cars with 2-barrel carburetors, check alignment of the accelerator cross shaft-to-accelerator assembly lever connecting link. Connecting link must be parallel to centerline of engine. If connecting link is misaligned, loosen the adjustment screw locknut, then turn adjustment screw until correct alignment is obtained.

Dashpot Adjustment (Fordomatic Cars): Adjust engine idle speed to 475-500 RPM with selector lever in "N" position, engine at normal operating temperature. *Make sure that fast idle cam is in slow position.* Loosen dashpot adjusting screw locknut. Hold throttle in closed position, and turn dashpot adjusting screw out (counter-clockwise) until head of screw pushes dashpot rod up to the end of its travel. Turn dashpot adjusting screw in (clockwise) 1½-2 turns to obtain a clearance of .045-.064" between rod and screw head. After adjustment made, tighten adjusting screw locknut.

FORD TWO-BARREL

Ford No. B6A-9510-J (Exc. Fordomatic), B6A-9510-K (Fordomatic). Dual, downdraft type.

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyl. 2-3-5-8, LEFT barrel 1-4-6-7.*

Idle Setting—Initial setting 1 turn open. Set both screws alike. Turn adjusting screws in until engine begins to run rough from the lean mixture, then turn screws out until engine begins to roll from rich mixture. Turn screws in until engine runs smoothly. Favor a slightly rich mixture. Turn screws out for richer mixture.

Idle Speed—475-500 RPM (Std. & O.D.), 475-500 RPM (Fordomatic) with selector lever in "N" position.

Fuel Level—11/16" below top surface of float bowl (Tool T52L-9550-AGE).

Float Level—1.374-1.438" from flange surface of air horn (inverted) to edge of soldered seam on bottom side of float. It should be equal on both ends of float.

Accelerating Pump: Center hole for normal operation, shortest stroke (closest hole to throttle shaft) for hot weather operation, longest stroke for cold weather operation.

Fast Idle: Integral type operated by choke valve. No adjustment required.

Automatic Choke: Index mark on cover aligned with center mark on housing.

Throttle Linkage Adjustment (Fordomatic Cars): *See CARBURETOR above.*

►*OTHER DATA: See "Ford Dual Downdraft Carburetors" in Carburetion Section.*

Fuel Pump Pressure: 4-5 lbs. at 500 RPM.

FORD FOUR-BARREL

Ford No. B6A-9510-L (Early Exc. Fordomatic), B6A-9510-M (Early Fordomatic), B6A-9510-N, Q, (Later).

►*CARBURETOR PRODUCTION CHANGES & RECOMMENDED CHANGES FOR IMPROVED STARTING & WARM-UP PERFORMANCE: See "Ford, Lincoln, Mercury 4-Barrel Centri-Quad" in Carburetion Section.*

►*ACCELERATOR RETURN SPRING (Fordomatic)BIND:* To eliminate bind causing throttle to stick open or prevent transmission from kicking down, shorten each end hook of accelerator bellcrank lever spring 1/16".

►*ROUGH IDLE (Caus d by Plugg d S condary High Spe d Air Bl ed):* When adjusting idle mixture screws does not correct condition, look for fuel being discharged from secondary transfer holes or secondary discharge nozzles. Clean bleed holes to eliminate siphoning.

►*AIR CLEANER WING SCREW TIGHTENING CAUTION:* Tighten anchor screw to 135 inch lbs. only, and wing nut just finger tight. Overtightening will permit anchor screw removal with air cleaner and cause lock washer to be drawn into carburetor venturi and engine.

►*4-BARREL CARBURETOR CHOKE LINKAGE INTERFERENCE CORRECTION:* Heat baffle or shield front portion may be bent toward the rear, causing it to bind on carburetor choke linkage.

►*4-BARREL CARBURETOR HARD COLD STARTING CORRECTION:* Choke plates may be operating improperly because wire link in choke housing has become disconnected from choke piston or the choke spring link. Move choke plates manually to see if any spring tension is present. If choke plates are completely free, correct as follows: Remove choke thermostat housing assembly and thermostatic housing plate and connect wire link. It is suggested that ends of wire link be bent slightly in order to make link more secure in proper holes. *NOTE*—Care should be exercised when reworking this link so that shape of link is not changed. Change of shape might cause a bind in the choke mechanism.

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyl. 2-3-5-8, LEFT barrels 1-4-6-7.*

Idle Setting—Initial setting 5/8 turn open. Place choke fast idle cam in slow position. Turn both screws in until engine begins to run roughly from lean mixture. Turn screws out until engine begins to roll from rich mixture. Then turn screws in until engine begins to run smoothly. Favor a slightly rich mixture. Final setting may vary ½ turn between screws.

Idle Speed—475-500 RPM (Std. & O.D.), 475-500 RPM (Fordomatic) with selector lever in "N" position.

Throttle Linkage Adjustment (Fordomatic Cars): *See CARBURETOR above.*

►*OTHER DATA: See "Ford, Lincoln, Mercury, Centri-Quad Carburetors" in Carburetion Section.*

Fuel Pump Pressure: 4-5 lbs. at 500 RPM.

STARTER

Ford No. B6A-11002-A. *12 Volt.* **Armature–B6A-11005-A.**

► *IMPULSE STARTING (Back Up Light Equipped Cars) CORRECTION:* Before replacing neutral safety switch to correct short between light and solenoid terminals causing engine to start, interchange leads at switch. Connect longest lead (beyond taped portion of harness) to "A" terminal and short lead to "B" terminal.

Drive – Ford 1CM-11350-C. Bendix "Folo-Thru".

Rotation – Counter-clockwise at commutator end.

Brush Spring Tension – 48-56 ozs.

Cranking Speed – 150-180 RPM with warm engine.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	①	12.0	120
	150-180 ②		190 max.

① – With starter on engine and engine idling.

② – Cranking speed with warm engine.

Starting Switch: Magnetic type, Ford No. B6A-11450-A. Starter Switch is controlled by ignition switch. *NOTE* - Neutral Safety switch used on Fordomatic transmissions.

Fordomatic Neutral Safety Switch: Ford No. FAC-15812-C. **Adjustment** – *See "Fordomatic & Mercomatic" in Transmission Section.*

GENERATOR

Ford No. B6A-10002-A (Exc. Thunderbird), B6S-10002-A (Thunderbird). *12 Volt.*

Armature – Ford No. B6A-10005-A (All).

► *GENERATOR INDICATOR LIGHT (Idle Speed) CORRECTION:* When generator light comes "ON" when engine idles, install a 75 ohm, 25 Watt resistor (Vitreous enamel type with eyelets moulded into resistor body), at "A" terminal of regulator in series with indicator light wire (Yellow with black tracer). Adjust engine idle to high limit. *NOTE* - Light will now have lower illumination than oil indicator light.

Performance Data

Amperes ①	Eng. RPM
30	1388

① – See Regulator for maximum charging rate.

Brush Spring Tension – 26-34 ozs.

Field Current – 1.4-1.6 amps. at 12.0 volts.

Rotation – Counter-clockwise at commutator end.

Belt Adjustment: Approximately ½" deflection on belts midway between generator and pump pulleys with normal thumb pressure.

REGULATOR

Ford No. B6A-10505-A. *12 Volt.*

► *SETTING CAUTION: "Temperature Compensated" type. Set to following specifications at 75° F. ambient (engine compartment) temperature, after ½ hour operation in vehicle, or after regulator heated and stabilized.*

Cutout Relay

Cuts In – 12.0-12.8 volts.

Voltage Regulator

Setting – 14.6-15.4 volts.

Checking & Adjusting – *See Electrical Section.*

Current Regulator

Setting – 28-32 amperes.

Checking & Adjusting – *See Electrical Section.*

MISC. ELECTRICAL

► *DOME LIGHT FAILURE (High Voltage) CORRECTION:* When dome lights fail due to high voltage, remove head light switch, remove dome light wire from switch (green wire with yellow tracer), and install 1.5 Ohm, 5 Watt Vitreous enamel resistor in dome light circuit.

Headlamps: Sealed Beam. *See Electrical Section.*

Directional Signals: *See Electrical Section.*

Lighting Switch Removal: With control knob in the "OFF" position, press spring release button on switch housing, turn shaft slightly and pull it out of switch. Unscrew mounting nut with Tool 17470-N.

Stop Light Switch Location: On forward end of brake master cylinder (Conventional Brakes), and on top of brake booster assembly (Power Brakes). Master cylinder located on firewall in engine compartment.

FUSES: Located as follows:

Interior Lights – 7.5 ampere. On lighting switch.

Overdrive – 15 ampere. On overdrive relay.

Cigar Lighter – Special fuse in lighter base.

Clock – 3 ampere. In clock lead.

Heater – 14 ampere. In blower switch lead.

Turn Signal Fuse–7.5 ampere. In flasher to switch lead.

CIRCUIT BREAKERS: On headlight switch. Combination headlight switch, circuit breaker, and fuse assembly used. One circuit breaker protects headlight circuit and second circuit breaker protects instrument, parking, stop and tail light circuits.

► *1956 CIGAR LIGHTER CAUTION:* 12 volt socket and element smaller than 6 volt. 12 volt socket has ink mark stamped on it for identification. DO NOT use 12 volt element in a 6 volt socket as element when heated will eject onto front seat.

HORNS: (Except West Coast). Ford B5T-13832-B (High Pitch), B5T-13833-B (Low Pitch). *12 Volt.*

(West Coast Only) Ford B6A-13832-A (High Pitch),use bracket Ford No. B6A-13830-A; Ford B6A-13833-A (Low pitch), use bracket Ford No. B6A-13831-A. *12 Volt.*

Horn Current – 9.2-9.6 amperes at 12 - 12.6 volts.

Horn Relay: Ford No. 2Q-13853-A.

ENGINE

► *AIR CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air conditioning equipment or lines for access to engine. See "Air Conditioning Service Cautions" in Misc. Section.*

ENGINE SPECIFICATIONS: 90° V8 (All Models).

Engine	Bore	Stroke	Displmnt
272 Eng.	3.62"	3.30"	272 cu. ins.
292 Eng.	3.75"	3.30"	292 cu. ins.
312 Eng.	3.80"	3.44"	312 cu. ins.

Engine	Rated HP	Compr. Ratio	Dev. HP at RPM
272 Eng. ①	42.05	8.0-1	173 at 4400
272 Eng. ②	42.05	8.4-1	176 at 4400
292 Eng. ③	45.00	8.0-1	200 at 4600
292 Eng. ④	45.00	8.4-1	202 at 4600
312 Eng. ⑤	46.21	8.0-1	210 at 4600
312 Eng. ⑥	46.21	8.4-1	215 at 4600

①–Customline & Mainline (Synchro-mesh Trans. & Overdrive). 2-barrel Carburetor.

②–Customline & Mainline (Fordomatic). 2-barrel Carburetor.

③–Fairlane & Station Wagon Models (Synchro-mesh Trans. & Overdrive). 4-barrel Carburetor & Dual Exhaust.

④–Fairlane & Station Wagon Models (Fordomatic). Thunderbird (Synchro-mesh Trans.), 4-barrel Carburetor & Dual Exhaust.

⑤–Police Interceptor (Synchro-mesh Trans. & Overdrive). 4-barrel Carburetor & Dual Exhaust.

⑥–Police Interceptor (Fordomatic) & Thunderbird (Overdrive). Optl. on Fairlane & Station Wagon. 4-barrel Carburetor & Dual Exhaust.

⑦–Thunderbird Engine (Fordomatic). Optional on Fairlane & Station Wagon. 4-barrel Carburetor & Dual Exhaust.

Compression & Vacuum Reading–*See TUNE-UP.*

CYLINDER HEAD: *See "Cylinder Head & Manifold" in Ford Special Data.*

► *CYLINDER HEAD IDENTIFICATION: Heads can be identified by designation cast in top of head as listed below. Use of incorrect head will cause rough engine.*

Engine	Compr. Ratio	Head Ident.
272	8.0-1	ECZ-C
272	8.4-1	ECG-H
292	8.0-1	ECZ-B
292	8.4-1	ECZ-C
292	9.0-1	ECG-H
312	8.0-1	ECZ-A
312	8.4-1	ECZ-B
312	9.0-1	ECZ-C

► *CYLINDER HEAD PART NO. CHANGE (272 & 292 ENGINES):* Cylinder Heads Nos. B6A-6049-K and B6A-6049-E have been used on these engines. See Valve Springs for types used with each head.

► *CYLINDER HEAD BOLT INSTALLATION CAUTION:* Cylinder head bolts used on 1956 cars differ from those used previously. New bolt (B6A-6066-B), used at the four dowel hole locations, is 5/16" longer than other cylinder head bolts (B6A-6066-A). New bolts should be used at dowel hole locations only, as there is a possibility that bolts will bottom at other locations. Use of regular shorter bolts at dowel hole locations may result in cylinder block thread failure.

► *CRANKCASE VENTILATOR COVER OIL LEAK CORRECTION:* Install new .090" thick cover gasket. Old type gasket was .060".

TIGHTENING TORQUES: *See "Tightening Specifications" in Ford Special Data.*

ENGINE REMOVAL: *See "Engine" in Ford Spec. Data.*

► *EXCESSIVE VIBRATION (312 Eng.) CORRECTION:* Replace insulator assemblies AE-6038-B (identified by ½" band of white paint), with AE-6038-A insulator assemblies.

OIL PAN REMOVAL: Remove oil level indicator, drain crankcase. Remove engine front splash pans. On Ford-

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

omatic equipped cars, remove converter housing cover assembly. Disconnect oil pump inlet pipe at oil pump. Remove "O" ring seal from pump end of tube. Remove oil pan retaining nuts and screws, then remove oil pan. *NOTE* - No. 5 piston must be approximately TDC before oil pan can be removed.

PISTONS

Autothermic type. Solid skirt with three rings above pin.

Removal – Pistons and rods removed from above.

Fitting New Pistons: Use ½" feeler gauge inserted between piston and cylinder wall at right angles to pin on thrust side. Pull to withdraw feeler should be 5-10 lbs. with feeler thickness as follows: .0015" (New Piston in New Bore), .002" (New Piston in Used Bore), .002" (Used Piston in Used Bore).

Replacement Pistons: Standard, .020", .030", .040", .060" Oversize. Pistons furnished only with fitted pins.

Installing Pistons: Install with small indentation in head toward FRONT of engine. *See Rod Installation.*

PISTON PINS

Floating type with lock rings at each end.

Diameter – .9120-.9123". **Length** – 3.016-3.030".

Pin Fit in Piston – .0001-.0008" clearance or light thumb push fit at 70° F.

Pin Fit in Rod Bushing – .0008" clearance or light thumb push fit at 70° F.

Replacement Pins: Standard (Green), & .001" (Blue), .002" (Yellow) Oversize. Fitted pins furnished with new pistons.

PISTON RINGS

Two compression, one oil ring per piston. Oil ring is "side-sealing" type (two steel rails with spring spacer between them).

Ring	Width	End Gap	Side Clearance
Compr.(1 & 2)	3/32"	.010-.027" ①	.006" max.
Oil (3)	3/16"	.015-.062" ②	③

① – .012-.029" on 312 Engine.
② – On rails.
③ – "Side-sealing" type.

Replacement Rings: Furnished in sets as follows: "**Snap Type**" Std. & .020", .030", .040", .060" Oversize (except Std. size only for 312 Engine), "**Steel Section**" Std. & .020", .030" Oversize (272 Engine), Std. & .020", .030", .040", .060" Oversize (292 Engine).

CONNECTING RODS

Crankpin Journal Diameter – 2.1880-2.1888".

Lower Bearing – Steel backed, copper lead alloy lined type. Upper and lower halves interchangeable.

Clearance – .0037" (272, 292 Engs.), .0036" (312 Eng.) maximum.

Side Clearance – .019" (two rods) maximum.

Replacement Bearings: Standard (2 sizes marked **Red** and **Blue** for selective fitting) and .010", .020", .030" Undersize.

Installing Rods: Install rod in piston so that rod bearing lock slots in connecting rod are toward outside of engine when indentation in head of piston is toward front of engine. Numbers on bearing caps and rods must be on same side when installed. Install in same numbered cylinders.

CRANKSHAFT

►*1956 CRANKSHAFT PRODUCTION CHANGE (To minimize oil leaks at front and rear oil seals):* New Crankshaft with integral Rear Oil Slinger, Part No. B6A-6303-D (272 & 292 Engines), B6A-6303-C (312 Engine), used with separate Front Oil Slinger, Part No. B6A-6310-B. Slingers will divert oil away from seals. *NOTE* - New crankshaft and front slinger can be installed in 1955 272 & 292 engines also.

Journal Diameter – 2.4980-2.4988" (272 & 292 Eng.), 2.6235-2.6243" (312 Eng.).

Bearings – Steel-backed, lead-babbitt (272 Eng.), copper-lead (292 & 312 Eng.).

Clearance – .0031" max. (272 Eng.), .0042" max. (292 Eng.), .0036" max. (312 Eng.).

Replacement Bearings: Standard (2 sizes marked **Red & Blue** for selective fitting) and .010", .020", .030" Undersize.

End Thrust: Taken by No. 3 main bearing. Replace bearing if end play excessive.

Thrust Bearing Alignment – *See "Crankshaft & Main Bearings" in Ford Special Data.*

Endplay – .010" max.

Crankshaft Rear Oil Seal Installation: *See "Crankshaft and Main Bearings" in Ford Special Data.*

Crankshaft Front Oil Seal Installation: *See "Engine Front Cover" in Ford Special Data.*

CAMSHAFT

►*CAMSHAFT REPLACEMENT INSTALLATION CAUTION:* 1956 camshafts have an oil groove around perimeter of journal, replacing oil holes in 1955 camshaft. 1955 and 1956 camshafts and center bearings are **not** interchangeable.

►*312 ENGINE CAMSHAFT PRODUCTION CHANGE (Fordomatic Engines):* New camshaft, Part No. B6A-6250-C (superseding No. B6A-6250-B) used in production beginning Sept. 7, 1956 to reduce engine noise level. Engines with this camshaft marked by daub of blue paint on right side near date stamp. Cam lobe lift and tappet clearance are unchanged with this new camshaft. *See Valve Timing below.*

Journal Diameters – 1.9255-1.9265".

Clearance – .006" max.

End Thrust: Taken by thrust plate and spacer located between camshaft sprocket and shoulder on camshaft.

►*CAMSHAFT THRUST SPACER NOTE:* Chamfer on the inside of spacer must be to the rear or face camshaft journal.

End Play – .012" max.

Replacement Camshaft Bearings: Finished bearings furnished Standard and .015" undersize.

Camshaft Removal & Installation: *See "Camshaft & Bearings" in Ford Special Data.*

Timing Chain: Double strand "Diamond" (272 Eng.), Side-guide type (Others). Length 56 links.

►*TIMING CHAIN REPLACEMENT NOTE:* Replace chain and sprockets when deflection on slack side exceeds ½" (take up all slack on driving side, measure slack on opposite side). Remove and install chain "endless" as a unit with both sprockets.

Camshaft Setting: Sprockets marked by round depressions on one tooth. Mesh chain so that there are 12 chain link pins between timing marks on sprockets when marks are both on drive side of chain.

Engine Front Cover Oil Seal (Crankshaft Front Seal) Installation: *See "Engine Front Cover" in Ford Special Data.*

Engine Front Cover Removal: *See "Engine Front Cover" in Ford Special Data.*

VALVES

Tappet Clearance: .019" (Intake or Exhaust) either cold or hot. *NOTE* - Valve tappet clearance on truck engines is different.

Tappet Adjustment - *See "Valve System" in Ford Special Data.*

Valve	Head Diam.	Stem Diam. ①	Length
Intake	1.775-1.785"	②	5.02"
Exhaust	1.505-1.515"	③	5.02"

Valve	Seat Angle	Lift ④	Stem Clearance
Intake	45°	.259"	.004" max.
Exhaust	45°	.267"	.006" max.

① – Furnished with .003", .015", .030" oversize stems.
② – .3415-.3420" (Coded RED), .3420-.3425" (Coded GREEN).
③ – .3400-.3405" (Coded RED), .3405-.3410" (Coded GREEN).
④ – Cam lobe lift. Service limit.

►*EXHAUST VALVE STEM DIAMETER PRODUCTION CHANGE:* Valve stem diameter decreased .0005" for increased stem clearance to minimize valve sticking. *See "Valve System" in Ford Special Data.*

Valve Seat Width – .060-.080" (Intake), .070-.090" (Exhaust).

►*ROTATABLE VALVE NOTE:* All valves are rotatable type. *See "Valve System" in Ford Special Data.*

Valve Stem Oil Seals – "Umbrella" type seals on intake and exhaust valve stems. Install seals on valve stems with cupped side down to cover guide boss on head. Install new seals whenever valves removed or when seals become loose on valve stems.

►*VALVE SPRING OIL BAFFLE PRODUCTION CHANGE:* Valve spring oil baffles were discontinued on all 8 cylinder engines approximately May 14th, 1956. Improved rocker arm lubrication eliminates need for these baffles.

Valve Springs: Install with closed coil end toward cylinder head.

►*VALVE SPRING CAUTION:* Valve Spring No. EAA-6513-A (7½ coils, 2.12" free length) used with Cylinder Head No. B6A-6049-K, Spring No. B6A-6513-A (7 coils, 2.09" free length) used with Cylinder Head No. B6A-6049-E. *See Cylinder Head Change above.*

Spring Specifications

	Pressure	Length
Valve Closed	64-79 lbs.	1.780"
Valve Open	145-177 lbs.	1.390"

►*VALVE SPRING INSTALLATION NOTE:* Measure valve spring assembled height from machined surface of cylinder head spring pad to under side of spring retainer. If assembled height is 1 13/16" or greater, install necessary .030" spacers between cylinder head valve spring pad and valve spring to bring assembled height to recommended 1 25/32 - 1 13/16". *CAUTION - DO NOT install spacers unless necessary.*

Valve Guides: Integral with cylinder head. When stem-to-guide clearance exceeds maximum (See table above), ream guides and install oversize valves. *See "Valve System" in Ford Special Data.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Valv Lift rs: Mushroom type. Remove from below after camshaft removed from engine.
Clearance – .0026".
Rocker Arm Assembly: *See "Valve System" in Ford Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

►*312 ENGINE WITH FORDOMATIC CAMSHAFT PRODUCTION & VALVE TIMING CHANGES:* For production change, *See CAMSHAFT above; For Valve Timing change, see below.*

Valve Timing
Exc. 312 Eng. With B6A-6250-C Camshaft
Intake Valves—Open 12° ① BTDC. Close 54° ② ALDC.
Exhaust Valves—Open 58° ③ BLDC. Close 8° ④ ATDC.
312 Eng. With B6A-6250-C Camshaft (Fordomatic)
Intake Valves—Open 20° ⑤ BTDC. Close 54° ② ALDC.
Exhaust Valves—Open 58° ③ BLDC. Close 8° ④ ATDC.
①— Camlift .016". ②—Camlift .019". ③—Camlift .015"
④— Camlift .018". ⑤—Camlift .014".

Valve Timing Check: Remove right rocker arm cover. Back off No. 1 intake valve adjusting screw, slide rocker arm assembly to one side. With push rod in lifter socket, install dial indicator to indicate push rod movement. Turn engine slowly until cam lobe contacts lifter. Zero indicator and continue to turn engine until correct lift is obtained (see table above). Compare degrees on pulley with specifications.

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Ford Special Data.*

Crankcase Capacity: 5 qts. (refill), 6 qts. (when filter changed).
Normal Oil Pressure: 45-50 lbs. at 2000 RPM (Hot).
Pressure Regulator Valve—In pump body, not adjustable.
Oil Pressure Indicator – Indicator light on instrument panel, operated by Engine Unit, Ford No. FDA-9278-A (stamped No. 7 on Hex.).
Oil Pump: Gear type, located on left side of engine crankcase, driven by distributor shaft.
►*OIL PUMP CAUTION:* New type oil pump has aluminum body. Use extreme care when servicing.
Pump Overhaul—*See "Oiling System" in Ford Spec. Data.*
Oil Filter: Full-flow type (Std. Equip.) with pressure relief valve in center filter bolt. Replace filter element at 4000 miles or when oil dirty or polluted.
Replacement Filter Element – Ford No. B2A-6731-A
►*CAUTION: This Special Full-flow filter element must be used for replacement (use of by-pass type element would restrict oil flow and result in insufficient engine lubrication). See "Oil Filter" in Ford Special Data.*
Crankcase Ventilation: Filter in oil filler cap (inlet) with outlet pipe at left front of engine (exc. Thunderbird), connected to valve chamber cover at right rear of engine (Thunderbird). All engines except Thunderbird have filter screen in outlet pipe. Clean this screen every 2000 miles.

COOLING

Water Capacity: 19 qts. (Pass. Cars and Sta. Wgn.), 20 qts. (Thunderbird). Add 1 qt. for heater.
►*LOSS OF COOLANT CORRECTION:* Lower generator mounting bracket bolt holes are tapped into cylinder water jacket. For loss of coolant at this point or when replacing bolts, apply a good coating of waterproof sealer.
Pressure Valve: Radiator filler cap. Ford No. LA-8100-A, 12-15 lbs. (marked "13" or "14"). *CAUTION* - If replacement required, use 12-15 lb. type.
Thermostat: 157-162° F. (Std.), 177-182° F. (High Temp.) for use with permanent type anti-freeze.
Water Pump: Packless, sealed ball bearing type.
See "Water Pumps" in Ford Special Data.
Pump Removal – (On Thunderbird) remove engine left hand splash shield). Drain cooling system, disconnect lower radiator hose and heater hose. Remove fan belt, fan, fan spacer, and pulley. (On Thunderbird, remove generator support bracket bolt at the water pump housing and bolt at generator, then move bracket out of way, remove remaining bolts, retaining water pump assembly and timing pointer). On other cars, remove four bolts retaining water pump to cover. Remove pump and timing pointer.
Temperature Gauge: King-Seeley Electric.
Dash Unit – Ford No. B6S-10883-A (Thunderbird), B6A-10883-D (Others).
Engine Unit – Ford No. B6A-10884-A.
See "Temperature Gauges" in Miscellaneous Section.

CLUTCH

Long Model 10CF (272 & 292 Eng.), 11CF (Taxi, Interceptor & Thunderbird 292 & 312 Eng.). Single plate, semi-centrifugal type. *NOTE* - 11CF used on 272 & 292 Engines as Heavy Duty equipment.

Cover Assembly	Long No.	Ford No.
10CF	265125	B6A-7563-B
11CF	265126	B6A-7563-A

Clutch Disc	Long No.	Ford No.
272 Pass. Car	284978	B5A-7550-B
292 Pass. Car	285182	B6A-7550-C
272, 292 H.D.	281982	B5A-7550-B
Thunderbird	281982	B5S-7550-A
Interceptor	284961	

See "Long Clutches" in Clutch Section.

►*HEAVY DUTY CLUTCH PRODUCTION CHANGE:* Heavy Duty clutch incorporating an oil slinger to protect disc from excessive lubrication along with release bearing incorporating lubrication fitting, used in production. New heavy duty disc, Ford No. B6A-7550-A, released for service.

Pedal Adjustment: If total pedal travel is less than 6 3/8" or more than 6 5/8", reposition pedal bumper and bracket until correct travel is within limits. Adjust assist spring link to give assist spring length of 6 5/8" when clutch is fully released.

Pedal Free Travel – 1 1/8" - 1 3/4". Loosen locknut on clutch pedal release rod, turn adjusting nut until correct travel is reached. *NOTE* - Check free travel by operating engine at 3000 RPM with transmission in neutral position. There should be a minimum of ½" free travel under these conditions. Readjust as necessary.

Removal (Exc. Thunderbird): Remove transmission (see transmission below), slide clutch release bearing off clutch release lever. Disconnect clutch pedal release rod from clutch release lever assembly. Remove clutch release equalizer bar. Remove split bronze bushing from bracket, remove flywheel housing. Install Tool 7563 and remove clutch pressure plate assembly (if tool not available, clutch may be released by backing off attaching bolts evenly).
Thunderbird – Drain transmission, remove drive shaft, disconnect shift rods at transmission, disconnect transmission from flywheel housing, move transmission back, so that clutch parts can be removed from flywheel housing. Slide clutch release bearing and hub assembly off end of release lever assembly. Remove pressure plate and cover assembly and clutch disc from engine flywheel.

SYNCHRO-MESH TRANSMISSION

Own. Helical gear, constant mesh, synchro-mesh (second & high), sliding gear (low & reverse). *See "Ford Synchro-mesh" in Transmission Section.*
►*SYNCHRO-MESH & OVERDRIVE THREE SPEED TRANSMISSION GEAR REPLACEMENT CAUTION:* Shot peened gears used in 1956 models. DO NOT use past model gears in 1956 transmission.
►*GEARSHIFT LINKAGE & CLUTCH RELEASE RODS PRODUCTION CHANGES AND CORRECTIONS:* For application of parts to eliminate interference causing premature gear tooth wear, *See "Transmission Control Notes" in Ford Special Data.*
Transmission Controls: *See "Transmission Controls" in Transmission Section.*
Removal: (Exc. Thunderbird) – Drain transmission, disconnect gear shift linkage at transmission. Remove speedometer cable and gear, remove drive shaft. Remove bolts which hold transmission extension to engine rear support. Remove frame crossmember and engine rear support. Remove bolts and lockwashers which attach transmission to clutch housing, then install two guide pins. Move transmission assembly to rear until input shaft splines clear clutch housing, then lower transmission and pull forward to remove from car.
Thunderbird – Drain transmission, disconnect gear shift linkage at transmission. Remove speedometer cable and gear. Remove drive shaft. Remove cover from bottom of clutch housing, then remove starter from clutch housing. Disconnect clutch pedal linkage from clutch release lever. Raise rear of engine slightly, disconnect engine rear mount and remove frame crossmember. Support transmission on jack, and remove transmission to clutch housing bolts. Move transmission to rear so that clutch parts can be removed from clutch housing. Slide clutch release bearing and hub assembly off end of release lever assembly. Remove pressure plate and cover assembly and clutch disc from engine flywheel. Remove clutch housing-to-engine bolts and lower the clutch housing, then remove transmission.

OVERDRIVE

Warner AS4-R10F. Solenoid operated type, with governor control and throttle operated kick-down. Lockout switch not used on this model.

CONTINUED ON NEXT PAGE

Form 15A

CONTINUED FROM PRECEDING PAGE

S e "Warner R10 Overdrive" in Transmission S ction.

Ov rdriv Control: *See "Warner R10 Overdrive Control" in Transmission Section.*

R m val: Same as for Synchro-mesh Transmission (above) after disconnecting control cable and wiring.

FORDOMATIC TRANSMISSION

Torque converter and three speed automatic transmission with hydraulic control and mechanical parking lock. *See "Fordomatic & Mercomatic" in Transmission Sect.*

► *FORDOMATIC "LOCK-UP" CORRECTION (1955-56 Cars & Trucks):* Caused by cross leakage in front servo piston. *See "Fordomatic & Mercomatic" in Transmission Section.*

► *FORDOMATIC TRANSMISSION FLUID COLOR CHANGE CAUTION:* New Fordomatic transmission oil used in production is green colored, similar to color of engine oil. DO NOT USE IT IMPROPERLY. "Type A" (reddish brown) may be used when adding oil to transmission filled with new type oil.

► *FORDOMATIC PRODUCTION CHANGES:* For improved Throttle Control Inner Lever Installation, change in Pressure Regulator Valve Body and new location of pressure take off plug, *Se "Fordomatic & Mercomatic" in Transmission Section.*

► *PRODUCTION CHANGES AND REPLACEMENT PARTS CAUTION: See "Fordomatic & Mercomatic in Transmission Section.*

► *TESTING & TROUBLE SHOOTING: See "Fordomatic & Mercomatic" in Transmission Section.*

Lubrication – Check transmission fluid level at 1000 mile intervals and maintain level at "F" (Full) mark on indicator. Drain & refill every 15,000 miles.

Ch cking Fluid Level: With selector lever in "N" (Neutral) and emergency brake applied, run engine approximately four minutes at idle speed. Check to see that emergency brake is applied and that engine is on slow idle, then move selector lever to "P" (Park) position. *NOTE* - When engine and transmission are at normal operating temperature move selector lever through all ranges to assure fluid distribution throughout transmission. Remove indicator and read fluid level. Add Automatic Transmission Fluid as necessary to bring fluid level to "Full" mark on indicator.

THROTTLE LINKAGE ADJUSTMENT: *See CARBURETOR above.*

► *OTHER "FORDOMATIC" SERVICE DATA: See "Fordomatic & Mercomatic" in Transmission Section.*

UNIVERSALS

M chanics. Needle bearing type.

► *CAUTION (All Cars Except Sta. Wgn., Sed. Del. & Interceptor)·* Rear universal joint companion flange nut controls pinion bearing pre-load (must be adjusted whenever nut is loosened). *See "Ford & Mercury" (Separate Carrier)" in Rear Axle Section.*

REAR AXLE

PASSENGER CARS

Own. Separate Carrier, semi-floating hypoid with Hotchkiss drive.

► *LUBRICATION BAFFLE NOTE:* 1956 rear axle housing has lubrication baffle (retained by two housing bolts) to direct lubricant to differential side bearings. *NOTE-* This baffle, Ford No. B5A-4018-A, can be installed on earlier models.

► *THUNDERBIRD REAR SPRING THUMP CORRECTION:* Replace early type rubber bumper with new soft rubber bumper Ford No. B6A-5783-B.

NOTE- Axle not same as Station Wagons & Sedan Delivery. *See "Ford & Mercury (Separate Carrier)" in Rear Axle Section.*

Ratios	Standard	Overdrive	Fordomatic
V8 Cars	3.78-1 or 3.89-1	4.11-1	3.22-1 or 3.55-1

► *RATIO, DRIVE GEAR & DIFFERENTIAL CASE IDENTIFICATION:* When differential case is to be replaced be sure new case is same as old one. Refer to following table for identification.

Drive Gear Ratio	Gear Teeth Drive	Pinion	Differential Case Color
3.22-1	29	9	Gray
3.55-1	32	9	Red
3.78-1	34	9	Black
3.89-1	35	9	Black
4.11-1	37	9	Black

Backlash – .003-.008"

Axle Shaft Removal: Remove wheel; take off drum. Remove four axle retainer locking type nuts (work through opening in axle shaft flange). Use Puller No. 4235-N and pull shaft (do not disturb brake backing plate or damage wheel bearing oil seal). Replace one nut to secure brake backing plate.

Carrier Assembly Removal: Drain lubricant from rear axle housing. Remove carrier-to-housing nuts, then remove identification tag (ratio) and set it aside for reference during assembly of axle. Remove carrier assembly from axle housing.

STA. WGN., SED. DEL., THUNDERBIRD & INTERCEPTOR

Own. Integral Carrier, semi-floating hypoid with Hotchkiss drive.

► *NOTE* Axle assembly not same as passenger cars. *See "Lincoln, Mercury, Ford (Integral Carrier)" in Rear Axle Section.*

Ratios	Standard	Overdrive	Fordomatic
S.W. & S.D.	4.09-1	4.27-1	3.54-1
Thbd. & Intr.	3.73-1	3.92-1	3.31-1 or 3.54-1

Axle Shaft Removal: Same as passenger cars (above).

Rear Axle Assembly Removal: Remove hub caps, loosen wheel stud nuts, raise car at rear and disconnect hydraulic brake hose from brake line at rear axle. Disconnect parking brake cable from equalizer rod, remove cable assembly from frame brackets. Remove wheels, disconnect drive shaft at rear axle universal joint flange. Remove "U" bolts. Remove assembly from under car.

SHOCK ABSORBERS

Direct acting, non-adjustable. Service by replacement.

Mdl	© Frnt	© Rar
All (Exc. S.W. & S.D.)	B5A-18124-A	B5A-18125-A
All (Hvy. Dty.)	B5A-18124-D	B5A-18125-C
S. W. & S.D.		B5A-18125-D
Thunderbird	B5S-18124-C	B5S-18125-B

© — Furnished in kits which include shock absorber mounting bushings.

FRONT SUSPENSION

Independent. "Ball Joint" suspension with direct acting shock absorbers mounted within front coil springs. *See "Lincoln, Mercury, Ford (Ball Joint)" in Suspension and Wheel Alignment Section.*

Kingpin Inclination – 6-7°, crosswise.

Caster – Pos. ½° to Pos. 1½°. Maximum variation between wheels ½°.

Camber – Pos. ¼° to Pos. 1¼°. Maximum variation between wheels ¼°.

Toe-In – 1/16-1/8". *NOTE* - When checking toe-in on cars with power steering, engine should be running so that power steering control valve will be properly centered.

STEERING

Manual: Own (Gemmer 305 Design). Worm & Roller type. *See "Gemmer Worm & Roller (Type 305)" in Steering Sect.*

Power Steering: Ford - Mercury Linkage type. Used in conjunction with standard steering. *See "Ford & Mercury Bendix Linkage Type" in Steering Section.*

► *STEERING ARM INTERFERENCE (Power Steering Cars) CORRECTION·* To correct interference between steering connecting rod clamps and bolts with power steering control valve, *See "Ford & Mercury Bendix Linkage Type" Power Steering in Steering Section.*

► *POWER STEERING BELT SQUEAL CORRECTION:* When belt slippage or squeal cannot be corrected by belt adjustment, install new pulley Ford No. B6A-33556-A and new solid type belt Ford No. B6S-33558-A (Thunderbird), B6A-33558-A (Others). *NOTE* - Old type belt with serrations can be used with either the new or old type pulley.

Pump Belt Adjustment: Install torque wrench on pump pulley bolt. Check torque required to slip pulley against belt friction. If torque is not 14-16 ft. lbs. adjustment is required. To adjust, position a heavy duty 1½" "C" clamp with bottom against lower side of pump support bracket and top of clamp resting on pump bracket at its center. Loosen four pump attaching bolts until pump body may be repositioned by tightening "C" clamp. Tighten "C" clamp until torque of 14-16 ft. lbs. is required to slide pump pulley. *(NOTE* - Hold final torque as close as possible to upper limit). Tighten pump attaching bolts, remove "C" clamp, and make a final check of pulley sliding torque.

St ring Linkage· *See "Steering Linkage" in Steering Sect.*

St ring Whe l & H rn Butt n R m val: *See "Gemmer Worm & Roller (Type 305)" in Steering Section.*

Form 15B

CONTINUED FROM PRECEDING PAGE

Steering Gear Removal: See *"Gemmer Worm & Roller (Type 305)" in Steering Section.*

BRAKES

Bendix Hydraulic, Single Anchor. Hand lever applies rear wheel service brakes.
See *"Ford, Lincoln, Mercury Bendix" in Brake Section.*
► *BRAKE DESIGN CHANGES:* Front wheels do not have eccentric and front and rear anchor pins are fixed (No adjustment).
Drum Diameter – 11" front and rear.

LINING SPECIFICATIONS

Passenger Car

Lining	Width	Thickness	Length
Front Primary	2¼"	3/16"	10 27/32"
Front Secondary	2¼"	15/64"	10 27/32"
All-Rear	1¾"	3/16"	10 27/32"

Sedan Delivery & Station Wagon

Lining	Width	Thickness	Length
Front Primary	2¼"	7/32"	9 9/32"
Front Secondary	2¼"	7/32"	11 15/16"
Rear Primary	2"	7/32"	9 9/32"
Rear Secondary	2"	7/32"	11 15/16"

Thunderbird

Lining	Width	Thickness	Length
Front Primary	1¾"	3/16"	10 27/32"
Front Secondary	2¼"	15/64"	10 27/32"
All-Rear	1¾"	3/16"	10 27/32"

Clearance – Adjusting screw backed off 10 to 12 notches from point where shoes are tight against drum.

Brake Pedal Free Play Adjustment: 5/16" to 7/16". If play not correct after brake adjustment, loosen locknut on the eccentric bolt that attaches brake pedal assembly to master cylinder pushrod, rotate eccentric bolt for desired clearance.

Standard Master Cylinder: Located on engine side of firewall.

Checking Fluid – Maintain fluid level to within ½" of top of reservoir.

Removal – Disconnect brake line from brake master cylinder and depress brake pedal a few times to force out fluid. Disconnect wires leading to stop light switch, and remove eccentric bolt attaching master cylinder pushrod to brake pedal. Remove capscrews and lock washers attaching master cylinder to firewall.

Power Brakes: Midland Hy-Power Unit mounted on left side of car in engine compartment and connected in hydraulic brake line between master cylinder and wheel cylinder. There are no mechanical connections and no adjustments are required.
See "Midland Power Unit" in Brake Section.
Checking Brake Fluid – Same as for manual brakes (above).
Removal of Power Unit – Depress brake pedal a few times to remove all vacuum from system. Disconnect hydraulic lines at power unit and remove wires from brake stop light switch. Remove power unit to mounting bracket bolts and lockwashers and remove power unit.

MISC. MECHANICAL

Windshield Wipers: Vacuum link and crank arm type. *See "Windshield Wipers" in Miscellaneous Section.*
Power Window Regulators: Reversible motor in each window. *See "Electric Window Regulators" in Misc. Sect.*
Power Top Control: Electric-Hydraulic with reversible pump motor. *See "Power Top Controls" in Misc. Sect.*
Power Seat Adjusters: "Four-way" type. Electric screw and jack type with individual motors for vertical and horizontal adjustment. *See "Power Seat Adjusters" in Miscellaneous Section.*
Air Conditioning: *See Ford "SelectAire" in Misc. Sect.*

MODEL IDENTIFICATION

VEHICLE NUMBER· On Rating Plate attached to inside of glove compartment door or on left front cab pillar Vehicle number is also Engine Number
First Number - 10001.

►*ENGINE IDENTIFICATION NOTE* 6 Cyl. and V8 engines used. 6 Cyl. (223 Eng prefix EBR-S-T), V8 (272 Eng prefix ECY-W, light duty, ECR heavy duty). Reference is made to engine by displacement (223 Eng. -223" displacement).

►*VEHICLE NUMBER NOTE* Vehicle number (Example *F10D6 10001*) includes identification in the following sequence.

Serial Code ①	Engine Symb I ②	Year ③	Assy. Plant	Serial Number
F10	D	6	See below	10001 up

① -See Model & Serial Code Table below
② -**D** - 6 Cyl. 223 Eng , **V** - V8 Eng. (2-Barrel Carb. Light Duty), **Z** - V8 Eng. (2-barrel Carb. Heavy Duty), **R** - V8 Eng. (4-barrel Carb. Heavy Duty)
③ -Last digit of model year (1956).

TUNE-UP

COMPRESSION PRESSURE. At cranking speed, compression pressures are as follows

Engin	Compr. Ratio	Compr Press
223 Eng	7.8-1	150 lbs
272 Eng (ECY-W)	7 8-1	160 lbs
272 Eng (ECR—2 Bbl Carb)	7 8-1	160 lbs
272 Eng (ECR—4 Bbl Carb)	7 8-1	155 lbs

VACUUM READING: 18-19" (223 Eng), 19-20" (272 Eng) idling at 475-500 RPM in neutral

VALVE TAPPET CLEARANCE: 019" (223 Eng), 018" (272 Eng) Intake and Exhaust (Hot & Cold)

MANIFOLD HEAT CONTROL. (*NOTE*—Manifold heat control valve is **n t** used on 272 ECR Engine) Automatic thermostatic type with counterweight On 6 Cylinder engine valve is located at outlet of exhaust manifold On 8 Cylinder engine valve is located between crossover pipe and inlet of right exhaust manifold Spring stop is at top of valve housing and spring is hooked on stop pin when valve is properly installed Valve is closed when engine is at normal operating temperature and *running at idle speed, and opens at high RPM*

IGNITION

FIRING ORDER: 6 Cyl Engine—1-5-3-6-2-4 **8 Cyl. Engine**—1-5-4-8-6-3-7-2

Cylinders (8 Cyl Eng)—RIGHT BANK 1-2-3-4 LEFT BANK 5-6-7-8

SPARK PLUG GAP: 028'- 032"
Spark Plugs—Champion 860 18mm

►*V8 ENGINE SPARK PLUG MISFIRE CORRECTION* If misfiring occurs at either No. 6 or No. 8 cylinders, interchange position of No. 5 and No. 6 spark plug cables in all insulator blocks and separator blocks on left side of engine

►*SPARK PLUG CAUTION* Spark plug has tapered seat and does not require a sealing gasket It is important that plugs be torque tightened within limits 15-20 ft

COIL Ford No. B6A-12029-B *12 Volt*
Ignition Current—2 5 amps idling 4 5 amps stopped
Resistor—Ford B6A-12250-B (Early), **B6A-12250-C** (Later) Mounted next to coil

►*IGNITION RESISTOR PRODUCTION CHANGES* Two types of resistors Ford No. B6A-12250-C used in production to replace original resistor B6A-12250-B. First type replacement identified by copper flashings on heads of rivets which support elements. A piece of fibre glass is cemented to inside of support bracket. Second type has sheet metal cover snapped over channel and rivets are cadmium plated. Replace earlier type when servicing ignition system.

►*COIL RESISTOR NOTE* Resistor is connected in lead from ignition switch to coil Resistor is by-passed during cranking by a lead from starter solenoid to battery terminal of coil

DISTRIBUTOR: *12 Volt* Ford distributors used as follows

Engine	Carb	Air. Cl.	Distr. No.
223 Eng (EBR-S-T)	1-Bb	Oil Bath	B6A-12127-E
223 Eng (EBR-S-T)	1 Bbl	Dry Type	B6A-12127-E
272 Eng (ECY-W)	2 Bbl		B6A-12127-A
272 Eng (ECR)	2 Bbl		B6T-12127-A
272 Eng (ECR)	4 Bbl		B6T-12127-B

►*SUDDEN ENGINE STOPPAGE CORRECTION* Inspect distributor primary terminal wire assembly Ford No. B6A-12216-A, for defective welds at brass terminals.

►*DISTRIBUTOR DIAPHRAGM PRODUCTION CHANGE* A new distributor diaphragm Ford No B6A-12370-B used on all engines after Nov. 15th 1955, and is available for replacement of all B6A-12370-A diaphragms. It can be identified by die cast end cover in place of stamped cover and incorporates new type material in secondary diaphragm giving it much greater strength

Condens r—Ford 7RA-12300-C (223 Eng,) FAB-12300-A (272 Eng) **Capacity**— 21- 25 microfarad
Contact Point Set—Ford FAA-12171-A (223 Eng), FAB-12171-B (272 Eng)
Breaker Gap— 024- 026" (6 Cyl), 014- 016" (8 Cyl)
Cam Angle—35-38° (6 Cyl) 26-28 5° (8 Cyl)
Breaker Arm Spring Tension—17-20 ozs
Rotation—Clockwise (6 Cyl), counter-clockwise (8 Cyl) viewed from above

►*DISTRIBUTOR INSTALLATION CAUTION* On 6 Cylinder engines be sure oil pump intermediate shaft

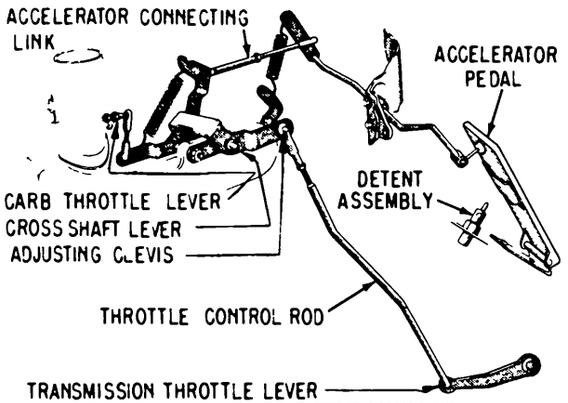
CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

engages seat in oil pump. On 8 Cylinder engines, be sure distributor shaft engages oil pump intermediate hex shaft

Initial Distributor Timing (6 Cyl. Engine): Set engine crankshaft so that No. 1 cylinder is at TDC after compression stroke (with timing mark in line with pointer) Install distributor so that rotor points to the No 1 spark plug wire terminal in distributor cap.

Initial Distributor Timing (8 Cyl Engine): Remove No. 1 spark plug. Hold thumb over spark plug hole until piston starts up on compression. Slowly "bump" engine over with starter until timing mark is aligned with pointer, Find No. 1 spark plug sprocket in distributor cap and fit distributor cap to distributor housing Mark distributor housing to indicate No. 1 spark plug wire position. Position rotor approximately 20° counter-clockwise from mark made on distributor housing. Engage distributor drive gear and install distributor in engine.



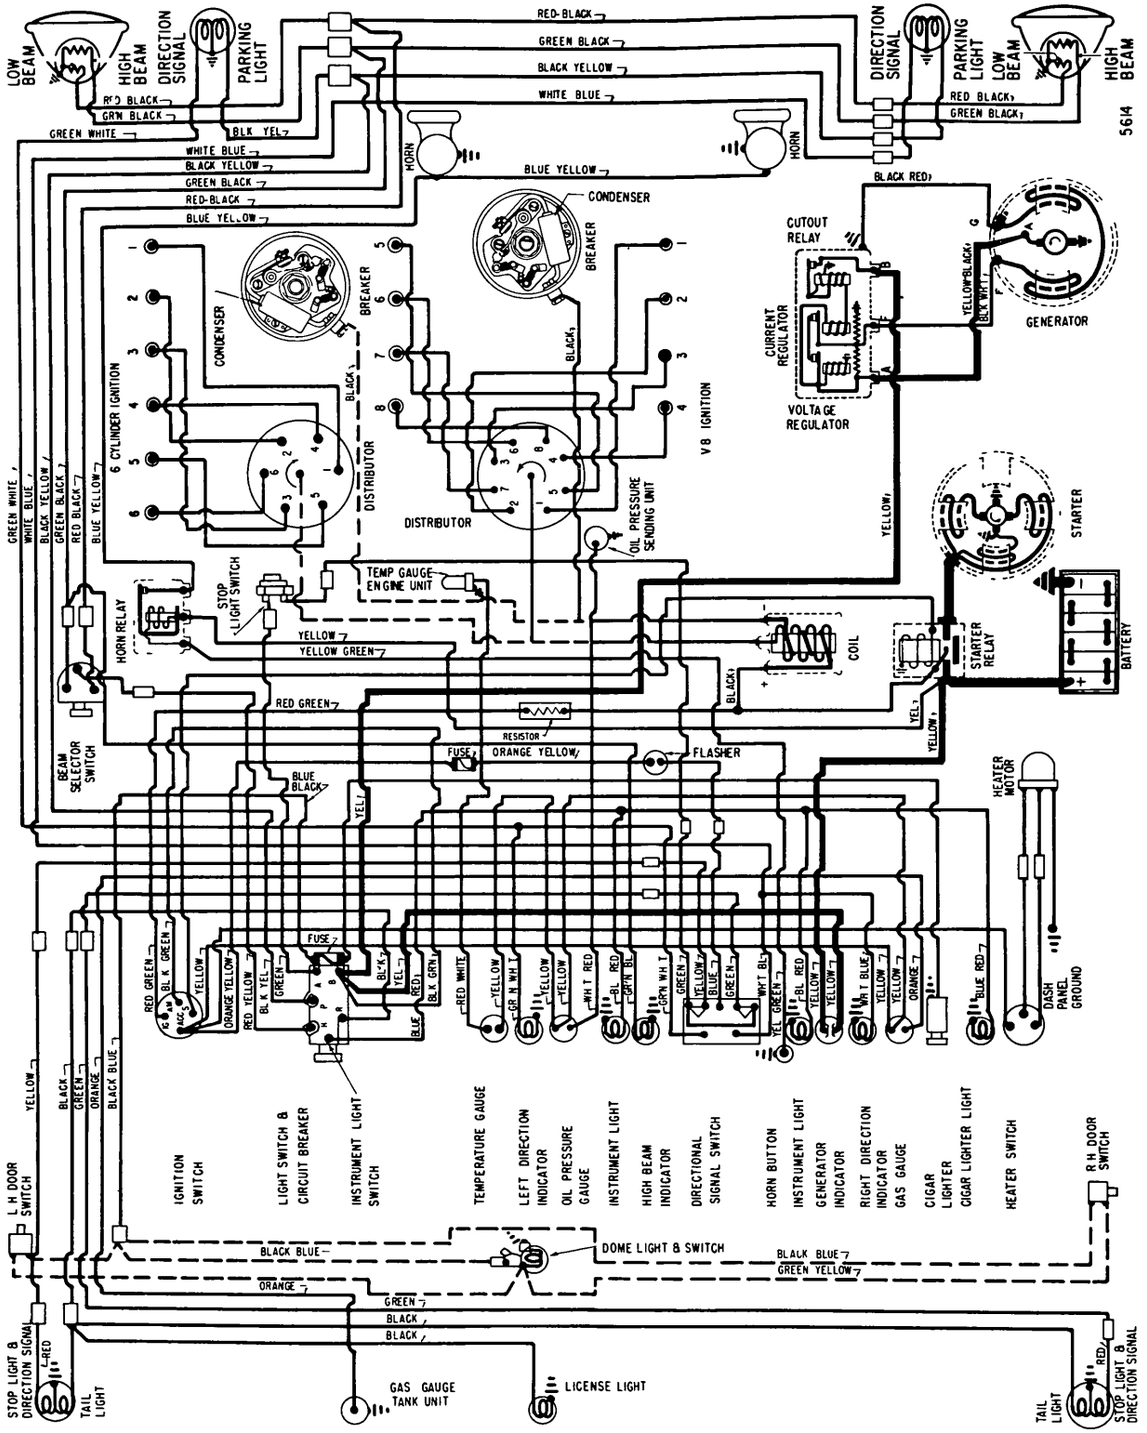
IGNITION TIMING

Setting–223 Engine–5° BTDC (Std & Fordomatic) with engine idling at 475 RPM and vacuum line disconnected. *NOTE*–Maximum initial timing recommended is 5° BTDC (Std.), 6° BTDC (Fordomatic). *See Initial Distributor Timing above.*

272 Engine–10° BTDC (Std. & Fordomatic) with engine idling at 475 RPM and vacuum line disconnected. *NOTE*–Maximum initial timing recommended is 10° BTDC. *See Initial Distributor Timing above.*

Timing Mark–6 Cyl. Engine–Vibration damper marked "TDC", and "3", "5", "7", "9" degrees BTDC. Align correct mark with pointer on cylinder front cover

8 Cyl. Engine–Vibration damper marked "TDC", and "2", "4", "6", "8", "10" degrees BTDC Align correct mark with pointer (bolted to water pump).

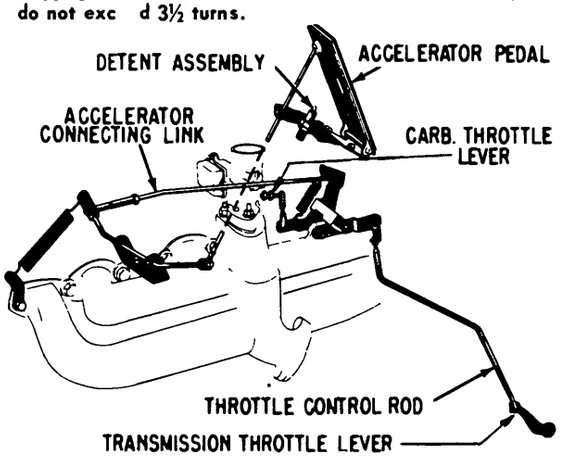


FORDOMATIC THROTTLE LINKAGE (6 CYLINDER TRUCKS)

CARBURETOR

► *CARBURETOR APPLICATION:* Ford Single Barrel Carburetor used on 223 Engine, and Ford 2-Barrel and 4-Barrel Carburetors on the 272 Engine (2-Barrel on ECW-Y Eng., 2-Barrel & 4-Barrel on ECR Eng.).

CONTINUED ON NEXT PAGE



CONTINUED FROM PRECEDING PAGE

►*LOW POWER OUTPUT (4-Barr l Carbur t r) CORRECTION:* Incorrect routing of governor vacuum lines at fitting (Governor Housing) causes governor to close throttle plates at speeds above 700 RPM, limiting power output. Attach line from vacuum pump to hole at bend of fitting. Attach line from governor controlling unit in conventional or side opening. *NOTE* - Be sure throttle stops have been removed.

►*AIR CLEANER WING SCREW TIGHTENING (4-Barrel Carbur t r) CAUTION:* Tighten anchor screw to 135 inch lbs. only, and wing nut just finger tight. Overtightening will permit anchor screw removal with air cleaner and cause lock washer to be drawn into carburetor venturi and engine.

►*AIR CLEANER AIR LEAK CORRECTION (C-500 & 600 Series Trucks):* Correct by installing two gaskets between elbow and carburetor and reversing holding clamp to provide better seating.

Thr ttl Linkage & Dashpot Adjustments (Fordomatic): *See "Carburetor" .on Ford 6 and V8 Passenger Car pages and note the following exceptions:* Adjust accelerator pedal height so pedal just touches detent stem when carburetor lever hits its wide-open stop (2 5/8" on V8 trucks). Initial adjustment of control rod is 2½ turns counter-clockwise. If band or clutch slippage evident, increase rod length to 3 turns, **but do not exc d 3½ turns.**

F RD MATIC THROTTLE LINKAGE (PARCEL DELIVERY)

FORD SINGLE BARREL 223 ENGINE

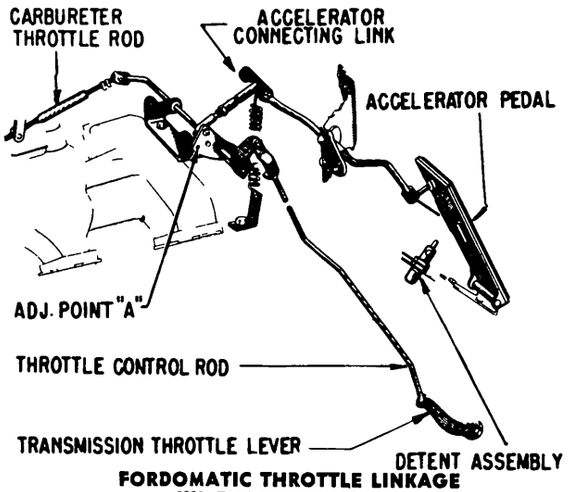
F rd N . B6C-9510-A (Exc. Fordomatic), **B6A-9510-G** (Fordomatic). Single barrel, downdraft type, with manual choke.

►*6 CYL. TRUCK ECONOMY CARBURETOR:* Carburetor B5A-9510-S has been released for owners who desire more fuel economy, but do not require maximum acceleration or top speed.

Idle S tting—Initial setting 1½ turns open. Turn adjusting screw in until engine begins to run roughly from lean mixture, then turn screw out until engine begins to roll from rich mixture. Turn screw in until engine runs smoothly. Favor a slightly richer mixture. Turn screws out for richer mixture.

Idle Speed—475-500 RPM (Std. & Overdrive), 475-500 RPM (Fordomatic) with selector lever in "N" position.

Fuel Level—11/16"±1/32" below power valve mounting surface (Tool T52L-9550-AEE). *See "Ford Visi-flo" in Carburetion Section of Manual.*



Accelerating Pump: Shortest stroke (closest hole to throttle shaft) for average or hot weather operation, longest stroke for cold weather operation.

Fast Idle: Integral type operated by choke valve. No adjustment required.

Throttle Linkage Adjustment (Fordomatic Trucks): *See CARBURETOR above.*

►*OTHER DATA: See "Ford Visi-flo" Carburetors in Carburetion Section.*

Fuel Pump Pressure: 3.5-5.5 lbs. at 500 RPM.

FORDOMATIC THROTTLE LINKAGE (V8 ENGINE TRUCKS)

FORD TWO-BARREL 272 (ECY-W) ENGINE

Ford No. B6Y-9510-A (Exc. Fordomatic), **B6C-9510-C** (Fordomatic). Dual barrel, downdraft type, with manual choke.

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyl. 2-3-5-8, LEFT barrel 1-4-6-7.*

Idle Setting—Initial setting 1 turn open. Set both screw s alike. Turn adjusting screws in until engine begins to run roughly from lean mixture, then turn screws out until engine begins to roll from rich mixture. Turn screws in until engine runs smoothly. Favor a slightly richer mixture. Turn screws out for richer mixture.

Idle Speed—475-500 (Std. & Overdrive) 475-500 RPM (Fordomatic) with selector lever in "N" position.

Fuel Level—11/16"±1/32" below power valve mounting surface (Tool T56L-9562-A).

Float Level—1.374-1.438" from air horn gasket surface to float bottom (carburetor inverted). It should be equal on both ends of float.

Acc l rating Pump: Center hole for normal operation, shortest stroke (closest hole to throttle shaft) for hot weather operations, longest stroke for cold weather.

Fast Idl : Integral type operated by choke valve. No adjustment required.

Throttl Linkag Adjustm nt (F rd matic Trucks): *See CARBURETOR above.*

►*OTHER DATA: See "Holley Ford" Carburetors in Carburetion Section.*

Fuel Pump Pressure: 3.5-5.5 lbs. at 500 RPM.

FORD TWO-BARREL 272 (ECR) ENGINE

Ford No. B6T-9510-A. Dual "Concentric" downdraft type with manual choke control, governor actuating assembly, and "depopper" valve.

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyl. 2-3-5-8, LEFT barrel 1-4-6-7.*

Idle Setting—Initial setting ½ turn open. Set both screws alike. Turn screws in until engine begins to run roughly from lean mixture, then turn screws out until engine begins to roll from rich mixture. Then turn screws in until engine runs smoothly. Favor a slightly rich mixture. Turn screws out for richer mixture.

Idle Speed—475-500 RPM (Std.), 475-500 RPM (Fordomatic) with selector lever in "N" position.

Fuel Level—½"±1/32" below top surface of float bowl, with engine idling.

Accelerating Pump: Center hole for normal operation, shortest strike (nearest hole to throttle shaft) for hot weather operation, longest stroke for cold weather operation.

Fast Idle: No adjustment required.

Throttle Linkage Adjustment (Fordomatic Trucks): *See CARBURETOR above.*

Depopper Valve Adjustment: *See "Ford Truck Dual Centri-flo" Carburetor in Carburetion Section.*

►*OTHER DATA: See "Ford Truck Dual Centri-flo" Carburetor in Carburetion Section.*

Fuel Pump Pressure: 3.5-5.5 lbs. at 500 RPM.

FORD FOUR-BARREL 272 (ECR) ENGINE

Ford No. B6T-9510-B. "Centri-Quad" 4-Barrel, downdraft type, with manual choke control, and NEW ball-type "depopper" device.

►*MANIFOLD FUEL DISTRIBUTION:* Carburetor RIGHT barrels feed Cyl. 2-3-5-8, LEFT barrels feed 1-4-6-7.

Idle Setting - Initial setting 1/2 turn open. Turn both screws in until engine begins to run roughly from lean mixture, then turn screws out until engine begins to roll from rich mixture. Then turn screws in until engine begins to run smoothly. Favor a richer mixture. Final setting may vary 1/2 turn difference between the screws.

Idle Speed - 475-500 RPM (Std.), 475-500 RPM (Fordomatic) with selector lever in "N" position.

Depopper Valve Adjustment: *See "Ford, Lincoln, Mercury Centri-Quad 4-Barrel" Carburetor in Carburetion Secti n.*

Throttle Linkage Adjustment (Fordomatic Trucks): *S CARBURETOR above.*

►*OTHER DATA: See "Ford, Lincoln, Mercury Centri-Quad 4-Barr l" Carburet r in Carbur tion Secti n.*

Fuel Pump Pr ssur : 3.5-5.5 lbs. at 500 RPM.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

CARB. EQUIPMENT

►*AIR CLEANER AIR LEAK (C-500, 600 Trucks) CORRECTION:* Install two gaskets between elbow and carburetor, and reverse the holding clamps to provide better seating.

Fuel Pump: AC. Fuel only or Fuel & Vacuum types.

Car Model	Ford Pump No.
223 Eng. (Fuel only)	B5A-9350-A
272 Eng. (2-Bbl. Carb.)	B6C-9350-A
223 & 272 Opt'l. (Fuel & Vacuum)	B6T-9350-A
272 Eng. (4-Bbl. Carb.)	B6T-9350-A

Pressure - 3.5-4.5 lbs. at 500 RPM.
See "Fuel Pumps" in Carburetion Section.

Gasoline Gauge: King-Seeley Electric.
Dash Unit - Ford No. B6C-9280-B (P-350, P-500); B6C-9280-C (All Others Exc. Open Face Cowl); B6C-9280-D (All Others with Open Face Cowl Exc. C-500, C-600).
Tank Unit - Ford No. B6C-9275-A (All with Closed Cab exc. P-350, P-500), No. B6C-9275-B (F-100, 250, 350 without Closed Cab & P-350, P-500 with 17 Gal. Tank), No. B6T-9273-A (F-500, 600; B-500, 600; and P-500 with 30 Gal. Tank).
See "Fuel Gauges" in Carburetion Section.

BATTERY

Ford No. B6A-10655-C. *12 Volt,* 11 plate, 55 ampere hour capacity, or **B6A-10655-E.** *12 Volt,* 13 plate, 70 ampere hour capacity.
Grounded Terminal - Negative to engine block.
►*CAUTION: This is reversed from previous models.*
Engine Ground - Cylinder head to dash.

STARTER

Ford No. B6A-11002-A. Armature B6A-11005-A. *12 Volt.*
►*IMPULSE STARTING (Back-Up Light Equipped Cars) CORRECTION:* Before replacing neutral safety switch to correct short between light and solenoid terminals causing engine to start, interchange leads at switch. Connect longest lead (beyond taped portion of harness) to "A" terminal and short lead to "B" terminal.
Drive - Ford 1CM-11350-C. Bendix "Folo-Thru".
Rotation - Counter-clockwise at commutator end.
Brush Spring Tension - 48-56 ozs.
Cranking Speed - 150-180 RPM with warm engine.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	①	12.0	120
	150-180 ②		190 max.

① - With starter on engine and engine idling.
② - Cranking speed with warm engine.

Starting Switch: Magnetic type, Ford No. B6A-11450-A, Starter switch is controlled by ignition switch. *NOTE* - Neutral Safety switch used on Fordomatic transmissions.
Fordomatic Neutral Safety Switch: Ford No. FAC-15812-C.
Adjustment - *See "Fordomatic & Mercomatic" in Transmission Section.*

GENERATOR

Ford No. B6A-10002-A. *12 Volt.*
Armature - Ford No. B6A-10005-A (223 Eng. - with rear bushing), No. B6A-10005-B (223 & 272 Eng. - with rear ball bearing).

Performance Data

Generator	Armature	Amperes①	RPM
B6A-10002-A	B6A-10005-A	30	1250
B6A-10002-A	B6A-10005-B	30	1388

①—See Regulator for maximum charging rate.
Brush Spring Tension—26-34 ozs.
Field Current—1.4-1.6 amps. at 12.0 volts.
Rotation—Counter-clockwise at commutator end.

Belt Adjustment: (*NOTE*—Two belt arrangements used. In one, fan and generator are driven by a single belt. In the other, fan and generator are driven by separate belts). Adjust belt or belts to have ½" deflection midway between generator and fan pulleys or generator and water pump pulleys, with normal thumb pressure.

REGULATOR

Ford No. B6A-10505-A. *12 Volt.*
►*SETTING CAUTION: "Temperature Compensated" type. Set to following specifications at 75°F. ambient (engine compartment) temperature, after ½ hour operation, or after regulator heated and stabilized.*

Cutout Relay
Cuts In - 12.0-12.8 volts.

Voltage Regulator
Setting - 14.6-15.4 volts.
Checking & Adjusting - *See Electrical Section.*

Current Regulator
Setting - 28-32 amps.
Checking & Adjusting - *See Electrical Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Section.*
Directional Signal - *See Electrical Section.*
Lighting Switch Removal: With control knob in the "OFF" position, press the spring release button on switch housing, turn shaft slightly and pull it out of switch. Unscrew mounting nut with Tool 17470-N. Remove switch and disconnect all wires.
Stop Light Switch Location: On brake master cylinder, or on brake power unit assembly. Master cylinder located on engine side of firewall (F-100), and on bracket attached to left frame member below brake pedal (Other Trucks).
LIGHTING CIRCUIT BREAKERS: Combination headlight switch, circuit breaker and fuse assembly is used. One circuit breaker protects headlight circuit, and second circuit breaker protects remaining lighting circuits. Fuse, on back of assembly, protects the interior lighting circuit.

FUSES: Heater—14 amps. On blower switch.
Interior Lights—7.5 amps. On headlight switch.
Overdrive—3AG 15 amps. On overdrive relay.
Directional Signals—7.5 amps. In flasher to switch lead.

HORNS (Exc. West Coast): Ford No. B5T-13832-B (High Pitch), No. B5T-13833-B (Low Pitch). *12 Volt.*
(West Coast Only exc. Parcel Delivery) - Ford No. B6A-13832-A (High Pitch), No. B6A-13833-A (Low Pitch), *12 Volt. NOTE* - Use Bracket Nos. B6A-13830-A and B6A-13831-A with these horns.
Horn Current - 9.2-9.6 amperes at 12-12.6 volts.
Horn Relay: Ford No. 2Q-13853-A. *12 Volt.*

ENGINE

ENGINE SPECIFICATIONS: 6 Cyl. 223" Engine (EBR-S-T), and V8 272" Engine (ECY-W and ECR Heavy Duty). All engines are Overhead Valve type.

Engine	Bore	Stroke	Displacement
223	3.62"	3.60"	223 Cu. Ins.
272	3.62"	3.30"	272 Cu. Ins.

Engine	Compr. Ratio	Rated HP	Developed HP
223	7.8-1	31.54	133 at 4000 RPM
272 (ECY-W)	7.8-1	42.05	167 at 4400 RPM
272 (ECR) ①	7.8-1	42.05	158 at 3800 RPM
272 (ECR) ②	7.8-1	42.05	168 at 3800 RPM

① - 2-Bbl. Carb. ② - 4-Bbl. Carb.

CYLINDER HEAD: *See Ford Special Data.*
►*272" V8 CYLINDER HEAD CHANGE:* Cylinder head Part No. B6A-6049-K and B6A-6049-E have been used on these engines. See Valve Springs for type used with each head. *NOTE* - On 1955 256" Engines, Head Part No. has been changed from B6A-6049-K to B5T-6049-C (use with No. B5T-6049-B).
TIGHTENING TORQUES: *See Ford Special Data.*
ENGINE REMOVAL: *See Ford Special Data.*
OIL PAN REMOVAL (223" Engine): Drain crankcase. Pull dipstick out of tube. Remove flywheel housing inspection cover. Remove oil pan retaining screws and remove oil pan and gasket.
OIL PAN REMOVAL (272" Engine): Drain crankcase, remove oil level indicator, engine front splash pans. On Fordomatic equipped trucks, remove converter housing dust cover. Disconnect oil pump inlet tube at oil pump. Remove "O" ring seal from pump end of tube. Remove retaining screws and remove oil pan and gasket.

223" 6 CYL. ENGINES
(See Engine Specifications Above)

See 1956 Ford 6 Passenger Car Pages. Engine is similar to those used in 1956 Pass. Cars, and all passenger car engine data applies to truck engines.

272" V8 ENGINES
(See Engine Specifications Above)

See 1956 Ford V8 Passenger Car Pages. Engine is similar to those used in 1956 Pass. Cars, and all passenger car engine data applies to truck engines EXCEPT AS NOTED BELOW.
►*272" H. D. ENGINE EXHAUST VALVE CAUTION:* Exhaust valves are Sodium cooled and require special disposal handling to prevent possibility of fire or explosion due to chemical reaction. DO NOT DISCARD SODIUM COOLED VALVES with other scrap material. Bury in ground not subjected to excavation or in deep water not subjected to dredging.
►*MAIN BEARING REPLACEMENT CAUTION (272-ECR Eng.):* Some early production 272-ECR engines may have either lead-babbitt or copper-lead type bearings. Replace all lead-babbitt type bearings found in 272 ECR engines with copper-lead type when overhauling engines.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

VALVES:	Head Diameter	Stem Diameter ①	Length
Intake	1.775-1.785"	②	④ 5.02"
Exhaust	1 505-1.515"	③	④ 5 02"
Valve	**Seat Angle**	**Lift ⑤**	**Stem Clearance**
Intake	45°	⑥	.004"
Exhaust	45°	⑦	⑧ .006"

① - Furnished with .003", .015", .030" oversize stems.
② - .3415-.3420" (Coded RED), .3420-.3425" (Coded GREEN).
③ - .3400-.3405" (Coded RED), .3405-.3410" (Coded GREEN) late engines. Early engines and All 272 H D engines .0005" greater (both colors).
④ - 272 H D engine, Intake 5.0275", Exhaust 4 920".
⑤ - Cam lobe lift. Service limit.
⑥ - .268" (L D eng.), .259" (H D eng.)
⑦ - .268" (L D eng.), .257" (H D eng.).
⑧ - 272 H.D. Eng. .005".

VALVE TIMING: *NOTE - The following valve opening and closing points are with cam lift as indicated.*

272" V8 Engine Valve Timing

Intake Valves - Open 8° ① BTDC. Close 44° ② ALDC.
Exhaust Valves - Open 47° ① BLDC Close 5° ② ATDC.
① - Cam lift .015". ② - Cam lift .019".
Valve Seat Width - .060-.080" (Intake), .070-.090" (Exhaust).

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Ford Special Data*

Crankcase Capacit,: 6 qts. (272 H D Eng. with 4-barrel Carb.), 5 qts. (Others). 1 qt. additional with filter change.
Normal Oil Pressure: 45-50 lbs at 2000 RPM (Hot).
Pressur Regulator Valve - In oil pump body. Not adjustable. *NOTE* - Valve spring pressure should be 9 80 lbs. at 1 56" (223 Eng.) 10.86 lbs. at 1 40"(272 Eng.).
Oil Pr ssure Indicator: Warning light (F-100, 250, 350, 500, 600), King-Seeley Gauge (P-350, 500, C-500, 600).
Dash Unit - Ford No. B6D-9273-B (P-350, 500, C-500, 600).
Engine Unit - Ford No. B6A-9278-A (P-350, 500, C-500, 600), FDA-9278-A (F-100, 250, 350, 500, 600).
Se "King-Seeley Gauges" in Miscellaneous Section.
Oil Pump: Gear type pump mounted inside crankcase in line with distributor shaft (223 Eng.), externally mounted on lower left corner of engine (272 Eng.). An external inlet tube from oil pan feeds inlet side of pump.
Pump Removal & Overhaul - *See "Oil Pump" in Ford Sp cial Data.*
Oil Filter Full-flow (Std. Equip.) with pressure relief valve in center bolt. Replace filter element at 5000 mile intervals or when oil becomes dirty or polluted.
Replacement Filt r Element - Ford No. B2A-6731-A (Kit includes new gasket)
►*CAUTION* This special Full-flow filter element must be used for replacement (use of by-pass type element would restrict oil flow and result in insufficient engine lubrication).
►*FILTER INSTALLATION CAUTION & OIL LEAKAGE CORRECTION* *See "Oiling System" in Ford Special Data.*
Crankcase V ntilation: Filter in oil filler cap (inlet) with outlet pipe in rear of crankcase on right side of engine.

COOLING

►*LOSS OF COOLANT CORRECTION:* Lower generator mounting bracket bolt holes are tapped into cylinder water jacket. For loss of coolant at this point or when replacing bolts, apply a good coating of waterproof sealer.
Water Capacity (Without Heater): 18.5 qts. (223 Eng.), 23 qts. (272 Eng. except C,D,Y), 22 qts. (272 Eng. C,D,Y).
Pressure Valve: Ford No. LT-8100-A, Radiator filler cap (opens at 4 lbs.).
Thermostat **223 Eng.** Ford No. B5C-8575-A (152-157°), EBR-8575-A (167-172°). **272 Eng.** Ford No. B4C-8575-A (152-157°), B4C-8575-B (167-172°). Single, spring and cartridge type.
Water Pump: Packless, sealed ball bearing type.
See "Water Pump" in Ford Special Data.

CLUTCH

Temperature Gauge: King-Seeley Electric type.
Dash Unit - Ford No. B6J-10883-A (P-350, P-500). B6C-10883-B (All others with open face cowl Exc. C-500, C-600). B6C-10883-C (All others Exc. open face cowl).
Engine Unit - Ford No. B6C-10884-A.
See "Temperature Gauges" in Miscellaneous Section.
Long L-5222 (10"), 264300 (10½"), L1478 (11") Semi-centrifugal type used as follows

Model	Long No.	Ford No.
F-100,250 (6 Cyl.) ①	L5222	② AE-7563-A
F-100 (8 Cyl.) ①	264300	B6C-7563-A
F-100,250 Optl.	L1478	③ 8MTH-7563-A
All Others	L1478	③ 8MTH-7563-A

① - 3 Spd. L D or H D Trans. and/or O D
② - Supersedes AB-7563-C.
③ - Supersedes 51-7563-A.

Clutch Disc - Use with cover assembly as follows

Model	Long No.	Ford No.
F-100,250 (6 Cyl.) ①	② CD 870	B4C-7550-A
F-100,250 (8 Cyl.) ①	284299	B6C-7550-A
F-100,250 Optl.	③ CD 606	④ ⑤ 81T-7550-A
All Others	③ CD 606	④ ⑤ 81T-7550-A

① - 3 Spd. L D or H D Trans. and/or O D
② - CD 887 Heavy Duty.
③ - CD 607 Heavy Duty.
④ - Supersedes 59T-7550-A.
⑤ - Moulded linings. Woven linings (Thermoid) TDAA-7550-A.

Pedal Adjustment: 1 1/8-1 3/8" free travel. Adjusting clevis provided at forward end of connecting rod between pedal shaft and equalizer shaft. *NOTE* - Check free travel by operating engine at 3000 RPM with transmission in neutral position. There should be a minimum of ½" free travel under these conditions. Readjust as necessary.
Removal: Disconnect clutch pedal retracting spring from clutch release lever. Remove lock nut and adjusting nut from release lever rod, then remove rod. Remove transmission assembly from clutch housing (see below). Remove clutch release bearing and hub from release lever. Mark pressure plate and cover assembly and flywheel so that parts may be reinstalled in same relative positions. Loosen pressure plate and cover assembly-to-flywheel bolts until pressure plate springs are expanded, then remove bolts. Remove pressure plate and cover assembly and clutch disc assembly through opening in bottom of clutch housing. Remove pilot bearing from flywheel with Tool 7600-E.

SYNCHRO-MESH TRANSMISSION

3-SPEED (LIGHT DUTY)

Own. 3-speed, all helical gear. Constant mesh, synchro-mesh (second and high), sliding gear (low and reverse). Steering column shift standard.
See "Ford Truck 3-Speed (L ght Duty)" in Transmission Section.
►*SYNCHRO-MESH & OVERDRIVE THREE SPEED TRANSMISSION GEAR REPLACEMENT CAUTION* Shot peened gears used in 1956 models. Shot peened gears can be used in past model transmissions. DO NOT use past model gears in 1956 transmissions.
Removal: Remove floor mat and floor plate. Loosen two nuts that secure top of transmission to clutch housing studs. Raise truck, then drain lubricant from transmission. Disconnect the drive shaft from the transmissi n. If truck equipped with band-type parking brake, disc nnect brake cable at brake and at gear shift housing. Disconnect gear shift linkage at transmission, then disconnect clutch pedal retracting spring from clutch release lever. Remove bolts and lockwashers which attach clutch release equalizer bar anchor bracket to transmission. Disconnect speedometer cable from transmission. Remove dust cover from bottom of clutch housing. Position transmission jack under transmission. Remove two top nuts, two bottom bolts, and lockwashers that secure transmission to clutch housing. Move transmission to rear until input shaft splines clear clutch housing. Be careful not to allow clutch release bearing and hub to drop out of release lever fork. Lower transmission to floor.

3-SPEED (MEDIUM DUTY)

Own. 3-Speed medium duty with steering column shift standard. *See "Ford Truck 3-Speed (Medium Duty)" in Transmission Section.*
►*3-SPEED (M.D.) TRANSMISSION SHIFT TUBE LEVER & BRAKE PEDAL INTERFERENCE CORRECTION:* To correct, disconnect shift rods at transmission levers, turn sleeve on rod to increase length, leaving ¼" of rod beyond sleeve. Check brake pedal movement and readjust rods to obtain proper cross-over with full travel into transmission detents.
Removal: Same as for 3-Speed (Light Duty) above.

3-SPEED (HEAVY DUTY)

Own. 3-Speed, helical gear (second & high), spur gear (low & reverse). Constant mesh, synchro-mesh (second & high), sliding gear (low & reverse). Steering column shift standard.
See "Ford Truck 3-Speed (Heavy Duty)" Transmission in Transmission Section.
►*3-SPEED HEAVY DUTY TRANSMISSION SHIFT LEVER BREAKAGE CORRECTION* *For corrective parts and procedures see "Ford Truck 3-Speed Heavy Duty" Transmission in Transmission Section.*
Removal: Same as for 3-Speed (Light Duty) above.

4-SPEED

Own. 4-Speed, Constant mesh, synchro-mesh (second, third & high). Helical gears used for second, third & high. Spur gears used for low & reverse. Center, floor mounted gear shift lever standard.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

See "Ford Truck 4-Spe d (Synchro-mesh)" in Transmission Section.

Removal: Same as for 3-Speed (Light Duty) above and note following: *If hoist not used, it may be necessary to remove gear shift lever assembly and lever housing before transmission can be removed from truck.* Disconnect drive shaft, or coupling shaft, at parking brake drum. If truck equipped with coupling shaft support disconnect support bracket from support plate, then remove coupling shaft.

OVERDRIVE

Warner Model AS4-R10F. Overdrive with solenoid operated (no centrifugal pawls) with governor control and throttle operated kick-down. There is no lockout switch on this unit.

See "Warner R10 Overdrive" in Transmission Section.

Overdrive Controls: *See "Overdrive Controls" in Transmission Section.*

Removal: Same as for 3-Speed Synchro-mesh Transmission (above), after disconnecting control cable and wiring.

FORDOMATIC TRANSMISSION

Torque converter and three speed automatic transmission with hydraulic control and mechanical parking lock.

See "Fordomatic & Mercomatic" in Transmission Section.

► *FORDOMATIC "LOCK-UP" CORRECTION (1955-56 Trucks):* Caused by cross leakage in front servo piston. *See "Fordomatic & Mercomatic" in Transmission Section.*

► *PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Fordomatic & Mercomatic" in Transmission Section.*

► *TESTING & TROUBLE SHOOTING: See "Fordomatic & Mercomatic" in Transmission Section.*

Lubrication - Check transmission oil every 1000 miles and maintain fluid level at "Full" mark on dipstick. Drain and refill every 15,000 miles. *See Fluid Change Caution below.*

► *FORDOMATIC TRANSMISSION FLUID CHANGE CAUTION:* New type fluid is green colored, similar to engine oil. DO NOT USE IT IMPROPERLY. "Type A" (reddish brown) may be used when adding oil to transmission filled with new type oil.

Checking Fluid Level - Apply parking brakes, place transmission selector lever in "N" (neutral) position, run engine at idle speed for approximately four minutes. With parking brake applied and engine running at slow idle, move selector lever to "P" (parking) position. When engine and transmission have reached normal operating temperature, move selector lever through all positions to assure fluid distribution throughout transmission. Return selector lever to "P" position. Raise hood, clean dirt away from fluid level cap, remove indicator. Add sufficient fluid to raise level to full mark on indicator.

THROTTLE LINKAGE ADJUSTMENT: *See CARBURETOR above.*

► *OTHER FORDOMATIC SERVICE DATA: See "Fordomatic & Mercomatic" in Transmission Section.*

UNIVERSALS

Spic r. Needle bearing type.

► *UNIVERSAL JOINT INSTALLATION CAUTION:* Make sure that all universal joint yokes in drive line are in same plane to avoid drive line unbalance.

C upling Shaft Center B aring: Consists of cushion mounted ball bearing bolted to underside of frame intermediate cross member. Bearing is mounted on end of coupling shaft in a sleeve with felt retainer on each end and bearing baffle on front end.

REAR AXLE

SEMI-FLOATING

Own. Semi-floating, hypoid gear with Hotchkiss drive. *NOTE* - Same axle as used in Station Wagon & Sedan Delivery.

See "Ford & Mercury (Integral Carrier Type) Hypoid" in Rear Axle Section.

Ratios - 3.92-1, 4.27-1, 4.09-1.

Backlash - .003-.008".

Axle Shaft Removal: Remove brake drum from axle flange. Work through hole in axle shaft flange to remove bolts that secure brake carrier plate to axle housing. Use Tool 4235-N to pull axle shaft assembly out of housing, but DO NOT DISLODGE BRAKE CARRIER PLATE OR DAMAGE OIL SEAL in housing.

Axle Assembly Removal: Raise rear of truck, then disconnect hydraulic brake hose from hydraulic brake line at rear axle. Disconnect parking brake cable from equalizer rod, then remove screws which attach brake cable brackets to frame crossmember. Disconnect drive shaft at rear axle universal joint flange. Remove nuts from rear spring clips (U-bolts), then remove spring clips. Loosen shock absorber stud nuts and move shock absorbers out of way. Roll axle assembly away from truck, remove wheels.

Wheel Bearing Adjustment: None required in service.

FULL FLOATING

Own. Full floating, Hypoid gear, with Hotchkiss drive.

Model	Rear Axle Type
F-250, P-350	Integral Housing
F-350 and 500, 600 Series	Banjo Housing

See Various types of Ford Rear Axles in Rear Axle Section.

Axle Ratios

Model	Axle Ratios
F-250,P-350	4.56-1(41-9), 4.88-1(39-8), 5.88-1(37-8) ①
F-350	4.86-1(39-7), 5.14-1(36-7), 5.83-1(35-6) ②
F,C,P,B-500	5.83-1(35-6), 6.2-1(31-5), 6.8-1(34-5) ③
F,C,B-600	6.17-1(37-6) ④, 6.67-1(40-6) ③

① - .008-.013" backlash. ② - .004-.018" backlash.
③ - .006-.012" backlash. ④ - .006-.016" backlash.

Axle Shaft Removal: Drain lubricant from axle housing, then remove axle shaft stud nuts and washers. Tap center of axle flanges to loosen tapered dowels, then remove dowels. Remove axle shaft from housing, remove hub and drum assembly.

Axle Assembly Removal: (Integral Carrier) - See "Semi-floating" above. **(Banjo Housing) -** Loosen wheel stud nuts, raise rear of truck, disconnect hydraulic brake hose from hydraulic brake pipe. Disconnect drive shaft at rear universal joint flange, remove spring clips (U bolts), roll axle from under car and remove wheels.

Whe l Bearing Adjustment: Remove axle shafts (see above), use special bearing adjusting wrench and remove bearing locknut (outer nut), and lockwasher. Adjust bearings by turning bearing adjusting nut (inner nut) up until tight then backing off 1/8 turn. Install bearing lockwasher. *(NOTE* - If adjusting nut equipped with dowel, make sure lockwasher fits over dowel). Install bearing locknut and draw nut up tight. If flange type lockwasher is used, bend one flange over adjusting nut and one flange over locknut. Install axle shaft and lower vehicle.

TWO-SPEED

Own. Electrically operated shift, Two-speed, Full-floating spur gear planetary unit (reduction gearing). Spiral bevel gear final drive.

See "Ford Truck Two-Sp d" in Rear Axle Section.

Ratio - 5.83-1 (Direct Speed), 8.11-1 (Second Speed); 6.33-1 (Direct Speed), 8.81-1 (Second Speed).

Backlash - .006-.016".

Removal: Same as for standard axle (above) after removal of wiring harness.

SHOCK ABSORBERS

Direct acting hydraulic. Shock absorbers are sealed units and are not adjustable or refillable.

► *REPLACEMENT SHOCK ABSORBER NOTE:* Shocks are supplied for service replacement in kits consisting of shock absorber and necessary bushings.

Replacement Shock Absorbers

Model	Front	Ford Nos.	R ar
F-100	B6C-18124-A		B6C-18125-A
F-250	B6D-18124-A		B6C-18125-A
F-350	B6D-18124-A		B3Y-18125-A
P-350	B6J-18124-A		B6C-18125-A
P,F,C-500; F,C-600	B3T-18124-A		B3T-18125-A

FRONT SUSPENSION

Conventional "I" beam section front axle with Reverse-Elliot ends and semi-eliptical springs.

Kingpin Inclination - 4° ± ½°.

Caster	Min.	Max.
F-100,250	3°	4°
F-350,500;(Exc. F-500 154" W.B.)	3°	5°
B-500,600; F-600 & F-500 154" W.B.)	3½°	5½°
C,P-500,C-600	2½°	4°

½° maximum variation between wheels.

Camber - ¼° to 1° Pos. ¼° maximum variation between wheels.

Toe-In - 0 to 1/16".

STEERING

Own. (Gemmer 305 & 335 Design). Worm-and-roller types with push-pull adjustment.

► *F-100, 250 DRAG LINK INSTALLATION CAUTION:* Due to design of drag link (THAA-3305-A) it is possible to install link in a reverse position causing steering interference. When properly installed, offset end of drag link is attached to sector shaft arm, and lubrication fittings will be at bottom side of link.

See "Gemmer Worm-and-Roller Types" in Steering Section.

Ste ring Wh el & Horn Button R moval: *See "Gemmer Worm & Roller (Type 305 & 335)" in Steering Section.*

Steering Gear Rem val: *See "Gemmer Worm & Roller (Type 305 & 335)" in Steering Section.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

BRAKES

Brake types are as listed in application table below. Hand lever applies rear wheel service brakes on F-100 only (independent shaft brake on other models).

► *SECONDARY BRAKE LINING PRODUCTION CHANGE (F-100 8 Cyl.)* Thickness of secondary lining, on F-100 8 cyl. trucks, increased to ¼" from 3/16". *CAUTION* - DO NOT MISMATCH LININGS when servicing F-100 truck. ¼" thick lining kits for both 6 and 8 cyl are B6C-2007-A (Front), B6C-2007-B (Rear).

► *REAR WHEEL BRAKE LEAK CORRECTION (1953-56F, C, B-500, 600, P-500)* Install Brake Cylinder Assembly B5T-2261-A (Front), B5T-2262-A (Rear) and Link B5T-2042-A or Conversion Kit B5T-2222-A.

Brake Type Application

Truck Model	Front	Rear
F-100	Duo-Servo	Duo-Servo
F,P-250,F-350	Uni-Servo	Duo-Servo
F,B,C,P-500,F,B,C-600	Uni-Servo	2 Cyl.

Uni-Servo - Ford-Bendix. Single anchor. Wheel cylinder actuates primary shoe. Ratchet adjusting screw.
See *"Ford-Bendix Uni-Servo Hydraulic" in Brake Section.*

Duo-Servo - Ford-Bendix. Single anchor, self energizing. Wheel cylinder actuates both shoes. Ratchet adjusting screw.
See *"Ford-Bendix Hydraulic" in Brake Section.*

Two-Cylinder Type - Two wheel cylinders in each brake assembly
See *"Ford Truck Two-Cylinder" in Brake Section.*

F-500 Single Speed	13 61/64"	14 29/64"
F-500 Two Speed	13 61/64"	15 11/32"
F-600 All Models	13 61/64"	15 11/32"

Clearance - Brake lining to drum clearance differ as follows

Uni-Servo & Duo-Servo - .010" clearance measured 1½" from each end of secondary shoe.

Two-Cylinder Type - Reduce clearance until drum drags, back off until drum is free, plus one turn to give working clearance.

Hand Brake (Exc. F-100): External contracting type, consisting of a brake drum bolted to transmission main shaft companion flange, and an external contracting band mounted on rear of transmission.

Adjustment—On cable controlled parking brakes, move lever to full released position. On transmission mounted parking brake levers, set lever to first notch. Observe position of cam to make sure flat portion is resting on brake band bracket. If cam not flat with bracket, remove clevis pin from upper part of cam, adjust clevis rod to allow flat portion to rest on brake band bracket. Install clevis and cotter pins. Remove lock wire from anchor adjusting screw, turn adjusting screw clockwise until .010" clearance is established between brake lining and drum at anchor bracket. Loosen locknut on adjusting screw from lower half of brake band. Adjust for .010" clearance between lining and drum at lower half of brake band. Tighten locknut. Turn upper band adjusting rod nut until .010" clearance is established between upper half of band and drum Re-install lockwire in anchor adjusting screw.

Hand Brake Drum Diameter—(F-250, 350) 8', (Others) 7 13/16"

Hand Brake Lining

Series	Length	Width	Thickness
F-250, 350	24 5/8"	2"	5/32"
P-350, 500①	23 5/64"	2½"	1/4"
B, C, F-500, 600	24 5/8"	2½"	1/4"

①—Three-piece lining used.

Brake Pedal Free Play Adjustment: 3/16-3/8". Adjust free play by loosening brake pedal-to-master cylinder push rod and rotating rod to obtain correct free play. Tighten lock nut while holding push rod securely.

Standard Master Cylinder: Located on bracket attached to left frame side member below brake pedal.

Checking Fluid—Maintain fluid level to within ½" of top of reservoir.

Removal—Disconnect brake lines from master cylinder and depress brake pedal a few times to empty master cylinder. Remove brake pedal return spring from brake pedal clevis pin and remove clevis pin. Disconnect stop light switch wires at switch. Remove assembly from bracket.

Power Brakes: Midland or Hydrovac unit mounted in various positions depending on truck model and connected in hydraulic brake line between master cylinder and wheel cylinders. There are no mechanical connections and adjustments are not required.
See *"Midland" or "Hydrovac" Power Units in Brake Section.*

Checking Brake Fluid—Same as for manual brakes (above).

Removal of Power Unit—Depress brake pedal several times to remove all vacuum from system. Loosen brake power unit air inlet tube clamp and remove tube. Disconnect master cylinder to power unit hydraulic line at power unit. Disconnect vacuum tube at power unit. If stop light switch located on brake power unit, disconnect wires. Remove mounting bracket bolts and power unit.

MODEL IDENTIFICATION

VEHICLE NUMBER: Stamped on patent plate on left front body pillar.
First Number:- 100001.

►*VEHICLE NUMBER NOTE:* Vehicle number (example *A7FV100501*) includes following identification data in sequence.

Eng. Type ①	Year ②	Assy. Plant	Body Style ③	Serial No.
A	7 .	See below	See below	100501

① - **A** - 6 Cyl. 223 cu. in. engine.
② - Last digit of model year.
③ - **C** - Conv. (Fairlane "500"). **F** - Ranchero. **G** - Tudor & Fordor (Custom & Custom "300"). **H** - Thunderbird. **R** - Ranch Wagon (Custom "300"). **S** - Sedan Delivery (Courier). **T** - Tudor & Fordor - Concealed Pillar (Fairlane & Fairlane "500"). **V** - Victoria Tudor & Fordor (Fairlane & Fairlane "500"). **W** - Retractable Hardtop (Fairlane "500"). **X** - Country Sedan. **Y** - Country Squire.

Assembly Plant Designation

A - Atlanta	**F** - Dearborn	**N** - Norfolk
B - Buffalo	**G** - Chicago	**P** - St. Paul
C - Chester	**K** - Kansas City	**R** - San Jose
D - Dallas	**L** - Long Beach	**S** - Somerville
E - Mahwah	**M** - Memphis	**U** - Louisville

TUNE-UP

►*POWER POUND CORRECTION·* This condition may be caused by the cylinder head if normal external corrections, such as tune-up, engine alignment, exhaust system grounding, have not eliminated the trouble Check engine compression and if compression pressure is found to be 170 lbs or greater, it is recommended that the cylinder head be replaced by a 1956 head Part No B6A-6049-D Temperature Indicator Bulb, Part No B7A-10884, must be used with the 1956 head

►*ENGINE PINGING (AT LOW SPEED UNDER LOAD) CORRECTION: Requires modification of Carburetor (B7A-9510-N), and Distributor (B7A-12127-C) See DISTRIBUTOR and CARBURETOR below*

COMPRESSION PRESSURE: 150 lbs. at cranking speed. Maximum variation between cylinders 10 lbs.

VACUUM READING: Steady 18-20" idling at 475-500 RPM in Neutral.

VALVE TAPPET CLEARANCE: .019" Intake & Exhaust (Hot & Cold). Adjust all tappets to .019" clearance while engine is cold, then again check all tappets for .019" clearance after running engine for 30 minutes to normalize temperature.

►*SELF LOCKING VALVE TAPPET ADJUSTING SCREW NOTE·* Special threads on adjusting screw provide interference fit. 3 ft. lbs. (36 in. lbs) interference when center section of screw threads are fully engaged with rocker arm threads. Replace screw and/or rocker arm as necessary when interference is below this specification

MANIFOLD HEAT CONTROL Automatic thermostatic type with counterweight. Valve is closed when engine is at normal temperature and running at slow idle, and opens when operating at high RPM Spring is installed with ¾ turn windup and hooked over stop pin.

IGNITION

FIRING ORDER: 1–5–3–6–2–4.

SPARK PLUG GAP: .032-.036".
Spark Plugs - Champion 870. 18 mm. Torque to 15-20 ft. lbs.

►*SPARK PLUG CAUTION:* Spark plug has tapered seat and does not require a sealing gasket. It is important that plugs be torque tightened within range of 15-20 ft.lbs.

COIL: Ford No. B6A-12029-B.
Ignition Current - 2.5 amps. idling, 4 5 amps. stopped.
Resistor - Ford B6A-12250-D. 1.3-1.4 Ohms.

►*COIL RESISTOR NOTE:* Resistor is connected in lead from ignition switch to coil. Resistor is by-passed during cranking by a lead from starter solenoid to battery terminal of coil.

DISTRIBUTOR: Ford No. B7A-12127-C. "Loadomatic" type of same design used on previous models.

►*DISTRIBUTOR MODIFICATION TO ELIMINATE ENGINE PING:* Replace distributor primary advance spring with Part No. 7RA-12192 and secondary advance spring with Part No. FDE-12225-A Calibrate distributor to modified advance table below *See also CARBURETOR below*
Condenser - Ford No. 7RA-12300-C **Capacity** .21-.25 mfd.
Contact Point Set - Ford No. FAA-12171-A.
Breaker Gap - .024-.026".
Cam Angle - 35-38°.
Breaker Arm Spring Tension - 17-20 ozs.
Rotation - Clockwise viewed from above.

Advance Performance (Unmodified Distributor)
►With Distributor on Test Stand

Distr. Degrees	Vacuum (" of Hg)	Distr. RPM
0±½	0	300
0 ±½	2¼	500
3-4	5	800
7¼-8½	6	1200
9¼-10½	5¾	1500
12-13¼	4¼	2000

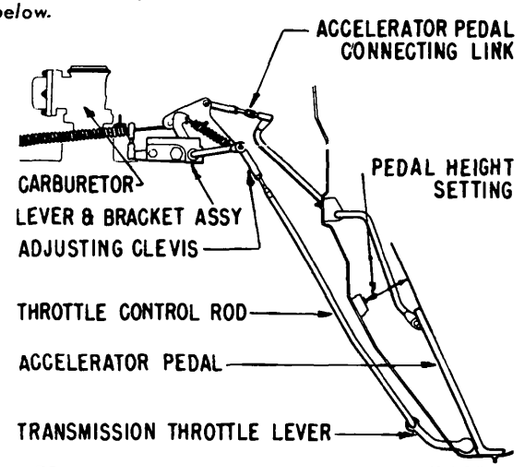
Advance Performance (Modified Distributor)
►With Distributor on Test Stand

Distr Degrees	Vacuum (" of Hg)	Distr RPM
0	29	600
1-2	55	800
6¼-7¼	1 36	1200
10½-11½	2 66	1700
11-12¼	3 38	2000

►*DISTRIBUTOR INSTALLATION CAUTION:* Be sure oil pump intermediate shaft engages the seat in the oil pump. It may be necessary to turn over the engine with starter after distributor drive gear is partially engaged, in order to engage intermediate shaft fully in oil pump.

Initial Distributor Timing: Set engine crankshaft so that No.1 cylinder is at TDC after compression stroke (with timing mark in line with pointer) Install distributor so that rotor points to the No 1 spark plug wire terminal in distributor cap.

IGNITION TIMING



Setting - 4° BTDC (Std.), 6° BTDC (Fordomatic) with engine idling at 475 RPM and vacuum line disconnected. *See Initial Distributor Timing abov . NOTE* - Maximum initial timing recommended is 6° BTDC (Std.) and 8° BTDC (Fordomatic).
Timing Mark - Vibration damper marked "TDC", and "3", "5", "7", "9" degrees BTDC. Align correct mark with pointer on cylinder front cover.

CARBURETOR

Ford No. B7A-9510-C (Std. Trans.), B7A-9510-D (Fordomatic), B7A-9510-N (Std. & F rd matic), B7A-9510-Y (Std. & Fordomatic), B7A-9510-M (Sp cial Ec n my). "Visi-flo" single barrel

►*CARBURETOR MODIFICATION TO ELIMINATE ENGINE PING. See "Ford Visi-flo Carbur tors" in Carburetion Section*

►*CARBURETOR AIR CLEANER (DRY TYPE) NOTE. Special cleaning procedure required. See AIR CLEANER below.*

FORDOMATIC TRANSMISSI N THR TTLE LINKAGE

Throttle Linkage Adjustment (Fordomatic Cars): Adjust engine idle speed to 475-500 RPM with selector lever in "N" position and engine at normal operating temperature. Adjust anti-stall dashpot (see below). Set hand brake and check idle speed in Dr (Drive) range and adjust if necessary to 425-450 RPM. Pull throttle rod assembly upward firmly so transmission lever is against its internal stop, align hole in throttle rod clevis with hole in accelerator assembly by rotating clevis on throttle rod. Then lengthen throttle control rod 2½ turns counterclockwise. Assemble throttle control rod to accelerator assembly and adjust pedal height to 3.10" by changing length of accelerator assembly connecting link Road test car. If band or clutch slippage is evident, increase rod length to 3 turns but not more than 3½ turns of the clevis

Anti-Stall Dashpot (Fordomatic Cars): After engine idle speed adjusted to 475-500 RPM turn off engine Loosen dashpot adjusting screw locknut Hold throttle in closed position and depress dashpot plunger with a screwdriver blade Turn dashpot or adjusting nut until 045 064" clearance obtained between dashpot plunger and throttle shaft lever Tighten locknut

CONTINUED FROM PRECEDING PAGE

FORD "VISI-FLO"

Idl S tting - Initial setting 1 turn open. Turn adjusting screw in until engine begins to run roughly from lean mixture, then turn screw out until engine begins to roll from rich mixture. Turn screw in until engine runs smoothly. Favor a slightly rich mixture, rather than a lean setting.

Idl Sp d - 475-500 RPM (Std. & O D.). 475-500 RPM (Fordomatic) with selector in Neutral and check for 425-450 RPM in Dr (Drive) range. Adjust as necessary to get drive range RPM.

Fuel Lev l - 11/16" ± 1/32" below power valve mounting surface (Tool T52L-9550-AEE).

Accelerating Pump: Inner hole for average or hot weather operation, outer hole for cold weather operation.

Fast Idle: Integral type operated by choke valve. No adjustment required.

Throttle Linkage Adjustment: See *CARBURETOR above*

► *OTHER DATA: See "Ford Visi-flo Carburetors" in Carburetion Section*

AIR CLEANER: DRY FILTER ELEMENT type. Clean every 5,000 miles, replace element every 20,000 miles.

► *CLEANING CAUTION:* Clean filter element by tapping and shaking to remove dirt particles. DO NOT wash element in solvent or other liquids and DO NOT oil or lubricate.

FUEL PUMP PRESSURE: 3.5-5.5 lbs. at 500 RPM.

CARB. EQUIPMENT

Fuel Pump: Ford B5A-9350-A Fuel only (Exc Fordomatic & Overdrive Cars), B5A-9350-B, Fuel & Vacuum (Fordomatic & Overdrive)

Fuel Pump Pr ssure - 4-5 lbs at 500 RPM

See "Fuel Pumps" in Carburetion Section

Gas line Gaug : New King-Seeley Electric "CV" (Constant Voltage) with gauge voltage regulator Ford No B7A-10804-B

Dash Unit - Ford No. B7A-9280-A.

Tank Unit - Ford No B6A-9278-B

S e "Fu l Gauges" in Carburetion Section

Air Cleaner: DRY FILTER ELEMENT Type Clean every 5,000 miles, replace element every 20,000 miles

► *CLEANING CAUTION·* Clean filter element by tapping and shaking to remove dirt particles *DO NOT wash element in solvent or other liquids and DO NOT oil or lubricate*

BATTERY

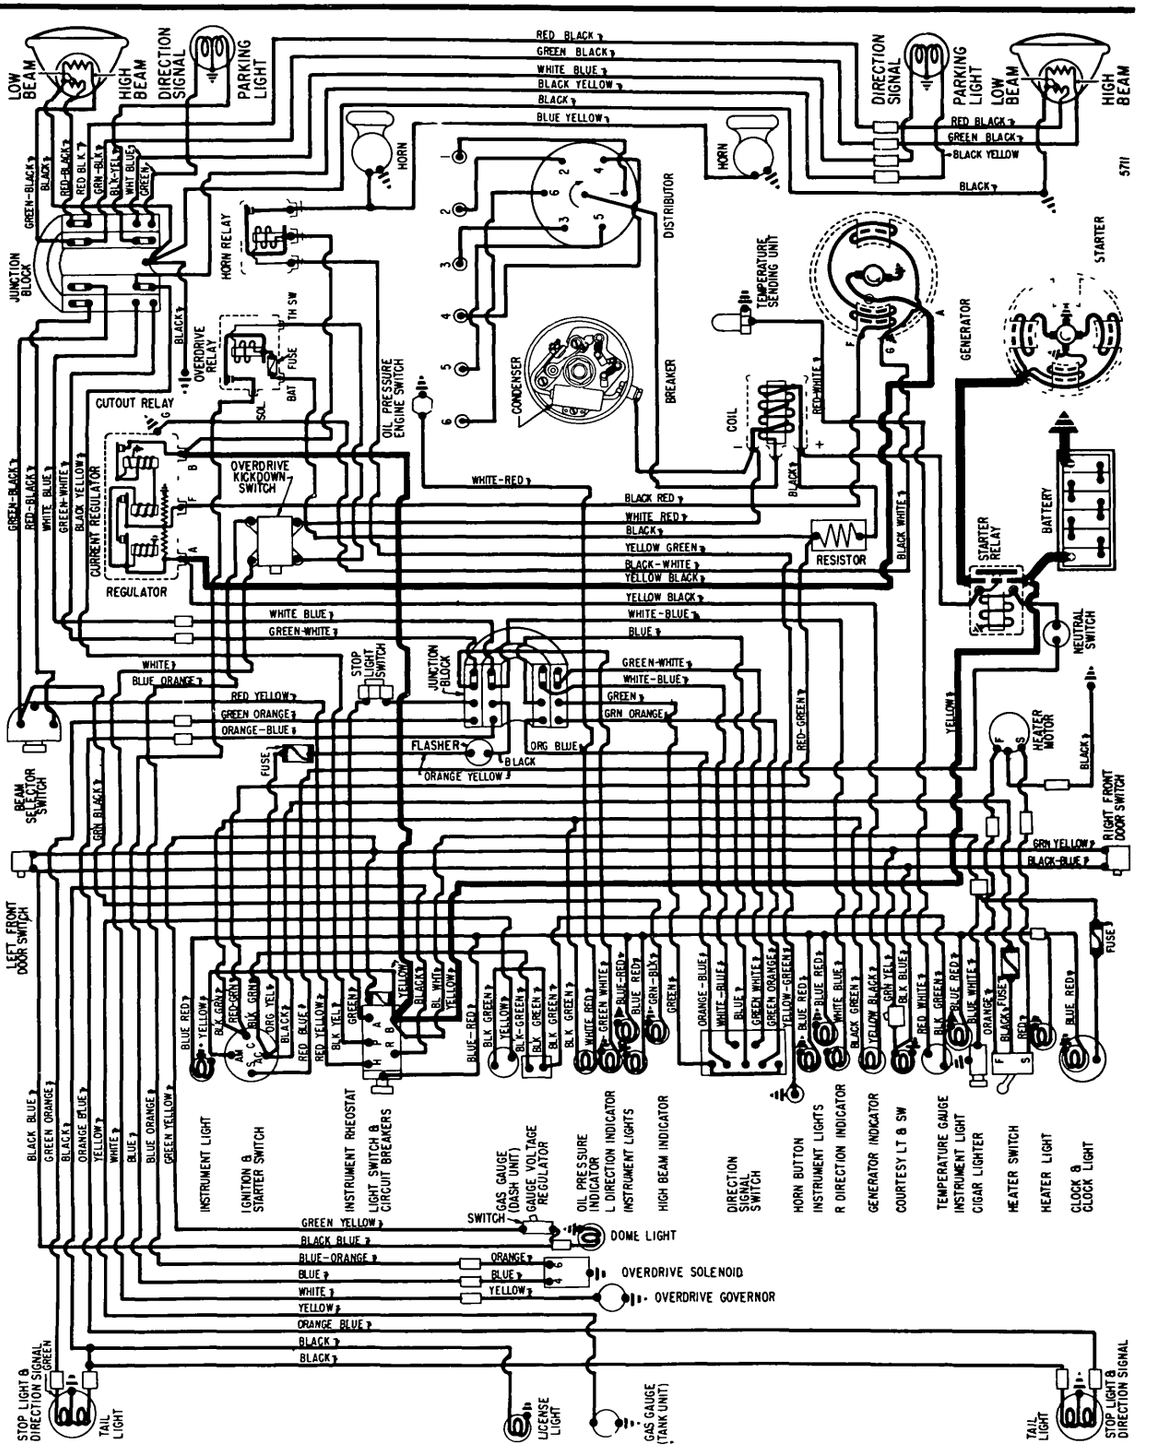
F rd B6A-10655-C. 12 volt, 11 plate, 55 ampere hour capacity, or **F rd B7A-10665-A,** 12 volt, 11 plate 70 ampere hour capacity (20 hour rate)

Battery Ground - Negative, to engine block

Engine Gr und - Cylinder head to dash

STARTER

F rd B6A-11002-A. Armature - B6A-11005-B.



Drive - Ford ICM-11350-C Bendix "Folo-Thru"

R tati n - Counterclockwise at commutator end

Brush Spring T nsi n - 48-56 ozs

Cranking Speed - 150-180 RPM, 190 amperes max

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Performance Data

Torque	RPM	Volts	Amperes
0 ft lbs	①	12 0	120
15 5 ft lbs		.5 0	550

①- With starter on engine and engine idling

Starting Switch: Magnetic type, Ford No B6A-11450-A Starter Switch is controlled by ignition switch *NOTE* - Neutral Safety switch used on Fordomatic Transmissions

Fordomatic Neutral Safety Switch: Ford B7A-15812-A **Adjustment** - *See "Fordomatic & Mercomatic" in Transmission Section*

GENERATOR

Ford. Used as follows:

Generator	Armature	Application
B6A-10002-C	B6C-10005-B	①Std
B6A-10002-H	B6A-10005-A	②Std
B6A-10002-F	B6C-10005-C	Special

①- With B6C-10505-B Regulator
②- With B6A-10505-A Regulator

►*40 AMPERE GENERATOR INSTALLATION CAUTION:* Install 2 Spacers, Ford No 10148, to secure proper alignment of generator-to-water pump and fan pulleys *NOTE* - Shorter or thinner spacer at front end of generator longer spacer at rear end

Performance Data

Generator	Amperes	Eng RPM
B6A-10002-C,H	30	1500
B6A-10002-F	40	1500

Brush Spring Tension - 26-34 ozs
Field Current - 1 5-1 6 amperes at 12 volts
Rotation - Counterclockwise at commutator end

Belt Adjustment: ¼" deflection midway between generator and water pump pulleys with light thumb pressure

REGULATOR

Ford B6A-10505-A (B6A-10002-H Gen.), B6C-10505-B (B6A-10002-C Gen.), B6A-10505-B (B6A-10002-F Gen.).

►*SETTING CAUTION: "Temperature Compensated" type Set to following specifications at 75°F, ambient (engine compartment) temperature, after ½ hour operation in vehicle, or after regulator heated and stabilized*

Cutout Relay

Cuts In - 12 0-12 8 volts

Voltage Regulator

Setting - 14 6-15 4 volts at 75°F (Ambient)
Checking & Adjusting - *See Electrical Section*

Current Regulator

Setting - 28-32 amperes (B6A 10505-A & B6C-10505 B), 38-42 amperes (B6A-10505-B)
Checking & Adjusting - *See Electrical Section*

MISC. ELECTRICAL

Headlamps: Sealed Beam *See Electrical Section*
Directional Signals: *See Electrical Section*
Lighting Switch Removal: With control knob in "OFF" position, press spring release button on switch housing, turn shaft slightly and pull it out of switch Unscrew mounting nut with Tool 17470-N Remove Switch and disconnect all wires
Stop Light Switch: On forward end of master cylinder
CIRCUIT BREAKERS: On headlight switch Combination headlight switch, circuit breaker, and fuse assembly used One circuit breaker protects headlight circuit and second circuit breaker protects instrument, parking, stop and tail light circuits
FUSES: Size & location as follows:
Back Up Light - SFE 7 5 ampere, in feed wire behind instrument panel
Cigar Lighter - Sulphur disc in base or reset circuit breaker located on back of lighter socket
Clock - 1 AG in feed wire
Heaters - SFE 14 ampere, in feed wire
Interior Lamps - SFE 7 5 ampere, on lighting switch
Overdrive - 15 AGC on overdrive relay
Spot Light - SFE 7 5 ampere in feed wire
Turn Signal - SFE 7 5 ampere in feed wire
Horn Relay: Ford No B7A-13853-H
►*HORN RELAY REPLACEMENT NOTE:* When replacing a horn relay that has been shorted by water, be sure to spray new relay with a plastic ignition spray (around crimped areas in particular but not on terminals) and install three ¼" flat washers between mounting bracket and fender apron

ENGINE

ENGINE SPECIFICATIONS: 6 Cyl Valve-in-head

Bore	Stroke	Displacement
3 62"	3 60"	223 Cu Ins
Compr. Ratio	**Rated HP**	**Developed HP**
8 6-1	31 54	144 at 4200 RPM

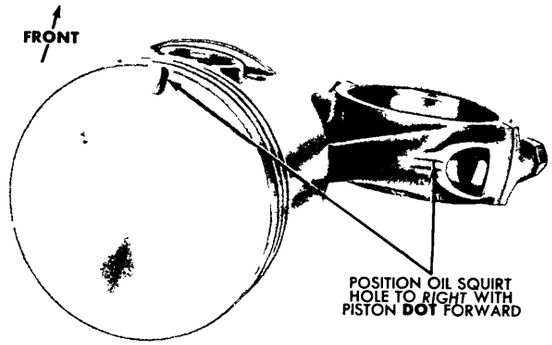
Compression & Vacuum Reading - *See TUNE-UP*
CYLINDER HEAD: *See "Cylinder Head & Manifolds" in Ford Special Data*
TIGHTENING TORQUES: *See "Tightening Specifications" in Ford Special Data*
ENGINE REMOVAL: *See "Engine" in Ford Special Data*
OIL PAN REMOVAL: Drain crankcase, Remove oil level indicator, engine left and right front splash aprons Remove stabilizer bar flywheel housing inspection cover, oil pan retaining screws and pan .

PISTONS

Autothermic type Solid skirt with three rings above pin
Removal - Pistons and rods removed from above
Fitting New Pistons: Clearance - 0009- 0015" at bottom of skirt Use ½" ribbon feeler inserted between piston and cylinder wall at right angle to pin on thrust side with piston inverted and end of piston 1½" below top of block Pull required to remove feeler should be 5 10 lbs when using feeler gauge thicknesses as follows.
New Piston in New Bore - 0015"
New Piston in Used Bore - 0020"
Used Piston in Used Bore - 0025"
Replacement Pistons: Furnished with fitted pins in Std and 020", 030", 040", 060" oversize
Installing Pistons: Install piston with indentation in head of piston toward front of engine

PISTON PINS

Floating type with lock ring at each end
Diameter - 9120- 9123" **Length** - 3 016-3 030"
Pin Fit in Piston - 0001- 0003", wear limit 0008"
Pin Fit in Rod Bushing - 0001- 0003", wear limit 0008"
Replacement Pins: Standard, and 001", 002" oversize



PISTON RINGS

Ring	Width	End Gap	Side Clearanc
Compr #1,2	3/32"	010- 027"	002- 0035"
Oil #3	3/16"	015- 062"	①

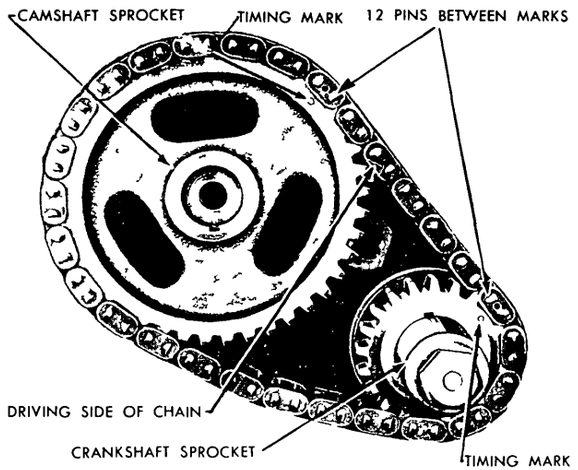
①- Side sealing type ring
Replacement Rings: Standard, 020", 030", 040", 060" oversize (Expander type)

CONNECTING RODS

Journal Diameter - 2 2980-2 2988"
Clearance - 0004- 0023", wear limit 0033"
Side Clearance - 003- 009", wear limit 012"
Replacement Bearings: Standard size (2 sizes marked **Red** & **Blue** for selective fitting) and 010", 020", 030" Undersize
Installing Rods: Install rod with squirt hole to right and piston indentation toward front of engine

FORD 6 CYL. PISTON & ROD ASSY.

CRANKSHAFT



Journal Diameter - 2 4980-2 4988" Four Bearings
Bearings - Steel backed copper lead alloy, or lead babbitt
Clearance - **Copper Lead** - 0005- 0025", wear limit 0035" **Lead Babbitt** - 0005- 0021", wear limit 0031"
Replacement Bearings: Standard size, (2 sizes marked **Red** & **Blue** for selective fitting) and 010", 020", 030" Undersize
End Thrust: Taken on rear intermediate #3 bearing
Thrust Bearing Alignment - *See "Crankshaft & Main Bearings" in Ford Special Data*
End Play - 004- 008" wear limit 012"
Crankshaft Rear Oil Seal Installation: *See "Crankshaft & Main Bearings" in Ford Special Data*
Crankshaft Front Oil Seal Installation: *See "Engine Front Cover" in Ford Special Data*
►*OIL SLINGER NOTE:* A crankshaft front oil slinger is incorporated on all cars and truck engines to reduce oil leakage at front oil seal Slinger is held in place by crankshaft pulley and cylinder front cover To remove slinger remove cylinder front cover and slide slinger off crankshaft

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

CAMSHAFT

Journal Diam t r - 1 9255-1 9265"
Clearance - 001- 003", wear limit 006"
End Thrust: Taken by thrust plate and spacer behind camshaft sprocket *NOTE* - Chamfer on inside of spacer must be toward camshaft journal
R placem nt B arings: Finished bearings furnished Standard and 015" undersize *CAUTION* - Rear intermediate (#3) bearing not interchangeable with other bearings
Camshaft R m val & Installation: *See "Camshaft & Bearings" in Ford Special Data*
Timing Chain: Side guide type 56 links
►*REPLACEMENT NOTE* Replace chain and sprockets when deflection on slack side exceeds ½" (take up all slack on driving side and measure on opposite side) Remove and install chain as a unit with both sprockets
Camshaft Setting: Sprockets marked by "O" at one tooth Mesh chain so that there are 12 pins between "O" marks on driving side of chain

FORD 6 CYL. VALVE TIMING MARKS

Engin Fr nt C v r Oil S al (Crankshaft Front Seal)· *See "Engine Front Cover" in Ford Special Data*
Engine Fr nt Cov r R m val· *See "Engine Front Cover" in Ford Special Data*

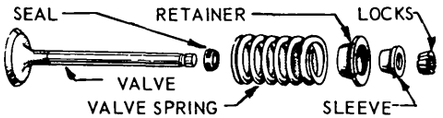
VALVES

Tappet Cl aranc · 019" Intake & Exhaust (Hot or Cold)

Valv	H ad Diam ter	①Stem Diameter
Intake	1 775-1 785"	3416 3423"
Exhaust	1 505 1 515"	3403- 3410"

Valv s	Seat Angl	②Lift	③Stem Clearance
Intake	45°	273"	001 0024"
Exhaust	45°	273"	0023 0037"

① Furnished with 003" 015" 030" oversize stems
②- Cam lobe lift Wear limit 268"
③ Wear limit 0045"(Intake) 0065" (Exhaust)



►*ROTATABLE VALVE NOTE All valves are rotat abl type See "Valve System" in Ford Special Data*
Valv St m S als - Umbrella type seals used on both intake and exhaust valve stems, cupped side down
Valve Seat Width - 060- 080" (Intake), 070- 090" (Exhaust)
Valve Springs: Free Length - 2 09" approximately

Valve Spring Specifications

Valve	Spring Pressure	Length
Valve Closed	①71-79 lbs	1 780"
Valve Open	②161-177 lbs	1 390"

①- Wear limit 64 lbs at 1 780"
②- Wear limit 145 lbs at 1 390"

►*VALVE SPRING INSTALLATION NOTE:* Measure valve spring assembled height from machined surface of cylinder head spring pad to spring retainer contact surface If assembled height is 1 13/16" or greater, install necessary 030" spacer or spacers between cylinder head valve spring pad and valve spring to bring assembled height to recommended dimension of 1 25/32 1 13/16"
Valve Guides: Integral with cylinder head When stem-to-guide clearance exceeds maximum (see table above) ream guides and install oversize valves *See "Valve System" in Ford Special Data*
Valve Lifters: Mushroom type Removed from below with camshaft out
Rocker Arm Assembly: *See "Valve System" in Ford Special Data*

FORD 6 CYL. VALVE ASSEMBLY

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above
►*VALVE TIMING NOTE:* The following valve opening and closing points are with camlift as indicated
Intake Valves - Open 17°①BTDC Close 53°②ALDC
Exhaust Valves - Open 61°①BLDC Close 9°② ATDC
① Camlift 016" ②- Camlift 019"
Valve Timing Check - Release No 1 Intake valve adjusting screw push rocker arm to one side install dial indicator in pushrod socket Zero indicator with cam on heel of lobe Install quadrant on crank shaft pulley rotate engine to amount of lobe lift shown in table above then check quadrant and compare reading with degrees shown in table above for that valve

OILING SYSTEM

►*ENGINE OILING SYSTEM See 'Engine Lubrication" under OILING SYSTEM in Ford Special Data*
Crankcase Capacity 4 quarts (refill) 5 quarts (when filter element changed)
Normal Oil Pressure· 45 50 lbs at 2000 RPM
Pressure Regulator Valve - In pump body not adjustable
Oil Pressure Indicator - Indicator light on instrument panel operated by engine unit Ford No B6A 9278 B
Oil Pump Gear type pump located in crankcase
Pump Ov rhaul - *See "Oil Pump" in Ford Special Data*
Oil Filt r· New "Disposable" type Replace at 4000 mile intervals
Disp sabl Filt r R placem nt - Coat gasket face of filter with oil thread filter on insert by hand until gasket contacts adapter surface then tighten filter an additional one-half turn
Crankcase Ventilation: Filter in oil filler cap (inlet), an outlet pipe in rear of crankcase at left side

COOLING

Water Capacity: 15 quarts, add 1 quart for heater.
Pressure Valve: Ford LA-8100-A Radiator filler cap Opens 12-15 lbs *CAUTION* - Use only 12-15 lb cap for replacement
Thermostat: Ford No EAA-8575-A (157-162°F) standard Ford No EAA-8575-B (177-182°F) for use with permanent anti-freeze
Water Pump: Packless sealed ball bearing type *See "Water Pump" in Ford Special Data*
Temperature Gauge: New King Seeley Electric Constant-voltage ("CV") type with gauge voltage regulator Ford No B7A-10804-B
Dash Unit - Ford No B7A-10883-A
Engine Unit - Ford No B7A-10884-A
►*TEMPERATURE UNIT (CYL HEAD) CAUTION:* 1957 Unit Ford No B6A 10884-A will not transmit proper temperature when used with a 1956 Cyl Head No B6A-6049-D Use Unit No B7A-10884-B *See "Temperature Gauges' in Miscellaneous Section*

CLUTCH

Long Model 9½ CF. No. 268594, 11 CF 266978. Semi-Centrifugal type
See 'Long Clutches" in Clutch Section
Clutch Disc - Long No 288824 (9½ CF) 285419 (11CF)
Pedal Adjustment· If total pedal travel is less than 6 3/8" or more than 6 5/8" reposition pedal bumper and bracket until travel is within limits Adjust assist spring link to give assist spring length of 6 5 8" when clutch is fully released
Pedal Free Travel - 1 1 8 1 3 8" Loosen locknut on clutch pedal release rod turn adjusting nut until correct travel is obtained *NOTE* Check free travel by operating engine at 3000 RPM with transmission in neutral position There should be a minimum of ½" free travel under these conditions
Removal: Remove transmission flywheel housing cover release lever retracting spring slide release bearing and hub off release lever Mark clutch cover and flywheel for reinstallation loosen six cover bolts uniformly to release spring tension remove cover and pressure plate through opening in flywheel housing Remove clutch release lever

SYNCHRO-MESH TRANSMISSION

Own Helical gear constant mesh synchro-mesh (second & high) sliding gear (low & reverse)
See "Ford Synchro mesh" in Transmission Section
►*HARD SHIFTING, PARTIAL DISENGAGEMENT, GEAR BREAKAGE & NOISE CORRECTION See 'Ford Synchro-mesh' Transmission in Transmission Section*
Transmission C ntr l *See "Transmission Controls" in Transmission Section*
R m val· With car raised up disconnect drive shaft at rear universal joint slide drive shaft off transmis-

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

sion output shaft Remove speedometer cable and gear Disconnect shift rods at transmission Remove rear engine support to extension housing bolts Disconnect parking brake adjusting rod from equalizer bracket Support rear of engine and remove rear engine support, then lower engine for clearance and remove transmission to flywheel housing bolts Use guide pins in two lower bolt holes and slide transmission back until input shaft clears flywheel housing, and lower transmission

OVERDRIVE

Warner R10. Solenoid operated type, with governor control and throttle operated kick-down
See "Warner R10 Overdrive" in Transmission Section

Ov rdrive Control: *See "Overdrive Control" in Transmission Section*

R moval: Same as for Synchro-mesh Transmission (above) after disconnecting control cable and wiring

FORDOMATIC TRANSMISSION

Torque Converter and three speed automatic transmission with hydraulic control
See "Fordomatic, Merc-O-Matic & Turbo-Drive" in Transmission Section

► *PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Fordomatic, Merc-O-Matic & Turbo-Drive" in Transmission Section*

► *TESTING & TROUBLE SHOOTING: See "Fordomatic, Merc-O-Matic & Turbo-Drive" in Transmission Section*

Lubrication - Check transmission fluid at 1,000 mile intervals and maintain level at "F" mark on indicator Drain and refill every 25,000 miles **Use only Automatic Transmission Fluid Type "A".**

Checking Fluid Level - Bring transmission to operating temperature by running engine with selector lever in Neutral position Move selector lever through all ranges to assure fluid distribution, then place lever in "P" (Park) position for checking fluid level Add Automatic Transmission Fluid Type "A" to bring level to "Full" mark on indicator

Throttle Linkage Adjustment: *See CARBURETOR above*

► *OTHER FORDOMATIC SERVICE DATA. See "Fordomatic, Merc-O-Matic & Turbo-Drive" in Transmission Section*

UNIVERSALS

Mechanics. Needle bearing type

► *CAUTION:* Rear universal joint companion flange nut controls pinion bearing preload (must be adjusted whenever nut is loosened) *See "1957 Ford & Mercury" in Rear Axle Section*

REAR AXLE

Own New Separate Carrier type semi-floating hypoid with Hotchkiss Drive *NOTE - Same type used on all models*
See "1957 Ford & Mercury" in Rear Axle Section

Axle Ratios

Model	Sta. Wgn.	Others
Conventional	3.89-1①	3.70-1 ②3.89-1)
Overdrive	4.11-1	3.89-1 ②3.70-1)
Fordomatic	3.56-1	3.10-1 ②3.56-1)

①- 4.11-1 Optl ②- Optional

Backlash - .004-.009"

Axle Shaft Removal: Remove wheel take off drum Remove four axle retainer locking type nuts (work through opening in axle shaft flange) Use Puller No. 4235-N and pull axle shaft (do not disturb brake backing plate or damage wheel bearing oil seal) Replace one nut to secure brake backing plate

Carrier Assembly Removal: *NOTE* - Pinion carrier assembly can be removed separately without disturbing differential carrier by disconnecting rear universal joint at companion flange, and removing five bolts that attach pinion carrier assembly to differential carrier housing With rear universal joint disconnected axle shafts removed (see above), remove differential carrier housing to rear axle housing bolts and lift out carrier assembly

Wheel Bearing Adjustment: None required

SHOCK ABSORBERS

Direct acting non-adjustable Service by replacement

Model	①Front	①Rear
Pass. Cars (Std.)	B7A-18124-A	B7A-18125-A
Pass. Cars (H.D.)	B7A-18124-B	B7A-18125-B
Sta. Wgn. & Sed. Del.		B7A-18125-C
Tudor Sedan (Hard Top) Std.		B7A-18125-D
Tudor Sedan (Hard Top) H.D.		B7A-18125-E

① - Furnished in kits which include shock absorber mounting bushing

► *FRONT SHOCK ABSORBER UPPER BUSHING NOTE:* Install bushing with groove seated in frame hole flange, and do not dislodge when installing shock absorber

FRONT SUSPENSION

Independent. "Ball Joint" suspension with direct acting shock absorbers mounted within front coil springs
See "Lincoln, Mercury, Ford (Ball Joint)" in Suspensions & Wheel Alignment Section

Caster - Pos. ½° to Pos. 1½° Maximum variation between wheels ½°

Camber - Pos. ½° to Pos. 1½° ¼° preferred Maximum variation between wheels **½°**

Toe-In - 1/16" to 1/8" *NOTE* - When checking toe-in on cars with power steering, engine should be running so that power steering control valve will be properly centered

Toe-Out on Turns - With Outer wheel at 20°, inner wheel should be 24¼°

STEERING

Manual: Own (Gemmer 305 Design). Worm & Roller type
See "Gemmer Worm & Roller" in Steering Section

Power Steering: Ford-Mercury Linkage type Used in conjuction with standard type steering gear
See "Ford & Mercury Bendix Linkage Type" in Steering Section

Steering Linkage: *See "Steering Linkage" in Steering Section*

Steering Wh el & Horn Button Removal· *See "Gemmer Worm & Roller (3-tooth)" in St ering Section*

Steering Gear Removal: *See "G mmer Worm & Roller (3-tooth)" in Steering Section*

BRAKES

Ford-B ndix Hydraulic. Hand lever applies rear wheel service brakes

► *BRAKE DESIGN NOTE:* Front brake anchor pin (fixed anchor type) is mounted on wheel spindle independently of backing plate (wheel cylinder mounted on anchor pin)
See "Ford, Lincoln, Mercury B ndix" in Brake S ction

► *BRAKE PULLING CORRECTION:* To correct loosen anchor pin attaching bolt (See Brake Design Note above) and retighten to 80-100 ft. lbs.

Drum Diameter - 11" Front and Rear

Wheel Cylinder Diameter - 1 1/8" (Front-All) 7/8" (Rear-Pass. Cars), 15/16" (Rear - Sta. Wgn.)

Model	Primary (Width & Length)	Secondary
Pass. Car(Front)	2 1/4"x10 62"	2 1/4"x 11 93"
(Rear)	1 3/4"x10 62"	1 3/4"x 11 93"
Sta. Wgn. (Front)	2 1/4"x10 62"	2"x 10 62"
(Rear)	2 1/4"x11 93"	2"x 11 93"

Clearance - Adjusting screw backed off 10-12 notches from point where shoes are tight against drum

Brake Pedal Free Play Adjustment: 5/16" to 7/16" If play not correct after brake adjustment, loosen locknut on the eccentric bolt that attaches brake pedal assembly to master cylinder pushrod, rotate eccentric bolt for desired clearance, tighten locknut

Standard Master Cylinder: Located on engine side of firewall

Checking Fluid - Maintain fluid level to within ½" of top of reservoir

Removal - Disconnect rubber boot from rear end of master cylinder brake line at master cylinder fitting stop light switch from front of cylinder and disconnect wires from switch Push down brake pedal several times to force as much fluid as possible (into clean container), remove bolts that secure master cylinder to dash panel Do not disconnect pushrod from brake pedal unless it is to be serviced

Power Brakes: New "Bellows Type" Pedal assist power unit with vacuum bellows and control valves mounted on drivers side of dash panel and attached direct to brake power lever
See "Ford Bellows Type" in Brak S ction

Checking Fluid Level - Maintain fluid to within ½" of top of reservoir

Removal - Remove vacuum hose from top of unit, valve adjusting eccentric with flat washer spring and bushing nylon bushing from power unit valve housing Remove two mounting screws (bracket-to-dash panel) and remove power unit from car

MISC. MECHANICAL

Windshield Wipers: New Cable operated type with tension assemblies
See "Windshield Wipers" in Miscellaneous Section

Power Window Regulators: Reversible motor in each window *See "Electric Window Regulators" in Misc Section*

P w r Top Control· Electric-Hydraulic with reversible pump motor *See "Power Top Controls" in Misc Sect*

Pow r S at Adjusters· "4-way" Electric Screw and Jack type with single electric motor driving a screw jack
See "Power Seat Adjusters" in Miscellaneous S ct

►*SPECIAL 270 HP (DUAL 4-BARREL CARBURETOR) & 300 HP (SUPERCHARGED) HIGH PERFORMANCE ENGINES:* Special 312" Engines. Specifications and service data on the equipment used on these engines are given below.

MODEL IDENTIFICATION

VEHICLE NUMBER: Stamped on patent plate on left front body pillar (Exc. Thunderbird). On dash panel in engine compartment (Thunderbird).

First Number - 100001 and up.

►*VEHICLE NUMBER NOTE:* Vehicle number (Example *C7FV100501*) includes following identification data in sequence:

Eng. Type ①	Year ②	Assy. Plant	Body Style ③	Serial No.
C	7	See below	See below	100501

① Engine Type

B - V8 272 cu. in. Engine (Dual Carb.).
C - V8 292 cu. in. Engine (Dual Carb.).
D - V8 312 cu. in. Engine (4-Barrel Carb.).
E - V8 312 cu. in. Engine (Dual 4-Barrel Carb.).
② - Last digit of model year (1957).

③ Body Styles

C - Conv. (Fairlane 500), **F** - Ranchero.
G - Tudor & Fordor (Custom & Custom 300).
H - Thunderbird, Ranch Wagon (Custom 300).
S - Sedan Delivery (Courier).
T - Tudor & Fordor - Hardtop (Fairlane & 500).
V - Victoria Tudor & Fordor (Fairlane & 500).
W - Retractable Hardtop (Fairlane & 500).
X - Country Sedan. **Y** - Country Squire.

Assembly Plant Designation

A - Atlanta	**F** - Dearborn	**N** - Norfolk
B - Buffalo	**G** - Chicago	**P** - St. Paul
C - Chester	**K** - Kansas City	**R** - San Jose
D - Dallas	**L** - Long Beach	**S** - Somerville
E - Mahwah	**M** - Memphis	**U** - Louisville

TUNE-UP

COMPRESSION PRESSURE: 160-165 lbs. (All Engines except Schgd. 300 HP), 120-130 lbs. (Schgd. 300 HP) at cranking speed.

VACUUM READING: Steady 19-20" idling at 475-500 RPM in Neutral.

VALVE TAPPET CLEARANCE: (All Engines except Schgd. 300 HP with B7A-6250-C Camshaft) - .020" (Intake & Exhaust COLD), .019" (Intake & Exhaust HOT). If tappet clearance set with engine Cold, recheck tappet clearance after engine operated for 30 minutes to normalize temperature and set to HOT figure.

(300 HP Engin with B7A-6250-C Camshaft) - .020" Intake. .025" Exhaust. HOT.

Tappet Adjustment - *See "Valve System" in Ford Special Data.*

►*SELF LOCKING TAPPET ADJUSTING SCREW NOTE:* Self locking adjustment screws used which have interference thread fit at center portion of threads. Replace adjusting screw or adjusting screw and rocker arm assembly when torque less than 3 ft. lbs.

MANIFOLD HEAT CONTROL: Automatic thermostatic type with counterweight. Valve is closed when engine is at normal temperature and running at idle speed, and is open when operating at high RPM. Spring is installed with ¾ turn wind-up and hooked over stop pin.

IGNITION

FIRING ORDER: 1-5-4-8-6-3-7-2.

Cylinders - RIGHT BANK 1-2-3-4, LEFT BANK 5-6-7-8.

SPARK PLUG GAP: .032"-.036".

Spark Plugs - (Early) Champion 870 (272" Eng.), 860 (292" & 312" Engs.). **(Later)** F-14Y (All). *NOTE - Use F-14Y for replacement. 18 mm.*

►*SPARK PLUG NOTE:* No gasket. Torque to 15-20 Ft. Lbs.

COIL: Ford No. B6A-12029-B.

Ignition Current - 2.5 amps. idling, 4.5 amps. stopped.

Resistor - Ford No. B6A-12250-D. 1.3-1.4 Ohms.

►*COIL RESISTOR NOTE:* Resistor is connected in lead from ignition switch to coil. Resistor is by-passed during cranking by a lead from starter solenoid to battery terminal of coil.

►*312" ENGINE COIL RESISTOR INTERFERENCE CORRECTION:* Resistor may ground on intake manifold. To correct, loosen mounting bracket bolt and rotate resistor assembly 45° counterclockwise. Tighten bolt.

DISTRIBUTOR: New type with separate mechanical and vacuum spark advance systems. Tachometer Drive attachment on Thunderbird. Used as follows:

Engine	Distributor No.
272" & 292"	B7A-12127-A
272" Repl. Distr.	B7AF-12127-A
312" (Std.)	B7A-12127-D
312" (2 Carbs.)	B7A-12127-E
312" (Supercharged)	B7A-12127-G
Thunderbird (292" & 312" Std.)	B7S-12127-A
Thunderbird (312" 2-Carb.)	B7S-12127-B
Thunderbird (312" Schgd.)	B7S-12127-C

See "Ford, Lincoln, Mercury Distributors" in Electrical Section.

►*SCHGD. 300 HP ENGINE DISTRIBUTOR NOTE:* This distributor is "Double Breaker" type. Set both sets of points to the same gap.

Condenser - Ford B7A-12300-B (B7A-12127-G & B7S-12127-C Distr.), B7A-12300-A (Others). **Capacity** - .21-.25 mfd.

Contact Point Set - Ford B7A-12171-B (B7A-12127-G & B7S-12127-C Distr.), B7A-12171-A (Others).

Breaker Gap - .014-.016" (All Models). On double breaker distributor, set both sets of points alike.

Cam Angle - 26-28½° (Single Breaker Distr.), 33-36° (Double Breaker Distr.).

Breaker Arm Spring Tension - 17-20 ozs. (All Models).

Rotation - Counterclockwise viewed from above.

Automatic Advance - B7A-12127-A

Degrees	Distr. RPM	Degrees	Eng. RPM

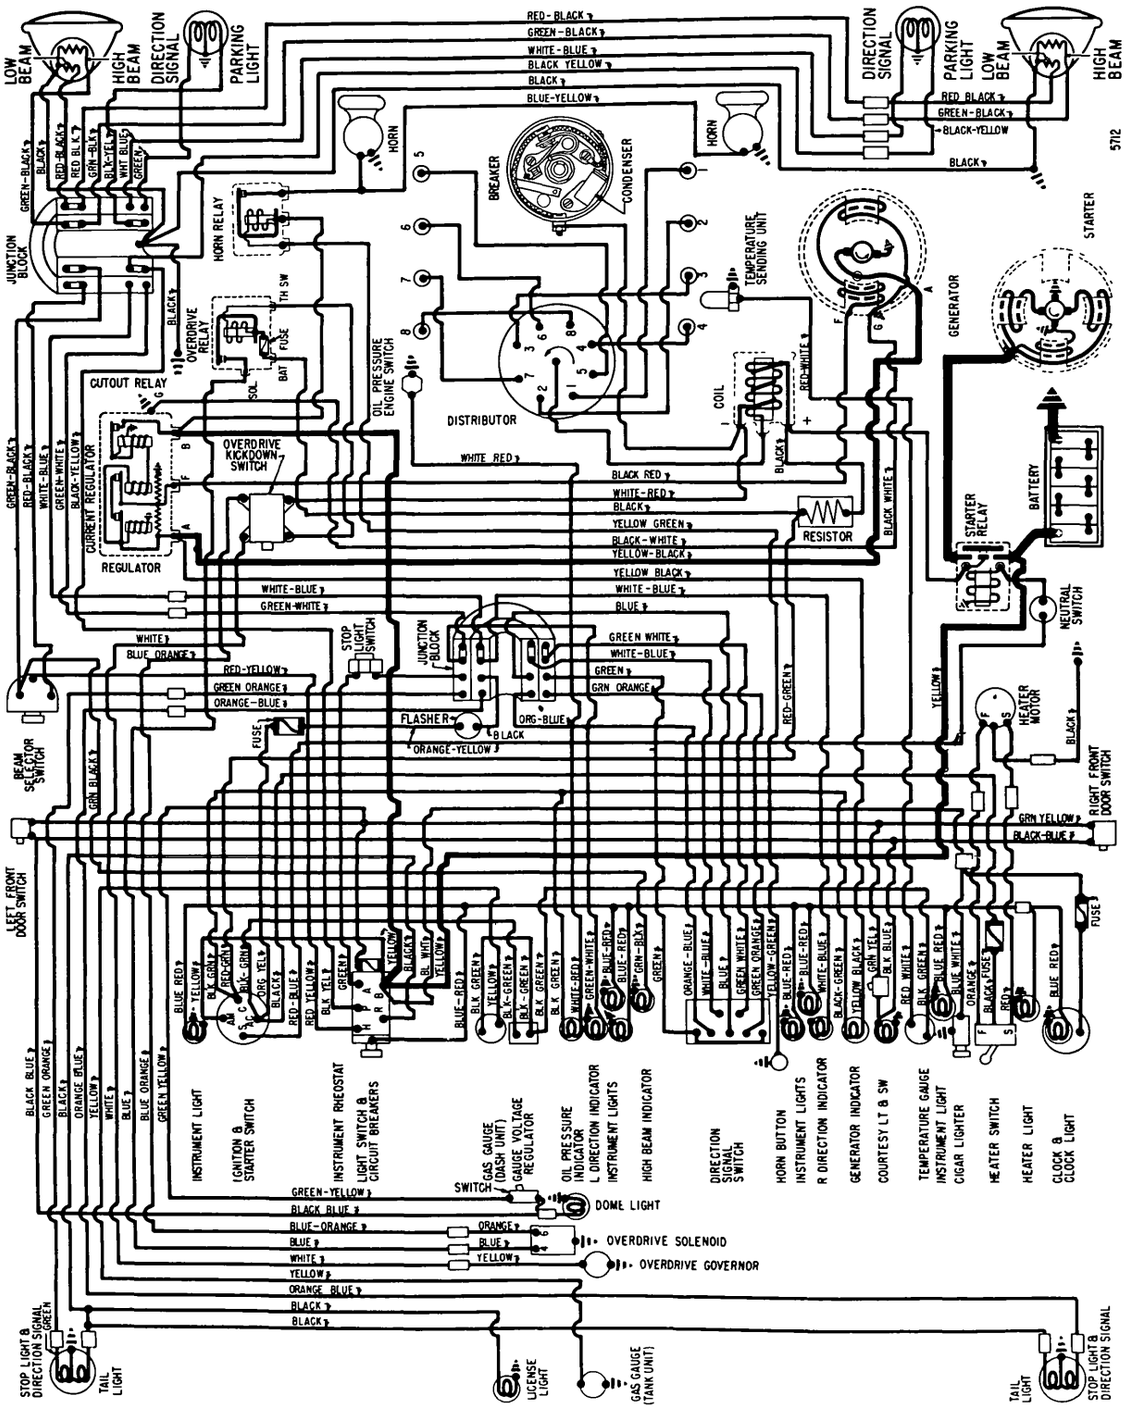
1-3	2-6	7"
9-11	18-22	14-20"

IGNITION TIMING



Engine	Std. Ign. Setting
All exc. 300HP (Std. & OD)	3° BTDC (Max. 6° BTDC)
All exc. 300 HP (Fordomatic)	6° BTDC (Max. 8° BTDC)
300 HP Schgd. (All Trans.)	6° BTDC (Max. 10° BTDC)

Timing Mark - Vibration damper marked "TDC" and "2", "4", "6", "8", "10" degrees BTDC. Align correct mark with pointer (bolted to water pump).

CARBURETOR

►*CARBURETOR APPLICATION: Two-barrel carburetors used on 272 & 292 cu. in. engines, 4-barrel carburetors used on 312 cu. in. engine. All new types.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Throttle Linkage Adjustment (Fordomatic Cars): With engine at normal operating temperature and idle speed correctly set at 425-450 RPM with selector lever in "Dr" range, disconnect throttle control rod, lock accelerator shaft assembly by inserting pin (¼" drill rod) in lever and bracket, adjust carburetor connecting link so that throttle valves closed. *NOTE* - Holes should remain aligned with pin removed. Adjust clevis on throttle rod while holding throttle control upward against transmission inner stop so pin will enter freely, then turn clevis counter-clockwise 3 turns. Connect assembly. Adjust pedal height to 3.10" (Thunderbird 4.88") by changing length of accelerator assembly connecting link. Road test car. If band or clutch slippage is evident, increase rod length to 3½ turns, but do not exceed 4 turns of clevis.

Dashpot Adjustment (Holley & Ford Carburetors): With engine idle speed set to specifications and throttle closed, there should be .045-.064" clearance between end of dashpot plunger and throttle lever with dashpot plunger fully depressed. To adjust, loosen dashpot locknut, turn adjustment nut to increase or decrease clearance. Tighten locknut.

Dashpot Adjustment (Carter Carburetors) : Hold throttle valves wide open. Distance between top surface of bowl cover and bottom of lever should be 7/16". To adjust, bend dashpot inner arm tang (Tool T109-22).

FORD 2 & 4-BARREL

Ford 2 & 4-barrel carburetors used as follows:

Model	2-BARREL CARBURETORS	Carbur tor No.
Pass. Cars 272" Eng. ① ②	(Early)	B7A-9510-A
Pass. Cars 272" Eng. ① ②	(Later)	B7A-9510-Q
Pass. Cars 272" Eng. ① ②	(Later)	B7A-9510-Z
Pass. Cars 292" Eng. ①		B7A-9510-E
Pass. Cars 292" Eng. ③	(Early)	B7A-9510-L
Pass. Cars 292" Eng. ③	(Later)	B7A-9510-W
Model	**4-BARREL CARBURETORS**	**Carbur tor No.**
Pass. Cars 312" Eng. ③	(Early)	B7A-9510-B
Pass. Cars 312" Eng. ③	(Later)	B7A-9510-X

① - Synchro-mesh transmission.
② - When used with Fordomatic, dashpot and attaching parts must also be used.
③ - Fordomatic transmission.

► *CARBURETOR IDENTIFICATION NOTE: To identify carburetors see "Ford 2 & 4-Barrel Carburetors" in Carburetion Section*

► *DISTRIBUTOR VACUUM LINE INTERFERENCE CORRECTION:* Distributor vacuum line may interfere with fast idle adjusting screw at ¾-open throttle. To correct, reposition vacuum line to give proper clearance.

► *CARBURETOR-TO-INTAKE MANIFOLD GASKET INSTALLATION NOTE:* Two gaskets Part No. B7A-9447-A and 1 spacer, Part No. B7A-9603-C, are required

► *PRODUCTION CHANGES AND RECOMMENDED PARTS AND SETTING CHANGES FOR IMPROVED PERFOR-*

④ - When used with synchro-mesh transmission, remove dashpot and attaching parts.

►*CARBURETOR IDENTIFICATION NOTE: To identify carbur tors see "Holley 2 & 4-Barrel Carburetors" in Carbur tion Section.*

►*CARBURETOR-TO-INTAKE MANIFOLD GASKET INSTALLATION NOTE:* Two gaskets, Part No. B7A-9447-B (Neoprene or Asbestos), and 1 spacer, Part No. B7A-9603-D ("Resinoid"), are required. *NOTE* - The "Resinoid" spacer should be used to correct a hard hot starting condition where the aluminum spacer (B7A-9603-B) is found

►*PRODUCTION CHANGES AND RECOMMENDED PARTS AND SETTING CHANGES FOR IMPROVED PERFORMANCE: See "Holley 2 & 4-Barrel Carburetors" in Carburetion Section.*

►*MANIFOLD FUEL DISTRIBUTION: Carbur tor RIGHT barrels feed Cyl. 2-3-5-8, LEFT barr ls 1-4-6-7.*

Idl Setting - Initial setting 1 turn open. Set both screws alike. Turn adjusting screws in until engine begins to run rough from the lean mixture, then turn screws out until engine begins to roll from rich mixture. Turn screws in until engine runs smoothly. Favor a slightly rich mixture. Turn screws out for richer mixture.

Idle Speed - 475-500 RPM with selector lever in Neutral and check for 425-450 RPM in "DR" (Drive) range. Adjust as necessary to get drive range RPM.

Throttle Linkage Adjustment (Fordomatic Cars): *See CARBURETOR above.*

►*OTHER DATA: See "Holley 2 & 4-Barrel Carburetors" in Carburetion Section.*

CARTER AFB 4-BARREL

Carter AFB No. 2441S, SA.

►*SURGE CORRECTION DUE TO LEANNESS:* Install new venturi assemblies, metering rods, and vacuum piston spring. *See "Carter AFB Carburetors" in Carburetion Section.*

►*CHOKE SETTING CHANGE:* Changed from 2 notches rich to 1 notch rich. *See "Carter AFB Carburetors" in Carburetion Section.*

►*HARD HOT STARTING CORRECTION:* Install carburetor-to-intake manifold "Resinoid" spacer, Part No. B7A-9603-D, in place of aluminum spacer B7A-9603-B

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyl. 2-3-5-8, LEFT barrels 1-4-6-7.*

Idle Setting - Initial setting 1 turn open. Set both screws alike. Turn adjusting screws in until engine beginsto run rough from the lean mixture, then turn screws out until engine begins to roll from rich mixture. Turn screws in until engine runs smoothly. Favor a slightly rich mixture. Turn screws out for richer mixture.

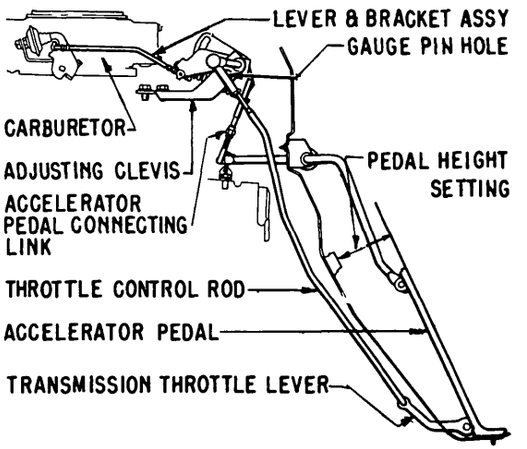
Idle Speed - 475-500 RPM with selector lever in Neutral and check for 425-450 RPM in "DR" (Drive) range. Adjust as necessary to get drive range RPM.

Throttle Linkage Adjustment (Fordomatic Cars): *See CARBURETOR above.*

►*OTHER DATA: See "Carter AFB Carburetors" in Carburetion Section.*

270 HP ENGINE CARBURETORS
(Dual 4-Barrel)

Two Holley 4-barrel carburetors, **Part No. B7A-9510-P,** used. Similar in design to previous models.



►*CARBURETOR IDENTIFICATION NOTE:* Carburetors stamped ECJ-9510-AA or ECJ-9510-AB on mounting flange.

►*ADJUSTMENT NOTE:* Front and rear carburetors linked together by synchronizer rod which must be adjusted for correct synchronized operation of the carburetors (make this adjustment first).

Throttle Linkage Adjustment - 1) Disconnect rear end of throttle synchronizer rod from rear carburetor. 2) Back off throttle stopscrews so that throttle valves of both front and rear carburetors completely closed. 3) Adjust throttle synchronizer rod length so that rod end enters rear carburetor throttle lever freely, connect rod. 4) Set idle speed by adjusting throttle stopscrews. 5) Adjust idle mixture by adjusting both screws on rear carburetor first, and screws on front carburetor last.

Idle Sp d Setting - 500-600 RPM (All Transmissions) with selector lever in Neutral on Fordomatic Cars.

Idl Mixtur S tting - Both screws (primary side only) 5/8 turn open. Adjust both screws alike. Turn screws out for richer mixture.

FORDOMATIC TRANSMISSION THROTTLE LINKAGE

►*OTHER DATA: See "Holley (Ford, Lincoln, Mercury) 4-Barrel Carburetors" in Carburetion Section.*

300 HP SCHGD. ENGINE
(Supercharger & Carburetor)

Holley 4-barrel carburetor used as follows:

Model	Carburetor N .
Pass. Car	B7A-9510-AC
Thunderbird (Early)	B7A-9510-V
Thunderbird (Later)	B7A-9510-AC

►*CARBURETOR IDENTIFICATION NOTE:* Model B7A-9510-V stamped EDB-9510-AA on edge of carburetor mounting flange.

SUPERCHARGER

►*SUPERCHARGER CAUTION: Two different McCulloch Superchargers may be found on these engines:*

1) Conventional Type - This supercharger has variable speed pulley (High & Low Blower) operated by manifold vacuum.

2) Special Type - This supercharger does not have variable speed pulley and is controlled by carburetor linkage and engine oil pressure (special connection to engine oil pressure system). The following operating precautions must be observed with this type supercharger:

►*OPERATING CAUTION (SPECIAL TYPE SUPERCHARGER):* The engine MUST NOT BE OPERATED with the flexible air hose (between supercharger and carburetor) disconnected, or with Flapper Valve in carburetor elbow not properly seated, or with any restriction in air intake (would result in internal oil leak which would drain engine oil system and damage supercharger). If necessary to operate engine under above conditions, remove drive belts, disconnect supercharger oil line at cylinder block, and plug this fitting in block.

Sup rcharg rC ntr l Linkag (Sp cial Typ Sup rcharg r): 1) Loosen setscrew in swivel clamp on control arm.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

2) Open carburetor throttle valves to approximately 1/8 open position so that 1/8" drill rod can be inserted between throttle stop pin and throttle lever.
3) Place supercharger control lever in full "on" position (control lever foot should be against housing
4) With throttle lever and supercharger control lever positioned as above, and control wire ball end against throttle lever swivel, tighten setscrew in control arm swivel securely against control wire cable.
5) Check adjustment to make certain that carburetor throttle valves move from full-closed to full-open positions and that supercharger control lever moves through full arc of travel when carburetor throttle lever moved from half-open to 7/8 open position.

Supercharger Output Check (Special Type Supercharger): Remove 1 8" pipe plug in side of carburetor elbow and connect gauge at this point Supercharger pressure should be 2 4-2 7 P S I (Std Trans) 3 4-3 7 P S I (Fordomatic) at 2500 RPM

Engine Idle Speed: 500-525 RPM (all transmissions) with selector lever in Neutral on Fordomatic Cars

►*OTHER DATA See "McCulloch Supercharger" and "Holley (Ford, Lincoln, Mercury) 4-Barrel Carburetors" in Carburetion Section*

AIR CLEANER: DRY FILTER ELEMENT type. Clean every 5,000 miles, replace element every 20,000 miles.

►*CLEANING CAUTION:* Clean filter element by tapping and shaking to remove dirt particles. *DO NOT wash element in solvent or other liquids and DO NOT oil or lubricate.*

FUEL PUMP PRESSURE: 3.5-5.5 lbs. at 500 RPM.

CARB. EQUIPMENT

Fuel Pump: AC Fuel only or Fuel & Vacuum

Model	Ford Pump No.
V8 exc Thunderbird (Std)	B5A 9350-C
Overdrive & Fordomatic	B5A-9350-D
Thunderbird (Std)	B5S 9350-A
Overdrive & Fordomatic	B5S-9350-B

Pressure - 3 5-5 5 lbs at 500 RPM
See "Fuel Pumps" in Carburetion Section

Gasoline Gauge: New King-Seeley Electric Constant-voltage ("CV") type with gauge voltage regulator Ford B7S-10804-A Thunderbird B7A 10804 B Others
Dash Unit-Ford No B7S-9280 A (Thbrd) B7A-9280-A (Others)
Tank Unit - Ford No B7A-9276-A (All)
See "Fuel Gauges" in Carburetion Section

Air Cleaner: DRY FILTER ELEMENT type Clean every 5000 miles replace element every 20 000 miles

►*CLEANING CAUTION* Clean filter element by tapping and shaking to remove dirt particles *DO NOT wash element in solvent or other liquids and DO NOT oil or lubricate*

BATTERY

Ford B6A-10655-C (All) 12 volt 11 plate 55 ampere hour capacity **Ford B7A-10655-A (Exc. Thbrd).** 12 volt 11 plate, 70 ampere hour capacity (20 hr rate)
Battery Ground - Negative to engine block
Engine Ground - Cylinder head to dash

STARTER

Ford B6A-11002-A. Armature - B6A-11005-B.
Drive - Ford ICM-11350-C Bendix "Folo-Thru"
Rotation - Counterclockwise at commutator end
Brush Spring Tension - 48-56 ozs
Cranking Speed - 150-180 RPM, 190 amperes max

Performance Data

Torque	RPM	Volts	Amperes
0 ft lbs	①	12 0	120
15 5 ft lbs		5 0	550

①- With starter on engine and engine idling

Starting Switch: Magnetic type Ford No B6A-11450-A Starter Switch is controlled by ignition switch
Fordomatic Neutral Safety Switch: Ford B6S-15812-A (Thbrd) B7A-15812-A (Others)
Adjustment - *See "Fordomatic & Mercomatic" in Transmission Section*

GENERATOR

Ford. Used as follows

Generator	Armature	Application
B6A-10002-C	B6C-10005-B	①Std
B6A-10002-H	B6A-10005-B	②Std
B6A-10002-E	B6C-10005-C	Special

①- Use with B6C-10505-B Regulator
②- Use with B6A-10505-A Regulator

►*40 AMPERE GENERATOR INSTALLATION CAUTION.* Install 2 Spacers Ford No 10148, to secure proper alignment of generator-to-water pump and fan pulleys

Performance Data

Generator	Amperes	Eng RPM
B6A-10002-C H	30	1500
B6A-10002-E	40	1500

Brush Spring Tension - 26-34 ozs
Field Current - 1 5-1 6 amperes at 12 0 volts
Rotation - Counterclockwise at commutator end
Belt Adjustment· Approximately ½" deflection on belts midway between generator and pump pulleys with normal thumb pressure

REGULATOR

Ford No. B6A-10505-A (B6A-10002-H Gen.), B6C-10505-B (B6A-10002-C Gen.), B6A-10505-B (B6A-10002-E Gen.).

►*SETTING CAUTION. "Temperature Compensated" type Set to following specifications at 75°F ambient (engine compartment) temperature*

Cutout Relay
Cuts In - 12 0-12 8 volts

Voltage Regulator
Setting - 14 6-15 4 volts at 75°F (ambient)
Checking & Adjusting - *See Electrical Section*

Current Regulator
Setting - 28 32 amperes (B6A-10505-A & B6C-10505-B), 38-42 amperes (B6A-10505-B)
Checking & Adjusting - *See Electrical Section*

MISC. ELECTRICAL

Headlamps: Sealed Beam *See Electrical Section*
Directional Signals: *See Electrical Section*
Lighting Switch Removal: With control knob in the "OFF" position press spring release button on switch housing, turn shaft slightly and pull it out of switch Unscrew mounting nut with Tool 17470-N
Stop Light Switch Location: On forward end of brake master cylinder (Conventional Brakes), and on top of brake booster assembly (Power Brakes) Master cylinder located on firewall in engine compartment
CIRCUIT BREAKERS: On headlight switch Combination headlight switch circuit breaker and fuse assembly used One circuit breaker protects headlight circuit and second circuit breaker protects instrument parking, stop and tail light circuits
FUSES: Size and location as follows.
Back Up Light - SFE 7 5 ampere in feed wire
Cigar Lighter - Sulphur disc in base or reset circuit breaker, at back of assembly
Clock - 1 AG, in feed wire
Heaters - SFE 14 ampere in feed wire
Interior Lamps - SFE 7 5 ampere, on lighting switch
Overdrive - 15 AGC on overdrive relay
Turn Signal - SFE 7 5 ampere in feed wire
Horn Relay: Ford No B7A-13853-H

►*HORN RELAY REPLACEMENT NOTE* When replacing a horn relay that has been shorted by water be sure to spray new relay with a plastic ignition spray (around crimped areas in particular but not on terminals) and install three ¼" flat washers between mounting bracket and fender apron

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION Use extreme care when disconnecting any part of air conditioning equipment or lines for access to engine See "Air Conditioning Service Cautions" in Misc Sect*

ENGINE SPECIFICATIONS: 90° V8

Engine	Bore	Stroke	Displacement
272	3 62"	3 30"	272 cu ins
292	3 75"	3 30"	292 cu ins
312	3 80"	3 44"	312 cu ins

Engine	Rated HP	Compr. Ratio	Developed HP
272	42 05	8 6-1	190 at 4500 RPM
292	45 0	9 1-1	①206 at 4500 RPM
312	46 21	9 7-1	245 at 4500 RPM
312" 270 HP②		9 7-1	270 at 4800 RPM
312" 300 HP③		8 3-1	. 300

①- 212 HP at 4500 RPM with Fordomatic
②- High Performance Engine (Two 4-Barrel Carbs)
③- High Performance Engine with Supercharger
Compression & Vacuum Reading - *See TUNE-UP*

CYLINDER HEAD: *See "Cylinder Head & Manifold" in Ford Special Data*

►*ENGINE OIL LEAK CORRECTION:* Engine oil leakage may occur at point where crankcase vent tube is brazed to adapter

►***1957 FORD THUNDERBIRD & HIGH PERFORMANCE CARS (WITH TWO 4-BARREL CARBS. OR SUPERCHARGER) ENGINE FAILURE CORRECTION:*** Engine failure on these models may be due to a valve stem breaking and allowing valve to drop into the cylinder. To correct, install Spring & Dampener Assembly (Part No. B6A-6513-D; Push Rod, (Part No. B7A-6565-A); Retainer, (Part No. B6A-6514-A). *CAUTION - High performanc ngines must not b operat d in xc ss of 5500 RPM.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

►*EXHAUST MANIFOLD BREAKAGE CORRECTION:* Breakage at manifold flange caused by exhaust crossover pipe contacting uneven road surface Fabricate and install a guard (1½" diameter pipe flattened at each end to contact frame) and weld to two 2" strap irons bolted (one bolt each) to frame side rail at existing frame holes Brackets will be back against #1 body bolt outrigger

TIGHTENING TORQUES: *S e "Tightening Specifications" in Ford Special Data*

ENGINE REMOVAL: *S e "Engine" in Ford Special Data*

OIL PAN REMOVAL: On conventional car remove stabilizer bar, disconnect oil pump inlet tube at oil pump and remove "O" ring seal retainer screws and oil pan

PISTONS

Autothermic type Solid skirt with three rings.

R m val - Pistons and rods removed from above

Fitting N w Pist ns: Use ½" wide feeler gauge inserted between piston and cylinder wall at right angles to pin on thrust side Pull should be 5-10 lbs when using feeler gauge thicknesses as follows New piston in new bore 0015", New piston in used bore 002", Used piston in used bore 0025"

R plac ment Pist ns: Standard, 020", 030", 040" (312 Eng), plus 060" (272 & 292 Eng) Oversize

Installing Pist ns: Install with small indentation in head of piston toward front of engine *See Rod Installation*

PISTON RINGS

Two compression one oil ring per piston Oil ring is "Side Sealing" type (two steel rails with spring spacer between them)

272 & 292 Engines

Ring	Width	End Gap	Side Clearance
Compr #1 2	①	010- 027"	② 002- 0035"
Oil #3		015- 062"	③

312 Engine

Ring	Width	End Gap	Side Clearance
Compr #1	0775- 0780"	012- 029"	② 002- 0035"
Compr #2	0930- 0940"	012- 029"	② 001- 003"
Oil #3		015- 062"	③

①- (272 Eng) 0930- 0935", (292) 0775- 0780"
②- Wear Limit 006" ③- Side sealing type rings

R plac m nt Rings: Furnished in Expander and Steel Section Types in Std 020" 030", 040" (312 Eng), plus 060" (272 & 292 Eng)

PISTON PINS

Floating type with lock ring at each end

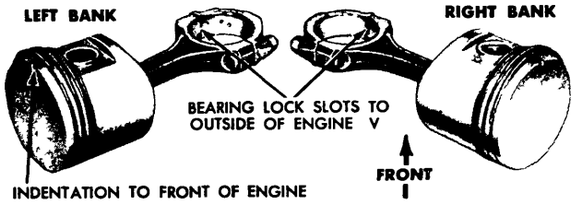
Diam ter - 9120- 9123" **L ngth** - 3 016-3 030"

Pin Fit in Pist n - 0001- 0003" Wear limit 0008"

Pin Fit in R d Bushing - 0001- 0003" Wear limit 0008"

Replac m nt Pins: Color marked for identification and furnished in following sizes Standard (Green), 001" (Blue), 002" (Yellow) Oversize Fitted pins furnished with new pistons

CONNECTING RODS



Crankpin J urnal Diam ter - 2 1880-2 1888"

L w r B aring - Steel backed, copper lead alloy lined type Upper and lower halves interchangeable

Clearance - 0008- 0027" Wear limit 0037 (272 & 292 Eng), 0007- 0026" Wear limit 0036 (312 Eng)

Side Clearance - 006- 016" Wear limit 019" (2 rods)

Replacement Bearings· Standard (2 sizes marked **Red** and **Blue** for selective fitting) and 010", 020", 030" undersize

FORD V8 PISTON & ROD ASSY.

Installing Rods: Install rod in piston so that rod bearing lock slots in connecting rod are toward outside of engine when indentation on head of piston is toward front of engine Cylinder numbers on bearing caps and rods must be on same side and installed in same numbered cylinder

CRANKSHAFT

Journal Diameter - 2 4980-2 4988" (272, 292 Eng) 2 6235-2 6243" (312 Eng)

Bearings - Copper lead (All Eng), or Lead babbitt (272 Eng) Steel backed

Clearance	Copper Lead	Lead Babbitt
272	① 0006- 0032"	② 0005- 0021"
292	① 0006- 0032"	
312	③ 0008- 0026"	

①- 0042" wear limit ②- 0031" wear limit
③- 0036" wear limit

Replacement Bearings: Standard (2 sizes marked **Red** and **Blue** for selective fitting) and 010", 020", 030" (272 & 292 Eng) plus 040" (312 Eng) Undersize

End Thrust: Taken by No 3 main bearing Replace bearing if endplay excessive

Thrust Bearing Alignment - *See "Crankshaft & Main Bearings" in Ford Special Data*

End Play - 002- 006", wear limit 010"

Crankshaft Rear Oil Seal Installation: *See "Crankshaft and Main Bearings" in Ford Special Data*

Crankshaft Front Oil Seal Installation: *See "Engine Front Cover" in Ford Special Data*

CAMSHAFT

Journal Diameters - 1 9255-1 9265"

Clearance - 001- 003", wear limit 006"

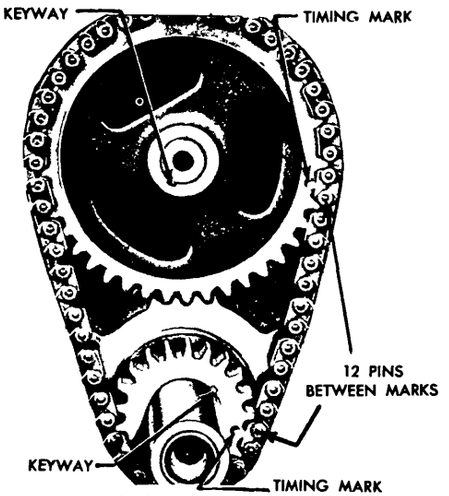
End Thrust: Taken by thrust plate and spacer located between camshaft sprocket and shoulder on camshaft

►*CAMSHAFT THRUST SPACER NOTE* Chamfer on the inside of spacer must be to the rear or face camshaft journal

End Play - 006" max

R plac m nt Camshaft B arings· Finished bearings furnished Standard and 015" undersize

Camshaft R m val & Installati n· *See "Camshaft & Bearings" in Ford Special Data*



Timing Chain: Side guide type 56 links

►*TIMING CHAIN REPLACEMENT NOTE*· Replace chain and sprockets when deflection on slack side exceeds ½" (take up all slack on driving side, measure slack on opposite side) Remove and install chain "endless" as a unit with both sprockets

Camshaft Setting: Sprockets marked by round depression at one tooth Mesh chain so that there are 12 chain link pins between timing marks on sprockets when marks are both on drive side of chain

Engine Front Cover Oil Seal (Crankshaft Front Seal) Installation: *See "Engine Front Cover" in Ford Special Data.*

Engine Front Cover Removal: *See "Engine Front Cover" in Ford Special Data*

FORD V8 VALVE TIMING MARKS

VALVES

Tappet Clearance: 020" (Intake & Exhaust) Cold 019" (Intake & Exhaust) Hot *NOTE* - Valve tappet clearance on truck engines different

Tappet Adjustment - *See "Valve System" in Ford Special Data*

Valve	Head Diam.	Stem Diam.①	Length
Intake	1 920-1 930"	3416- 3423"	5 02"
Exhaust	1 505-1 515"	3400- 3410"	5 02"

Valve	Seat Angle	②Lift	Stem Clearanc
Intake	45°	272"	0045" wear limit
Exhaust	45°	285"	0065" wear limit

①- Furnished with 003", 015", 030" oversize stems
②- Cam lobe lift 005" wear limit

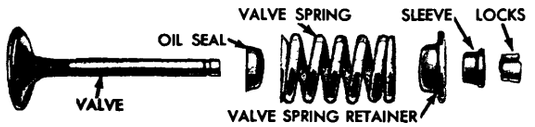
Valve Seat Width - 060- 080" (Intake), 070- 090" (Exhaust)

►*ROTATABLE VALVE NOTE*· All valves are rotatable type *See "Valve System" in Ford Special Data*

Valve Stem Oil Seals· "Umbrella" type seals on intake and exhaust valve stems Install seals with cupped side down to cover guide boss on head Install new seals whenever valves removed or when seals become loose on valve stems

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE



Valv Springs: Install with closed end of coil toward cylinder head

Spring Specifications

	Spring Pressure	Length
Valve Closed	71-79 lbs ①	1 780"
Valve Open	161-177 lbs ②	1 390"

①- 64 lbs wear limit at 1 780"
②- 145 lbs wear limit at 1 390"
Free Length - 2 09"

►*VALVE SPRING INSTALLATION NOTE:* Measure valve spring assembled height from machined surface of cylinder head spring pad to under side of spring retainer If assembled height is 1 13/16" or greater install necessary 030" spacers between cylinder head valve spring pad and valve spring to bring assembled height to recommended 1 25/32-1 13/16" *CAUTION* - Do not install spacers unless necessary

FORD V8 VALVE ASSEMBLY

Valve Guides: Integral with cylinder head When stem-to-guide clearance exceeds maximum (See table above), ream guides and install oversize valves *See "Valve System" in Ford Special Data*

Valve Lifters: Mushroom type Remove from below after camshaft removed from engine
Clearance - 0026"

R cker Arm Assembly: *See "Valve System" in Ford Special Data*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above

►*VALVE TIMING NOTE:* The following valve opening and closing points are with camlift as indicated

Valve Timing
(All Engines with B7A-6250-B Camshaft)

Intake Valves - Open 18° ① BTDC Close 58° ① ALDC
Exhaust Valves - Open 66° ② BLDC Close 10° ③ ATDC
①- Camlift 015" ②- Camlift 013" ③ Camlift 016"

Valve Timing
(312" Eng. Schgd. with B7A-6250-C Camshaft)

Intake Valves - Open 32° ℂ BTDC Close 78° ℂ ALDC
Exhaust Valves - Open 72° ℂ BTDC Close 38° ℂ ALDC
ℂ - Camlift 016" ℂ - Camlift 019"

Valve Timing Check: Release No 1 Intake Valve adjusting screw, push rocker arm to one side install dial indicator in pushrod socket Zero indicator with cam on heel of lobe Install quadrant on crankshaft pulley rotate engine to amount of lobe lift shown in table above, then check quadrant and compare reading with degrees shown in table above for that valve If reading not correct check for bent pointer worn timing chain or sprocket before replacing camshaft

OILING SYSTEM

►*ENGINE OILING SYSTEM S e "Engine Lubrication" und r OILING SYSTEM in Ford Special Data*

Crankcas Capacity - 5 qts (refill) 6 qts when filter changed

N rmal Oil Pr ssur : 45-50 lbs at 2000 RPM
Pr ssur R gulat r Valv - In oil pump body, not adjustable
Oil Pressure Indicator - Indicator light on instrument panel operated by Engine Unit Ford No B6A-9278-B (stamped No 7 on Hex) Lights when ignition switch turned on, goes out when engine starts and pump pressure reaches (7 lbs)

Oil Pump: Rotor type located on left side of engine crankcase driven by distributor shaft
Pump Overhaul - *See "Oiling System" in Ford Special Data*

Oil Filter: New "Disposable" type
Disposable Filter Replacement - Coat gasket face of filter with oil, thread filter on insert by hand until gasket contacts adapter surface, then tighten filter an additional one-half turn *CAUTION* - Do not overtighten Run engine and check for leaks

Crankcase Ventilation: Filter in oil filler cap (inlet) all models Road draft outlet pipe for crankcase ventilation all models *NOTE* - 272 and 292 Engines have filter screen in road draft outlet pipe Service filler cap by cleaning with solvent and resaturating with engine oil at 4000 mile intervals.

COOLING

Water Capacity: 19 qts (Pass Cars & Station Wagons), 20 qts (Thunderbird) Add 1 qt for heater

Pressure Valve: Radiator filler cap Ford No LA-8100-A 12-15 lbs (marked "13" or "14") *CAUTION* If replacement required use 12-15 lb type

Thermostat: 157-162°F (Std), 177-182°F (High Temp) for use with permanent type anti-freeze

Water Pump: Packless sealed ball bearing type
See "Water Pump" in Ford Special Data
Pump Removal - (On Thunderbird remove engine left hand splash shield) Drain cooling system disconnect lower radiator hose and heater hose Remove fan belt fan fan spacer and pulley (On Thunderbird remove generator support bracket bolt at the water pump housing and bolt at generator then move bracket out of way remove remaining bolts, retaining water pump assembly and timing pointer) On other cars remove four bolts retaining water pump to cover Remove pump and timing pointer

Temperature Gauge: New King-Seeley Electric Constant-voltage ("CV") type with gauge voltage regulator Ford B7S-10804 A (Thunderbird), B7A-10804-B (Others)
Dash Unit - Ford B7S-10883-A (Thunderbird), B6A-10883-A (Others)
Engine Unit - Ford No B7A-10884-A
See "Temperature Gauges" in Miscellaneous Section

CLUTCH

Long Model 10CF. Std (272 292 Eng) **11CF** Std (Thbrd & 312 Eng) **11CF** Heavy Duty (272, 292 Eng) Single plate semi centrifugal type

Cover Assembly	Long No.	Ford No.
10CF	267346	B7A-7563 A
11CF①	266978	B6A-7563 A
11CF②	267350	B7A-7563 B

①- Black & Yellow paint on cover
②- Green & Lt Blue paint on cover

Clutch Disc	L ng N .	F rd N .
272,292 Std, & O D	236116 or 287222	B7A-7550-A
272,292 H D, 312	287226	B7A-7550-B
Thbrd (292)	281982	B5S-7550-A
272 H D	284961	B6A-7550-B

See "Long Clutches" in Clutch S ction

►*THUNDERBIRD DRIVE LINE VIBRATION OR TRANSMISSION GEAR RATLLE CORRECTION.* When above condition exists on conventional or overdrive cars, install Heavy Duty Dlutch Disc Assembly Ford No B7A-7550-B

Pedal Adjustment: If total pedal travel is less than 6 3/8" or more than 6 5/8", reposition pedal bumper and bracket until travel is within limits Adjust assist spring link to give assist spring length of 9 7 8" (eye centers) with clutch fully released
Pedal Free Travel - 1 1 8-1 3 8" Loosen locknut on clutch pedal release rod, turn adjusting nut until correct travel is reached *NOTE* - Check free travel by operating engine at 3000 RPM with transmission in Neutral position There should be a minimum of ½" free travel under these conditions

Removal: Remove transmission flywheel housing cover, release lever retracting spring slide release bearing and hub off release lever Mark clutch cover and flywheel for reinstallation, loosen six cover bolts uniformly to release spring tension remove cover and pressure plate through opening in flywheel housing Remove clutch release lever

SYNCHRO-MESH TRANSMISSION

Own. Helical gear constant mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse)
See "Ford Synchro-mesh" in Transmission S cti n

►*HARD SHIFTING, PARTIAL DISENGAGEMENT, GEAR BREAKAGE & NOISE CORRECTION See 'Ford Synchro-mesh' Transmission in Transmission Section*

Transmission Controls: *Se "Transmission Controls" in Transmission Section*

Removal (Exc. Thunderbird): With car raised up, disconnect drive shaft at rear universal joint, slide drive shaft off transmission output shaft Remove speedometer cable and gear Disconnect shift rods at transmission Remove rear engine support to extension housing bolts Disconnect parking brake adjusting rod from equalizer bracket Support rear of engine and remove rear engine support then lower engine for clearance and remove transmission to flywheel housing bolts Use guide pins in two lower bolt holes and slide transmission back until input shaft clears flywheel housing and lower transmission

Thunderbird - With car raised up disconnect drive shaft at rear universal joint slide drive shaft off transmission output shaft Remove speedometer cable and gear Disconnect shift rods at transmission Remove rear engine support to extension housing bolts Raise engine and remove engine rear support Lower engine remove transmission to flywheel housing bolts move transmission back for clearance Remove flywheel housing bottom cover and remove starter Disconnect clutch linkage at release lever remove release bearing and hub clutch assembly and

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

disc Remove flywheel housing to engine bolts Turn housing upside down and remove from car Then remove transmission

OVERDRIVE

Warner R10. Solenoid operated type with governor control and throttle operated kickdown

See "Warner R10 Overdrive" in Transmission Section

R m val: Same as for synchro-mesh transmission (above) after disconnecting control cable and wiring

FORDOMATIC TRANSMISSION

Torque converter and three speed automatic transmission with hydraulic control and mechanical parking lock

See "Fordomatic, Merc-O-Matic & Turbo-Drive" in Transmission Section

► *PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION. See "Fordomatic, Merc-O-Matic & Turbo-Drive" in Transmission S ction*

► *TESTING & TROUBLE SHOOTING See "Fordomatic, Merc-O-Matic & Turbo-Drive" in Transmission Section*

Lubrication - Check transmission fluid at 1,000 mile intervals and maintain level at "F" mark on indicator Drain and refill every 25,000 miles **Use only Automatic Transmission Fluid Type "A".**

Ch cking Fluid L v l - Bring transmission to operating temperature by running engine with selector lever in Neutral position Move selector lever through all ranges to assure fluid distribution then place lever in "P" (Park) position for checking fluid level Add Automatic Transmission Fluid Type "A" to bring level to "Full" mark on indicator

Throttl Linkag Adjustm nt: *See CARBURETOR above*

► *OTHER FORDOMATIC SERVICE DATA See "Fordomatic, Merc-O-Matic & Turbo-Drive" in Transmission Section*

UNIVERSALS

M chanics. Needle bearing type

► *CAUTION:* Rear universal joint companion flange nut controls pinion bearing preload (must be adjusted whenever nut is loosened) *See "1957 Ford & Mercury" in Rear Axl Section*

REAR AXLE

Own. New Separate Carrier type semi-floating hypoid with Hotchkiss drive *NOTE* - Same type used on all models

Se "1957 Ford & Mercury" in Rear Axle Section

	Axl Ratios	
Mod l	**Sta. Wgns.**	**Others**
Conventional	3 89-1①	3 56-1 ②3 70-1)
Overdrive	4 11-1	3 70-1 ②3 56-1)
Fordomatic	3 56-1	3 10-1 ②3 56-1)

① - 4 11-1 Optl ② - Optional ratio

Backlash - 004- 009"

Axl Shaft R m val: Remove wheel take off drum Remove four axle retainer locking type nuts (work through opening in axle shaft flange) Use Puller No 4235-N and pull axle shaft (do not disturb brake backing plate or damage wheel bearing oil seal) Replace one nut to secure brake backing plate

Carrier Ass mbly R m val: *NOTE* - Pinion carrier assembly can be removed separately without disturbing differential carrier by disconnecting rear universal joint at companion flange and removing five bolts that attach pinion carrier assembly to differential carrier housing With rear universal joint disconnected axle shafts removed (see above) remove differential carrier housing to rear axle housing bolts and lift out carrier assembly

SHOCK ABSORBERS

Direct acting non-adjustable Service by replacement

Model	① Front	① Rear
Pass Cars (Std)	B7A-18124-A	B7A-18125-A
Pass Cars(H D)	B7A 18124-B	B7A-18125-B

Tudor Sedan (Hd Top) Std		B7A-18125-D
Tudor Sedan (Hd Top) H D		B7A-18125-E

① Furnished in kits which include mounting bushing

► *FRONT SHOCK ABSORBER UPPER BUSHING NOTE:* Install bushing with groove seated in frame hole flange and do not dislodge when installing shock absorber

FRONT SUSPENSION

Independent. "Ball Joint" suspension with direct acting shock absorbers.

See "Ford, Lincoln, Mercury, (Ball Joint)" in Suspensions & Wheel Alignment Section

Caster - Pos ½° to Pos 1½° Maximum variation between wheels ½°

Camber - Pos ½° to Pos 1½° ¼° preferred Maximum variation between wheels ½°

Toe-In - 1 16 to 1 8" *NOTE* - When checking toe-in on cars that have power steering, engine should be running so that power steering control valve will be properly centered

Toe-Out on Turns - With outer wheel at 20° inner wheel should be 24¼° (Pass), 25° (Thunderbird)

STEERING

Manual: Own (Gemmer 305 Design). Worm & Roller type

See "Gemmer Worm & Roller" in Steering Section

Power Steering: Ford-Mercury Linkage type Used in conjuction with standard type steering gear

See "Ford & Mercury Bendix Linkage Type" in Steering Section

Pump Belt Adjustment: Install torque wrench on pump pulley bolt Check torque required to slip pulley against belt friction If torque is not 14-16 ft lbs adjustment is required To adjust position a heavy duty 2½" "C" clamp with bottom against lower side of pump support bracket and top of clamp resting on pump bracket at its center Loosen four pump attaching bolts until pump body may be positioned by tightening "C" clamp Tighten "C" clamp until torque of 14-16 ft lbs is required to slide pump pulley *NOTE*- Hold final torque as close as possible to upper limit

Steering Linkage: *See "Steering Linkage" in Steering Section*

Ste ring Whe l & H rn Button Removal: *See "Gemmer Worm and Roller (3-tooth)" in Steering Section*

St ering Gear Rem val: *S e "Gemmer Worm & Roll r (3-tooth)" in Steering Section*

BRAKES

F rd-B ndix Hydraulic. Hand lever applies rear wheel service brakes

► *BRAKE DESIGN NOTE* Front wheel anchor pin (fixed anchor type) is mounted on wheel spindle independently of backing plate (wheel cylinder mounted on anchor pin)

See "Ford, Lincoln, Mercury Bendix" in Brake Section

► *BRAKE PULLING CORRECTION:* To correct, loosen anchor pin attaching bolt (see Brake Design Note above) and retighten bolt to 80-100 ft lbs

Drum Diameter - 11" front and rear

Wheel Cylinder Diameter - 1 1 8" (Front-All) 7 8" (Rear-Pass Cars), 15 16" (Rear-Sta Wgn & Courier)

Lining Specifications (Width & Length)

Model	Primary	Secondary
Pass Car(Front)	2 1/4"x10 62"	2 1/4"x 11 93"
(Rear)	1 3 4"x10 62"	1 3/4"x 11 93"
Thunderbird(Front)	2"x10 67"	2 1 2"x 12 13"
(Rear)	1 3/4"x10 67"	2"x 12 00"
Sta Wgn (Front)	2 1/4"x10 62"	2"x 10 62"
(Rear)	2 1/4"x11 93"	2"x 11 93"

Clearance - Adjusting screw backed off 10-12 notches from point where shoes are tight against drum

Brake Pedal Free Play: 5 16 to 7/16" If play not correct after brake adjustment loosen locknut on eccentric bolt that attaches brake pedal assembly to master cylinder pushrod rotate eccentric bolt

Standard Master Cylinder: On engine side of firewall

Checking Fluid Level - Within ½" of top of reservoir.

Removal - Disconnect rubber boot from rear end of master cylinder brake line at master cylinder fitting stop light switch from front of cylinder and disconnect wires from switch Push down brake pedal several times to force as much fluid as possible (into clean container) remove bolts that secure master cylinder to dash panel Do not disconnect pushrod from brake pedal unless it is to be serviced

Power Brakes: New "Bellows Type" Pedal assist power unit with vacuum bellows and control valves mounted on drivers side of dash panel

See "Ford Bellows Type" in Brake Section

Checking Fluid Level - Within ½" of top of reservoir.

Removal - Remove vacuum hose from top of unit valve adjusting eccentric with flat washer spring and bushing nylon bushing from power unit valve housing Remove two mounting screws (Bracket to dash panel) and remove power unit from car

MISC. MECHANICAL

Windshield Wipers: Cable operated type (exc. Thunderbird), Link & Crank Arm (Thunderbird).

See "Windshield Wipers" in Miscellaneous Section.

Power Window Regulators: Electric type.

See "Electric Window Regulators" in Misc. Section.

Power Top Control: Electric-Hydraulic (Convertible), Electric (Retractable Hard-Top). *See "Power Top Controls" in Miscellaneous Section.*

Power Seat Adjust rs: "4-Way" Electric.

See "Power Seat Adjusters" in Miscellaneous Section.

Air Conditi ning: *See "Polar Aire" or "Select Aire" in Miscellan ous Section.*

MODEL IDENTIFICATION

Truck Model	Model & Serial Code Regular	Light	Heavy
F-100 Conv.	F-10	F-11	
F-250 Conv.	F-25	F-26	
F-350 Conv.	F-35	F-36

C-600 Tilt Cab	C-60	C-61	C-64

VEHICLE NUMBER: Stamped in "Serial No." space on Rating Plate attached to left front cab pillar (no separate Engine No.). This number incorporated the following information in sequence shown (Example *F10J7G10001*)

Serial Code ①	Engine Symbol ②	Year ③	Assy. Plant ④	Serial Number
F 10	J	7	G	10001

① — See Model & Serial Code Table (above).
② — See Engine Identification Note (below).
③ — Last digit of model year (1957).
④ — See Assembly Plant Designation(below).

Assembly Plant Designation

D — Dallas	**K** — Kansas City	**P** — Twin City
E — Mahwah	**L** — Long Beach	(St. Paul)
G — Chicago	**M** — Memphis	**R** — San Jose
H — Detroit	**N** — Norfolk	**U** — Louisville

►*ENGINE IDENTIFICATION NOTE* 6 Cyl. & V8 Engines are used as listed below. For identification in the following Ford Truck data pages, reference is made to these engines by piston displacement, "223 Eng." and "272 Eng.", or as "6 Cyl." and "V8" Engines.

Engine Types

Engine	Model	Displ.	Symbol
6 Cyl.		223 cu. in.	J
V8 ⑤	ECW-272	272 cu. in.	K
V8 ⑥	ECY-272	272 cu. in.	L
V8 ⑦	ECR-272	272 cu. in.	U

⑤ — Light Duty Engine with 2-Barrel Carburetor.
⑥ — Heavy Duty Engine with 2-Barrel Carburetor
⑦ — Heavy Duty Engine with 4-Barrel Carburetor.

TUNE-UP

►***1957 FORD F-100 TRUCK LOW SPEED SURGE CORRECTION (Trucks with 272" Engine & Loadomatic Distributor):*** **This condition may be caused by incorrectly positioned distributor advance springs. Make sure the primary spring (smaller diameter wire) is installed on post furthest from vacuum diaphragm. Adjust primary spring so it is under slight tension and the secondary spring is slack when breaker plate is in full retard position.**

COMPRESSION PRESSURE: At cranking speed

Engine	Compr. Ratio	① Compr. Pressur
6 Cyl.	8.3-1	150 lbs.
V8 (ECW & ECY-272)	8.3-1	160 lbs.
V8(ECR-272)	7.6-1	155 lbs.

①—Plus or minus 10 lbs. & uniform within 10 lbs.

VACUUM READING: (6 Cyl.) 18-19", (V8) 19-20", at idling speed.

VALVE TAPPET CLEARANCE: Can be set with engine cold but must be rechecked with engine at operating temperature (30 minutes minimum operation at 1200 RPM) and engine idling.

Tappet Clearance (Intake & Exhaust)

Engine	Cold	Hot
6 Cyl.	.019"	.019"
V8 (All)	.020"	.019"

►*TAPPET CLEARANCE ADJUSTING SCREW NOTE.* Screws are "self-locking" and torque required to turn screw (after interference noted) must be 3 ft. lbs., minimum, if less than 3 ft. lbs., replace adjusting screw or adjusting screw and rocker arm assembly.

MANIFOLD HEAT CONTROL (Except ECR-272): Automatic thermostatic type. Located at center of exhaust manifold (6 Cyl.), between cross-over pipe and right exhaust manifold (V8 ECW & ECY-272). Install valve assembly with stop pin at top of valve housing

►*MANIFOLD VALVE OPERATION CAUTION:* Valve is closed with engine at normal operating temperature and idling (should open with very light finger pressure on counterweight).

IGNITION
6 CYL. ENGINE

FIRING ORDER: 1-5-3-6-2-4.

SPARK PLUG GAP: .028-.032"
Plugs – Champion 860. 18 mm.

►*SPARK PLUG CAUTION.* Plugs have tapered seat and no gasket is used. Tighten plugs to 15-20 ft. lbs.

COIL: Ford No. B6A-12029-B.
Ignition Current – 2.5 amps. idling, 4.5 amps. stopped.
Resistor – Ford No. B6A-12250-D. 1 30-1 40 ohms.

►*COIL RESISTOR NOTE.* Resistor is connected in lead from ignition switch to coil and is by-passed during cranking by lead from starter switch to battery terminal of coil.

DISTRIBUTOR: Ford No. B7A-12127-C. "Loadomatic" type (same design as previous models).
Condenser – Ford No. 7RA-12300-C. Capacity .21-.25 mfd.
Contact Point Set – Ford No. FAA-12171-A.
Breaker Gap – .024-.026".
Cam Angle – 35-38° at idling speed.
Breaker Arm Spring Tension – 17-20 ozs.
Rotation – Clockwise viewed from above.

Advance Performance
►With Distributor on Test Stand

Distr. Degrees	Vacuum (" of HG)	Distr. RPM
0-½	0.22	500
5½-6½	0 96	1000
9¼-10½	2.09	1500
12-13¼	3.38	2000

►*DISTRIBUTOR REMOVAL & INSTALLATION CAUTION* Scribe mark on distributor to indicate rotor position and housing position on block before removing distributor, align marks when installing distributor. Make certain that oil pump intermediate shaft engages distributor shaft properly.

IGNITION
V8 ENGINES

FIRING ORDER: 1-5-4-8 6-3-7-2.
Cylinders - RIGHT BANK 1-2-3-4, LEFT BANK 5-6-7-8

SPARK PLUG GAP: 028"- 032"
Spark Plug - Champion 860 (ECW & ECY-272), F-10 (ECR-272) No gasket used Torque to 15-20 Ft Lbs

COIL: Ford No. B6A-12029-B.
Ignition Current – 2.5 amps. idling, 4.5 amps. stopped.
Resistor – Ford No. B6A-12250-D (ECW & ECY-272) B7A-12250-A (ECR-272), 1 30-1 40 ohms at 75°F

►*COIL RESISTOR NOTE* See 6 Cyl Note (above)

DISTRIBUTOR: Ford (ECW-272) B6A-12127-A. (ECY-272) B7A-12127-A, (ECR-272) B7T-12127-B, 272 Replacement Distributor B7AF-12127-A Loadomatic type same as used on previous models (ECW & ECR Engs.). New type with separate mechanical and vacuum advance mechanism (ECY Eng.). *For ECY Distributor, see "Ford, Lincoln, Mercury Distributors" in Electrical Section*
Condenser – Ford FAB-12300-A (B6A-12127-A & B7T-12127-B Distr.), B7A-12300-A (B7A-12127-A Distr.).
Capacity .21-.25 mfd.
Contact Point Set – Ford FAB-12171B (B6A-12127-A & B7T-12127B Distr), B7A-12171A (B7A-12127A Distr)
Breaker Gap – .014-.016" (All models).
Cam Angle – 26-28½° at idling speed (All).
Breaker Arm Spring Tension – 17-20 ozs.
Rotation – Counter-clockwise viewed from above.

0-3	0-6	10
6-9	12-18	15
9¼-12¼	18¼-24½	19

① – At 1000 RPM distributor speed.

►*DISTRIBUTOR REMOVAL & INSTALLATION CAUTION See 6 Cyl. Caution (above).*

IGNITION TIMING

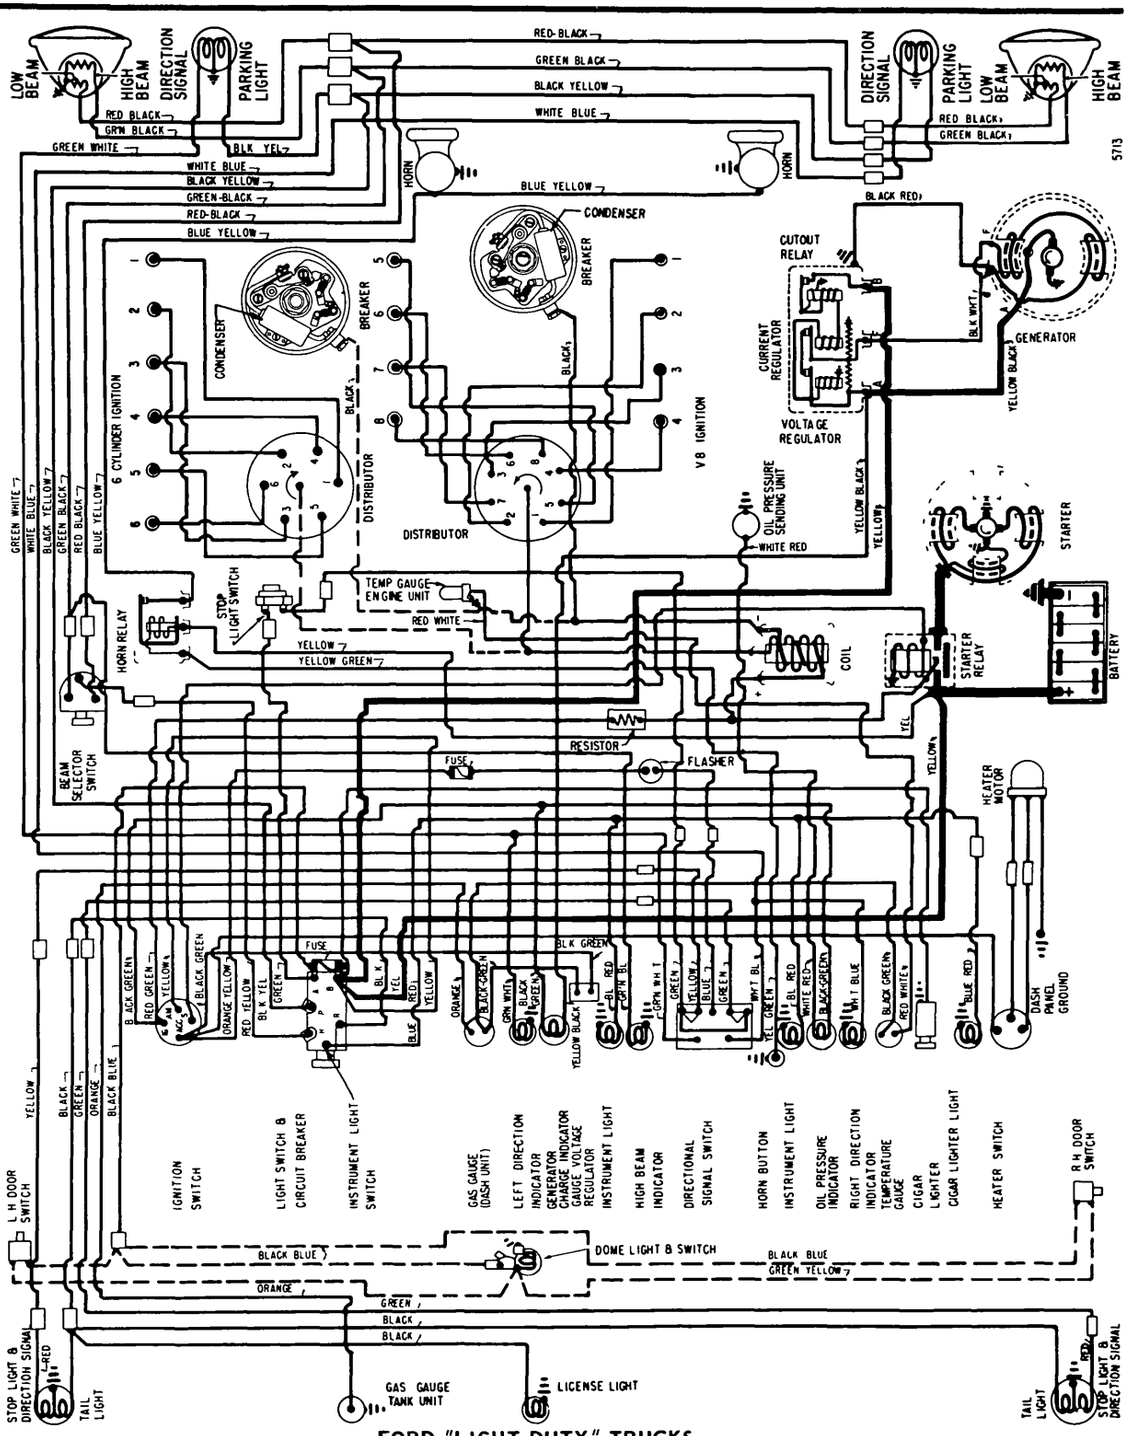
Engine	Std. Ignition Setting
6 Cyl. (Std. & O D.)	4° BTDC
6 Cyl. (Fordomatic)	6° BTDC
V8 ECW-272 (Std.)	8° BTDC
V8-ECW-272 (Fordomatic)	10° BTDC
V8 ECY-272 & ECR-272	10° BTDC

►*TIMING CAUTION* – Set timing with engine idling and with vacuum line disconnected.

Timing Mark (6 Cyl.) – Vibration dampener marked by lines TDC – 3° – 5° – 7° – 9°.

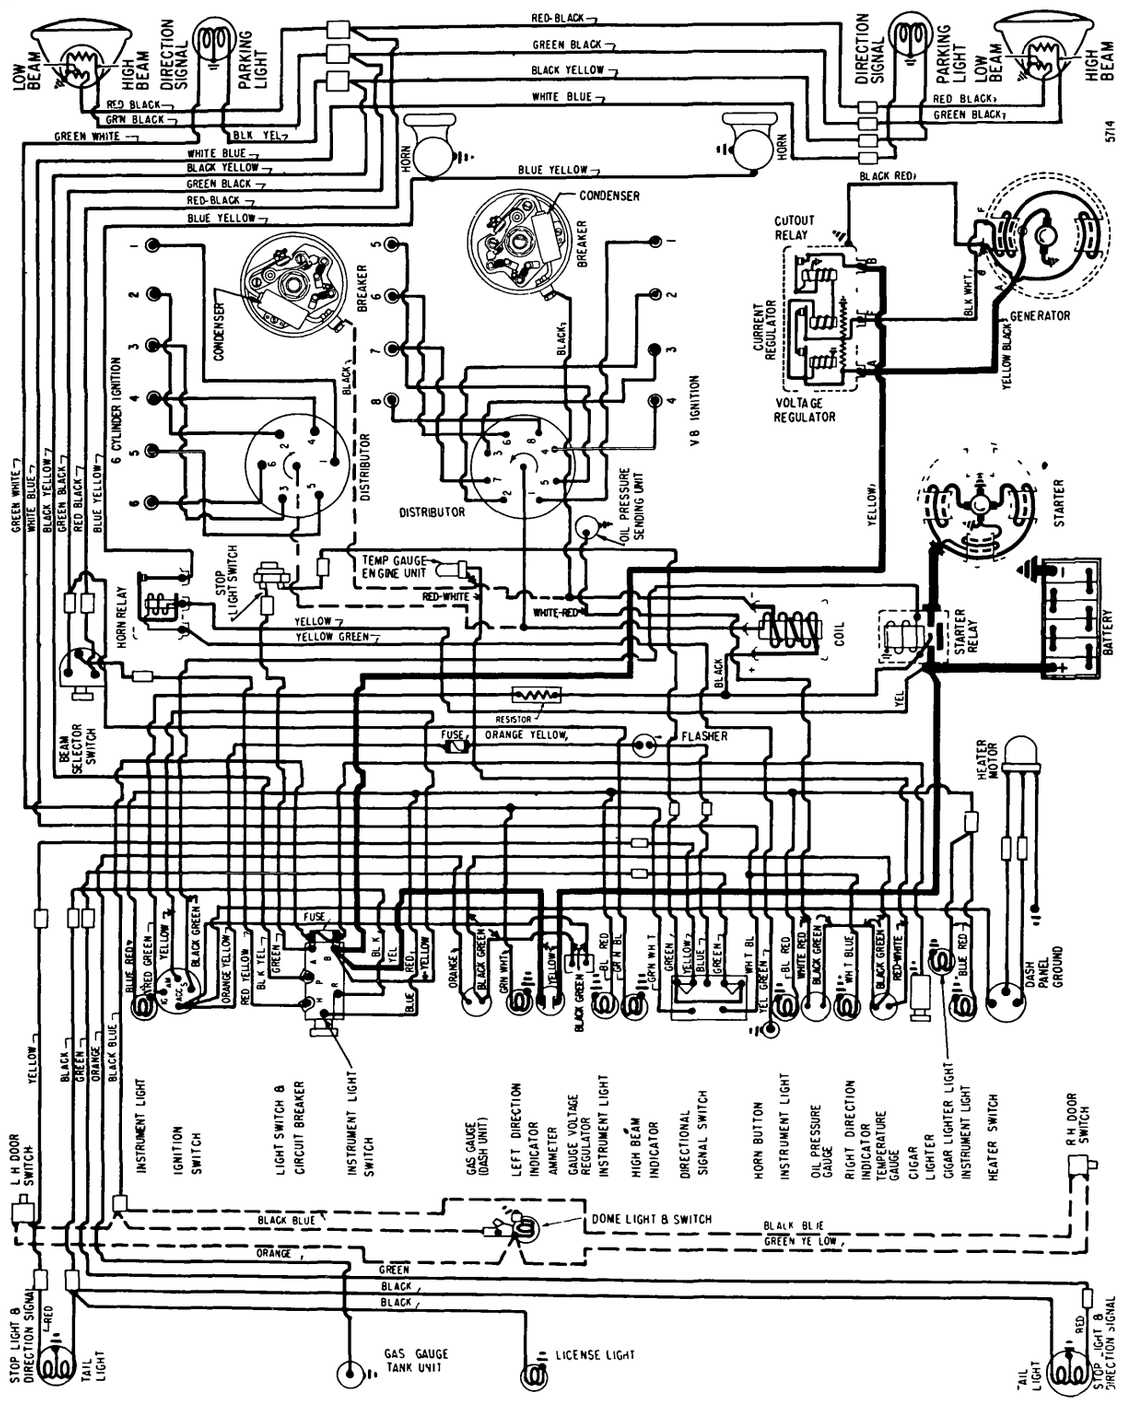
Timing Mark (V8) – Vibration dampener marked by lines TDC – 2° – 4° – 6° – 8° – 10°. Align correct line with pointer on chain case cover.

CARBURETOR



CARBURETOR APPLICATION Ford or Holley carburetors used as follows

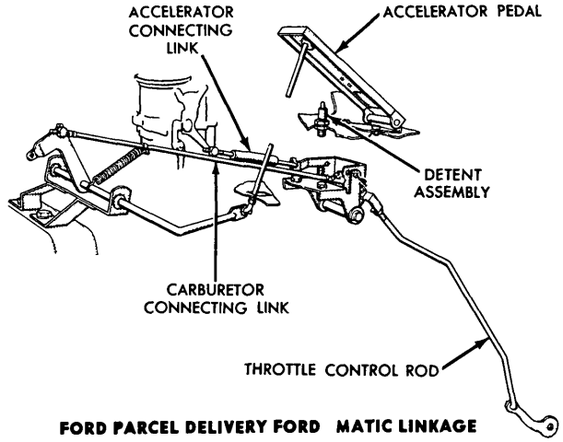
Engin	Carburetor Model
6 Cyl. (Std. & OD)	Holley Single B7C-9510-C
6 Cyl. (Fordomatic)	Holley Single B7A-9510-D
V8 ECW-272(Std &OD)	Holley(Ford)Dual B7C 9510-A
V8 ECW-272(Fordomatic)	Holley(Ford)Dual B7C 9510-B
V8 ECY-272 (Par. Del.)	Holley Dual B7J-9510 A
V8 ECY-272 (Others)	Holley Dual B7T-9510-A
V8 ECR-272	Holley 4-Bbl B7T 9510-C



Throttl Linkage Adjustment (Fordomatic Models): *Same as for corresponding 6 Cyl. & V8 Passenger Cars. See Passenger Car data and also note the following:*

Acc l rat r P dal H ight – With gauging pin installed through holes of accelerator assembly, and carburetor connecting link adjusted so that throttle valves closed with throttle lever stopscrew against stop, accelerator pedal height should be 2 3/4" (6 Cyl & V8 Trucks except Parcel Delivery). Adjust pedal height by changing length of accelerator pedal connecting link On all truck models, accelerator pedal should just contact detent (on toeboard under pedal) when carburetor lever strikes wide-open stop (this is the only pedal height specification for Parcel Delivery models)

CONTINUED ON NEXT PAGE



FORD "LIGHT DUTY" TRUCKS

FORD "HEAVY DUTY" TRUCKS

CONTINUED FROM PRECEDING PAGE

Dashpot Adjustm nt (All Fordomatic Mod ls): After engine idle speed correctly set, turn off engine, loosen dashpot adjusting screw locknut, depress dashpot plunger fully, turn dashpot in or out of bracket until clearance between end of dashpot plunger and lug on throttle lever is .045-.064" (with throttle closed and throttle stopscrew against stop), tighten locknut.

FORD PARCEL DELIVERY FORD MATIC LINKAGE

HOLLEY SINGLE CARBURETOR (6 Cyl. Trucks)

Ford B7C-9510-C (Std. & OD), B7A-9510-D (Fordomatic).

Idle Setting – Initial setting 1½ turns open. With engine at normal operating temperature, turn screw in until engine runs rough, turn screw out until engine begins to roll, finally turn screw in just enough for smooth running (favor slightly rich mixture).

Idle Speed – 475-500 RPM with transmission in neutral. On Fordomatic models, check idle speed with selector lever in Drive "Dr" position. Idle speed in "Dr" must be 425-450 RPM. If not in this range, readjust as necessary.

Float Level: Fuel level in bowl should be 11/16" plus or minus 1/32" below power valve mounting surface on carburetor. Use Gauge T52L-9550-AGE to check fuel level (remove power valve diaphragm cover and power valve assembly, install gauge in this hole). Fuel should touch tip of "Low" pin on gauge but should not touch "High" gauge pin.

Accelerating Pump: Engage pump link in inner hole of throttle lever for average or hot weather operation, outer hole for cold weather operation.

Fast Idle: No adjustment required.

Throttle Linkage & Dashpot Adjustment (Fordomatic Models): *See CARBURETOR above.*

► *OTHER DATA: See "Ford Visi-flo Carburetors" in Carburetion Section*

HOLLEY (FORD) DUAL CARBURETOR (V8 ECW-272 Engine)

Ford B7C-9510-A (Std. & OD), B7C-9510-B (Fordomatic).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

►*CARBURETOR CHOKE VALVE REMAINING CLOSED CORRECTION.* On some early trucks carburetor choke valve may remain closed because fast idle cam and shaft assembly may move sideways To correct, bend end of choke rod lever contacting fast idle pickup arm approximately 10° away from its original position

►*MANIFOLD FUEL DISTRIBUTION Carburetor RIGHT barrel feeds Cyl. 2-3-5-8, LEFT barrel feeds 1-4-6-7.*

Idle Setting – Initial setting 1 turn open (both screws). With engine at normal operating temperature, turn both idle adjusting needles in until engine runs rough from lean mixture, turn needles out until engine begins to roll, finally turn needles in just enough for smooth running (favor slightly rich mixture).

Idle Speed – 475-500 RPM with transmission in neutral. On Fordomatic models, recheck idle speed with selector lever in Drive "Dr" position. Idle speed in "Dr" must be 425-450 RPM. If not within this range, readjust as necessary.

Float Level: 1 437-1 500" from flange surface of air horn to bottom of float (adjacent to soldered seam) and equal for both ends of float with needle valve seated. To check float level, remove air horn and float assembly, invert, place Gauge T56L-9510-A on flange surface of air horn. "Go" leg on gauge (1 500') should slide over bottom of float (not soldered seam), "No Go" leg (1 437") should not clear float.

Accel rating Pump: Three holes provided in throttle lever for pump link engagement **Inner Hole –** Hot weather or high altitudes, **Center Hole –** Average conditions, **Outer Hole –** Extreme cold weather.

Fast Idle: No adjustment required.

Throttle Linkage & Dashpot Adjustment (Fordomatic Models): See *CARBURETOR* above.

►*OTHER DATA See "Holley (Ford Truck) Dual Carburetor" in Carburetion Section*

HOLLEY DUAL CARBURETOR
V8 ECY-272 Engines

Ford B7J-9510-A (Par. Del.), B7T-9510-A (Others). New type "Low Silhouette" dual carburetors.

►*MANIFOLD FUEL DISTRIBUTION· Carburetor RIGHT barrel feeds Cyl. 2-3-5-8, LEFT barrel feeds 1-4-6-7.*

Idle Setting – Initial setting 1-1½ turns open (both screws). With engine at normal operating temperature, turn both idle adjusting needles in until engine runs rough from lean mixture, then turn needles out until engine begins to roll, finally turn needles in just enough for smooth running (favor slightly rich mixture).

Idle Speed – 475-500 RPM with transmission in neutral. On Fordomatic models, recheck idle speed with selector lever in Drive "Dr" position. Idle speed in "Dr" must be 425-450 RPM. If not within this range, readjust as necessary.

Throttle Linkage & Dashpot Adjustment (Fordomatic Models): See *CARBURETOR* above.

►*OTHER DATA See "Holley 2 & 4-Barrel Carburetors" in Carburetion Section*

HOLLEY 4-BARREL CARBURETOR
V8 ECR-272 Engines

Ford B7T-9510-C. New "Low Silhouette" 4-Barrel carburetor with vacuum diaphragm control of the secondary throttle valves.

►*DEPOPPER VALVE OPERATION NOTE·* All trucks equipped with this carburetor have depopper valve made inoperative by plugging air inlet passage between secondary venturis next to air cleaner stud hole boss to improve idle characteristics Remove plug if depopper needed and a higher idle RPM can be maintained

Idle Setting – *NOTE - Idle system provided for all four barrels (primary & secondary). Idle mixture adjusting needles used only on SECONDARY side (one on each side of Fuel Metering Block).* Initial setting 1-1½ turns open (both screws). With engine at operating temperature, turn both screws in until engine runs rough from lean mixture, then turn screws out until engine begins to roll, finally turn screws in just enough for smooth running (favor slightly rich mixture).

Idle Speed – 475-500 RPM with transmission in neutral. *NOTE* – Idle speed screw located on Throttle Operating Housing adjacent to throttle lever.

►*OTHER DATA See "Holley 2 & 4-Barrel Carburetors" in Carburetion Section*

FUEL PUMP PRESSURE: 3.5-5.5 lbs. at 500 RPM.

CARB. EQUIPMENT

Fuel Pump: AC. Fuel only or Fuel & Vacuum types (Std.). *NOTE* - Electric type Optl.

Model	Ford Pump No.
223 Eng. Fuel only	B5A-9350-A
272 Eng. (TH,WH) 4-Bbl. Carb. Fuel & Vac.	B6T-9350-A
272 Eng. (THZ,WHZ) Fuel only	B7T-9350-A
272 Eng. Others 2-Bbl. Carb.	B6C-9350-A

Pressure - 3.5-5.5 lbs. (mechanical diaphragm types), 3 5-7 lbs. (electric type).

See "Fuel Pumps' in Carburetion Section.

Gasoline Gauge: New King-Seeley Electric Constant voltage ("CV") type with gauge voltage regulator, Ford No. B7J-10804-A (J,JH,JL), B7A-10804-B (Others).

Dash Unit - Ford No B7C-9280-A.

Tank Unit - Ford No. B6A-9276-A.

See "Fuel Gauges" in Carburetion Section.

Air Cleaner: DRY FILTER ELEMENT type. Clean every 12,000 miles, replace element every 36,000 miles.

►*CLEANING CAUTION* Clean filter element by tapping and shaking to remove dirt particles. *DO NOT wash element in solvent or other liquids and DO NOT oil or lubricate.*

BATTERY

Ford No. B6A-10655-C. 12 volt, 11 plate, 55 Ampere Hour Capacity **Ford No. B7A-10655-A.** 12 volt, 11 plate, 70 Ampere Hour Capacity. **Ford No. B6A-10655-E.** 12 volt, 13 plate, 70 Ampere Hour Capacity (20 hr. rate).

Grounded Terminal - Negative to engine block.

Engine Ground - At flywheel housing.

STARTER

Ford B6A-11002-A. Armature - B6A-11005-B.

Drive - Ford LCM-11350-C. Bendix "Folo-Thru".

Rotation - Counterclockwise at commutator end.

Brush Spring Tension - 48-56 ozs.

Cranking Speed - 150-180 RPM, 190 amps. max

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	①	12.0	80 max.
15 5 ft. lbs.		5.0	550 max.

① - If starter on engine, engine must be idling.

Starting Switch: Magnetic type, Ford No. B6A-11450-A Starter switch controlled by ignition switch. *NOTE* - Neutral Safety switch used on Fordomatic transmissions.

Fordomatic Neutral Safety Switch: Ford No. FAC-15812-C.

Adjustment - *See "Fordomatic & Mercomatic" in Transmission Section.*

GENERATOR

Ford. Used as follows

Generator No.	Armature No.	Application
B6A-10002-C	B6C-10005-B	6 & 8 (30 Amp)
B6A-10002-F	B6C-10005-C	6 Cyl. (40 Amp)
B6A-10002-E	B6C-10005-C	V8 (40 Amp)

Performance Data

Generator	Amperes	RPM
B6A-10002-C	30	1500
B6A-10002-E, F	40	1500

Brush Spring Tension – 26-34 ozs.

Field Current – 1 4-1 6 amperes at 12.0 volts.

Rotation – Counter-Clockwise at commutator end.

Belt Adjustment: ¼" deflection (6 Cyl.), ½" deflection (V8) midway between generator and water pump pulleys with light thumb pressure.

REGULATOR

Ford B6C-10505-B (B6A-10002-C Gen.). B6A-10505-B (B6A-10002-E & F Gen.). *See "Ford, Lincoln, Mercury 12 Volt Regulators" in Electrical Section.*

►*SETTING CAUTION "Temperature Compensated" type. Set to following specifications at 75°F ambient (engine compartment) temperature, after ½ hour operation or after regulator heated and stabilized.*

Cutout Relay

Cuts In - 12.0-12.8 volts.

Voltage Regulator

Setting - 14.6-15.4 volts at 75°F (ambient).

Checking & Adjusting - *See Electrical Section.*

Current Regulator

Setting - 28-32 amperes (B6C-10505-B), 38-42 amperes (B6A-10505-B).

Checking & Adjusting - *See Electrical Section.*

MISC. ELECTRICAL

Headlamps - Sealed Beam. *See Electrical Section.*

Directional Signals: *See Electrical Section.*

Lighting Switch Removal: With control knob in the "OFF" position, press the spring release button on switch housing, turn shaft slightly and pull it out of switch. Unscrew mounting nut, remove switch.

Stop Light Switch Location: On brake master cylinder, Power Unit Assembly or fitting on frame side rail. Master Cylinder located on firewall (Conventional Trucks), and on bracket attached to left frame member below brake pedal (Other).

LIGHTING CIRCUIT BREAKERS: Two used in lighting switch. One circuit breaker protects headlight circuit, other circuit breaker protects instrument, parking, stop, and tail light circuits.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

FUSES: **Interior lights** - 7.5 amps. On lighting switch.
Dir ctional Signals - 7.5 amps. in flasher lead.
Overdrive - 15 amps. On Overdrive Relay.
Heater - 7.5 amps. In switch lead.
Clock - 3 amps. In clock lead.
Horn Relay: Ford No. B7A-13853-A.

ENGINE

ENGINE SPECIFICATIONS: 6 Cyl. 223" Eng. (EBR, EBS,EBT), and V8 272" Eng. (ECW,ECY, and ECR Heavy Duty). All engines are overhead valve type.

Engine	Bore	Stroke	Displacement
223	3.62"	3.60"	223 Cu. ins.
272	3.62"	3.30"	272 Cu. ins.

Engine	Compr. Ratio	Rated HP	Developed HP
223	8.3-1	31.5	139 at 4200 RPM
ECW-272 ①	8.3-1	41.9	171 at 4400 RPM
ECY-272 ①	8.3-1	41.9	181 at 4400 RPM
ECR-272 ②	7.6-1	41.9	178 at 3800 RPM

① - 2-Bbl. Carb. ② - 4-Bbl. Carb.

CYLINDER HEAD: *See Ford Special Data.*

TIGHTENING TORQUES: *See Ford Special Data.*

ENGINE REMOVAL: *See Ford Special Data.*

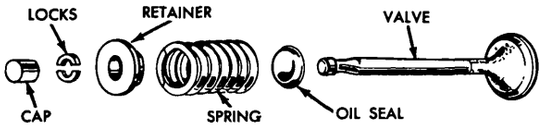
OIL PAN REMOVAL (223" Engine): Drain crankcase, remove oil dipstick. Remove left and right front engine splash aprons. Remove flywheel housing inspection cover. Take out oil pan retaining screws and remove oil pan.

OIL PAN REMOVAL (272" Engine): Drain crankcase. On Fordomatic models, remove converter housing dust cover. Disconnect oil pump inlet tube at oil pump and remove "0" ring seal from pump end of tube. On Tilt Cab Trucks, crank engine until No. 1 piston is on TDC. Remove oil pan retaining screws, remove pan.

223" 6 CYL. ENGINES
(See Engine Specifications Above)

See 1957 Ford 6 Cyl. Passenger Car Pages. Engine is similar to those used in 1957 Pass. Cars, and all passenger car engine data applies to truck engines.

272" V8 ENGINES
(See Engine Specifications Above)



See 1957 Ford V8 Passenger Car Pages. Engine is similar to those used in 1957 Pass. Cars, and all passenger car engine data applies to truck engines EXCEPT AS NOTED BELOW.

CRANKSHAFT: Bearings – Copper lead bearings only used in ECR-272 Engine.

VALVES (ECR-272 ENGINE) Exhaust valves are Sodium Cooled "Free Turning" type with special specifications as follows: Stem Diameter–.4343–.4350". Stem Clearance – .0018"-.0032" (Wear limit .0055"), Valve Seat Width – .070-.090" (Intake), .090-.110" (Exhaust).

Valve Cap Clearance (ECR-272 Exhaust Valves) – .0002-.004" between end of valve stem and inner face of cap (necessary to insure cap carrying valve spring pressure and permit rotating of valve). Measure with Micro Gauge, Tool 6513-CE-2. If clearance greater than .004", reduce clearance by lapping open end of cap on flat surface.

►*EXHAUST VALVE CAUTION (ECR-272 H.D. ENGINE):* Exhaust valves are Sodium cooled and require special disposal handling to prevent possibility of fire or explosion due to chemical reaction. DO NOT DISCARD SODIUM COOLED VALVES with other scrap material. Bury in ground not subjected to excavation or in deep water not subjected to dredging.

FORD V8 ECR-272 VALVE ASSY.

EXHAUST VALVE INSERT (ECR-272 ENGINE): *See "Valve System" in Ford Special Data.*

VALVE TIMING: Cam lift specifications for valve timing points differ from Pass. Car engines. Use Pass. Car Valve Timing Check procedures but note special Cam Lift data following:

Valve Timing (All 272" Engines)

Intake Valves - Open 18° ② BTDC. Close 58° ④ ALDC.
Exhaust Valves - Open 66° ① BLDC. Close 10° ③ ATDC.
Cam Lift - ① .014", ② .015", ③ .017", ④ .018".

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Ford Special Data.*

Crankcase Capacity: 6 qts. (ECR-272 Eng.) 5 qts. (Others). Add 1 qt. with filter change.

Normal Oil Pressure: 45-50 lbs. at 2000 RPM (Hot).

Pressure Regulator Valve - In oil pump body. Not adjustable.

Oil Pressure Indicator: Warning Light (F-100, 250, 350, 500, 600). King-Seeley Gauge (P-350, 400, 500; B-500, 600).

Dash Unit - Ford No. B7J-9273-A (Parcel Delivery), B7T-9273-A (Others).

Engine Unit - Ford No. B7T-9275-A.

See "King-Seeley Gauges" in Miscellaneous Section.

Oil Pump: Gear type pump mounted inside crankcase in line with distributor shaft (223 Eng.), rotor type located on left side of crankcase and driven by distributor shaft (272 Eng.).

Pump Removal & Overhaul - *See "Oil Pump" in Ford Special Data.*

Oil Filter: Full-flow (Std. Equip.), with pressure relief valve in center bolt. Replace filter element at 4000 mile intervals or when oil becomes dirty or polluted.

Replacement Filter Element - Ford No. B2A-6731-A (Kit includes new gasket).

►*CAUTION:* This special Full-flow filter element must be used for replacement (use of bypass type element would restrict oil flow and result in insufficient engine lubrication).

►*FILTER INSTALLATION CAUTION & OIL LEAK CORRECTION: See "Oiling System" in Ford Special Data.*

Crankcase Ventilation: Filter in oil filler cap (inlet) all models. Road draft outlet pipe for crankcase ventilation all models. *NOTE* - V8 engine has filter screen in road draft outlet tube. Service filler cap by cleaning with solvent and resaturating with engin oil at 4000 mile intervals, clean screen in road draft outlet tube at same mileage.

COOLING

►*LOSS OF COOLANT CORRECTION:* Lower generator mounting bracket bolt holes are tapped into cylinder water jacket. For loss of coolant at this point or when replacing bolts, apply a good coating or waterproof sealer.

Water Capacity: (6 Cyl. exc. Par. Del.) - 18 qts. (6 Cyl. Par. Del.) - 18½ qts.
(V8 F-100, 250, 350) - 18 qts. (V8 F-350 Dual Rear Whls, F & B-500, F & B-600) - 22 qts.
(V8 P-350 Single Rear Whls.) - 22 or 23 qts., (V8 P-350 Dual Rear Whls. , P-400, 500) - 27 qts.
(V8 C-550, 600) - 28 qts. Add 1 qt. for heater.

Pressure Valve: Ford No. OL-8100-A, radiator filler cap (opens at 7 lbs.).

Thermostat: 223 Eng. - Ford No. EAA-8575-A (157-162°), EAA-8575-B (177-182°).
272 Eng. - Ford No. B4C-8575-A (152-157°), B4C-8575-B (167-172°). Spring and cartridge type.

Water Pump: Packless, sealed ball bearing type. *See "Water Pump" in Ford Special Data.*

Temperature Gauge: New King-Seeley Electric Constant-voltage ("CV") type with gauge voltage regulator, Ford No. B7J-10804-A (J,JH,JL), B7A-10804-B (Others).

Dash Unit - Ford No. B7J-10883-A (J,JH,JL), B7C-10883-A (Others).

Engine Unit - Ford No. B7A-10884-A.

See "Temperature Gauges" in Miscellaneous Section.

CLUTCH

Long 10, 10½, & 11CF clutches used. For Truck Model (with type Trans.) application of Cover and Disc. See below.

Model	Long No.-C v r Assy.-Ford No.
6 Cyl. 223" Eng. ①	L5222 ... B4A-7563-B
6 Cyl. 223" Eng. ②	267371 ... B7C-7563-A
V8 272 Eng. ③	L5222 ... B4A-7563-B
V8 272 Eng. ④	267371 ... B7C-7563-A
6 Cyl. & V8 (Others) ⑤	267147 ... B7Y-7563-A

Model	Long N - Disc - F rd N .
6 Cyl. 223" Eng. ①	CD870 ... B7C-7550-A
6 Cyl. 223" Eng. ②	287335 ... B7C-7550-B

① - F100, 250, 350; P350 (10CF).
② - F100, 250 (EBR); P350 (10½CF).
③ - F100 3-Speed L.D. Trans.; Overdrive (10CF).
④ - F100, 250 (ECW); P350 (10½ CF).
⑤ - 11CF.
⑥ - All 6 Cyl.; 272" Eng. (F100, 250; P350 with Std. Trans.); 272" Eng. (F100, 250 with 4-Speed Trans.); 272" Eng. (F350).

►*HEAVY DUTY CLUTCH DISC:* Heavy Duty Clutch Disc Ford No. B6D-7550-A entered production Jan. 1957 and identified by gray painted damper springs and yellow paint on hub.

Clutch Pedal Clearance: Adjust pushrod eccentric bolt on clutch pedal (Conv. Trucks) or extension rod (Par. Del.) for ¼" free travel at pedal pad before pushrod contacts master cylinder piston.

Clutch R lease L v r Cl aranc - Adjust clearance be-

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

tween slave cylinder pushrod adjusting nut and release lever to ¼" (six turns of adjusting nut).

Hydraulic Clutch C ntrol: Master cylinder mounted on firewall (Conv. Cab), on bracket on firewall (Tilt Cab), and connected to Slave Cylinder which is attached to flywheel housing and connected to outer end of clutch release lever.

Filling Mast r Cylind r - Maintain fluid level (H D. Brake Fluid) to within ½" below top of cylinder reservoir. Change fluid at 15,000 mile intervals.

R m val - Release retracting spring. Remove slave cylinder from flywheel housing, slave cylinder pushrod from release lever. Remove trans. (see Trans. Removal below), dust cover from flywheel housing, release bearing and hub from release lever. Mark pressure plate, cover assembly and flywheel for reassembly. Remove pressure plate and cover assembly to flywheel bolts gradually to reduce spring tension, remove assembly through bottom of clutch housing.

SYNCHRO-MESH TRANSMISSION

3-SPEED (LIGHT DUTY)

Own. 3-speed, all helical gear, constant mesh, synchro-mesh (second and high), sliding gear (low and reverse). Steering column shift standard.

Se "Ford Truck 3-Speed (Light Duty)" in Transmission Section.

Rem val: Drain lubricant, disconnect speedometer cable and drive shaft and gear shift linkage at transmission. *(NOTE* - On band type parking brake, disconnect brake cable clevis and remove cable support bracket). Remove flywheel housing-to-transmission bolts and nuts, draw transmission to rear to clear flywheel housing and lower transmission.

3-SPEED (MEDIUM DUTY)

Own. 3-speed medium duty with steering column shift standard. *See "Ford Truck 3-Speed (Medium Duty)" in Transmission Section.*

R m val: Same as for 3-Speed (Light Duty) above.

3-SPEED (HEAVY DUTY)

Own. 3-speed, helical gear (second & high), spur gear (low & reverse), constant mesh, synchro-mesh (second & high), sliding gear (low & reverse). Steering column shift standard.

See "Ford Truck 3-Speed (Heavy Duty)" Transmission in Transmission Section.

Rem val· Same as for 3-Speed (Light Duty).

4-SPEED

Own. 4-Speed, constant mesh, synchro-mesh (second, third, & high). Helical gears used for second, third, & high. Spur gears used for low & reverse. Floor mounted gear shift standard.

S e "Ford Truck 4-Sp ed (Synchro-mesh) Transmission" in Transmission Section.

R m val: Same as 3-Speed (Light Duty) and note following If hoist not used, it may be necessary to remove gear shift lever assembly (New Process) and lever housing (Others), before transmission can be removed from truck. *(NOTE* - On Tilt-Cab - release lock and tilt cab forward) Disconnect shift linkage at split pin which attaches universal joint to finger socket shaft in rear cross shaft housing Drain transmission, disconnect drive shaft at parking brake drum If truck equipped with coupling shaft support, disconnect support bracket, and remove coupling shaft. Disconnect parking brake and speedometer cables. Remove dust cover from bottom of clutch housing, support transmission on jack, remove two top nuts, two bottom bolts, move transmission to rear until input shaft splines clear clutch housing and lower transmission.

OVERDRIVE

Warner Model R10. Solenoid operated with governor control and throttle operated kickdown.

See "Warner R10 Overdrive" in Transmission Section.

Overdrive Controls: *See "Overdrive Controls" in Transmission Section.*

Removal: Same as 3-Speed Synchro-mesh Transmission (above), after disconnecting control cable and wiring.

FORDOMATIC TRANSMISSION

Torque converter and three speed automatic transmission with hydraulic control and mechanical parking lock. *See "Fordomatic & Merc-O-Matic" in Transmission Section.*

► *PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION See "Fordomatic & Merc-O-Matic" in Transmission Section.*

► *TESTING & TROUBLE SHOOTING. See "Fordomatic & Merc-O-Matic" in Transmission Section.*

Lubrication - Check transmission fluid level every 1000 mile intervals, maintain level at "F" (full) mark on dipstick. Drain and refill every 15,000 miles. Use only Automatic Transmission Fluid Type "A".

Checking Fluid Level: Bring transmission to operating temperature by idling engine (operate with selector lever in "N" for 4 minutes, in "P" for remainder of time). With transmission warm, move selector lever through all positions, then check fluid level with selector lever in "P" Add Automatic Transmission Fluid Type "A" to bring level to "F" mark on dipstick.

Throttle Linkage Adjustment (Fordomatic Models)· *See CARBURETOR above.*

► *OTHER FORDOMATIC SERVICE DATA See "Fordomatic & Merc-O-Matic" in Transmission Section.*

UNIVERSALS

Spicer. Needle bearing type.

► *UNIVERSAL JOINT INSTALLATION CAUTION* Make sure that all universal joint yokes in drive line are in same plane to avoid drive line vibration.

Coupling Shaft Center Bearing· Consists or cushion mounted ball bearing bolted to underside of frame intermediate cross member. Bearing is mounted on end of coupling shaft in a sleeve with felt retainer on each end a id bearing baffle on front end

REAR AXLE

SEMI-FLOATING

Own. New Separate Carrier, hypoid gear, with Hotchkiss drive.

See "1957 Ford & Mercury" in Rear Axle Section.

Ratios - 3 70 (37-10), 3 89 (35-9), 4 11 (37-9)
Backlash - 004- 009".

Axl Shaft Removal Remove wheel, take off drum Remove four axle retainer locking type nuts (work through opening in axle shaft flange) Use Puller No 4235-N and pull axle shaft (do not disturb brake backing plate or damage wheel bearing oil seal). Replace one nut to secure brake backing plate.

Carri r Ass mbly Removal: *NOTE* - Pinion carrier assembly can be removed separately without disturbing differential carrier by disconnecting rear universal joint at companion flange, and removing five bolts that attach pinion carrier assembly to differential carrier housing. With rear universal joint disconnected, axle shafts removed (see above), remove differential carrier housing to rear axle housing bolts and lift out carrier assembly.

Wheel Bearing Adjustment: None required.

FULL FLOATING

Full floating, Hypoid gear, with Hotchkiss drive.

Model	Rear Axle Type
F-250,P-350 (Spicer Model 60)	Integral Housing
350;600 Series	Banjo Housing

See Various types of Ford Rear Axles in Rear Axle Section.

Rear Axle Ratios

Model	Axle Ratios
F-250, P-350	4.56(41-9),4.88(39-8),5.88(47-8) ④
F-350, P-350,400	4.86(34-7),5.14(36-7),5.83(35-6) ⑤
F,P,B-500	6.2(31-5),6.8(34-5) ⑥
F,P,B-500, C-550	5.83(35-6),6.2(31-5),6.8(34-5) ⑥
F,B,C-600	6.2(31-5),6.8(34-5),7.2(36-5) ⑥

Backlash - ④ -.008-.013". ⑤ -.004-.018". ⑥ -.006-.012".

Axle Shaft Replacement: Remove axle shaft stud nuts and lockwashers. Strike center of axle shaft flange with a hammer and drift to loosen tapered dowels, then remove dowels. Pull axle shaft from housing. To reinstall, place gasket in position on housing and install axle shaft. Install tapered dowels, lockwashers and nuts on studs. Tighten nuts to 50-70 ft. lbs.

Axle Assembly Removal (Integral Housing): Loosen wheel and axle shaft stud nuts, disconnect rear shock absorbers, raise rear of frame until weight is off springs. Disconnect flexible hydraulic line at frame, parking cable (if so equipped) at equalizer, remove cables at brackets. Disconnect rear universal joint at flange, remove spring "U" bolts, roll rear axle from under truck and drain lubricant.

Carrier Removal (Banjo Housing): Remove axle shaft stud nuts and lockwashers, strike center of axle shaft flange with hammer and punch to loosen tapered dowels, remove dowels and axle shaft. Disconnect drive shaft at rear universal joint flange, support carrier assembly with roller jack, remove carrier to housing bolts and lockwashers. Tighten puller screws (when provided in carrier) to loosen carrier from housing, roll carrier from truck.

Wheel Bearing Adjustment· Remove axle shafts (see above), use special bearing adjusting wrench and remove bearing locknut (outer nut), and lockwasher Adjust bearings by turning bearing adjusting nut (inner nut) up until tight then backing off 1/8 turn Install bearing lockwasher *(NOTE* - If adjusting nut equipped with dowel, make sure lockwasher fits over dowel) Install bearing locknut and draw nut up tight If flange type lockwasher is used, bend one flange over adjusting nut

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

and one flange over locknut. Install axle shaft and lower vehicle.

TWO-SPEED

Own. Electrically operated shift, Two-speed, Full-floating spur gear planetary unit (reduction gearing). Spiral bevel gear final drive.
See "Ford Truck Two-Speed" in Rear Axle Section.
Ratio - 5.83-1 (Direct Speed), 8.11-1 (Second Speed); 6.33-1 (Direct Speed), 8.81-1 (Second Speed).
Backlash - .006-.016".
Removal: Same as for standard axle (above) after removal of wiring harness.

SHOCK ABSORBERS

Direct acting hydraulic. Shock absorbers are sealed units and are not adjustable or refillable.
► *REPLACEMENT SHOCK ABSORBER NOTE* Shocks are supplied for service replacement in kits consisting of shock absorber and necessary bushings.

Replacement Shock Absorbers

Model	Front - Ford Nos. - Rear
F-350	B7C-18124-A B3Y-18125-A
F-100,250	B7C-18124-A B7C-18125-A
P-350,400	B7J-18124-B ①B7C-18125-A
P-500	B7J-18124-A ②B7J-18125-A
F,B-500	B7T-18124-A ①B7J-18125-A
P-350	B7J-18124-B ②B3T-18125-A
F,B-500,600	B7T-18124-A ②B3T-18125-A
C-550-600	B7T-18124-B ②B3T-18125-A

① - Single Speed Axle. ② - Two Speed Axle.

FRONT SUSPENSION

Conventional "I" beam section front axle with Reverse-Elliot ends and semi-elliptical springs.
Kingpin Inclination - 5½° - C-550,600, P-500 (154" W.B.). 4° - Others.

Caster ①	Specification
F-100,250	3° ± ½°
P-350	4° ± 1°
P-400, P-500(137" W.B.), F-500(130" W.B.)	3° ± 1°
C-550,600	3° ± 1°
F-350	3¾° ± 1°
F-500 (154" W.B.), F-600, B-500, B-600	4½° ± 1°
P-500 (154" W.B.)	3½° ± 1°

① - Maximum variation between wheels ½°.
Camber - 0-1°. Maximum variation between wheels ¼°.
Toe-In - 0-1/16". *NOTE* - On Power Steering models, run engine so hydraulic pressure will center power control valve.

STEERING

Own. Gemmer design. Worm-and-roller types with push-pull adjustment. *NOTE* - Tilt Cab steering column has universal joint.
See "Gemmer Worm & Roller Types" in Steering Section.

Steering Linkage: *See "Steering Linkage" in Steering Section.*
Steering Wheel & Horn Button Removal: *See "Gemmer Worm & Roller" in Steering Section.*
Steering Gear Removal: *See "Gemmer Worm & Roller" in Steering Section.*

BRAKES

Brake types are listed in application table below. Hand lever applies rear wheel service brakes on F-100, F-250, and P-350 trucks. Independent transmission mounted drum and contracting band type brake on other models.

Brake Type Application

Model	Front	Rear
F-100	Duo-Servo	Duo-Servo
F-250,F,P-350,400	Uni-Servo	Duo-Servo
C-550,600	Uni-Servo	Two Cyl.
F,B,P-500, F,B-600	Uni-Servo	Two Cyl.

Uni-Servo - Ford-Bendix. Single anchor. Wheel cylinder actuates primary shoe. Ratchet adjusting screw.
See "Ford-Bendix Uni-Servo Hydraulic" in Brake Section.
Duo-Servo - Ford Bendix. Single anchor, self energizing wheel cylinder actuates both shoes. Ratchet adjusting screw.
See "Ford-Bendix Hydraulic" in Brake Section.
Two-Cylinder Type - Two wheel cylinders in each brake assembly.
See "Ford Truck Two-Cylinder" in Brake Section.

Brake Lining

Model	Drum Diam.	Primary Width-Length	Secondary Width-Length
F-100) Front	11"	2"-11 91"	2"-11.91"
6 Cyl.) Rear	11"	1¾"-11.91"	1¾"-11.91"
F-100) Front	11"	2"-11.91"	2"-11.91"
V8) Rear	11"	1¾"-11.91"	1¾"-11.91"
F-250) Front	12 1/8"	2"-11.65"	2"-13.12"
P-350) Rear	12 1/8"	2"-11 65"	2"-13.12"
F-350) Front	12 1/8"	2"-11.65"	2"-13.12"
P-400) Rear	13"	2½"-12.72"	2½"-14.00"
P-500) Front	13"	2¼"-12.70"	2¼"-12.95"
Rear	14 1/8"	3½"-14.45"	3½"-14.45"
F,B-500) Front	13"	2¼"-12.70"	2¼"-12.95"
F,B-600) Rear	15"	4"-15.31"	4"-15.31"
C-550) Front	14"	2½"-13.65"	2½"-15.02"
C-600) Rear	15"	4"-15.31"	4"-15.31"

Hand Brake: **(F-100,250; P-350)** Eliminate slack in cables after adjusting service brakes. *See "Ford-Bendix Hydraulic" in Brake Section.*

(Except F-100,250; P-350) External contracting type, consisting of a brake drum bolted to transmission main shaft companion flange, and an external contracting band mounted on rear of transmission.

Brake Drum Diameter - 8" (F-350), 9½" (THZ, WHZ 4-Speed Trans.), 7 13/16" (All Others).

Adjustment - On cable controlled parking brakes, move lever to full released position. On transmission mounted parking brake levers, set lever to first notch. Observe position of cam to make sure flat portion is resting on brake band bracket. If cam not flat with bracket, remove clevis pin from upper part of cam, adjust clevis rod to allow flat portion to rest on brake band bracket. Install clevis and cotter pins. Remove lock wire from anchor adjusting screw, turn adjusting screw clockwise until .010" clearance is established between brake lining and drum at anchor bracket. Loosen locknut on adjusting screw from lower half of brake band. Adjust for .010" clearance between lining and drum at lower half of brake band. Tighten locknut. Turn upper band adjusting rod nut until .010" clearance is established between upper half of band and drum. Reinstall lockwire in anchor adjusting screw.

Hand Brake Lining

Series	Length	Width	Thickness
F-350	24.63"	2.00"	.156"
P-350,400,500;C-550,600	①	2.50"	.250"
F-500,600,B-500,600	24.63"	2.50"	.250"

① - Two 7.89" and one 7.30".

Standard Master Cylinder: Located on engine side of firewall.
Checking Fluid - Maintain fluid level to within ½" of top of reservoir.

Removal - Disconnect rubber boot from rear end of master cylinder, brake line at master cylinder fitting, stop light switch from front of cylinder and disconnect wires from switch. Push down brake pedal several times to force as much fluid as possible (into clean container) remove bolts that secure master cylinder to dash panel. Do not disconnect pushrod from brake pedal unless it is to be serviced.

Power Brakes: Midland (Diaphragm) or Hydrovac (Piston) types used. *See Model Application following:*

Model	Power Brake	Ford No.
C	Midland Diaphragm	AD-2005-A
D,Y	Hydrovac Piston	B7D-2005-A
J,JL	Hydrovac Piston	B4D-2005-A
JH,T,TH,THZ	Midland Diaphragm	TEAA-2005-B
W,WH,WHZ	Midland Diaphragm	B7T-2005-A

See "Midland" or "Hydrovac" Power Units in Brake Section.
Checking Fluid - Same as for Manual Brakes above.
Removal of Power Unit - (Hydrovac) - Depress brake pedal several times to remove all vacuum from system. Loosen brake power unit inlet tube clamp and remove tube. Disconnect master cylinder to power unit hydraulic line at power unit. Disconnect vacuum tube at power unit. If stop light switch located on brake power unit, disconnect wires. Remove mounting bracket bolts and power unit.

(Midland) - Depress brake pedal several times to equalize air pressure at both sides of diaphragm in booster unit. Loosen slave cylinder clamp and disconnect the air breather hose from the booster. Disconnect Hydraulic lines at booster and intake manifold to booster vacuum hose at booster. Remove booster. *NOTE* - Do not remove breather in cab or controls mounted in engine compartment unless operating conditions indicate repairs are necessary.

MISC. MECHANICAL

Windshield Wipers: Vacuum Link and Arm (Exc. H.D. and Tilt Cab models). Electric (H.D. and Tilt Cab models).
See "Windshield Wipers" in Miscellaneous Section.

MODEL IDENTIFICATION

SERIAL NUMBER: Stamped on patent plate attached to left door post. *NOTE* - Number (example below) includes identification data as indicated

① ② ③ ④ ⑤
A 8 F G 100001

① - Engine Type (A - 6 Cylinder).
② - Year (1958)
③ - Assembly Plant, see below.
④ - Body Style, see below.
⑤ - Consecutive unit number

Assembly Plant Designation

A - Atlanta	F - Dearborn	N - Norfolk
B - Buffalo	G - Chicago	P - St. Paul
C - Chester	K - Kansas City	R - San Jose
D - Dallas	L - Long Beach	U - Louisville
E - Mahwah	M - Memphis	

Body Style

C - Convertible (Fairlane "500").
F - Ranchero
G - Tudor, Fordor, (Custom & Custom "300"), Business Tudor (Custom).
R - Ranch Wagon, Custom "300" Ranch Wagon, Tudor.
S - Courier.
T - Tudor, Fordor (Fairlane & Fairlane "500").
V - Victoria, Tudor & Fordor (Fairlane & Fairlane "500").
X - Fordor Station Wagon, Country Sedan.
Y - Fordor Station Wagon, Country Squire.

NOTE - Asterisk used to prevent tampering with number.

COMPRESSION PRESSURE: 150 lbs. at cranking speed Maximum variation between cylinders 10 lbs

VACUUM READING: Steady 18-19" at idling speed (475-500 RPM), in Neutral

VALVE TAPPET CLEARANCE: .019" Intake & Exhaust (Hot & Cold) Adjust all tappets to .019" clearance while engine is cold, then again check all tappets for .019" clearance after running engine for 30 minutes to normalize temperature.

MANIFOLD HEAT CONTROL: Automatic thermostatic type with counterweight Valve is closed when engine is at normal temperature and running at slow idle, and opens when operating at high RPM Spring is installed with ¾ turn windup and hooked over stop pin.

IGNITION

FIRING ORDER: 1–5–3–6–2–4.

SPARK PLUG GAP: .032-.036".

Spark Plugs - Champion 870 18 mm. Torque to 15-20 ft. lbs.

►*SPARK PLUG CAUTION:* Spark plug has tapered seat and does not require a sealing gasket. It is important that plugs be torque tightened within range of 15-20 ft.lbs.

COIL: Ford. B6A-12029-B.

Ignition Current - 2.5 amps idling, 4.5 amps. stopped.
Resistor - Ford B8E-12250-A. 1.3-1.4 ohms.

DISTRIBUTOR: Loadomatic type of same design used on previous models Distributors must be used with correct carburetor as follows:

Application	Distributor No.	Carburetor No.
Early Cars	① B7A-12127-H	B8A-9510-J,M
Later Cars	② B8A-12127-J	B8A-9510-J,M
Latest Cars	③ B8A-12127-M	B8A-9510-M,U

① - Replaced by B8A-12127-J
② - Engr No FET-12127-B ③ - Engr No FET-12127-C

►*DISTRIBUTOR PRODUCTION CHANGES TO MINIMIZE DETONATION:* Different distributors used with carburetors listed above Later distributors have different advance performance (see below) and later carburetors have different jet calibrations to eliminate leanness and surging and to provide correct distributor vacuum *Distributor and Carburetor combinations listed above. must be used together.*

►*EARLY DISTRIBUTOR MODIFICATION (For use with later carburetors)* Distributor B8A-12127-J can be reworked for use with Carburetor B8A-9510-U by installing new Secondary Advance Spring FAA-12225-A and recalibrating advance performance to specifications listed below for B8A-12127-M distributor *NOTE - Distributor B7A-12127-H should be replaced by B8A-12127-J, or M*

Condenser - Ford No 7RA-12300-C **Capacity** .21-.25 mfd.
Contact Point Set - Ford No FAA-12171-A
Breaker Gap - 024-026"
Cam Angle - 35-38°.
Breaker Arm Spring Tension - 17-20 ozs
Rotation - Clockwise viewed from above.

Advance Performance

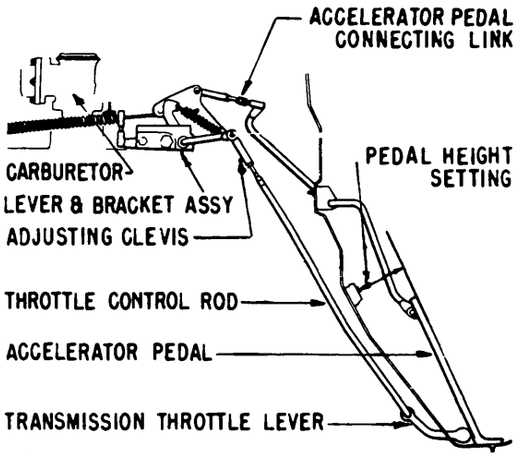
0	.38	450
2½-3½	79	650
6¾-7¾	2 85	1100
8¾-9¾	4 33	1400
10½-11¼	5 99	1800



►*DISTRIBUTOR INSTALLATION CAUTION:* Be sure oil pump intermediate shaft engages the seat in the oil pump. It may be necessary to turn over the engine with starter after distributor drive gear is partially engaged, in order to engage intermediate shaft fully in oil pump

IGNITION TIMING

Setting (For Fuel of 88 Octane Research Fuel) - TDC (Std. & O.D. Cars), 2° BTDC (Auto. Trans.) with engine idling at 475 RPM and vacuum line disconnected.

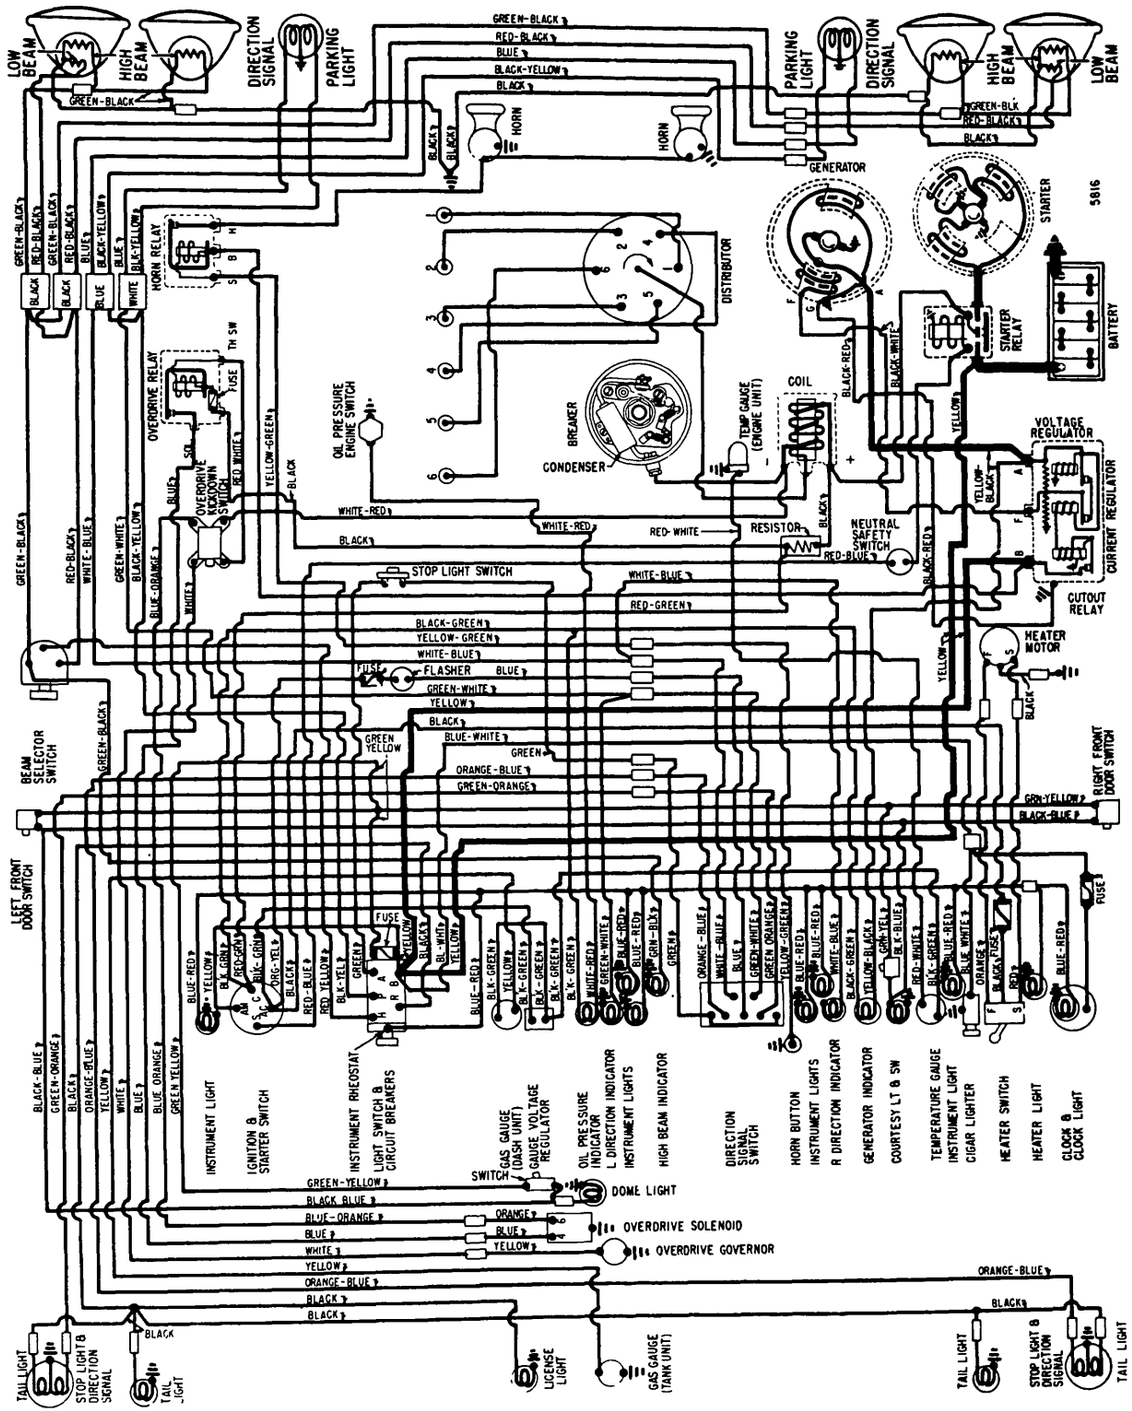
►*NOTE:* Above settings supersede previous recommendations.

Timing Mark - Vibration damper marked "TDC", and "3", "5", "7", "9" degrees BTDC. Align correct mark with pointer on cylinder front cover.

FORDOMATIC TRANSMISSION THROTTLE LINKAGE

CARBURETOR

►*CARBURETOR AIR CLEANER (DRY TYPE) NOTE Special cleaning procedure required See AIR CLEANER*



Throttle Linkage Adjustment (Automatic Trans.): Adjust engine idle speed to 475-500 RPM with selector lever in "N" position and engine at normal operating temperature. Adjust anti-stall dashpot (see below) Set hand brake and check idle speed in Dr (Drive) range and adjust if necessary to 425-450 RPM Pull throttle rod assembly upward firmly so transmission lever is against its internal stop, align hole in throttle rod clevis with hole in accelerator assembly by rotating clevis on throttle rod Then lengthen throttle control rod 2½ turns counterclockwise Assemble throttle control rod to accelerator assembly and adjust pedal height to 3.10" by changing length of accelerator assembly connecting link. This is an approximate setting. To adjust Control rod for correct operating pressure, place car on hoist, then remove 1/8" plug located ahead of transmission levers (on some cars at rear face of transmission), and install pressure gauge Lower car, install tachometer and shift into DR (Fordomatic), D1 or D2 Cruise-O-Matic) position. Raise engine speed to 1,000 RPM. Gauge reading should be 80-85 lbs. When pressure below 80 lbs., lengthen throttle rod. When pressure above 85 lbs, shorten rod *For pressure ranges at Idle and Stall speed conditions, see "Fordomatic" & "Cruis - O-Matic" in Transmission Section*

Anti-Stall Dashpot (Automatic Trans.): After engine idle speed adjusted to 475-500 RPM turn off engine. Loosen dashpot adjusting screw locknut Hold throttle in closed position and depress dashpot plunger with a screwdriver blade Turn dashpot or adjusting nut until 045 064" clearance obtained between dashpot plunger and throttle shaft lever Tighten locknut

FORD "VISI-FLO"

Holley (Ford) Visi-Flo. Ford No. B8A-9510-J (Std. Early), B8A-9510-U (Std. Later), B8A-9510-M (Special Economy).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

►*APPLICATION & RFPLACEMENT NOTE: Carbur tors must be us d with corr ct Distributor. Us only B8A-9510-U for service replac ment. S DISTRIBUTOR above.*

►*SURGING & LEANNESS CORRECTION (B8A-9510-J,M):* Install new main metering jet, No. 1GA-9533-B (#62). This jet used on B8A-9510-U Carburetor. *S e "Holl y (Ford) Visi-Flo Carburetors" in Carbur tion S ction.*

Idle Setting - Initial setting 1 turn open. Turn adjusting screw in until engine begins to run roughly from lean mixture, then turn screw out until engine begins to roll from rich mixture. Turn screw in until engine runs smoothly. Favor a slightly rich mixture, rather than a lean setting.

Idle Speed - 475-500 RPM in Neutral. Recheck automatic transmission cars with selector lever in "DR" range. Readjust to obtain 450 RPM.

Fuel Level - 11/16" ± 1/32" below power valve mounting surface (Tool T52L-9550-AEE).

Accelerating Pump: Inner hole for average or hot weather operation, outer hole for cold weather operation.

Fast Idle: Integral type operated by choke valve. No adjustment required.

Throttle Linkage Adjustment: *S CARBURETOR abov .*

►*OTHER DATA: See "Ford Visi-flo Carbur tors" in Carburetion Section.*

CARB. EQUIPMENT

Fuel Pump: Ford B5A-9350-E (Fuel only), B5A-9350-F (Fuel & Vacuum).

Fuel Pump Pressure - 3.5-5.5 lbs. at 500 RPM. *See "Fuel Pumps" in Carburetion S ction.*

Gasoline Gauge: King-Seeley Electric "CV" (Constant Voltage) with gauge voltage regulator Ford No. B7A-10804-B. **Dash Unit** - Ford No. B8A-9280-A.

Tank Unit - Ford No. B8A-9275-F (Pass. Cars), B8A-9275-G (Sta. Wgn.). *See "Fuel Gauges" in Carburetion S ction.*

Air Cleaner: DRY FILTER ELEMENT Type. Clean every 4,000 miles, replace element every 24,000 miles.

►*CLEANING CAUTION:* Clean filter element by tapping lightly and shaking to remove dirt particles. *DO NOT wash element in solvent or oth r liquids and DO NOT oil or lubricate.*

BATTERY

Ford B6A-10655-C. 12 volt, 11 plate, 55 ampere hour capacity, or **Ford B7A-10665-A,** 12 volt, 11 plate 70 ampere hour capacity (20 hour rate).

Battery Ground - Negative, to engine block.

Engine Ground - Cylinder head to dash.

STARTER

Ford B6A-11002-A. Armatur - B6A-11005-B.

Drive - Ford ICM-11350-C. Bendix "Folo-Thru".

Rotation - Counterclockwise at commutator end.

Brush Spring Tension - 48-56 ozs.

Cranking Speed - 150-180 RPM, 190 amperes max.

Performanc Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	①	12.0	80
15.5 ft. lbs.		5.0	550

①- With starter on engine and engine idling.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Starting Switch: Magnetic type, Ford No. B6A-11450-A. Starter Switch is controlled by ignition switch. *NOTE* - Neutral Safety switch used on Fordomatic Transmissions.

N utral Safety Switch (Auto. Trans.): Ford No. B8A-15812-D (Fordomatic), B8A-15812-E (Cruise-O-Matic). *S "Fordomatic" & "Cruise-O-Matic" in Transmission S ction.*

GENERATOR

F rd. Used as follows:

G nerator	Armature	Application
B6A-10002-C	B6C-10005-B	①Std.
B6A-10002-H	B6A-10005-A	②Std.
B6A-10002-F	B6C-10005-C	Special

① - With B6C-10505-B Regulator.
② - With B7A-10505-B Regulator.

P rformance Data

Generator	Amperes	Eng. RPM
B6A-10002-C,H	30	1500
B6A-10002-F	40	1500

Brush Spring T nsi n - 26-34 ozs.
Field Curr nt - 1.5-1.6 amperes at 12 volts.
R tati n - Counterclockwise at commutator end.
B lt Adjustm nt: ¼" deflection midway between generator and water pump pulleys with light thumb pressure.

REGULATOR

F rd N . B7A-10505-B (B6A-10002-H Gen.), B6C-10505-B (B6A-10002-C G n.), B7A-10505-A (B6A-10002-F Gen.).

►*SETTING CAUTION: "Temperature Compensated" typ . Set to following specifications at 75°F, ambient (ngine compartm nt) temperature, after ½ hour operation in vehicle, or aft r regulator heated and stabiliz d.*

Cut ut Relay

Cuts In - 12.4-13.2 volts (B7A-10505-B & B6C-10505-B), 12.0-12.8 volts (B7A-10505-A).
Cuts Out - 2-9 amps. (B7A-10505-B & B6C-10505-B), 2-6 amps. (B7A-10505-A).

V ltag Regulator

Setting - 14.6-15.4 volts at 75°F (Ambient).
Checking & Adjusting - *S e Electrical Section.*

Curr nt Regulator

S tting - 28-32 amperes (B7A-10505-B & B6C-10505-B), 38-42 amperes (B7A-10505-A).
Ch cking & Adjusting - *See Electrical Section.*

MISC. ELECTRICAL

Headlamps: Dual Headlights (4-Headlight System). *S "4-Headlights" in Electrical Section.*
Dir cti nal Signals: *See El ctrical Section*
Lighting Switch R m val: With control knob in "OFF" position, press spring release button on switchhousing, turn shaft slightly and pull it out of switch. Unscrew mounting nut. Remove Switch and disconnect all wires.
St p Light Switch L cati n: On forward end of brake master cylinder (Conventional Brakes), on top of booster assembly (Power Brakes). Master cylinder located on firewall in engine compartment.
CIRCUIT BREAKERS: On headlight switch. Combination headlight switch, circuit breaker, and fuse assembly used. One circuit breaker protects headlight circuit and second circuit breaker protects instrument, parking, stop and tail light circuits.

FUSES: Size & location as follows:
Back Up Light - SFE 7.5 ampere, in feed wire behind instrument panel.
Cigar Lighter - Sulphur disc in base or reset circuit breaker located on back of lighter socket.
Clock - 1 AG, in feed wire.
Heaters - SFE 14 ampere, in feed wire.
Interior Lamps - SFE 7.5 ampere, on lighting switch.
Overdrive - 15 AGC on overdrive relay.
Turn Signal - SFE 7.5 ampere, in feed wire.
Horn Relay: Ford No. B8C-13853-A.

ENGINE

ENGINE SPECIFICATIONS: 6 Cyl. valve-in-head.

Bore	Stroke	Displacement
3.62"	3.60"	223 cu. ins.

Compr.Ratio	Rated HP	Developed HP
8.6-1	31.54	145 at 4200 RPM

Compression & Vacuum Reading - *See TUNE-UP.*

►*FLYWHEEL PRODUCTION CHANGE (Fordomatic):* New Flywheel Part No. B8A-6375-C and Spacer Plate No. B7A-6383-A used on late cars. Spacer plate must go between flywheel and heads of crankshaft mounting bolts. Use this flywheel and spacer plate with all 11¾" diameter converter assemblies.

►*ENGINE STARTS IN DRIVE POSITION CORRECTION:* When Neutral Safety Switch **cannot** be adjusted so engine will start in "P" & "N" positions **ONLY,** replace switch with Part No. B8A-15812-D (Fordomatic) or B8A-15812-E (Cruise-O-Matic).

►*ENGINE STALLING AFTER COLD START CORREC-* (Holley Carb.): Caused by incorrect automatic choke linkage adjustment. *See "Holley Carburetors" in Carburetion Section.*

CYLINDER HEAD: *See "Cylinder Head & Manifolds" in Ford Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Ford Special Data.*

ENGINE REMOVAL: *See "Engine" in Ford Special Data.*

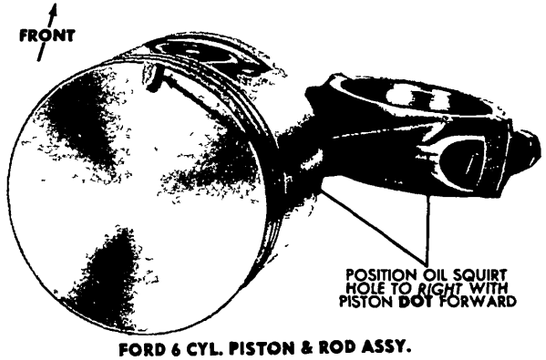
OIL PAN REMOVAL: Drain crankcase, Remove oil level indicator, engine left and right front splash aprons. Remove stabilizer bar, flywheel housing inspection cover, oil pan retaining screws, and pan.

PISTONS

Autothermic type. Solid skirt with three rings
Removal - Pistons and rods removed from above.
Fitting New Pistons: Clearance - .0009-.0015" at bottom of skirt. Use ½" wide ribbon feeler inserted between piston and cylinder wall at right angle to pin on thrust side, with piston inverted and end of piston 1½" below top of block. Pull required to remove feeler should be 5-10 lbs. when using feeler gauge thicknesses as follows:
New Piston in New Bore - .002".
New Piston in Used Bore - .0025".
Used Piston in Used Bore - .003".
Replacement Pistons: Furnished with fitted pins in Std. and .020", .030", .040", .060" oversize.
Installing Pistons: Install piston with indentation in head of piston toward front of engine.

PISTON PINS

Floating type with lock ring at each end.
Diam t r - .9120-.9123". **L ngth** - 3 016-3.030".
Pin Fit in Pist n - .0001-.0003", wear limit .0008".
Pin Fit in Rod Bushing - .0001-.0003", wear limit .0008".
Replacement Pins: Standard, and .001", .002" oversize.



PISTON RINGS

Ring	Width	End Gap	Side Clearanc
Compr.#1,2	3/32"	.010-.027"	.002-.0035"
Oil #3	3/16"	.015-.062"	①

① - Side sealing type ring.
Replacement Rings: Standard, .020", .030", .040", .060" oversize (Expander type).

CONNECTING RODS

Journal Diameter - 2.2980-2.2988".
Clearance - .0004-.0023", wear limit .0033".
Side Clearance - .003-.009", wear limit .012".
Replacement Bearings: Standard size (2 sizes marked **Red** and **Blue**) and .010", .020", .030" Undersize.

FORD 6 CYL. PISTON & ROD ASSY.

►*STANDARD SIZE NOTE:* **Red** marked bearings increase clearance, **Blue** marked bearings decrease clearance.
Installing Rods: Install rod with squirt hole to right and piston indentation toward front of engine.

CRANKSHAFT

►*REAR MAIN BEARING PRODUCTION CHANGE:* Copper-lead narrow type used on later cars. Both wide and narrow types available for service.
Journal Diameter - 2.4980-2.4988". Four Bearings.
Bearings - Steel backed, copper lead alloy, or lead babbitt.
Clearance - **Copper Lead** - .0005-.0025", wear limit .0035". **Lead Babbitt** - .0005-.0021", wear limit .0031".
Replacement Bearings: Standard size (2 sizes marked **Red** and **Blue** for selective fitting) and .010", .020", .030" Undersize.
►*STANDARD SIZE NOTE:* **Red** marked bearings increase clearance, **Blue** marked bearings decrease clearance. Use mixed set (Red & Blue) if necessary to obtain selective fit.
End Thrust: Taken on rear intermediate #3 bearing.
Thrust Bearing Alignment - *See "Crankshaft & Main Bearings" in Ford Special Data.*
End Play - .004-.008", wear limit .012".
Crankshaft Rear Oil Seal Installation: *See "Crankshaft & Main B arings" in Ford Sp cial Data.*
Crankshaft Fr nt Oil S al Installati n: *S "Engin Front Cov r" in Ford Special Data.*

CONTINUED ON NEXT PAGE

Form 16A

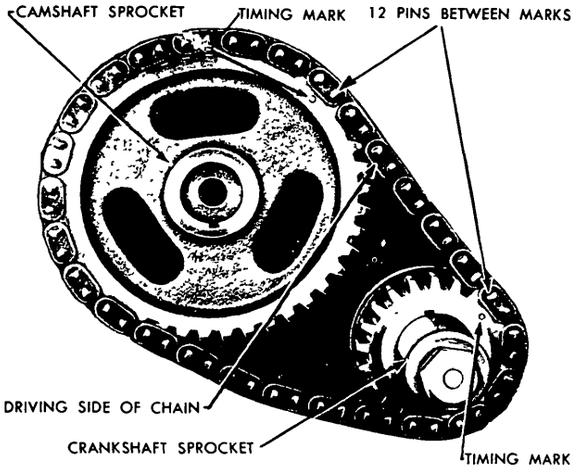
CONTINUED FROM PRECEDING PAGE

CAMSHAFT

►*OIL SLINGER NOTE:* A crankshaft front oil slinger is incorporated on all cars and truck engines to reduce oil leakage at front oil seal. Slinger is held in place by crankshaft pulley and cylinder front cover. To remove slinger, remove cylinder front cover and slide slinger off crankshaft.

Journal Diameter - 1.9255-1.9265".

Clearance - .001-.003", wear limit .006".



End Thrust: Taken by thrust plate and spacer behind camshaft sprocket. *NOTE* - Chamfer on inside of spacer must be toward camshaft journal.

Replacement Bearings: Finished bearings furnished Standard, and .015" undersize. *CAUTION* - Rear intermediate (#3) bearing not interchangeable with other bearings.

Camshaft Removal & Installation: *See "Camshaft & Bearings" in Ford Special Data.*

Timing Chain: Side-guide type. 56 links.

Camshaft Setting: Sprockets marked by "O" at one tooth. Mesh chain so that there are 12 pins between "O" marks on driving side of chain.

FORD 6 CYL. VALVE TIMING MARKS

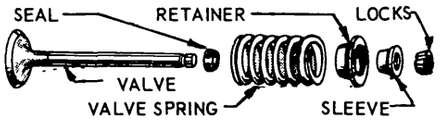
Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Ford Special Data.*

Engine Front Cover Removal: *See "Engine Front Cover" in Ford Special Data.*

VALVES

Tappet Clearance: .019" Intake & Exhaust (Hot or Cold).

Valve	Head Diameter	①Stem Diameter
Intake	1.775-1.785"	.3416-.3423"
Exhaust	1.505-1.515"	.3403-.3410"



Valves	Seat Angle	②Lift	③Stem Clearance
Intake	45°	.273"	.001-.0024"
Exhaust	45°	.273"	.0023-.0037"

①- Furnished with .003", .015", .030" oversize stems.

②- Cam lobe lift. Wear limit, .268".

③- Wear limit .0045" (Intake), .0065" (Exhaust).

►*ROTATABLE VALVE NOTE: All valves are rotatable type. See "Valve System" in Ford Special Data.*

FORD 6 CYL. VALVE ASSEMBLY

Valve Stem Seals - Umbrella type seals used on both intake and exhaust valve stems, cupped side down.

Valve Seat Width - .060-.080" (Intake), .070-.090" (Exhaust).

Valve Springs: Free Length - 2.09" approximately.

Valve Spring Specifications

Valve	Spring Pressure	Length
Closed	①71-79 lbs.	1.780"
Open	②161-177 lbs.	1.390"

①- Wear limit 64 lbs. at 1.780".

②- Wear limit 145 lbs. at 1.390".

►*VALVE SPRING INSTALLATION NOTE:* Measure valve spring assembled height from machined surface of cylinder head spring pad to spring retainer contact surface. If assembled height is 1 13/16" or greater, install necessary .030" spacer or spacers between cylinder head valve spring pad and valve spring to bring assembled height to recommended dimension of 1 25/32-1 13/16".

Valve Guides: Integral with cylinder head. When stem-to-guide clearance exceeds maximum (see table above), ream guides and install oversize valves. *See "Valve System" in Ford Special Data.*

Valve Lifters: Mushroom type. Removed from below with camshaft out.

Rocker Arm Assembly: *See "Valve System" in Ford Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

►*VALVE TIMING NOTE:* The following valve opening and closing points are with camlift as indicated.

Intake Valves - Open 17°①BTDC. Close 53°②ALDC.

Exhaust Valves - Open 61°①BLDC. Close 9°②ATDC.

①- Camlift .016". ②- Camlift .019".

Valve Timing Check - Release No. 1 Intake valve adjusting screw, push rocker arm to one side, install dial indicator in pushrod socket. Zero indicator with cam on heel of lobe. Install quadrant on crankshaft pulley, rotate engine to amount of lobe lift shown in table above, then check quadrant and compare reading with degrees shown in table above for that valve. If reading not correct, check for bent pointer, worn timing chain, or worn sprocket before replacing camshaft.

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Ford Special Data.*

Crankcase Capacity: 4 quarts (refill), 5 quarts (when filter element changed).

Normal Oil Pressure: 45-50 lbs. at 2000 RPM.

Pressure Regulator Valve - In pump body, not adjustable.

Oil Pressure Indicator - Indicator light on instrument panel, operated by engine unit, Ford No. B6A-9278-B

Oil Pump: Gear type pump located in crankcase,

Pump Overhaul - *See "Oil Pump" in Ford Special Data.*

Oil Filter: "Disposable" type. Replace at 4,000 mile intervals.

Disposable Filter Replacement - Coat gasket face of filter with oil, thread filter on insert by hand until gasket contacts adapter surface, then tighten filter an additional one-half turn.

Crankcase Ventilation: Filter in oil filler cap (inlet), an outlet pipe in rear of crankcase at left side

COOLING

Water Capacity: 15 quarts, add 1 quart for heater.

Pressure Valve: Ford LA-8100-A Radiator filler cap. Opens 12-15 lbs. *CAUTION* - Use only 12-15 lb. cap. for replacement.

Thermostat: Ford No. B7A-8575-A (157-162°F) standard, Ford No. B7A-8575-B (177-182°F) for use with permanent anti-freeze.

Water Pump: Packless, sealed ball bearing type. *See "Water Pump" in Ford Special Data.*

Temperature Gauge: King-Seeley Electric Constant-voltage ("CV") type, with gauge voltage regulator Ford No. B7A-10804-B. **Dash Unit** - Ford B8A-10883-A. **Engine Unit** - Ford B7A-10884-A. *See "Temperature Gauges" in Miscellaneous Section.*

CLUTCH

Long Model 9½ CF. No. 268594, 11 CF 267350 (Pass. Cars), 11NC No. 266978 (Taxi). Semi-centrifugal type. *See "Long Clutches" in Clutch Section.*

Clutch Disc - Long 288849 (9½ CF), 288851 (11 CF).

Pedal Adjustment: If total pedal travel is less than 6 3/8" or more than 6 5/8" reposition pedal bumper and bracket until travel is within limits. Adjust spring link to give assist spring length of 9¾-10" (between eye centers) with pedal fully released.

Free Travel - 1 1/8-1 3/8". Loosen locknut on clutch pedal release rod, turn adjusting nut until correct travel is obtained. *NOTE* - Check free travel by operating engine at 3,000 RPM with transmission in neutral position. There should be a minimum of ½" free travel under these conditions.

Removal: Remove transmission, *see "Synchro-Mesh Transmission" below,* then remove flywheel housing cover and release lever retracting spring. Slide release bearing and hub off release lever. Mark clutch cover and flywheel for reinstallation, loosen six cover bolts uniformly to release spring tension. Remove cover and pressure plate through opening of flywheel housing.

SYNCHRO-MESH TRANSMISSION

Own. Helical gear, constant mesh, synchro-mesh (second & high), sliding gear (low and reverse). *See "Ford Synchro-mesh" in Transmission Section.*

►*TRANSMISSION & REAR AXLE RATIO PRODUCTION CHANGE (To Improve Economy):* Late production cars (Exc. Taxi) use Transmission B8A-7003-G, with New Input Shaft, New Intermediate Gear, and New Cluster Gear with 3.56-1 Rear Axle Ratio to improve economy. Use speedometer Driven Gear No. B7A-17322-Q(8.00x14; 7.50x14; 6.70x15 tires) or B7A-17322-P (7.10x15 tires). New transmission identified by lettering (WAP-G) on extension housing.

Transmission Controls: *See "Transmission Controls" in Transmission Section.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

R m val: With car raised up, disconnect drive shaft at rear universal joint, slide drive shaft off transmission output shaft Remove speedometer cable and gear Disconnect shift rods at transmission Remove rear engine support to extension housing bolts Disconnect parking brake adjusting rod from equalizer bracket Support rear of engine and remove rear engine support, then lower engine for clearance, and remove transmission to flywheel housing bolts Use guide pins in two lower bolt holes and slide transmission back until input shaft clears flywheel housing, and lower transmission

OVERDRIVE

Warner R10. Solenoid operated type, with governor control and throttle operated kick-down

S e "Ford Ov rdriv " in Transmission Section.

Ov rdriv C ntr l: *S e "Overdrive Control" in Transmission S ction*

R m val: Same as for Synchro-mesh Transmission (above) after disconnecting control cable and wiring

AUTOMATIC TRANSMISSION

Torque Converter and three speed automatic transmission with hydraulic control

See "Fordomatic, Merc-O-Matic & Turbo-Drive" in Transmission Section

► *PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION. See "Fordomatic, Merc-O-Matic & Turbo-Drive" in Transmission Section*

► *TESTING & TROUBLE SHOOTING· See "Fordomatic, Merc-O-Matic & Turbo-Drive" in Transmission Section*

Lubricati n - Check transmission fluid at 1,000 mile intervals and maintain level at "F" (Full) mark on dipstick Drain and refill every 24,000 miles **Use only Aut matic Transmissi n Fluid Type "A".**

Ch cking Fluid L v l - Bring transmission to operating temperature by running engine with selector lever in Neutral position Move selector lever through all ranges to assure fluid distribution, then place lever in "P" (Park) position for checking fluid level Add Automatic Transmission Fluid Type "A" to bring level to "Full" mark on dipstick

Throttle Linkage Adjustment: *See CARBURETOR above*

► *OTHER FORDOMATIC SERVICE DATA. See "Fordomatic, Merc-O-Matic & Turbo-Drive" in Transmission S ction*

UNIVERSALS

M chanics. Needle bearing type

►*CAUTION* Rear universal joint companion flange nut controls pinion bearing preload (must be adjusted whenever nut is loosened) *S "Ford & Mercury" in Rear Axl S cti n*

REAR AXLE

Own. Separate carrier type, semi-floating, hypoid, with Hotchkiss Drive *NOTE* - Same type used on all models *S "Ford & M rcury" in R ar Axle Section*

►*TRANSMISSION & REAR AXLE RATIO PRODUCTION CHANGE (T Improv Economy)· S "SYNCHRO-MESH TRANSMISSION" ab v*

Axl Rati

FRONT SUSPENSION

Independent. "Ball Joint" suspension with direct acting shock absorbers mounted within coil springs

See "Ford, Thunderbird, Mercury" in Suspension & Wheel Alignment Section

Caster - 0° to Pos 1° Maximum variation between wheels ½°

Camber - Pos ½° to Pos 1½° Maximum variation between wheels ½° (¼° preferred)

Toe-In - 1/16-1 8" *NOTE* - When checking toe-in on cars with power steering, engine should be running so that power steering control valve will be properly centered

Toe-Out on Turns - Outer wheel 20°, inner wheel should be 24½°

STEERING

Manual: Own. Recirculating ball worm and nut

See "Saginaw Ball B aring Worm & Nut" in St ring Section

P w r St ring: Ford-Mercury Linkage type Used in conjunction with standard steering gear

Se "Ford & Mercury Linkag Type" in St ering S ction

Steering Linkage: *See "Steering Linkage" in Steering Section*

Steering Wheel & Horn Button Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

Steering Gear Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

BRAKES

Ford-Bendix Hydraulic. Hand lever applies rear wheel service brakes

► *BRAKE DESIGN NOTE:* Front brake anchor pin (fixed anchor type) is mounted on wheel spindle independently of backing plate (wheel cylinder mounted on anchor pin)

See "Ford, Lincoln, Mercury Bendix" in Brake Section

► *BRAKE PULLING CORRECTION:* To correct loosen anchor pin attaching bolt (See Brake Design Note above) and retighten to 80-100 ft lbs

Drum Diameter - 11" front and rear

Wheel Cylinder Diameter - 1 1/8" (Front-All), 7/8" (Rear-Pass Cars), 15/16" (Rear - Sta Wgn

Lining Width & Length

Model	Primary	Secondary
Sed & Cpe (Front)	2¼" x 10 62"	2¼" x 11 93"
(Rear)	1¾" x 10 62"	1¾" x 11 93"
Others (Front)	2¼" x 10 62"	2¼" x 11 93"
(Rear)	2" x 10 62"	2" x 11 93"

Clearance - Adjusting screw backed off 10-12 notches from point where shoes are tight against drum

Brake Pedal Free Play Adjustment: 5/16" to 7 16" If play not correct after brake adjustment loosen locknut on the eccentric bolt that attaches brake pedal assembly to master cylinder pushrod rotate eccentric bolt for desired clearance, tighten locknut

Standard Master Cylinder: Located on engine side of firewall

Checking Fluid - Maintain fluid level to within ½" of top of reservoir

Removal - Disconnect rubber boot from rear end of master cylinder brake line at master cylinder fitting stop light switch from front of cylinder and disconnect wires from switch Push down brake pedal several times to force as much fluid as possible (into clean container) remove bolts that secure master cylinder to dash panel Do not disconnect pushrod from brake pedal unless it is to be serviced

Power Brakes: "Bellows Type" used Pedal assist power unit with vacuum bellows and control valves mounted on drivers side of dash panel and attached direct to brake power lever

See "Ford Bellows Type" in Brake Section

Checking Fluid Level - Maintain fluid to within ½" of top of reservoir

Removal - Remove vacuum hose from top of unit, valve adjusting eccentric with flat washer spring, and bushing nylon bushing from power unit valve housing Remove two mounting screws (bracket-to-dash panel) and remove power unit from car

MISC. MECHANICAL

►*Se Ford V8 Data following*

Form 168

►*AIR SUSPENSION CAR CAUTION: Befor jacking, hoisting, towing or working under car, se SERVICE CAUTIONS and TOWING instructions in "Ford Air Suspension" in Suspension & Wheel Alignment Section.*

MODEL IDENTIFICATION

SERIAL NUMBER: Stamped on patent plate attached to left door post. *NOTE* - Number (example below) includes identification data as indicated.

①②③④ ⑤
B 8 F G 100001

① - Engine Type, see below.
② - Year (1958).
③ - Assembly Plant, see below.
④ - Body Style, see below.
⑤ - Consecutive unit number.

Engine Type

B - Interceptor V8 (Dual Carb.).
C - Y-V8 (Dual Carb.).
G- Interceptor V8 & Interceptor V8 Special (4-Barrel Carb.).
H - Interceptor V8 Thunderbird Special (4-Barrel Carb.).
W - Police Interceptor Option (361 Engine).
NOTE - Asterisk used to prevent tampering with number.

Assembly Plant Designation

A - Atlanta	**F** - Dearborn	**N** - Norfolk
B - Buffalo	**G** - Chicago	**P** - St. Paul
C - Chester	**K** - Kansas City	**R** - San Jose
D - Dallas	**L** - Long Beach	**U** - Louisville
E - Mahwah	**M** - Memphis	**Y** - Wixom

NOTE - Wixom is Lincoln-Thunderbird plant.

Body Style

C - Convertible (Fairlane "500").
F - Ranchero.
G - Tudor, Fordor (Custom & Custom "300"): Business Tudor (Custom)
H - Thunderbird.
R - Ranch Wagon, Custom "300" Ranch Wagon; Tudor.
S - Courier.
T - Tudor, Fordor (Fairlane & Fairlane "500").
V - Victoria, Tudor & Fordor (Fairlane & Fairlane "500").
X - Fordor Station Wagon, Country Sedan.
Y - Fordor Station Wagon, Country Squire.
W - Retractable Hard Top

►*ENGINE IDENTIFICATION NOTE:* Specifications below are designated for each engine using engine displacement figure as follows: **292** - Y-V8 (Dual Carb.) **332** - Interceptor V8 & Interceptor Special V8 (Dual & 4-Barrel Carb.), **352** - Interceptor V8 Thunderbird Special, **361** - Police Interceptor Power Option.

TUNE-UP

►*HIGH IDLE SPEED CORRECTION (Ford Carb.):* High idle speed caused by accelerator rod clip interference at wide open throttle can be corrected by grinding or filing off throttle lever so edge of lever is concentric with hole. Lever should have not more than 1/8" greater radius than hole.

COMPRESSION PRESSURE: 160 lbs. (292), 180 lbs. (Others) at cranking speed.

VACUUM READING: Steady 19-20" at 475-500 RPM in Neutral.

Tappet Clearance - Mechanical Lifters - (292") .020" Cold, .019" Hot, All Valves, **(332" & 352")** .026" Cold & Hot, All Valves. *NOTE* - If tappet clearance set Cold, recheck clearance after engine operated 30 minutes to normalize temperature and reset tappet clearance to Hot figure. *See "Valve System" in Ford Special Data for Tappet Clearance checking procedure.*

Hydraulic Lifters - (332", 352", 361") None in service. *See "Valve System" in Ford Special Data for operating range check of hydraulic lifters.*

►*SELF-LOCKING TAPPET ADJUSTING SCREW NOTE:* Self-locking adjusting screws used which have interference thread fit at center portion of threads. Replace adjusting screw or rocker arm assembly when turning torque is less than 3 ft. lbs. (36 in. lbs.).

MANIFOLD HEAT CONTROL: Automatic thermostatic type with counterweight. Valve is closed when engine is at normal temperature and running at idle speed and is open when operating at high RPM. Spring is installed with ¾ turn wind-up and hooked over stop pin.

IGNITION

FIRING ORDER: 292 - 1-5-4-8-6-3-7-2, **332,352 & 361** - 1-5-4-2-6-3-7-8.

Cylinders - RIGHT BANK 1-2-3-4, LEFT BANK 5-6-7-8.

SPARK PLUG GAP: .032-.036".

Spark Plugs - 292 - Champion F-14-Y, **332,352** - Champion F-11-Y. 18 mm. Torque to 15-20 ft. lbs.

►*SPARK PLUG CAUTION:* Spark plug has tapered seat and does not require a sealing gasket. It is important that plugs be torqued to 15-20 ft. lbs.

COIL: Ford No. B6A-12029-B.

Ignition Current - 2.5 amps. idling, 4.5 stopped.

Resistor - Ford B8E-12250-A. 1.30-1.40 ohms at 75°F.

►*COIL RESISTOR NOTE:* Resistor is connected in lead from ignition switch to coil. Resistor is by-passed during cranking by lead from starter solenoid to battery terminal of coil.

DISTRIBUTOR: Same type as used on previous V8 models (with centrifugal and vacuum spark advance). *See "Ford, Lincoln, Mercury Distributors" in Electrical Section.*

Engine	Ford Distributor No.
292" (No mark on Frt. Cover)	B8A-12127-B
292" (Orange mark on Frt. Cover)	B8A-12127-L
332" (Early) Ⓒ	② B8A-12127-C
332" (Late) Ⓒ	③ B8A-12127-E
332" (Later)	④ B8A-12127-G
352" (Mech. Lifters)	⑤ B8A-12127-F
352" (Hydr. Lifters)	⑥ B8A-12127-K

Ⓒ - Replaced by Distributor No. B8A-12127-G.
② - Eng. No. FEU-12127-B. ③ - Eng. No. FEU-12127-E.
④ - Eng. No. FEU-12127-J. ⑤ - Eng. No. FEU-12127-H.
⑥ - Eng. No. FEU-12127-N.

►*LOW SPEED DETONATION CORRECTION (332" & 352" ENGINES):* May be caused by use of regular fuel (instead of specified premium fuel) or low octane rating of available fuel. Correct as follows:

332" Engines - Reset Ignition Timing to 2° BTDC. If detonation still present, indicating use of fuel of less than 92 Octane Rating, recalibrate distributor for special centrifugal and vacuum advance listed below under "332 Engine Special Calibration", and set Ignition Timing to 3° BTDC (Synchro-mesh Cars) or 6° BTDC (Auto. Trans. Cars). If detonation still present, reset Ignition Timing to 2° BTDC (All Trans.).

352"Engines with Mechanical Lifters - If fuel of less than 96 Octane Rating used, recalibrate distributor (B8A-12127-F) to advance specifications listed below for B8A-12127-K distributor. DO NOT change specified Ignition Timing setting. *CAUTION* - Ignition timing should not be retarded beyond 2° BTDC under any conditions.

Condenser - Ford B7A-12300-A. **Capacity** .21-.25 mfd.
Contact Point Set - Ford B7A-12171-A.
Breaker Gap - .014-.016".
Cam Angle - 26-28½°.
Breaker Arm Spring Tension - 17-20 ozs.
Rotation - Counterclockwise viewed from above.

① - With distributor speed of 1000 RPM.
② - *See "Low Spe d D t nation Correction" above.*

►*332" & 352" DISTRIBUTOR REMOVAL CAUTION:* When oil pump intermediate shaft retainer is loose on shaft, shaft may become disengaged from oil pump as distributor is removed. To correct, remove oil pan, oil pump intermediate drive shaft, and remove retainer from shaft. Strike retainer lightly with hammer to flatten it and reinstall. *NOTE* - Retainer must be tight on shaft and bear against top of crankcase with shaft fully seated.

FORD V8 (EXCEPT THUNDERBIRD) WIRIN DIAGRAM

FORD THUNDERBIRD WIRING DIAGRAM

IGNITI N TIMING

►*INCORRECT IGNITION TIMING & DETONATION NOTE:* If detonation is encountered and timing is set properly (for type of fuel being used), check and reset, if necessary, the ignition timing pointer on engine frontcover, as follows: Remove No. 1 spark plug and install a dial indicator to contact top of No. 1 piston. Rotate crankshaft clockwise to locate TDC, then adjust dial indicator to zero. Rotate crankshaft clockwise until a reading of .005" is obtained and scribe a line on dampener. Rotate crankshaft counterclockwise until .005" is obtained and scribe another line on dampener. Position crankshaft between the two marks on true TDC, then bend ignition timing pointer to align with the correct TDC mark on dampener.

Standard Igniti n Setting

Engine	Synchro-mesh Cars	Aut . Trans.
292"	①3° BTDC	②6° BTDC
332" (Std.)	5° BTDC	8° BTDC
332" (Det. Corr. ③)	2° BTDC	2° BTDC
352"	3° BTDC	6° BTDC
361"	3° BTDC	6° BTDC

① - Maxium 6° BTDC. ② - Maximum 8° BTDC.

③ - *See "Low Speed Detonati n C rr ction" und r Distributor (above).*

Timing Mark - Crankshaft dampener or pulley marked TDC (long line) and 2°, 4°, 6°, 8°, 10° BTDC (five short lines). Align pointer with correct mark.

CARBURETOR

►*CARBURETOR APPLICATION:* Used as follows:

Engine Type	Carburet r Typ
292	Ford & Holley 2-Barrel
332	Ford & Holley 2-Barrel & 4-Barrel
352	Ford & Carter 4-Barrel
361	Ford & Holley 4-Barrel

►*1958 FORD AUTOMATIC CHOKE FAILURE TO COMPLETELY OPEN CORRECTION:* If choke valve does not open completely or "come off" quickly enough, it may be due to improper sealing of choke stove to manifold. Correct by cementing gasket to manifold and the choke stove cover to gasket with asbestos furnace cement.

►*ENGINE STALLING AFTER COLD START CORRECTION (Cars with Holley Carbur t rs):* Caused by incorrect choke linkage adjustment and insufficient choke action. *See "Holley 2 & 4-Barrel Carbur tors" in Carburetion Section.*

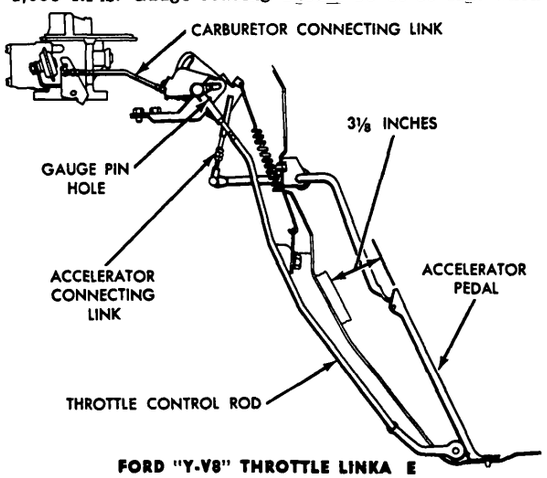
►*HOLLEY CARBURETOR IMPROVED OPERATION (332" Engine Cars with 2 or 4-Barr l Carburet rs):* It is recommended that Hot Start Bleed Holes (in venturi wall) be plugged with drive screws, Part No. 92032-S2. *For installation data, s e "H ll y 2 & 4-Barr l Carburetors" in Carburetion S cti n.*

►*INEFFECTIVE IDLE SCREW ADJUSTMENT (Cars with Holley 4-Barrel Carburetor):* Caused by excessive fuel mixture bleed past secondary throttle valves. *For secondary valve stopscrew adjustm nt, se "Holl y 2 & 4-Barrel Carburetors" in Carburetion S ction.*

►*332" & 352" ENGINE THROTTLE LINKAGE INTERFERENCE CORRECTION (Aut . Trans.):* Accelerator

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE



bellcrank-to-carburetor rod should be parallel to centerline of engine and accelerator-to-transmission control rod should be installed with retaining nuts to outside of engine and in an inclined position (not vertical) when viewed from front of engine.

►*LOW GAS MILEAGE OR ROUGH ENGINE IDLE CORRECTION (Cart r 4-Barrel Carb.):* Caused by poor automatic choke operation. *See Choke Housing Change and n w s tting und r "Carter Carburetors" in Carburetion Secti n.*

►*SLOW & HARD HOT START CORRECTION (4-Bbl. Carb.): See "Carter 4-Barrel Carburetors" or "Ford 4-Barrel Carburetors" in Carburetion Section.*

►*A.C. CAR IDLE SPEED NOTE:* During season when A.C. in use, set idle speed after operating A.C. for 20 minutes with unit on at maximum cooling.

Thr ttl Linkag Adjustment (Auto. Trans. Cars): Adjust engine idle speed (see Carburetor data below) with engine at normal operating temperature. Adjust Anti-stall Dashpot (see below). Stop engine. Disconnect upper end of transmission throttle control rod. Insert gauge pin (¼" drill rod) in gauge pin hole (see illustration). Adjust carburetor connector link length so that carburetor throttle lever is against hot or slow idle stop. Adjust accelerator pedal link for pedal height of 3 1/8". Remove gauge pin and check alignment of holes (pin must enter freely). Pull upward firmly on transmission throttle control rod so that transmission lever is held firmly against its stop, adjust clevis on upper end of rod until clevis fits pin on accelerator assembly lever freely, **th n l ngthen rod by turning clevis 3 full turns count rcl ckwis ,** connect rod. Then adjust rod for correct operating pressure as follows: Place car on hoist then remove 1/8" plug located ahead of transmission levers (on some cars at rear face of transmission), and install pressure gauge. Lower car, install tachometer and shift into DR (Fordomatic), D1 or D2 (Cruise-O-Matic) position. Raise engine speed to 1,000 RPM. Gauge reading should be 80-85 lbs. When reading below 80 lbs. lengthen throttle rod. When pressure is above 85 lbs. shorten throttle rod. For pressure ranges at Idle and Stall speed conditions, *see "F rd-omatic" & "Cruise-O-Matic" in Transmission Section.*

FORD "Y-V8" THROTTLE LINKA E

Dashpot Adjustment (Ford & Holley Carbs.): Loosen dashpot locknut, bottom dashpot plunger, hold throttle in hot idle position. Clearance between dashpot plunger and throttle lever should be .060-.090" (V8 Ford Carbs.); .045-.064" (All other carbs.). To adjust, turn dashpot or dashpot adjusting nut. Tighten locknut.

Dashpot Adjustment (Carter Carbs.): Hold throttle valves wide open. Distance between top surface of bowl cover and top of plunger shaft should be 7/16". To adjust, bend stop lug on dashpot operating lever.

FORD & HOLLEY 2-BARREL

Interceptor, with mechanical lifters) 500 RPM, (with hydraulic lifters) 450 RPM. (Police Interceptor) 450 RPM. Transmission in either "Drive" range.

Accelerating Pump: No seasonal adjustment.

Throttle Linkage Adjustment (Auto. Trans.): *See CARBURETOR above.*

►*OTHER DATA: See "Carter AFB 4-Barrel Carburetors" in Carburetion Section.*

CARB. EQUIPMENT

Fuel Pump: AC. Fuel only or Fuel & Vacuum.

Model	Ford Pump No.
All Std. (Fuel only)	B8A-9350-A,C
All Optl. (Fuel & Vacuum)	B8A-9350-D,B

Pressure - 3.5-5.5 lbs. (Fuel only), 4.5-6.5 lbs. (Fuel & Vacuum).

See "Fuel Pumps" in Carburetion Section.

Gasoline Gauge: King-Seeley Electric Constant Voltage ("CV") type with gauge voltage regulator, Ford No. B7A-10804-B.

Dash Unit	Ford Part No.
All (exc. Thunderbird)	B8A-9280-A
Thunderbird (exc. Air Cond.) ①	B8S-9280-A
Thunderbird (with Air Cond.) ①	B8S-9280-B
Tank Unit	**Ford Part No.**
All (exc. below)	B7A-9275-F
Sta. Wgn. & Sedan Del.	B7A-9275-G
Hard Top	B7A-9275-B
Thunderbird	B8S-9275-A

① - Combination Fuel & Temperature Gauge.

See "Fuel Gauges" in Carburetion Section.

Air Cleaner: DRY FILTER ELEMENT type. Clean every 4,000 miles, replace element every 24,000 miles.

►*CLEANING CAUTION:* Clean filter element by tapping lightly against hard surface. *DO NOT wash element in cleaning solvent or blow out with compressed air.*

►*AIR CLEANER INSTALLATION CAUTION (332" & 352" Eng.):* Word "Front" should be to front on all air cleaner installations, except when recess in bottom of cleaner will not clear carburetor linkage when cleaner mounted on carburetor. In this case, position notch in cleaner on lug in carburetor (disregarding word "Front").

BATTERY

Ford B6A-10655-C. 12 volt, 11 plate, 55 ampere hour.
Ford B7A-10655-A. 12 volt, 11 plate, 70 ampere hour.
Ford B8A-10655-A. 12 volt, 13 plate, 65 ampere hour.
All capacities are 20 Hour Rate.
Battery Ground - Negative to engine block.
Engine Ground - Cylinder head to dash.

STARTER

►*ENGINE STARTING IN OTHER THAN "N" & "P" POSITION:* If Neutral Safety Switch cannot be adjusted so that engine starts ONLY in "N" and "P" positions, replace switch with latest type (see below).

Ford B6A-11002-A. Armature - B6A-11005-B.
Drive - Ford ICM-11350-C. Bendix "Folo-Thru"
Rotation - Counterclockwise at commutator end.
Brush Spring Tension - 48-56 ozs.
Cranking Speed - 150-180 RPM, 190 amperes max.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs	①	12.0	80
15.5 ft. lbs.		5.0	550

① - With starter on engine and engine idling.

Starting Switch: Magnetic type, Ford No. B6A-11450-A. Starter Switch is controlled by ignition switch. *NOTE* - Neutral safety switch used on Fordomatic Transmission

Neutral Safety Switch (Auto. Trans.): Ford B8A-15812-D (Fordomatic), B8A-15812-E (Cruise-O-Matic). *NOTE* - B8A-15812-E supersedes B8A-15812-C and can be identified by black paint on actuating lever. It reduces starter closed-circuit arc from 9-10° to 4½-7° and will assist in correcting engine starting in other than "N" and "P" positions (see above).
Adjustment - *See "Ford Automatic Transmission" in Transmission Section.*

GENERATOR

Ford. Used as follows:

Model	Generator	Armature
Exc. T-Bird (Std.) ①	B6A-10002-C	B6C-10005-B
Exc. T-Bird (Std.) ②	B6A-10002-H	B6C-10005-C
Exc. T-Bird (A.C.)	B8A-10002-A	B8A-10005-A
Exc. T-Bird (Spec.)	B6A-10002-E	B6C-10005-C
Thunderbird	B7S-10002-A	B6A-10005-B

① - Use with Regulator B6C-10505-B.
② - Use with Regulator B7A-10505-B.

Performance Data

Generator	Amperes	Engine RPM
B6A-10002-C, H	30	1500
B7S-10002-A	30	1500
B6A-10002-E	40	1500
B8A-10002-A	35	1500

Brush Spring Tension - 26-34 ozs.
Field Current - 1.5-1.6 amperes at 15.0 volts.
Rotation - Counterclockwise at commutator end.

Belt Adjustment: ½" deflection (292), 3/8" deflection (332, 352, 361) midway between generator and water pump pulleys with light thumb pressure.

REGULATOR

Ford. Used as follows:

Ford Regulator No.	Generator
B6C-10505-B	B6A-10002-C
B7A-10505-B	B6A-10002-H, B7S-10002-A
B7A-10505-A	B6A-10002-E
B8E-10505-B	B8A-10002-A

►*SETTING CAUTION: "Temperature compensated" type. Set to following specifications at 75° ambient (engine compartment) temperature, after ½ hour operation in vehicle, or after regulator heated and stabilized.*

Cutout Relay

Cuts In - 12.4-13.2 volts (Exc. B7A-10505-A), 12.0-12.8 volts (B7A-10505-A).
Cuts Out - 2-9 amperes (Exc. B8E-10505-B & B7A-10505-A), 2-6 amperes (B8E-10505-B & B7A-10505-A) discharge current.

Voltage Regulator

Setting - 14.6-15.4 volts at ambient temperature of 70-80°F.
Checking & Adjusting - *See "Ford 12-V Voltage Regulators" in Electrical Section.*

Current Regulator

Setting - 28-32 amperes (B6C-10505-C & B7A-10505-B), 33-37 amperes (B8E-10505-B), 38-42 amperes (B7A-10505-A).
Checking & Adjusting - *See "Ford 12-V Voltage Regulators" in Electrical Section.*

MISC. ELECTRICAL

Headlights: Dual Headlights (4-Headlights), *see "4-Headlight System" in Electrical Section.*

Directional Signals: *See Electrical Section.*

Lighting Switch Removal: With control knob in the "OFF" position, press spring release button on switch housing, turn shaft slightly and pull it out of switch. Unscrew mounting nut with Tool 17470-N

Stop Light Switch Location: On forward end of brake master cylinder (Conventional Brakes), and on top of brake booster assembly (Power Brakes). Master cylinder located on firewall in engine compartment.

CIRCUIT BREAKERS: On headlight switch. Combination headlight switch, circuit breaker, and fuse assembly used. One circuit breaker protects headlight circuit and second circuit breaker protects instrument, parking, stop and tail light circuits

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

FUSES: Size and location as follows:
Back Up Light - SFE 7.5 ampere, in feed wire.
Cigar Lighter - Sulphur disc in base or reset circuit breaker, at back of assembly.
Clock - 1 AG, in feed wire.
Heaters - SFE 14 ampere in feed wire.
Interior Lamps - SFE 7.5 ampere, on lighting switch.
Overdrive - 3 AG-15, in clip on O.D. relay.
Spot Light - SFE 7.5 ampere in feed wire.
Turn Signal - SFE 7.5 ampere in feed wire.
Horn Relay: Ford No. B8A-13853-A.

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air conditioning or lines for access to engine. See "Air Conditioning Service Cautions" in Miscellaneous Section.*

ENGINE SPECIFICATIONS: Own 90° V8. TWO types of engines used: "**Y-V8**" - 292" Displ. V8 of same design used on previous models. "**Interceptor V8**" - 332" Displ. Interceptor & Interceptor Special V8, 352" Displ. Thunderbird Special V8, 361" Displ. Police Interceptor V8.

►*INTERCEPTOR ENGINE NOTE:* These engines are new design with combination intake manifold and valve tappet chamber cover. Distributor is mounted on forward end of engine and new valve arrangement and firing order is used. *NOTE* - 352" Cylinder Block is painted Blue, 361" block painted Yellow.

Engine	Bore	Stroke	Displacement
292	3.75"	3.30"	292 cu. in.
332	4.00"	3.30"	332 cu. in.
352	4.00"	3.50"	352 cu. in.
361	4.05"	3.50"	361 cu. in

Engine	Rated HP	Comp. Ratio	Developed HP
292	45.00	9.1-1	205 at 4500 RPM
332	51.20	9.5-1	240 at 4600 RPM
352	51.20	10.2-1	300 at 4600 RPM
361	52.49	10.5-1	303 at 4600 RPM

Compression & Vacuum Reading - *See TUNE-UP.*

►*AERATED ENGINE OIL CORRECTION (Interceptor Engines):* Due to air leak at oil pump inlet tube. May cause noisy hydraulic lifter operation. Check for air bubbles in oil flowing from No. 2 Cyl. exhaust valve pushrod coolant tube. Correct by replacing inlet tube-to-pump gasket (if defective) or brazing fittings at both ends of oil pump inlet tube (if leak occurs at this point).

►*INTAKE MANIFOLD-TO-BLOCK SEAL FAILURE & OIL LEAK CORRECTION (Interceptor Engines):* Install new type Intake Manifold-to-Block Seals, Part Nos. B8A-9422-B & B8A-9423-B with tabs and double ridge type sealing lip. These seals used at front and rear ends of manifold.

►*INTAKE MANIFOLD-CYLINDER HEAD GASKET PRODUCTION CHANGE & REPLACEMENT NOTE (332, 352 Engines):* Later cars use one-piece "Steelbestos" gasket, Part No. B8A-9439-B, for better sealing, and replaces three-piece type used previously. Use new type gasket for service replacement.

CYLINDER HEAD: *See "Cylinder Head & Manifold" in Ford Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Ford Special Data.*

ENGINE REMOVAL: *See "Engine" in Ford Special Data.*

OIL PAN REMOVAL (292" Eng.): Drain oil, remove stabilizer bar, disconnect oil pump inlet tube at oil pump. Remove oil pan screws, lower oil pan.

OIL PAN REMOVAL (Others): Drain oil, remove dipstick. Turn engine to bring No. 1 piston to TDC. Remove stabilizer bar, oil pan screw, lower oil pan to frame crossmember. Remove lower, and loosen upper oil pump inlet tube bolts. Swing tube clear of oil pan. Push oil pan forward and tilt down to remove.

PISTONS

Autothermic type. Solid skirt with three rings above pin.
Removal - Pistons and rods removed from above.
Clearance - .0012-.0018" (292), .0015-.0021" (Others) at bottom of skirt.
Fitting New Pistons: Use ½" wide feeler gauge full length of cylinder, inserted between piston and cylinder wall at right angles to pin on thrust side, piston inverted and 1½" below top of block. Pull required to remove feeler should be 5-10 lbs. when using feeler gauge thicknesses as follows: New Piston in New Bore - .002" feeler, New Piston in Used Bore - .0025", Used Piston in Used Bore - .003".
Replacement Pistons: Furnished Standard and .020", .030", .040" & .060" Oversize, with fitted pins.
Installing Pistons - Install piston with indentation in head of piston toward front of engine. *See Rod Installation.*

PISTON PINS

Floating type with lock ring at each end.
Diameter - .9120-.9123" (292), .9750-.9753" (Others).
Length - 3.016-3.030" (292), 3.156-3.170" (Others).
Pin Fit in Piston - .0001-.0003". Wear limit .0008".
Pin Fit in Rod Bushing - .0001-.0003". Wear limit .0008".
Replacement Pins: Color marked for identification and furnished in following sizes: Standard (Green), .001" (Blue), .002" (Yellow) Oversize. Fitted pins furnished with new pistons.

PISTON RINGS

Two compression and one oil ring per piston. Oil ring is "Side Sealing" type (two steel rails with spring spacer between them).

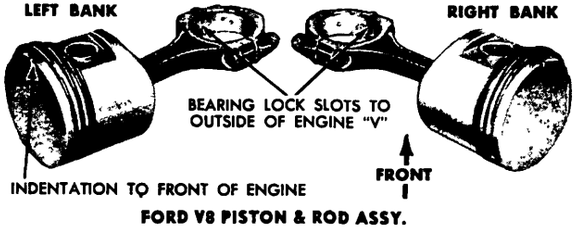
292 Engine

Ring	Width	End Gap	Side Clearance
Compr. #1	.0775-.0780"	.010-.027"	.002-.0035"
Compr. #2	.0775-.0780"	.010-.027"	.002-.0035"
Oil	.1850	.015-.062"	②

332 & 352 Engines

Ring	Width	End Gap	Side Clearance
Compr. #1	.0775-.0780"	.013-.030"	.002-.0035"
Compr. #2	.0930-.0935"	.013-.030"	.002-.004"
Oil	①	.015-.062"	②

361 Engine



Ring	Width	End Gap	Side Clearance
Compr. #1	.0775-.0780"	.013-.030"	.002-.0035"
Compr. #2	.0929-.0935"	.013-.030"	.0025-.0045"
Oil	.1885"	.015-.062"	②

① - .1880" (332), .1860" (352).
② - Side sealing type ring.

Replacement Rings: Furnished in Partial Ring Sets (for 2 Pistons) in Standard & .020", .030", .040", .060" Oversize.

CONNECTING RODS

Crankpin Journal Diameter - 2.1880-2.1888" (292), 2.4380-2.4388" (Others).
Lower Bearing - Steel backed, copper lead alloy lined type. Upper and lower halves interchangeable.
Clearance - .0008-.0027" (292), .0009-.0028" (Others).
Side Clearance - .006-.016". Wear limit .019" (2 rods).
Replacement Bearings: Standard size (2 sizes marked **Red & Blue**) and .010", .020", .030" (292) plus .040" (Others) Undersize.
►*STANDARD SIZE NOTE:* **Red** marked bearings increase clearance, **Blue** marked bearings decrease clearance.
Installing Rods: Install rod in piston so that rod bearing lock slots in connecting rod are toward outside of engine when indentation on head of piston is toward front of engine. Cylinder numbers on bearing caps and rods must be on same side and installed in same numbered cylinder.

FORD V8 PISTON & ROD ASSY.

CRANKSHAFT

Journal Diameter - 2.4980-2.4988" (292), 2.7484-2.7492" (Others).
Bearings - Copper-lead, steel-backed.
Clearance - .0006-.0032" (292), .0007-.0029" (Others).
Replacement Bearings: Standard size (2 sizes marked **Red & Blue**) and .010", .020", .030" (292) plus .040" (Others) Undersize.
►*STANDARD SIZE NOTE:* **Red** marked bearings increase clearance, **Blue** marked bearings decrease clearance.
End Thrust: Taken by No. 3 main bearing. Replace bearing when endplay is excessive.
Thrust Bearing Alignment - *See "Crankshaft & Main Bearings" in Ford Special Data.*
Endplay - .002-.006". Wear limit .010"

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Crankshaft Rear Oil Seal Installation: *See "Crankshaft & Main Bearings" in Ford Special Data.*

Crankshaft Front Oil Seal Installation: *See "Engine Front Cover" in Front Special Data.*

CAMSHAFT

►*CAMSHAFT REPLACEMENT CAUTION (Interceptor Engines):* Check all camshafts for correct type, before installation, as follows:

332" & 352" Engine (Mechanical Lifters) - Camshaft No. B8A-6250-A. Check diameter of cam lobes (2 Intake and 2 Exhaust) at right angles to centerline through high point of cam. Intake lobe diameter should be .006" larger than exhaust lobe.

332", 352", & Late 361" Engine (Hydraulic Lifters) - Camshaft No. B8A-6250-B. Check cam lobe diameter in same manner as for engine with mechanical lifters (above). Intake and exhaust lobes are SAME diameter and in addition shaft has letter "X" stamped on rear of No. 5 bearing journal following date code.

Early 361" Engine (Hydraulic Lifters) - Camshaft No. B8E-6250-A. Shaft has cast letters "EDD" located between No. 16 cam lobe and rear bearing journal.

►*CAMSHAFT THRUST BUTTON PRODUCTION CHANGE (Interceptor Engines):* Revised Thrust Button & Spring assemblies with revised Engine Front Cover used on later engines to eliminate possibility of thrust knocks. *See thrust knock correction following.*

►*CAMSHAFT THRUST KNOCK OR WHINE CORRECTION (Early Interceptor Engines): See Thrust Button Production Change above. Make correction on early engines as follows:*

Thrust Knock Correction - Install all parts furnished in Kit No. B8A-6275-A (Thrust button, spring, retainer clip, bolt and washer). Engine front cover must be reworked by removing button retainer plate with a sharp chisel and polishing burrs on button contact surface, or installing revised Front Cover No. B8A-6019-B. *CAUTION* - Above kit must be installed whenever revised front cover installed to replace original cover No. B8A-6019-A.

Whining Noise Correction - On early cars with first type thrust button assembly, noise is caused by thrust button operating on rough bolt head. Correct by polishing bolt head and applying lubriplate to area.

Journal Diameter - (292) 1.9255-1.9265", (332 & 352) 2.1238-2.1248", (361) 2.1230-2.1240".

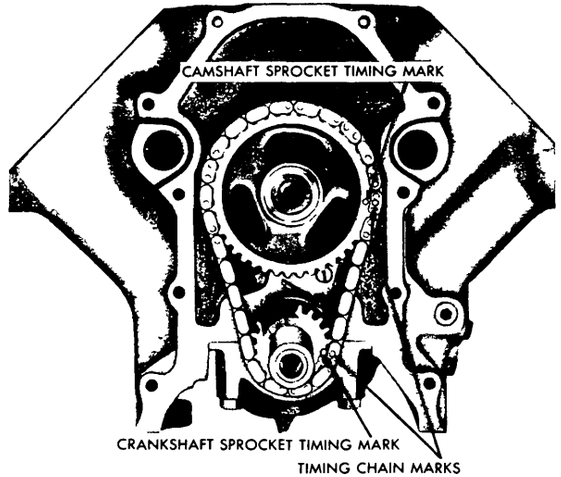
Bearings - Steel-backed, babbitt lined bushings.

Clearance - .001-.003"

End Thrust: (292) - Taken by thrust plate and washer located between camshaft sprocket and shoulder on camshaft.

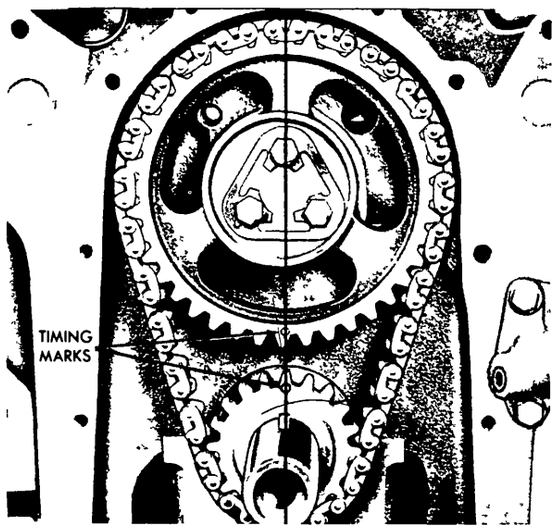
(Other Engines) - Controlled by spring loaded thrust button on fuel pump eccentric bolt.

►*CAMSHAFT THRUST WASHER NOTE (292 Engine):* Chamfer on inner diameter of washer must be toward the rear or facing the camshaft journal when installed.



Replacement Camshaft Bearings: Furnished Standard and .015" Undersize.

Camshaft Removal & Installation: *See "Camshaft & Bearings" in Ford Special Data.*



Timing Chain: Side guide type. Length 56 links (292), 48 links (Others).

►*332, 352, 361 TIMING CHAIN NOISE CORRECTION:* Caused by inadequate lubrication, misaligned camshaft gear locating pin, or loose timing gear and fuel pump eccentric. *See "Camshaft" in Ford Special Data.*

►*TIMING CHAIN REPLACEMENT NOTE:* Replace chain and/or sprockets when deflection on slack side exceeds ½" (take up slack on driving side, measure slack on opposite side). Remove and install chain (endless) as a unit with both sprockets.

FORD V8 292 VALVE TIMING MARKS

FORD V8 332 & 352 INTERCEPTOR ENGINE VALVE TIMING MARKS

Camshaft Setting: (292) Timing marks on chain and sprockets are together when chain marks are on drive side. There are 12 timing chain link pins between timing marks on sprockets.

(332, 352, 361) - Timing marks on sprockets must be adjacent and in line across shaft centers.

Engine Front Cover Oil Seal (Crankshaft Front Seal) Installation: *See "Engine Front Cover" in Ford Special Data.*

Engine Front Cover Removal: *See "Engine Front Cover" in Ford Special Cover.*

VALVES

Tappet Clearance: Mechanical Lifters - (292") .020" Cold, .019" Hot, All Valves. **(332" & 352")** .026" Cold & Hot, All Valves. *NOTE* - If tappet clearance set Cold, recheck clearance after engine operated 30 minutes to normalize temperature and reset tappet clearance to Hot figure. *See "Valve System" in Ford Special Data for Tappet Clearance checking procedure.*

Hydraulic Lifters - (332", 352", 361") None in service. *See "Valve System" in Ford Special Data for operating range check of hydraulic lifters.*

292 Engine

Valve	Head Diameter	① Stem Diameter
Intake	1.920-1.930"	.3416-.3423"
Exhaust	1.505-1.515"	.3403-.3410"

Valve	Seat Angle	② Lift	Stem Clearance
Intake	45°	.272"	③ .001- .0024"
Exhaust	45°	.285"	④ .0023-.0037"

332,352,361 Engines

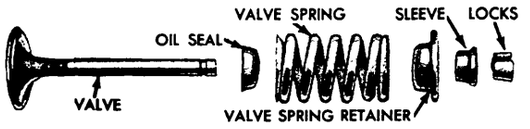
Valve	Head Diameter	① Stem Diameter
Intake	2.022-2.032"	.3711-.3718"
Exhaust	1.551-1.561"	.3693-.3700"

Valve	Seat Angle	⑤ Lift	Stem Clearance
Intake	30°	.241"	.001-.0024"
Exhaust	45°	.244"	.0028-.0042"

① - Furnished with .003", .015", .030" oversize stem.
② - Cam lobe lift. .005" wear loss limit.
③ - .0045" wear limit. ④ - .0065" wear limit.
⑤ - Cam lobe lift with mechanical lifters. .232" (intake & exhaust) cam lobe lift with hydraulic lifters. Camshaft Part No. B8A-6250-B

Valve Seat Width - .060-.080" Intake, .070-.090" Exhaust.

Valve Stem Oil Seals - Umbrella type seals used on all valves. Install seals with cup side down over valve guide.



►*ROTATABLE VALVE NOTE:* All valves are rotatable type.
See "Valve System" in Ford Special Data.

Valve Springs: Install with closed coil end toward cylinder head.

►*VALVE SPRING NOTE:* **(332, 352, 361)** - Early production engines used dampener spring inside valve spring, single spring used in later production. Both types have same spring specifications and can be intermixed.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

FORD V8 VALVE ASSEMBLY

Fr L ngth - (292) 2.09". **(332, 352, 361)** 2.26".

Spring Sp cifications - 292

Valv	Spring Pressure		Length
Closed	71-79 lbs.	①	1.780"
Open	161-177 lbs.	②	1.390"

332,352,361 Engines - ③

Valve	Spring Pressure		Length
Closed	94-104 lbs.	④	1.82"
Open	180-198 lbs.	⑤	1.42"

① - Wear limit 64 lbs. at 1.780".
② - Wear limit 145 lbs. at 1.390".
③ - Spring and dampener assembly.
④ - Wear limit 85 lbs. at 1.82".
⑤ - Wear limit 162 lbs. at 1.42".

Out of Squar Limit - .062" (All engines).

►*VALVE SPRING INSTALLATION NOTE:* Measure valve spring assembled height from machined surface of cylinder head spring pad to under side of spring retainer. If assembled height is 1 13/16" (292), 1 55/64" (Others) or greater, install necessary .030" spacers between cylinder head valve spring pad and valve spring to bring assembled height to recommended 1 25/32-1 13/16" (292), or 1 53/64-1 55/64" (Others). *CAUTION* - Do not install spacers unless necessary.

Valv Guid s: Integral with cylinder head. When stem-to-guide clearance exceeds maximum (See table above), ream guides and install oversize valves. *See "Valve Syst m" in Ford Special Data.*

Valv Lift rs (M chanical): (292, 332, 352) Mushroom type. Remove from below after camshaft remove d.

Clearance - .0008-.0024"

Valv Lift rs (Hydraulic): (332, 352, 361) Barrel type. Can be removed from above without removing camshaft.

Cl aranc - .0008-.0023".

Lift r Ov rhaul - *S "Valve System" in Ford Special Data.*

Hydraulic Lift r Op rating Range - With lifter collapsed, operating range should be .062-.1875". *See "Valv Syst m" in Ford Special Data.*

R ck r Arm Ass mbly: *S e "Valve System" in Ford Sp cial Data.*

►*VALVE ROCKER ARM LUBRICATION CORRECTION (332 & 352 Engin with Mechanical Lifters):* Improper lubrication caused by incorrect position or machining of oil groove. *S "Rock r Arms" in Ford Special Data.*

VALVE TIMING

See "Camshaft S tting" und r CAMSHAFT abov .

►*VALVE TIMING NOTE - Th following valv op ning and closing points ar with camlift as indicated.*

Valv Timing - 292 Eng.

Intak Valv s - Open 18° ① BTDC. Close 58° ① ALDC.
Exhaust Valv s - Open 66° ② BLDC. Close 10° ③ ATDC.

Valv Timing - 332" & 352" Engs. (Mechanical Valve Lifters)

Intake Valves - Open 21° ④ BTDC. Close 51° ⑤ ALDC.
Exhaust Valves - Open 67° ④ BLDC. Close 9° ⑤ ATDC.

Valve Timing - 332" & 352" Engs. (Hydraulic Valve Lifters)

Intake Valves - Open 22° ⑥ BTDC. Close 68° ⑦ ALDC.
Exhaust Valves - Open 68° ⑥ BLDC. Close 22° ⑦ ATDC.

Valve Timing - 361 Eng.

Intake Valves - Open 17° ⑥ BTDC. Close 59° ⑦ ALDC.
Exhaust Valves - Open 57° ⑤ BLDC. Close 19° ⑦ ATDC.

① - Camlift .015". ② - Camlift .013". ③ - Camlift .016". ④ - Camlift .017". ⑤ - Camlift .019". ⑥ - Camlift .002". ⑦ - Camlift .005".

Valve Timing Check: Release No. 1 Intake Valve adjusting screw, push rocker arm to one side, install dial indicator in pushrod socket. Zero indicator with cam on heel of lobe. Install quadrant on crankshaft pulley, rotate engine to amount of lobe lift shown in table above, then check quadrant and compare reading with degrees shown in table above for that valve. If reading not correct, check for bent pointer, worn timing chain or sprocket before replacing camshaft.

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Ford Special Data.*

Crankcase Capacity - 5 qts. (refill). 6 qts. when filter changed.

Normal Oil Pressure: 45-50 lbs. at 2000 RPM.

Pressure Regulator Valve - In oil pump body, not adjustable.

Oil Pressure Indicator - Indicator light on instrument panel, operated by Engine Unit, Ford No. B6A-9278-B (stamped No. 7 on Hex.). Lights when ignition switch turned on, goes out when engine starts and pump pressure reaches (7 lbs.).

Oil Pump: Rotor type. Located outside crankcase on left side (292), at front inside crankcase (332, 352). Driven by distributor through intermediate drive shaft.

Pump Overhaul - *See "Oiling System" in Ford Special Data.*

Oil Filter: New "Disposable" type.

Disposable Filter Replacement - Coat gasket face of filter with oil, thread filter on insert by hand until gasket contacts adapter surface, then tighten filter an additional one-half turn. *CAUTION* - Do not overtighten. Run engine and check for leaks.

Crankcase Ventilation: Filter in oil filler and breather cap (Inlet) all models. Road draft outlet pipe for crankcase ventilation, all models. *NOTE* - 292 Engine has filter screen in road draft outlet pipe. Service filler cap by cleaning with solvent and resaturating with engine oil at 4000 mile intervals.

COOLING

Water Capacity: 20 qts. (Thunderbird), 18½ qts. (All Others). Add 1 qt. for heater.

Pressur Valve: Opens 12-15 lbs. Use only 12-15 lb. cap for replacement. Ford B8A-8100-A.

Therm stat: Ford B7A-8575-A (157-162°F) (Std.), & B7A-8575-B (177-182°F) (Permanent anti-freeze).

Water Pump: Packless, sealed ball bearing type.

Pump R m val (292 Engin). Drain cooling system, disconnect radiator lower hose and heater hose from water pump. Remove fan belt, fan, fan spacer, and pulley. Take out four mounting bolts, remove pump, gaskets, and timing pointer.

Pump Removal (332, 352, 361 Engine) - Drain cooling system, loosen generator and remove fan belt. Disconnect lower radiator hose and heater hose (from water pump). Loosen fuel pump bolts for access to lower left water pump bolt. Remove generator bracket bolts and move bracket away from pump. Loosen and move water pump by-pass hose front clamp to rear. Remove water pump to block bolts and remove water pump assembly. *See "Water Pump" in Ford Special Data.*

Temperature Gauge: King-Seeley Electric. Constant-voltage ("CV") type with gauge voltage regulator Ford No. B7A-10804-B.

Dash Unit - (Pass. Cars) Ford No. B8A-10883-A. **(Thunderbird)** Ford No. B8S-9280-A (Without Air Cond.), B8S-9280-B (With Air Cond.). *NOTE* - Thunderbird units are combination Fuel and Temperature gauges.

Engine Unit - Ford No. B7A-10884-A.

See "Temperature Gauges" in Miscellaneous Section.

CLUTCH

Long Model 10CF (Std. 292), **11CF** (Std. 332, 352 & Heavy Duty on 292 Pass, Cars & Taxi). Single plate, semi-centrifugal type.

See "Long Clutches" in Clutch Section.

Cover Assembly	Long No.	Ford N .
10CF	267346	① B7A-7563-A
11CF	267350	② B8A-7563-A
11CF	267350	③ B8A-7563-B

① - Yellow & Brown cover - White pressure plate.
② - Brown & Yellow cover - Green pressure plate.
③ - Pink & Orange cover - Green pressure plate.

Clutch Disc	Long No.	Ford No.
292 O.D.	288855	④ B8A-7550-D
292 S.M.	288852	⑤ B8A-7550-C
292 Pass. & Taxi H.D.	288853	⑥ B8A-7550-E,G
332 Pass	288853	⑥ B8A-7550-G
352 Pass. & T-Bird	288351	⑦ B8A-7550-F

O.D. Overdrive. **S.M.** Synchro-mesh. **H.D.** Heavy Duty.
④ - Orange springs (blue paint).
⑤ - 4 Aluminum & 4 unmarked springs.
⑥ - **E** - Orange springs (White paint). **G** - Orange springs.
⑦ - Blue springs.

Pedal Adjustment: If pedal travel is less than 6 3/8" or 6 7/8" (Thunderbird) or more than 6 5/8" or 7 1/8" (Thunderbird), reposition pedal bumper and bracket until travel is within limits. Adjust assist spring link to give assist spring length of 9 7/8" or 6 3/4-6 7/8" (Thunderbird) between eye centers with clutch released.

P dal Free Travel - 1 1 8-1 3 8". Loosen locknut on clutch pedal release rod, turn adjusting nut until

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

correct travel is reached. *NOTE* - Check free travel by operating engine at 3000 RPM with transmission in Neutral position. There should be a minimum of ½" free travel under these conditions.

Removal: Remove transmission, flywheel housing cover, release lever retracting spring, slide release bearing and hub off release lever. Mark clutch cover and flywheel for reinstallation, loosen six cover bolts uniformely to release spring tension, remove cover and pressure plate through opening in flywheel housing. Remove clutch release lever.

SYNCHRO-MESH TRANSMISSION

Own. Helical gear, constant mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse).
See "Ford Synchro-mesh" in Transmission Section.

Transmission Controls: *See "Transmission Controls" in Transmission Section.*

Removal (Exc. Thunderbird): With car raised up, disconnect drive shaft at rear universal joint, slide drive shaft off transmission output shaft. Remove speedometer cable and gear. Disconnect shift rods at transmission. Remove rear engine support to extension housing bolts. Disconnect parking brake adjusting rod from equalizer bracket. Support rear of engine and remove rear engine support, then lower engine for clearance, and remove transmission to flywheel housing bolts. Use guide pins in two lower bolt holes and slide transmission back until input shaft clears flywheel housing, and lower transmission.

Thunderbird - Drain transmission, raise car and remove driveshaft at rear universal joint. Disconnect parking brake adjusting rod. Disconnect parking brake cables from equalizer. Disconnect exhaust pipe assembly at manifolds and couplings. Remove exhaust inlet assembly. Remove transmission to rear engine support bolts. Raise transmission on jack and remove crossmember. Disconnect speedometer cable bracket and disconnect cable from transmission. Remove shift rods and bolts that secure transmission to flywheel housing. Remove transmission

OVERDRIVE

Warner R10. Solenoid operated type, with governor control and throttle operated kickdown. No Lock-out Switch used.
See "Ford Overdrive" in Transmission Section.

Overdrive Control: *See "Overdrive Controls" in Transmission Section.*

Removal: Same as for synchro-mesh transmission (above) after disconnecting control cable and wiring.

AUTOMATIC TRANSMISSION

Fordomatic & Cruise-O-Matic. Two types, with Torque Converter and three speed automatic transmission with hydraulic control "Cruise-O-Matic" has different Clutch and Hydraulic Control System design and operation, with one additional manual selected driving range.
See "Ford Automatic Transmission" in Transmission Section.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Ford Automatic Transmission" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Ford Automatic Transmission" in Transmission Section.*

Lubrication - Check transmission fluid at 1,000 mile intervals and maintain level at "F" (Full) mark on dipstick. Drain and refill every 24,000 miles. Use only Automatic Transmission Fluid Type "A".

Checking Fluid Level - Bring transmission to operating temperature by running engine with selector lever in Neutral position. Move selector lever through all ranges to assure fluid distribution, then place lever in "P" (Park) position for checking fluid level. Add Automatic Transmission Fluid Type "A" to bring level to (Full) mark on dipstick

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER AUTOMATIC TRANSMISSION DATA: See "Ford Automatic Transmission Section", in Transmission Section.*

UNIVERSALS

Mechanics. Needle bearing type.

►*CAUTION:* Rear universal joint companion flange nut controls pinion bearing preload (must be adjusted whenever nut is loosened). *See "Ford & Mercury" in Rear Axle Section.*

REAR AXLE

Own. Separate carrier type, semi-floating, hypoid, with Hotchkiss Drive. *NOTE* - Same type used on all models. *See "Ford & Mercury" in Rear Axle Section.*

Ⓒ - Or 3.70-1.
Backlash - .004-.009".

Axle Shaft Removal: Remove wheel, take off drum Remove four axle retainer locking type nuts (work through opening in axle shaft flange). Use Puller No.4235-N and pull axle shaft (do not disturb brake backing plate or damage wheel bearing oil seal). Replace one nut to secure brake backing plate.

Carrier Assembly Removal: *NOTE* - Pinion carrier assembly can be removed separately without disturbing differential carrier by disconnecting rear universal joint at companion flange, and removing five bolts that attach pinion carrier assembly to differential carrier housing. With rear universal joint disconnected, axle shafts removed (see above), remove differential carrier housing to rear axle housing bolts and lift out carrier assembly.

FRONT SUSPENSION

Independent. "Ball Joint" suspension with direct acting shock absorbers mounted within coil springs. *See "Ford, Thunderbird, Mercury" in Suspension & Wheel Alignment Section.*

Caster - 0° to Pos. 1°. Maximum variation between wheels ½°.

Camber - Pos. ½° to Pos. 1½°. Maximum variation betwbeen wheels ½° (¼° preferred).

Toe-In - 1/16-1/8". *NOTE* - When checking toe-in on cars with power steering, engine shquld be running so that power steering control valve will be properly centered.

Toe-Out on Turns - Outer wheel 20°, inner wheel should be 24½°.

REAR SUSPENSION

Thunderbird uses coil springs, other models have conventional semi-eliptical springs.
See "Ford Thunderbird" in Suspension & Wheel Alignment Section.

AIR SUSPENSION

Optional on Fairlane, Fairlane 500, and Station Wagons with Automatic Transmission.
See "Ford & Mercury Air Suspension" in Suspension & Wheel Alignment Section.

STEERING

Manual: Own. Recirculating ball worm & nut.
See "Saginaw Ball Bearing Worm & Nut" in Steering Section.

Power Steering: Ford-Mercury Linkage type. Used in conjunction with standard steering gear.
See "Ford & Mercury Linkage Type" in Steering Section.

Steering Linkage: *See "Steering Linkage" in Steering Section.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Steering Wheel & Horn Button Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

Steering Gear Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

BRAKES

Ford-Bendix Hydraulic. Hand lever applies rear wheel service brakes.

► *BRAKE DESIGN NOTE:* Front wheel anchor pin (fixed anchor type) is mounted on wheel spindle independently of backing plate (wheel cylinder mounted on anchor pin).
See "Ford, Lincoln, Mercury Bendix" in Brake Section.

► *BRAKE PULLING CORRECTION:* To correct, loosen anchor pin attaching bolt (see Brake Design Note above) and retighten bolt to 80-100 ft. lbs.

Drum Diameter - 11" front and rear.

Wheel Cylinder Diameter - 1 1/8" (Front-All), 7/8" (Rear-Pass. Cars), 15/16" (Rear-Sta. Wgn. & Courier).

Lining Specifications (Width & Length)

Model	Primary	Secondary
Pass. Cars (Front)	2¼" x 10.62"	2¼" x 11.93"
(Rear)	1¾" x 10.62"	1¾" x 11.93"
Sta. Wgn. & (Front)	2¼" x 10.62"	2¼" x 11.93"
Sedan Del. (Rear)	2" x 10.62"	2" x 11.93"
Thunderbird (Front)	2½" x 10.64"	2½" x 10.91"
(Rear)	2" x 10.64"	2" x 10.91"

Clearance - Adjusting screw backed off 10-12 notches from point where shoes are tight against drum.

Brake Pedal Free Play: 5 16 to 7 16". If play not correct after brake adjustment, loosen locknut on eccentric bolt that attaches brake pedal assembly to master cylinder pushrod, rotate eccentric bolt

Standard Master Cylinder: On engine side of firewall.

Checking Fluid Level - Within ½" of top of reservoir.

Removal - Disconnect rubber boot from rear end of master cylinder, brake line at master cylinder fitting, stop light switch from front of cylinder and disconnect wires from switch. Push down brake pedal several times to force as much fluid as possible (into clean container), remove bolts that secure master cylinder to dash panel. Do not disconnect pushrod from brake pedal unless it is to be serviced.

Power Brakes: "Bellows Type" used. Pedal assist power unit with vacuum bellows and control valves mounted on drivers side of dash panel
See "Ford Bellows Type" in Brake Section.

Checking Fluid Level - Within ½" of top of reservoir.

Removal - Remove vacuum hose from top of unit, valve adjusting eccentric with flat washer spring, and bushing, nylon bushing from power unit valve housing. Remove two mounting screws (Bracket to dash panel) and remove power unit from car.

MISC. MECHANICAL

Windshield Wipers: Vacuum type with Link & Arm type linkage (Exc. Thunderbird), Cable operated (Thunderbird).
See "Windshield Wipers" in Miscellaneous Section.

Power Window Regulators: Electric type.
See "Electric Window Regulators" in Misc. Section.

Power Top Control: Electric-Hydraulic (Convertible), Electric (Retractable Hard-Top). *See "Power Top Controls" in Miscellaneous Section.*

Power Seat Adjusters: "4-Way" Electric.
See "Power Seat Adjusters" in Miscellaneous Section.

Air Conditioning: *See "Polar Aire" or "Select Aire" in Miscellaneous Section.*

TUNE-UP

►*LOSS OF POWER CORRECTION (272 4-Bbl Carb Eng)* Caused by ball check sticking in secondary diaphragm housing To correct, remove ball check *See "Holley 4-Barrel Carburetors" in Carburetion Section*

COMPRESSION PRESSURE: 150±20 lbs with variation limit between cylinders of 10 lbs

VACUUM READING: (6 Cyl.) 18-19", (V8) 19-20", at idling speed.

VALVE TAPPET CLEARANCE: Can be set with engine cold but must be rechecked with engine at operating temperature (30 minutes minimum operation at 1200 RPM) and engine idling.

Tappet Clearance (Intak & Exhaust)

Engin	C ld	H t
6 Cyl.	.019"	.019"
V 8 (All)	.020"	.019"

►*TAPPET CLEARANCE ADJUSTING SCREW NOTE.* Screws are "self-locking" and torque required to turn screw (after interference noted) must be 3 ft. lbs., minimum, if less than 3 ft. lbs., replace adjusting screw or adjusting screw and rocker arm assembly.

MANIFOLD HEAT CONTROL (Except ECR-272): Automatic thermostatic type. Located at center of exhaust manifold (6 Cyl.), between cross-over pipe and right exhaust manifold (V8 MD Engines only) Install valve assembly with stop pin at top of valve housing and hook thermostatic spring on stop pin.

►*MANIFOLD VALVE OPERATION CAUTION:* Valve is closed with engine at normal operating temperature and idling (should open with very light finger pressure on counterweight). Valve will open momentarily when engine accelerated, and will be open when engine operated at high RPM.

IGNITION
6 CYL. ENGINE

FIRING ORDER: 1-5-3-6-2-4.

SPARK PLUG GAP: .028-.032"
Plugs – Champion 860. 18 mm.

►*SPARK PLUG CAUTION:* Plugs have tapered seat and no gasket is used. Tighten plugs to 15-20 ft. lbs.

COIL: Ford No. B6A-12029-B.
Ignition Current - 2 5 amps idling, 4 0 amps stopped
Resistor - Ford No. B8E-12250-A 1.3-1.4 ohms at 75°F.

DISTRIBUTOR: Loadomatic type of same design used on previous models Distributors must be used with correct carburetor as follows

Application	Distributor No.	Carburetor No.
Early Trks ①	B7A-12127-H	B8A-9510-J,M
Later Trks ②	B8A-12127-J	B8A-9510-J,M,B8C-9510-B
Latest Trks ③	B8A-12127-M	B8A-9510-M,U,B8C-9510-C

① - Replaced by B8A-12127-J
② - Engr No FET-12127-B
③ - Engr No FET-12127-C

►*DISTRIBUTOR PRODUCTION CHANGES TO MINIMIZE DETONATION* Different distributors used with carburetors listed above Later distributors have different advance performance (see below) and later carburetors have different jet calibrations to eliminate leanness and surging and to provide correct distributor vacuum *Distributor and Carburetor combinations listed above must be used together*

►*EARLY DISTRIBUTOR MODIFICATION (For use with later carburetors)* Distributor B8A-12127-J can be reworked for use with Carburetor B8A-9510-U by installing new Secondary Advance Spring FAA-12225-A and recalibrating advance performance to specifications listed below for B8A-12127-M distributor. *NOTE - Distributor B7A-12127-H should be replaced by B8A-12127-J, or M*

Condenser – Ford No. 7RA-12300-C. Capacity .21-.25 mfd.
Contact Point Set – Ford No. FAA-12171-A.
Breaker Gap – .024-.026".
Cam Angle – 35-38° at idling speed.
Breaker Arm Spring Tension – 17-20 ozs.
Rotation – Clockwise viewed from above.

Advance Performance
►With Distributor on Test Stand

IGNITION TIMING

Engine	Std. Ignition Setting
6 Cyl. (All Trans.)	4° BTDC
272 MD (ECW) All Trans.	5° BTDC
272 MD (ECY) & HD (Std. & O.D.)	10° BTDC
292 All Trans	4° BTDC

►*TIMING CAUTION:* Disconnect vacuum line on distributors with vacuum advance. Operate engine below 550 RPM when checking centrifugal and vacuum advance distributor. Operate engine at idle speed for other distributors. Rotate distributor counterclockwise(6 Cyl.) or clockwise (V8) to advance timing.

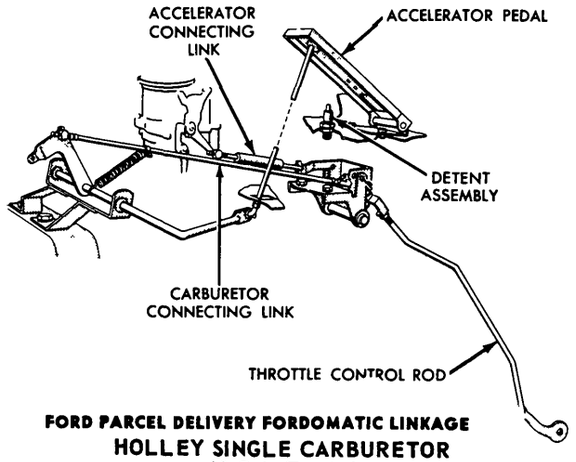
Timing Mark (6 Cyl.) - Vibration dampener marked by lines - TDC -3°-5°-7°-9°. Align pointer half-way between 3° and 5° lines (4° BTDC) on vibration dampener.

Timing Mark (272, 292) - Vibration dampener has six marks - Long mark is TDC, preceding marks are 2°, 4°, 6°, 8°, 10° BTDC. Align pointer with correct specification shown in Ignition Table above.

CARBURETOR

►*CARBURETOR APPLICATION:* Holley (Ford) or Holley Carburetors used as follows:

Engine	Carburetor Model
6 Cyl. (Std. & O.D.) ①	Holley(Ford) Single B8C-9510-B
6 Cyl. (Std. & O.D.) ②	Holley(Ford) Single B8C-9510-C
6 Cyl. (Fordomatic) ①	Holley(Ford) Single B8A-9510-J
6 Cyl. (Fordomatic) ②	Holley(Ford) Single B8A-9510-U
6 Cyl. (Spec. Economy)	Holley (Ford) Single B8A-9510-M
272 MD (Par. Del)	Holley Dual B7J-9510-B
272 MD (Others)	Holley Dual B7T-9510-D
292 MD (Par. Del.)	Holley Dual B8J-9510-A
292 MD (Others)	Holley Dual B8C-9510-A
272 HD	Holley 4-Bbl. B7T-9510-C
292 HD	Holley 4-Bbl. B8T-9510-A



① - With Distributor B8A-12127-J.

② - With Distributor B8A-12127-M.

Throttle Linkage Adjustment (Fordomatic Models): *Same as for corresponding 6 Cyl. & V8 Passenger Cars. See Passenger Car data and also note the following:*

Accelerator Pedal Height – With gauging pin installed through holes of accelerator assembly, and carburetor connecting link adjusted so that throttle valves closed with throttle lever stopscrew against stop, accelerator pedal height should be 2-3/4" (6 Cyl. & V8 Trucks except Parcel Delivery). Adjust pedal height by changing length of accelerator pedal connecting link. On all truck models, accelerator pedal should just contact detent (on toeboard under pedal) when carburetor lever strikes wide-open stop (this is the only pedal height specification for Parcel Delivery models).

Dashpot Adjustment (All Fordomatic Models): After engine idle speed correctly set, turn off engine, loosen dashpot adjusting screw locknut, depress dashpot plunger fully, turn dashpot in or out of bracket until clearance between end of dashpot plunger and lug on throttle lever is .045-.064" (with throttle closed and throttle stopscrew against stop), tighten locknut.

FORD PARCEL DELIVERY FORDOMATIC LINKAGE

HOLLEY SINGLE CARBURETOR
(6 Cyl. Trucks)

Holley (Ford) Visi-Flo. Ford No. B8A-9510-J, B8C-9510-B,C (Std. Early); B8A-9510-U (Std. Later); B8A-9510-M (Special Economy).

►*APPLICATION & REPLACEMENT NOTE: Carburetors must be used with correct Distributor. Use only B8A-9510-U for service replacement. See DISTRIBUTOR above.*

►*SURGING & LEANNESS CORRECTION (EXC. B8A-9510-U):* Install new main metering jet, No. 1GA-9533-B (#62). This jet used on B8A-9510-U Carburetor. *See "Holley (Ford) Visi-Flo Carburetors" in Carburetion Section.*

Idle Setting – Initial setting 1½ turns open. With engine at normal operating temperature, turn screw in until engine runs rough, turn screw out until engine begins to roll, finally turn screw in just enough for smooth running (favor slightly rich mixture).

Idle Speed – 475-500 RPM with transmission in neutral. On Fordomatic models, check idle speed with selector lever in Drive "Dr" position. Idle speed in "Dr" must be 425-450 RPM. If not in this range, readjust as necessary.

Float Level: Fuel level in bowl should be 11/16" plus or minus 1/32" below power valve mounting surface on carburetor. Use Gauge T52L-9550-AGE to check fuel level (remove power valve diaphragm cover and power valve assembly, install gauge in this hole). Fuel should touch tip of "Low" pin on gauge but should not touch "High" gauge pin.

Accelerating Pump: Engage pump link in inner hole of throttle lever for average or hot weather operation, outer hole for cold weather operation.

Fast Idle: No adjustment required.

Throttle Linkage & Dashpot Adjustment (Fordomatic Models): *See CARBURETOR above.*

►*OTHER DATA: See "Ford Visi-flo Carburetors" in Carburetion Section.*

HOLLEY DUAL CARBURETOR
272 & 292 Medium Duty

Ford B6J-9510-B (272 MD Par. Del.), B7T-9510-D (272 MD Others); B8J-9510-A (292 MD Par. Del.), B8C-9510-A (292 MD Others).

New type "Low Silhouette" dual carburetors.

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyl. 2-3-5-8, LEFT barrel feeds 1-4-6-7.*

Idle Setting – Initial setting 1-1½ turns open (both screws). With engine at normal operating temperature, turn both idle adjusting needles in until engine runs rough from lean mixture, then turn needles out until engine begins to roll, finally turn needles in just enough for smooth running (favor slightly rich mixture).

Idle Speed – 475-500 RPM with transmission in neutral. On Fordomatic models, recheck idle speed with selector lever in Drive "Dr" position. Idle speed in "Dr" must be 425-450 RPM. If not within this range, readjust as necessary.

Float Level - Drain fuel at lower bolt hole, remove bowl, and use Gauge MC-241 to check float level. Without Gauge, distance between floor of fuel bowl and bottom of float (bowl inverted) should be 13/16" (272 & 292 MD).

Accelerating Pump - Install screw in bottom hole of cam (cold weather), top hole of cam (summer weather).

Fast Idle - After adjusting engine idle speed, hold choke wide open, turn fast idle screw in to obtain .005-.008" clearance between screw and fast idle cam. (Turn screw in to just touch cam then back off 1/8-1/4 turn).

Throttle Linkage & Dashpot Adjustment (Ford Automatic Models): *See CARBURETOR above.*

►*OTHER DATA: See "Holley 2 & 4-Barrel Carburetors" in Carburetion Section.*

HOLLEY 4-BARREL CARBURETORS
272 & 292 Heavy Duty

Ford B7T-9510-C (272 HD), B8T-9510-A (292 HD). "Low Silhouette" 4-Barrel carburetor with vacuum diaphragm control of the secondary throttle valves.

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyl. 2-3-5-8, LEFT barrels 1-4-6-7.*

Idle Setting *NOTE - Idle system provided for all four barrels (primary & secondary). Idle mixture adjusting needles used only on SECONDARY side (one on each side of Fuel Metering Block).* Initial setting 1-1½ turns open (both screws). With engine at operating temperature, turn both screws in until engine runs rough from lean mixture, then turn screws out until engine begins to roll, finally turn screws in just enough for smooth running (favor slightly rich mixture).

Idle Speed – 475-500 RPM with transmission in neutral.

NOTE – Idle speed screw located on Throttle Operating Housing adjacent to throttle lever.

►*OTHER DATA: See "Holley 2 & 4-Barrel Carburetors" in Carburetion Section.*

CARB. EQUIPMENT

Gasoline Gauge: King-Seeley Electric Constant Voltage ("CV") type with gauge voltage regulator, Ford No. B7J-10804-A, (J, JH, JL), B7A-10804-B (Others).

Dash Unit - Ford B7J-9280-A (J, JH, JL), B7C-9280-A (Others).

GENERATOR

Generator	Armature	Application
B6A-10002-F	B6C-10005-C	6 Cyl 40 Amp
B6A-10002-E	B6C-10005-C	V8 40 Amp
B6A-10002-H	B6A-10005-A,B,C	All 30 Amp
B8QH-10002-A	B8QH-10005-A	All 40 Amp

Performance Data

Generator	Amperes	RPM
B6A-10002-E, F	40	1800
B6A-10002-H	30	2525
B8QH-10002-A	40	2500

Brush Spring Tension - 32-40 ozs (B6A-10002-H, B8QH-10002-A), 34-41 ozs (B6A-10002-E,F)
Field Current - 1 5-1 6 amperes at 12 volts
Rotation - Counterclockwise at commutator end
Belt Adjustment: ¼" (6 Cyl), ½" (V8), deflection midway between generator and water pump pulleys with light thumb pressure

REGULATOR

Ford B6A-10505-B (B6A-10002-E Gen.) ①; B7A-10505-A (B6A-10002-E, F Gen.); B7A-10505-B (B6A-10002-A, H Gen.); B8E-10505-C (B8QH-10002-A Gen.).

① - B6A-10505-B replaced by B7A-10505-A

See "Ford, Lincoln, Mercury 12 Volt Regulators" in Electrical Section
►*SETTING CAUTION· "Temperature Compensated" type Set to following specifications at 75°F ambient (engine compartment) temperature, after ½ hour operation or after regulator heated and stabilized*

Cutout Relay

Cuts In - 12 4-13 2 volts (B6A-10505-B, B7A-10505-A), 12 0-13 9 volts (B7A-10505-B, B8E-10505-C), at 75° F (Ambient Temp)
Cuts Out - 2-9 Amps (B6A-10505-B, B7A-10505-A), 2-8 Amps (B7A-10505-B, B8E-10505-C)

Voltage Regulator

Setting - 14 6-15 4 volts (B6A-10505-B, B7A-10505-A), 14 2-14 9 volts (B7A-10505-B, B8E-10505-C) at 75°F (Ambient Temp)
Checkina & Adjusting - *See Electrical Section*

Current Regulator

Setting - 28-32 Amps (B6A-10505-B, B7A-10505-A)' 38-42 Amps (B7A-10505-B, B8E-10505-C)
Checking & Adjusting - *See Electrical Section*

MISC. ELECTRICAL

Headlamps: Dual Headlights (4-Headlight System) *See "4-Headlight Systems" in Electrical Section*
Dir cti nal Signals: *See El ctrical S cti n*
Lighting Switch R m val: With control knob in "OFF" position press spring release button on switch housing, turn shaft slightly and pull it out of switch Unscrew mounting nut, remove switch
St p Light Switch L cati n: On brake master cylinder, Power Unit Assembly, or fitting on frame side rail Master Cylinder located on firewall (Conventional Trucks), on bracket attached to left frame member below brake pedal (Others)
LIGHTING CIRCUIT BREAKERS: Two used in lighting switch One circuit breaker protects headlight circuit, other circuit breaker protects instrument, parking,stop, and tail light circuits
FUSES: Interior Lights - 7 5 Amps On lighting switch
Directional Signals - 7 5 Amps in flasher lead
Overdrive - 15 Amps On overdrive relay
Heater - 7 5 Amps In switch lead
Clock - 3 Amps In clock lead
Horn Relay: Ford No B8C-13853-A

ENGINE

ENGINE SPECIFICATIONS: 6 Cyl 223" Eng , V8 272 & 292 Eng Medium Duty (MD), V8 272 & 292 Eng Heavy Duty (HD) All engines are overhead valve type

Engine	Bore	Stroke	Replacement
223	3 62"	3 60"	223 cu ins
272	3 62"	3 30"	272 cu ins
292	3 75"	3 30"	292 cu ins

Engine	Compr. Ratio	Rated HP	Developed HP
223	8 3-1	31 50	139 at 4200 RPM
272 MD ①	8 3-1	41 90	181 at 4400 RPM
272 HD ②	7 6-1	41 90	178 at 3800 RPM
292 MD ①	7 9-1	44 60	186 at 4000 RPM
292 HD ②	7 6-1	44 60	187 at 3800 RPM

① - 2 Bbl Carb ② - 4-Bbl Carb

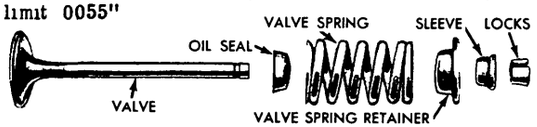
Compression & Vacuum Reading - *See TUNE-UP*
CYLINDER HEAD & MANIFOLDS: *See "Cylinder Head & Manifolds" in Ford Special Data*
TIGHTENING TORQUES: *See "Tightening Specifications" in Ford Special Data*
ENGINE REMOVAL: *See "Engine" in Ford Special Data*
OIL PAN REMOVAL (223 Eng.): Drain oil, remove dipstick and flywheel housing cover Remove oil pan screws and remove oil pan and gasket
OIL PAN REMOVAL (272, 292 Eng.): Drain oil, remove dipstick On Fordomatic trucks, remove converter housing dust cover On F100 trucks, turn engine to TDC Disconnect oil pump inlet tube at oil pump and remove "O" ring seal from pump end of tube Remove oil pan

223" 6 CYL. ENGINES

(See Engine Specifications Above)

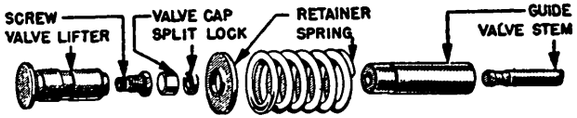
See 1958 Ford 6 Cyl Passenger Car Pages Engine is similar to those used in 1958 Pass Cars, and all passenger car engine data applies to truck engines

272" & 292" V8 ENGINES



(See Engine Specifications Above)

See 1957 Ford V8 Passenger Car Pages Engines are similar to these used in 1957 Pass Cars, and all passenger car engine data applies to truck engines EXCEPT AS NOTED BELOW



CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

VALVES: Valve Stem to Guide Clearance - (272, 292 MD) Clearance should be 0010-0024" Intake, wear limit 0045", Exhaust 0023-0037", wear limit 0065" **(272, 292 HD)** Clearance should be 0010-0024" Intake, wear limit 0045", Exhaust 0018-0032", wear limit 0055"

FORD V8 "ROTATABLE" VALVE ASSEMBLY

FREE TYPE VALVE ASSY.

Valve Seat Width - (272 MD, 292) 060-080" Intake, 070-090" Exhaust **(272 HD)** 070-090" Intake, 090-110" Exhaust

Valve Lifter Bore Clearance - (272) 0005-0021", **(292)** 0008-0024"

Valve Cap Clearance (Exh. Valves HD Engines) - *See "Valve System" in Ford Special Data*

►*ROTATABLE & FREE TURNING VALVE NOTE* Free Turning type valve (cap over end of stem) used for Sodium Cooled Exhaust valves on HD engines All other valves (All Engines) have "Rotatable" type valve (sleeve between spring retainer and lock) See Illustrations

►*EXHAUST VALVE CAUTION (HD Engines):* Exhaust valves are Sodium cooled and require special disposal handling to prevent possibility of fire or explosion due to chemical reaction DO NOT DISCARD SODIUM COOLED VALVES with other scrap material

EXHAUST VALVE INSERT (HD Engines): *See 'Valve System" in Ford Special Data*

OILING SYSTEM

►*ENGINE OILING SYSTEM See "Engine Lubrication" under OILING SYSTEM in Ford Special Data*

Crankcase Capacity: 6 qts (HD Engines), 5 qts (Others) Add 1 qt with filter change

Normal Oil Pressure: 45-50 lbs at 2000 RPM (Hot)

Pressure Regulator Valve - In oil pump body

Oil Pressure Indicator: Warning Light (Exc Par Del), King-Seeley Gauge (Par Del)

Dash Unit - Ford B7J-9273-A (Par Del)

Engine Unit - Ford B7T-9278-A (Par Del), B6A-9278-B (Others)

See "King-Seeley Gauges" in Miscellaneous Section

Oil Pump: Gear type pump mounted inside crankcase in line with distributor shaft (223 Eng), rotor type located on left side of crankcase and driven by distributor shaft (Others)

Pump Removal & Overhaul - *See "Oil Pump" in Ford Special Data*

Oil Filter: Full-flow with pressure relief valve in center bolt or "Disposable" type Replace element or filter unit at 4000 mile intervals

Replacement Element Disposable Unit - Ford No B2A-6371-A (223, 272), B8C-6371-A (292) element Ford B7A-6371-B (All) disposable unit *NOTE* -Adapter B7A-6882-A used with disposable unit

Crankcase Ventilation: Filter in oil filler cap (inlet) all models Road draft outlet pipe for crankcase ventilation all models *NOTE* - V8 engines has filter screen in road draft outlet tube Service filler cap by cleaning with solvent and resaturating with engine oil at 4000 mile intervals Clean screen in road draft outlet tube

COOLING

Pressure Valve: Ford OL-8100-A, radiator filler cap (opens at 7 lbs)

Thermostats: (All) Ford No B7A-8575-A (157-162°F), B7A-8575-B (177-182°F) Use with permanent anti-freeze

Water Pump: Packless, sealed ball bearing type *See "Water Pump in Ford Special Data*

Temperature Gauge: King-Seeley Electric Constant Voltage ("CV") type with gauge voltage regulator, Ford No B7J-10804-A (Par Del), B7A-10804-B (Others)

Dash Unit - Ford No B7J-10883-A (Par Del), B7C-10883-A (Others)

Engine Unit - Ford No B7A-10884-A

See "Temperature Gauges" in Miscellaneous Section

CLUTCH

Long 10, 10½ & 11CF Clutches used as follows

Ford No	Cover Assembly	Long No.
B4A-7563-B 10"	①	L5222
B7C-7563-A 10½"	②	267371
B7Y-7563-A 11"	③	267147
B7Y-7563-A 11"	⑪	267147
Ford No.	**Disc**	**Long No.**
B7C-7550-A 10" Molded		CD870
B7C-7550-B 10½" Molded		287335
B7C-7550-C 11" Molded		CD607
B6D-7550-A 11" Woven		CD606

① - With Disc Ford B7C-7550A, Long No CD870
② - With Disc Ford B7C-7550B Long No 287335
③ - With Disc Ford B7C-7550C, Long No CD607
⑪ - With Disc Ford B6D-7550A Long No CD606

See 'Long Clutches' in Clutch Section

►*CLUTCH LINKAGE PRODUCTION CHANGE (To Reduce Operation Effort)* New linkage installed in trucks approximately Jan 2nd 1958 New linkage parts consist of Clutch Pedal and Release Lever Assemblies, Master Cyl Pushrod, Spring and Retainer Assembly, Master Cyl Piston Stop Plate and Repair Kit New parts can be installed in early 1958 and all 1957 trucks

Clutch Pedal Clearance: Free travel 1 3/8" (F & T Trucks), 1 11/16" (C Trucks)

Pedal Height - Adjust pedal travel (Bumper adjustment) so pedal is even with brake pedal when fully released

Free Travel Adjustments - 1) Remove retracting spring, bottom slave cylinder pushrod and piston (force it forward), pull release lever to rear until bearing just contacts release fingers Adjust pushrod adjusting nut to obtain not less than ¼" clearance between adjusting nut and lever (6 turns equal ¼")

2) Adjust master cylinder pushrod eccentric bolt to obtain 3/16-3/8" (F & B Trucks), 7/32" (C Trucks) or ¼" (Par Del Trucks), free travel at pedal pad before pushrod contacts master cylinder piston

Removal: Release retracting spring Remove slave cylinder from flywheel housing and slave cylinder pushrod from release lever Remove transmission (see Transmission Removal below), dust cover from flywheel housing, release bearing and hub from release lever Mark pressure plate, cover assembly and flywheel for reassembly Remove pressure plate and cover assembly-to-flywheel bolts gradually to reduce spring tension, remove assembly through bottom of clutch housing

Hydraulic Clutch Control: Master cylinder mounted on firewall (Conv Cab), on bracket on firewall (Tilt Cab), and connected to Slave Cylinder which is attached to flywheel housing and connected to outer end of clutch release lever

Filling Master Cylinder - Maintain fluid level (HD Brake Fluid) to within ½" below top of cylinder reservoir Change fluid at 15000 mile intervals

SYNCHRO-MESH TRANSMISSION

3-SPEED (LIGHT DUTY)

Own. 3-speed, all helical gear, constant mesh, synchro-mesh (second and high), sliding gear (low and reverse). Steering column shift standard.

See "Ford Truck 3-Speed (Light Duty)" in Transmission Section.

Removal: Drain lubricant, disconnect speedometer cable and drive shaft and gear shift linkage at transmission. *(NOTE* - On band type parking brake, disconnect brake cable clevis and remove cable support bracket). Remove flywheel housing-to-transmission bolts and nuts, draw transmission to rear to clear flywheel housing and lower transmission.

3-SPEED (MEDIUM DUTY)

Own. 3-speed medium duty with steering column shift standard. *See "Ford Truck 3-Speed (Medium Duty)" in Transmission Section.*

Removal: Same as for 3-Speed (Light Duty) above.

3-SPEED (HEAVY DUTY)

Own. 3-speed, **left hand** helical gear (second & high), spur gear (low & reverse), constant mesh, synchro-mesh (second & high), sliding gear (low & reverse) Steering column shift standard *NOTE* - Left hand helical gears can be used in 1957 HD transmissions

See "Ford Truck 3-Speed (Heavy Duty)" Transmission in Transmission Section.

Removal: Same as for 3-Speed (Light Duty).

4-SPEED

Own. 4-Speed, constant mesh, synchro-mesh (second, third, & high). Helical gears used for second, third, & high. Spur gears used for low & reverse. Floor mounted gear shift standard.

See "Ford Truck 4-Speed (Synchro-mesh) Transmission" in Transmission Section.

Removal: Same as 3-Speed (Light Duty) and note following If hoist not used, it may be necessary to remove

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

gear shift lever assembly (New Process) and lever housing (Others), before transmission can be removed from truck. *(NOTE* - On Tilt-Cab - release lock and tilt cab forward). Disconnect shift linkage at split pin which attaches universal joint to finger socket shaft in rear cross shaft housing. Drain transmission, disconnect drive shaft at parking brake drum. If truck equipped with coupling shaft support, disconnect support bracket, and remove coupling shaft. Disconnect parking brake and speedometer cables. Remove dust cover from bottom of clutch housing, support transmission on jack, remove two top nuts, two bottom bolts, move transmission to rear until input shaft splines clear clutch housing and lower transmission.

OVERDRIVE

Warner M-d-l R10. Solenoid operated with governor control and throttle operated kickdown.

See "Warner R10 Overdrive" in Transmission Section.

Overdrive Controls: *See "Overdrive Controls" in Transmission Section.*

Removal: Same as 3-Speed Synchro-mesh Transmission (above), after disconnecting control cable and wiring.

FORDOMATIC TRANSMISSION

Torque converter and three speed automatic transmission with hydraulic control and mechanical parking lock. *See "Fordomatic & Merc-O-Matic" in Transmission Section.*

► *PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Fordomatic & Merc-O-Matic" in Transmission Section.*

► *TESTING & TROUBLE SHOOTING: See "Fordomatic & Merc-O-Matic" in Transmission Section.*

Lubrication - Check transmission fluid level every 1000 mile intervals, maintain level at "F" (full) mark on dipstick. Drain and refill every 16,000 miles. Use only Automatic Transmission Fluid Type "A".

Checking Fluid Level: Bring transmission to operating temperature by idling engine (operate with selector lever in "N" for 4 minutes, in "P" for remainder of time). With transmission warm, move selector lever through all positions, then check fluid level with selector lever in "P" Add Automatic Transmission Fluid Type "A" to bring level to "F" mark on dipstick.

Throttle Linkage Adjustment (Fordomatic Models): See *CARBURETOR above.*

► *OTHER FORDOMATIC SERVICE DATA: See "Fordomatic & Merc-O-Matic" in Transmission Section.*

UNIVERSALS

Spicer. Needle bearing type.

► *UNIVERSAL JOINT INSTALLATION CAUTION:* Make sure that all universal joint yokes in drive line are in same plane to avoid drive line vibration.

Coupling Shaft Center Bearing: Consists or cushion mounted ball bearing bolted to underside of frame intermediate cross member. Bearing is mounted on end of coupling shaft in a sleeve with felt retainer on each end and bearing baffle on front end.

REAR AXLE

SEMI-FLOATING

Own. New Separate Carrier, hypoid gear, with Hotchkiss drive.

See "Ford & Mercury" in Rear Axle Section.

Ratios - 3.70 (37-10), 3.89 (35-9), 4.11 (37-9).

Backlash - .004-.009".

Axle Shaft Removal: Remove wheel, take off drum. Remove four axle retainer locking type nuts (work through opening in axle shaft flange). Use Puller No. 4235-N and pull axle shaft (do not disturb brake backing plate or damage wheel bearing oil seal). Replace one nut to secure brake backing plate.

Carrier Assembly Removal: *NOTE* - Pinion carrier assembly can be removed separately without disturbing differential carrier by disconnecting rear universal joint at companion flange, and removing five bolts that attach pinion carrier assembly to differential carrier housing. With rear universal joint disconnected, axle shafts removed (see above), remove differential carrier housing to rear axle housing bolts and lift out carrier assembly.

Wheel Bearing Adjustment: None required.

FULL FLOATING

Full floating, Hypoid gear, with Hotchkiss drive.

Model	Rear Axle Type
F-250, P-350 (Spicer Model 60)	Integral Housing
350-600 Series	Banjo Housing

See Various types of Ford Rear Axles in Rear Axle Section.

Rear Axle Ratios

Model	Axle Ratios
F-250	5.87-1①, 4.56-1
F-350	4.86-1, 5.14-1, 5.83-1①
P-350	4.56-1②, 4.86-1, 5.87-1⑥

C-600	6.2-1⑥, 6.8-1⑥ 7.2-1⑤

4.56-1(41:9); 4.86-1 (34:7); 5.14-1 (36:7); 5.83-1(35:6); 5.87-1(47:8); 6.2-1(31:5); 6.8-1(34:5); 7.2-1(36:5).

① - 6 Cyl. ② - V8. ③ - 6 Cyl. with HD Axle.
④ - V8 with HD Axle. ⑤ - With HD Axle.
⑥ - With Std. & HD Axle.

Axle Shaft Replacement: Remove axle shaft stud nuts and lockwashers. Strike center of axle shaft flange with a hammer and drift to loosen tapered dowels, then remove dowels. Pull axle shaft from housing. To reinstall, place gasket in position on housing and install axle shaft. Install tapered dowels, lockwashers and nuts on studs. Tighten nuts to 50-70 ft. lbs.

Axle Assembly Removal (Integral Housing): Loosen wheel and axle shaft stud nuts, disconnect rear shock absorbers, raise rear of frame until weight is off springs. Disconnect flexible hydraulic line at frame, parking cable (if so equipped) at equalizer, remove cables at brackets. Disconnect rear universal joint at flange, remove spring "U" bolts, roll rear axle from under truck and drain lubricant.

Carrier Removal (Banjo Housing): Remove axle shaft stud nuts and lockwashers, strike center of axle shaft flange with hammer and punch to loosen tapered dowels, remove dowels and axle shaft. Disconnect drive shaft at rear universal joint flange, support carrier assembly with roller jack, remove carrier to housing bolts and lockwashers. Tighten puller screws (when provided in carrier) to loosen carrier from housing, roll carrier from truck.

Wheel Bearing Adjustment: Remove axle shafts (see above), use special bearing adjusting wrench and remove bearing locknut (outer nut), and lockwasher. Adjust bearings by turning bearing adjusting nut (inner nut) up until tight then backing off 1/8 turn. Install bearing lockwasher. *(NOTE* - If adjusting nut equipped with dowel, make sure lockwasher fits over dowel). Install bearing locknut and draw nut up tight. If flange type lockwasher is used, bend one flange over adjusting nut and one flange over locknut. Install axle shaft and lower vehicle.

TWO-SPEED

Own. Electrically operated shift, Two-speed, Full-floating spur gear planetary unit (reduction gearing). Spiral bevel gear final drive.

See "Ford Truck Two-Speed" in Rear Axle Section.

Ratio - 5.83-1 (Direct Speed), 8.11-1 (Second Speed); 6.33-1 (Direct Speed), 8.81-1 (Second Speed).

Backlash - .006-.016".

Removal: Same as for standard axle (above) after removal of wiring harness.

SHOCK ABSORBERS

Direct acting hydraulic. Shock absorbers are sealed units and are not adjustable or refillable.

► *REPLACEMENT SHOCK ABSORBER NOTE:* Shocks are supplied for service replacement in kits consisting of shock absorber and necessary bushings.

Replacement Shock Absorbers

Model	Front	Ford Nos.	Rear

C-550, C-600	3°	6°

① - Maximum variation between wheels ¼°.

② - F-100 with 130" wheelbase is 3¾° Std., 6¾° Pwr. Strg.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Camb r - 1° Maximum variation between wheels ¼°
Toe-In - 1/16" *NOTE* - On Power Steering models, run engine so hydraulic pressure will center power control valve

STEERING

Manual: Own Gemmer design Worm-and-roller types with push-pull adjustment *NOTF* - Tilt Cab steering column has a universal joint
See "Gemmer Worm & Roller Types" in Steering Section
Power Steering, Ford-Mercury Linkage type Used in connection with standard type steering gear
See Ford Truck Power Steering in Steering Section
Steering Linkage: *See "Steering Linkage" in Steering Section*
Steering Wheel & Horn Button Removal: *See "Gemmer Worm & Roller" in Steering Section*
Steering Gear Removal: *See "Gemmer Worm & Roller" in Steering Section*

BRAKES

Brake types are listed in application table below. Hand lever applies rear wheel service brakes on F-100, F-250, and P-350 trucks. Independent transmission mounted drum and contracting band type brake on other models.

Brake Type Application

Model	Front	Rear
F-100	Duo-Servo	Duo-Servo
F-250,F,P-350,400	Uni-Servo	Duo-Servo
C-550,600	Uni-Servo	Two Cyl.
F,B,P-500, F,B-600	Uni-Servo	Two Cyl.

Uni-Servo - Ford-Bendix. Single anchor. Wheel cylinder actuates primary shoe. Ratchet adjusting screw.
See "Ford-Bendix Uni-Servo Hydraulic" in Brake Section.
Duo-Servo - Ford Bendix. Single anchor, self energizing wheel cylinder actuates both shoes. Ratchet adjusting screw.
See "Ford-Bendix Hydraulic" in Brake Section.
Two-Cylinder Type - Two wheel cylinders in each brake assembly.
See "Ford Truck Two-Cylinder" in Brake Section.

Brake Lining Thickness

Model	Primary	Secondary
F-100 6 Cyl	187"	187"
F-100 V8	187"	250"
F-250	250"	250"
F-350 Front	250"	300"
P-350 Rear	250"	250"
Others Front	250"	250"
Rear	375"	375"

Drum Diam ter & Lining Width & L ngth

Mod l		Drum Diam.	Primary Width - Length	S condary Width - Length
F-100	Front	11"	2" - 11 96"	2" - 11 96"
	Rear	11"	1¾" - 11 96"	1¾" - 11 96"
F-250	Front	12 1/8"	2" - 11 63"	2" - 13 09"
	Rear	12 1/8"	2" - 11 63"	2" - 13.09"
F-350	Front	12 1/8"	2" - 11 63"	2" - 13 09"
	Rear	13"	2½" - 12 71	2½" - 13 95"
P-350①	Front	12 1/8"	2" - 11 63	2" - 13 09"
	Rear	12 1/8"	2" - 11 63"	2" - 13 09"
P-350②	Front	12 1/8"	2" - 11 63"	2" - 13 09"
P-400	Rear	13"	2½" - 12 71"	2½" - 13 95"
F-500)	Front	13 7/32"	2¼" - 12 68"	2¼" - 13 95"
B-500)	Rear	15"	4" - 15 31"	4" - 15 31"
P-500	Front	13 7/32"	2¼" - 12 68"	2¼" - 13 95"
	Rear	14 1/8"	3½" - 14 42"	3½" - 14 42"
F-600)	Front	14"	2½" - 13 66"	2½" - 15 03"
B-600)	Rear	15"	4" - 15 31"	4" - 15 31"
C-550)	Front	14"	2½" - 13 66"	2½" - 15 03"
C-600)	Rear	15"	4" - 15 31	4" - 15 31"

① - With Spicer Rear Axle
② - With Timken B-100 Rear Axle

Hand Brake: (Except F-100, 250; P-350) External contracting type, consisting of a brake drum bolted to transmission main shaft companion flange, and an external contracting band mounted on rear of transmission
Brake Drum Diameter - 8" (F-350), 7 812" (P-350, 400, 500, C-550, 600), 7 812" (Std Trans), 9 500" (Transmatic) F-500, 600, B-500, 600
Adjustment - *NOTE* - On cable controlled parking brakes place lever in fully released position On rod type linkage, set lever at first notch Flat portion of cam must rest on brake band bracket If not on flat spot, remove clevis pin and adjust clevis rod, then proceed as follows
1) Remove adjusting screw lockwire and turn screw to obtain 010" clearance between lining and drum at anchor bracket Replace lockwire
2) Loosen adjusting screw nut for lower half of band and turn screw to obtain 010" clearance between lining and drum at lower half of brake band, then tighten locknut
3) Turn upper band adjusting rod nut to obtain 010" clearance between upper band lining and drum

Hand Brake Lining

Model	No. & Length	Width	Thickness
F-350	1 - 24 63"	2"	156"
P-350, 400, 500)	2 - 7 89"	2 50"	250"
C-550 600)	1 - 7 30"	2 50"	250"
F-500, 600	① 2 - 10 00"	2 50"	250"
B-500, 600)	② 1 - 24 63"	3 00"	310"

① - With Std Trans ② - With Transmatic

Standard Mast r Cylind r: Located on engine side of firewall on F-, B-, T- Series, mounted under instrument panel beside brake pedal arm on C-Series, above left frame side member under drivers seat on P-Series
Checking Fluid - Maintain fluid level to within ½" of top of reservoir
Removal - *CAUTION* - When truck equipped with booster, stop engine and expel all vacuum from system before disconnecting hydraulic lines, then proceed as follows
1) Disconnect rubber boot from rear end of master cylinder On F- B- T- P- Series, disconnect stoplight switch wires from switch and brake line at fitting. On P-Series, turn front wheels to left out of way, then remove apron for access to master cylinder On C-Series, roll back floor mat, remove floor plate to disconnect hydraulic line
2) Force all brake fluid from master cylinder
3) On F-, B-, T- Series, remove master cylinder to dash panel bolts and left cylinder away from pushrod On C-Series, remove 2 mounting bolts and lower cylinder from pushrod On P-Series, remove brake pedal return spring Remove cotter pin from clevis pin and remove master cylinder pushrod and boot Remove 3 mounting bolts
Power Brakes: Bendix (Hydrovac) Piston type used on F-250, 350, P-350, 400 Midland (Hy-power) Diaphragm type used on all other models
See 'Hydrovac" or "Midland" Pow r Units in Brak Section
Checking Fluid - Same as for Manual Brakes above
Removal of Power Unit (Hydr vac) - Depress brake pedal several times to remove all vacuum from system Loosen brake power unit inlet tube clamp and remove tube Disconnect hydraulic lines and vacuum hose from booster Remove mounting bolts and remove booster from bracket *NOTE* - **DO NOT** remove breather or vacuum check valve unless operating conditions indicate repairs are necessary
Removal of Power Unit (Midland) - Stop engine, depress brake pedal several times to remove all vacuum from system Disconnect 2 hydraulic lines and vacuum hose from booster On frame mounted booster, loosen air breather hose clamp and disconnect hose from booster Remove 3 mounting bolts, then remove booster On F-100, remove 2 bolts from under side of mounting bracket and remove booster from engine compartment *NOTE* - On frame mounted booster, do not remove breather or vacuum check valve unless operating conditions indicate repairs are necessary

MISC. MECHANICAL

Windshield Wipers: Vacuum Link and Arm (Par Del), Electric all others
See "Windshield Wipers" in Misc llaneous S ction

MODEL IDENTIFICATION

SERIAL NUMBER: Stamped on patent plate attached to left door post. *NOTE* - Number (example below) includes identification data as indicated.

① ② ③ ④ ⑤
A 9 F G 100001

① - Engine Type (A - 6 Cylinder).
② - Year (1959).
③ - Assembly Plant, see below.
④ - Body Style, see below.
⑤ - Consecutive unit number.

Assembly Plant Designation

A - Atlanta	**G** - Chicago	**N** - Norfolk
C - Chester	**H** - Lorain	**P** - St. Paul
D - Dallas	**K** - Kansas City	**R** - San Jose
E - Mahwah	**L** - Long Beach	**S** - Pilot Plant
F - Dearborn	**M** - Memphis	**U** - Louisville

Body Style

C - Convertible
F - Ranchero
G - Tudor & Fordor (Custom & Custom "300").
R - Ranch Wagon & Country Sedan (Custom & Custom "300").
S - Tudor & Fordor (Galaxie) (Fairlane "500").
T - Town Sedan & Club Sedan (Fairlane & Fairlane "500").
V - Town & Club Victoria (Fairlane & Fairlane "500").
W - Retractable Hardtop.
X - Commercial Ranch Wagon "Courier".
Y - Country Squire.

TUNE-UP

COMPRESSION PRESSURE: 150±10 lbs. at cranking speed. Maximum variation between cylinders 10 lbs.

VACUUM READING: Steady 18-19" at specified idle speed, with transmission in neutral.

VALVE TAPPET CLEARANCE: .019" Intake & Exhaust (Hot & Cold). Adjust all tappets to .019" clearance while engine is cold, then again check all tappets for .019" clearance after running engine for 30 minutes to normalize temperature.

►*SELF-LOCKING VALVE TAPPET ADJUSTING SCREW NOTE:* Special threads on adjusting screw provide interference fit. 3 ft. lbs. (36 in. lbs.) interference when center section of screw threads is fully engaged with rocker arm threads. Replace screw and/or rocker arm as necessary when interference is below this specification.

MANIFOLD HEAT CONTROL: Automatic thermostatic type with counterweight. Valve is closed when engine is at normal temperature and running at slow idle, and opens when operating at high RPM. Spring is installed with ¾ turn windup and hooked over stop pin.

IGNITION

FIRING ORDER: 1-5-3-6-2-4.

SPARK PLUG GAP: .032-.036".

Spark Plugs - Champion 870 (Std.), 860 with economy carburetor. 18 mm. Torque to 15-20 ft. lbs. (25-30 ft. lbs. new plug in new cyl. head).

►*SPARK PLUG CAUTION:* Spark plug has tapered seat and does not require a sealing gasket. It is important that plugs be tightened within range of 15-20 ft. lbs.

COIL: Ford No. B6A-12029-B.

Ignition Current - 2.5 amps. idling, 4.5 amps. stopped.
Resistor - B8A-12250-A. 1.3-1.4 ohms at 75°F.

►*COIL RESISTOR NOTE:* Resistor is connected in lead from ignition switch to coil. Resistor is bypassed during cranking by a lead from starter solenoid to battery terminal of coil.

DISTRIBUTOR: Ford No. B8A-12127-M. "Loadomatic" type of same design used on previous models. *NOTE - Distributor identified by No. FET-12127-C stamped on distributor housing.*

Condenser - Ford No. 7RA-12300-C. **Capacity** .21-.25 mfd.
Contact Point Set - Ford No. FAA-12171-A.
Breaker Gap - .024-.026".
Cam Angle - 35-38°.
Breaker Arm Spring Tension - 17-20 ozs.
Rotation - Clockwise viewed from above.

Advance Performance
►With Distributor on Test Stand

Distr. Degrees	Vacuum (" of Hg)	Distr. RPM
0	.38	450
2½-3½	.79	650
6¾-7¾	2.85	1100
8¾-9¾	4.33	1400
10¼-11¼	5.99	1800

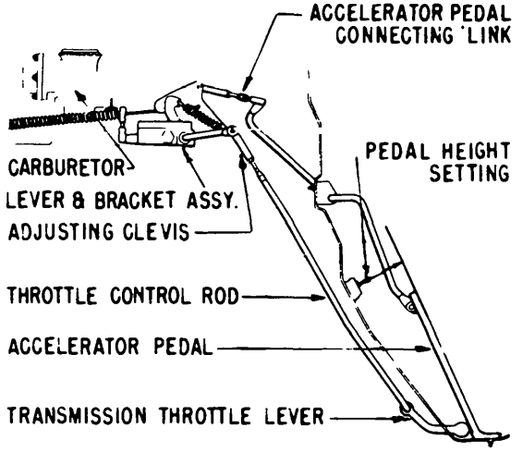
►*DISTRIBUTOR INSTALLATION CAUTION:* Be sure oil pump intermediate shaft engages the seat in the oil pump. It may be necessary to turn over the engine with starter after distributor drive gear is partially engaged, in order to engage intermediate shaft fully in oil pump.

Initial Distributor Timing: Set engine crankshaft so that No. 1 Cylinder is at TDC after compression stroke (with timing mark in line with pointer). Install distributor so that rotor points to the No 1 Spark Plug Wire Terminal in distributor cap.

IGNITION TIMING

Setting - 4° BTDC (Std. & O.D. Trans.), 3° BTDC (Auto. Trans.). Allowable range 2-10° BTDC. Set timing with engine at normal idle speed and vacuum line disconnected.

Timing Mark - Vibration damper marked "TDC" and "3", "5", "7", "9" degrees BTDC. Align correct mark with pointer on engine front cover.



CARBURETOR

►*THREE-SPEED FORDOMATIC THROTTLE ADJUSTMENT NOTE:* Adjustment the same as for "TWO-SPEED" except to lengthen throttle rod 2½ turns and adjust pedal height to 3.10".

Throttle Linkage Adjustment (2-Speed Fordomatic Cars): Adjust engine idle speed to 475-500 RPM and make anti-stall dashpot adjustment (see below). With engine stopped and carburetor on hot idle, remove lock from clevis pin on upper end of throttle control rod and loosen clevis locknut. Remove clevis and pull throttle control rod upward so throttle lever will be held against internal stop in transmission. Turn clevis until pin enters hole in lever **and lengthen rod 3½ turns** (see "Special Setting Note" below). Connect throttle control rod, tighten locknut, install clevis lock. Measure accelerator pedal height from top rear corner of pedal to floor mat. Distance should be 3½". Adjust by turning threaded trunnion on accelerator link.

►*SPECIAL SETTING NOTE:* For more satisfactory shift feel, rod may be lengthened 2±½ turns in place of 3½ turns.

Anti-Stall Dashpot Adjustment: After engine idle speed adjusted to 475-500 RPM, turn off engine. Loosen dashpot adjusting screw locknut. Hold throttle in closed position and depress dashpot plunger with a screwdriver blade. Turn dashpot or adjusting nut until .045-.064" clearance obtained between dashpot plunger and throttle shaft lever. Tighten locknut.

FORDOMATIC TRANSMISSION THROTTLE LINKAGE

HOLLEY VISI-FLO

Carburetor No.	① Identification No.
B9A-9510-F (Std. & O.D.)	② B9EA-9510-A,B,C
B9AE-9510-A (Econ.)	② B9AE-9510-A,B9EA-9510-D,E

① - Stamped on flat of main body at fuel inlet.
② - Add dashpot when used with Fordomatic.

►*STANDARD CARBURETOR ECONOMY IMPROVEMENT NOTE:* Use later type main metering jet. See *"Holley Visi-Flo" in Carburetion Section.*

Idle Setting - Initial setting ¼-1¾ turns open. Turn adjusting screw in until engine begins to run roughly from lean mixture, then turn screw out until engine begins to roll from rich mixture. Turn screw in until engine runs smoothly. Favor a slightly rich mixture, rather than a lean setting.

Idle Speed - 475-500 RPM in Neutral. Recheck automatic transmission cars with selector lever in "DR" range. Readjust to obtain 450 RPM.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Fu l Level - 11/16" ± 1/32" below power valve mounting surface (Tool T52L-9550-AEE).

Accelerating Pump - Inner hole for average or hot weather operation, outer hole for cold weather operation.

Fast Idle: Integral type operated by choke valve. No adjustment required.

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Holley Visi-Flo Carburetors" in Carburetion Section.*

CARB. EQUIPMENT

Fuel Pump: Ford B8A-9350-E (Fuel only), B9A-9350-B (Fuel & Vacuum).

Fuel Pump Pressure - 3.5-5.5 lbs. at 500 RPM. *See "Fuel Pumps" in Carburetion Section.*

Gasoline Gauge: King-Seeley Electric "CV" (Constant Voltage) with gauge voltage regulator Ford No. B7A-10804-B.

Dash Unit - Ford No. B9A-9280-A.

Tank Unit - See table below.

Model	Ford Part No.
Retractable Hardtop	B7A-9275-B
Sta. Wgn., Sed. Del., Ranchero	B7A-9275-G
Others	B9A-9275-A

See "Fuel Gauges" in Carburetion Section.

Air Cleaner: DRY FILTER ELEMENT type. Clean every 4,000 miles, replace element every 24,000 miles.

►*CLEANING CAUTION:* Clean element by tapping it against a hard surface. DO NOT immerse element in cleaning solvent or blow it out with compressed air. Clean cleaner body and cover in solvent and wipe dry.

BATTERY

Ford Part No.	Color	Volts	Plates	℄ Capacity
B9A-10655-A	Red	12	11	55 ampere
B9A-10655-B	Silver	12	13	65 ampere
B9A-10655-C ℰ	Yellow	12	11	70 ampere

℄ - At 20 hr. rate.

ℰ - Requires special tray & holders.

Battery Ground - Negative, to engine block.

Engine Ground - Cylinder head to dash.

STARTER

Ford B6A-11002-A. Armature - B6A-11005-B.

Drive - Ford ICM-11350-C. Bendix "Folo-Thru".

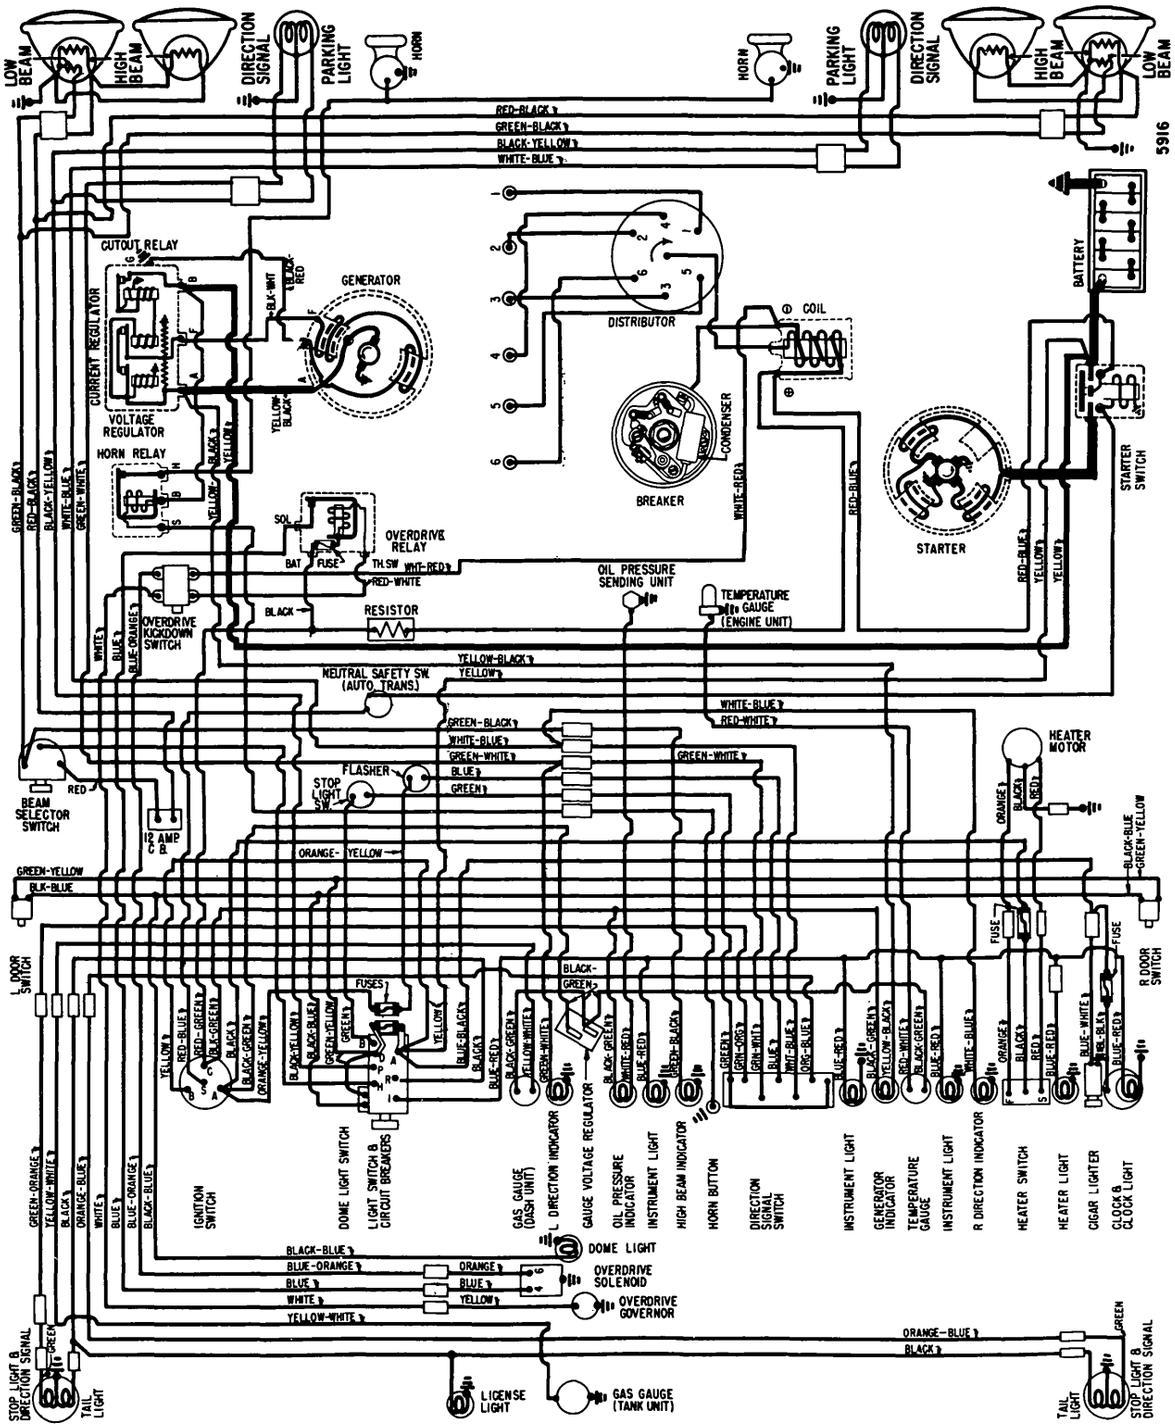
Rotation - Counterclockwise at commutator end.

Brush Spring Tension - 48-56 ozs.

Cranking Speed - 150-180 RPM, 190 amperes max.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	℄	12.0	80
15.5 ft. lbs.		5.0	550



℄ - With starter on engine and engine idling.

Starting Switch: Magnetic type, Ford No. B6A-11450-A. Starter Switch is controlled by ignition switch.

NOTE - Neutral safety switch used on Fordomatic Transmissions.

N utral Safety Switch (Aut -Trans.): Ford No. B9A-15812-A1 (Auto. Trans.).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Adjustment - *See "Ford Two-Speed Automatic" in Transmission Section*

►*NEUTRAL SAFETY SWITCH REPLACEMENT NOTE* Both "RBM" & "MECO" switches used in production Use B9A-15812-A1 for replacement

GENERATOR

Ford, Bosch & Auto-Lite generators used

Generator	Armature
B6A-10002-C (Bosch) ①	B6C-10005-B

B5C-10505-A Bosch	B6A-10002 B
B6C-10505-A Ford	B6A-10002-G

►*SETTING CAUTION* "Temperature Compensated" type Set to following specifications at 75°F ambient (engine compartment) temperature, after ½ hour operation in vehicle, or after regulator heated and stabilized

Cut-out Relay

Cuts In - Auto-Lite 12 5-13 9 volts **Bosch** 13 0-13 5 volts, **Ford** 12 0-12 8 volts (B7A-10505-B), 12 0 12 6 volts (B6C-10505-A)

Cuts Out - Auto-Lite 2-6 amps, **Bosch** 2-8 amps, **Ford** 6-9 amps (B7A-10505-B), 2-6 amps (B6C-10505-A)

Voltage Regulator

Setting - Auto-Lite 14 2-14 9 volts, **Bosch** 14 1 volts lower contacts, 14 8 volts upper contacts, **Ford** 14 6-15 4 volts (B7A-10505-B), 15 0 volts (B6C-10505-A)

Checking & Adjusting - *See Auto-Lite, Bosch & Ford Regulators in Electrical Section*

Current Regulators

Setting - Auto-Lite 38-42 amperes, **Bosch** 28-32 amperes (B6C-10505-B), 48-52 (B6C-10505-C), 58-62 amperes (B5C-10505-A), **Ford** 28-32 amperes (B7A-10505-B), 58-62 amperes (B6C-10505-A)

Checking & Adjusting - *See Auto-Lite, Bosch & Ford Regulators in Electrical Section*

MISC. ELECTRICAL

Headlamps: Dual Headlights (4-Headlight System) *See "4-Headlight Systems" in Electrical Section*

Directional Signals: *See Electrical Section*

Lighting Switch Removal- With control knob in the "OFF" position, press spring and release button on switch housing turn shaft slightly and pull it out of switch Unscrew mounting nut with Tool 17470-N, remove bezel and switch and remove wires

Stop Light Switch Location- On forward end of brake master cylinder

CIRCUIT BREAKERS- Two circuit breakers built in lighting switch 1) Protects Headlights 2) Protects Instrument, Parking, Stop, Tail & Back-up lights

12 Ampere - Protects headlight low beam circuit Located at lower left edge of instrument panel

FUSES- **7 5 Ampere** - Interior lights On headlight switch

5 Ampere - Direction signals On headlight switch

15 Ampere - Overdrive On overdrive relay

14 Ampere - Heater In feed wire

1 Ampere - Clock In feed wire.

Horn Relay: Ford No B8C-13853-A

ENGINE

ENGINE SPECIFICATIONS 6 Cyl valve in head

Bore	Stroke	Displacement
3 62"	3 60"	223 cu in
Compr Ratio	**Rated HP**	**Developed HP**
8 4 1	31 54	145 at 4000 RPM

Compression & Vacuum Reading - *See TUNE-UP*

►*ENGINE OIL PRESSURE LOSS CORRECTION* New oil pump screen and cover assembly No B9AE-6622-C with bypass valve reduces possibility of pressure loss due to screen stoppage

►*SLOW ENGINE WARM UP CORRECTION* Remove shield located in front of bi-metal spring on heat control valve Crimp shaft at slot to retain spring Center bushings in manifold cavity

►*ENGINE OIL LEAK AT FUEL PUMP NOTE* Use Fuel Pump Gasket No B5A-9417-A which is 020" thick

►*OIL PUMP DRIVE SHAFT BREAKAGE CORRECTION.* Enlarge holes in **distributor shaft** to 140" to permit roll pin to float in distributor shaft and the flats of the hexagon to drive the oil pump

►*ROCKER ARM COVER OIL LEAK CORRECTION* When cover inner gasket retainer interferes with proper seating of gasket, grind off retainer edge to provide clearance and install new gasket

►*ORIGINAL BORE & PISTON SIZES See "Pistons" in Ford Special Data*

CYLINDER HEAD: *See "Cylinder Head & Manifolds" in Ford Special Data*

TIGHTENING TORQUES: *See "Tightening Specifications" in Ford Special Data*

ENGINE REMOVAL: *See "Engine" in Ford Special Data*

OIL PAN REMOVAL: Drain crankcase, remove oil level dipstick and flywheel housing inspection cover Remove oil pan screws, oil pan and gasket

PISTONS

Autothermic type Solid skirts with three rings

Removal - Pistons and rods removed from above

Fitting New Pistons: Clearance - 0008-0026" at bottom of skirt Use ½" wide ribbon feeler gauge inserted between piston and cylinder wall at right angle to pin on thrust side, piston inverted and bottom of piston skirt 1½" below top of block To test minimum clearance, use 0015" feeler and 4 lbs pull, to test maximum clearance use 003" feeler and 4 lbs pull

Replacement Pistons: Furnished Std (1 size only) and 020", 030", 040", 060" Oversize with fitted pins

Installing Pistons: Install piston with indentation in head of piston toward front of engine *See Rod Installation*

PISTON PINS

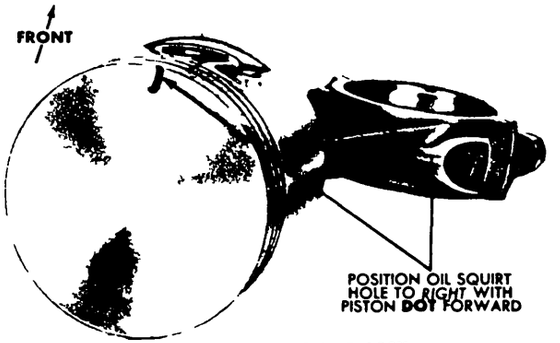
Floating type with lock ring at each end

Diameter - 9120 9123" **Length** - 3 016-3 030"

Pin Fit in Piston - 0001 0003" wear limit 0008"

Pin Fit in Rod Bushing - 0001-0003" wear limit 0008"

Replacement Pins: Standard and 001" 002" oversize



PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr #1 2	3 32"	010 027"	002 0035"
Oil #3	3 16"	015-062"	①

① Side sealing type ring

Replacement Rings- Standard 020" 030" 040" 060" oversize (Expander type)

CONTINUED ON NEXT PAGE

FORD 6 CYL. PISTON & ROD ASSY.

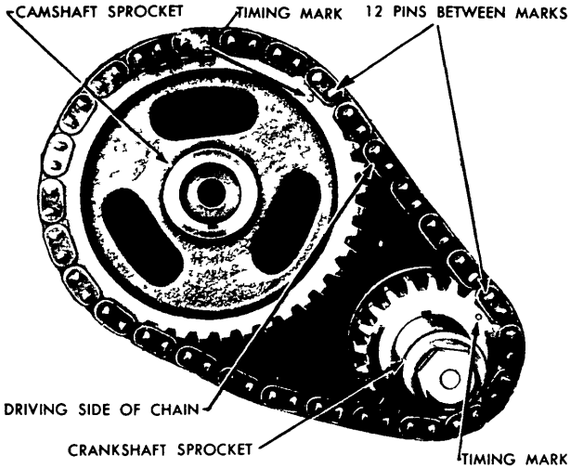
CONTINUED FROM PRECEDING PAGE

CONNECTING RODS

Journal Diameter - (Red) 2.2984-2.2988", (Blue) 2 2980-2.2984".
Clearance - 0004- 0023" wear limit 0033"
Side Clearance - 003- 009", wear limit 012"
R placement Bearings: Standard size (2 sizes marked **Red** and **Blue**) and 010", 020", 030" Undersize
►*STANDARD SIZE NOTE* **Red** marked bearings increase clearance, **Blue** marked bearings decrease clearance
Installing Rods: Install rod with squirt hole to right and piston indentation toward front of engine

CRANKSHAFT

Journal Diameter - (Red) 2.4984-2.4988", (Blue) 2 4980-2.4984"
Bearings - Steel backed copper lead alloy
Clearance - .0005- 0025" Wear limit .0035"
R placement Bearings: Standard size (2 sizes marked **Red** and **Blue** for selective fitting) and 010", 020", 030" Undersize
►*STANDARD SIZE NOTE* **Red** marked bearings increase clearance, **Blue** marked bearings decrease clearance
End Thrust: Taken on rear intermediate #3 bearing
Thrust Bearing Alignment - *See "Crankshaft & Main Bearings" in Ford Special Data*
End Play - 004- 008", wear limit 012"
Crankshaft Rear Oil Seal Installation: *See "Crankshaft & Main Bearings" in Ford Special Data*
Crankshaft Front Oil Seal Installation: *See "Engine Front Cover" in Ford Special Data*
►*OIL SLINGER NOTE:* A crankshaft front oil slinger is incorporated on all cars and truck engines to reduce oil leakage at front oil seal

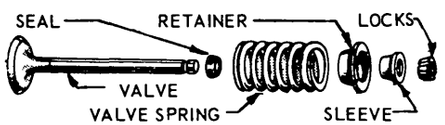


CAMSHAFT

►*CAMSHAFT LOBE WEAR CORRECTION (1952-59):* A hardenable iron valve lifter has been released under Part No B8C-6500-A for use when excessive cam lobe wear is experienced
Journal Diameter - 1 9255-1 9265"
Clearance - 001- 003", wear limit 006"
End Thrust: Taken by thrust plate and spacer behind camshaft sprocket *NOTE* - Chamfer on inside of spacer must be toward camshaft journal
R placement Bearings: Finished bearings furnished Standard, and 015" undersize *CAUTION* - Rear intermediate (#3) bearing not interchangeable with other bearings
Camshaft Removal & Installation: *See "Camshaft & Bearings" in Ford Special Data*
Timing Chain: Side-guide type 56 links
Camshaft Setting: Sprockets marked by "O" at one tooth Mesh chain so that there are 12 pins between "O" marks on driving side of chain
Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Ford Special Data*
Engine Front Cover Removal: *See "Engine Front Cover" in Ford Special Data*

VALVES

Tappet Clearance: 019" Intake & Exhaust (Hot or Cold)



Valve	Head Diameter	①Stem Diameter
Intake	1 775-1 785"	3416- 3423"
Exhaust	1 505-1 515"	3403- 3410"

FORD 6 CYL. VALVE TIMING MARKS

Valves	Seat Angle	②Lift	③Stem Clearance
Intake	45°	273"	001- 0024"
Exhaust	45°	273"	0023- 0037"

①- Furnished with 003", 015" 030" oversize stems
②- Cam lobe lift Wear limit, 268"
③- Wear limit 0045"(Intake), 0065" (Exhaust)
►*ROTATABLE VALVE NOTE: All valves are rotatable type See "Valve System" in Ford Special Data*

FORD 6 CYL. VALVE ASSEMBLY

Valve Stem Seals - Umbrella type seals used on both intake and exhaust valve stems cupped side down
Valve Seat Width - 060- 080" (Intake), 070- 090" (Exhaust)
Valve Springs: Free Length - 2 09" approximately

Valve Spring Specifications

Valve	Spring Pressure	Length
Closed	①71-79 lbs	1 780"
Open	②161-177 lbs	1 390"

①- Wear limit 64 lbs at 1 780"
②- Wear limit 145 lbs at 1 390"

►*VALVE SPRING INSTALLATION NOTE:* Measure valve spring assembled height from machined surface of cylinder head spring pad to spring retainer contact surface If assembled height is 1 25/32" or greater, install necessary 030" spacer or spacers between cylinder head valve spring pad and valve spring to bring assembled height to recommended dimension of 1 3/4-1 25/32"
Valve Guides: Integral with cylinder head When stem-to-guide clearance exceeds maximum (see table above), ream guides and install oversize valves *See "Valve System" in Ford Special Data*
Valve Lifters: Mushroom type Removed from below with camshaft out
Clearance - .0008-.0024" wear limit 0045".
Rocker Arm Assembly: *See "Valve System" in Ford Special Data*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT abov
►*VALVE TIMING NOTE:* The following valve opening and closing points are with camlift as indicated
Intake Valves - Open 17°①BTDC Close 53°②ALDC
Exhaust Valves - Open 61°①BLDC Close 9°②ATDC
①- Camlift 016" ②- Camlift 019"

OILING SYSTEM

►*ENGINE OILING SYSTEM See "Engine Lubrication" under OILING SYSTEM in Ford Special Data.*
Crankcase Capacity: 4 quarts (refill), 5 quarts (when filter element changed)
Normal Oil Pressure: 45-50 lbs at 2000 RPM
Pressure Regulator Valve - In pump body, not adjustable
Oil Pressure Indicator - Indicator light on instrument panel operated by engine unit, Ford No B6A-9278-B
Oil Pump: Gear type pump located in crankcase,
Pump Overhaul - *See "Oil Pump" in Ford Special Data.*
Oil Filter: "Disposable" type Replace at 4,000 mile intervals
Disposable Filter Replacement - Coat gasket face of filter with oil, thread filter on insert by hand until gasket contacts adapter surface then tighten filter an additional one-half turn
Crankcase Ventilation: Filter in oil filler cap (inlet), an outlet pipe in rear of crankcase at left side

COOLING

►*OVERHEATING DURING EXTENDED IDLE CORRECTION* To correct above condition, install extra cooling water pump pulley B7A-8509-D with fan belt B7A-8620-E identified by EBP-8620-E
Water Capacity: 15 qts. Add 1 qt for heater
Pressure Valve: Ford B8A-8100-A 14 lb radiator filler cap
Thermostat: Ford No B7A-8575-A (157-162°F) standard, Ford No. B7A-8575-B (177-182°F) for use with permanent antifreeze
►*THERMOSTAT INSTALLATION NOTE:* Install thermostat with valve pivot shaft in a vertical position to insure best operation
Water Pump: Packless, sealed ball bearing type
See "Water Pump" in Ford Special Data
Temperature Gauge: King-Seeley Electric Constant-voltage ("CV") type, with gauge voltage regulator Ford No B7A-10804-B
Dash Unit - Ford B9A-10883-A
Engine Unit - Ford No B7A-10884-A
See 'Temperature Gauges' in Miscellaneous Section

CLUTCH

Long Model 9½CF (Std.), 11CF (Heavy Duty). Semi-centrifugal, single plate type

Cover Assembly

Type	Long No.	Ford No.
9½CF	268594	1A-7563-A
11CF	266978	B7A-7563-C

See "Long Clutches' in Clutch Section

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Typ	Clutch Disc. L ng No.	Ford No.
9½CF	288849	B8A-7550-A
11CF	288851	B8A-7550-B

Pedal Adjustm nt: If total pedal travel is less than 6 5/8" or more than 6 7/8", reposition pedal bumper and bracket until travel is within limits Adjust spring link to give assist spring length of 9¾-10" (between spring eye centers) with pedal fully released against bumper

Fre Trav l - 1 1/8-1 3/8" Loosen locknut on clutch pedal release rod, turn adjusting nut until correct travel is obtained *NOTE* - Check free travel by operating engine at 3,000 RPM with transmission in neutral position There should be a minimum of ½" free travel under these conditions

R moval· Remove transmission, *see "Synchro-mesh Transmission" below,* then remove flywheel housing cover and release lever retracting spring Slide release bearing and hub off release lever Mark clutch cover and flywheel for reinstallation Loosen six cover bolts uniformly to release spring tension Remove cover and pressure plate through opening in flywheel housing

SYNCHRO-MESH TRANSMISSION

Own. Helical gear, constant mesh, synchro-mesh (second & high), sliding gear (low & reverse)
See "Ford Synchro-mesh" in Transmission Section

Transmission C ntrol: *See "Transmission Controls" in Transmission S ction*

Removal: Raise car and disconnect drive shaft at rear joint flange Slide drive shaft off transmission output shaft Insert Tool T57L-7657-A over output shaft and into seal Disconnect speedometer cable at extension housing, gear shift rods from transmission levers Remove parking brake equalizer lever from bracket and remove brake cable from bracket on crossmember Remove extension housing to engine rear support bolts and raise rear of engine and remove engine rear support and frame crossmember as a unit Place jack under transmission and remove transmission to flywheel housing bolts Slide transmission and jack to rear to clear input shaft and remove transmission from beneath car

OVERDRIVE

Warn r R10. Solenoid operated type, with governor control and throttle operated kick-down
See "Ford Overdriv ' in Transmission Section

Ov rdriv C ntrol· *See "Overdrive Control' in Transmission Section*

Removal· Same as for Synchro-mesh Transmission (above) after disconnecting control cable and wiring

FORDOMATIC TRANSMISSION

Tw -Sp d F rd matic New, simplified type, with torque converter and two speed automatic transmission

►*THREE-SPEED FORDOMATIC NOTE* Some cars have Three-Speed Fordomatic installed These cars can be identified by letter "C" stamped on "TRANS" entry on serial number plate

►*TWO-SPEED FORDOMATIC RUMBLE NOISE CORRECTION* Install new pressure regulator valve and spring Kit No B9AZ-7A135-A, *see 'Ford Two-Speed Fordomatic" in Transmission Section*

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION See "Ford Two-Speed Fordomatic" in Transmission Section*

►*TESTING & TROUBLE SHOOTING See "Ford Two-Speed Fordomatic" in Transmission Section*

Lubrication - Check fluid level every 1,000 miles Drain and refill every 24,000 miles Use Automatic Transmission Fluid Type "A", Suffix A

►*TRANSMISSION FLUID COLOR NOTE* A dye is added to automatic transmission fluid at assembly plant to aid in detecting leaks

Checking Fluid Level - Bring transmission to operating temperature by running engine with selector lever in neutral position Move selector lever through all ranges to assure fluid distribution, then place lever in "P" (Park) position for checking fluid Maintain level at "Full" mark on dipstick

Throttle Linkage Adjustment: *See CARBURETOR above*

►*OTHER DATA See "Ford Two-Speed Fordomatic" in Transmission Section*

UNIVERSALS

Mechanics. Needle bearing type

►*CAUTION* Rear universal joint companion flange nut controls pinion bearing preload (must be adjusted whenever nut is loosened) *See "Edsel, Ford & Mercury" in Rear Axle Section*

►*REAR UNIVERSAL JOINT INSTALLATION CAUTION* To eliminate possibility of early failure, the bearing retaining strap must be correctly positioned in cast recess in rear axle flange prior to tightening attaching "U" bolts

REAR AXLE

Own. Separate carrier type, semi-floating, hypoid, with Hotchkiss Drive "Equa-Lock" (Power Transfer) type differential Optional *See "Edsel, Ford, Thunderbird & Mercury (Deep-Offset) Hypoid' or Ford Equa-Lock Differential ' in Rear Axle Section*

Axle Ratios - 3 56-1(32-9), 3 70-1(37-10), 3 89-1 (35-9)

Backlash - 004- 009"

Axle Shaft Removal Remove wheel and brake drum Remove four axle bearing retainer locking type nuts (work through opening in axle shaft flange) Use puller No 4235-N and pull axle shaft (do not disturb brake backing plate or damage wheel bearing oil seal) Replace one nut to secure brake backing plate

Carri r Ass mbly R moval Remove axle shafts (see above) and drive shaft Remove locknuts which attach carrier to housing and remove carrier from housing

SHOCK ABSORBERS

Direct acting, non adjustable Serviced by replacement.

Ford Shock Absorber Nos.

Model	Front	Rear
Pass Car ℂ	B9A-18124-A	B9A-18125-B
Hardtop	B7A-18124-H	B9A-18125-D
Station Wagon		B9A-18125-C
Pass Car ℂ (Hvy Dty)	B7A-18124-F	B9A-18125-A
Sed Del , Taxi (Hvy Dty)	B7A-18124-F	B9A-18125-A
Sta Wgn (Hvy Dty)	B7A-18124-F	B9A-18125-H

ℂ - Exc Hardtop, Ranchero & Sta Wgn
ℂ - Exc Sta Wgn & Ranchero

FRONT SUSPENSION

Independent "Ball Joint" suspension with direct acting shock absorbers mounted within coil springs
See "Ford, Thunderbird, Mercury" in Suspension & Wheel Alignment Section

Caster - 0° to Pos 1° Maximum variation between wheels ½°

Camber - Pos ½° to Pos 1½° Maximum variation between wheels ½° (¼° preferred)

Toe-In - 1 16 1 8" *NOTE* When checking toe-in on cars with power steering engine should be running so that power steering control valve will be properly centered

Toe-Out on Turns - Outer wheel 20°, inner wheel should be 24½°

STEERING

Manual: Own Recirculating ball worm and nut
See "Saginaw Ball Bearing Worm & Nut" in Steering Section

Power Steering: Linkage type Used in conjunction with standard steering gear
See "Bendix Linkage Type" in Steering Section

►*POWER STEERING PUMP NOISE CORRECTION* To eliminate cold start noise, install Kit (B9MY-3A711-A), *see "(Eaton Roller Type) Power Steering Pump" in Steering Section*

Steering Linkage: *See "Steering Linkage" in Steering Section*

Steering Wheel & Horn Button Removal: *See "Saginaw Ball Bearing Worm & Nut' in Steering Section*

Steering Gear Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section*

BRAKES

Ford-Bendix Hydraulic Parking lever applies rear wheel service brakes

►*BRAKE DESIGN NOTE* Front brake anchor pin (fixed anchor type) is mounted on wheel spindle independently of backing plate (Wheel cylinder mounted on anchor pin)
See 'Ford, Lincoln, Mercury Bendix' in Brake Section

Drum Diam t r - 11" front and rear

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Wheel Cylinder Diameter - 1 1/8" (front all), 7/8" (Rear-Pass. Cars), 15/16" (Sta. Wgn. & Ranchero).

Brake Lining (Width-Length)

Model	Primary	Secondary
Sed. & Cpe. (Front)	2¼" x 11.62"	2¼" x 11.93"
(Rear)	1¾" x 10.62"	1¾" x 11.93"
Others (Front)	2¼" x 10.62"	2¼" x 11.93"
(Rear)	2" x 10.62"	2" x 11.93"

Clearance - Adjusting screw backed off 10-12 notches from point where shoes are tight against drum.

Brake Pedal Freeplay: 5/16-7/16".

►*REVISED BRAKE PEDAL ADJUSTMENT:* No return spring used on later cars. Measure distance from floor to brake pedal (pushrod against master cylinder piston). Lift pedal against bumper stop and again measure distance. Difference between measurements is pedal freeplay.

Standard Master Cylinder: Located on engine side of firewall.

Checking Fluid - Maintain fluid level to within ½" of top of filler neck.

Removal - Disconnect rubber boot from rear end of master cylinder, brake line at fitting, stop light switch wires from switch. Push down brake pedal several times to force as much fluid as possible into clean container, then remove bolts that secure master cylinder to dash panel and lift cylinder away from pushrod and out of vehicle.

Power Brakes: "Bellows" type used. Pedal assist power unit with vacuum bellows and control valves mounted on drivers side of dash panel and attached direct to brake power lever.
See "Ford Bellows" type in Brake Section.

Checking Fluid Level - Maintain fluid level to within ½" of top of filler neck.

Removal - Remove vacuum hose from top of unit. Remove valve adjusting eccentric nut, flat washer, spring and bushing, then remove eccentric. Remove nylon bushing from power unit valve housing. Remove two nuts and two screws that retain bracket to dash panel and remove unit from car.

MISC. MECHANICAL

Windshield Wipers: Electric & Vacuum types with Link & Arm type linkage.
See "Windshield Wipers" in Miscellaneous Section.

Power Window Regulators: Electric type.
See "Electric Window Regulators" in Misc. Section.

Power Top Control: Electric-Hydraulic. *See "Power Top Controls" in Miscellaneous Section.*

Power Seat Controls: 4-Way Electric.
See "Power Seat Adjusters" in Miscellaneous Section.

Air Conditioning: *See "Air Conditioning" in Miscellaneous Section.*

►*THUNDERBIRD JACKING & HOISTING PRECAUTIONS* Before jacking or hoisting, see "Jacking & Hoisting Precautions" in Suspension & Wheel Alignment Section

MODEL IDENTIFICATION

SERIAL NUMBER: Stamped on patent plate attached to left door post *NOTE* - Number (example below), includes identification data as follows

① ② ③ ④ ⑤

C 9 F V 100001

① - Engine type **C** - 292" Y-V8, **B** - 332", **H** - 352", **J** - 430" *See Note below*
② - Year (1959)
③ - Assembly plant *See Table below*
④ - Body style *See Table below*
⑤ - Consecutive unit number

Assembly Plant Designation

A - Atlanta	**G** - Chicago	**N** - Norfolk
C - Chester	**H** - Lorain	**P** - St Paul
D - Dallas	**K** - Kansas City	**R** - San Jose
E - Mahwah	**L** - Long Beach	**S** - Pilot Plant
F - Dearborn	**M** - Memphis	**U** - Louisville

Y - Wixom (Thunderbird only - Lincoln plant)

Body Style

C) - Convertible
F) - Ranchero
G) - Tudor & Fordor (Custom & Custom "300")
H) - Thunderbird Tudor Hardtop
J) - Thunderbird Convertible
R) - Ranch Wagon & Country Sedan (Custom & Custom "300")
S) - Tudor & Fordor (Galaxie) (Fairlane "500")
T) - Town Sedan & Club Sedan (Fairlane & Fairlane "500")
V) - Town & Club Victoria (Fairlane & Fairlane "500")
W) - Retractable Hardtop
X) - Commercial Ranch Wagon "Courier"
Y) - Country Squire

►*ENGINE IDENTIFICATION NOTE* In the following Ford V8 data pages, engines will be referred to as follows

Engine	Designation
Thunderbird 292" V8	**292**
Thunderbird 332" Special V8	**332**
Thunderbird 352" Special V8	**352**
Thunderbird 430" V8 (Thunderbird Car Only)	**430**

COMPRESSION PRESSURE: 292 - 160±10 lbs, **332, 352** - 180±20 lbs, **430** - 200±20 lbs At cranking speed

VACUUM READING: 292, 332, 352 - 19-20", **430** - 17-18" Steady at specified engine idle speed with transmission in neutral

VALVE TAPPET CLEARANCE: 292 - 019" Cold, 018" Hot, all valves *NOTE* - Adjust all tappets to 019" clearance while engine is cold, then check all tappets for 018" clearance after running engine for 30 minutes to normalize temperature

332, 352, 430 - Zero lash, hydraulic lifters *See "Valve System" in Ford Special Data for operating range check of hydraulic lifters*

►*SELF-LOCKING TAPPET ADJUSTING SCREW NOTE (292)* Torque required to turn screw (after interference noted) must be 3 ft lbs minimum

MANIFOLD HEAT CONTROL: 292, 332, 352 - Automatic thermostatic type with counterweight Valve is closed when engine is at normal temperature and running at idle speed and is open when operating at high RPM Spring is installed with ¾ turn wind-up and hooked over stop pin

430 - Water jacketed intake manifold with thermostat controlled circulation eliminates need of heat valve *See Cooling System for data.*

►*MANIFOLD HEAT CONTROL VALVE NOTE (332, 352).* Use new type valve B8A-9685-C to minimize pin binding or breaking

►*CARBURETOR AIR INTAKE DUCT ASSEMBLY (430)* Carburetor air intake duct with thermostatically controlled valve Provides warm air for cold engine (below 85°F), or cool air for warm engine (above 105°F) *See "Fuel System Notes" in Ford Special Data*

IGNITION

FIRING ORDER: 292 - 1-5-4-8-6-3-7-2 **332, 352, 430** - 1-5-4-2-6-3-7-8

Cylinders - RIGHT BANK 1-2-3-4, LEFT BANK 5-6-7-8

SPARK PLUG GAP: 032-036"

Spark Plugs - 292 - Champion F-14-Y **332, 352, 430** - Champion F-11-Y 18 mm Torque to 15-20 ft lbs (25-30 ft lbs new plug in new cylinder head)

NOTE - Plugs have tapered seat, no gasket used

COIL: Ford No. B6A-12029-B.

Ignition Current - 2 5 amps. idling, 4 5 amps stopped
Resistor - Ford B8A-12250-A 1 30-1 40 ohms at 75°F

►*COIL RESISTOR NOTE* Resistor is connected in lead from ignition switch to coil and is bypassed during cranking by lead from starter solenoid to battery terminal of coil

DISTRIBUTOR: Ford. (Early) - Same type as used on previous V8 models **(Later)** - New pivot plate type Both have centrifugal & vacuum spark advance *See "Distributors" in Electrical Section*

Engine	Distr. Part No.	① Engineering No.
292 (Early)	B9A-12127-B	B9FA-12127-A
292 (Later)	B9AF-12127-B	B9AF-12127-B
332 (Early)	B8A-12127-G	FEU-12127-J
332 (Later)	B9AF-12127-A	B9AF-12127-A
352 (Early)	B8A-12127-K	FEW-12127-N
352 (Later)	B9AF-12127-D	B9AF-12127-D
430 (Early)	B8S-12127-A	②
430 (Later)	B9S-12127-B	FEW-12127-H
430 (Latest)	B9MF-12127-B	B9MF-12127-B

① - Stamped on distributor housing for identification
② - This distributor not replaced

►*332 ENGINE DETONATION CORRECTION* If timing retarded to 2° BTDC and detonation still occurs, install Spring, Part No. B8QH-12192-C for **both** primary and secondary weights and recalibrate distributor according to special table below

Condenser - Ford B7A-12300-C **Capacity** 21-25 mfd

►*CONDENSER REPLACEMENT NOTE (1957-59)* Condenser B7A-12300-C replaces B7A-12300-A which is retained for use on trucks

Contact Point Set - Ford B7A-12171-A
Breaker Gap - 014-016"
Cam Angle - 26-28½°
Breaker Arm Spring Tension - 17-20 ozs
Rotation - Counterclockwise viewed from above

ℂ - With distributor speed of 1000 RPM

►*DISTRIBUTOR REMOVAL CAUTION:* When oil pump intermediate shaft retainer is loose on shaft, shaft may become disengaged from oil pump as distributor is removed. To correct, remove oil pan, oil pump, oil pump intermediate shaft and remove retainer from shaft. Strike retainer lightly with hammer to flatten it and reinstall in original position (1.40" from bottom of shaft on 292) *NOTE* - Retainer must be tight on shaft and bear against crankcase when pump and shaft are installed

IGNITION TIMING

ℂ Standard Ignition Setting

Engine	Std. Trans.	Auto. Trans.
292 ②	3° BTDC	6° BTDC
332 ②		3° BTDC
352 ②	3° BTDC	6° BTDC
430 ③		6° BTDC

ℂ - These are operating recommendations. Factory setting is 3° BTDC (Std. & O.D. Trans.), 6° BTDC (Auto. Trans.).

② - Allowable range 2-10° BTDC.

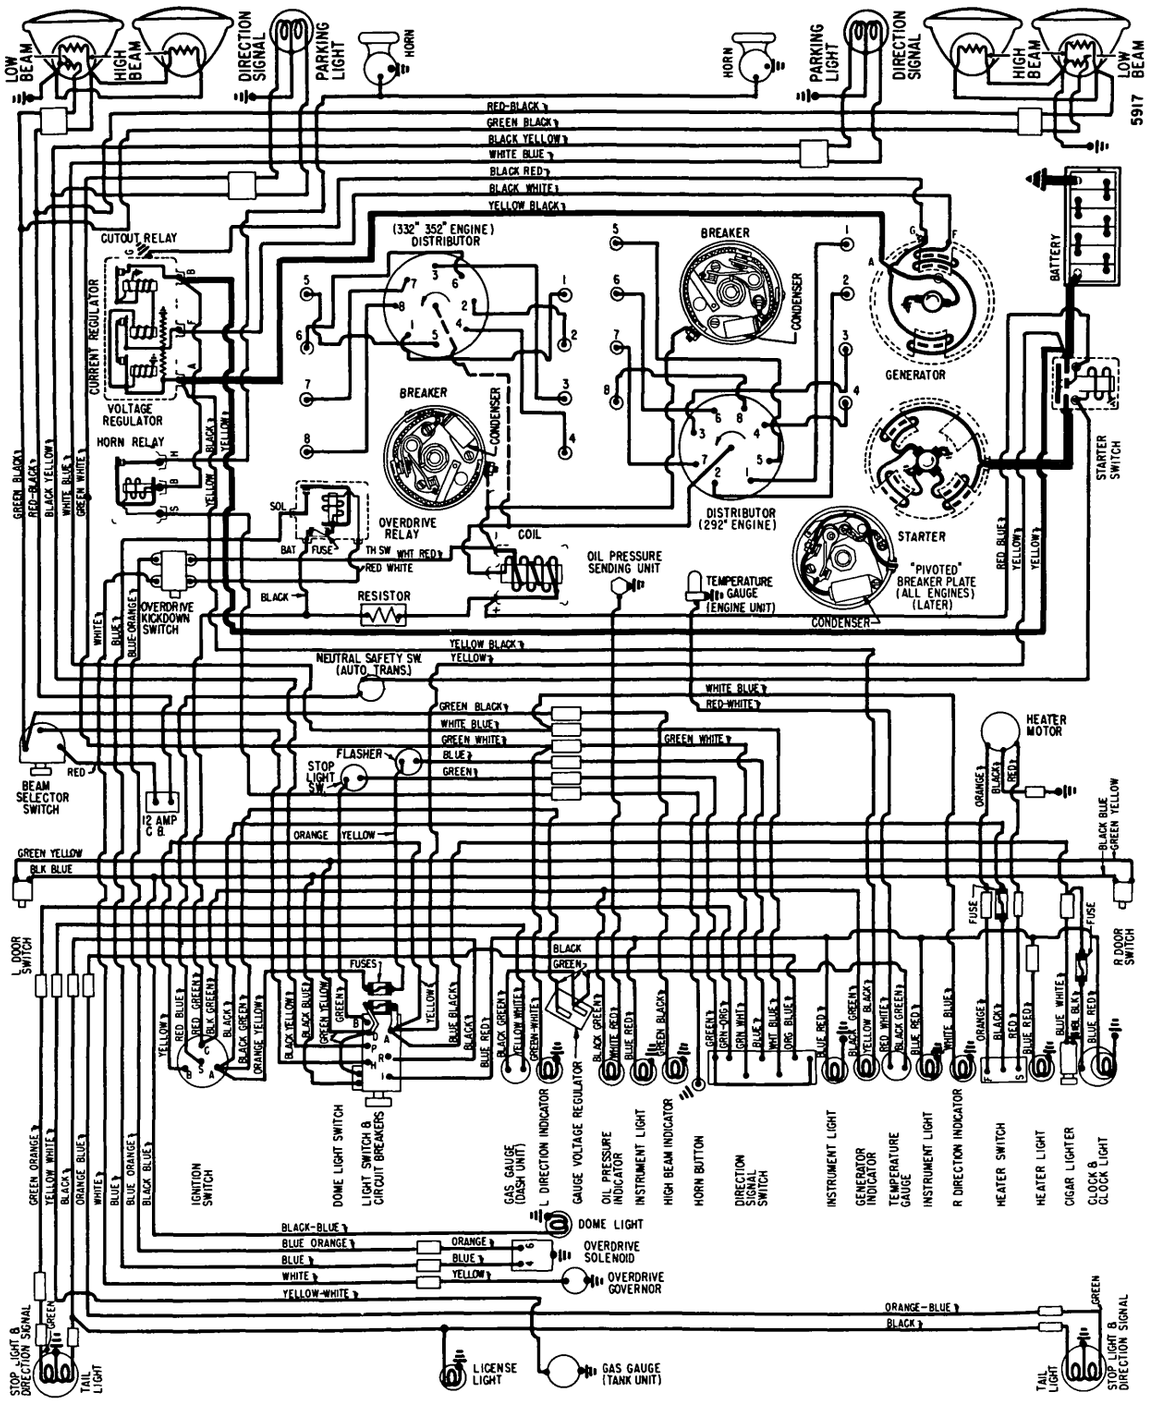
③ - Allowable range 6-10° BTDC.

Timing Marks - Align correct mark on crankshaft pulley or vibration damper with pointer on chain case cover as follows:

292 - 16 marks from TDC to 30° BTDC in 2° increments.

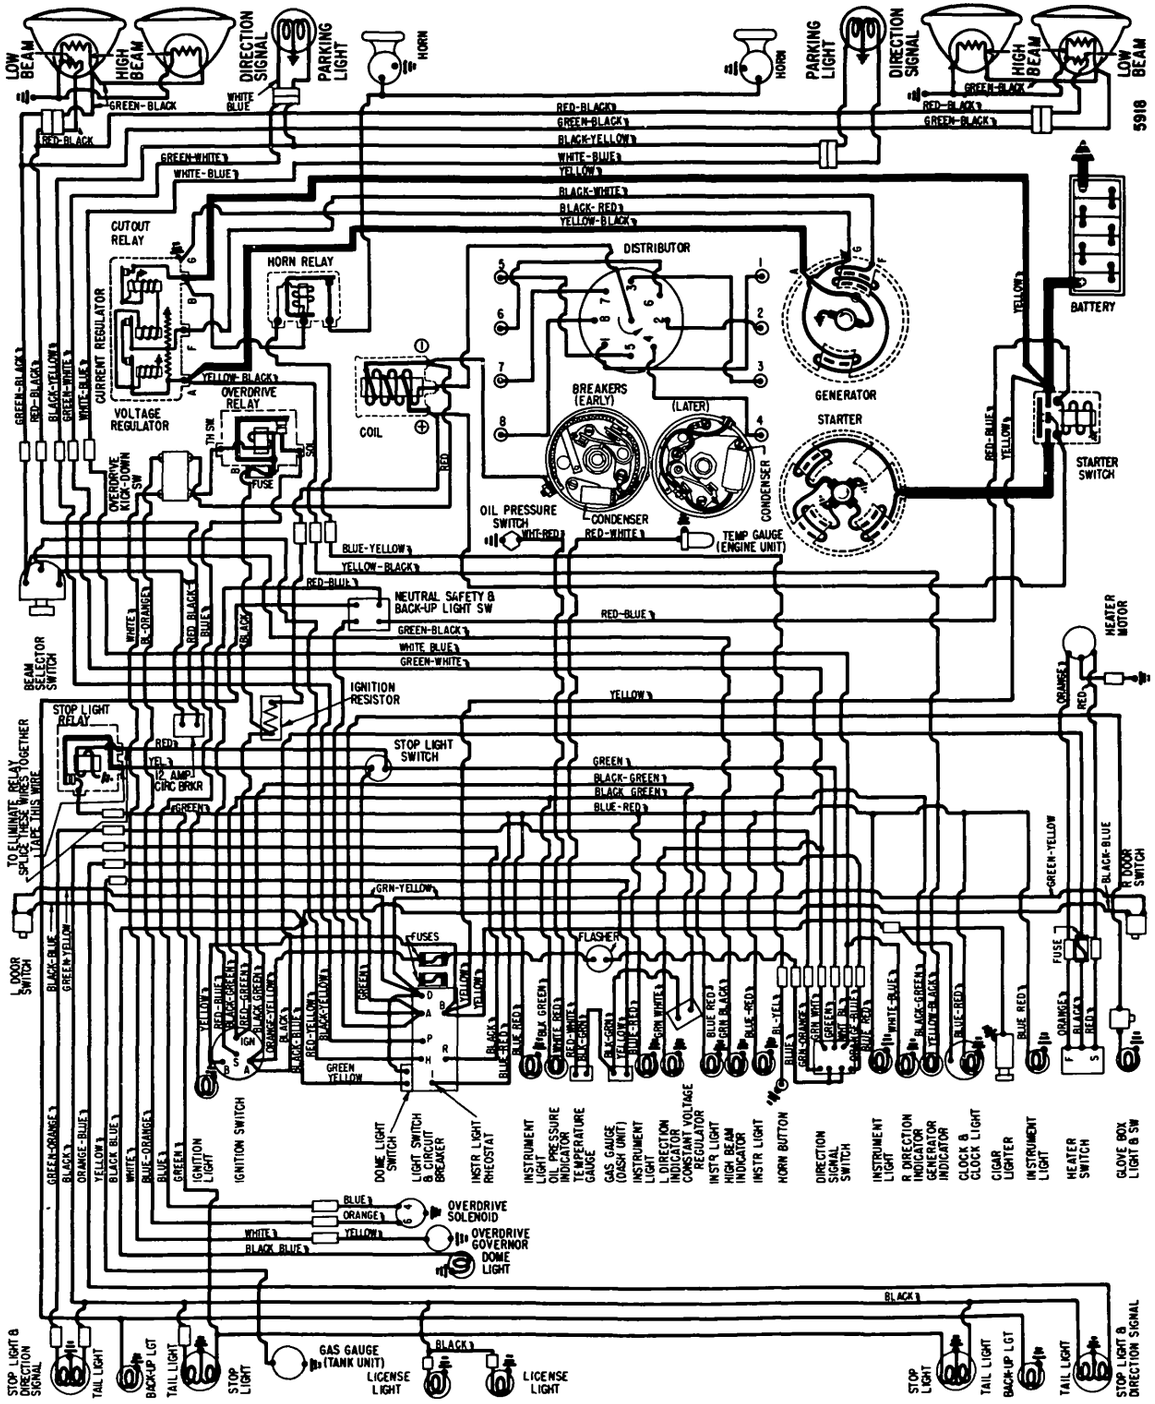
332, 352 - 6 marks from TDC to 10° BTDC in 2° increments.

430 - 11 marks from TDC to 20° BTDC in 2° increments.



CARBURETOR

►*CARBURETOR APPLICATION: Ford, Holley & Carter carburetors used as follows:*



Engine	Carburetor Type
292	Ford 2-Barrel
332	Ford or Holley 2-Barrel
352	Ford 4-Barrel
430	Carter 4-Barrel

►*CARBURETOR INSTALLATION CAUTION (292, 332):* 1959 2-bbl. carburetor-to-intake manifold spacers B9AE-9603-A Phenolic resin bonded asbestos (Ford), B9AE-9603-B Aluminum die cast (Holley) are **not** interchangeable and cannot be used on 1958 models Gasket B9AE-9447-A can be used with either spacer

CONTINUED ON NEXT PAGE

FORD V8 PASSENGER CARS (EXCEPT THUNDERBIRD)

FORD V8 THUNDERBIRD

CONTINUED FROM PRECEDING PAGE

►*HARD COLD STARTING, STALLING, POOR COLD ACCELERATION & SPARK PLUG FOULING CORRECTION:* These conditions can be eliminated by changing specifications and adjustments as follows:

Ford Carb. (292,332,352) - With fast idle screw on starting step of fast idle cam (marked "O") adjust fast idle speed to 2000 RPM (hot engine). Set choke at **2 notches rich** (292), **3 notches lean** (332 & 352). Place pump rod in **fourth hole** (farthest from throttle shaft). *NOTE* - Place rod in **third hole** to improve performance and economy in hot weather.

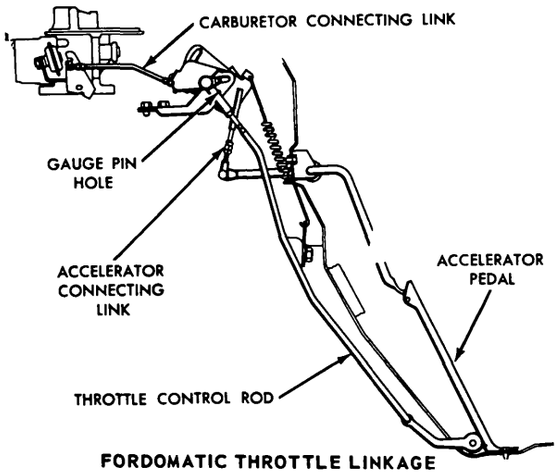
Holley Carb. (332) - Place pump rod in No. 2 position by aligning lower hole in pump cam with lower hole in throttle lever and placing attaching screw in lower hole (marked 2) for **winter only.**

Carter Carb. (430) - With engine temperature normal and fast idle screw on lowest step of cam, adjust fast idle speed to 600-650 RPM with transmission in drive.

►*THREE-SPEED FORDOMATIC THROTTLE LINKAGE ADJUSTMENT NOTE:* For adjustment procedures for cars with 3-speed Fordomatic, see *1958 Ford V8 Data.*

Throttle Linkage Adjustment (Fordomatic): Adjust engine to correct idle speed. Stop engine and make anti-stall dashpot adjustment (see below). Disconnect throttle control rod from accelerator bellcrank and insert ¼" gauge pin through gauging holes in bellcrank. Adjust carburetor connecting link so carburetor lever is against hot idle stop **and then lengthen rod 1 full turn at turnnion.** Accelerator pedal height should be 3½" from top rear corner of pedal to floor mat. Adjust by turning accelerator connecting link. Remove gauge pin and check alignment of holes. Pin should enter freely. With gauge pin removed, pull firmly but gently upward on throttle control rod so transmission lever is held against internal stop in transmission and rotate clevis until pin fit freely on accelerator bellcrank. Then lengthen rod by rotating clevis 3½ turns counterclockwise (*see "Special Setting Note" below).* Connect throttle control rod.

►*SPECIAL SETTING NOTE:* For more satisfactory shift feel, rod may be lengthened 2±½ turns in place of 3½ turns.



Throttle Linkage Adjustment (Cruise-O-Matic): Adjust engine to correct idle speed. Stop engine and make anti-stall dashpot adjustment (see below). Disconnect throttle control rod from accelerator bellcrank and insert ¼" gauge pin through holes in bellcrank. With fast idle cam in slow position, adjust carburetor connecting link so carburetor lever is against its hot idle stop. Accelerator pedal height should be 3½" (Pass. Cars), 4½" (Thunderbird) from top corner of pedal to floor. Adjust by turning accelerator connecting link. Remove gauge pin and check alignment of holes. Pin should enter freely. With gauge pin removed, pull throttle control rod upward firmly but gently so transmission lever is against internal stop in transmission. Rotate clevis on throttle control rod so clevis pin fits freely on bellcrank lever. Then lengthen throttle control rod by turning clevis **3 full turns c unt rcl ckwis .** Con-

nect rod *For final adjustment, use pressure method as follows* Make sure transmission is at normal operating temperature Raise car and remove 1/8" pipe plug forward of transmission levers Install pressure gauge Lower car and install a tachometer Put selector lever in either Drive position With engine speed at 1000 RPM , pressure should be 80-85 lbs If below 80 lbs , lengthen throttle control rod, if above 85 lbs , shorten rod Connect rod, tighten locknut For pressure ranges at Idle & Stall speed conditions, *see "Edsel, Ford, Lincoln, Mercury Automatic Transmissions" in Transmission Section*

Anti-Stall Dashpot Adjustment (Ford & Holley): With engine idle speed properly set, engine stopped, and throttle in hot idle position, loosen dashpot locknut and bottom dashpot plunger Clearance between plunger and throttle shaft lever should be 035-050" (292, 352), 035-060" (332). Adjust by turning dashpot or adjusting nut Tighten locknut

FORDOMATIC THROTTLE LINKAGE

CRUISE-O-MATIC THROTTLE LINKAGE

Anti-Stall Dashpot Adjustment (Carter): Set engine at correct idle speed, then stop engine

1) With primary throttle plates **closed,** clearance between dashpot plunger operating lever and top surface of air horn should be 1/16-5/32" Adjust by bending dashpot lever in area between lever arm base and dashpot plunger

2) With primary throttle plates **wide open,** clearance between dashpot plunger operating lever and top surface of air horn should be 3/8-7/16" To adjust, bend stop tang on opposite side of lever arm

Brush Spring Tension - Auto-Lite 34-41 ozs , **Bosch** 16-18 ozs ; **Ford** 32-40 ozs

Field Current - (B6A-10002-A) 1 0-1 1 amps , (B6A-10002-C) 1 27 amps , (B6A-10002-D,B) 1 31 amps , (B6A-10002-G) 1 72 amps , (B6A-10002-A) 1 48-1 58 amps All at 10 volts hot

Rotation - Counterclockwise at commutator end

Belt Adjustment: ½" (292), 3/8" (Others) deflection midway between generator and water pump pulleys with light thumb pressure

REGULATOR

Ford, Bosch & Auto-Lite. Used as follows

Ford Regulator No.	Generator
B5C-10505-A Bosch	B6A-10002-B
B6C-10505-A Ford	B6A-10002-G
B6C-10505-B Bosch	B6A-10002-C
B6A-10505-C Bosch	B6A-10002-D
B7A-10505-A Auto-Lite	B6A-10002-E
B7A-10505-B Ford	B6A-10002-H,B8S-10002-A
B7A-10505-B Ford	B9A-10002-A
B8E-10505-B Ford	B8A-10002-A

►*SETTING CAUTION* "Temperature Compensated" type Set to following specifications at 75°F, ambient (engine compartment) temperature, after ½ hour operation in vehicle, or after regulator heated and stabilized

Cut ut Relay

Cuts In - Aut -Lit 12 5-13 9 volts, **Bosch** 13 0-13 5 volts, **Ford** 12 0-12 8 volts (B7A-10505-B,B8E-10505-B), 12 0-12 6 volts (B6C-10505-A)

Cuts-Out - Auto-Lite 2-6 amps , **Bosch** 2-8 amps , **Ford** 6-9 amps (B7A-10505-B), 2-6 amps (B8A-10505-A, B6A-10505-G)

Voltage Regulator

Setting - Auto-Lite 14 2-14 9 volts, **Bosch** 14 1 volts lower contacts, 14 8 volts upper contacts, **Ford** 14 6-15 4 volts (B9A-10505-A, B8A-10505-A),15 0 volts (B6A-10505-G)

Checking & Adjusting - *See 'Auto-Lite", "Bosch" & "Ford Regulators' in Electrical Section*

Current Regulator

Setting - Auto-Lite 38-42 amperes **Bosch** 28-32 amperes (B6C-10505-B), 48-52 amperes (B6A-10505-C), 58-62 amperes (B5C-10505-A), **Ford** 28-32 amperes (B7A-10505-B), 33-37 amperes (B8E-10505-B), 58-62 amperes (B6C-10505-A)

Checking & Adjusting - *See "Auto-Lite", "Bosch" & "Ford Regulators" in Electrical Section*

MISC. ELECTRICAL

Headlamps: Dual Headlights (4-Headlight System)

See 4-Headlight Systems" in Electrical Section

Directional Signals: *See Electrical Section*

Lighting Switch Removal: With control knob in "OFF" position, press spring release button on switch housing, turn shaft slightly and pull it out of switch Unscrew mounting nut with Tool 17470-N, remove bezel and switch and remove wires

Stop Light Switch Location: On forward end of brake master cylinder

►*STOP LIGHT SWITCH NOTE* Early Thunderbirds used stop light switch with relay, later type switch B9SF-13480-A does not require relay and can be installed on early Thunderbirds by connecting wires as shown in wiring diagram

CIRCUIT BREAKERS: Two circuit breakers built in lighting switch 1) Protects Headlights 2) Protects Instrument, Parking, Stop, Tail & Back-up Lights

12 Ampere - Protects headlight low beam circuit Located at lower left edge of instrument panel (Pass Cars), on top of left air inlet (Thunderbird)

FUSES: 7 5 Ampere - Interior lights On headlight switch

5 Ampere (Pass. Cars) - Direction signals On headlight switch

7.5 Ampere (Thunderbird) - Direction signals In feed wire

15 Ampere - Overdrive On overdrive relay

14 Ampere - Heater. In feed wire

1 Ampere - Clock In feed wire

Horn Relay: Ford No B8C-13853-A

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION Use extreme care when disconnecting any part of air conditioning or lines for access to engine See "Air Conditioning Service Cautions" in Miscellaneous Section*

ENGINE SPECIFICATIONS: Own. 90° V8 Different engines used as follows

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Thund rbird 292' V8 - YV8 of same design used previously

Thunderbird 332" & 352" Special V8 - Same design as previous Interceptor engines

Thunderbird 430" Special V8 - Has special water jacketed intake manifold and 3-stage engine warm-up and cooling system Combustion chamber located in cylinder block *See Cooling System Data*

►*POLICE SPECIAL ENGINE NOTE This engine is same as standard 352" Engine but has a high lift camshaft and damper spring and spacer on all valves*

Engine	Bore	Stroke	Displacement
292	3 75"	3 30"	292 cu in
332	4 00"	3 30"	332 cu in
352	4 00"	3 50"	352 cu in
430	4 30"	3 70"	430 cu in

Engine	Compr. Ratio	Rated HP	Developed HP
292	8 8-1	45 00	200 at 4400 RPM
332	8 9-1	51 20	225 at 4400 RPM
352	9 6-1	51 20	300 at 4600 RPM
430	10 0-1	59 17	350 at 4800 RPM

Compression & Vacuum Reading - See *TUNE-UP*

►***1959 FORD 352" ENGINE OVERHEATING CORRECTION:*** **If overheating occurs when engine is operated at idle speed for a prolonged period at ambient temperatures above 90°F, install a new water pump pulley, Part No. B8A–8509–B (1.05–1 ratio), and a new fan belt, Part No. B9S–8620–A.**

►*430" ENGINE ROCKER ARM COVER AND GASKET REPLACEMENT NOTE·* New rocker arm cover, Part No B9LE-6582-A, and gasket, Part No B9ME-6584-B, should be used for service replacement to reduce oil leaks at this area New gasket has round screw holes and notch on inside edge Install gasket with notch toward **front** of engine on **right** bank, to **rear** of engine on **left** bank

►*OIL LEAKAGE AT INTAKE MANIFOLD (FRONT OR REAR) CORRECTION (332, 352) See "Cylinder Head Manifolds" in Ford Special Data*

►*COOLANT LEAKAGE CORRECTION & EXHAUST MANIFOLD INSTALLATION NOTE (430)* Use new exhaust manifold attaching studs (with Lok Thred - 3/8-16 x 1 68) Part No 372404-S7 to reduce coolant leakage at studs, using sealer or Permatex No 2 on stud threads

►*OIL LEAKAGE AT FUEL PUMP GASKET CORRECTION* Caused by installation of incorrect gasket Correct gaskets are B8A-9417-A (060" thick) for 332" & 352" Engines, or B5A-9417-A (020" thick) for 292" engine

►*DIRT & WATER ENTERING FLYWHEEL HOUSING CORRECTION (430)* Install cylinder block cup plug No 371058-S into manufacturing hole in oil pan rail at right rear of cylinder block

►*THUNDER B IRD 430 ENGINE VIBRATION RUMBLE NOISE CORRECTION* When pressure applied at "X" section of valley cover dampens noise, insert a 2½" long piece of 1" heater hose, slit at one end, at "X" section of valley between valley and intake manifold

►*1959 FORD V8 ENGINE EXCESSIVE ENGINE OIL CONSUMPTION, EXHAUST SMOKING & SPARK PLUG FOULING CORRECTION* These conditions may be caused by plugged cylinder head oil return holes If excessive oil is found in rocker arm cover chambers, clean drain passages with a piece of wire, air pressure and solvent

►*EXHAUST MANIFOLD PRODUCTION CHANGE (430).* New exhaust manifolds Part No B9ME-9430-A (Right Hand), B9LE-9431-A (Left Hand) used in production beginning Feb 1959 New type has thicker flanges and has detents cast on lower surface of inlet flange

ORIGINAL BORE & PISTONS: *See "Original Bore & Pistons" in Ford Special Data*

CYLINDER HEAD: *See "Cylinder Head & Manifold" in Ford Special Data*

TIGHTENING TORQUES: *See "Tightening Specifications" in Ford Special Data*

ENGINE REMOVAL: *See "Engine" in Ford Special Data*

OIL PAN REMOVAL: Proceed as follows

292 - Drain crankcase and disconnect oil pump inlet tube at oil pump Remove oil pan retaining screws and remove pan

332,352 (Pass. Cars) - Drain crankcase and remove dipstick Crank engine so No 1 piston is at TDC Remove oil pan retaining screws and lower pan to frame crossmember Loosen oil pump inlet tube upper bolt and remove lower bolt Swing tube clear of oil pan Remove pan by moving it forward and tilting down

352 (Thunderbird) - **1)** Drain cooling system and crankcase Disconnect radiator upper hose at radiator tank Remove oil pan retaining screws and lower pan to underbody crossmember Position crankshaft so counterweight will clear pan, then move pan forward

2) Remove bolts holding coil and move coil out of way Raise engine so tension is off mounts and remove bolts holding engine to front mounts Raise engine so bolts holding oil pump can be removed Remove oil pan and pump

430 - Crank engine until 14° BTDC mark on damper is aligned with pointer Drain crankcase Remove both engine front mounts Remove both engine front support-to-underbody nuts Raise engine and place 1" wood blocks between engine front support brackets and underbody Let engine rest on blocks Remove oil pan retaining screws and let pan rest on underbody crossmember Loosen oil pump inlet tube upper bolt and remove lower bolt Swing tube out of way Remove pan in a lowering forward motion

PISTONS

►*PISTON IDENTIFICATION & USAGE NOTE (292,332, 352)* Two types of pistons used intermingled in production **On type** has ring lands machined **round** with no stabilizing step on bottom ring land Skirt of piston is cam ground **Oth r typ** has both ring lands and skirt cam ground and the bottom ring land has stabilizing step

Autothermic type Solid skirt with three rings above pin.

Removal - Pistons and rods removed from above

Clearance - (292) 0008- 0026" (wear limit 005") at bottom of skirt

Clearance (332,352,430) - 0011- 0029" at bottom of skirt Wear limit 005" (332,352), 0045" (430)

Fitting New Pistons: To test minimum and maximum clearances, use ribbon feeler gauges ½" wide inserted between piston and cylinder wall at right angle to pin on thrust side, piston inverted and bottom of piston skirt 1½" below top of block, as follows

Engine	Minimum Clearanc Feeler	Lbs. Pull	Maximum Clearance Feel r	Lbs. Pull
292	0015"	4¼	003"	4
332,352,430	0015"	3¾	.003"	3¼

Replacement Pistons: (Exc. 430) Furnished Std (1 size only) and 020", 030", 040", 060" Oversize with fitted pins .

(430) Furnished in 2 Std sizes (Red-Grade 2, 4 2985", Blue-Grade 6, 4 2997") and 020", 030", 040", Oversize with fitted pins

Installing Pistons: Install piston with indentation in head of piston toward front of engine, and on **430**, step on piston head towards inside of engine "V" *See Rod Installation*

PISTON PIN

Floating type with lock ring at each end (Exc 430) No retaining rings used (430) Pin is press fit in connecting rod *See Pin Fit in Rod below*

Diameter - 9120- 9123" (292), 9750- 9753" (Others)

Length - 3 016-3 030" (292), 3 156-3 170" (332, 352), 3 480-3 500" (430)

Pin Fit in Piston - 0001- 0003" loose Wear limit 0008" Light thumb press fit at 70°F

Pin Fit in Rod - (292.332,352) - 0001- 0003" loose Wear limit 0008" Light thumb press fit at 70°F

Pin Fit in Rod - (430) - Interf rence fit. *See "Piston Pins" in Ford Special Data*

Replacement Pins· (292,332,352) - Furnished Standard (Green), and 001" (Blue), 002" (Yellow) Oversize

(430) - Standard only Fitted pins furnished with new pistons

PISTON RINGS

Two compression and one oil ring per piston Oil ring is "Side Sealing" type (two steel rails with spring spacer between them)

292 Engine

Ring	Width	End Gap	Side Clearance
Compr 1 & 2	0775- 0780"	010- 027"	① 0020- 0035"
Oil	1880- 1890"	② 015- 062"	③

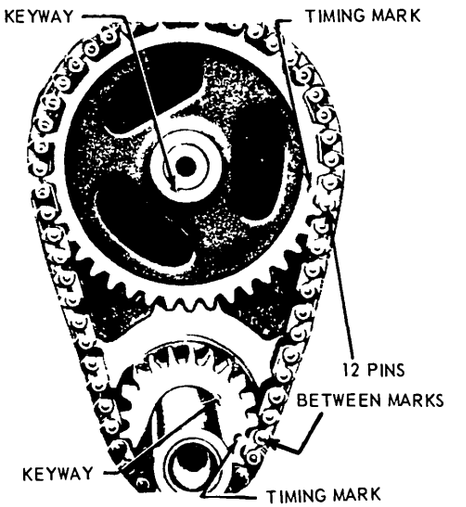
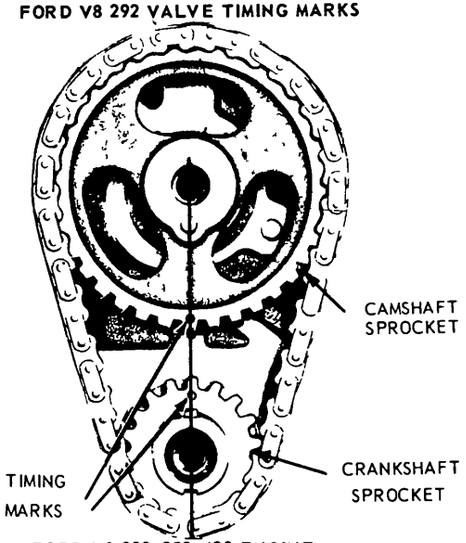
③ - Side sealing type ring.

Replac ment Rings: Furnished in Partial Ring Sets (for 2 Pistons) in Standard & .020", .030", .040"Oversize (All engines), plus .060" Oversize (Exc. 430).

CONNECTING ROD



L ngth (C nt r-t -C nt r) - **(292)** - 6.320-6.324". **(332,352)** - 6.538-6.542"). **(430)** - 6.599-6.601".
Journal Diam ter - **(292)** - 2.1880-2.1888". **(332,352)** - 2.4380-2.4388". **(430)** - 2.5992-2.6000",
Low r B aring - Steel backed, copper lead alloy lined type. Upper and lower halves interchangeable.
Cl aranc - **(292)** .0008-.0027" (wear limit .0037").
Clearance - **(332, 352)** - .0009-.0028" (wear limit .0036"). **(430)** - .0006-.0026" (wear limit .0034").
Sid Clearance - **(292,332,352)** - .006-.016" (wear limit .019"). **(430)** - .005-.015" (wear limit .018").
Replacem nt B arings: Standard size (2 sizes marked **R d & Blu)** and .010", .020", .030" (292, 430), plus .040" (332, 352) Undersize.
►*STANDARD SIZE NOTE:* **Red** marked bearings increase clearance, **Blue** marked bearings decrease clearance.
Installing Rods: Install rod in piston so that rod bearing lock slots in connecting rod are toward outside of engine when indentation on head of piston is toward front of engine. Cylinder numbers on bearing caps and rods must be on same side and installed in same numbered cylinder.



FORD V8 PISTON & ROD ASSY.

CRANKSHAFT

Journal Diamet r - **(292)** - 2.4980-2.4988". **(332,352)** - 2.7484-2.7492". **(430)** 2.8994-2.9002".
Bearings - Copper-lead, steel-backed.
Cl aranc - **(292)** .0006-.0032" (wear limit .0042"). **(332,352)** - .0007-.0029" (wear limit .0036"). **(430)** - .0009-.0029" (wear limit .0038").
R plac ment B arings: Standard size (2 sizes marked **Red & Blue)** and .010", .020", .030" (292, 430), plus .040" (332, 352) Undersize.
►*STANDARD SIZE NOTE:* **Red** marked bearings increase clearance, **Blue** marked bearings decrease clearance.
End Thrust: Taken by No. 3 main bearing. Replace bearing when endplay is excessive.
Thrust B aring Alignm nt - *See "Crankshaft & Main Bearings" in Ford Sp cial Data.*
Endplay - **(292.332,352)** .002-.006" (wear limit .010") **(430)** - .004-.008" (wear limit .012").

FORD V8 292 VALVE TIMING MARKS

FORD V8 332, 352, 430 ENGINE VALVE TIMING MARKS

Crankshaft Rear Oil Seal Installation: *See "Crankshaft & Main Bearings" in Ford Special Data.*
Crankshaft Front Oil Seal Installation: *See "Engine Front Cover" in Ford Special Data*

CAMSHAFT

►*CAMSHAFT NOTE:* 352 Police Special Engine uses a special "high lift" camshaft.
Journal Diameter - **(292)** - 1.9255-1 9265" **(332, 352)** - 2.1238-2.1248" **(430)** - 2.264-2.265".
Bearings - Steel-backed babbitt lined bushings.
Clearance - .001-.003" Wear limit 006"
End Thrust: **(292)** - Taken by thrust plate and washer located between camshaft sprocket and shoulder on camshaft
(332, 352) - Controlled by spring loaded thrust button on fuel pump eccentric bolt.
(430) - Camshaft end thrust toward rear of engine. Taken by thrust face of camshaft sprocket riding against front surface of cylinder block.
►*CAMSHAFT THRUST WASHER NOTE (292):* Chamfer on inner diameter of washer must be toward rear of facing camshaft journal when installed.
Replacement Camshaft Bearings: Furnished Standard & .015" Undersize.
Camshaft Removal & Installation: *See "Camshaft & Bearings" in Ford Special Data.*
Timing Chain: Side guide type. Length 56 links (292), 48 links (332, 352), 52 links (430).
►*TIMING CHAIN REPLACEMENT NOTE:* Replace chain and/or sprockets when deflection on slack side exceeds ½" (take up slack on driving side, measure slack on opposite side).
Camshaft Setting - **(292)** - Sprockets marked by round depression on one tooth. Mesh chain so that there are 12 chain link pins between timing marks on sprockets when marks are on drive side.
Camshaft Setting - **(332,352,430)** - Timing marks on camshaft and crankshaft sprockets adjacent and in line with straightedge across shaft centers.
Engine Front Cover Oil Seal (Crankshaft Front Seal) *See "Engine Front Cover" in Ford Special Data.*
Engine Front Cover Removal: *See "Engine Front Cover" in Ford Special Data.*

VALVES

►***1959 (LATE) FORD 332" & 352" PASS. CAR ENGINE CYLINDER HEAD & VALVE NOTE:*** **Engines identified by the ¼" high letters "B9AE–6090" stamped on either end of cylinder head have the valve machined .015" further into the heads and the valve stems are shortened .032". *CAUTION – Use only 1960 valves, Part No. COAE–6505–A (Exhaust), COAE–6507–E (Intake) in these engines. DO NOT use 1959 valves.***
Tappet Clearance: Mechanical Lifters - **(292)** - .019" **Cold,** .018" **Hot** All valves. *See "Valve System" in Ford Special Data for Tappet Clearance checking procedures.*
Hydraulic Lifters - **(332,352,430)** - None in service. *See "Valve System" in Ford Special Data for operating range check of hydraulic lifters*

292 Engine

Valve	Head Diameter	①Stem Diameter
Intake	1.920-1.930"	3416-.3423"
Exhaust	1.505-1 515"	.3403-.3410"

Valve	Seat Angle	②Lift	Stem Clearance
Intake	45°	.264"	③.0010-.0024"
Exhaust	45°	.244"	④ 0023- 0037"

332, 352 Engines

Valve	Head Diameter	①Stem Diameter
Intake	2.022-2.032"	3711- 3718"
Exhaust	1.551-1.561"	.3693-.3700"

Valve	Seat Angle	②⑤Lift	Stem Clearanc
Intake	30°	.232"	③ 0010- 0024"
Exhaust	45°	232"	④ 0028- 0042"

430 Engine

Valv	H ad Diam t r	①St m Diamet r
Intake	2 080-2.090"	.3711- 3718"
Exhaust	1.770-1 780"	3693- 3700"

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Valv	Seat Angl	②Lift	St m Cl arance
Intake	30°	232"	③ 0010- 0024"
Exhaust	45°	232"	⑤ 0028- 0042"

① - Furnished with 003", 015" & 030" oversize items
② - Cam lobe lift Wear loss limit 005"
③ - Wear limit 0045" ⑤ - Wear limit 0065"
⑤ - Except 352 Police Special High lift camshaft used

Valve Seat Width - 060- 080" Intake, 070- 090" Exhaust
Valve Stem Oil Seals - Umbrella type seals used on all valves Install seals with cup side down over valve guide

►*ROTATABLE VALVE NOTE* All valves (except Police Special V8) are rotatable type *See "Valve System" in Ford Special Data*

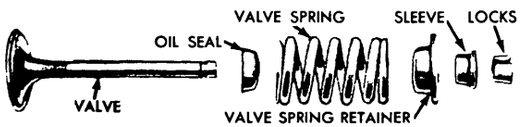
Valve Springs: Install with closed coil end toward cylinder head

►*VALVE SPRING NOTE* Valve damper springs used inside valve springs on 352 Police Special and 430 Engines

Free Length - (292) 2 09", **(332,352)** 2 26", **(430)** 2 03"

Spring Specifications - 292

Valve	Spring Pressure	Length
Closed	71-79 lbs ①	1 780"
Open	161-177 lbs ②	1 390"



Spring Specifications - 332, 352

Valve	Spring Pressure	Length
Closed	94-104 lbs ③	1 820"
Open	180-198 lbs ④	1 420"

②Spring Specifications - 430

Valve	Spring Pressure	Length
Closed	66-77 lbs ⑤	1 830"
Open	240-260 lbs ⑥	1 430"

① - Wear limit 64 lbs at 1 780"
② - Wear limit 145 lbs at 1 390"
③ - Wear limit 85 lbs at 1 820"
④ - Wear limit 162 lbs at 1 420"
⑤ - Wear limit 60 lbs at 1 830"
⑥ - Wear limit 225 lbs at 1 430"
⑦ - Spring and damper assembly together

FORD V8 VALVE ASSEMBLY

Out of Square Limit - 062" (All engines)

►*VALVE SPRING INSTALLATION NOTE* Measure valve spring assembled height from machined surface of cylinder head spring pad to underside of spring retainer If assembled height is greater than 1 25/32" (292), 1 27/32" (332, 352), 1 55/64" (430), install necessary 030" spacers between cylinder head valve spring pad and valve spring to bring assembled height to recommended 1 3/4-1 25/32" (292), 1 13/16-1 27/32" (332,352), 1 13/16-1 55/64" (430) *CAUTION* - DO NOT install spacers unless necessary to bring measurement within specifications

Valv Guides: Integral with cylinder head When stem-to-guide clearance exceeds maximum (see table above), ream guides and install oversize valves *See "Valve System" in Ford Special Data*

Valve Lifters (Mechanical): (292) Mushroom type Remove from below after camshaft removed
Clearance - 0008- 0024" Wear limit 0045"

Valve Lifters (Hydraulic): (332,352,430) Barrel type Can be removed from above without removing camshaft
Clearance - 0005- 0020"

►*HYDRAULIC LIFTER NOTE* 1959 hydraulic lifter Part No B8S-6500-A is approximately 1/8" shorter (overall length) than previous design Both types of lifters are interchangeable
Lifter Overhaul - *See "Valve System" in Ford Special Data*
Hydraulic Lifter Operating Range - With lifter collapsed, operating range should be 062- 1875" (332,352) 126- 226" (430) *See "Valve System" in Ford Special Data*

Rocker Arm Assembly: *See "Valve System" in Ford Special Data*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above

►*VALVE TIMING NOTE The following valve opening and closing points are with camlift as indicated*

Valve Timing - 292
Intake Valves - Open 12° ①BTDC Close 54° ② ALDC
Exhaust Valves- Open 58° ③ BLDC Close 8° ④ ATDC

Valve Timing - 332
Intake Valves - Open 17° ⑤ BTDC Close 59° ⑥ ALDC
Exhaust Valves - Open 57° ⑤BLDC Close 19° ⑥ ATDC

Valve Timing - 352
Intake Valves - Open 22° ⑤ BTDC Close 68° ⑥ ALDC
Exhaust Valves - Open 68° ⑤BLDC Close 22° ⑥ ATDC

Valve Timing - 430
Intake Valves - Open 22° ⑤ BTDC Close 68° ⑥ ALDC
Exhaust Valves - Open 63° ⑤ BLDC Close 27° ⑥ ATDC
① - Camlift 016" ② - Camlift 019" ③ - Camlift 015"
④ - Camlift 018" ⑤ - Camlift 002" ⑥ - Camlift 005"

►*VALVE TIMING CHECK NOTE* Checking timing by use of quadrant on pulley and dial indicator in pushrod socket no longer recommended due to inaccuracy of interpreting degree of crankshaft rotation at pulley position

OILING SYSTEM

►*ENGINE OILING SYSTEM See "Engine Lubrucation" under OILING SYSTEM in Ford Special Data*

Crankcase Capacity: 5 qts refill, add 1 qt with filter change
Normal Oil Pressure - 45-50 lbs (292), 35-50 lbs (332,352,430) all at 2000 RPM
Pressure Regulator Valve - In oil pump body, not adjustable
Oil Pressure Indicator - Indicator light on instrument panel operated by Oil Pressure Switch Ford No B6A-9278-B (stamped No 7 on Hex) Lights when ignition switch turned on, goes out when engine starts and pump pressure reaches 7 lbs

►*OIL PRESSURE BUILD-UP (AFTER COLD ENGINE START) CORPECTION (332, 352, 430)* Caused by oil relief valve plug vent closed by flange of oil pick-up tube *See "Oil Pump" in Ford Special Data*

Oil Pump: Rotor type (292,332,352), Rotor type oil pump and Vane type vacuum pump (430). Located outside crankcase on left side (292), at front inside crankcase (332, 352, 430) Driven by distributor through intermediate drive shaft
Pump Overhaul - *See "Oil Pump" in Ford Special Data*

Vacuum Pump (430): Part of oil pump assembly *See "Vacuum Pump" in Ford Special Data*

Oil Filter: Disposable type
Disposable Filter Replac m nt - Coat gasket face of filter with oil, thread filter on insert by hand until gasket contacts adapter surface, then tighten filter an additional one-half turn *CAUTION* - Do not overtighten Run engine and check for leaks

Crankcase Ventilation: Filter in oil filler and breather cap (Inlet) all models Road draft outlet pipe for crankcase ventilation, all models Service filler cap by cleaning with solvent and resaturating with engine oil at 4,000 mile intervals

COOLING

430" ENGINE - New three-stage engine warm-up and cooling system with temperature controlled water jacketed intake manifold Additional thermostat installed in front face of each cylinder head
Below 140°F - Water circulates from pump to cylinder heads, intake manifold and back to water pump
140-180°F - Water circulates from pump to cylinder heads, intake manifold and cylinder blocks and back to water pump
Above 180°F - Water circulates the same as between 140-180°F except it returns to radiator for cooling
NOTE - Cylinder block thermostats are accessible by removing water pump

Water Capacity: 20 qts (Thunderbird), 19 qts (All others) Add 1 qt for heater

Pressure Valve: Ford B8A 8100-A 14 lbs radiator filler cap

Thermostat: One thermostat located in water outlet connector (All Engines) plus 2 thermostats in front face of block behind water pump (430 Eng) See table following

Replacement Thermostats

Engine	Opens	Ford Part No.
292,332,352	160°F	B7A-8575-A
292,332,352	①177-182°F	B7A-8575-B
430	160°F	B8E-8575-B
430	① 170°F	B9S-8575-A
430 (In block)	137-142°F	B9S-8575-B

① - For use with permanent type anti-freeze

►*THERMOSTAT INSTALLATION NOTE:* Install thermostat with pivot shaft in vertical position to insure best operation

Water Pump: Packless, sealed ball bearing type
See "Water Pump" in Ford Special Data
Pump Removal - (Exc. Thbrd.) - Drain cooling system, disconnect lower radiator hose and heater hose at water pump Remove fan belt, fan, fan spacer (292) end pulley Remove four bolts retaining pump to cylinder front cover (292) or to block (332,352) then remove pump, gaskets and timing pointer (292)

CONTINUED ON NEXT PAGE

Form 17A

CONTINUED FROM PRECEDING PAGE

(Thbrd.) - Drain cooling system, remove generator arm bolt at generator and loosen adjusting arm bolt at water pump Loosen two generator mounting bolts at brackets and move generator inward to remove fan belts Disconnect lower radiator hose and heater hose at water pump On 352 engine, loosen fuel pump bolts and slide pump out to obtain access to water pump lower left retaining bolt Remove generator bracket retaining bolt at water pump and loosen generator bracket retaining bolt at cylinder head then block bracket away from water pump Loosen and move water pump bypass hose front clamp to rear Remove water pump retaining bolts and remove water pump and gaskets Remove fan, spacer and pulley Remove generator adjusting arm retaining bolt and remove arm

Temperature Gauge: King-Seeley Electric Constant Voltage ("CV") type, with gauge voltage Regulator, Ford No B7A-10804-B

Dash Unit - (Pass. Cars) - Ford No B9A-10883-A **(Thunderbird)** - Ford No B9S-9280-A *NOTE* - Thunderbird units are combination Fuel & Temperature gauges

Engin Unit - Ford No B7A-10884-A

See "Temperature Gauges" in Miscellaneous Section

CLUTCH

L ng M d l 10CF (Std 292) **11CF** (Std 332,352 and Heavy Duty on 292 Pass Cars & Taxi) Single plate, semi-centrifugal type

C v r Assembly	Long No.	Ford No.
10CF	267346	① B7A-7563-A
11CF	267350	② B8A-7563-B

① - Yellow & Brown cover - White pressure plate
② - Pink & Orange cover - Green pressure plate

Clutch Disc.	Long No.	Ford No
292 S M	288852	③ B8A-7550-C
292 Overdrive	288855	B9AA-7550-A
292 Pass & Taxi H D	288853	④ B8A-7550-G
332 Pass	288853	④ B8A-7550-G
352 Pass Cars & Thbrd	288351	⑤ B8A-7550-F

③ - 4 Aluminum & 4 unmarked springs
④ - Orange springs ⑤ - Blue springs

See "Long Clutches" in Clutch Section

Pedal Adjustment: If total pedal travel is less than 6 5/8" or more than 6 7/8" (Pass Cars), 6 7/8" or more than 7 1/8" (Thbrd), reposition pedal bumper and bracket until travel is within limits Adjust assist spring link to give assist spring length of 9 7/8" (Pass Cars) 6 3/4-6 7/8" (Thbrd) between spring eye centers with clutch fully released

Pedal Fr Trav l - 1 1 8 1 3 8" Loosen locknut on clutch pedal release rod turn adjusting nut until correct travel is reached *NOTE* Check free travel by operating engine at 3000 RPM with transmission in Neutral position There should be a minimum of ½" free travel under these conditions

R m val Remove transmission flywheel housing cover release lever retracting spring slide release bearing and hub off release lever Mark clutch cover and flywheel for reinstallation loosen six cover bolts uniformly to release spring tension remove cover and pressure plate through opening in flywheel housing Remove clutch release lever

SYNCHRO-MESH TRANSMISSION

Own. Helical gear constant mesh synchro-mesh (Second & High), sliding gear (Low & Reverse)

See "Ford Synchro-mesh" in Transmission Section

Transmission Controls *See "Transmission Controls" in Transmission Section*

Removal (Exc. Thunderbird): With car raised up disconnect drive shaft at rear universal joint slide drive shaft off transmission output shaft Remove speedometer cable and gear Disconnect shift rods at transmission Remove rear engine support to extension housing bolts Disconnect parking brake adjusting rod from equalizer bracket Support rear of engine and remove rear engine support then lower engine for clearance and remove transmission to flywheel housing bolts Use guide pins in two lower bolt holes and slide transmission back until input shaft clears fly wheel housing and lower transmission

Thunderbird - Drain transmission, raise car and remove driveshaft at rear universal joint Disconnect parking brake adjusting rod Disconnect parking brake cables from equalizer Disconnect exhaust pipe assembly at manifolds and couplings Remove exhaust inlet assembly Remove transmission to rear engine support bolts Raise transmission on jack and remove crossmember Disconnect speedometer cable bracket and disconnect cable from transmission Remove shift rods and bolts that secure transmission to flywheel housing Remove transmission

OVERDRIVE

Warner R10 Solenoid operated type with governor control and throttle operated kickdown No Lock out Switch used

See "Ford Overdrive in Transmission Section

Overdrive Control *See "Overdrive Controls" in Transmission Section*

Removal Same as for synchro mesh transmission (above) after disconnecting control cable and wiring

AUTOMATIC TRANSMISSION

Two types used **Fordomatic** New simplified type with torque converter and two-speed automatic transmission **Cruise-O-Matic** Of same design as used previously *See "Ford Automatic Transmission in Transmission Section*

►*THREE-SPEED FORDOMATIC NOTE* Some cars have 3-speed Fordomatic installed These cars can be identified by letter "C" stamped on "TRANS" entry on serial number plate

►*TWO-SPEED FORDOMATIC RUMBLE NOISE CORRECTION* Install new pressure regulator valve and spring Kit No B9AZ-7A135-A *See 'Ford Two Speed Automatic Transmission' in Transmission Section*

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION See 'Ford Automatic Transmission' in Transmission Section*

►*TESTING & TROUBLE SHOOTING See 'Ford Automatic Transmissions' in Transmission Section*

Lubricati n: Check fluid level every 1 000 miles Drain and refill every 24 000 miles Use only Ford Automatic Transmission Fluid P rt No B8A 19582-A

►*TRANSMISSION FLUID COLOR NOTE* A lye is added to automatic transmission fluid at assembly plant to aid in detecting leaks

Ch cking Fluid L v l - Bring transmission to operating temperature by running engine with selector lever in neutral position Move selector lever through all ranges to assure fluid distribution, then place lever in "P" (Park) position for checking fluid Maintain level at "Full" mark on dipstick

Throttle Linkage Adjustment: *See CARBURETOR above*

►*OTHER DATA See "Ford Automatic Transmission" in Transmission Section*

UNIVERSALS

Mechanics. Needle bearing type

►*CAUTION* Rear universal joint companion flange nut controls pinion bearing preload (must be adjusted whenever nut is loosened) *See "Ford & Mercury' in Rear Axle Section*

►*REAR UNIVERSAL JOINT INSTALLATION CAUTION* To eliminate possibility of early failure, the bearing retaining strap must be correctly positioned in cast recess in rear axle flange prior to tightening attaching "U" bolts

REAR AXLE

Own. Separate carrier type semi-floating, hypoid, with Hotchkiss Drive "Equa-Lock" (Power Transfer) type differential optional *See 'Edsel, Ford, Thunderbird & Mercury (Deep-Offset) Hypoid and 'Ford Equa-Lock Differential" in Rear Axle Section*

Axle Ratios - 3 56-1 (32-9) 3 70-1 (37-10), 3 89-1 (35-9)

Backlash - 004- 009"

Axle Shaft Removal· Remove wheel and brake drum Remove four axle bearing retaining locking type nuts (work through opening in axle shaft flange) Use puller No 4235-N and pull axle shaft (do not disturb brake backing plate or damage wheel bearing oil seal) Replace one nut to secure brake backing plate

Carrier Assembly Removal: Remove axle shafts (see above) and drive shaft Remove 10 nuts which attach carrier to housing and remove carrier from housing

SHOCK ABSORBERS

Direct acting non-adjustable Serviced by replacement **Ford Shock Absorber Nos**

Model	Front	Rear
Pass Car ①	B9A-18124-A	B9A 18125-B
Thunderbird	B9S-18124-A	B9S-18125-A
Hardtop	B7A-18124-H	B9A-18125-D
Station Wagon		B9A-18125-C
Pass Car ② Hvy Dty	B7A-18124-F	B9A-18125-A
Sed Del Taxi Hvy Dty	B7A-18124-F	B9A-18125-A
Sta Wgn Hvy Dty	B7A-18124-F	B9A-18125-H

① Exc Thbrd Hardtop Ranchero & Sta Wgn
② Exc Thbrd Sta Wgn & Ranchero

FRONT SUSPENSION

Independent "Ball Joint" suspension with direct acting shock absorbers mounted within coil springs

See "Ford, Thunderbird, Mercury" in Suspension & Wheel Alignment Section

Caster - 0° to Pos 1° Maximum variation between

Caster (Pass Cars) - 0° to Pos 1° Maximum variation between wheels ½°

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Cast r (Thund rbird) - Pos ½° to Pos 1½° Maximum variation between wheels ½°

Camber - Pos ½° to Pos 1½° Maximum variation between wheels ½° (¼° preferred)

T e-In - 1/16"-1/8" *NOTE* - When checking toe-in on cars with power steering, engine should be running so that power steering control valve will be properly centered

T e-Out on Turns - Outer wheel 20°, inner wheel should be 24½°

STEERING

Manual: Own. Recirculating ball worm and nut
S e "Saginaw Ball Bearing Worm & Nut" in Steering S ction

Power Steering: Linkage type Used in conjunction with standard steering gear
See "Bendix Linkage Type" in Steering Section

►*POWER STEERING PUMP NOISE CORRECTION* To eliminate cold start noise, install Kit B9MY-3A711-A
See "(Eaton Roller Type) Power Steering Pump" in Steering Section

St ring Linkage: *See "Steering Linkage" in Steering S ction*

St ering Wheel & Horn Button Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section*

St ering Gear Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section*

BRAKES

Ford-Bendix Hydraulic. Parking lever applies rear wheel brakes

►*BRAKE DESIGN NOTE* Front brake anchor pin (fixed anchor type) is mounted on wheel spindle independently of backing plate (wheel cylinder mounted on anchor pin)
S e "Ford, Lincoln, Mercury Bendix" in Brake Section

Drum Diam ter - 11" front & rear

Wh el Cylind r Diam t r - 1 1/8" (front all), 7/8" (rear - Pass Cars), 15/16" (Sta Wgn & Ranchero)

Brake Lining (Width-Length)

Model		Primary	Secondary
Sed & Cpe	(Front)	2¼" x 11 62"	2¼" x 11 93"
	(Rear)	1¾" x 10 62"	1¾" x 11 93"
Sta Wgn &	(Front)	2¼" x 10 62"	2¼" x 11 93"
Ranchero	(Rear)	2" x 10 62"	2" x 11 93"
Thunderbird	(Front)	2½" x 11 62"	2½" x 11 93"
	(Rear)	2½" x 10 62"	2½" x 11 93"

Clearance - Adjusting screw backed off 10-12 notches (Pass Cars), 14-16 notches (Thunderbird) from point where shoes are tight against drum

Brake Pedal Freeplay: 5/16-7/16"

►*REVISED BRAKE PEDAL ADJUSTMENT* No return spring used on later cars Measure distance from floor to brake pedal (pushrod against master cylinder piston) Lift pedal against bumper stop and again measure distance Difference between measurements is pedal freeplay

Standard Master Cylinder: On engine side of firewall

Checking Fluid - Maintain fluid level to within ½" of top of filler neck

Removal - Disconnect rubber boot from rear end of master cylinder, brake line at fitting, stop light switch wires from switch Push down brake pedal several times to force as much fluid as possible into clean container, then remove bolts that secure master cylinder to dash panel and lift cylinder away from pushrod and out of vehicle

Power Brakes: Early (Bellows) Type. Pedal assist power unit with vacuum bellows and control valves mounted on drivers side of dash panel and connected through linkage to standard master cylinder

Lat r (Piston) Type - Combination vacuum booster and master cylinder unit located on engine side of firewall and connected to brake pedal by pushrod *NOTE*- Due to interference at evaporator housing, this unit cannot be used on Thunderbird with Air Conditioning
See "Ford Bellows Type" or "Bendix Hydraulic (Disc) Reaction Type" Power Units in Brake Section

Checking Fluid - Same as for standard master cylinder

Removal - Remove bolt securing brake pedal to brake unit (inside vehicle) From engine compartment, disconnect stop-light switch wires at master cylinder and brake line at outlet fitting Loosen clamp that secures vacuum hose to unit and remove hose, then remove vacuum reserve tank hose at unit Remove nuts and lockwashers that secure unit to cowl panel and slide unit forward from cowl panel

MISC. MECHANICAL

Windshield Wipers: Electric & Vacuum types with Link & Arm type linkage (Exc Thbrd), Vacuum type with cable control (Thbrd)
See "Windshield Wipers" in Miscellan ous Section

Power Window Regulators: Electric type
See "Electric Window Regulators" in Misc Section

Power Top Control: Electric-Hydraulic (Convertible), Electric (Retractable Hard-Top), *see "Power Top Controls" in Miscellaneous Section*

Power Seat Controls: 4-Way Electric
See "Power Seat Adjusters" in Misc llaneous Section

Air Conditioning: *See "Air Conditioning" in Miscellaneous Section*

MODEL IDENTIFICATION

SERIAL NUMBER: Stamped on plate on left front cab pillar or glove box door, depending on truck model On Parcel Delivery models, plate is on right hand dash panel *NOTE* - Number (example below) includes identification data as follows

① ②③④ ⑤
F10 C 9 U 10001

① - Truck Model *See Table Below*
② - Engine Type **J** - 6 Cyl , **C** - 292" V8, 2-Bbl Carb , **D** - 292" V8, 4-Bbl Carb *See Engine Note Below*
③ - Year Model, 1959
④ - Assembly Plant *See Table Below*
⑤ - Beginning vehicle number

Truck Model Identification

Truck Series	Model Code
F-100 (Conventional)	F10
F-250 (Conventional)	F25
F-350 (Conventional)	F35
P-350 (Parcel Delivery)	P35
P-400 (Parcel Delivery)	P40
F-500 (Conventional)	F50

C-600 (Tilt Cab)	C60

Assembly Plant Designation

A - Atlanta	**H** - Lorain	**P** - St Paul
D - Dallas	**K** - Kansas City	**R** - San Jose
E - Mahwah	**L** - Long Beach	**U** - Louisville
G - Chicago	**N** - Norfolk	

►*ENGINE IDENTIFICATION NOTE* In the following Ford Truck data pages, engines will be referred to as follows

Engine	Designation
6 Cyl 223"	6 Cyl
V8 292" 2-Bbl Carb Med Duty	V8MD
V8 292" 4-Bbl Carb Heavy Duty	V8HD

TUNE-UP

COMPRESSION PRESSURE 150 lbs ± 10 lbs at cranking speed Cylinders must be uniform within 10 lbs

VACUUM READING· 18 19" (6 Cyl), 19-20" (All V8) at idling speed

VALVE TAPPET CLEARANCE Can be set with engine cold but must be rechecked with engine at operating temperature (30 minutes operation at 1200 RPM) and idling **Cold Clearance** - 019" All valves, All engines **Hot Clearance** - 019" (6 Cyl), 018" (All V8), All valves

►*SELF LOCKING TAPPET ADJUSTING SCREW NOTE* Torque required to turn screw (after interference noted) must be 3 ft lbs minimum

MANIFOLD HEAT CONTROL (EXC. V8HD): Automatic thermostatic type Located at center of exhaust manifold (6 Cyl), between crossover pipe and right exhaust manifold (V8MD) Install valve assembly with stop pin at top of valve housing and hook thermostatic spring on stop pin

IGNITION

6 CYL. ENGINE

FIRING ORDER: 1-5-3-6-2-4
SPARK PLUG GAP: 028- 032"
Spark Plugs - Champion 870 18 mm Torque to 15-20 ft lbs *NOTE* - Plugs have tapered seat, no gasked used
COIL· Ford No B6A-12029-B.
Ignition Current - 2 5 amps idling, 4 5 amps stopped
Resistor - B8A-12250-A 1 3-1 4 ohms at 75°F
►*COIL RESISTOR NOTE:* Resistor is connected in lead from ignition switch to coil Bypassed during cranking by lead from starter solenoid to battery terminal of coil
DISTRIBUTOR: Ford B8A-12127-M. "Loadomatic" type of same design used on previous models. *NOTE - Distributor identified by No FET-12127-C stamped on distributor housing Use Distr B8A-12127-M only with Carburetor P9TE-9510-A*
Condenser - Ford 7RA-12300-C **Capacity** 21- 25 mfd
Contact Point Set --Ford FAA-12171-A
Breaker Gap - 024–026"
Cam Angle - 35-38°
Breaker Arm Spring Tension - 17-20 ozs
Rotation - Clockwise viewed from above

Advance Performance
►With Distributor on Test Stand

Distr Degrees	Vacuum (" of Hg)	Distr RPM
0	38	450
2½-3½	79	650
6¾-7¾	2 85	1100
8¾-9¾	4 33	1400
10¼-11¼	5 99	1800

►*DISTRIBUTOR REMOVAL & INSTALLATION CAUTION* Scribe mark on distributor to indicate rotor position and housing position on block before removing Align marks when installing Make sure oil pump intermediate shaft engages distributor shaft properly

V8 ENGINES

FIRING ORDER: 1-5-4-8-6-3-7-2
Cylinders - RIGHT BANK 1-2-3-4 LFFT BANK 5-6-7-8
SPARK PLUG GAP· 028- 032"
Spark Plugs – Champion 860 18 mm Torque to 15-20 Ft lbs (Std) New plug in new cylinder head 25-30 ft lbs *NOTE* Plugs have tapered seat no gasket required
COIL· Ford B6A-12029-B
Ignition Current - 2 5 amps idling, 4 5 amps stopped
Resistor - B8A-12250-A 1 3-1 4 ohms at 75°F
►*COIL RESISTOR NOTE* Resistor is connected in lead from ignition switch to coil Bypassed during cranking by lead from starter solenoid to battery terminal of coil
DISTRIBUTOR Ford (V8MD Early) Same design as used on previous models **(V8MD Later)** New pivot plate type Both types have centrifugal and vacuum advance **(V8HD)** Centrifugal advance type distributor This distributor does not have vacuum advance
See "Distributors" in Electrical Section

Engine	Parts No	① Engr. No.
V8MD	② B8C-12127-B	FFD-12127-B
V8MD	B9TF-12127-B	B9TF-12127-B
V8HD Std Trans	③ B8T-12127-B	FFD-12102-N
V8HD Std Trans	B8T-12127-A	FFD-12102-F L
V8HD Auto Trans	④ B8C-12127-E	FFD-12102-K
V8HD Auto Trans	B8C-12127-D	FFD-12102-H,M

① - Stamped on distributor housing
② - Replaced by B9TF-12127-B
③ - Replaced by B8C-12127-D
④ - Replaced by B8T-12127-A

Condenser No. - B7A-12300-A (Exc B9TF-12127-B), B9TF-12300-A (B9TF-12127-B) Capacity 21- 25 mfd
Contact Point Set - B7A-12171-A (B8C-12127-B, B9TF-12127B), B8Q-12171A (B8C-12127D,E, B8T-12127A,B)
Breaker Gap: 014- 016"
Cam Angle - 26-28½° at idling speed
Breaker Arm Spring Tension - 17-20 ozs
Rotation - Counterclockwise viewed from above

Automatic Advance - V8MD

Degrees	Distr.	RPM	Degrees	Eng.	RPM
Start		325	0		650
½-1½		425	1-3		850
6-7		700	12-14		1400
8½-9½		900	17-19		1800
14¼-15¾		2000	18½-31½		4000

Automatic Advance – V8HD

Degrees	Distr.	RPM	Degrees	Eng	RPM
Start		550	0		1100
½-1½		600	1-3		1200
5-6		825	10-12		1650
7¼-8¼		1000	14½-16½		2000
12¼-13½		1900	24½-27		3800

Vacuum Spark Control (V8MD): Both early and late type have vacuum diaphragm unit mounted on distributor housing and linked to breaker plate Pivot type breaker plate used on later distributors Both types operate in conjunction with centrifugal (governor weight) advance mechanism

Vacuum Advance - V8MD

Distr Degrees	Eng Degrees	① Vacuum (" of Hg)
0-2	0-4	6
4-6	8-12	8
6-8	12-16	9¼

① - At 1000 RPM distributor speed

►*DISTRIBUTOR REMOVAL & INSTALLATION CAUTION See 6 Cyl above*

IGNITION TIMING

Engine	Std Ignition Setting
6 Cyl & V8MD	4° BTDC
V8HD (85-88 Octane Fuel)	4° BTDC
V8HD (88-90 Octane Fuel)	6° BTDC
V8HD (90-92 Octane Fuel)	8° BTDC
V8HD (92 Octane or Premium Fuel)	10° BTDC

CONTINUED ON NEXT PAGE

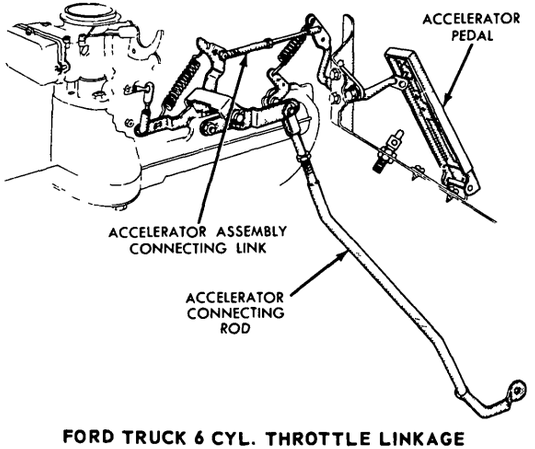
CONTINUED FROM PRECEDING PAGE

►*TIMING CAUTION:* Set timing with engine idling and vacuum line disconnected. Check advance operation by accelerating engine after vacuum line connected.

Timing Mark (6 Cyl.) - Vibration damper marked by lines: TDC (long mark), & 3°, 5°, 7°, 9° BTDC. Align space between 3° and 5° lines (4° BTDC) with pointer on chain case cover.

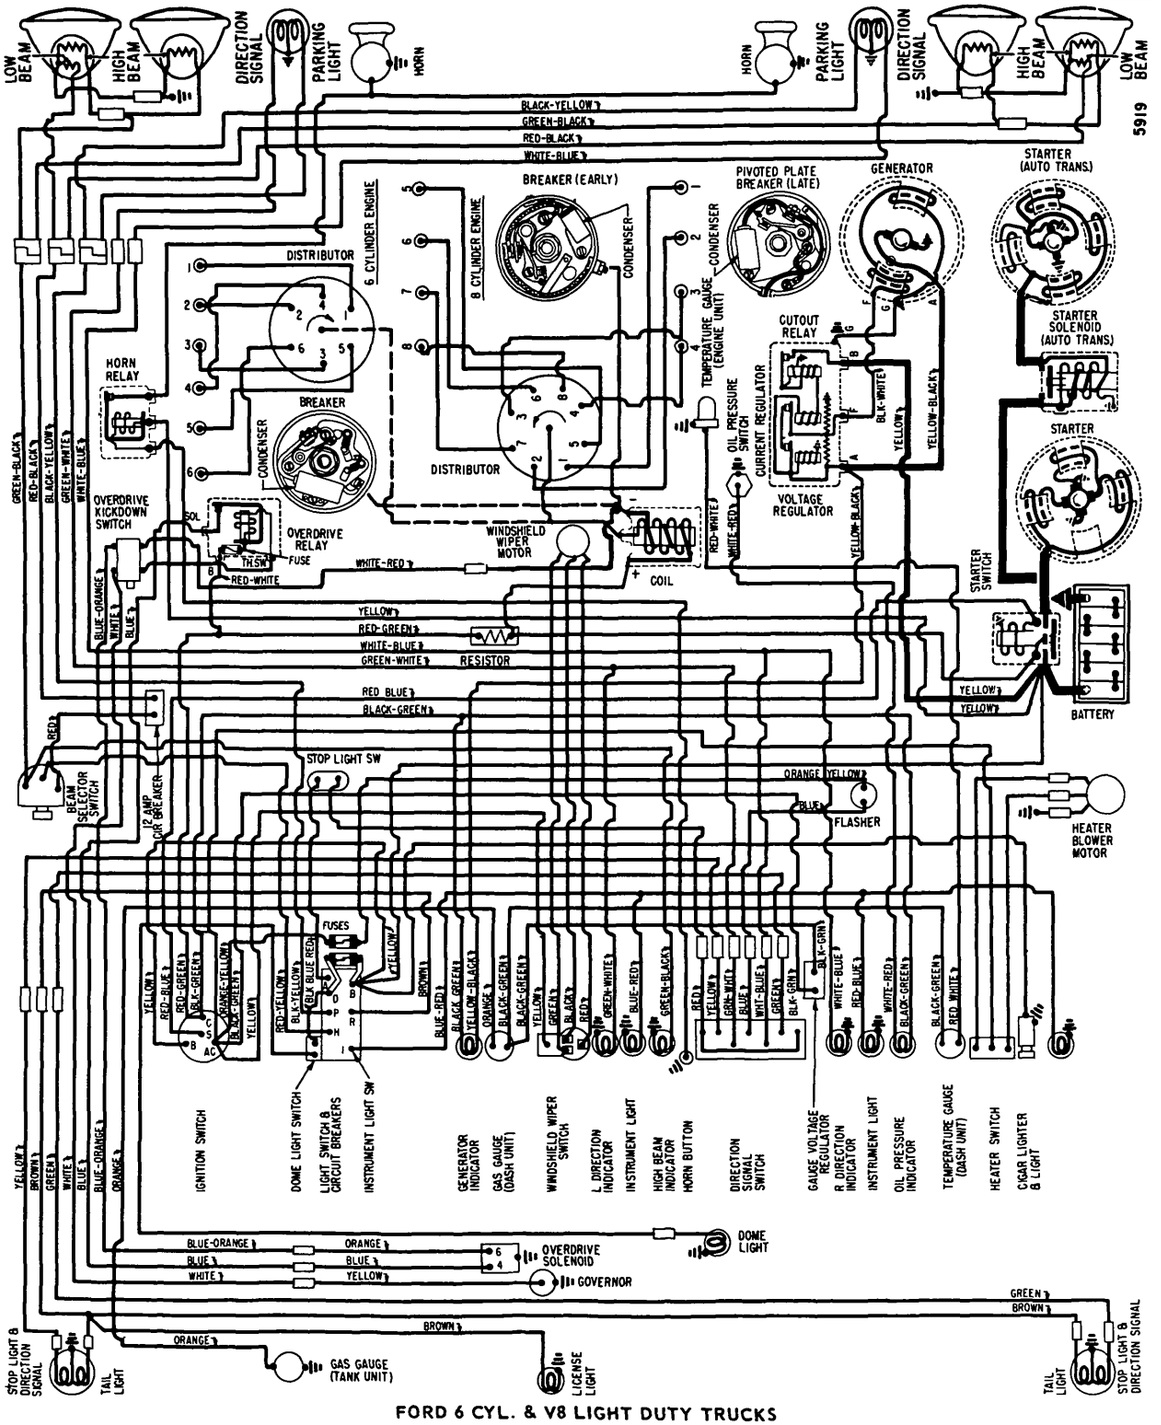
Timing Mark (V8) - Vibration damper has 16 lines from TDC to 30° BTDC in 2° increments. Align correct line with pointer on chain case cover.

CARBURETOR



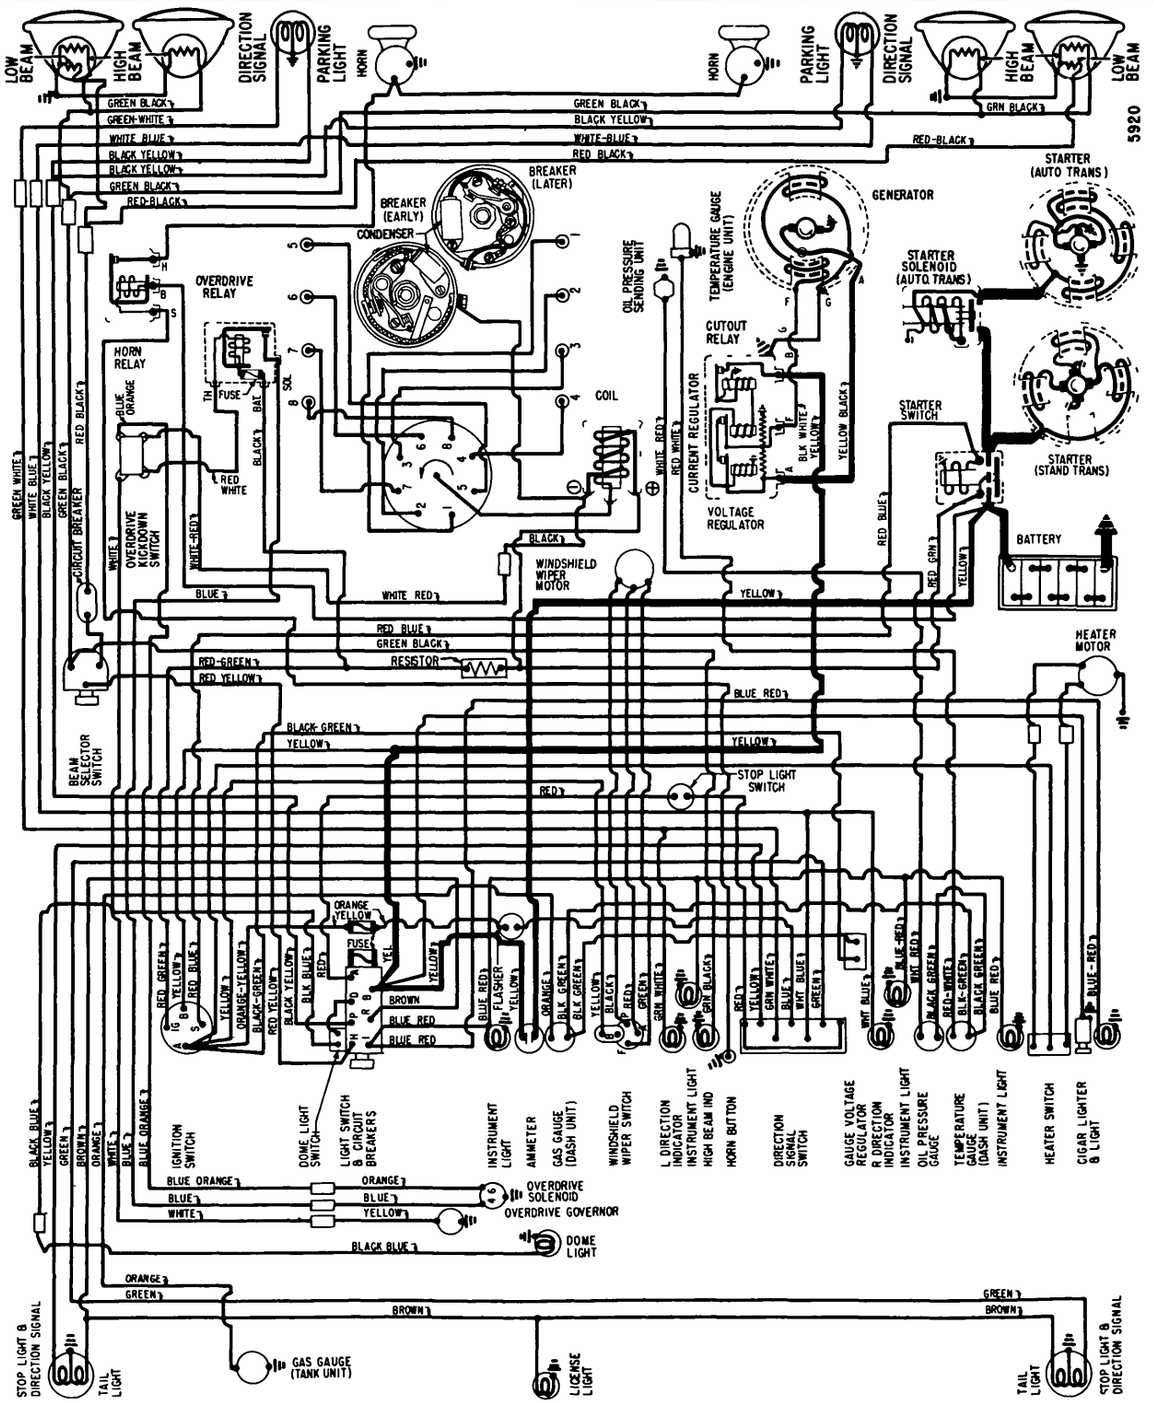
►*CARBURETOR APPLICATION: Holley carburetors used. "Visi-Flo" (1-Bbl.) used on 6 Cyl. 2-Barrel used on V8MD. 4-Barrel used on V8HD.*

►*SCHOOL BUS CARBURETOR ICING CORRECTION (V8HD):* Install exhaust manifold heat control valve No. B7A-9685-C, replacing studs at manifold outlet with new studs No. 353409-S. Use new gasket 1GA-9450 on each side of valve.



Throttle Linkage Adjustment (6 Cyl. Fordomatic Trucks): Adjust engine idle speed to 475-500 RPM and make anti-stall dashpot adjustment (see below). With engine stopped and carburetor on hot idle, remove lock from clevis pin on upper end of throttle control rod and loosen clevis locknut. Remove clevis and pull throttle control rod upward so throttle lever will be held against internal stop in transmission. Turn throttle rod clevis until pin enters hole in lever and lengthen throttle rod 2½ turns. Connect throttle control rod, tighten locknut, install clevis lock. Measure accelerator pedal height from point where linkage connects to pedal to floor mat. Distance should be 2¾". Adjust by turning threaded trunnion on accelerator connecting link.

Throttle Linkage Adjustment (V8 Fordomatic & Cruise-O-Matic Trucks): Warm up engine and adjust to correct idle speed. Make anti-stall dashpot adjustment (see



CONTINUED ON NEXT PAGE

FORD TRUCK 6 CYL. THROTTLE LINKAGE

FORD 6 CYL. & V8 LIGHT DUTY TRUCKS

FORD V8 HEAVY DUTY TRUCKS

CONTINUED FROM PRECEDING PAGE

below) Disconnect throttle control rod from accelerator Insert ¼" gauge pin through holes in carburetor bellcrank Adjust length of carburetor connecting link so carburetor is on hot idle position Adjust accelerator connecting link so accelerator pedal height is 2¾" from floor mat to point where linkage connects to pedal Remove gauge pin and make sure holes are aligned so pin can enter freely With gauge pin removed, pull throttle control rod upward so transmission lever is against internal stop in transmission Rotate clevis on throttle control rod so clevis freely fits pin on bellcrank lever Then turn clevis **3 full turns counterclockwise** to lengthen throttle control rod Connect rod *For final adjustment, use pressure method as follows.* Make sure transmission is at normal operating temperature Raise truck and remove 1/8" pipe plug forward of transmission levers Install pressure gauge Lower truck and install a tachometer Put selector lever in any Drive position. With engine speed at 1000 RPM, pressure should be 80-85 lbs If below 80 lbs , lengthen throttle control rod, if above 85 lbs , shorten rod Connect rod, tighten locknut For pressure ranges at Idle & Stall speed conditions, *see "Fordomatic (3-Speed) Transmission and 'Cruise-O-Matic Transmission" in Transmission Section*

Anti-Stall Dashpot Adjustment: After engine idle speed adjusted to 475-500 RPM, turn off engine. Loosen dashpot adjusting screw locknut Hold throttle in closed position and depress dashpot plunger with a screwdriver blade Turn dashpot or adjusting nut until 045- 064" clearance obtained between dashpot plunger and throttle shaft lever Tighten locknut

HOLLEY "VISI-FLO"

Holley Visi-Flo Ford No B9TE-9510-A Identified by No B9TE-9510-A, 5752317 or 318 stamped on main body at fuel inlet

►*APPLICATION & REPLACEMENT NOTE: Carburetors must be used with correct Distributor See DISTRIBUTOR above*

Idle Setting - Initial setting ¾-1⅜ turns open Turn adjusting screw in until engine begins to run roughly from lean mixture, then turn screw out until engine begins to roll from rich mixture Turn screw in until engine runs smoothly Favor a slightly rich mixture, rather than a lean setting

Idle Speed - 475-500 RPM in Neutral) Recheck automatic transmission trucks with selector lever in "DR" range Readjust to obtain 450 RPM

Fuel Level - 11/16" ± 1/32" below power valve mounting surface (Tool T52L-9550-AEF)

Accelerating Pump - Inner hole for average or hot weather operation, outer hole for cold weather operation

Fast Idle- Integral type operated by choke valve No adjustment required

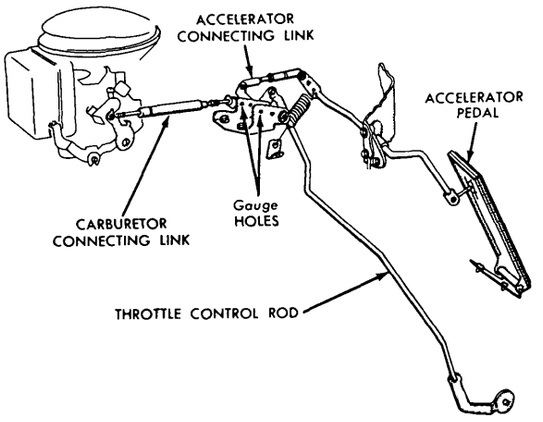
Thr ttl Linkage Adjustment- *See CARBURETOR above*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

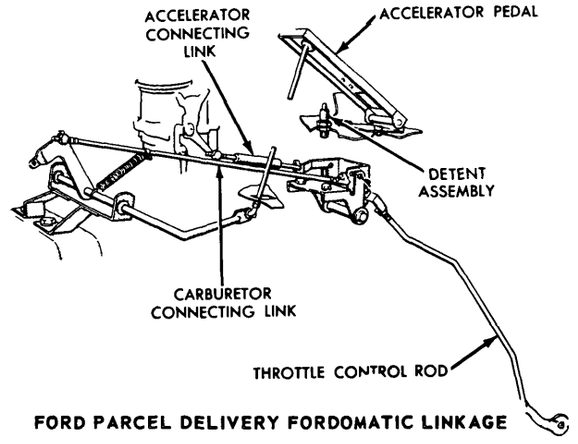
►*OTHER DATA See "Holley Visi-Flo Carburetors" in Carburetion Section*

HOLLEY 2-BARREL



Ford No. B9C-9510-C. "Low Silhouette" type Identified by No 5752310 or 12 or 13 stamped on left front side of choke plate flange

►*MANIFOLD FUEL DISTRIBUTION Carburetor RIGHT barrel feeds Cyl 2-3-5-8 LEFT barrel feeds 1-4-6-7*



Idle Setting - Initial setting 1-1½ turns open (both screws) With engine at normal operating temperature, turn both idle adjusting needles in until engine runs rough from lean mixture, then turn needles out until engine begins to roll, finally turn needles in just enough for smooth running (favor a slightly rich mixture)

Idle Speed - 475-500 RPM in Neutral Recheck automatic transmission trucks with selector lever in "DR" range Readjust to obtain 450 RPM

Fuel Level - Level with lower edge of sight plug open-

FORD TRUCK V8 THROTTLE LINKAGE

FORD PARCEL DELIVERY FORDOMATIC LINKAGE

ing, ± 1/16" To adjust, stop engine, loosen lockscrew on top of float bowl and turn adjusting nut in until fuel level is **bel w** desired setting Always make a final adjustment by raising fuel level *NOTE* - 1/6 turn of the nut will change fuel level 3/64" Recheck fuel level with engine running

Accelerating Pump - Install screw in bottom hole of cam (cold weather), top hole of cam (hot weather)

Fast Idle - After adjusting engine idle speed, hold choke wide open, turn fast idle screw in to obtain 005-008" clearance between screw and fast idle cam Turn screw in to just touch cam, then back off 1/8-1/4 turn

Throttle Linkage Adjustment: *See CARBURETOR above*

►*OTHER DATA· See "Holley 2 & 4-Barrel Carburetors" in Carburetion Section*

HOLLEY 4-BARREL

Ford No. B9T-9510-A (Early), B9TE-9510-L (Later). Early carburetor identified by No 5751759, late carburetor by No B9TE-9510-L, stamped on left front side of choke plate flange

►*MANIFOLD FUEL DISTRIBUTION Carburetor RIGHT barrels feed Cyl 2-3-5-8, LEFT barrels feed 1-4-6-7*

Idle Setting - *NOTE - Idle mixture adjusting needles used only on SECONDARY side (one on each side of Fuel Metering Block)* Initial setting 1-1½ turns open (both screws) With engine at operating temperature, turn both screws in until engine runs rough from lean mixture, then turn screws out until engine begins to roll Finally, turn screws in just enough for smooth running (favor a slightly rich mixture)

Idle Speed - 475-500 RPM in Neutral Recheck automatic transmission trucks with selector lever in "DR" range Readjust to obtain 450 RPM *NOTE* - Idle speed screw located on Throttle Operating Housing adjacent to throttle lever

Throttle Linkage Adjustment: *See CARBURETOR above*

►*OTHER DATA See "Holley 2 & 4-Barrel Carburetors" in Carburetion Section*

CARB. EQUIPMENT

Gasoline Gauge: King-Seeley Electric Constant Voltage ("CV") type with Voltage Regulator, Ford No B7J-10804-A (P-350, 400, 500), B7A-10804-B (Others)

Dash Unit - Ford B9C-9280-A.

Tank Unit - Ford No. B8C-9275-A (F-100,250,350, P-350,400,500), Par Del and Chassis

Tank Unit - Ford No. B8C-9275-B (F-100,250,350, 600, B-500, exc, electric fuel pump), closed cab

Tank Unit - Ford No.B8T-9275-A (B-500, F-600) Chassis, (P-500) with 30 gal fuel tank

See "Fuel Gauges" in Carburetion Section

Fuel Pump: AC, Fuel only or Fuel & Vacuum types

Model.	Ford Pump No.
6 Cyl (Early)	B8A-9350-E
6 Cyl (Later)	B9A-9350-B
V8MD (Early)	B8C-9350-A
V8MD (Later)	B9TF-9350-A
V8HD	B8T-9350-B

Pressure - 3 5-5 5 lbs at 500 RPM

See "Fuel Pumps" in Carburetion Section

Air Cl an r: Dry filter element type standard, oil bath type optional on all models Clean every 4,000 miles, replace dry type element every 32,000 miles

►*DRY TYPE CLEANING CAUTION* Clean filter element by tapping and shaking to remove dirt particles DO NOT wash element in solvent or other liquids and DO NOT oil or lubricate

BATTERY

Ford B9A-10654-A (Exc. Sch l Bus), 12 volt, 11 plate, 55 ampere hour capacity (painted red), **B9A-10654-C (School Bus),** 12 volt, 11 plate, 70 ampere hour capacity (painted yellow) Both at 20 hr rate *NOTE* - These batteries are dry type for service replacement

Battery Ground - Negative to engine block

Engine Ground - At flywheel housing (6 Cyl), at left cylinder head (V8)

STARTER

Ford. As follows

Model	Starter N	Armature N .

Brush Spring Tension - Auto-Lite 34-41 ozs , **Bosch** 16-18 ozs , **Ford** 32-40 ozs

Field Current - 1 2-1 8 amps (B6A-10002-C,D,E,F,G), 1 7-1 8 amps (B6A-10002-H), 1 4-1 5 amps (B8QH-10002-A)

Rotation - Counterclockwise at commutator end

Belt Adjustment: ¼" (6 Cyl), ½" (V8), deflection midway between generator and water pump pulleys with light thumb pressure

REGULATOR

Used as follows

Ford Regulator No.	Generator
B6C-10505-B (Bosch)	B6A-10002-C
B7A-10505-B (Ford)	B6A-10002-H
B7A-10505-B (Ford)	B9A-10505-A
B7A-10505-H (Auto-Lite)	B6A-10002-F
B8E-10505-C (Ford)	B8QH-10002-A
B7A-10505-A (Auto-Lite)	B6A-10002-E
B6A-10505-C (Bosch)	B6A-10002-D
B6C-10505-A (Bosch)	B6A-10002-G

See "Ford, Lincoln, Mercury 12 Volt Regulators" in Electrical Section

►*SETTING CAUTION* "Temperature Compensated" type Set to following specifications at 75°F, ambient (engine compartment) temperature, after ½ hour operation in vehicle or after regulator heated and stabilized

Cutout Relay

Cuts In - Auto-Lite 12 5-13 9 volts, **Bosch** 13 0-13 5 volts, **Ford** 12 0-12 8 volts

Cuts-Out - Auto-Lite 2-6 amps , **Bosch** 2-8 amps , **Ford** 6-9 amps

Voltage Regulator

Setting - Auto-Lite 14 6-14 9 volts, **Bosch** 14 2-14 6 volts (B6C-10505-A,B) both upper and lower sets, 14 2-14 6 volts upper, 14 2-14 8 volts lower (B6A-10505-C), **Ford** 14 6-15 4 volts

Checking & Adjusting - *See Electrical Section*

Current Regulator

Setting - Auto-Lite 38-42 amps , **Bosch** 28-32 amps (B6C-10505-B), 48-52 amps (B6A-10505-C), 58-62 amps (B6C-10505-A), **Ford** 28-32 amps (B7A-10505-B), 38-42 amps (B8E-10505-C)

Checking & Adjusting - *See Electrical Section*

MISC. ELECTRICAL

Headlamps: Dual Headlights (4-Headlight System) *See "4-Headlight Systems" in Electrical Section*

Directional Signals: *See Electrical Section*

Lighting Switch Removal: With control knob in "OFF" position press spring release button on switch housing, turn shaft slightly and pull it out of switch Unscrew mounting nut, remove switch

Stop Light Switch Location: On brake master cylinder, Power Unit Assembly, or fitting on frame side rail Master Cylinder located on firewall (Conventional Trucks), on bracket attached to left frame member below brake pedal (Others)

LIGHTING CIRCUIT BREAKERS: Two used in lighting switch One circuit breaker protects headlight circuit, other circuit breaker protects instrument, parking,stop, and tail light circuits

FUSES: 7.5 Ampere - Interior lights On headlight switch
5 Ampere - Directional Signals On headlight switch
15 Ampere - Overdrive On overdrive relay
14 Ampere - Heater In feed wire
1 Ampere - Clock In feed wire

Horn Relay: Ford No B8C-13853-A

ENGINE

ENGINE SPECIFICATIONS: 6 Cyl 223" Eng and V8 292" Eng All engines are overhead valve type

Engine	Bore	Stroke	Displacement
6 Cyl	3 625"	3 60"	223 cu in
V8	3 75"	3 30"	292 cu in

Engine	Compr Ratio	Rated HP	Developed HP
6 Cyl	8 1-1	31 50	139 at 4200 RPM
V8MD①	7 9-1	44 60	186 at 4000 RPM
V8HD②	7 6-1	44 60	187 at 3800 RPM

① - With 2-Bbl Carb ② - With 4-Bbl Carb

Compression & Vacuum Reading - *See TUNE-UP*

CYLINDER HEAD & MANIFOLDS: *See Ford Special Data*

TIGHTENING TORQUES: *See "Tightening Specifications" in Ford Special Data*

ENGINE REMOVAL: *See "Engine" in Ford Special Data*

OIL PAN REMOVAL (6 CYL.): Drain crankcase, remove oil level dipstick and remove flywheel housing cover Remove oil pan retaining screws and remove pan

OIL PAN REMOVAL (V8): Drain crankcase and remove dipstick Remove converter housing dust cover on auto trans trucks On C-Series, crank engine until No 1 piston is on TDC Disconnect oil inlet tube from oil pump and remove "O" ring seal from tube Remove oil pan retaining screws and remove pan

►*OIL PAN LEAK NOTE (292)* Use New Studs No, 88351-S8 with interference fit, lockwashers No 34806-S7, and nuts 33798-S8 at rear main bearing seal retainer locations to eliminate leaks at rear of oil pan *NOTE* - Coat threaded portion of stud that fits into block with oil resistant type sealer prior to installation

6 CYL. ENGINE

►*See 1959 Ford 6 Cyl Passenger Car Pages* Engine is similar to that used in 1959 Pass Cars, and all passenger car engine data applies to truck engine

V8 ENGINES

►*See 1959 Ford V8 Passenger Car Pages* Engines are similar to 1959 292" Pass Car engine, and all passenger car engine data applies to truck engines EXCEPT AS NOTED BELOW

VALVES: Exhaust Valve Stem Diameter (V8HD) - 4343-4350"

Cam Lobe Lift (V8HD) - 272" (All valves)

Valve Timing Specifications (V8HD)

Intake - Open 18° ① BTDC Close 58° ① ALDC
Exhaust - Open 66° ② BLDC Close 10° ② ATDC

① - Camlift 015" ② - Camlift .013" ③ - Camlift .016"

Valve Cap Clearance (Exh. Valves HD Engines) - *See "Valve System" in Ford Special Data*

►*ROTATABLE & FREE TURNING VALVE NOTE* Free Turning type valve (cap over end of stem) used for Sodium Cooled Exhaust valves on HD engines All other valves (All Engines) have "Rotatable" type valve (sleeve between spring retainer and lock)

►*EXHAUST VALVE CAUTION (HD Engines)* Exhaust valves are Sodium cooled and require special disposal handling to prevent possibility of fire or explosion due to chemical reaction DO NOT DISCARD SODIUM COOLED VALVES with other scrap material Bury in ground not subjected to excavation or in deep water not subjected to dredging

EXHAUST VALVE INSERT (HD Engines): *See 'Valve System" in Ford Special Data*

OILING SYSTEM

►*ENGINE OILING SYSTEM See "Engine Lubrication" under OILING SYSTEM in Ford Special Data.*

Crankcase Capacity· 6 qts (HD Eng), 5 qts (Others) Add 1 qt for filter change

Normal Oil Pressure · 35-50 lbs at 2000 RPM (hot)

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Pr ssure R gulat r Valve - In oil pump body Not adjustable

Oil Pressure Indicator: Warning Light (Exc Par Del & Tilt Cab), King Seeley Gauge (Par Del & Tilt Cab)

Dash Unit - Ford No B7J-9273-A (Par Del & Tilt Cab)

Engine Unit - Ford B7T-9278-A (Par Del & Tilt Cab B6A-9278-B (Others)

See King-Seeley Gauges in Miscellaneous Section

Oil Pump: Gear type pump mounted inside crankcase in line with distributor shaft (223 Eng), rotor type located on left side of crankcase and driven by distributor shaft (Others)

Pump Removal & Overhaul - *See "Oil Pump" in Ford Special Data*

Oil Filter: Full-flow with pressure relief valve in center bolt or "Disposable" type Replace element or filter unit at 4000 mile intervals or when oil becomes dirty or polluted

Replacement Element or Disposable Unit - Ford No B2A-6371-A (6 Cyl), B8C-6371-A (V8) element Ford No B7A-6371-B or B9AE-6714-B (All) disposable unit

NOTE - B7A-6882-A adapter used with disposable unit

Crankcase Ventilation: Filter in oil filler and breather cap (Inlet) all models Road draft outlet tube for crankcase ventilation all models Service filler cap by cleaning with solvent and resaturating with engine oil at 4,000 mile intervals

COOLING

Pressure Valve: Ford OL-8100-A, radiator filler cap (opens at 7 lbs)

Thermostats: (All) Ford No B7A-8575-A (157-162°F), B7A-8575-B (177-182°F) Use with permanent anti-freeze

Water Pump: Packless, sealed ball bearing type

See "Water Pump" in Ford Special Data

Temperature Gauge: King-Seeley Electric Constant Voltage ("CV") type with gauge voltage regulator, Ford No B7J-10804-A (Par Del), B7A-10804-B (Others)

Dash Unit - Ford No B7J-10883-A (Par Del),B9C-10883-A (Others)

Engine Unit - Ford No B7A-10884-A

See 'Temperature Gauges' in Miscellaneous Section

CLUTCH

Long 10, 10½ & 11CF clutches used For cover and disc combinations see table below

Ford No	Cover Assembly	Long No.
B4A-7563-B	10"	L5222
B7C-7563-A	10½"	267371
B7Y-7563-A	11"	267147
B7Y-7563-	11"	267147

Ford No	Disc	Long No
B7C-7550-A	10" Molded	CD870
B7C-7550-B	10½"Molded	287335
B7C-7550-C	11" Molded	CD607
B6C-7550-A	11" Woven	CD606

Clutch Pedal Clearanc : Free travel 2" See *Adjustments that follow*

Pedal Height: Adjust pedal travel (Bumper adjustment) so pedal is even with brake pedal when fully released

Free Travel Adjustments - **1)** Remove retracting spring bottom slave cylinder pushrod and piston (force it forward), pull release lever to rear until bearing just contacts release fingers Adjust pushrod adjusting nut to obtain not less than ¼" clearance between adjusting nut and lever (6 turns equal ½")

2) Adjust master cylinder pushrod eccentric bolt to obtain 3/16-3/8" (F & B Trucks), ¼" (P & C Trucks) free travel at pedal pad before pushrod contacts master cylinder piston

Removal: Release retracting spring Remove slave cylinder from flywheel housing and slave cylinder pushrod from release lever Remove transmission (see Transmission Removal below), dust cover from flywheel housing, release bearing and hub from release lever Mark pressure plate, cover assembly and flywheel for reassembly Remove pressure plate and cover assembly-to-flywheel bolts gradually to reduce spring tension, remove assembly through bottom of clutch housing

Hydraulic Clutch Control: Master cylinder mounted on firewall (Conv Cab), on bracket on firewall (Tilt Cab), and connected to Slave Cylinder which is attached to flywheel housing and connected to outer end of clutch release lever

►*CLUTCH SLAVE CYLINDER BOOT PRODUCTION CHANGE (F-100-600)* New boot, Ford No B9TT-7A508-A, entered production Oct 1959 to reduce slave cylinder fluid leakage

►*CLUTCH MASTER CYLINDER PUSHROD BREAKAGE CORRECTION (P Series)* Install new master cylinder stop washer Ford No B8C-2188-A to eliminate binding between pushrod and washer

Filling Master Cylinder - Maintain fluid level (HD Brake Fluid) to within ½" below top of cylinder reservoir Change fluid at 15000 mile intervals

SYNCHRO-MESH TRANSMISSION

3-SPEED (LIGHT DUTY)

Own. 3-speed, all helical gear, constant mesh, synchro-mesh (second and high), sliding gear (low and reverse). Steering column shift standard.

See "Ford Truck 3-Speed (Light Duty)" in Transmission Section.

Removal: Drain lubricant, disconnect speedometer cable and drive shaft and gear shift linkage at transmission. *(NOTE* - On band type parking brake, disconnect brake cable clevis and remove cable support bracket). Remove flywheel housing-to-transmission bolts and nuts, draw transmission to rear to clear flywheel housing and lower transmission.

3-SPEED (MEDIUM DUTY)

Own. 3-speed medium duty with steering column shift standard. *See "Ford Truck 3-Speed (Medium Duty)" in Transmission Section.*

Removal: Same as for 3-Speed (Light Duty) above.

3-SPEED (HEAVY DUTY)

Own. 3-speed, **left hand** helical gear (second & high), spur gear (low & reverse), constant mesh, synchro-mesh (second & high), sliding gear (low & reverse) Steering column shift standard *NOTE* - Left hand helical gears can be used in 1957 HD transmissions

Se "Ford Truck 3-Speed (Heavy Duty)" Transmission in Transmission Section.

►*LOW GEAR JUMP-OUT CORRECTION (F-100 3-Speed with Overdrive)* Install new output shaft No B9TT-7061-D with 004-.006" deep relief 1 17/64" long cut in coast side of first and reverse sliding splines New shaft used in production Feb 1959

►*SHIFT LEVER LOOSENESS ON SHAFT OR BREAKAGE CORRECTION (F-350,P-350,400,500 Series with 3-Speed H D Trans)* Use heavier late production shift levers on all above models Continue to use former levers on F-100,250 Series Conventional Trucks

Removal: Same as for 3-Speed (Light Duty).

4-SPEED

Own. 4-Speed, constant mesh, synchro-mesh (second, third, & high). Helical gears used for second, third, & high. Spur gears used for low & reverse. Floor mounted gear shift standard.

See "Ford Truck 4-Speed (Synchro-mesh) Transmission" in Transmission Section.

Removal: Same as 3-Speed (Light Duty) and note following If hoist not used, it may be necessary to remove gear shift lever assembly (New Process) and lever housing (Others), before transmission can be removed from truck. *(NOTE* - On Tilt-Cab - release lock and tilt cab forward). Disconnect shift linkage at split pin which attaches universal joint to finger socket shaft in rear cross shaft housing . Drain transmission, disconnect drive shaft at parking brake drum. If truck equipped with coupling shaft support, disconnect support bracket, and remove coupling shaft. Disconnect parking brake and speedometer cables. Remove dust cover from bottom of clutch housing, support transmission on jack, remove two top nuts, two bottom bolts, move transmission to rear until input shaft splines clear clutch housing and lower transmission.

TRANSFER CASE

(4-WHEEL DRIVE)

Own. 2-speed, manually controlled type, used with 4-wheel drive

See "Ford Transfer Case" in Transmission Section

Removal: Drain transfer case and disconnect rear drive shaft, transmission output shaft and front drive shaft at case. Disconnect shift rod and speedometer cable at case Support transfer case, remove mounting bolts and remove case

OVERDRIVE

Warner Model R10. Solenoid operated with governor control and throttle operated kickdown.

See "Warner R10 Overdrive" in Transmission Section.

Overdrive Controls: *See "Overdrive Controls" in Transmission Section.*

Removal: Same as 3-Speed Synchro-mesh Transmission (above), after disconnecting control cable and wiring.

AUTOMATIC TRANSMISSION

Fordomatic & Cruise-O-Matic types used Transmissions are of same design as used on previous Truck (Fordomatic) or Passenger Car (Cruise-O-Matic) models

See Ford Automatic Transmissions" in Transmission Section

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION* See *"Ford Automatic Transmissions" in Transmission S ction*

►*TESTING & TROUBLE SHOOTING* See *"Ford Automatic Transmissions' in Transmission Section*

Lubrication - Check fluid level every 1,000 miles Drain and refill every 16,000 miles **Use only Ford ut matic Transmissi n Fluid Part No. B8A-19582-A.**

Checking Fluid Lev l: Bring transmission to operating temperature by running engine with selector lever in neutral position Move selector lever through all ranges to assure fluid distribution, then place lever in "P" (Park) position for checking fluid Maintain level at "Full" mark on dipstick

Throttl Linkage Adjustment: See *CARBURETOR above*

►*OTHER DATA* See *"Ford Automatic Transmissions" in Transmission Section*

UNIVERSALS

Spic r. Needle bearing type.

►*UNIVERSAL JOINT INSTALLATION CAUTION:* Make sure that all universal joint yokes in drive line are in same plane to avoid drive line vibration.

C upling Shaft C nt r B aring: Consists or cushion mounted ball bearing bolted to underside of frame intermediate cross member. Bearing is mounted on end of coupling shaft in a sleeve with felt retainer on each end and bearing baffle on front end.

FRONT AXLE

4-WHEEL DRIVE

Spic r Mod l 44-4F. Full-Floating, hypoid gear type See *"Front Axle" on 1960 Ford Truck Car Page.*

REAR AXLE

SEMI-FLOATING

Own Separate carrier, hypoid gear, with Hotchkiss drive See *"Ford (Deep Offset) Hypoid" in Rear Axle Section*

Spic r 44 used with Optional "Power-Lock" Differential See *"Ford Truck Hypoid' and Power-Lock (Plate Clutch) Differential" in Rear Axle Section*

Rati s - 3.70 (37-10), 3.89 (35-9), 4.11 (37-9).

Backlash - .004-.009".

Axle Shaft R m val: Remove wheel, take off drum. Remove four axle retainer locking type nuts (work through opening in axle shaft flange). Use Puller No. 4235-N and pull axle shaft (do not disturb brake backing plate or damage wheel bearing oil seal). Replace one nut to secure brake backing plate.

Axl Ass mbly R m val (Spicer): See *"Full-floating (Int gral Housing) R moval" following*

Carrier Assembly R m val· *NOTE* - Pinion carrier assembly can be removed separately without disturbing differential carrier by disconnecting rear universal joint at companion flange, and removing five bolts that attach pinion carrier assembly to differential carrier housing. With rear universal joint disconnected, axle shafts removed (see above), remove differential carrier housing to rear axle housing bolts and lift out carrier assembly.

Wh l Bearing Adjustment: None required.

FULL FLOATING

Full floating, Hypoid gear, with Hotchkiss drive *NOTE - "Power-Lock" differential optional on F-250*

M del	R ar Axle Type
F-250,P-350 (Spicer Model 60)	Integral Housing
350-600 Series	Banjo Housing

See "Ford Truck Hypoid","Ford Truck Hypoid (Banjo Housing)" and "Power-Lock(Plate Clutch) Differential" in Rear Axle Section

Model	Rear Axle Ratios — Axle Ratios
F-250	4 56-1②,4 88-1,5 87-1①
F-350	4 85-1,4 86-1②,5 14-1⑥ 5 83-1①⑤
P-350	4 56-1 ②,4 86-1④,4 88-1
	5 14-1③,5 83-1③,⑤,5 97-1①
P-400	4 86-1②,5 14-1,5 83-1
P-500	5 83-1②,6 2-1①②③,6 8-1①②
F,B-500	5 83-1②,6 2-1①②③,6 8-1①②
C-550	5 83-1,6 2-1②,6 8-1②
F-B-60	6 2-1⑥, 6 8-1⑥

① - 6 Cyl ② - V8 ③ - 6 Cyl with HD Axle
④ - V8 with HD Axle ⑤ - With HD Axle
⑥ - With Std & HD Axle

►*NUMBER OF GEAR & PINION TEETH FOR EACH RATIO NOTE* 4 56 (41-9), 4 86 (34-7), 4 88 (39-8), 5 14 (36-7), 5 83 (35-6), 5 87 (47-8)

Axle Shaft Replacement: Remove axle shaft stud nuts and lockwashers. Strike center of axle shaft flange with a hammer and drift to loosen tapered dowels, then remove dowels. Pull axle shaft from housing. To reinstall, place gasket in position on housing and install axle shaft. Install tapered dowels, lockwashers and nuts on studs. Tighten nuts to 50-70 ft. lbs.

Axle Assembly Removal (Integral Housing): Loosen wheel and axle shaft stud nuts, disconnect rear shock absorbers, raise rear of frame until weight is off springs. Disconnect flexible hydraulic line at frame, parking cable (if so equipped) at equalizer, remove cables at brackets. Disconnect rear universal joint at flange, remove spring "U" bolts, roll rear axle from under truck and drain lubricant.

Carrier Removal (Banjo Housing): Remove axle shaft stud nuts and lockwashers, strike center of axle shaft flange with hammer and punch to loosen tapered dowels, remove dowels and axle shaft. Disconnect drive shaft at rear universal joint flange, support carrier assembly with roller jack, remove carrier to housing bolts and lockwashers. Tighten puller screws (when provided in carrier) to loosen carrier from housing, roll carrier out

Wheel Bearing Adjustment: Remove axle shafts (see above), use special bearing adjusting wrench and remove bearing locknut (outer nut), and lockwasher Adjust bearings by turning bearing adjusting nut (inner nut) up until tight then backing off 1/8 turn Install bearing lockwasher *(NOTE* - If adjusting nut equipped with dowel, make sure lockwasher fits over dowel). Install bearing locknut and draw nut up tight. If flange type lockwasher is used, bend one flange over adjusting nut and one flange over locknut. Install axle shaft

TWO-SPEED

Own. Electrically operated shift, Two-speed, Full-floating spur gear planetary unit (reduction gearing). Spiral bevel gear final drive.

See "Ford Truck Two-Speed" in Rear Axle Section.

Ratio - Two ratios available 1) 5 83-1 (35-6) with reduction ratio of 8 11-1 2) 6 33-1 (38-6) with reduction ratio of 8 81-1

Backlash - 006- 016"

Removal: Same as for standard axle (above)

SHOCK ABSORBERS

Direct acting hydraulic Shock absorbers are sealed units and are not adjustable or refillable

►*REPLACEMENT SHOCK ABSORBER NOTE* Shocks are supplied for service replacement in kits consisting of shock absorber and necessary bushings

Replacement Shock Absorbers

Model	Front	Rear
F-100	B7C-18124-A	B7C-18125-A
F-250	B7C-18124-A	B9TZ-18125-A
P-350,400	B7J-18124-B	B9TZ-18125-A
F-350	B7C-18124-A	B3Y-18125-A
P-500	B7J-18124-A	① B3T-18125-A
F-500	B8T-18124-A	① B3T-18125-A
B-500	B8T-18124-A	① B3T-18125-A
C-550,600	B7T-18124-B	B3T-18125-A
F,B-600	B8T-18125-A	B3T-18125-A

① - B7J-18125-A with 2-Speed Axle

FRONT SUSPENSION

Conventional "I" beam section front axle with Reverse-Elliot ends and semi-elliptical springs

Kingpin Inclination - 5½° (C-550 & C-600), 4° (All Others) crosswise

Caster - As follows

Model	Man. Steering	Power Steering
F-100, F-250	3°	6°
F-350	3¾°	6¾°
P-350	4°	4°
P-400	3°	6¾°
F-500 (130" WB)	3¾°	6¾°
F-500 (154" WB)	4½°	7½°
B-500, B & F-600	4½°	7½°
P-500 (137" WB)	3°	6°
P-500 (154" WB)	3½°	6½°
C-550, C-600	3°	6°

NOTE - Maximum variation between wheels ½°

Camber - 1° maximum (All Models) Maximum variation between wheels ¼°

Toe-In - 1/16" maximum (All Models) *NOTE* - On power steering trucks, run engine so that hydraulic pressure will center power steering control valve

STEERING

Manual: Gemmer Worm & Roller type with some Saginaw Recirculating Ball type used of F-100,250,350 and C-500,600 models starting in Dec 1958

See "Gemmer Worm & Roller" or 'Saginaw Recirculating Ball" types in Steering Section

Power Steering: Ford Linkage type Used in conjunction with standard steering gear

See 'Ford Truck Power Steering" in Steering Section

►*POWER STEERING FRONT END SHIMMY CORRECTION (F,B-600)* Caused by collapse of first type piston rod insulator To correct, use New Power Steering Piston Rod End-to-Bushing Kit Part No B9T-3314-A (used in production beginning Dec 1958)

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

St ring Linkag : *See 'Steering Linkage in Steering Section*

Steering Wheel & Horn Button Removal: *See "Gemmer Worm & Roller" and "Saginaw Recirculating Ball" in Steering Section*

Steering Gear Removal: *See 'Gemmer Worm & Roller" & "Saginaw Recirculating Ball" in Steering Section*

BRAKES

Service: Brake types are listed in application table below Hand lever applies rear wheel service brakes on F-100, 250 and P-350 trucks Independent transmission mounted drum-type with either contracting band or internal expanding shoe type brakes used on all other models Type used depending on truck models and transmission used

Brake Type Application

Model	Front	Rear
F-100	Duo-Servo	Duo-Servo
F-250,F,P-350,P-400	Uni-Servo	Duo-Servo
C-550,600	Uni-Servo	Two-Cyl
F B,P-500,F,B-600	Uni-Servo	Two-Cyl

Uni-Servo - Ford-Bendix. Single anchor. Wheel cylinder actuates primary shoe. Ratchet adjusting screw.
See "Ford-Bendix Uni-Servo Hydraulic" in Brake Section.

Duo-Servo - Ford Bendix. Single anchor, self energizing wheel cylinder actuates both shoes. Ratchet adjusting screw.
See "Ford-Bendix Hydraulic" in Brake Section.

Two-Cylinder Type - Two wheel cylinders in each brake assembly.
See "Ford Truck Two-Cylinder" in Brake Section.

►*REAR BACKING PLATE NUT NOTE (F-100, B,F, P-500, C-550, F,C,B-600)* Use "Huglock" type nut Part No 34424-S7 for proper retention of backing plates subjected to high temperatures

►*F-100 TRUCKS SERVICE LINING NOTE* Use V8 lining for service replacement on both 6 Cyl & V8 trucks

Brake Lining Thickness

Model	Primary	Secondary
F-100 6 Cyl	187"	187"
F-100 V8	187"	250"
F-250	250"	250"
F-350 Front	250"	300"
P-350 ①	250"	300"
P-350 ②, P-400 Front	250"	300"
Rear	250"	.250"
Others, Front	.250"	250"
Rear	.375"	375"

① - With Spicer 60 RA ② - With Timken B-100 RA

Clearance (Duo-Servo & Uni-Servo) - Adjusting screw backed off 10-12 notches from point where shoes are against drum

Cl aranc (Tw -Cylind r) - Adjust each shoe by turning adjusting worm in direction of forward wheel rotation until shoes drag, then back off adjusting worm until shoes are just free

Drum Diameter & Lining Width & L ngth

Model		Drum Diam.	Primary Width - Length	S c ndary Width - Length
F-100	Front	11"	2" - 11 96"	2" - 11 96"
	Rear	11"	1¾" - 11 96"	1¾" - 11 96"
F-250	Front	12 1/8"	2" - 11 63"	2" - 13 09"
	Rear	12 1/8"	2" - 11 63"	2" - 13.09"
F-350	Front	12 1/8"	2" - 11 63"	2" - 13 09"
	Rear	13"	2½" - 12 71	2½" - 13 95"
P-350①	Front	12 1/8"	2" - 11 63	2" - 13 09"
	Rear	12 1/8"	2" - 11 63"	2" - 13 09"
P-350②	Front	12 1/8"	2" - 11 63"	2" - 13 09"
P-400	Rear	13"	2½" - 12 71"	2½" - 13 95"
F-500	Front	13 7/32"	2" - 12 68"	2" - 13 95"

F-600	Front	13 7/32"	2" - 13 66"	2" - 15 03"
B-600	Rear	15"	4" - 15 31"	4" - 15 31"
C-550	Front	14"	2½" - 13 66"	2½" - 15 03"
C-600	Rear	15"	4" - 15 31"	4" - 15 31"

① - With Spicer Rear Axle
② - With Timken B-100 Rear Axle

Hand Brake (Exc. F-100,250;P-350): External contracting or internal expanding types used

External Type - Consists of brake drum bolted to transmission main shaft companion flange and an external contracting band mounted on rear of transmission and operated by brake cable (Exc C-Series), by rod type linkage (C-Series)

Internal Type - Consists of a brake drum attached to drive shaft (or coupling shaft), primary and secondary brake shoes, an actuating cam mechanism with rod type linkage to parking brake lever

Hand Brake Specifications

Model	Drum Diam.	Drum Width	Lining Length	Lining Thickness
F-350	8 0"	2 0"	24 63"	0 156"
P-350,400, 500	7 812"	2 5"	2-7 89",1-7 3"	0 250"
Others ①	9 0"	2 0"	2-10 57"	0 210"
Others ②	9 0"	3 0"	2-10 57	0 210"

① - Warner T-98A Trans or Clark 250-V Trans
② - Transmatic Trans

Adjustment - (External Type) *NOTE* - On cable controlled parking brakes, place lever in fully released position On rod type linkage, set lever in first notch Flat portion of cam must rest on brake band bracket If not on flat spot, remove clevis pin and adjust clevis rod, then proceed as follows

1) Remove adjusting screw lockwire and turn screw to obtain .010" clearance between lining and drum at anchor bracket Replace lockwire

2) Loosen adjusting screw nut for lower half of band and turn screw to obtain .010" clearance between lining and drum at lower half of brake band, then tighten locknut

3) Turn upper band adjusting rod nut to obtain .010" clearance between upper band lining and drum

Adjustm nt - (Int rnal Type) Release brake lever, remove clevis pin Turn clevis counterclockwise (from beneath truck) until shoes contact drum with clevis pin in place Remove clevis pin and back off clevis until there is a minimum of .010" clearance between shoes and drum at all points with clevis pin installed

Standard Master Cylinder: Located on engine side of firewall on F- & B-Series, mounted under instrument panel beside brake pedal arm on C-Series, above left frame side member under drivers seat on P-Series

Checking Fluid - Maintain fluid level to within ½" of top of reservoir

Removal - *CAUTION* - When truck equipped with booster, stop engine and expel all vacuum from system before disconnecting hydraulic lines, then proceed as follows

1) Disconnect rubber boot from rear end of master cylinder On F-, B- & P-Series, disconnect stoplight switch wires from switch and brake line at fitting. On P-Series, turn front wheels to left out of way, then remove apron for access to master cylinder On C-Series, roll back floor mat, remove floor plate to disconnect hydraulic line

2) Force all brake fluid from master cylinder

3) On F- & B-Series, remove master cylinder to dash panel bolts and lift cylinder away from pushrod On C-Series, remove 2 mounting bolts and lower cylinder from pushrod On P-Series, remove brake pedal return spring Remove cotter pin from clevis pin and remove master cylinder pushrod and boot Remove 3 mounting bolts

Power Brakes: Bendix (Hydrovac) Piston type used on F-250, 350, P-350, 400 Midland (Hy-power) Diaphragm type used on all other models
See "Hydrovac" or "Midland" Power Units in Brake Section

Checking Fluid - Same as for Manual Brakes above

Removal of Power Unit (Hydrovac) - Depress brake pedal several times to remove all vacuum from system Loosen brake power unit inlet tube clamp and remove tube Disconnect hydraulic lines and vacuum hose from booster Remove mounting bolts and remove booster from bracket *NOTE* - **DO NOT** remove breather or vacuum check valve unless operating conditions indicate repairs are necessary

Removal of Power Unit (Midland) - Stop engine, depress brake pedal several times to remove all vacuum from system Disconnect 2 hydraulic lines and vacuum hose from booster On frame mounted booster, loosen air breather hose clamp and disconnect hose from booster Remove 3 mounting bolts, then remove booster On F-100, remove 2 bolts from under side of mounting bracket and remove booster from engine compartment *NOTE* - On frame mounted booster, do not remove breather or vacuum check valve unless operating conditions indicate repairs are necessary

MISC. MECHANICAL

Windshield Wip rs: Vacuum Link and Arm or Electric type *NOTE* - Electric Vacuum Assist available for use with vacuum type wiper
See "Windshield Wipers" in Miscellaneous S ction

MODEL IDENTIFICATION

SERIAL NUMBER: Stamped on patent plate attached to left door post. *NOTE* – Number (example below) includes identification data as indicated.

Station Wagon – Series 60
61 – 2–Dr. Ranch Wagon
62 – 4–Dr. Ranch Wagon
64 – 4–Dr. 6–Pass. Country Sedan
66 – 4–Dr. 9–Pass. Country Sedan
68 – 4–Dr. 9–Pass. Country Squire
69 – 2–Dr. Courier (Commercial Wagon)

TUNE-UP

COMPRESSION PRESSURE: 150 lbs. at cranking speed. Maximum variation between cylinders 10 lbs.

VACUUM READING: Steady 18" at specified idle speed, with transmission in neutral.

VALVE TAPPET CLEARANCE: .019" Intake & Exhaust (Hot & Cold). Adjust all tappets to .019" clearance while engine is cold, then again check all tappets for .019" clearance with engine idling after running engine for 30 minutes to normalize temperature.

►*SELF-LOCKING TAPPET ADJUSTING SCREW NOTE:* Torque required to turn screw after interference noted must be 3 ft. lbs. minimum.

MANIFOLD HEAT CONTROL: Automatic thermostatic type with counterweight. Valve is closed when engine is at normal temperature and running at slow idle, and opens when operating at high RPM. Spring is installed with ¾ turn windup and hooked over stop pin.

IGNITION

FIRING ORDER: 1–5–3–6–2–4.
SPARK PLUG GAP: .032–.036".

Spark Plugs - Champion 870. 18 mm. Torque to 15-20 ft. lbs.

NOTE – When a new spark plug is installed in a new replacement cylinder head, torque plug to 20–30 ft. lbs.

COIL: F rd N . B6A–12029–B.
Igniti n Curr nt – 2.5 amps. idling, 4.5 amps. stopped.
R sist r – Pink resistance wire (1.30–1.40 ohms at 75°F) used between ignition switch and multiple connector on dash. Bypassed during cranking by lead from multiple connector to starter solenoid.

DISTRIBUTOR: Ford. Used as follows:

Mdl	Distributor No.	①Identification No.
S.M. & O.D.	②**B8A–12127–M**	FET –12127–C
S.M. & O.D.	**COAF–12127–G**	COAF–12127–G
Fordomatic	③**COAF–12127–F**	COAF–12127–F
All	④**COAF–12127–C**	COAF–12127–C

① - Stamped on distributor housing.

② - Replace with Distributor No. COAF–12127–G.

③ –"Step-Stop" type. *See Note below.*

④ - Replace with Distributor No. B8A–12127–M.

See "Ford Loadomatic Distributors" & "Ford Step-Stop Distributors" in Electrical Section.

►*DISTRIBUTOR COAF–12127–F NOTE:* This distributor is "Step-Stop" type with secondary spring eliminated and modified vacuum diaphragm. *See "Ford Step-Stop Distributors" in Electrical Section.*

►*DISTRIBUTOR ROTOR CHECK:* Distributors not marked with daub of yellow paint should be checked for proper spring contact of flush to .040" above rotor top. Improperly formed contact on rotor will create an air gap between rotor and cap, causing engine to miss.

Condenser – Ford No. 7RA–12300–C. **Capacity** .21–.25 mfd.
Contact Point Set – Ford No. FAA–12171–A.
Breaker Gap – .024–.026".
Cam Angle – 35–38°.
Breaker Arm Spring Tension – 17–20 ozs.
Rotation – Clockwise viewed from above.

Advance Performance –Loadomatic Distr.
►With Distributor on Test Stand

Distr. Degrees	Vacuum (" of Hg)	Distr. RPM
0	0.38	450
2½–3½	0.79	650
6¾–7¾	2.85	1100
8¾–9¾	4.33	1400
10¼–11¼	5.99	1800

Advance Performance – Step–Stop Distr.
►With Distributor on Test Stand

Distr. Degrees	Vacuum (" of Hg)	Distr. RPM
3½–4½	1.08	800
6¼–7¼	1.70	1000
7½–8½	2.38	1200
7½–8½	5.63	2000
9-10½	6.50	1450

►*DISTRIBUTOR INSTALLATION CAUTION:* Be sure oil pump intermediate shaft engages the seat in the oil pump. It may be necessary to turn over the engine with starter after distributor drive gear is partially engaged, in order to engage intermediate shaft fully in oil pump.

IGNITION TIMING

Setting – 4° BTDC (S.M. & O.D. Trans.), 10° BTDC (Auto. Trans.). Allowable range 2–10° BTDC. Set timing with engine at normal idle speed and vacuum line disconnected. *NOTE – 10° BTDC setting for Auto. Trans. cars supersedes previous setting of 6° BTDC.*

Timing Mark – Vibration damper has five timing marks ranging from top dead center (TDC) to 9° before top dead center (BTDC). Align correct mark with pointer on engine front cover.

CARBURETOR

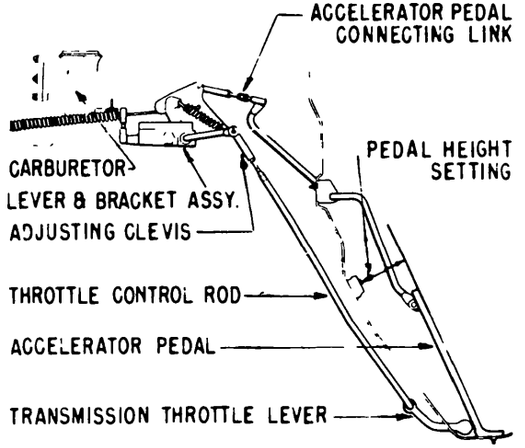
►*CARBURETOR APPLICATION NOTE: One Holley "Visi-Flo" 1-barrel carburetor used.*

►*THROTTLE LINKAGE PRODUCTION CHANGE & ADJUSTMENT NOTE:* A turnbuckle has been installed on clevis end of throttle control rod on later production cars. When making preliminary adjustment, rotate clevis. Turnbuckle may be used when making final adjustment by pressure method.

Thr ttl Linkag Adjustment (F rdomatic Cars): With engine stopped and carburetor at hot idle position, remove lock from clevis pin on throttle control rod, Loosen clevis locknut. Remove clevis and pull throttle control rod upward to hold throttle lever against stop inside transmission. Turn throttle rod clevis until clevis pin enters hole in lever. Lengthen throttle rod 3½ turns. Connect throttle control rod to accelerator shaft and secure it with clevis pin lock. Adjust accelerator pedal height by turning threaded trunnion on the accelerator connecting link until accelerator pedal 3½" from floor mat. Measure from top rear corner of pedal to floor mat. *For final adjustment, use pressure method as follows:* Raise car and remove 1/8" pipe plug on left side of transmission case. Install pressure gauge. Lower car, install a tachometer and place selector in "Drive" position. With brakes applied, accelerate engine to 1000 RPM. If pressure below 77 lbs., lengthen throttle rod. If pressure above 84 lbs., shorten rod. *Do not lengthen or shorten rod more than 2½ turns from initial adjustment.*

Anti-Stall Dashpot Adjustment: With engine idle speed properly adjusted, and engine at operating temperature, loosen anti-stall dashpot screw. Hold throttle in closed position and depress dashpot plunger fully. Turn dashpot in bracket until .060–.090" clearance obtained between dashpot plunger and throttle shaft lever. Secure dashpot in bracket after adjustment.

HOLLEY "VISI-FLO"



Carburetor No.	① Identification No.
COAE–9510–U (Std. & O.D.)	COAE–9510–E or U
COAE–9510–Z (Auto. Trans.)	COAE–9510–Z
COAE–9510–Y (Taxi)	COAE–9510–F, V, Y

① – Stamped on flat of main body at fuel inlet.

Idle Setting – Initial setting ½–1½ turns open. Turn adjusting screw in until engine begins to run roughly from lean mixture, then turn screw out until engine begins to roll from rich mixture. Turn screw in until engine runs smoothly. Favor a slightly rich mixture, rather than a lean setting.

Idle Speed – 475–500 RPM (Synchro–mesh), 450–475 RPM (Fordomatic in "D").

CONTINUED ON NEXT PAGE

FORDOMATIC TRANSMISSION THROTTLE LINKAGE

CONTINUED FROM PRECEDING PAGE

Fuel Level – 11/16" ±1/32" below power valve mounting surface (Tool T52L–9550–AEE).

Accelerating Pump – Inner hole for average or hot weather operation, outer hole for cold weather operation.

Fast Idle: Integral type operated by choke valve. No adjustment required.

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Holley Visi-Flo Carburetors" in Carburetion Section.*

CARB. EQUIPMENT

Fuel Pump: Ford No. COAE-9350-D (Fuel & Vacuum), No. COAE-9350-C (Fuel Only).

Fuel Pump Pressure - 3.5-5.5 lbs. at 500 RPM. *See "Fuel Pumps" in Carburetion Section.*

Gasoline Gauge: King-Seeley Electric "CV" (Constant Voltage) with Gauge Voltage Regulator Ford No. B9MF-10804-A.

►*INACCURATE FUEL GAUGE READING CORRECTION:* Make sure correct fuel tank sending unit installed. *See below.*

Dash Unit - Ford No. COAF-9305-B.

Tank Unit - Ford No. COAF-9A294-B (Sta. Wgn.), No. COAF-9A294-C (Others).

See "Fuel Gauges" in Carburetion Section.

Fuel Filter: Disposable type located in carburetor inlet line Replace every 12,000 miles or if clogged.

Air Cleaner: Dry filter element type. Clean every 4,000 miles, replace element every 24,000 miles.

►*CLEANING CAUTION:* Clean filter element by tapping and shaking to remove dirt particles. If compressed air used, direct air stream from inside surface of filter element. DO NOT wash element in solvent or other liquids and DO NOT oil or lubricate.

ELECTRICAL

►*SEE FORD V8 PAGES (FOLLOWING) FOR ALL BATTERY, STARTER, GENERATOR, REGULATOR & MISC. ELECTRICAL DATA.*

ENGINE

ENGINE SPECIFICATIONS: Own. 6 Cyl., Valve-in-head.

Bore	Stroke	Displacement
3.62"	3.60"	223 cu. ins.
Compr. Ratio	**Rated HP**	**Developed HP**
8.4-1	31.54	145 at 4000 RPM

Compression & Vacuum Reading - *See TUNE-UP.*

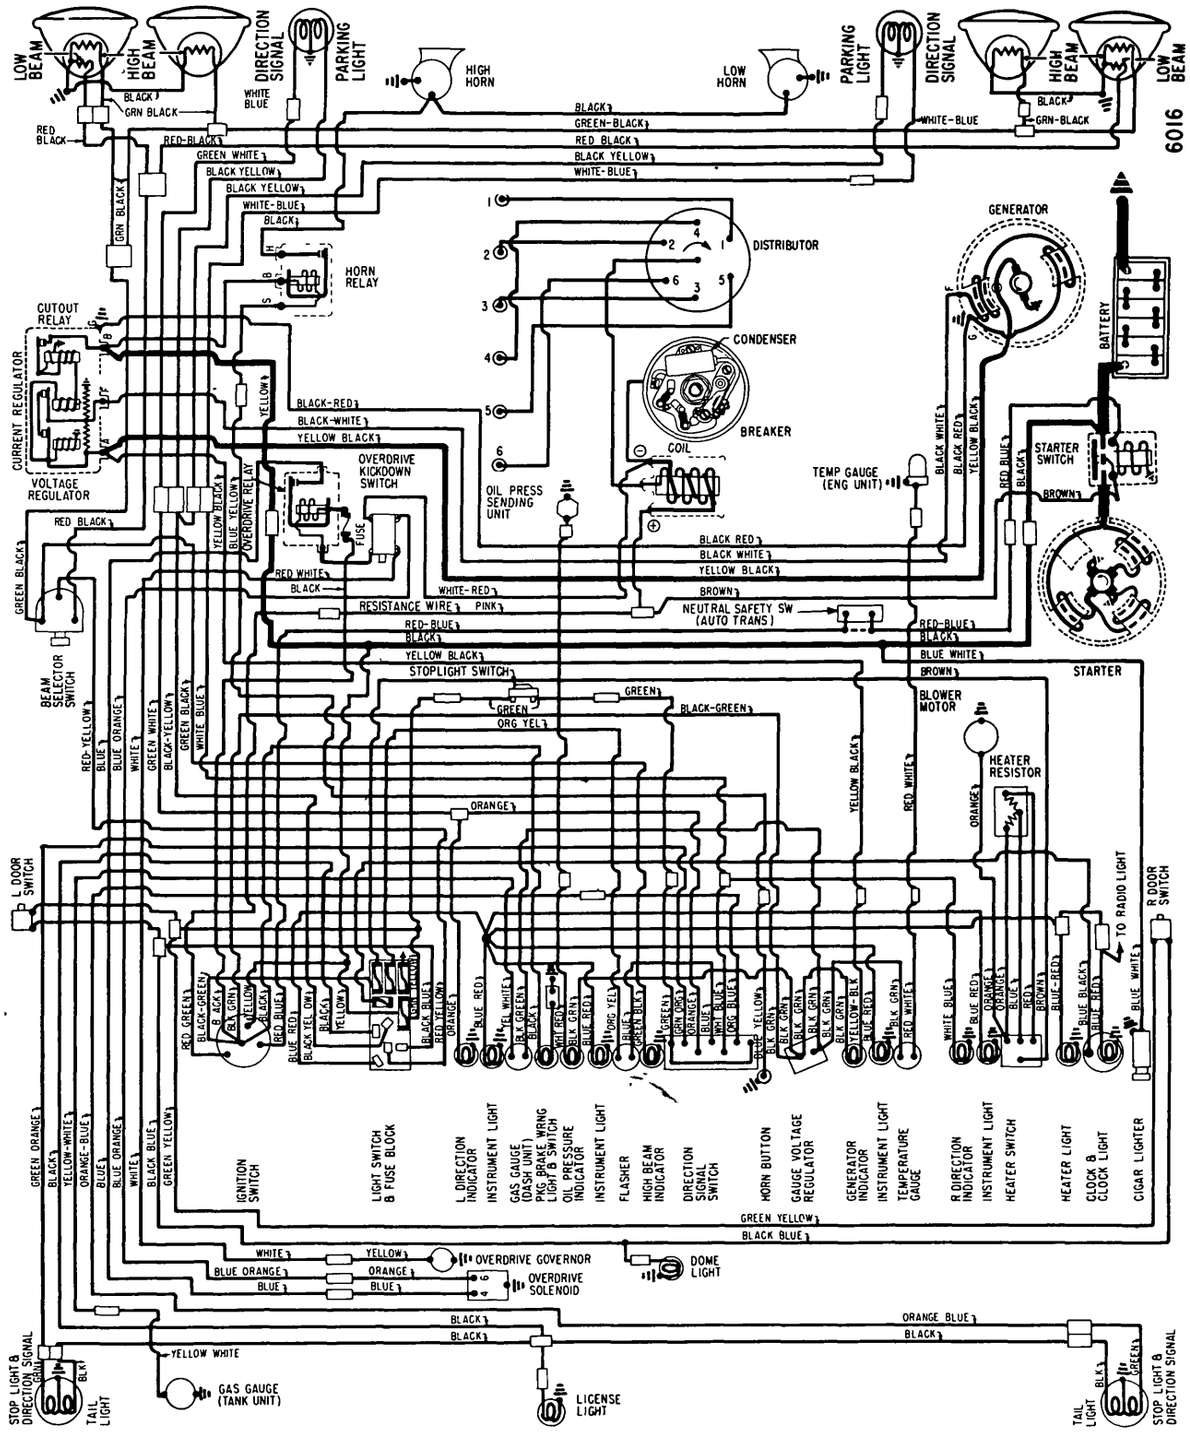
►*ROCKER ARM COVER INSTALLATION NOTE:* Torque cover attaching bolts to specifications twice, once initially and again after two minutes from initial torquing to prevent oil leaks.

CYLINDER HEAD: *See "Cylinder Head & Manifold" in Ford Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Ford Special Data.*

ENGINE REMOVAL: *See "Engine" in Ford Special Data.*

OIL PAN REMOVAL: Drain crankcase and remove flywheel housing cover and crankcase ventilation tube. Remove oil pan retaining bolts and remove pan.



PISTONS

Autothermic type. Solid skirts with three rings.

Removal - Pistons and rods removed from above.

Fitting New Pistons: Clearance - .0008-.0026" at bottom

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

of skirt. Use ½" wide ribbon feeler gauge inserted between piston and cylinder wall at right angle to pin on thrust side, piston inverted and bottom of piston skirt 1½" below top of block. To test minimum clearance, use .0015" feeler and 4 lbs. pull; to test maximum clearance use .003" feeler and 4 lbs. pull.

Replacement Pistons: Furnished Std. (1 size only) and .020", .030", .040", .060" Oversize with fitted pins.

Installing Pistons: Install piston with indentation in head of piston toward front of engine. *See Rod Installation.*

PISTON PIN

Floating type with lock ring at each end.

Diameter - .9120-.9123". **Length** - 3.016-3.030".

Pin Fit in Piston - .0001-.0003". Wear limit .0008".

Pin Fit in Rod Bushing - .0001-.0005". Wear limit .001".

Replacement Pins: Std., .001" & .002" Oversize.

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr. (1 & 2)	.0930-.0935"	.010-.025"	①.0020-.0035"
Oil (3)	.1880-.1890"	.015-.062"	②

① - Wear limit .006". ② - Side sealing type ring.

Replacement Rings: Std., .020", .030", .040" & .060" Oversize

CONNECTING ROD

Journal Diameter - 2.2984-2.2988" (Red), 2.2980-2.2984" (Blue).

Clearance - .0004-.0025". Wear limit .0035".

Side Clearance - .003-.009". Wear limit .012".

Length - 6.258-6.262" center-to-center.

Replacement Bearings: Std. (2 sizes marked Red and Blue), and .002", .010", .020", .030" Undersize.

►*STANDARD SIZE NOTE:* Red marked bearings increase clearance, Blue marked bearings decrease clearance.

Installing Rods: Install rod in piston so that oil squirt hole is to right when indentation on piston head is to front of engine. Rods and caps are numbered 1 to 6. Numbers on rods and caps must be on same side and installed in same numbered cylinders.

CRANKSHAFT

Journal Diameter - 2.4984-2.4988" (Red), 2.4980-2.4984" (Blue).

Bearings - Steel backed copper lead alloy.

Clearance - .0006-.0028". Wear limit .0038".

Replacement Bearings: Std. (2 sizes marked Red and Blue), and .002", .010", .020", .030" Undersize.

►*STANDARD SIZE NOTE:* Red marked bearings increase clearance, Blue marked bearings decrease clearance.

End Thrust: Taken by rear intermediate (No. 3) bearing.

Thrust Bearing Alignment - *See "Crankshaft & Main Bearings" in Ford Special Data.*

Endplay - .004-.008". Wear limit .012".

Crankshaft Rear Oil Seal Installation: *See "Crankshaft & Main Bearings" in Ford Special Data.*

Crankshaft Front Oil Seal Installation: *See "Engine Front Cover" in Ford Special Data.*

►*OIL SLINGER NOTE:* A crankshaft front oil slinger is incorporated on all car and truck engines to reduce oil leakage at front oil seal. Slinger is held in place by crankshaft pulley hub and cylinder front cover. To remove slinger, remove cylinder front cover and slide slinger off crankshaft.

CAMSHAFT

Journal Diameter - 1.9255-1.9265".

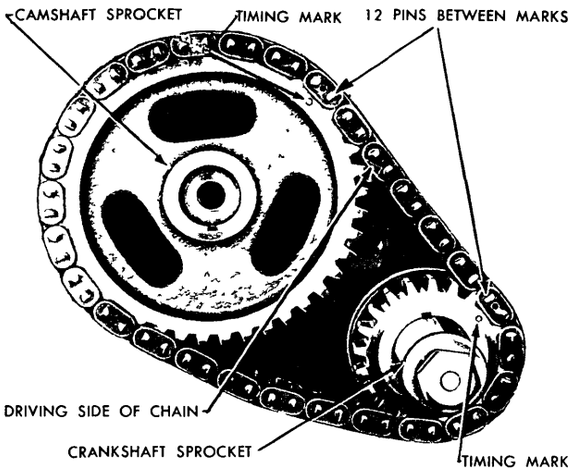
Clearance - .001-.003". Wear limit .006".

End Thrust: Taken by thrust plate and spacer behind camshaft sprocket. *NOTE* - Chamfer on inside of spacer must be toward camshaft journal.

Endplay - .001-.007". Wear limit .012".

Replacement Bearings: Finished bearings furnished Std. & .015" Undersize. *CAUTION* - No. 3 bearing is **not** interchangeable with other bearings.

Camshaft Bearing Replacement - *See "Camshaft & Bearings" in Ford Special Data.*



Camshaft Removal & Installation: *See "Camshaft & Bearings" in Ford Special Data.*

Timing Chain: Side guide type. 56 links.

Camshaft Setting: Sprockets marked by "O" at one tooth. Mesh chain so that there are 12 pins between "O" marks with marks on driving side of chain.

Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Ford Special Data.*

Engine Front Cover Removal: *See "Engine Front Cover" in Ford Special Data.*

FORD 6 CYL. VALVE TIMING MARKS

VALVES

Tappet Clearance: .019" Intake & Exhaust, Hot. *See TUNE-UP*

Valve	Head Diameter	①Stem Diameter
Intake	1.775-1.785"	.3416-.3423"
Exhaust	1.505-1.515"	.3398-.3405"

Valve	Seat Angle	②Lift	③Stem Clearance
Intake	45°④	.273"	.0010-.0024"
Exhaust	45°④	.273"	.0028-.0042"

① - Furnished with .003", .015", .030" Oversize Stems.
② - Cam Lobe Lift. Wear limit .268".
③ - Wear limit .0045" Intake, .0055" Exhaust.
④ - Valve Face Angle 44°.

Valve Stem Seals - Umbrella type seals used on all valve stems. Install with cupped side down.

Valve Seat Width - .070-.090", all valves.

Valve Springs: Free Length - 2.09" approximately.

►*VALVE SPRING INSTALLATION NOTE:* Measure valve spring assembled height from machined surface of cylinder head spring pad to underside of spring retainer. If assembled height is 1 25/32" or greater, install necessary .030" spacer or spacers between cylinder head valve spring pad and valve spring to bring assembled height to recommended dimension of 1 3/4-1 25/32". *Spring ends must be square within 1/16".*

Valve Spring Specifications

Valve	Pressure	Length
Closed	①71-79 lbs.	1.780"
Open	②161-177 lbs.	1.390"

① - Wear limit 64 lbs. at 1.780".
② - Wear limit 145 lbs. at 1.390".

Valve Guides: Integral with cylinder head. When stem-to-guide clearance exceeds maximum (see table above), ream guides and install valves with oversize stems. *See "Valve System" in Ford Special Data.*

Valve Lifters: Mushroom type. Remove from below with camshaft out.

Clearance - .0011-.0027". Wear limit .0055".

Rocker Arm Assembly: *See "Valve System" in Ford Special Data.*

VALVE TIMING

►*VALVE TIMING CHECKING NOTE:* Checking timing by use of quadrant on pulley not recommended by manufacturer. *See "Camshaft Setting" under CAMSHAFT for alignment of sprocket marks, and "Lift" under VALVES for checking of camshaft lobe wear.*

Valve Timing Specifications

Intake Valves - Open 17°① BTDC. Close 53°②ALDC.

Exhaust Valves - Open 61°① BLDC. Close 9°② ATDC.

① - Camlift .016". ② - Camlift .019".

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Ford Special Data.*

Crankcase Capacity: 4 qts. refill, 5 qts. with filter change.

Normal Oil Pressure: 35-55 lbs. at 2000 RPM.

Pressure Regulator Valve - In pump, not adjustable.

Oil Pressure Indicator - Indicator light on instrument panel, operated by engine unit, Ford No. B6A-9278-B.

Oil Pump: Gear type pump located in crankcase.

Overhaul – *See "Oiling System" in Ford Special Data.*

Oil Filter: Disposable type. Replace every 4,000 miles.

Disposable Filter Replacement - Coat gasket face of filter with oil, thread filter on insert by hand until gasket contacts adapter surface, then tighten filter an additional one-half turn.

Crankcase Ventilation: Filter in oil filler cap (inlet), and outlet pipe in rear of crankcase at left side. Clean filter in filler cap every 4000 miles.

COOLING

Water Capacity: 15 qts. Add 1 qt. for heater.

Pressure Valve: Ford No. B8A-8100-A. 12-15 lbs.

Thermostat: Ford No. B7A-8575-A (157-162°) Low Temp., No. B7A-8575-B (175-180°) High Temp., for use with permanent type anti-freeze.

Water Pump: Packless, sealed ball bearing type. *See "Water Pump" in Ford Special Data.*

Temperature Gauge: King-Seeley Electric "CV" (Constant Voltage) with Gauge Voltage Regulator Ford No. B9MF-10804-A.

Dash Unit - Ford No. COAF-10970-B.

Engine Unit - Ford No. B7A-10884-A.

See "Temperature Gauges" in Miscellaneous Section.

MECHANICAL

►*SEE FORD V8 PAGES (FOLLOWING) FOR ALL CLUTCH, SYNCHRO-MESH TRANSMISSION, OVERDRIVE, FORDOMATIC TRANSMISSION, UNIVERSALS, REAR AXLE, SHOCK ABSORBERS, FRONT SUSPENSION, STEERING, BRAKES & MISC. MECHANICAL DATA.*

►*THUNDERBIRD JACKING & HOISTING PRECAUTIONS* Before jacking or hoisting, see "Jacking & Hoisting Precautions" in Suspension & Wheel Alignment Section

MODEL IDENTIFICATION

SERIAL NUMBER: Stamped on plate attached to left front door post Number (example below) includes identification data

Engine Production Code Number: Indicates place, day and month of engine manufacture Not used for licensing Located as follows **292** - Stamped on front of block at pushrod cover-to-cylinder head mounting surface **352** - Stamped on machined boss on left front of engine below cylinder head **430** - Stamped on block in front of left cylinder head

►*ENGINE IDENTIFICATION NOTE* Engines will be referred to as follows

Engine	Designation
Thunderbird 292" V8	**292**
Thunderbird 352" V8	**352**
Thunderbird 352" Special V8	**352**
Thunderbird 352" Police Interceptor V8	**352**
Thunderbird 430" V8 (Thunderbird Car Only)	**430**

TUNE-UP

►*SURGE, MISFIRE OR HARD START CORRECTION* Check for high tension voltage leak at coil, distributor and spark plug leads If leak exists, replace wiring harness with new harness, Part No B8S-12259-A

COMPRESSION PRESSURE: 292 - 160±10 lbs **352** - 180±20 lbs **430** - 200±20 lbs At cranking speed

VACUUM READING: 18" (All Engines) steady at specified engine idle speed with transmission in neutral

VALVE TAPPET CLEARANCE: 292 - 019" Cold, 018" Hot all valves *NOTE* - Adjust all tappets to 019" clearance while engine is cold, then check all tappets for 018" clearance with engine idling after running engine for 30 minutes to normalize temperature

Tappet Adjustment - See "Valve System" in Ford Special Data

352 & 430 - Zero lash, hydraulic lifters

►*SELF-LOCKING TAPPET ADJUSTING SCREW NOTE (292)* Torque required to turn screw (after interference noted) must be 3 ft lbs minimum

MANIFOLD HEAT CONTROL: 292 & 352 - Automatic thermostatic type with counterweight Valve is closed when engine is at normal temperature and running at idle speed and is open when operating at high RPM Spring is installed with ¾ turn wind-up.

CARBURETOR AIR INTAKE DUCT ASSEMBLY (430): See "Fuel System Notes" in Ford Special Data

IGNITION

FIRING ORDER: 292 - 1-5-4-8-6-3-7-2 **352 & 430** - 1-5-4-2-6-3-7-8

Cylinders - RIGHT BANK 1-2-3-4, LEFT BANK 5-6-7-8

SPARK PLUG GAP: 032-036"

Spark Plugs - 292 - Champion F-14-Y **352 & 430** - Champion F-11-Y 18mm Torque to 15-20 ft lbs *NOTE* - Plugs have tapered seat, no gasket used

COIL: Ford No. B6A-12029-B.

Ignition Current - 2 5 amps idling, 4 5 amps stopped

Resistor - Pink resistance wire (1 30-1 40 ohms at 75°F) used between ignition switch and multiple connector on dash

DISTRIBUTOR: Ford. Pivoted breaker plate type. See "Distributors" in Electrical Section

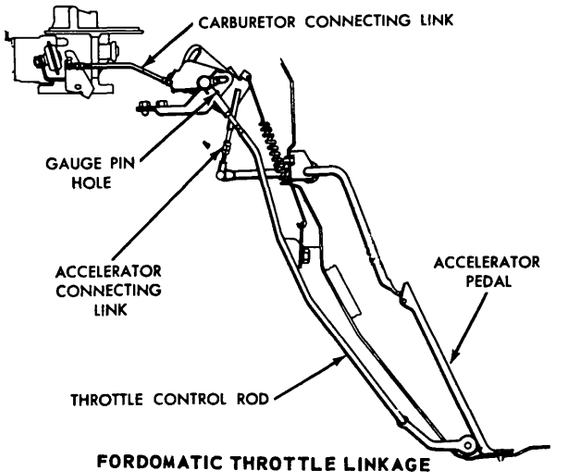
CARBURETOR

►*CARBURETOR APPLICATION: Ford, Holley & Carter Carbur tors used as follows:*

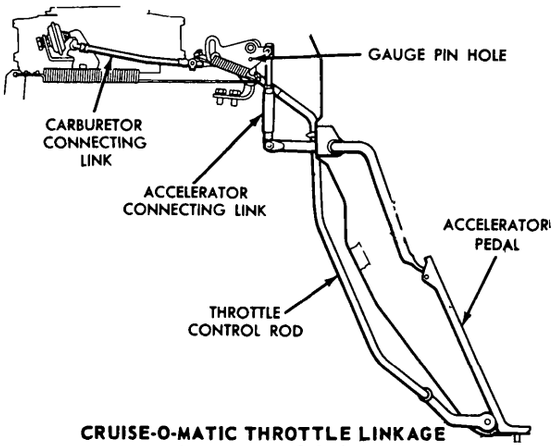
Engin	Carburetor Type
292	Ford 2-Barrel
352	Ford 2-Barrel
352 (Special & Pol. Interceptor V8)	Holley 4-Barrel
430	Carter 4-Barrel

►*THROTTLE LINKAGE PRODUCTION CHANGE & ADJUSTMENT NOTE (EXC. THUNDERBIRD):* A turnbuckle has been installed on clevis end of throttle control rod on later production cars (except Thunderbird). When making preliminary adjustment, rotate clevis. Turnbuckle may be used when making final adjustment by pressure method.



THROTTLE LINKAGE ADJUSTMENT (FORDOMATIC & CRUISE-O-MATIC): Adjust engine to correct idle speed. Stop engine and make anti-stall dashpot adjustment (see below). Disconnect throttle control rod and carburetor connecting link from accelerator bellcrank and insert ¼" gauge pin through gauging holes in bellcrank. Lift carburetor connecting link to normal operating position and maintain forward pressure so carburetor throttle lever is firmly against carburetor idle adjusting screw. Adjust length of connecting link so trunnion fits freely into accelerator bellcrank. Rotate trunnion 1 full turn counterclockwise to lengthen connecting link. Make sure gauge pin fits freely in its holes, then remove pin and attach connecting link to bellcrank. Pull upward firmly but gently on throttle control rod so transmission lever is held against internal stop in transmission and rotate clevis until pin fits freely on accelerator bellcrank **th n lengthen rod by rotating cl vis 3 turns countercl ckwise.** Connect throttle control rod. Adjust accelerator connecting link so distance from top corner of accelerator pedal to floor mat is 3½" (Pass. Cars), 4½" (Thunderbird). *For final adjustment, us pr ssur method as follows:* Raise car and remove 1/8" pipe plug on left side of transmission case and install a pressure gauge. Lower car, install a tachometer and place selector in any "Drive" position. With brakes applied, accelerate engine to 1000 RPM. If pressure below 77 lbs. (Fordomatic), 80 lbs. (Cruise-O-Matic), lengthen throttle rod. If pressure above 84 lbs. (Fordomatic), 85 lbs. (Cruise-O-Matic), shorten rod. *D not lengthen or shorten rod more than 2½ turns from initial 3 turn adjustm nt.*

Anti-Stall Dashpot Adjustm nt (Ford Carb.): With engine idle speed properly set, engine stopped, and throttle in hot idle position, loosen dashpot locknut and bottom dashpot plunger. Clearance between plunger and throttle shaft lever should be .060-.090" (All Engines). Adjust by turning dashpot or adjusting nut. Tighten locknut.



Anti-Stall Dashpot Adjustm nt (Carter Carb.): Set engine at correct idle speed, then stop engine.

1) With primary throttle plates **closed,** clearance between dashpot plunger operating lever and top surface of air horn should be 1/16-5/32". Adjust by bending dashpot lever in area between lever arm base and dashpot plunger.

2) With primary throttle plates **wid p n,** clearance between dashpot plunger operating lever and top surface of air horn should be 3/8-7/16". To adjust, bend stop tang on opposite side of lever arm.

FORDOMATIC THROTTLE LINKAGE

CRUISE-O-MATIC THROTTLE LINKAGE

FORD & HOLLEY 2 & 4-BARREL

FORD 2-BARREL CARBURETOR

Engine	①Carburetor No.
292 Synchro-mesh (Early)	COAE-9510-M
292 Synchro-mesh (Later)	COAE-9510-AF
292 Auto. Trans. (Early)	COAE-9510-H
292 Auto. Trans. (Later)	COAE-9510-AG
352 Synchro-mesh (Early)	②COAE-9510-R
352 Synchro-mesh (Later)	COAE-9510-AB
352 Auto. Trans. (Early)	COAE-9510-S
352 Auto. Trans. (Later)	COAE-9510-AC

FORD 4-BARREL CARBURETOR

352 Synchro-mesh	③COAE-9510-J
352 Auto. Trans.	COAE-9510-K

HOLLEY 4-BARREL CARBURETOR

352 Special & Police	COAE-9510-AA

① - Part No. stamped on left side of fuel bowl (Ford Carb.); on left front side of choke plate flange (Holley Carb.).

② - Replaced by Carburetor No. COAE-9510-AB.

③ - Also furnished in Service Package No. COAZ--9510-C which includes dashpot for auto. trans. cars.

►*MANIFOLD FUEL DISTRIBUTION (292): Carburetor RIGHT barrels feed Cyl. 2-3-5-8, LEFT barrels 1-4-6-7.*

►*MANIFOLD FUEL DISTRIBUTION (352): Carburetor RIGHT barrels feed Cyl. 1-4-6-7, LEFT barrels 2-3-5-8.*

►*HESITATION OR STUMBLE CORRECTION (Ford Carb.):* Use revised accelerator pump adjustment procedure. *See "Ford 2 & 4-Barrel Carburetors" in Carburetion Section.*

Idle Setting - 1-1½ turns open for both screws from a lightly seated position. With engine at normal operating temperature, turn both idle adjusting needles in until engine runs rough from lean mixture, then turn needles out until engine begins to roll. Finally, turn needles in just enough for smooth running (favor a slightly rich mixture.),

Idle Speed - 500-525 RPM (Synchro-mesh), 450-475 RPM (Auto. Trans. in "D") with engine at normal operating temperature.

►*AIR CONDITIONED CAR IDLE SPEED NOTE:* Operate air conditioner at least 20 minutes before setting idle speed.

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Ford 2 & 4-Barrel Carburetors" or "Holley 2 & 4-Barrel Carburetors" in Carburetion Section.*

CARTER AFB 4-BARREL

Engine	Carter No.	①Ford No.	②Distr. No.
430	2992S	COLE-9510-A	B9MF-12127-B

① - Stamped on front of air cleaner flange for identification.

② - Carburetor and Distributor MUST be used together.

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyl. 1-4-6-7, LEFT barrels 2-3-5-8,*

►*IDLE COMPENSATOR CAUTION:* Idle Compensator (thermostatically controlled idle air bypass) must be in closed position when making idle setting and idle speed adjustments. Remove air cleaner and use pencil or suitable tool inserted in throttle bore to hold valve closed.

Idle Setting - Initial setting ½-2 turns open. Turn screws out for richer mixture. With engine at normal operating temperature, turn both idle adjusting screws in until engine runs rough from lean mixture, then turn screws out until engine begins to roll. Finally, turn screws in just enough for smooth running (favor a slightly rich mixture).

Idle Speed - 450-475 RPM with Cruise-O-Matic in either "D" position.

►*AIR CONDITIONED CAR IDLE SPEED NOTE:* Operate air conditioner at least 20 minutes before setting idle speed.

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Carter AFB 4-Barrel Carburetors" in Carburetion Section.*

CARB. EQUIPMENT

Fuel Pump: Fuel only or Fuel & Vacuum as follows:

Model	Ford Pump No.
292 & 352 2-Bbl. (Fuel Only)	COAE-9350-B
292 & 352 2-Bbl. (Fuel & Vacuum)	COAE-9350-A
352 4-Bbl. (Fuel Only)	COAE-9350-E
430 (Fuel Only)	B8B-9350-A or COLE-9350-A

Fu l Pump Pressure - 292 & 352 - 4-6 lbs. at 500 RPM.
430 - 4½-6½ lbs. at 500 RPM.
See "Fu l Pumps" in Carburetion S ction.

CONTINUED FROM PRECEDING PAGE

Gasolin Gaug : King-Seeley Electric "CV" (Constant Voltage) with Gauge Voltage Regulator Ford No B9MF-10804-A (Pass Cars), No B7A-10804-B (T-Bird)

►*INACCURATE FUEL GAUGE READING CORRECTION (Pass. Cars):* Make sure correct fuel tank unit installed *See below*

Dash Unit - Ford No COAF-9305-B (Pass Cars), No COSF-9307-B (T-Bird - Fuel & Temp Gauge Unit)

Tank Unit - Ford No B8S-9275-A (T-Bird), No COAF-9A294-B (Sta Wgn), No COAF-9A294-C (Others) *See "Fuel Gauges" in Carburetion Section*

Fuel Filter: Disposable type located in carburetor inlet line Replace every 12,000 miles or if clogged

Air Cleaner: Dry filter element type Clean every 4,000 miles, replace element every 24,000 miles

►*CLEANING CAUTION* Clean element by tapping lightly against a hard surface DO NOT wash in solvent or other liquids If compressed air used, direct stream from inside surface of filter element

►*AIR CLEANER NOISE CORRECTION (Pass. Cars):* Remove air cleaner element from base, and clean bottom surface of base Install a 37½"long strip of adhesive backed sponge rubber weatherstrip 5/16" thick by 1/2" wide over spot welds in the base and butt ends together carefully Make sure wing nut holding air cleaner is tightened securely and outer edge of inlet flange may be crimped to prevent sharp edges deflecting air flow

BATTERY

Ford Part No. ①	Volts	Plates	②Capacity
B9A-10654-D ③	12	11	55 Ampere Hr
B9A-10654-E ④	12	13	65 Ampere Hr
B9A-10654-F ⑤	12	11	70 Ampere Hr

① - Numbers are for dry type batteries for service replacement ② - At 20 hour rate

③ - Replaces original battery with red filler caps

④ - Replaces original battery with gray filler caps

⑤ - Replaces original battery with yellow filler caps

Battery Ground - Negative, to cylinder block

Engine Ground - Converter or flywheel housing to frame (6 Cyl), Cylinder head to dash (V8)

STARTER

Ford No. B6A-11002-A (6 Cyl., 292 & 352), B9S-11002-A or FAY-11002-A (430).

Armature - B6A-11005-B (All)

Drive - Bendix "Folo-Thru" type Ford 1CM-11350-C (identified by 2900550 or FAY-11001-A on tag attached to frame of starter)

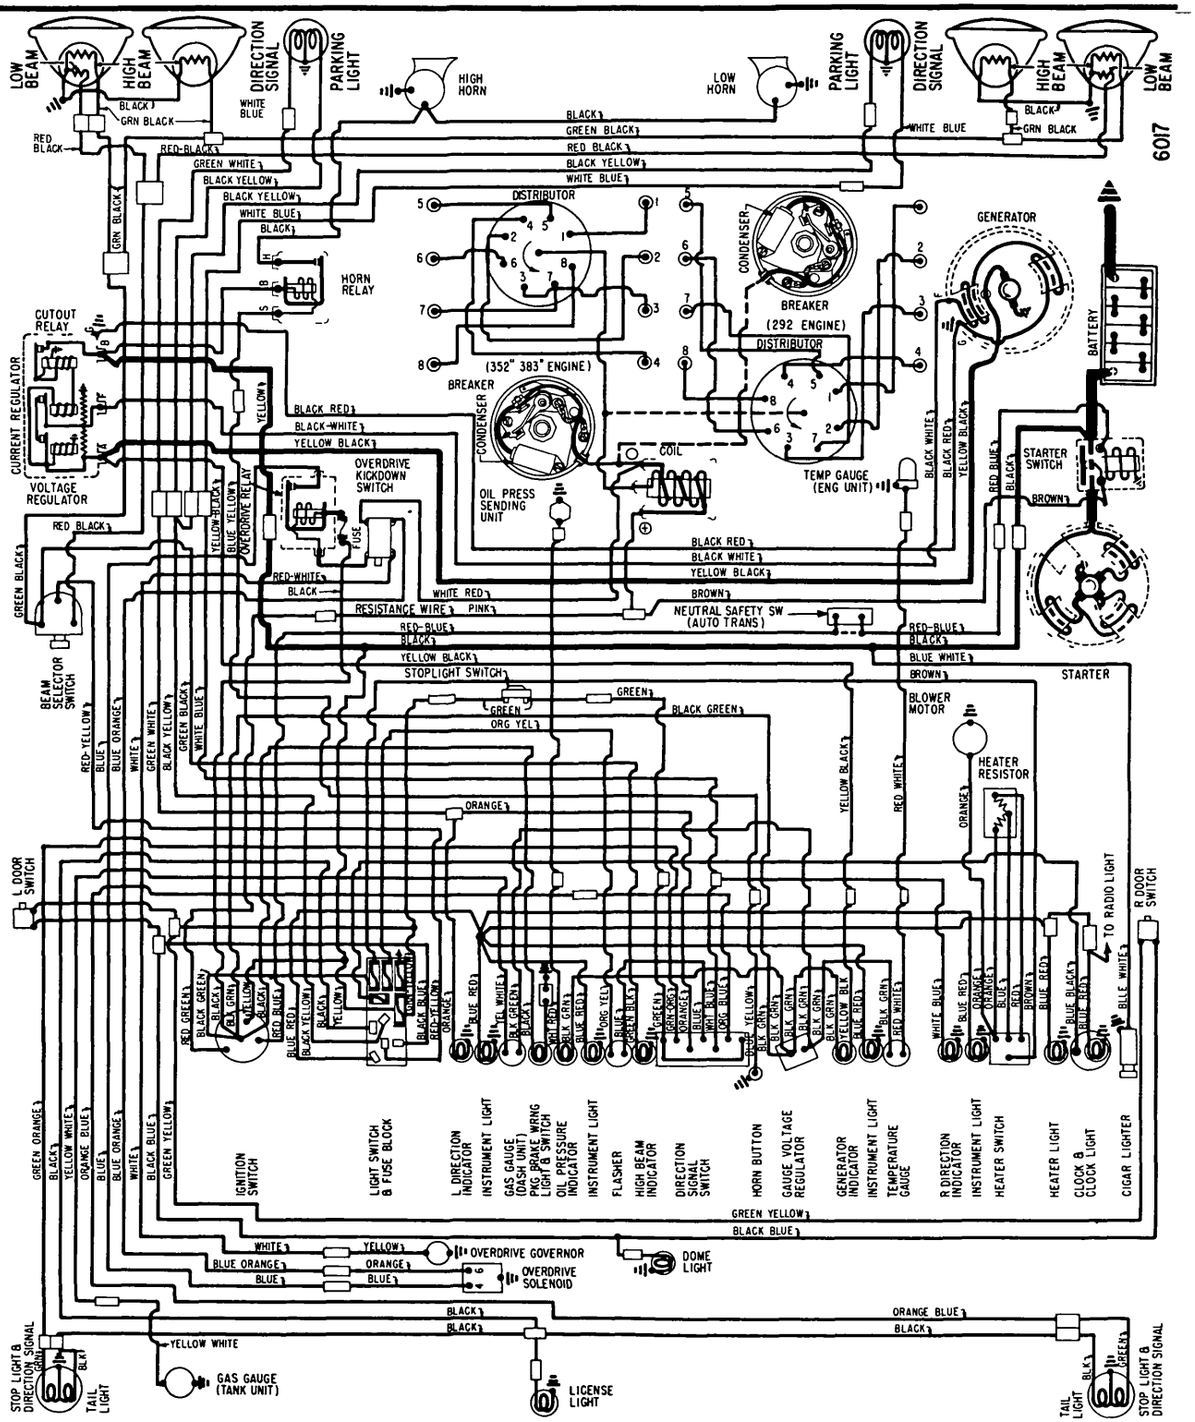
Rotation - Counterclockwise at commutator end

Brush Spring Tension - 48-56 ozs

Cranking Speed - 150-180 RPM, 155-190 amperes

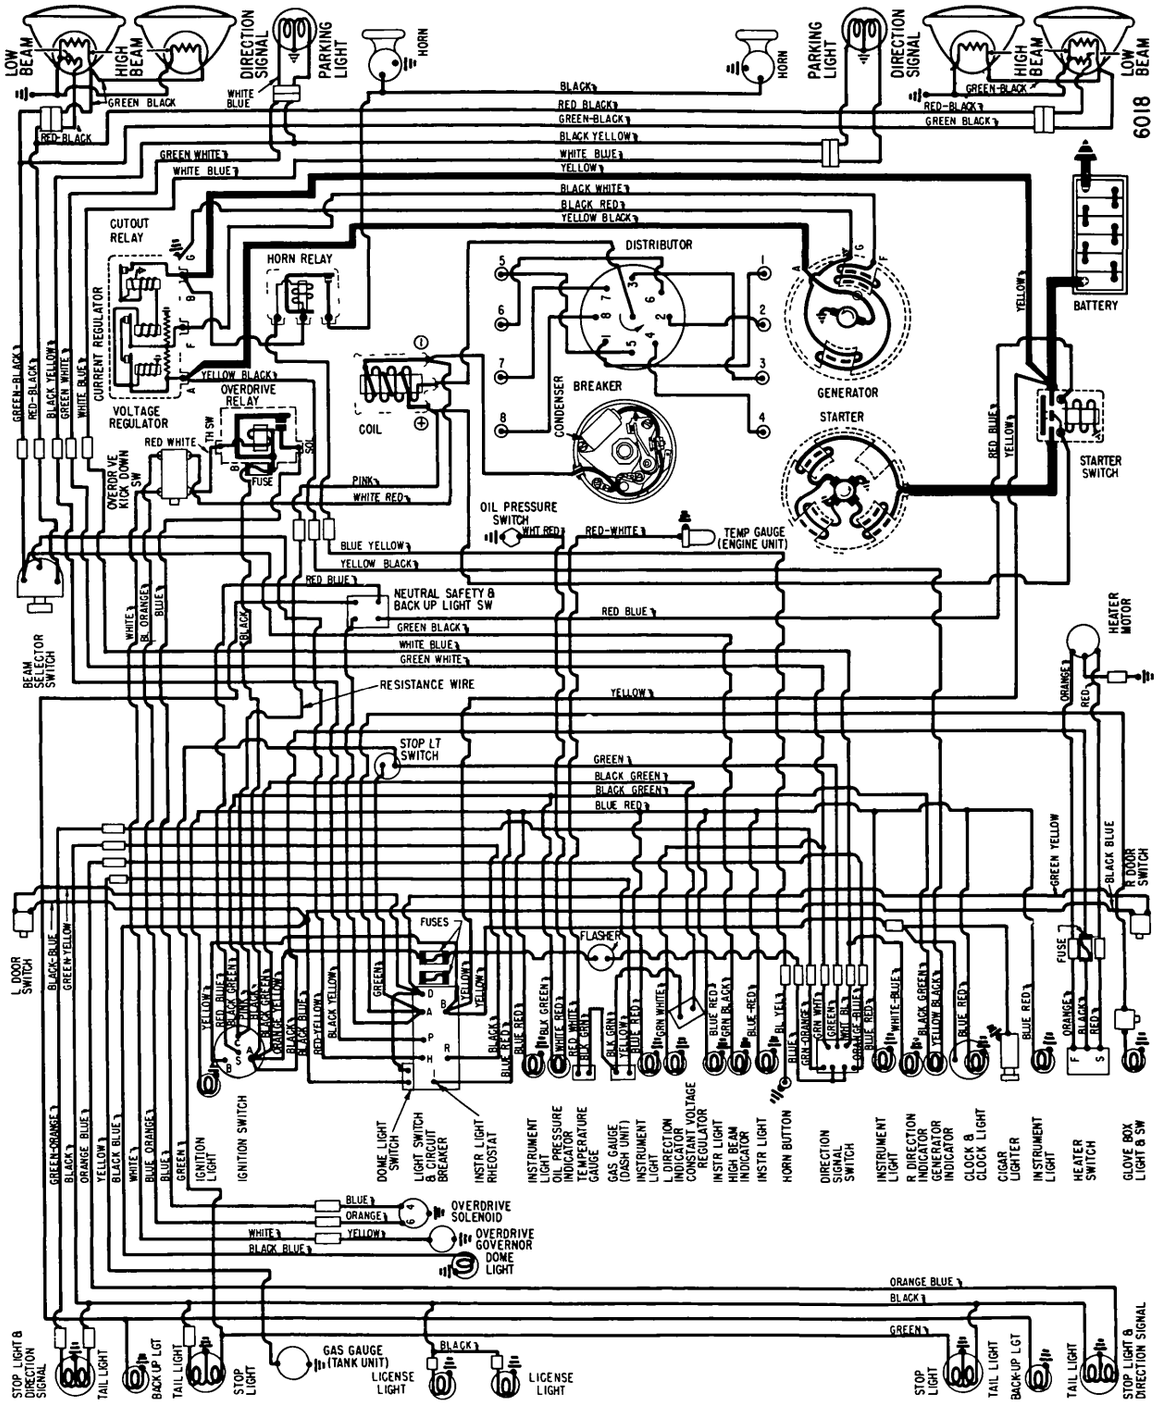
Performance Data

Torque	RPM	Volts	Amperes
0 ft lbs.	①	12 0	80-85
15 5 ft. lbs.		5.0	550



① - With starter on engine and engine idling.

Starting Switch: Magnetic type, Ford No B6A-11450-A, controlled by ignition switch



Neutral Safety Switch (Auto. Trans.): Ford No COAF-7A247-A (Fordomatic), No COAF-7A247-B (Cruise-O-Matic)

Adjustm nt - *See Ford Automatic Transmissions in Transmission Section.*

CONTINUED FROM PRECEDING PAGE

V Itag R gulator

Setting (F rd & Aut lit) - 14.6-15.4 volts (Ford), 14 2-14.9 volts (Autolite) at ambient temperature of 75°F.

Setting (Delco-Remy) - 14.6-15.4 volts at 75°F ambient temperature when operating on upper contacts. .1-.3 volts lower when operating on lower contacts.

Setting (Bosch) - 14.1-14.8 volts (upper contacts), 14.1-14.6 volts (lower contacts) at ambient temperature of 75°F.

Checking & Adjusting - *See Ford, Autolite, Delco-Remy (Double Contact), and Bosch 12-Volt Regulators in Electrical Section.*

Current Regulator

Setting (30 Amp.) - 28-32 amperes.

Setting (35 Amp.) - 33-37 amperes.

Setting (40 Amp. Ford & Autolite) - 38-42 amperes.

Setting (40 Amp. Delco-Remy) - 43.0-51.5 amperes at 85°F ambient temperature (temperature compensated type).

Setting (50 Amp.) - 48-52 amperes.

Checking & Adjusting - *See Ford, Autolite, Delco-Remy (Double Contact), and Bosch 12-Volt Regulators in Electrical Section.*

MISC. ELECTRICAL

►*IGNITION SWITCH BINDING CORRECTION:* If switch fails to return to ON position after engine starts, remove lock cylinder and clean all burrs from inside flat surface of switch bezel and apply lubriplate to this surface.

Headlights: 4-Headlight System. *See "4-Headlight Systems" in Electrical Section.*

Direction Signals: *See Electrical Section.*

Stop Light Switch Location: On forward end of brake master cylinder.

Lighting Switch: New type switch with blade type terminals. Wire connector for switch is a fuse junction block, making switch and fuse block one unit.

Switch Removal - Disconnect battery. Remove switch control knob and shaft by pressing spring-release button on top of switch (switch in "off" position). Unscrew retaining nut and remove switch.

CIRCUIT BREAKER (Pass. Cars): Circuit breaker built into lighting switch protects headlights.

CIRCUIT BREAKER (T-Bird): Circuit breaker built into lighting switch protects Headlights, Parking, Tail, Stop, Instrument Panel, Back-up, & Dome lights.

FUSES (Pass. Cars): 15 Ampere - Parking, Tail, Stop & Instrument Panel lights. On fuse block.

15 Ampere - Overdrive. On overdrive relay.

14 Ampere - Direction Signals. On fuse block.

14 Ampere - Heater Blower. On fuse block.

14 Ampere - Back-up lights. On fuse block.

7.5 Ampere - Radio. On fuse block.

1 Ampere - Clock. On fuse block.

Cigar Lighter - Sulphur disc on back of lighter.

FUSES (T-Bird): 15 Ampere - Overdrive. On overdrive relay.

14 Ampere - Heater Blower. In feed wire from ignition switch.

7.5 Ampere - Interior lights (Dome Light Feed). On fuse block

5 Amper - Direction Signals. On fuse block.

5 Amp r - Radio. In feed wire.

1 Ampere - Clock. In feed wire.

Cigar Light r - Sulphur disc on back of lighter.

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Us extr me car when disconn cting any part of air conditioning equipment or lines for access to engine. See "Air Conditioning Service Cautions" in Miscellaneous Section.*

ENGINE SPECIFICATIONS: Own. 90° V8. 292", 352" & 430" engines of same designs used previously.

►*POLICE SPECIAL ENGINE NOTE: This engine is same as standard 352" Engine but has a high lift camshaft and damper spring and spacer on all valves.*

Engine	Bore	Stroke	Displacement
292	3.75"	3.30"	292 cu. ins.
352	4.00"	3.50"	352 cu. ins.
430	4.30"	3.70"	430 cu. ins.

Engine	Compr. Ratio	Rated HP	Developed HP
292	8.8-1	45.00	185 at 4200 RPM
352 ①	8.9-1	51.20	235 at 4400 RPM
352 ②	9.6-1	51.20	300 at 4600 RPM
430	10.0-1	59.17	350 at 4600 RPM

① - With 2-Bbl. Carb. ② - With 4-Bbl. Carb.

Compression & Vacuum Reading - *See TUNE-UP.*

►*CYLINDER HEAD PRODUCTION CHANGE & VALVE USAGE CAUTION (430 ENG.):* Cylinder Head, Part No. B9ME-6049-C, used up to Dec. 2, 1959. Cylinder Head, Part No. COME-6049-B, used from Dec. 2, 1959. Later type head has **smaller** valve ports and uses smaller diameter valves. *DO NOT INTERCHANGE. See "Head Diameter" under VALVES for correct usage and specifications.*

CYLINDER HEAD & MANIFOLD: *See "Cylinder Head & Manifold" in Ford Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Ford Special Data.*

ENGINE REMOVAL: *See "Engine" in Ford Special Data.*

OIL PAN REMOVAL: Proceed as follows:

292 - Drain crankcase and disconnect oil pump inlet tube at oil pump. Remove oil pan retaining screws and remove pan.

352 (Pass. Cars) - Drain crankcase and remove dipstick. Remove flywheel housing lower cover. Remove oil pan retaining screws and let pan rest on frame crossmember. Crank engine so crankshaft counterweight will clear rear of oil pan. Loosen oil pump inlet tube upper bolt, remove lower bolt and swing tube out of way. Remove pan by moving forward and tilting down.

352 (Thunderbird) - **1)** Drain cooling system and crankcase. Disconnect radiator upper hose at radiator tank. Remove oil pan retaining screws and lower pan to underbody crossmember. Position crankshaft so counterweight will clear pan, then move pan forward.

2) Remove bolts holding coil and move coil out of way. Raise engine so tension is off mounts and remove bolts holding engine to front mounts. Raise engine so bolts holding oil pump can be removed. Remove oil pan and pump.

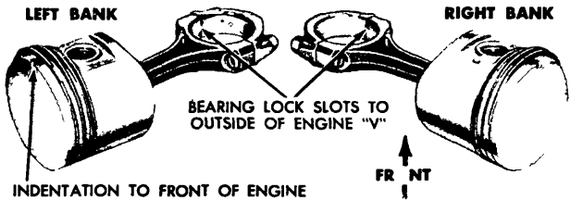
430 - Crank engine until 14° BTDC mark on damper is aligned with pointer. Drain crankcase. Remove both engine front mounts. Remove both engine front support-to-underbody nuts. Raise engine and place 1" wood blocks between engine front support brackets and underbody. Let engine rest on blocks. Remove oil pan retaining screws and let pan rest on underbody crossmember. Loosen oil pump inlet tube upper bolts and remove lower bolt. Swing tube out of way. Remove pan in a lowering forward motion.

PISTONS

Autothermic type. Solid skirt with three rings above pin.

R m val - Pistons and rods removed from above.

Cl aranc (292 & 430) - .0008-.0026" at bottom of skirt. Wear limit .005".



Clearance (352) - .0011-.0029" at bottom of skirt. Wear limit .005".

Checking Clearance - *See "Original Bor & Pistons" in Ford Special Data.*

Installing Pistons - Install piston with indentation in head of piston toward front of engine, and **n 430,** step on piston head toward inside of engine "V", *S e Rod Installation.*

Replacement Pistons: Furnished Std. & .020", .030", .040", .060" Oversize. *NOTE - Std. siz only on 430 engine.*

►*352 ENGINE PISTON IDENTIFICATION:* Pistons for 2-Bbl. Carb. engine have 1 notch on piston dome, pistons for 4-Bbl. Carb. engine have 2 notches.

FORD V8 PISTON & ROD ASSY.

PISTON PIN

Floating type with lock ring at each end **(292 & 352),** press fit in connecting rod **(430).**

Diameter - 292 - .9120-.9123", **352** .9750-.9753", **430** .9749-.9752".

Length - 292 3.016-3.030", **352** 3.156-3.170", **430** 3.480-3.500".

Clearance in Piston (292 & 352) - .0001-.0003" loose. Wear limit .0008". Light thumb press fit at 70°F.

Clearance in Piston (430) - .0002-.0004" loose. Wear limit .0008". Light thumb press fit at 70°F.

Clearance in Rod (292 & 352) - .0001-.0005" loose. Wear limit .001". Light thumb press fit at 70°F.

Clearance in Rod (430) - Interference press fit in rod bushing. *See "Piston Pins" in Ford Special Data.*

Replacement Pins: 292 & 352 - Furnished Std. (Green), .001" (Blue), & .002" (Yellow) Oversize.

430 - Furnished Std. size only (fitted with new pistons).

PISTON RINGS

Two compression rings and one oil ring per piston. Oil ring is "Side Sealing" type (two steel rails with spring spacer between them).

292 Engin

Ring	Width	End Gap	Sid Cl aranc
Compr. 1&2	.0775-.0780"	.010-.025"	① .0020-.0035"

Engine	Red	Blue
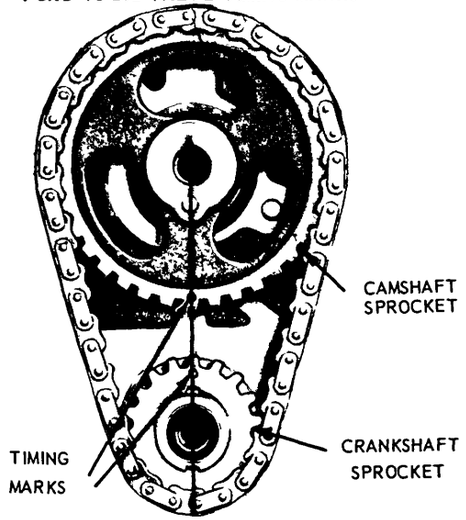
292	2.4984-2.4988"	2.4980-2.4984"
352	2.7488-2.7492"	2.7484-2.7488"
430	2.8998-2.9002"	2.8994-2.8998"



Bearings - Steel backed copper lead alloy.
Clearance - 292 .0006-.0032". Wear limit .0042". **352** .0007-.0029". Wear limit .0039". **430** .0009-.0029". Wear limit .0039".
Replacement Bearings: Std. (2 sizes marked Red and Blue), and .002", .010", .020", .030" Undersize. *NOTE - .040" Undersize also furnished for*
►*STANDARD SIZE NOTE:* Red marked bearings increase clearance, Blue marked bearings decrease clearance.
End Thrust: Taken by No. 3 (center) main bearing.
Thrust Bearing Alignment - *See "Crankshaft & Main Bearings" in Ford Special Data.*
Endplay - .004-.008". Wear limit .012".
Crankshaft Rear Oil Seal Installation: *See "Crankshaft & Main Bearings" in Ford Special Data.*
Crankshaft Front Oil Seal Installation: *See "Engine Front Cover" in Ford Special Data.*
►*OIL SLINGER NOTE:* A crankshaft front oil slinger is incorporated on all car and truck engines to reduce oil leakage at front oil seal. Slinger is held in place by crankshaft pulley hub and cylinder front cover. To remove slinger, remove cylinder front cover and slide slinger off crankshaft.

CAMSHAFT

►*CAMSHAFT IDENTIFICATION NOTE:* 352 Engine with 4-Bbl. Carb. uses camshafts Part No. COAE-6250-B & COAE-6250-A. No. COAE-6250-A identified by "A" between No. 16 lobe and 5th bearing journal. 352 Police Special Engine uses "high lift" camlift, Part No. B9A-6250-A, identified by "B9EA" on rear of 5th bearing journal.
Journal Diameter - 292 1.9255-1.9265", **352** 2.1238-2.1248", **430** 2.264-2.265".
Bearings - Steel backed babbitt lined bushings.
Clearance - .001-.003". Wear limit .006".
End Thrust: 292 - Taken by thrust plate and spacer located between camshaft sprocket and shoulder on camshaft. **Endplay** - .001-.007". Wear limit .012". **352** - Controlled by spring-loaded thrust button on fuel pump eccentric bolt.
430 - Thrust is toward rear. Taken by thrust face of camshaft sprocket riding against front surface of cylinder block.

FORD V8 292 VALVE TIMING MARKS

FORD V8 352" & 430" ENGINE VALVE TIMING MARKS

Replacement Bearings: Std. & .015" Undersize.
Camshaft Bearing Replacement - *See "Camshaft & Bearings" in Ford Special Data.*
Camshaft Removal & Installation: *See "Camshaft & Bearings" in Ford Special Data.*
Timing Chain: Side guide type. Length 56 links (292), 48 links (352), 52 links (430).
►*TIMING CHAIN REPLACEMENT NOTE:* Replace chain and/or sprockets when deflection on slack side exceeds ½" (take up slack on driving side, measure slack on opposite side). Remove and install chain as a unit with both sprockets.
Camshaft Setting (292): Sprockets marked by round depression on one tooth. Mesh chain so that there are 12 chain link pins between timing marks on sprockets when marks are on drive side.
Camshaft Setting (352 & 430): Timing marks on both sprockets adjacent and in line with straightedge across shaft centers.
Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Ford Special Data.*
Engine Front Cover Removal: *See "Engine Front Cover" in Ford Special Data.*

VALVES

Tappet Clearance: 292 - .019" Cold, .018" Hot, All valves. *For preliminary adjustment after overhaul, see "Valve System" in Ford Special Data.*
352 & 430 - Zero lash, hydraulic lifters. *For hydraulic lifter operating range check, see "Valve System" in Ford Special Data.*

292 Engine

Valve	Head Diam.	①Stem Diam.	Length
Intake	1.642-1.652"	.3416-.3423"	5.02"
Exhaust	1.505-1.515"	.3398-.3405"	5.02"
Valve	**Seat Angle**	**②Lift**	**Stem Clearance**
Intake	45°③	.264"	④.0010-.0024"
Exhaust	45°③	.262"	⑤.0028-.0042"

352 Engine

Valve	Head Diam.	①Stem Diam.	Length
Intake	2.022-2.037"	.3711-.3718"	5.356"
Exhaust	1.551-1.561"	.3693-.3700"	5.356"
Valve	**Seat Angle**	**②⑥Lift**	**Stem Clearance**
Intake	30°⑦	.232"	④.0010-.0024"
Exhaust	45°③	.232"	⑤.0028-.0042"

430 Engine

Valve	Head Diam.	①Stem Diam.	Length
Intake	⑧	.3711-.3718"	5.293"
Exhaust	⑨	.3693-.3700"	5.293"
Valve	**Seat Angle**	**②Lift**	**Stem Clearance**
Intake	45°③	.2316"	④.0010-.0024"
Exhaust	45°③	.2316"	⑤.0028-.0042"

① - Furnished with .003", .015" & .030" Oversize stems.
② - Cam lobe lift. Wear loss limit .005".
③ - Valve face angle 44°.
④ - Wear limit .0045"-
⑤ - Wear limit 0055".
⑥ - Except 352 Police Special. High lift camshaft used.
⑦ - Valve face angle 29°.
⑧- 2.080-2.090" with B9ME-6049-C Cyl. Head; 1.962" with COME-6049-B Cyl. Head. *See "Cylinder Head Production Change" above.*
⑨ - 1.770-1.780" with B9ME-6049-C Cyl. Head; 1.655" with COME-6049-B Cyl. Head. *See "Cylinder Head Production Change" above.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Valv S at Width - 070- 090" (All Engines & Valves)
Valve Stem Oil Seals - Umbrella type seals used on all valves Install seals with cup side down over valve guide

►*ROTATABLE VALVE NOTE:* All valves are rotatable type *See "Valve System" in Ford Special Data*

Valve Springs: Install with closed coil end toward cylinder head

►*VALVE SPRING NOTE* Valve damper springs used inside valve springs on 352 Police Special and may be found on other 352 and 430 engines
Free Length - 292 2 09", **352** 2 26", **430** 2 03"

Spring Specifications - 292

Valve	Spring Pressure	Length
Closed	71-79 lbs ①	1 780"
Open	161-177 lbs ②	1 390"

Spring Specifications - 352

Valve	Spring Pressure	Length
Closed	94-104 lbs ③	1 820"
Open	180-198 lbs ④	1 420"

① Spring Specifications - 430

Valve	Spring Pressure	Length
Closed	66-77 lbs ⑤	1 830"
Open	240-260 lbs ⑥	1 430"

① - Wear limit 64 lbs at 1 780"
② - Wear limit 145 lbs at 1 390"
③ - Wear limit 89 lbs at 1 820"
④ - Wear limit 163 lbs at 1 420"
⑤ - Wear limit 60 lbs at 1 830"
⑥ - Wear limit 225 lbs at 1 430"
⑦ - Spring and damper assembly together

Spring Out-of-Square Limit - 072" (All Engines)

►*VALVE SPRING INSTALLATION NOTE·* Measure valve spring assembled height from machined surface of cylinder head spring pad to underside of spring retainer If assembled height is greater than 1 25/32" (292), 1 27/32" (352), 1 55/64" (430), install necessary 030" spacers between cylinder head valve spring pad and valve spring to bring assembled height to recommended 1 3/4-1 25/32" (292), 1 13/16-1 27/32" (352), 1 13/16-1 55/64" (430) *CAUTION* - DO NOT install spacers unless necessary to bring measurement within specifications

Valve Guides: Integral with cylinder head When stem-to-guide clearance exceeds maximum (see table above), ream guides and install valves with oversize stems *See "Valve System" in Ford Special Data*

Valve Lifters (292): Mechanical, mushroom type Remove from below after camshaft removed
Clearance - 0011"- 0027" Wear limit 0055"

Valve Lifters (352 & 430): Hydraulic, barrel type Can be removed through pushrod holes without disturbing valve chamber cover or manifold
Clearance - 0005- 0020" Wear limit 005"
Lifter Overhaul - *See "Valve System" in Ford Special Data*
Hydraulic Lift r Op rating Rang - *See "Valve Syst m" in Ford Special Data*

Rock r Arm Ass mbly: *See "Valve System" in Ford Special Data*

VALVE TIMING

►*VALVE TIMING CHECKING NOTE* Checking timing by use of quadrant on pulley not recommended by manufacturer *See "Camshaft Setting" under CAMSHAFT for alignment of sprocket marks, and "Lift" under VALVES for checking of camshaft lobe wear*

Valve Timing Specifications - 292
Intake Valves - Open 12°①BTDC Close 54°②ALDC
Exhaust Valves - Open 58°③BLDC Close 8°④ ATDC

Valve Timing Specifications - 352 (2-Bbl.)
Intake Valves - Open 17°⑤BTDC Close 59°⑥ALDC
Exhaust Valves - Open 57°⑤BLDC Close 19°⑥ ATDC

Valve Timing Specifications - 352 (4-Bbl.)
(Camshaft No. COAE-6250-A)
(Exc. Police Interceptor with High Lift Camshaft)
Intake Valves - Open 22°⑤BTDC Close 68°⑥ALDC
Exhaust Valves - Open 68°⑤BLDC Close 22°⑥ ATDC

Valve Timing Specifications - 430
Intake Valves - Open 22°⑤BTDC Close 68°⑦ ALDC
Exhaust Valves - Open 63°⑤BLDC Close 27°⑥ ATDC

① - Camlift 016" ② - Camlift 019", ③ - Camlift 015"
④ - Camlift 018" ⑤ - Camlift 002" ⑥ - Camlift 005"
⑦ - Camlift 0045"

OILING SYSTEM

►*ENGINE OILING SYSTEM See 'Engine Lubrication' under OILING SYSTEM in Ford Special Data*

Crankcase Capacity: 5 qts refill, 6 qts with filter change

Normal Oil Pressure: 35-55 lbs at 2000 RPM
Pressure Regulator Valve - In pump body, not adjustable
Oil Pressure Indicator - Indicator light on instrument panel, operated by engine unit, Ford No B6A-9278-B

Oil Pump (292 & 352): Rotor type driven by distributor through intermediate drive shaft Located outside crankcase on left side (292), on inside crankcase at front (352)

Oil Pump (430): Combination oil-vacuum pump located on inside crankcase at front and driven by distributor through intermediate drive shaft

Pump Overhaul (All Engines): *See "Oiling System" in Ford Special Data*

Oil Filter: Full flow disposable type
Filter- Replacement - Coat gasket face of filter with oil, thread filter on bracket by hand until gasket contacts adapter face, then tighten filter an additional ½-turn Run engine and check for leaks *CAUTION - Do not overtighten*

Crankcase Ventilation: Filter in oil filler cap (inlet) and ventilation tube at rear of engine Clean and lubricate filler cap filter at 4000 mile intervals

COOLING

►*430 ENGINE NOTE* Three-stage engine warm-up and cooling system with water jacketed intake manifold and a thermostat in front of each cylinder head Same design as used previously.

Water Capacity: 20 qts (T-Bird), 19 qts (Pass Cars) Add 1 qt for heater

Pr ssur Valv : Ford No B8A-8100-A 12-15 lb radiator filler cap

Th rm stat: One thermostat located in water outlet connector (All Engines), plus 2 thermostats in front face of block behind water pump (430) See table below

R plac m nt Th rm stats

Engin	Op ns	F rd Part N .
292 & 352	160°F	B7A-8575-A
292 & 352	① 177-182°F	B7A-8575-B
430	160°F	B8E-8575-B
430	① 178°F	B9S-8575-A
430 (In block)②	137-142°F	B9S-8575-B

① - For use with permanent type anti-freeze
② - Two used

►*THERMOSTAT INSTALLATION NOTE:* Install thermostat with pivot shaft in vertical position to insure best operation

Water Pump: Packless, sealed ball bearing type *See "Water Pump' in Ford Special Data*

Temperature Gauge: King-Seeley Electric "CV" (Constant Voltage) with Gauge Voltage Regulator Ford No B9MF-10804-A
Dash Unit - Ford No COAF-10970-B (Pass Cars), No COSF-9307-B (T-Bird - Fuel & Temp Gauge Unit)
Engine Unit - Ford No B7A-10884-A
See "Temperature Gauges" in Miscellaneous Section

CLUTCH

Long. Used as follows

Cover Ass mbly

Engine	Model	L ng No.	F rd N .
6 Cyl Std	9½CF	268594	1A-7563-A
6 Cyl H D	11NC	266978	B7A-7563-C
292 Std	10½CF	260108	COAA-7563-A
292 H D	11CF	267350	B8A-7563-B
352 Std & H D	11CF	267350	B8A-7563-B
352 Special & Police (10½")			COAA-7563-C
352 Special & Police (11")			COAA-7563-B

Clutch Disc

Engine	L ng N .	F rd No.
6 Cyl Std	288849	B8A-7550-A
6 Cyl H D	288851	B8A-7550-B
292 Std	280166	COAA-7550-A
292 H D ,352 Std & H D	288351	B8A-7550-F
352 Special & Police (10½")		COAA-7550-C
352 Special & Police (11")		COAA-7550-B

See "Long Clutches" in Clutch Section

Pedal Adjustment: If total pedal travel is less than 6 5/8" or more than 6 7/8", reposition pedal bumper and bracket until travel is within limits Adjust spring link to give assist spring length of 9¾-10" (between spring eye centers) with pedal fully released against bumper
Free Travel - With engine idling, depress pedal to take up free travel and note reading from released position Free travel should be 1" To adjust, turn adjusting nut on equalizer rod Tighten locknut securely Operate engine at 3000 RPM Free travel should not be less than ½" Readjust equalizer rod if necessary *Free travel must be set exactly*

Removal: Remove transmission (or slide back far enough to clear input shaft, *see "Synchro-mesh Transmission" below),* then remove flywheel housing cover and release lever retracting spring Slide release bearing and hub off release lever Mark clutch cover and flywheel for reinstallation Loosen six cover bolts uniformly to release spring tension Remove cover and pressure plate through opening in flywheel housing

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

SYNCHRO-MESH TRANSMISSION

Own. Helical gear, constant mesh, synchro-mesh (second & high), sliding gear (low & reverse).
See "Ford Synchro-mesh Transmission" in Transmission Section.

Transmissi n Contr l: *See "Transmission Controls" in Transmission Section.*

R m val (Pass. Cars): Raise car and disconnect drive shaft at rear joint flange. Slide drive shaft off transmission output shaft. Insert Tool T57L-7657-A over output shaft and into seal. Disconnect speedometer cable at extension housing, gear shift rods from transmission levers, and parking brake cable from equalizer lever. Remove extension housing-to-engine rear support bolts, raise rear of engine and remove engine rear support and frame crossmember as a unit. Place jack under transmission and remove transmission-to-flywheel housing bolts. Install guide pins in the two lower bolt holes. Slide transmission and jack to rear to clear input shaft and remove transmission from beneath car.

R m val (T-Bird): Drain transmission, disconnect drive shaft from rear joint, parking brake adjusting rod, and parking brake cables from equalizer. Disconnect right and left exhaust pipes at manifolds and remove exhaust pipe from section as an assembly (rear connection just behind equalizer pipe). Disconnect transmission from rear support and raise transmission to take weight off crossmember. Remove attaching bolts and move crossmember out of way. Disconnect speedometer cable bracket and cable, gear shift rods from shift levers and remove rods. Remove flywheel-to-transmission attaching bolts and remove transmission.

OVERDRIVE

Warn r R10. Solenoid operated type, with governor control and throttle operated kickdown.
See "Warner R10 Overdrive" in Transmission Section.

Ov rdriv Contr l: *See "Overdrive Control" in Transmission Section.*

R m val: Same as for Synchro-mesh Transmission (above) after disconnecting control cable and wiring.

AUTOMATIC TRANSMISSION

Tw -Sp d F rd matic and **Cruise-O-Matic** of same designs used previously.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: S "Ford 2-Speed Automatic" and "Ford Aut matic" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Ford 2-Speed Automatic" and "Ford Automatic" in Transmission S ction.*

Lubricati n: Check fluid level every 1000 miles, drain and refill every 24,000 miles. **Use nly F rd Aut matic Transmission Fluid, Part N . B8A-19582-A r Automatic Transmissi n Fluid Typ A, Suffix A.**
Ch cking Fluid L v l - With transmission at normal operating temperature, move selector lever through all ranges to assure fluid distribution, then place lever in "P" position. With engine idling, maintain fluid at "F" mark on dipstick. DO NOT OVERFILL.

Throttle Linkage Adjustment: *See CARBURETOR above.*
►*OTHER DATA: See "Ford 2-Speed Automatic" and "Ford Automatic" in Transmission Section.*

UNIVERSALS

Needle bearing type.
►*CAUTION:* Rear universal joint companion flange nut controls pinion bearing preload (must be adjusted whenever nut is loosened). *See "Ford Deep-Offset Hypoid" in Rear Axle Section.*

►*REAR UNIVERSAL JOINT INSTALLATION CAUTION:* To eliminate possibility of early failure, the bearing retaining strap must be correctly positioned in cast recess in rear axle flange prior to tightening attaching "U" bolts.

REAR AXLE

Own. Separate carrier type, semi-floating, hypoid, with Hotchkiss Drive. "Equa-Lock type Differential" optional. *See "Ford Deep-Offset Hypoid" and "Ford Equa-Lock Differential" in Rear Axle Section.*

Axle Ratios & Identification Code: *NOTE - Identification code number or letter stamped under AXLE on car patent plate on left front door hinge pillar post.*

Axle Ratio	Code
3.56-1 (32-9)	1
3.89-1 (35-9)	2
3.10-1 (31-10) ①	3
3.78-1	4
3.22-1	6
2.91-1 (32-11) ②	8
3.70-1 (37-10) ③	9
3.56-1 (Equa-Lock)	A
3.89-1 (Equa-Lock)	B
3.10-1 (Equa-Lock)	C

① - With Cruise-O-Matic on Thunderbird with 352 Engine.
② - With 430 Engine and Cruise-O-Matic.
③ - With Std. & O.D. Trans. on Thunderbird with 352 Engine.

Backlash - .004-.009". Max. variation between teeth .003".

Axle Shaft Removal: Remove wheel and brake drum. Remove axle bearing retainer nuts (work through opening in axle shaft flange). Use Puller No. 4235-N and pull axle shaft (do not disturb brake backing plate or damage wheel bearing oil seal). Replace one nut to securebrake backing plate.

Carri r Ass mbly R moval: Remove axle shafts (see above) and drive shaft. Remove carrier attaching nuts and remove carrier.

SHOCK ABSORBERS

Direct acting, non-adjustable. Serviced by replacement.

Ford Shock Absorber Nos.

Model	Front	Rear
T-Bird	CODZ-18124-A	COAZ-18125-F
Sta. Wgn. Std.	COAZ-18124-B	COAZ-18125-D
Sta. Wgn. H.D.	COAZ-18124-C	COAZ-18125-E
Pass. Std.	COAZ-18124-D	COAZ-18125-A
Pass. H.D. & Taxi	COAZ-18124-E	COAZ-18125-B

FRONT SUSPENSION

Independent. Ball-Joint type with shock absorbers mounted within coil springs.
See "Ford Front Suspension" in Suspension & Wheel Alignment Section.

►*NOTE: Stabilizer bar not used on 6 Cyl. Cars.*

►*FRONT WHEEL BEARING ADJUSTMENT PROCEDURE & CAUTION (Pass. Cars): Following procedure supersedes previous instructions.* Rotate wheel slowly and tighten adjusting nut to 11.5-12.5 ft. lbs. while wheel rotates. Then back off nut 1 castellation but not more than 2 castellations.

Caster - (Pass. Cars) Pos. ¾° to 1¼°.
Caster - (T-Bird) Pos. ½° to Pos. 1½°. Maximum variation between wheels ½°.
Camber - (Pass. Cars) Pos. ½° to Pos. 1°. Maximum variation between wheels ½° (¼° preferred).
Camber - (T-Bird) Pos. ½° to Pos. 1½°. Maximum variation between wheels ½° (¼° preferred).
Toe-In - 1/8-1/4" (Pass. Cars), 1/16-1/8" (T-Bird).

NOTE - When checking toe-in on cars with power steering, engine should be running so that power steering control valve will be properly centered.

Toe-Out on Turns (Pass. Cars) - With outer wheel at 20°, inner wheel should be at 24¼°.
Toe-Out on Turns (T-Bird) - With inner wheel at 20°, outer wheel should be at 17 1/8°.

STEERING

Manual: Own. Recirculating ball worm and nut.
See "Saginaw Ball Bearing Worm & Nut" in Steering Section.

Power Steering: Bendix Linkage Type. Used in conjunction with standard steering gear.
See "Bendix Linkage Type Power Steering" in Steering Section.

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

St ring G ar R m val: *S e "Saginaw Ball B aring Worm & Nut" in Ste ring S ction.*

CONTINUED ON NEXT PAGE

BRAKES

Ford-Bendix Hydraulic. Parking lever applies rear wheel service brakes.
See "Ford-Bendix Hydraulic" in Brake Section.
Drum Diameter - 11" front & rear.
Wheel Cylinder Diameter - 1 3/32" front; 15/16" rear, Pass. Cars; 29/32" rear, T-Bird.

Brake Lining Width & Length

Car Series		Primary	Secondary
30, 40, 50	(Front)	2½" x 11.62"	2½" x 11.93"
	(Rear)	2½" x 10.62"	2½" x 11.93"
60 Ⓒ	(Front)	3" x 10.62"	3" x 11.93"
	(Rear)	2½" x 10.62"	2½" x 11.93"
Thunderbird	(Front)	2½" x 11.62"	2½" x 11.93"
	(Rear)	2½" x 11.62"	2½" x 11.93"

Ⓒ - Also includes Police Interceptor and Taxi.
Clearance - Adjusting screw backed off 14-16 notches (Thunderbird), or until shoes are free of drag (Pass. Cars), from point where shoes are tight against drum.
►*LEFT REAR WHEEL ADJUSTMENT CAUTION:* Adjusting slot in **left rear wheel** carrier plate is located to rear of vertical centerline of plate. Position **and rotation** of adjusting screw **is reversed** from other wheels.
Standard Master Cylinder: Located on engine side of firewall.
Checking Fluid - Maintain fluid level to within ½" of top.
Master Cylinder Bore Diameter - 1".
Removal - Disconnect rubber boot from rear of master cylinder (passenger compartment side), brake line and stop light switch wires. Remove attaching bolts and remove cylinder.

Power Brakes: V8 Pass. Cars and Thunderbird without Air Cond. use Bendix type. 6 Cyl. Cars and Thunderbird with Air Cond. use Bellows type.
See "Bendix Hydraulic (Disc) Reaction Type Power Unit" and "Ford Bellows Type Power Unit" in Brake Section.

Removal (6 Cyl.) - Remove vacuum hose, valve adjusting eccentric nut, flat washer, spring and bushing and eccentric. Remove nylon bushing from valve housing, bracket-to-dash panel retaining screw and remove unit.

Removal (Bendix Type - V8 Cars & T-Bird) - From under instrument panel remove horseshoe retaining clip or eccentric bolt locknut and push eccentric bolt out through brake pedal and power unit pushrod. Disconnect stoplight switch wires, brake line and both vacuum hoses from power unit (under hood). Remove power unit retaining bolts and remove unit.

Removal (Bellows Type - T-Bird) - Disconnect stoplight switch wires and brake line and force as much fluid as possible from master cylinder. Remove master cylinder and slide boot off pushrod. Remove headlight dimmer switch and left cowl trim panel. Remove hood control cable from bracket by removing cable-to-bracket nut. Remove overdrive control handle and bracket (if equipped). Remove left vent air register panel by loosening 6 screws and 3 attaching bolts, lowering parking brake control handle and tilting panel outward at bottom. Disconnect vacuum hose at power unit. Remove valve adjusting eccentric nut, flat washer, spring and sleeve and slide eccentric to left until it contacts brake pedal. Remove bolts and screws from power unit mounting bracket and remove unit carefully.

MISC. MECHANICAL

Windshield Wipers: Vacuum or Electric types with Link & Crank Arm type linkage (Pass. Cars), Vacuum with Cable Control (T-Bird).
See "Windshield Wipers" in Miscellaneous Section.

Power Window Regulators: Electric type.
See "Electric Window Regulators" in Misc. Section.

Power Seat Control: 4-Way Electric.
See "Power Seat Controls" in Miscellaneous Section.

Power Top Control: Electric-Hydraulic.
See "Power Top Controls" in Miscellaneous Section.

Air Conditioning: *See "Air Conditioning" in Miscellaneous Section.*

MODEL IDENTIFICATION

SERIAL NUMBER: Stamped on plate on left front cab pillar or glove box door On Parcel Delivery models, plate is on right hand dash panel *NOTE* - Number (example below) includes identification data as follows

① ② ③ ④ ⑤ ⑥
C 550 C O U 10001

① - Truck Model Type *See Truck Model Table below*
② - Truck Model Size *See Truck Model Table below*
③ - Engine *See Table Below*
④ - Year Model **1960.**
⑤ - Assembly Plant *See Table below*
⑥ - Beginning Vehicle Number

Engine Designation

Letter		Sales Designation
B	- 2 Bbl Carb (Export)	292 MD V8
C	- 2 Bbl Carb	292 MD V8
D	- 4 Bbl Carb	292 HD V8
E	- 4 Bbl Carb (Export)	292 V8
J	-	223 Six

►*ENGINE IDENTIFICATION NOTE.* In the following Ford Truck data pages, engines will be referred to as follows

Engine	Designation
6 Cyl 223"	6 Cyl
V8 292" 2-Bbl Carb Med Duty	292MD
V8 292" 4-Bbl Carb Heavy Duty	292HD

Truck Model

Letter	Type	Number	Size
F	Conventional	100,250,350,400	Light Duty
C	Tilt Cab	500,550,600	Medium Duty
B	School Bus		
P	Parcel Del		

Assembly Plant Designation

A - Atlanta	H - Lorain	P - St Paul
D - Dallas	K - Kansas City	R - San Jose
E - Mahwah	N - Norfolk	U - Louisville
G - Chicago		

TUNE-UP

COMPRESSION PRESSURE: 150 lbs ± 10 lbs at cranking speed Cylinders must be equal within 10 lbs
VACUUM READING: 18" (All) at idling speed
VALVE TAPPET CLEARANCE: Can be set with engine cold but must be rechecked with engine at operating temperature (30 minutes operation at 1200 RPM) and idling
Cold Clearance - 019" All valves All engines
Hot Clearance - 019" (6 Cyl), 018" (292MD & HD), All valves
►*SELF-LOCKING TAPPET ADJUSTING SCREW NOTE* Torque required to turn screw (after interference noted) must be 3 ft lbs minimum
MANIFOLD HEAT CONTROL (EXC. V8HD): Automatic thermostatic type Located at center of exhaust manifold (6 Cyl) between crossover pipe and right exhaust (V8MD) Install valve assembly with stop pin at top of valve housing and hook thermostatic spring on stop pin

IGNITION
6 CYL. ENGINE

FIRING ORDER: 1-5-3-6-2-4
SPARK PLUG GAP: 028-032"
Spark Plugs - Champion 860 18 mm Torque to 15-20 ft lbs *NOTE* - Plugs have tapered seat, no gasket used
COIL: Ford B6A-12029-B.
Ignition Current - 2 5 amps idling, 4 5 amps stopped
Resistor - COLF-12250-A 1 3-1 4 ohms at 75°F
►*COIL RESISTOR NOTE:* New Ignition Resistor Wire Assembly is connected to a small pigtail from ignition switch and to upper quick disconnect at dash panel Resistor Wire Assembly is bypassed during cranking by lead from starter solenoid to battery terminal of coil
DISTRIBUTOR: Ford. "Loadomatic" type Used as follows

Distributor No.	①Identification No.
B8A-12127-M (Early)	FET-12127-C
COAF-12127-G (Later)②	COAF-12127-G

① - This number stamped on distributor housing
② - Use this distributor to replace B8A-12127-M
See "Distributors" in Electrical Section
►*DISTRIBUTOR ROTOR CHECK* Distributors not marked with daub of yellow paint should be checked for proper spring contact of flush to 040" above rotor top Improperly formed contact on rotor will create an air gap between rotor and cap, causing engine to miss
Condenser - Ford 7RA-12300-C **Capacity** - 21- 25 mfd
Contact Point Set - Ford FAA- 12171-A
Breaker Gap - 024- 026"
Breaker Arm Spring Tension - 17-20 ozs
Rotation - Clockwise viewed from above

Advance Performance
►With Distributor on Test Stand

Distr Degrees	Vacuum (" of Hg)	Distr RPM
0	38	450
2½-3½	79	650
6¾-7¾	2 85	1100
8¾-9¾	4 33	1400
10¼-11¼	5 99	1800

►*DISTRIBUTOR REMOVAL & INSTALLATION CAUTION* Scribe marks on distributor body to indicate rotor to body position and body to block position before removing Align marks when installing Make sure oil pump intermediate shaft engages distributor shaft properly

V8 ENGINES

FIRING ORDER: 1-5-4-8-6-3-7-2
Cylinders - RIGHT BANK 1-2-3-4, LEFT BANK 5-6-7-8
SPARK PLUG GAP: 028-032"
Spark Plugs - Champion 860 (292MD), F10 (292HD) 18 mm Torque to 15 20 ft lbs *NOTE* - Plugs have tapered seat no gasket used
COIL: Ford B6A-12029-B
Ignition Current - 2 5 amps idling, 4 5 amps stopped
Resistor - COLF-12250-A 1 3-1 4 ohms at 85°F
►*COIL RESISTOR NOTE* New Ignition Resistor Wire Assembly is connected to a small pigtail from ignition switch and to upper quick disconnect at dash panel Resistor Wire Assembly is bypassed during cranking by lead from starter solenoid to battery terminal of coil
DISTRIBUTOR: Centrifugal & Vacuum Advance type used on 292MD Centrifugal type used on 292HD as follows

Engine	①Distributor No
292MD	**COTF-12127-B**
292HD Synchro-mesh	**COTF-12102-C**
292HD Auto Trans	**COTF-12102-D**

① - Stamped on distributor housing
See "Distributors" in Electrical Section
Condenser No. - B7A-12300-C (Exc COTF-12127-B), B9TF-12300-A (COTF-12127-B) **Capacity** 21- 25 mfd
Contact Point Set - B8C-12171-A (Exc COTF-12127-B), B7A-12171-A (COTF-12127-B)
Breaker Gap - 014- 016"
Cam Angle - 26-28½°
Breaker Arm Spring Tension - 17-20 ozs
Rotation - Counterclockwise viewed from above

Automatic Advance
①COTF-12127-B

Degrees Distr.	RPM	Degrees Eng.	RPM
0	550	0	1100

IGNITION TIMING

Engine	Std. Ignition Setting
6 Cyl & 292 MD	4° BTDC
292 HD (85-88 Octane Fuel)	4° BTDC
292 HD (88-90 Octane Fuel)	6° BTDC
292 HD (90-92 Octane Fuel)	8° BTDC
292 HD (92 Octane or Premium Fuel)	10° BTDC

►*TIMING CAUTION* Set timing with engine idling and vacuum line disconnected Check advance operation by accelerating engine after vacuum line connected
Timing Mark (6 Cyl) - Vibration damper marked by lines TDC (Long Mark) & 3°,5°,7°,9° BTDC Align space between 3° and 5° lines (4° BTDC), with pointer on chain case cover
Timing Mark (V8) - Timing pointer has 4 timing marks 0° 3°,6°,10° BTDC Align timing pin on damper with proper timing mark on timing pointer

CARBURETOR

►*CARBURETOR APPLICATION Holley carburetors used 'Visi-Flo' (1-Bbl) used on 6 Cyl 2-Barrel used on 292 HD, 4-Barrel used on 292 HD*
Throttle Linkage Adjustment (6 Cyl. Fordomatic Trucks): Adjust engine idle speed to 450 RPM in Dr,D2 or D1 and make anti-stall dashpot adjustment (see below). With engine stopped and carburetor on hot idle, remove lock from clevis pin on upper end of throttle control rod and loosen clevis locknut Remove clevis and pull throttle control rod upward so throttle lever will be held against internal stop in transmission Turn throttle rod clevis until pin enters hole in lever and lengthen throttle

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

rod 2½ turns. Connect throttle control rod, tighten lock nut, install clevis lock. Measure accelerator pedal height from point where linkage connects to pedal to floor mat. Distance should be 2¾". Adjust by turning threaded trunnion on accelerator connecting link.

Throttle Linkage Adjustment (V8 Fordomatic & Cruise-O-Matic Trucks): Warm up engine and adjust to correct idle speed. Make anti-stall dashpot adjustment (see below). Disconnect throttle control rod from accelerator. Insert ¼" gauge pin through holes in carburetor bellcrank. Adjust length of carburetor connecting link so carburetor is on hot idle position. Adjust accelerator connecting link so accelerator pedal height is 2¾" from floor mat to point where linkage connects to pedal. Remove gauge pin and make sure holes are aligned so pin can enter freely. With gauge pin removed, pull throttle control rod upward so transmission lever is against internal stop in transmission. Rotate clevis on throttle control rod so clevis freely fits pin on bellcrank lever. Then turn clevis **3 full turns counterclockwise** to lengthen throttle control rod. Connect rod. *For final adjustment, use pressure method as follows:*

Pressure Method of Throttle Linkage Adjustment: Make sure transmission is at normal operating temperature. Raise truck and remove 1/8" pipe plug forward of transmission levers. Install pressure gauge. Lower truck and install a tachometer. Put selector lever in any Drive position. With engine speed at 1000 RPM, pressure should be 80-85 lbs. If below 80 lbs., lengthen throttle control rod; if above 85 lbs., shorten rod. Connect rod, tighten locknut.

Anti-Stall Dashpot Adjustment: After completing engine idle adjustment (450 RPM in Dr,D2 or D1) turn off engine. Loosen dashpot locknut and hold throttle in hot idle position and bottom dashpot plunger. Clearance between bottomed plunger and throttle shaft lever should be .045-.064". To adjust, turn dashpot or dashpot adjusting nut.

HOLLEY "VISI-FLO"

Ford No. COTE-9510-S. No. COTE-9510-A, B, J or S stamped on main body fuel inlet boss.

Idle Setting - Initial setting 1-1½ turns open. Turn mixture needle in until engine runs rough (lean mixture) then back out needle until engine rolls (rich mixture). Turn needle in until engine runs smoothly. Always favor a rich mixture.

Idle Speed - 475-500 RPM Synchro-mesh Trans., 450 RPM in Dr, D2 or D1 Auto. Trans.

Fuel Level - 11/16"±1/32" below power valve mounting surface (Tool T52L-9550-AEE).

Accelerating Pump - Inner hole for average or hot weather operation, outer hole for cold weather operation.

Fast Idle: Integral type operated by choke valve. No adjustment required.

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Holley Visi-Flo Carburetors" in Carburetion Section.*

HOLLEY 2-BARREL

Carb. No. ①	Application
COTE-9510-C	B & F Series Synchro-mesh
COTE-9510-E	P Series Synchro-mesh
COTE-9510-D ②	B,F & P Series Auto. Trans.

① - Stamped on right front choke plate housing.

② - Serviced by COTE-9510-C (with dashpot).

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyl. 2-3-5-8, LEFT barrel feeds 1-4-6-7.*

Idle Setting - Initial setting 1-1½ turns open. Turn mixture needle in until engine runs rough (lean mixture) then back out needle until engine rolls (rich mixture). Turn needle in until engine runs smoothly. Always favor a rich mixture.

Idle Speed - 475-500 RPM (Synchro-mesh Trans.), 450 RPM in Dr, D2 or D1 (Auto. Trans.).

Fuel Level - Lower edge of sight plug opening (on side of bowl) ±1/16". To adjust, loosen lock screw on top of fuel bowl just enough to permit rotation of adjusting nut underneath. 1/6 turn of nut changes level 3/64". To lower level, always lower float 1/2 turn, then raise in 1/6 turns as necessary.

Accelerating Pump - Inner hole (closest to throttle shaft) is for warm weather, Outer hole is for cold weather.

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Holley 2 & 4-Barrel Carburetors" in Carburetion Section.*

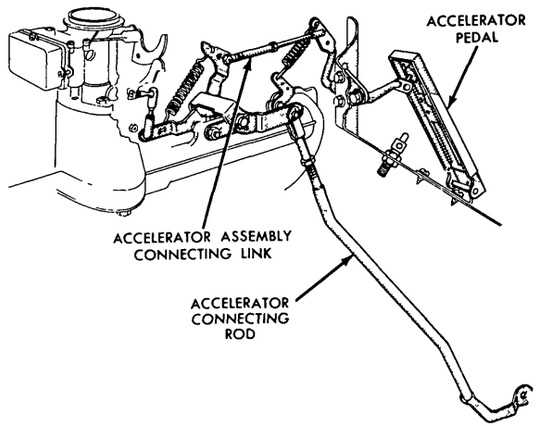
HOLLEY 4-BARREL

Ford No. COTE-9510-F.

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel is feed Cyl. 2-3-5-8, LEFT barrel is fed 1-4-6-7.*

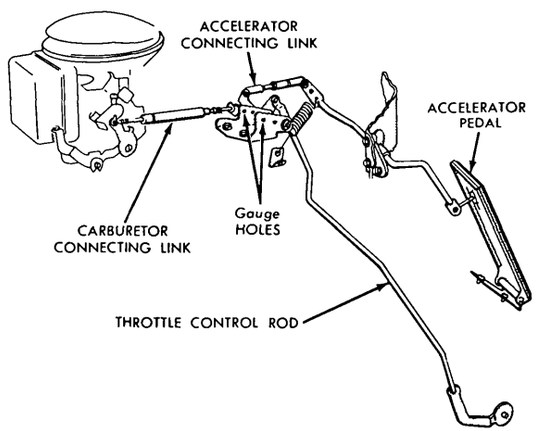
Idle Setting - *NOTE - Idle mixture adjusting needles used only on SECONDARY side (on each side of Fuel Metering Block).* Initial setting 1-1½ turns open. Turn mixture needles in until engine runs rough (lean mixture), then back needles out until engine begins to roll (rich mixture). Turn needles in until engine runs smoothly. Always favor a rich mixture.

Idle Speed - 475-500 RPM Synchro-mesh Trans., 450 RPM in Dr, D2 or D1 Auto. Trans.



Fuel Level - At lower edge of sight plug opening (on side of bowl) ±1/16". To adjust, loosen lock screw on top of fuel bowl just enough to permit rotation of adjusting nut underneath. 1/6 turn of nut changes level 3/64". To lower level always lower float 1/2 turn, then raise in 1/6 turns as necessary.

Accelerating Pump - Inner hole (closest to throttle shaft) is for warm weather, Outer hole is for cold weather.



Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Holley 2 & 4-Barrel Carburetors" in Carburetion Section.*

CARB. EQUIPMENT

Fuel Pump: Fuel only or Fuel & Vacuum as follows:

Model	Ford Pump No.
6 Cyl. Fuel Only	B8A-9350-E
6 Cyl. Fuel & Vacuum	B9A-9350-B
292 MD Fuel Only	B9TE-9350-A
292 HD Fuel Only	B8T-9350-B

Fuel Pump Pressure - 6 Cyl. & 292 MD 3.5-5.5 lbs. at 500 RPM. **292 HD** 3.5-6.5 lbs. at 500 RPM. *See "Fuel Pumps" in Carburetion Section.*

Gasoline Gauge: King-Seeley Electric "CV" (Constant Voltage) with Gauge Voltage Regulator Ford No. B7J-10804-A (P-350, 400, 500), B7A-10804-B (Others).

Dash Unit - Ford No. B7J-9280-A (P-350, 400, 500), COTF-9280-B (Others).

Tank Unit - Ford No. B8C-9275-A (F-100, 250, 350; P-350, 400, 500). No. B8C-9275-B (F-100, 250, 350; F-, B-500; F-, P-, B-600). No. B8T-9275-A (F-, B-500; F-, P-, B-600 and P-400, 500 with 30 gal. fuel tank). *See "Fuel Gauges" in Carburetion Section.*

Fuel Filter (V8): Separate filter in carburetor inlet line. Replace element every 8,000 miles (On Highway), 4,000 miles (Off Highway), or if clogged.

Air Cleaner: Oil Bath and Dry Filter Element types used. Clean as follows:

Type	Air Cleaner Service Interval (Miles) On Highway Clean	On Highway Replace	Off Highway Clean	Off Highway Replace
Oil Bath	8,000		ℂ 1,000	
Dry Type	4,000	24,000	500	4,000

℃ - 500 miles under extremely dusty conditions.

►*DRY TYPE CLEANING CAUTION:* Clean element by tapping lightly against a hard surface. DO NOT wash in solvent or other liquids. If compressed air used, direct stream from inside surface of filter element.

BATTERY

Ford No. B9A-10654-D (Exc. School Bus). 12 volt, 11 plate, 55 ampere hour capacity (20 hr. rate).

Ford No. B6A-10654-C (All). 12 volt, 13 plate, 70 ampere hour capacity (20 hr. rate).

Ford No. B9A-10654-F (School Bus Only). 12 volt, 11 plate, 70 ampere hour capacity (20 hr. rate).

►*NOTE:* Batteries are dry type for service replacement.

Battery Ground - Negative.

Engine Ground - At flywheel housing (6 Cyl.), at left cylinder head (V8).

Setting (30 & 40 Amp.) - 14.6-15.4 volts (30 Amp. & Ford 40 Amp.), 14.2-14.9 volts (Autolite 40 Amp.) at ambient temperature of 75°F.

Setting (B sch) - 14.1-14.8 volts (upper contacts), 14.1-14.6 volts (lower contacts) at ambient temperature of 75°F.

Ch cking & Adjusting - *See Ford, Autolite and Bosch 12-Volt Regulators in Electrical Section.*

Curr nt Regulator

S tting (30 Amp.) - 28-32 amperes.
S tting (40 Amp.) - 38-42 amperes.
S tting (50 Amp.) - 48-52 amperes.

Ch cking & Adjusting - *See Ford, Autolite and Bosch 12-Volt Regulators in Electrical Section.*

MISC. ELECTRICAL

►*EARLY F-100-600 SERIES IGNITION SWITCH SHORTING CORRECTION:* May be caused by insufficient clearance between "BAT" terminal of switch and inboard parking brake bracket mounting bolt, causing switch to short to ground. To correct, install shorter (½" long) bracket mounting bolts.

H adlights: 4-Headlight System. *See "4-Headlight Systems" in Electrical Section.*

Dir cti n Signals: *See Electrical Section.*

St p Light Switch L cati n: On brake master cylinder or on frame left side rail at brake pipe connector.

Lighting Switch R m val: Remove control knob and shaft by pressing spring-release button on switch housing (knob in "off" position). Turn shaft slightly and pull from switch. Remove retaining nut and remove switch, disconnecting wires, or unplugging fuse block.

CIRCUIT BREAKERS: Circuit breaker in headlight switch protects Headlights and Instrument Panel Lights. Also protects Parking and Tail Lights on H.D. Truck.

FUSES: Fuse panel integral with lighting switch (L.D. Truck), on left cowl panel to rear of air vent (H.D. Truck). All fuses on fuse panel except as noted.

15 Amp re (L.D. Truck) - Parking & Tail Lights.
15 Amp re (L.D. Truck) - Dome Light.
7.5 Amper (H.D. Truck) - Dome Light.
7.5 Amp r - Direction Signals.
7.5 Amp r - Radio.
14 Amp r - Heater Blower.
10 Amp r - Overdrive. On overdrive relay.
14 Amp r (H.D. Truck) - Cigar Lighter.
Cigar Light r (L.D. Truck) - Sulphur disc on back of lighter.

C mpr ssi n & Vacuum R ading - *See TUNE-UP.*

►*ROCKER ARM COVER INSTALLATION NOTE (6 CYL.):* Torque cover attaching bolts to specifications twice, once initially, and again after two minutes from initial torquing, to prevent oil leaks.

CYLINDER HEAD: *See "Cylinder Head & Manifolds" in Ford Special Data.*

TIGHTENING TORQUES: *See "Tightning Specifications" in Ford Special Data.*

ENGINE REMOVAL: *See "Engin " in Ford Special Data.*

OIL PAN REMOVAL (6 Cyl.): Drain crankcase, remove dipstick, flywheel housing cover and crankcase vent tube. Remove retaining bolts and remove pan.

OIL PAN REMOVAL (V8): Drain crankcase and remove dipstick. Remove converter housing dust cover (Auto. Trans. Trucks). On C-Series, position No. 1 piston at TDC. Disconnect oil inlet tube from oil pump and remove "O" ring seal from tube. Remove retaining bolts and remove pan.

6 CYL. ENGINE

►*See 1960 Ford 6 Cyl. Passenger Car Pages.* Engine is similar to that used in 1960 Pass. Cars, and all passenger car engine data applies to truck engine.

V8 ENGINES

►*See 1960 Ford V8 Passenger Car Pages.* Engines are similar to 1960 292" Pass. Car engine, and all passenger car engine data applies to truck engines EXCEPT AS NOTED BELOW.

►*292 ENGINE OIL PRESSURE LOSS CORRECTION:* If pressure lost in downgrade or angle operations, install new type oil pump screen and cover, No. COTE-6615-A. If pressure lost after sudden stops, install new design oil pan, No. COTE-6675-A.

►*PISTON & CONNECTING ROD NON-INTERCHANGEABILITY CAUTION:* Higher pistons and shorter connecting rods used in 292 HD engine. DO NOT interchange with those used on 292 MD engine.

Connecting Rod Length - 6.320-6.324" (292 MD), 6.250-6.254" (292 HD) center-to-center.

►*NOTE:* .040" Undersize connecting rod bearings also furnished.

VALVES: Exhaust Valve Stem Diameter (292 HD) - .4343-.4350".

Exhaust Valve Length (292 HD) - 4.92".

Cam Lobe Lift (292 HD) - .272" all valves.

Valve Timing Specifications (292 HD)

Intake Valves - Open 18° ① BTDC. Close 58° ① ALDC.

Exhaust Valves - Open 66° ② BLDC. Close 10° ③ ATDC.

① - Camlift .015". ② - Camlift .013". ③ - Camlift .016".

Exhaust Valve Seat Width (292 HD) - .090-.110".

Lifter-to-Bore Clearance (All) - .0005-.0021". Wear limit .0055".

Exhaust Valve Cap Clearance (292 HD) - *See "Valve System" in Ford Special Data.*

Exhaust Valve Insert Installation (292 HD) - *See "Valve System" in Ford Special Data.*

►*ROTATABLE & FREE TURNING VALVE NOTE:* Free turning type valve (cap over end of stem) used for Sodium Cooled exhaust valves on 292 HD engine. All other valves (both engines) have "Rotatable" type valve (sleeve between spring retainer and lock).

►*EXHAUST VALVE CAUTION (292 HD ENG.):* Exhaust valves are soldum cooled and require special disposal handling to prevent possibility of fire or explosion due to chemical reaction. DO NOT DISCARD SODIUM COOLED VALVES with other scrap material. Bury in ground not subjected to excavation or in deep water not subjected to dredging.

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Ford Special Data.*

Crankcas Capacity: 5 qts. refill, 6 qts. with filter change.

N rmal Oil Pr ssure: 35-55 lbs. at 2000 RPM.

Pr ssur R gulat r Valve - In pump body, not adjustable.

Oil Pr ssur Indicat r (F-100, 250, 350; F-, P-, B-600): Indicator light on instrument panel, operated by engine unit, Ford No. B6A-9278-B.

Oil Pressure Indicator (P-350, 400, 500; C-550, 600): King-Seeley Electric "CV" (Constant Voltage) with Gauge Voltage Regulator Ford No. B7J-10804-A (P-350, 400, 500), No. B7A-10804-B (C-550, 600).

Dash Unit - Ford No. B7J-9273-A (P-350, 400, 500), No. COTF-9273-B (C-550, 600).

Engine Unit - Ford No. B9T-9278-A.

See "Oil Pressure Gauges" in Miscellaneous Section.

Oil Pressure Engine Unit Location: On right side of engine above starter (6 Cyl.), at rear of oil filter (V8).

Oil Pump: Gear type mounted inside crankcase in line with distributor shaft (6 Cyl.), rotor type located outside crankcase on left side (V8).

Pump Overhaul - *See "Oiling System" in Ford Special Data.*

Oil Filter: Full-flow with pressure relief valve in center bolt, or "Disposable" type. Replace element or filter unit at 2000 mile intervals (Off Highway), 4000 mile intervals (On Highway). *NOTE* - Replace every 1000 miles under severe operating conditions.

Disposable Filter Replacement - Coat gasket face of filter with oil, thread filter on bracket by hand until gasket contacts adapter face, then tighten filter an additional ½-turn. Run engine and check for leaks. *CAUTION - Do not overtighten.*

Crankcase Ventilation: Filter in oil filler cap (inlet) and outlet pipe at rear of engine. Clean system every 4000 miles (On Highway), 1000 miles (Off Highway), or sooner under severe operating conditions.

COOLING

Cooling System Capacity

Truck Model	① Capacity
6 Cyl. Exc. Parcel Delivery	17½ qts.
6 Cyl. Parcel Delivery	18½ qts.
V8 F-100, 250, 350	② 17½ qts.
V8 F-500, 600; B-500, 600; P-350	③ 21½-22 qts.
V8 P-400, 500	23 qts.
V8 C-550, 600	④ 28 qts.

① - Add 1 qt. for heater.
② - F-350 with Dual Rear Wheels 21½-22 qts.
③ - P-350 with Dual Rear Wheels 23 qts.
④ - Add 1½ qts. with Auto. Trans.

Pressure Valve: Radiator filler cap, Ford No. OL-8100-A, opens at 7 lbs.

Thermostat: Ford No. B7A-8575-A (157-162°F). No. B7A-8575-B (175-182°F) for use with permanent type antifreeze.

Water Pump: Packless, sealed ball bearing type. *See "Water Pump" in Ford Special Data.*

Temperature Gauge: King-Seeley Electric "CV" (Constant Voltage) with Gauge Voltage Regulator Ford No. No. B7J-10804-A (P-350, 400, 500), No. B7A-10804-B (Others).

Dash Unit - Ford No. B7J-10883-A (P-350, 400, 500), No. COTF-10883-B (Others).

Engin Unit - Ford No. B7A-10884-A (All).
S e "T mperatur Gaug s" in Misc llan ous Section.

CLUTCH

Long 10CF, 10½CF, & 11CF types used.

Ford No.	Cover Assembly	Long No.
B4A-7563-B or B6A-7563-B	10" ①	L5222
B7C-7563-A	10½" ②	267371
B7Y-7563-A	11" ③④	267147
Ford No.	**Disc**	**Long No.**
B7C-7550-A	10" Molded	CD870
B7C-7550-B	10½" Molded	287335
B6D-7550-A	11" Woven	CD606
B7C-7550-C	11" Molded	CD607

① - Use with Disc Ford No. B7C-7550-A, Long No. CD870.
② - Use with Disc Ford No. B7C-7550-B, Long No. 287335.
③ - Use with Disc Ford No. B7C-7550-C, Long No. CD607.
④ - Use with Disc Ford No. B6D-7550-A, Long No. CD606.

See "Long Clutches" in Clutch Section.

Clutch Pedal & Slave Cylinder Adjustments: Make sure system is free of air (bleeder screw on slave cylinder) and master cylinder is filled to within ½" below top of reservoir. Proceed as follows:

1) Adjust clutch pedal total travel by adjusting pedal bumper so clutch pedal pad is even with brake pedal pad in fully released position.

2) Disconnect release lever retracting spring, bottom slave cylinder pushrod (push as far to front of truck as possible) and pull release lever to rear of truck until release bearing touches pressure plate fingers. Clearance between slave cylinder adjusting nut and release lever should be **not less than ¼"**. *Do not let pushrod turn as nut is adjusted.* Tighten locknut securely.

3) Initial pedal free travel should be 1/8-1/4" (C-550, 600), 3/16-3/8" (Others) measured at centerline of pedal pad, before master cylinder pushrod touches master cylinder piston. To adjust, turn master cylinder pushrod eccentric bolt.

4) Final pedal free travel (adjusted clearance at slave cylinder pushrod and free travel at master cylinder pushrod) should be 1 13/16" (C-550,600), 2" (Others). *NOTE - Free travel will decrease at high RPM. Do not readjust as this condition is normal.*

Removal: Disconnect clutch pedal retracting spring and remove muffler left inlet pipe (if necessary). Remove slave cylinder attaching bolts, disconnect slave cylinder pushrod from release lever and release lever retracting spring. Remove transmission *(see "Transmission Removal" below)*. Remove clutch housing dust cover and release bearing and hub from release lever. Mark pressure plate, cover assembly and flywheel for reassembly and remove pressure plate and cover assembly-to-flywheel attaching bolts evenly and gradually to release spring tension. Remove clutch assembly through bottom of housing.

SYNCHRO-MESH TRANSMISSION

3-SPEED

Light, Medium, and Heavy Duty 3-Speed Synchro-mesh Transmissions of same designs used previously.
See "Ford Synchro-mesh Transmissions" in Transmission Section.

Removal: Drain lubricant, disconnect speedometer cable, drive shaft, and gear shift linkage at transmission. On band type (propleelr shaft) parking brake, disconnect cable clevis at cam and remove cable conduit clamp. On 4-wheel drive trucks, remove transfer case shift lever bracket from transmission. Remove transmission-to-flywheel attaching bolts and install guide studs. Pull transmission rearward until input shaft clears clutch housing and then remove transmission.

4-SPEED

Own. 4-speed synchro-mesh transmission of same design used previously.
See "Ford Truck 4-Speed Synchro-mesh" in Transmission Section.

Removal: Remove floor mat and floor plate and loosen nuts holding top of transmission to clutch housing studs. Remove shift lever if necessary (Exc. Tilt Cab). Remove transfer case shift lever bracket from transmission (if equipped). *On Tilt Cab, put transmission in neutral and tilt the cab forward. Remove rear cross shaft housing bolts, loosen rear bolt on adjustment turnbuckle and tie cross shaft housing to prevent falling.* Drain transmission, disconnect drive shaft or transfer case coupling shaft at parking brake drum. *NOTE - If coupling shaft support used, disconnect support bracket to remove shaft.* Disconnect parking brake cable or linkage, remove clutch housing dust cover and support transmission. Remove transmission attaching bolts and remove transmission carefully, pulling rearward until input shaft clears clutch housing.

TRANSFER CASE

(4-WHEEL DRIVE)

Own. 2-speed, manually controlled type, used with 4-wheel drive.
See "Ford Transfer Case" in Transmission Section.

Removal: Drain transfer case and disconnect rear drive shaft, transmission output shaft and front drive shaft at case. Disconnect shift rod and speedometer cable at case. Support transfer case, remove mounting bolts and remove case.

OVERDRIVE

Warner R10. Solenoid operated type, with governor control and throttle operated kickdown.
See "Warner R10 Overdrive" in Transmission Section.

Overdrive Control: *See "Overdrive Control" in Transmission Section.*

Removal: Same as for 3-speed synchro-mesh transmission (above) after disconnecting control cable and wiring.

AUTOMATIC TRANSMISSION

Three-Speed Fordomatic and **Cruise-O-Matic** of same designs used previously.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION:* See *"Ford Automatic Transmissions" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Ford Automatic Transmissions" in Transmission Section.*

Lubrication: Check fluid level every 1000 miles (Off Highway), 4000 miles (On Highway). Drain and refill every 16,000 miles (On Highway), 12,000 miles (Off Highway). **Use only Ford Automatic Transmission Fluid, Part No. B8A-19582-A.**

Checking Fluid Level - With transmission at normal operating temperature, move selector lever through all ranges to assure fluid distribution, then place lever in "P" position. With engine idling, maintain fluid at "F" mark on dipstick. DO NOT OVERFILL.

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Ford Automatic Transmissions" in Transmission Section.*

UNIVERSALS

Needle bearing type.

►*F-100 CAUTION:* Rear universal joint companion flange nut controls pinion bearing preload (must be adjusted whenever nut is loosened). *See "Ford Dp-Offset Hypoid" in Rear Axle Section.*

►*UNIVERSAL JOINT INSTALLATION CAUTIONS:* To prevent early failure and vibration, the following cautions must be observed: 1) Bearing retaining strap must be correctly positioned in cast recess in universal joint flange before tightening attaching U-bolts. 2) Front and rear universal joint flanges or yokes on coupling shafts and drive shafts must be positioned in the same plane with each other.

FRONT AXLE

4-WHEEL DRIVE

Spicer Model 44-4F. Full-floating, hypoid gear type. *See "Ford 4-Wheel Drive Front Axle" in Rear Axle Section.*

Axle Ratios - *See table under REAR AXLE below.* *NOTE* - Letter "E" following axle code on patent plate identifies both front and rear axles on 4-wheel drive trucks.

Axle Shaft: Removal - Remove hub grease cap, hub retaining snap ring, slide driving hub from between axle shaft and wheel hub and remove driving hub spacer. Remove locknut, washer and wheel bearing adjusting nut from spindle and remove wheel, hub and drum assembly (outer bearing will also come out). Remove inner bearing. Remove oil baffle from brake carrier plate. Remove brake carrier plate and spindle from spindle arm (unnecessary to disconnect brake line). Support carrier plate. Remove axle shaft assembly.

Installation & Wheel Bearing Adjustment - Install axle shaft assembly. Install spindle and brake carrier plate on spindle arm, tighten retaining screws and install oil baffle. Install wheel inner bearing on spindle, driving hub spacer, and wheel outer bearing and adjusting nut. While rotating wheel forward and rearward, tighten bearing adjusting nut with Tool T59T-1197-A until bearings are firmly seated and then back off adjusting nut 1/8 turn (45°). Install lockwasher on spindle (locking dowel on adjusting nut must enter lockwasher hole most closely aligned with dowel). Torque locknut to 40 ft. lbs. Install driving hub, snap ring and grease cup. Fill spindle arm with proper lubricant.

Spindle Arm: Removal - With axle shaft removed (see above), disconnect steering drag link from spindle arm and spindle connecting rod at both spindle arms. Remove 2-piece seal retainer from spindle arm, felt, rubber and steel rings from spindle arm (place on axle housing). Remove upper and lower spindle arm bearing caps and shims and remove spindle arm. Remove upper and lower spindle bearings with Tool T58L-101-A inserted in bearing and Puller Tool T50T-100-A.

Installation - Make sure felt and rubber seals and steel retainer are placed on axle housing in same order as removed (felt seal toward center of truck, then rub-

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

ber seal and steel retainer). Install upper and lower spindle bearing cups in axle housing with Handle T53L-200-A and Driver T57P-4625-A and place bearings in cups (retain lower bearing with wheel bearing grease). Install spindle arm on axle housing and install upper and lower bearing caps (use old shims for a trial pack). Torque bearing cap bolts and stud nuts to 25 ft. lbs. Check bearing preload by rotating spindle arm with an inch-pound torque wrench installed on one of the bearing cap bolt heads. Turning torque should be 50-70 inch-pounds. Adjust shim pack at bearing caps to obtain correct preload. Install steel retainer, rubber and felt seals and 2-piece retainer. Connect spindle connecting rod and drag link. Install axle shaft assembly and adjust wheel bearing (see above).

Axle Housing Removal: Raise truck so front axle hangs freely. Remove axles and spindle arms (see above). Disconnect shock absorbers at lower end and front drive shaft at pinion flange. Support axle and remove spring clip (U-bolt) nuts and spring seats. Remove axle housing assembly.

REAR AXLE

►*AXLE RATIOS & IDENTIFICATION CODE:* Identification code for various axle ratios (see table below) stamped on truck patent plate under AXLE.

Axle Ratio Identification

Code	Ratio	Code	Ratio
OA Ⓒ	3.73-1	07	5.14-1
OB Ⓒ	3.92-1	08, B1	5.83-1
OD Ⓒ	4.56-1	22, B2, K2, S2	6.20-1
OF Ⓒ	4.88-1	23	6.50-1
01	3.70-1	24, B4, K4, S4	6.80-1
02	3.89-1	25	7.17-1
03	4.11-1	S6	7.20-1
04	4.56-1	51, E1, N1	5.83-1/8.11-1
05	4.86-1	E2, N2	6.33-1/8.81-1
06	4.88-1	53	6.50-1/9.04-1

Ⓒ - Power-Lock Differential.

SEMI-FLOATING

Own. Separate carrier, hypoid gear, with Hotchkiss Drive.
See "Ford Deep-Offset Hypoid" in Rear Axle Section.
Spicer Model 44. Used with Power-lock Differential.
See "Ford Truck Hypoid" and "Power-Lock Differential (Plate Clutch Type)" in Rear Axle Section.

Axle Ratios - *See Table above.*
Backlash - .004-.009". Max. variation between teeth .003".

Axle Shaft Removal: Remove wheel and brake drum. Remove axle bearing retainer nuts (work through opening in axle shaft flange). Use Puller No. 4235-N and pull axle shaft (do not disturb brake backing plate or damage wheel bearing oil seal). Replace one nut to secure brake backing plate.

Axle Assembly (Spicer): *See "Full-floating (Integral Housing) Removal" following.*

Carrier Assembly Removal: Remove axle shafts (see above) and drive shaft. Remove carrier attaching nuts and remove carrier. *NOTE* - Pinion carrier assembly can be removed separately without disturbing differential carrier by disconnecting rear universal joint and removing pinion retainer attaching bolts.

Wheel Bearing Adjustment: None required.

FULL FLOATING

Full floating, hypoid gear, with Hotchkiss Drive. Both Integral Carrier and Banjo Housing types used. "Power-Lock" Differential optional on some models.
See "Ford Truck Hypoid", "Ford Truck Hypoid (Banjo Housing)" and "Power-Lock Differential (Plate Clutch Type)" in Rear Axle Section.

Axle Ratios - *See Table above.*

Axle Shaft Replacement: Remove axle shaft stud nuts and lockwashers. Strike center of axle shaft flange with a hammer and drift to loosen tapered dowels, then remove dowels. Pull axle shaft from housing. To reinstall, place gasket in position on housing and install axle shaft. Install tapered dowels, lockwashers and nuts on studs. Tighten nuts to 50-70 ft. lbs.

Axle Assembly Removal (Integral Housing): Loosen wheel and axle shaft stud nuts, disconnect shock absorbers, raise rear of frame until weight is off springs. Disconnect flexible hydraulic line at frame, parking brake cable (if equipped) at equalizer, remove cables at brackets. Disconnect rear universal joint at flange, remove spring U-bolts, remove axle assembly.

Carrier Removal (Banjo Housing): Remove axle shafts (see above), disconnect drive shaft at rear joint flange. Support carrier assembly and remove carrier attaching bolts. Tighten puller screws (if provided) to loosen carrier from housing. Remove carrier.

Wheel Bearing Adjustment: Remove axle shafts (see above), use special bearing adjusting wrench and remove bearing locknut (outer nut), and lockwasher. Adjust bearings by turning bearing adjusting nut (inner nut) until tight, then back off 3/8 turn. Install bearing lockwasher. *NOTE - If adjusting nut equipped with dowel, make sure lockwasher fits over dowel.* Install bearing locknut and tighten. If flange type lockwasher is used, bend one flange over adjusting nut and one flange over lockmut. Install axle shafts.

TWO-SPEED

Own. Electrically operated shift, two-speed, full-floating spur gear planetary unit (reduction gearing). Spiral bevel gear final drive.
See "Ford Truck Two-Speed" in Rear Axle Section.
Axle Ratios - *See Table above.*
Backlash - .006-.016".
Axle Shaft Removal: *See "Full Floating" above.*
Carrier Removal: Same as for "Full Floating" above after unit shifted into low ratio and electric shift unit removed from carrier.

SHOCK ABSORBERS

Direct acting, non-adjustable. Serviced by replacement.

Ford Shock Absorber Nos.

Model	Front	Rear
F-100	B7C-18124-A	B7C-18125-A
F-100, 250 (4WD)	B9T-18124-A	B9TZ-18125-A
F-250	B7C-18124-A	B9TZ-18125-A
F-350	B7C-18124-A	B3Y-18125-A
P-350, 400	B7J-18124-B	B9TZ-18125-A
P-500	B7J-18124-A	Ⓒ B3T-18125-A
F-, B-500	B8T-18124-A	Ⓒ B3T-18125-A
F-, B-, P-600	B8T-18124-A	B3T-18125-A
C-550, 600	② B7T-18124-B	B3T-18125-A

Ⓒ - No. B7J-18125-A with 2-speed axle.
② - No. B7T-18124-C on C-600 with H.D. springs & 7000 lb. axle.

FRONT SUSPENSION

Conventional "I" beam section front axle with Reverse-Elliot ends and semi-elliptical springs.
Kingpin Inclination - 7½° (4-Wheel Drive), 5½° (C-550, 600), 4° (All Others) crosswise.
Caster - As follows:

Model	Ⓒ Manual Steering	Ⓒ Power Steering
F-100, F-250	②3°	6°
F-350	3¾°	6¾°
P-350	4°	4°
P-400	3°	6°
F-500 (130" WB)	3¾°	6¾°
F-500 (154" WB)	4½°	7½°
B-500, B-, F-600	4½°	7½°
P-500 (137" WB)	3°	6°
P-500 (154" WB)	3½°	6½°
C-550, C-600	3°	3°

Ⓒ - Maximum variation between wheels ½°.
② - 3¼° with 4-Wheel Drive.

Camber - 1½° (4-Wheel Drive), 1° (All Others). Maximum variation between wheels ½°.
Toe-In - 1/16" (All Models). *NOTE* - When checking toe-in on trucks with power steering, engine should be running so that power steering control valve will be properly centered.

Wheel Bearing Adjustment: Tighten adjusting nut while rotating hub until noticeable drag is felt, then back off nut until nearest slot in nut is aligned with cotter pin hole in spindle (1/6-1/4 turn), install cotter pin.

STEERING

Manual: Gemmer Worm & Roller type.
See "Gemmer Worm & Roller" in Steering Section.
Power Steering: Ford Linkage type. Used in conjunction with standard steering gear.
See "Ford Truck Linkage Type Power Steering" in Steering Section.
Steering Linkage: *See "Steering Linkage" in Steering Section.*
Steering Wheel & Horn Button Removal: *See "Gemmer Worm & Roller" in Steering Section.*
Steering Gear Removal: *See "Gemmer Worm & Roller" in Steering Section.*

BRAKES

Service: Bendix Hydraulic. *See table below for various types and truck application.* Hand lever applies rear wheel service brakes on F-100, 250 and some P-350 models. Independent transmission mounted drum type parking brake with either contracting band or internal expanding shoe type brake used on all other models.

Brake Type Application

Model	Front	Rear
F-100	Duo-Servo	Duo-Servo
F-250; F-, P-350; P-400	Uni-Servo	Duo-Servo
C-550, 600	Uni-Servo	Two Cyl.
F-, B-, P-500; F-, B-600	Uni-Servo	Two Cyl.

Uni-Servo - Ford-Bendix. Single anchor. Wheel cylinder actuates primary shoe. Ratchet adjusting screw.
See "Ford Truck Bendix Uni-Servo" in Brake Section.
Duo-Servo - Ford-Bendix. Single anchor, self-energizing. Wheel cylinder actuates both shoes. Ratchet adjusting screw.
See "Ford-Bendix Hydraulic" in Brake Section.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Two-Cylinder Typ . Two wheel cylinders in each brake assembly.
See "Ford Truck Self-Centering" in Brake Section.

►*F-, B-500, 600 ERRATIC OR DRAGGING BRAKE CORRECTION:* May be caused by improper brake shoe-backing plate clearance. This specification should be .045".

Clearance (Duo-Servo & Uni-Servo) - Adjusting screw backed off 10-12 notches from point where shoes are against drum.

Clearance (Two-Cylinder) - Adjust each shoe by turning adjusting cam in direction of forward wheel rotation until shoes drag, then back off adjusting cam until shoes are just free.

Parking Brake (Transmission Mounted): External contracting or internal expanding types used.

Parking Brake Specifications

Model	Drum Diam	Drum Width	Lining Length	Lining Thickness
External	8.0"	2.0"	24.63"	.156"
External	7.812"	2.5"	①	.250"
Internal	9.0"	2.0"	②	.210"

① - Three segments. Two segments 7.89" long each, and one segment 7.3" long.
② - Two shoes. Lining on each is 10.57" long.

Adjustment (External Type) - With hand lever fully released (cable operated), in first notch (rod type linkage), make sure flat part of cam rests on brake band bracket. Remove clevis pin and adjust clevis to correct.

1) Remove adjusting screw lockwire and turn screw to obtain .010" clearance between lining and drum at anchor bracket. Replace lockwire.
2) Loosen adjusting screw nut for lower half of band and turn screw to obtain .010" clearance between lining and drum at lower half of brake band, then tighten locknut.
3) Turn upper band adjusting rod nut to obtain .010" clearance between upper band lining and drum.

Adjustment (Internal Type) - With hand lever released, remove linkage adjusting clevis pin. Lengthen actuating link by turning clevis until shoes seat against drum with clevis pin installed. Remove pin and shorten linkage until there is a minimum of .010" clearance between shoes and drum (measure all around drum with clevis pin installed).

Standard Master Cylinder: Located on engine side of firewall (F & B Series), under instrument panel beside brake pedal arm (C Series), above left frame side member under driver's seat (P Series).

HYDRAULIC BRAKE SPECIFICATION TABLE

Truck Model		Brake Drum Diameter (Inches)		Brake Lining Dimensions (Inches)						Brake Cylinder Bore Diameter (Inches)	Brake Master Cylinder Piston Diameter (Inches)

	Rear	15	15.090	15.84	15.84	4	4	0.375	0.375	1 1/2	

Checking Fluid - Maintain fluid level to within ½" of top of filler neck.

Removal - On power brake trucks, relieve vacuum from system (engine stopped). Disconnect stoplight switch wires and brake line at master cylinder. Force as much fluid as possible from master cylinder (depress brake pedal several times). Remove rubber boot from rear of cylinder. On P Series, remove brake pedal return spring and master cylinder pushrod and boot. On all series, remove attaching bolts and remove master cylinder.
ACCESS NOTE - On C Series, roll back floor mat and remove floor plate. On P Series, turn front wheels to extreme left and remove fender apron.

Power Brakes: Hydrovac type booster used on F-250, 350; P-350, 400. Midland type booster used on all others.
See "Hydrovac Power Unit" or "Midland Power Unit" in Brake Section.

Checking Fluid - Std. master cylinder used, see above.

Removal (Midland) - Depress brake pedal several times to relieve vacuum (engine stopped). Disconnect hydraulic lines and vacuum hose from booster. On frame mounted unit, disconnect air breather hose but DO NOT remove breather or vacuum check valve unless necessary for repairs. On all units, remove mounting bolts and remove booster.

Removal (Hydrovac) - Depress brake pedal several times to relieve vacuum (engine stopped). Remove booster air inlet tube. Disconnect hydraulic lines and vacuum hose at booster, remove mounting bolts and remove unit.

MISC. MECHANICAL

Windshield Wiper: Vacuum or Electric types with Link & Crank Arm type linkage.
See "Windshield Wipers" in Miscellaneous Section.

►*AIR CONDITIONED CAR SERVICE CAUTION B fore disconn cting any part of air c nditioning equipment or lines for acc ss to ngine, see "Air Conditi ning S rvic Cautions" in Miscellaneous Section*

MODEL IDENTIFICATION

SERIAL NUMBER: Stamped on patent plate attached to right front body pillar between door hinges.

First Numb r–5001 up (each year) At both plants

►*SERIAL NUMBER NOTE. Serial number (example #55LA5001H#) includes following identification data in sequence.*

Year①	Assy. Plant②	Serial No.	Eng. Type
55	LA	5001	H

①–Last two digits of model year

②–Assembly Plant Code. **LA** (Los Angeles), **WA** (Wayne)

TUNE-UP

COMPRESSION PRESSURE: 135 lbs ± 10 lbs at cranking speed

VACUUM READING: (1954) 18-21" at 450 RPM in neutral. (1955) 19-20" at 500 RPM in neutral

VALVE TAPPET CLEARANCE: None in service (hydraulic)

MANIFOLD HEAT CONTROL: (Early 1954)–"Duckbill" type thermostatic valve located inside right end of cross-over pipe near flange

Lat 1954 & 1955 (Singl Exhaust)–"Butterfly" type valve located at right end of cross-over pipe at flange

1955 Dual Exhaust–"Butterfly" type located at rear flange on right manifold

►*BUTTERFLY TYPE MANIFOLD VALVE INSTALLATION CAUTION* When installing valve assembly, make sure counterweight portion is toward right front of engine

►*BUTTERFLY TYPE MANIFOLD VALVE INSTALLATION ON EARLY CARS:* Crossover pipe, Lincoln Part No EAD-5267-F, Right hand exhaust manifold, Part No EAD-9430-D, and longer studs, Part No 354055-S must be used when installing later type heat control valve Part No EAD-9685-C

IGNITION

FIRING ORDER: 1-5-4-8-6-3-7-2

Cylind rs–RIGHT BANK 1-2-3-4 LEFT BANK 5-6-7-8

SPARK PLUG GAP: 033- 037" (Champion H-10) 032-036" (Champion 870)

Spark Plugs (1954)–Champion H-10 14mm , or equivalent Tighten plugs to 24-30 ft lbs

Spark Plugs (1955)–Champion 870 18mm special

►*1955 SPARK PLUG CAUTION Spark plug is new type with a tapered s at and do s not require a sealing gasket It is important th t plugs be tightened to 15 ft lbs. exactly*

COIL Lincoln No. 8BA-12029.

Igniti n Current–3 amps idling, 5 amps stopped.

►*COIL HIGH TENSION LEAD CAUTION (Radio Equipped Cars)* Coil-to-Distributor lead is SPECIAL SUPPRESSOR LEAD (non-metallic with carbon impregnated nylon or rayon core) and the special length (approx. 14-1/2") is required for proper radio reception *DO NOT SHORTEN LEAD OR USE ANOTHER TYPE FOR REPLACEMENT.*

DISTRIBUTOR: (Early 1954)–Linc ln N . FAF-12127-B; (Late 1954)–FDD-12127-A; (1955)–FDL-12127-B

►*1954 DISTRIBUTOR (FAF-12127-B) OVER-ADVANCING WHEN ENGINE STARTED AT LOWER TEMPERATURE CORRECTION:* This condition noted when engine detonates excessively after starting under low temperature conditions Install Pin and Post Assembly, Lincoln Part No FDC-12357-A which limits distributor advance to 15° to 15½° FAF-12127-B distributors that have been reworked in production are identified by the part number prefix "ED" *CAUTION–When calibrating a corrected distributor refer to Automatic Advance Table for FDD-12127-A distributor. See "Ford, Lincoln, Mercury Distributor" in Electrical Section.*

Condenser–Lincoln No. FAB-12300-A **Capacity** .21-25 microfarad

Contact Point Set–Lincoln No FAB-12171-B.

Breaker Gap– 014- 016"

Cam Angle–26-28 5°

Breaker Arm Spring Tension–17-20 ozs

Rotation–Counter-clockwise viewed from above.

Advance Performance–FAF-12127-B①

►With Distributor on Test Stand

Distr Degrees	Vacuum (" of HG)	Distr RPM
0	0	200
2-3	0 19	300
5½-6¾	0 51	500
10¼-11¼	1 32	1000
11¼-12¾	1 63	1400
15¼-16¼	2 65	2000

①–Distributors **without** correction for "Over-Advance" See Distributor Correction (above)

Advance Performance–FDD-12127-A②

►With Distributor on Test Stand

Distr Degrees	Vacuum (" of HG)	Distr RPM
0	0	200
2 3	0 19	300
5½-6¾	0 51	500
10¼-11¼	1 32	1000
11¼-12¾	1 63	1400
15-15¼	2 65	2000

②–Use this table for FAF-12127-B distributors that have been corrected for "Over-Advance" See Distributor Correction (above)

Advance Performance–FDL-12127-B

►With Distributor on Test Stand

Distr. Degrees	Vacuum (" of HG)	Distr. RPM
0	0	200
4-1/2–5-1/2	62	500
10-11	1 76	1000
11-1/2–12-3/4	2 17	1500
12-1/4–13-1/2	2.35	2000

►*DISTRIBUTOR INSTALLATION NOTE* It may be necessary to crank engine slightly to engage oil pump hex shaft with distributor shaft Procedure will not disturb timing because distributor engages camshaft gear before distributor shaft starts to engage with oil pump drive

Initial Distribut r Timing: Rotate engine until timing mark on crankshaft dampener is lined up with pointer and #1 piston is in firing position. Install distributor with points just breaking and the rotor in position to fire #1 cylinder (vacuum advance connection boss should be at approximately right angles to crankshaft and pointing toward left side of engine).

IGNITION TIMING

Setting–3° BTDC (1954), 5° BTDC (1955)

Timing Mark–Crankshaft pulley marked TDC with ten lines (each line representing 2°) before this point. Align correct timing mark (see Setting above) with pointer on engine front cover

CARBURETOR
1954 MODELS

Lincoln EAD-9510-N "Centri-Quad" four-barrel downdraft type with automatic choke

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyl 2-3-5-8, LEFT barrels 1-4-6-7*

►*CARBURETOR SERVICE REPLACEMENT NOTE:* Carburetor Assembly, Lincoln Part No. ED-EAD-9510-S (with new type bowl cover to prevent fuel spill-over on sharp right turns) available for service replacement.

►*EXTERNAL VENT PRODUCTION CHANGE:* An adjustable spring clip, Lincoln Part No. EAD-99608-A used in production, and available for service on earlier carburetors to provide a means of closing off lower vent holes in accelerator pump rod for better starting in cold weather. *See "Lincoln-Mercury Centri-Quad" in Carburetor Section.*

►*CARBURETOR "SPILL-OVER" ON SHARP RIGHT TURN CORRECTION:* To prevent spill-over on cars with external vent, replace carburetor bowl cover assembly with Lincoln No. ED-EAD-99983-F. *See "Lincoln-Mercury Centri-Quad" in Carburetor Section.*

►*CHOKE HEAT TUBE ASSEMBLY & INTAKE MANIFOLD PRODUCTION CHANGE:* New assemblies entered production in early June to prevent exhaust gas leakage into choke control heat tube assembly. Previous type heat tube assemblies are retained for service replacement on early cars, and later type heat tubes and manifold assemblies can be installed.

Idle Setting–Exactly 1¼ turns open (set both screws alike)

Idle Speed–400-425 RPM with selector lever in "Drive"

► *1955 IDLE SPEED-UP CONTROL ON AIR CONDITIONED CARS* This automatic throttle control device may be found on 1955 cars (increases engine idle speed to 800 RPM with air conditioning turned on and transmission selector lever in Neutral). *For adjustment, see "Carburetor" on 1956 Lincoln.*

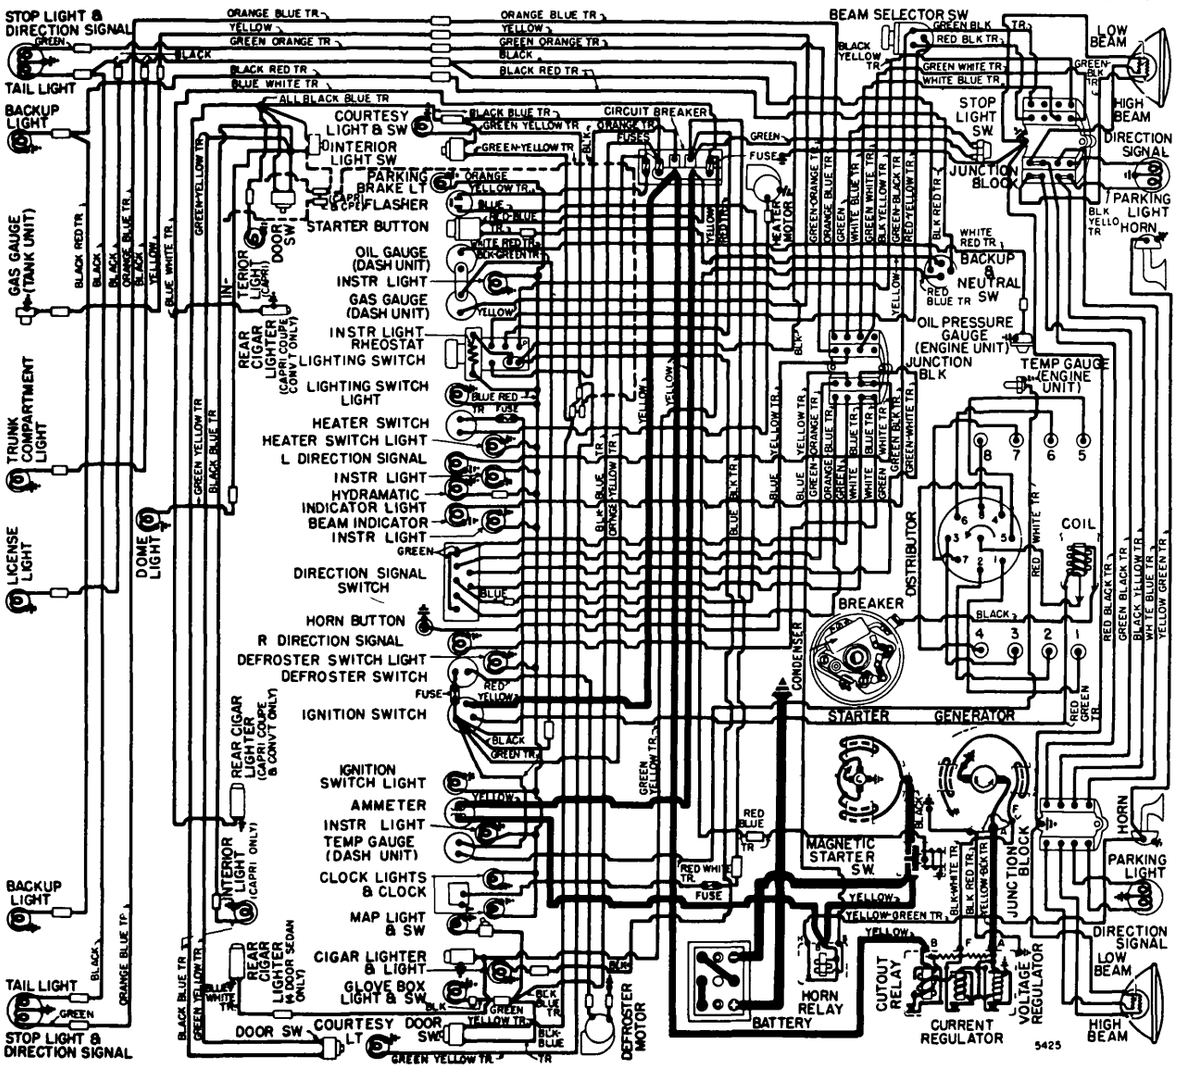
External Vent Seasonal Adjustment: (See "External Vent Production Change" above). On carburetors where spring clip is provided on hollow accelerator pump rod to control vent opening, adjust clip to open or close vent hole for best operation as follows

Winter Operation (Temperatures below 50°F)–Slide clip down on pump rod so that vent hole is CLOSED

Summ r Op rati n (T mp ratur s abov 50°F)–Slide clip upward on pump rod so that full diameter of vent hole is OPEN

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE



Hydra-Matic Thr ttl Linkag Adjustm nt: With engine at normal operating temperature (choke valve wide open and fast idle inoperative) adjust engine idle speed to 400-425 RPM with transmission selector lever in "N" (Neutral) and turn off engine Disconnect transmission throttle rod at forward end by taking out clevis pin. Adjust carburetor throttle rod by loosening locknut and turning adjusting clevis on rod so that carburetor throttle lever stop screw is against stop, and control shaft assembly is against its stop. Tighten locknut against adjusting clevis *(CAUTION—Throttle rod ends must be in alignment to prevent binding).* Hold throttle lever in slow idle position (stop screw against its stop), and push down firmly on transmission throttle rod so that lever is in its stop position, adjust clevis on forward end of rod so that clevis pin enters freely, then remove pin and **shorten the rod three full turns of clevis.** Connect rod and tighten clevis locknut Check shift points by road testing car

►*OTHER DATA: See "Lincoln & Mercury Centri-Quad" in Carburetion Section*

Fuel Pump Pressure: 3 5-4 5 lbs at 900 RPM

1955 MODELS

Lincoln EBJ-9510-D (Early); EBJ-9510-F, H (Late).

1954 MODELS

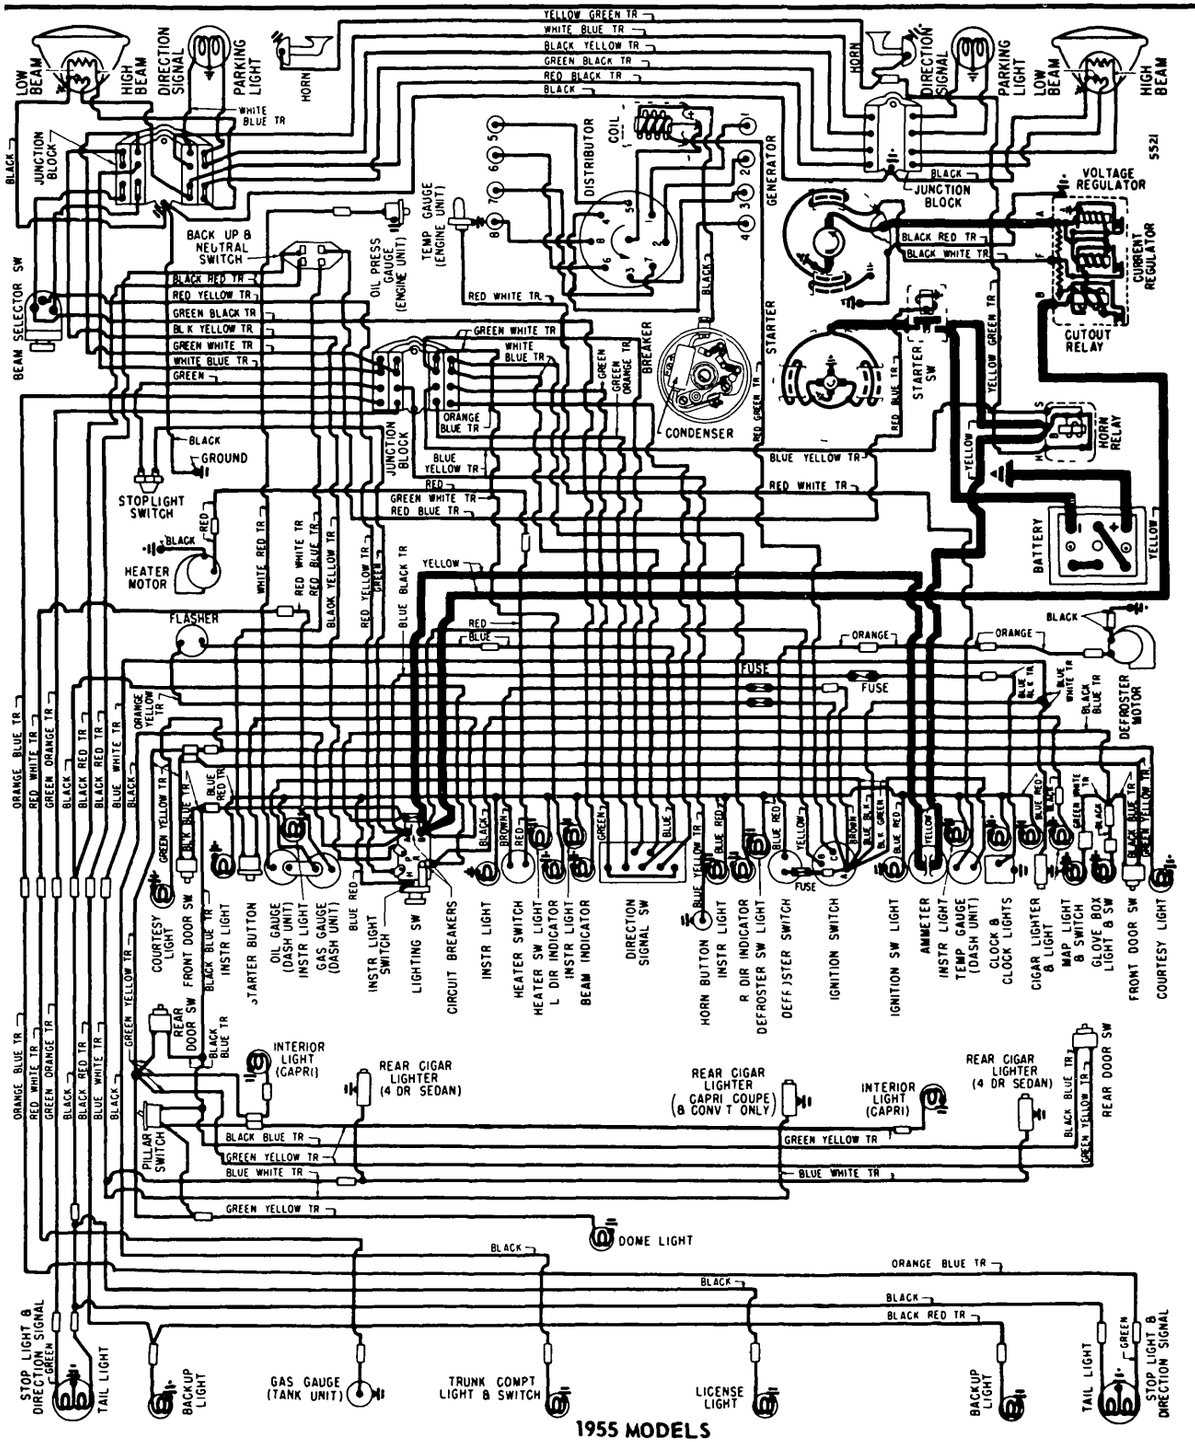
"Centri-Quad" four-barrel downdraft type with automatic choke

►*CARBURETOR INSTALLATION CAUTION (First cars with Choke Inlet Air Tub Washer in Thr ttl Body): See "Lincoln & Mercury C ntri-Quad" in Carburetor Section.*

►*AUTOMATIC CHOKE ROD ADJUSTMENT: Must b correct for proper starting and automatic chok op r- ation. See "Lincoln & M rcury C ntri-Quad" in Carburetor Section*

►*MANIFOLD FUEL DISTRIBUTION Carbur tor RIGHT barrels feed Cyl. 2-3-5-8, LEFT barrels 1-4-6-7*

Idle Setting—1-1/2 turns open (set both screws alike). **Idle Speed**—425-450 RPM with selector lever in "Drive"



Dashpot Adjustment: Hold dashpot piston in to limit of travel, turn adjusting screw in or out until clearance between screw and dashpot piston rod is .045-.064".

Automatic Throttle Control Adjustment (Air-C nditioned Cars): With engine adjusted to normal idle speed (425-450 RPM , selector lever in "D"), and engine at normal operating temperature, turn air-conditioner "ON" and place transmission selector lever in "N" (Neutral) position Loosen adjusting screw locknut on end of operating rod and adjust knurled adjusting nut to provide an idle speed of 800 RPM. Tighten locknut. Check operation of Automatic Throttle Control to make sure idle speed return to normal idle when transmission is shifted out of "N" (Neutral), or air-conditioner is turned off.

Turbo-Drive Throttle Linkag Adjustm nt: Adjust the engine idle speed to 425-450 RPM with fast idle cam in low idle position and transmission in "Dr" range. Disconnect clevis pin from transmission control-to-accelerator shaft assembly and transmission control shaft-to-transmission rod assembly. Disconnect carburetor-to-transmission control shaft rod assembly. Insert gauge pin through bracket and bellcrank tab. Adjust carburetor-to-transmission control shaft rod assembly so that it fits freely. Reassemble rod assembly and remove gauge pin. Pull upward on transmission control shaft-to-transmission rod assembly to position throttle lever against its internal stop. Adjust transmission control shaft-to-transmission rod clevis so that clevis pin enters clevis and lever on transmission control-to-accelerator shaft assembly freely. Lengthen rod by turning clevis 2-1/2 turns and reassemble. With ignition off and accelerator pedal depressed to full kickdown position, adjust length of toggle rod assembly so that nylon bushing fits in the slot in the transmission control-to-accelerator shaft lever assembly within .25" clearance (approximately). Adjust toggle rod assembly so that it is in a vertical plane when viewed from front of vehicle. This is done by loosening jam nut and turning stud with a screwdriver in desired direction. Retighten jam nut after making adjustment.

Turb -Driv Thr ttl Linkage Adjustm nt (Optional Method): *See "Turbo-Drive" in Transmission Section.*

Fuel Pump Pressure: 3.5-4.5 lbs. at 900 RPM.

CARB. EQUIPMENT

►*CARBURETOR AIR CLEANER INSTALLATION CAUTION: The indentation at bottom of air cleaner and the words "Front" on side of cleaner must face front of engine.*

►*1954 AIR CLEANER GASKET & HOLD-DOWN WING SCREW PRODUCTION CHANGE (To Correct Air Cleaner "Flexing" and Wing Screw Breakage):* The paper gasket has been replaced in production and for service by a neoprene gasket, Part No EAD-99654-B, and the previous wing screw has been replaced by a longer screw. Part No 354535-S8B. When installing the neoprene gasket, apply a coat of cement to both surfaces before inserting in air cleaner.

Fuel Pump: Lincoln No. EAD-9350-E (1954); EAD-9350-F (1955). Fuel & Vacuum type with magnetic type filter

Pressure—3.5-4 5 lbs , at 900 RPM.

See "Fuel Pumps" in Carburetion Section.

Gasoline Gauge: King-Seeley Electric type.

Dash Unit—Lincoln No. FAF-9280-A (1954); FDL-9280-A (1955).

Tank Unit—Lincoln No. FAB-9275-A.

See "Fuel Gauges" in Carburetion Section.

BATTERY

►*LINCOLN BATTERY REPLACEMENT CAUTION: Us only a replacement battery with terminal posts on sam side. Damage to battery will result if battery with diagonal terminal posts used.*

Lincoln No. FAA-10655-E. 6 volt, 21 plate, 110 ampere hour capacity (20 hr. rate).

Location—Under front compartment toe-boards on right side of car.

Battery Ground—Positive, to frame side rail.

Engine Ground—Engine cylinder head to dash.

STARTER

Lincoln No. FAC-11002-B (1954); FAC-11002-G (1955).

Armature—Lincoln No 52-11005 (FAC-11002-B), FAC-11005-B (FAC- 11002-G)

Drive—Lincoln No 1CM-11350-C Bendix "Folo-Thru"

Rotation—Counter-clockwise at commutator end

Brush Spring Tension—48-56 ozs

Cranking Speed—115-125 RPM

Performance Data—FAC-11002-B

Torque	RPM	Volts	Amperes
0 ft lbs	①	6 0	70
14 ft lbs	Lock	3 5	700

Performance Data—FAC-11002-G

Torque	RPM	Volts	Amperes
0 ft. lbs.	①	6.0	70
14 ft. lbs	Lock	3.5	700

① —With starter on engine and engine running.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Removal: Remove battery-to-starter cable. Remove attaching bolts holding steering idler arm support to frame lower support and remove idler arm assembly. Remove capscrews holding endplate to converter housing and remove starter by pulling out and down until starter drive clears housing.

Starting Switch: Lincoln No. B5A-11450-A *(NOTE—This relay is a sealed type and replaces the relay formerly used).* Mounted on frame side rail adjacent to starter, and controlled by Ignition Switch and Automatic Transmission Neutral Safety Switch.

Neutral Safety & Back-up Light Switch (1954): Lincoln No. FAB-15812-A (Without Power Steering); FAD-15812-A (With Power Steering). Located at lower end of steering column.
Adjustment—*See "Hydra-Matic Drive" in Transmission Section.*

Neutral Safety & Back-up Light Switch (1955): Lincoln No. FDK-15825-B (Switch Terminal). Located on steering column inside passenger compartment. Supersedes previous switch location.
Adjustment—*See "Turbo-Drive" in Transmission Section.*

GENERATOR

Lincoln No. FBB-10002-A. Armature—FAB-10005-A.

Performance Data

Generator	Amperes	Gen. RPM.
FBB-10002-A	50 ①	1850

① —See Regulator for maximum charging rate.

Brush Spring Tension—26-34 ozs.
Field Current—2.25-2.50 amps. at 6.0 volts.
Rotation—Counter-clockwise at commutator end.

Belt Adjustment: Approximately ½" deflection midway between generator and pump pulleys with normal thumb pressure.

REGULATOR

Lincoln No. FAJ-10505-A.

►*SETTING NOTE:* Settings below are for regulator at NORMAL OPERATING TEMPERATURE (after 1/2 hour operation) with room temperature at 70-80° F.

Cutout Relay

Cuts In—6.0-6.6 volts.

Voltage Regulator

Setting—7.4-7.8 volts.
Checking & Adjusting—*See Electrical Equip. Section.*

Current Regulator

Setting—48-52 amperes.
Checking & Adjusting—*See Electrical Equip. Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Equip. Section.*
Direction Signal: *See Electrical Equipment Section.*

Automatic Headlight Dimmer: *See "Lincoln-Mercury" Headlight Control" in Electrical Equipment Section.*

Lighting Switch Removal: With control knob in the "OFF" position, press the spring release button on switch housing, turn shaft slightly and pull it out of switch. Unscrew mounting nut, remove switch and disconnect all wires.

Stop Light Switch Location: On forward end of brake master cylinder (Conventional or Power Brakes). Master cylinder located on firewall in engine compartment.

FUSES: Turn Signal—14 amps. (1954); 9 amps (1955)
Dome & Courtesy Lights—14 amps. (1954); 9 amps. (1955).
Glove Box—14 amps.
Cigar Lighter (Front & Rear)—Special fuse in lighter base.
Clock—3 amps. (in clock lead) (1954); None (1955).
Heater—20 amps.
Spotlight—14 amps.
Windshield Washer (1955)—14 amps. (or special 3 amps.).

CIRCUIT BREAKERS (1954): Two circuit breakers (30 amps. for headlights, 15 amps. for auxiliary) mounted on signal panel located behind instrument panel.

CIRCUIT BREAKERS (1955): On headlight switch. One circuit breaker protects headlight circuit and second circuit breaker protects instrument panel lights, parking lights, and stop and tail light circuits.

HORNS: Dual Horns operated by relay.

Lincoln Nos.	Without Air Cond.	With Air Cond.
High Pitch	FAE-13832-B	B5A-13832-A
Low Pitch	FAE-13833-B	B5A-13833-A

Horn Relay—Lincoln No. FAA-13853-A.

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION:* Before disconnecting any part of air conditioning equipment or lines for access to engine, *see "Air Conditioning Service Cautions" in Miscellaneous Section.*

►*1954 CYLINDER HEAD & VALVE STEM SEAL PRODUCTION CHANGE:* Beginning with April 1954 production, a new cylinder head, Part No. EAD-6049-F (identified by a square shoulder ¼" below top of valve guide), and a new valve stem seal, Part No. EAA-6571-C, replaced earlier cylinder head, Part No. EAD-6049-D (identified by tapered shoulder on valve guide boss), and valve stem oil seal, Part No. EAD-6571-A. Early and late cylinder heads are interchangeable. *CAUTION*—Use later type valve stem seal with late type head, and early type seals with early head.

►*1955 SPECIAL ENGINE OVERHAUL CAUTION (Engines identified by yellow paint at water outlet connection housing):* Approximately 600 engines at close of 1955 production have special parts listed below which are not identical with regular engine parts. Special instructions must be followed when working on these engines. *See "Engine" in Lincoln Special Data.*

ENGINE SPECIFICATIONS: 90° V8 Valve-in-head

Model	Bore	Stroke	Displacement
1954	3.8"	3.5"	317.5 cu. ins.
1955	3.94"	3.5"	341 cu. ins.

Model	Compr. Ratio	Rated HP	Developed HP
1954	8.0-1	46.2	205 at 4200 RPM
1955	8.5-1	49.6	225 at 4400 RPM

Compression & Vacuum Reading—*See TUNE-UP.*

CYLINDER HEAD: *See "Cylinder Head & Manifold" in Lincoln Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Lincoln Special Data.*

ENGINE REMOVAL: *See "Engine" in Lincoln Special Data.*

OIL PAN REMOVAL: Turn crankshaft so that rear counterweights on crankshaft are upwards, then remove oil pan from front of car.

PISTONS

Aluminum alloy, autothermic slipper type with three rings above pin.
Removal—Rod and piston assembly removed from above.

Fitting New Pistons: Use 1/2" wide feeler gauge inserted between piston and cylinder wall at right angles to pin on thrust side. Feeler thickness as follows:
New Piston in New Bore—.0015" feeler, 6-12 lbs. pull.
New Piston in Used Bore—.002" feeler, 6-12 lbs. pull.
Used Piston in Used Bore—.0025" feeler, 6-12 lbs. pull.

Replacement Pistons: Standard size (see note following), .005", .020", .030", .040" Oversize. Pistons furnished only with fitted pins.

STANDARD SIZE PISTON NOTE: Standard size pistons furnished in eight different sizes ranging from 3.7990" to 3.8014" for selective fitting.

Installing Pistons: Install piston with "F" (embossed on piston) and dimple on head toward front of engine.

PISTON PINS

Floating type with lock rings at each end.
Diameter—.9120-.9123".
Pin Fit in Piston—.0001-.0003".
Pin Fit in Rod—.0002-.0004" loose, (Light thumb press fit).

Replacement Pins: Standard size, .001", .002" Oversize.

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr. #1	.0775-.0780"	.010-.027"	.0015-.0030"
Compr. #2	.0775-.0780"	.010-.027"	.0010-.0025"
Oil	.1860-.1865"	.010-.027"	.0015-.0030"

Replacement Rings: Standard size, .020", .030", .040" Oversize.

►*PISTON RING REPLACEMENT NOTE: Install Compression Rings with groove on inner edge of ring UPWARD.*

CONNECTING RODS

Length—7.064-7.066". **Weight**—28.36 ozs.
Crankpin Journal Diameter—2.2482-2.2490".
Lower Bearing—Steel backed, copper lead alloy lined type. Upper and lower halves interchangeable.
Clearance—.0005-.0025".
Side Clearance—.006-.014" (two rods).

Replacement Bearings: Standard (2 sizes marked **red** & **blu** for selective fitting) and .010", .020", .030", .040" Undersize.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Installing R ds: Oil squirt hole in rod toward camshaft side of bore on all rods. Numbers on rods and bearing caps should be together and installed in same numbered cylinder.

CRANKSHAFT

J urnal Diam t rs–2.6235-2.6243".
Out- f-R und Limits–.00025". **Taper Limits–**.0005".
B arings–Steel backed copper lead alloy lined.
Replacement B arings: Standard size (2 sizes marked r d and blu for selective fitting) and .010", .020", .030", .040" Undersize.
End Thrust: Taken by #3 main bearing. Replace bearing if end play excessive.
Thrust B aring Alignment–*See "Crankshaft & Main B arings" in Lincoln Sp cial Data.*
Endplay–.004-.008" (service maximum .012").
Crankshaft Rear Oil Seal Installation: *See "Crankshaft & Main Bearings" in Lincoln Special Data.*
Crankshaft Fr nt Oil Seal Installation: *See "Engine Front C v r" in Lincoln Special Data.*

CAMSHAFT

►*CAMSHAFT IDENTIFICATION NOTE: Camshafts us d in 1954-55 production and for service replacement are as f llows:*

1954 (Std. Camshaft)–EAD-6250-F. "EAD" cast between No. 12 cam lobe and No. 4 cam bearing; also letter "L" stamped on front face of camshaft fuel pump eccentric.
1954 (Heavy Duty Camshaft)–EAD-6250-E. "EAD" cast in same location as for Std. Camshaft (above). Letter "L" not stamped on shaft.
1955 (Early)–EBJ-6250-A. "EBJ" cast between No. 5 cam bearing and distributor drive gear; also letter "J" stamped on front face of camshaft fuel pump eccentric. Specifications are same as for later camshaft.
1955 (Late)–EBJ-6250-B. "EBJ-B" cast between No. 5 cam bearing and distributor drive gear; also letter "J" stamped on front face of camshaft fuel pump eccentric, and the letter "C", with two dimples cast between No. 4 cam lobe and No. 2 cam bearing. Specifications are same as for early camshaft.

►*1954-55 SERVICE REPLACEMENT CAMSHAFT CHANGE (To provid better wear characteristics):* Camshafts, Part Nos. EAD-6250-G (1954 Models), and EBJ-6250-B (1955 Models) are furnished for service replacement. These camshafts are identified by the letter "C", with two dimples, cast between the first two cam lobes, counting from front of engine.

J urnal Diameter–2.1263-2.1268".

Bearings–Steel-backed babbitt-lined bushings.
Clearanc –.0011-.0028". Wear limit .005".
End Thrust: Taken by hydraulic plunger in front end of camshaft. Excessive oil lubricates timing chain, sprockets, and front cover thrust boss. **Endplay–**.000".
Replac m nt Bearings: Standard size, and .015" Undersize.
Camshaft R m val: *See "Camshaft & Bearings" in Lincoln Sp cial Data.*
Timing Chain: Width 1.25". Pitch .5". Length 25".
Camshaft S tting: Timing marks on camshaft and crankshaft sprockets adjacent and in line with straight edge across shaft centers.
Timing Chain Cover Seal Installation (Crankshaft Front Seal): *See "Engine Front Cover" in Lincoln Special Data.*

VALVES

►*EXHAUST VALVE STEM DIAMETER CHANGE (Production & Service Replacement Valves): Stem diameter decreased .0005" for greater stem clearance in guide. See "Valve System" in Lincoln Special Data.*
Tappet Clearance: None in service (hydraulic).

Valve	Head Diam.	①②Stem Diam.	Length
Intake	2.000-2.010"	.3415-.3425"	5.18",
Exhaust	1.505-1.515"	.3405-.3410"	5.18"

Valve	Seat Angle	Lift	Stem Clearance
Intake	45°	③	④.0010-.0020"
Exhaust	45°	③	⑤.0020-.0030"

①–Exhaust valve stems (service replacement) decreased .0005" in diameter. See Exhaust Valve Change above.
②–Valves furnished with .003", .015", .030" oversize stems for service replacement.
③–.354" (1954); .384" (1955).
④–.004" service maximum.
⑤–.005" service maximum.

Valve Seat Width: 1/16" to 5/64".
Oversize Valve Stem Installation: *See "Valve System" in Lincoln Special Data.*
►*ROTATABLE VALVE NOTE: All valves are rotatable type.*

►*1955 VALVE STEM OIL SEAL CHANGE (For Improved Oil Control):* New valve stem oil seal, Part No. B5A-6571-A, has a .100" longer skirt to protect greater area of valve stem from oil splash. This seal used in production on later 1955 engines.

Valve Springs: (1954)–Free Length 2.21". Spring pressure, with spring compressed to 1.80", pressure should be 64-67 lbs. Compressed to 1.47", pressure should be 133-147 lbs.
1955–Free Length 2.11-2.13". Spring pressure with spring compressed to 1.80", pressure should be 67-74 lbs. Compressed to 1.42", pressure should be 165-183 lbs.

Valve Guides: Integral with cylinder head. When stem-to-guide clearance exceeds maximum (.004" intake, .005" exhaust), ream guides and install oversize valves. *See "Valve System" in Lincoln Special Data.*

Valve Lifters: Hydraulic, Barrel type. Lifters can be removed from above with camshaft in engine.

►*1954 MODEL NOISY VALVE LIFTER CORRECTION:* On cars built before Serial Nos. 54WA-19137-H & 54LA-7558-H, install an anti-drain back diaphragm B4A-6751-A and oil filter mounting bolt insert, EAA-6890-C in oil filter assembly. *S e "Oil Filt r" in Linc ln Sp cial Data.*

►*1954 HYDRAULIC VALVE LIFTER PRODUCTION CHANGE:* Beginning with Sept. 1954 production a new lifter EBJ-6500-A replaced former lifter EAD-6500-D. Later lifter has three oil holes in outside diameter groove and four holes in plunger, compared to one hole at each point on former lifter. Later type lifters are furnished in unit packs of eight.

►*1954 VALVE PUSH ROD PRODUCTION CHANGE & REPLACEMENT PARTS CAUTION:* A new pushrod, Part No. EBJ-6565-A has been released for service replacement for use with later type lifters (see Valve Lifter Production Change above). The new type pushrod can be identified by a spherical tappet end (early type had a flat end). *Later type pushrod must not b used with early type hydraulic lifter.*

►*1954 ROCKER ARM COVER SEAL NOTE:* A new seal, Part No. EBU-6570-A and a longer stud, Part No. 354053-S has been released for service to minimize engine noises.

Diameter–.8740-.8745". **Clearance in Block–**.0005-.0020".
Initial Valve Clearance–*See "Valve System" in Lincoln Special Data.*
Lifter Overhaul–*See "Valve System" in Linc ln Special D ata.*
Rocker Arm Assembly: *See "Valve System" in Linc ln Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT abov .
►*VALVE TIMING NOTE: The following valve opening and closing points are with a camlift as indicated.*

1954 Models

Intake Valves–Open 18° ① BTDC. Close 58° ② ALDC.
Exhaust Valves–Open 56° ① BLDC. Close 20° ② ATDC.

1955 Models

Intake Valves–Open 8° ① BTDC. Close 56° ② ALDC.
Exhaust Valves–Open 52° ① BLDC. Close 12° ② ATDC.

①–Camlift .002". ②–Camlift .005".
Valve Timing Check–Slide rocker arm to one side and install dial indicator so reading can be taken from end of valve push rod (use an indicator that will read .300" or more). Install a quadrant (reading in degrees) on crankshaft pulley to check amount of crankshaft rotation. Rotate engine slowly until dial indicator reading for valve being checked is same as indicated in table above. Amount of crankshaft rotation should be the same as shown in valve timing table. As an example, check intake valve opening by rotating engine until dial indicator reads .002" camlift. Quadrant on crankshaft should indicate 18° (1954); 8° (1955). Continue to rotate engine to check valve closing degrees. Dial indicator should read .005" and quadrant should indicate 58° (1954); 56° (1955).

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Lincoln Special Data.*
Crankcase Capacity: 5 qts. (refill), 6 qts. (when filter changed).
Normal Oil Pressure: 35-45 lbs. at 40 MPH.
Pressure Regulat r Valv –In pump body, not adjustable.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Oil Pressure Indicator—King-Seeley Electric.
Dash Unit (1954)—Lincoln No. FAG-9273-A
Dash Unit (1955)—Lincoln No. FDL-9273-A.
Engine Unit (1954-55)—Lincoln No. 41A-9278 (Use FAA-13785-A Clip)
See "Oil Gauges" in Miscellaneous Section.

Oil Pump: Gear type pump located on left side of engine crankcase and driven by distributor drive gear.

Pump Overhaul—*See "Oiling System" in Lincoln Special Data.*

Oil Filter: Full-flow type with pressure relief valve in center filter bolt. Replace filter element at 4000-5000 miles or when oil becomes dirty or polluted.

►*1954 OIL FILTER PRODUCTION CHANGE (New anti-drain back diaphragm): See "Oiling System" in Lincoln Special Data*

Replacement Filter Element—HCK-6731-A (Kit includes new gaskets).

See "Oiling System" in Lincoln Special Data.

CAUTION—Special "full-flow" filter element must be used for replacement (use of by-pass type filter element will restrict engine oil flow and result in insufficient engine lubrication).

Crankcase Ventilation: Filter element in oil filler cap and in road draft tube. Clean and oil filters every 2000 miles or more often in dusty areas.

►*1954 CRANKCASE VENTILATOR OIL LEAKAGE CORRECTION:* Install gasket, Part No. B4A-6872-A, which is a firmer type gasket and will not distort when tightened.

COOLING

Water Capacity: 22.5 qts. (1954), 23 qts. (1955), without heater (21.5 qts. recommended)

Pressure Valve: Lincoln No. LA-8100-A3 (14 lbs.), LA-8100-A4 (13 lbs.) Radiator filler cap, stamped with figure "13" or "14"

Thermostat: **(1954)**—EAD-8575-B (157-162°) EAD-8575-C (168-173°) **(1955)**—EAD-8575-D (157-162°). B4Q-8575-B (168-173°) *NOTE—When installing 1955 thermostats on 1954 cars, use gasket, Part No. EAD-8590-B.*

Water Pump: Packless type with sealed ball bearing
See "Water Pumps" in Lincoln Special Data.

Temperature Gauge: King-Seeley Electric
Dash Unit (1954)—Lincoln No. FAG-10883-A
Dash Unit (1955)—Lincoln No. FDL-10883-A.
Engine Unit—FAB-10884-A (Early 1954), 1A-10884-A (Late 1954 & 1955)
See "Temperature Gauges" in Miscellaneous Section.

HYDRA-MATIC DRIVE

"Dual-Range" four speed automatic transmission with fluid coupling.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Hydra-Matic Drive" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Hydra-Matic Drive" in Transmission Section.*

Lubrication—Check fluid level every 1000 miles. Drain & refill every 25,000 miles. Use only Automatic Transmission Fluid Type A, furnished under Lincoln Part No. 31-19582.

Checking Fluid Level—Check fluid level with engine idling, transmission at normal operating temperature, and selector lever in "Dr" range. Dipstick located under hood on right side of engine. Add fluid to bring level to "Full" mark on dipstick.

►*CAUTION—Do not check fluid level when transmission excessively hot, and do not fill above "Full" mark on dipstick.*

THROTTLE LINKAGE ADJUSTMENT: *See CARBURETOR above*

►*OTHER DATA: See "Hydra-Matic Drive" in Transmission Section.*

TURBO-DRIVE TRANSMISSION

Torque converter and three-speed automatic transmission with hydraulic control and mechanical parking lock
See "Turbo-Drive" Transmission in Transmission Section.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION. See "Turbo-Drive" Transmission in Transmission Section.*

►*TESTING & TROUBLE SHOOTING See "Turbo-Drive" Transmission in Transmission Section.*

Lubrication—Check transmission oil level every 1000 miles and maintain oil level at "Full" mark on dipstick. Drain and refill every 15,000 miles. **Use only Automatic Transmission Fluid Type A.**

Checking Fluid Level—With selector lever in "N" (Neutral) and emergency brake applied, run engine approximately four minutes at idle speed. Check to see that emergency brake is applied and that engine is on slow idle, move selector lever to the "P" (Park) position. *(NOTE*—When engine and transmission are at normal operating temperature, move selector lever through all ranges to assure fluid distribution throughout transmission) Raise hood and wipe top of oil level indicator. Remove indicator and read fluid level. Add Automatic Transmission Fluid "Type A" if necessary to bring fluid level to "Full" mark on indicator. Replace fluid level indicator.

THROTTLE LINKAGE ADJUSTMENT: *See CARBURETOR above.*

►*OTHER "TURBO-DRIVE" SERVICE DATA. See "Turbo-Drive" Transmission in Transmission Section.*

UNIVERSALS

Spicer. Needle bearing type.

REAR AXLE

Own. Semi-floating hypoid gear, with Hotchkiss drive.
See "Lincoln, Mercury, Ford (Integral Carrier)" in Rear Axle Section.

Ratios—3.31-1 (1954); 3.07-1 (Std. 1955); 3.31-1 (Optl. 1955).

Backlash—.003-.008" with .002" maximum variation per gear set.

Axle Shaft Removal: Remove rear wheels and take out screws holding brake drum to axle shaft flange. Remove hydraulic brake lines from brake backing plate. Take out axle retainer nuts (working through opening in axle shaft flange). Use Tool 4235-A to remove axle shaft and bearing assembly from axle housing. Take off backing plate and gasket and remove axle being careful not to damage oil seal.

Axle Assembly Removal: Raise rear of car and remove axle shafts and drive shaft. Take off hydraulic line clips from axle housing and free line from differential housing clip. Disconnect shock absorbers and spring U-bolts. Remove axle housing assembly from car.

Wheel Bearing Adjustment: None required.

SHOCK ABSORBERS

Direct acting, non-adjustable. Service by replacement

►*1954 SHOCK ABSORBER REPLACEMENT CAUTION:* Both Gabriel and Monroe shock absorbers used. Valve action is different in each make and it is recommended that single shock be replaced with the same make removed. Either make may be installed in pairs on front or rear.

Model	Front	Rear
Standard (1954)	LA-18045-F	LA-18080-F
Standard (1954)	LA-18045-G	LA-18080-G
Standard (1955)	LE-18045-A	LE-18080-E
Heavy Duty (1954)	LA-18045-H	LA-18080-H
Heavy Duty (1954)	LA-18045-J	LA-18080-J
Maximum Hvy. Duty (1954)	LA-18045-E	LA-18080-E
Special (1954) Ⓒ		LA-18080-B

Ⓒ—Use with Hvy. Duty Springs

FRONT SUSPENSION

Independent. "Ball-Joint" suspension with direct acting shock absorbers mounted within front coil springs.
See "Lincoln, Mercury, Ford (Ball Joint)" in Front Suspension Section.

Kingpin Inclination—7°10' with Pos. 3/4° camber.

Caster—0° to Neg. 1-1/2°. Caster must not vary more than 1/2° from one side to the other.

Camber—0° to Pos. 3/4°. Camber must not vary more than 1/4° from one side to the other.

Toe-In—3/32" to 5/32".

Toe-Out on Turns—With outer wheels at 20°, inner wheel should be 23½°.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

STEERING

Manual: Gemmer Mod l 335. "3-Tooth" Worm & Roller type with "push-pull" adjustment.
See "Gemm r Worm & Roller (Type 335)" in Steering Section.

Pow r St ering: Saginaw (GM) Hydraulic . Recirculating ball nut and worm type plus extended pitman shaft with gear sector in mesh with power rack. Power rack pinned to piston rod of hydraulic power cylinder.
See "Saginaw (GM) Power Steering" in Steering Section.

Steering Linkag : *See "Steering Linkage" in Steering Section.*

Steering Wh el & H rn Button Removal: *See "Gemmer Worm & Roller (Type 335)" in Steering Section.*

Steering G ar R moval: *See "Gemmer Worm & Roller (Type 335)" in Steering Section.*

BRAKES

►*1955 FRONT BRAKE PRODUCTION CHANGE: Front brake ecc ntric adjustment has been eliminated on Late 1955 cars.*

B ndix Hydraulic (Single Anchor). With Eccentric (Fr nt Wh els—See 1955 Production Change above). **With ut Ecc ntric (R ar Wheels).** Parking lever applies rear wheel service brakes.
See "Ford-Bendix (Ford, Lincoln, M rcury)" in Brake Section.
Drums—Diameter 12".
Wh el Cyl. Diam ter—1-1/8" (front), 15/16" (rear).
Lining—Molded type riveted to shoe
Width—2-1/2" (front whls.), 2" (rear whls.).
Thickness—7/32" (all whls.).
Length—11-33/64" (primary shoes, front & rear whls.), 12-15/16" (secondary shoes, front & rear wheels.).
Braking Power—59% (front whls.), 41% (rear whls.).
Clearance—.010" at each end of both primary and secondary shoes (.003" maximum variation).

Brake Pedal Free Play Adjustment: .240" to .440". If play not correct after brake adjustment, loosen lock nut on the eccentric bolt attaching brake pedal to master cylinder pushrod, rotate eccentric bolt for desired clearance.

Standard Master Cylinder: Located on engine side of fire wall.
Checking Fluid—Maintain fluid level to within 1/2" of top of reservoir.
Removal—Disconnect brake line from brake master cylinder and depress brake pedal a few times to force out fluid. Disconnect wires leading to stop light switch and remove eccentric bolt attaching master cylinder pushrod to brake pedal. Remove capscrews and lock washers attaching master cylinder to fire wall.

Power Brakes: Bendix Vacuum Power Unit (combination vacuum power unit and master cylinder). Unit mounted on engine side of fire wall and replaces regular master cylinder.
See "Bendix Power Unit" in Brake Section.
Checking Fluid—Same as for regular master cylinder.
Removal of Pow r Unit—Disconnect valve pushrod from brake pedal assembly in drivers compartment. Remove master cylinder outlet fitting bolt from master cylinder. (NOTE—It is not necessary to remove stop light switch, wires or hose assembly from outlet fitting. Do not disturb outlet fitting in master cylinder). Loosen clamp securing manifold vacuum hose to check valve on power unit. Remove hose from valve. Loosen clamp securing vacuum reserve tank hose to fitting on check valve. Remove four capscrews securing power brake assembly to bracket on dash panel and remove power brake assembly.

MISC. MECHANICAL

Windshield Wipers: Cable operated vacuum type. *See "Windshield Wipers" in Miscellaneous Section.*

Air Conditioning: Own. *See "Lincoln Air-Conditioning" in Miscellaneous Section.*

Power Window Regulators: Electric type. Reversible type motor in each window Controlled by door switch and master control switch. *See "Power Window Regulators" in Miscellaneous Section.*

Power Top Control: Reversible type motor (mounted under seat) drives two screw type jacks (one on each side) through flexible cables. Controlled by relay and two-way switch. *See "Power Top Controls" in Miscellaneous Section.*

Power Seat Adjusters: Electric type. Individual motor for vertical and horizontal adjustment. *See "P wer Seat Adjusters" in Miscellaneous Section.*

►*AIR CONDITIONED CAR SERVICE CAUTION: Us xtr m car wh n disconn cting any part of air conditioning quipment or lin s. Se "Air Conditioning S rvic Cautions" in Miscellaneous S ction.*

MODEL IDENTIFICATION

SERIAL NUMBER: Stamped on patent plate attached to left front body pillar between door hinges.
First Number – (Lincoln) 5001, (Continental) 1001.

►*LINCOLN SERIAL NUMBER NOTE: Serial number (example *56LA5001L*) includes following identification data in sequence.*

Year	Assy. Plant	Serial No.	Engine Type
56	ℂ	5001	② L

ℂ – **LA** – Los Angeles. **WA** – Wayne. ② – Lincoln.

►*CONTINENTAL SERIAL NUMBER NOTE: Serial number (example *C5681001*) includes following identification data in sequence.*

Eng. Type	Year	Month	Serial No.
C ℂ	56	②	1001

ℂ – Continental.
② – Model year began June, 1955. Numbers (6 for June through 9 for September and 0 for October) or letters (beginning with A for November 1955 and alphabetically thereafter) are used

TUNE-UP

►*HARD STARTING CORRECTION: See CARBURETOR below.*

COMPRESSION PRESSURE: 150±10 lbs at cranking speed.

VACUUM READING: 18-19" at 475-500 RPM in neutral.

VALVE TAPPET CLEARANCE: None in service (hydraulic). Adjustment required only when servicing valves or hydraulic lifters.
Initial Valve Tappet Clearance Adjustment - *See "Valve System" in Lincoln Special Data.*

►*TAPPET CLEARANCE ADJUSTING SCREW NOTE "Self-locking" screws used on later cars. See "Valve System" in Lincoln Special Data.*

LINCOLN MANIFOLD HEAT CONTROL: External valve at right exhaust manifold connection to exhaust pipe. Valve is automatic, requires no adjustment but should operate freely. When valve is closed, most exhaust gases are discharged through left hand exhaust pipe.

CONTINENTAL MANIFOLD HEAT CONTROL: Valve is mounted at end of right hand manifold. Valve is automatic, requires no adjustment but should operate freely. Dual exhaust system used.

►*NOTE:* When valve is closed, gases are discharged through left exhaust manifold back through left resonator (one in each exhaust pipe ahead of muffler) to the cross-over pipe where gases are again divided and discharged through the right and left mufflers. Cross-over pipe has been included to equalize exhaust system.

IGNITION

FIRING ORDER: 1-5-4-8-6-3-7-2.
Cylinders–RIGHT BANK 1-2-3-4. LEFT BANK 5-6-7-8.

SPARK PLUG GAP· 032-.036".
Spark Plug - Champion F-14Y 18 mm Torque to 15-20 ft lbs *NOTE* - Supersedes No 860 previously used

►*SPARK PLUG CAUTION:* Spark plug has tapered seat and does not require a sealing gasket. It is important that plugs be tightened within limits of 15-18 ft. lbs.

►*LINCOLN SPARK PLUG MISFIRE CORRECTION:* If misfire condition exists at either No. 8 or No. 6 cylinder, interchange No. 6 & No. 5 spark plug wire positions in all insulator blocks.

COIL: Lincoln No. B6A-12029-A. *12 Volt.*
Ignition Current–2 5 amps idling, 4 5 amps. stopped.
Resistor–Lincoln No. B6A-12250-B. On bracket attached to top of coil.

►*COIL RESISTOR NOTE:* Resistor is connected in lead from ignition switch to coil. Resistor is by-passed during cranking by a lead from starter solenoid to battery terminal of coil.

DISTRIBUTOR: (Lincoln) **Lincoln No. FDU-12127-B,** (Continental) **No. FEG-12127-A.** *12 Volt.* New double diaphragm, pressure type with separate vacuum lines to manifold and carburetor.

►*LINCOLN GROUNDING OF DISTRIBUTOR TERMINAL PRIMARY WIRE ASSY. CORRECTION:* Screws securing distributor identification plate extend into housing and may penetrate primary wire insulation and ground wire. To correct, grind or file off sharp points, replace damaged wire.

►*INTERMITTENT OR COMPLETE IGNITION FAILURE CORRECTION:* May be caused by having distributor primary wire improperly welded to one or both of its terminal lugs (insulated wire from terminal on distributor to breaker point terminal).

Condenser–Lincoln No. FAB-12300-A. **Capacity** .21-.25 microfarad.
Contact Point Set–Lincoln No. FAB-12171-B.
Breaker Gap–.014-.016".
Cam Angle–26-28.5°.
Breaker Arm Spring Tension–17-20 ozs.
Rotation–Counter-clockwise viewed from above.

Advance Performance
►With Distributor on Test Stand

Distr. Degrees	Vacuum (" of HG)	Distr. RPM
0	.12	350
¼-1¼	.21	400
3-4	46	600
5¼-6¼	70	800
6¾-8	90	1000
8¼-9½	1.09	1200
10¼-11½	1.42	1500
12¾-14	1.88	2000

DISTRIBUTOR INSTALLATION NOTE· It may be necessary to crank engine slightly if distributor is not seated properly in cylinder block. Crank engine, while holding distributor down, until intermediate shaft is engaged and distributor drops into place. *CAUTION– Do not start engine until distributor clamp and nut are in place.*

Initial Distributor Timing· Remove No. 1 spark plug. Crank engine until piston starts up on compression. Slowly "bump" engine over with starter until timing mark is aligned with pointer. Find No. 1 spark plug socket in distributor cap and fit cap to distributor housing. Mark distributor housing to indicate No. 1 spark plug wire position. Position rotor approximately 20° counter-clockwise from mark made on distributor housing. Engage distributor drive gear and install distributor in engine.

IGNITION TIMING

S tting–5° BTDC. with engine idling at 475 RPM and PRIMARY (inner diaphragm) vacuum line disconnected. *See Initial Distributor Timing above.*
Timing Mark–Crankshaft pulley marked TDC with twenty 2° lines before this point. Space between 2nd and 3rd line before TDC mark should be aligned with pointer on engine front cover.

CARBURETOR

Lincoln (Holley), ECU-9510-B, C, D, E. 4-Barrel carburetor with integral automatic choke.

►*CARBURETOR PRODUCTION CHANGES – ECU-9510-D, E (To Provide Improved Chok Operation & Eliminate Possibility of Fuel Leakage at Fu l Inl t Valv): See "Holley (Ford, Lincoln, Mercury) 4-Barr l C ntri-Quad" in Carburetion Section.*

►*CARBURETOR AIR INTAKE DUCT ASSEMBLY (THERMOSTATIC CONTROL):* Carburetor air intake duct to air cleaner has thermostatically controlled valve which provides warm air for cold engine (air taken in through muff or shroud around exhaust manifold), or cool air for warm engine (air taken in at front in front of radiator). Thermostat begins to open valve at 75° F. and valve should be wide open with air temperature of 95° F. or higher. *See "Fuel System N tes" in Lincoln Sp cial Data for testing and adjusting data.*

►*HARD ENGINE STARTING CORRECTION (Du t Disengagement of Choke Link):* If choke link found disengaged, reinstall choke link and bend tab of choke thermostat lever toward link sufficiently to prevent link from becoming disengaged, allowing sufficient clearance between the tab of thermostat lever and choke link to permit operation without binding or sticking. Loop on thermostat spring must fit over tang on thermostat lever.

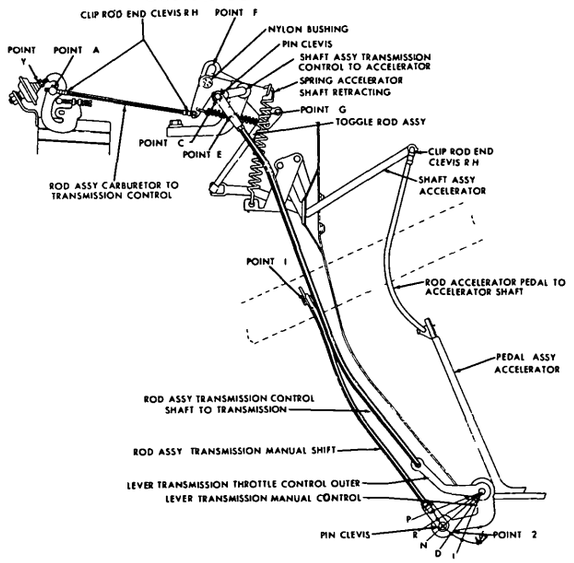
►*1956-57 HARD STARTING, STALLING OR ENGINE BACKFIRE CORRECTION:* New Choke Heat Tube Part No. ECU-9890-B with larger center section radius and larger runout radius at each end of tube is available for service to correct above conditions. *NOTE* - Service Intake Manifolds ECU-9424-A and C must have original type heat tube replaced by this new type before installation.

►*HARD COLD STARTING (ECU-9510-B Carbur tor):* If, after depressing accelerator, choke plates do not set themselves, choke fast idle cam should be checked. If too much stock has been removed from upper tip of cam at point where cam contacts choke link roller, there is a possibility that the cam will bind and wedge the linkage. This occurs when cam tip falls below roller center line, wedging the linkage.

►*LINCOLN VAPOR LOCK CORRECTION:* Check fuel pump-to-fuel' tube hose assembly. Correct hose, Part No. LE-9288-A, has an inside opening of .31". A hose with too small an inside opening will contribute to the vapor lock condition.

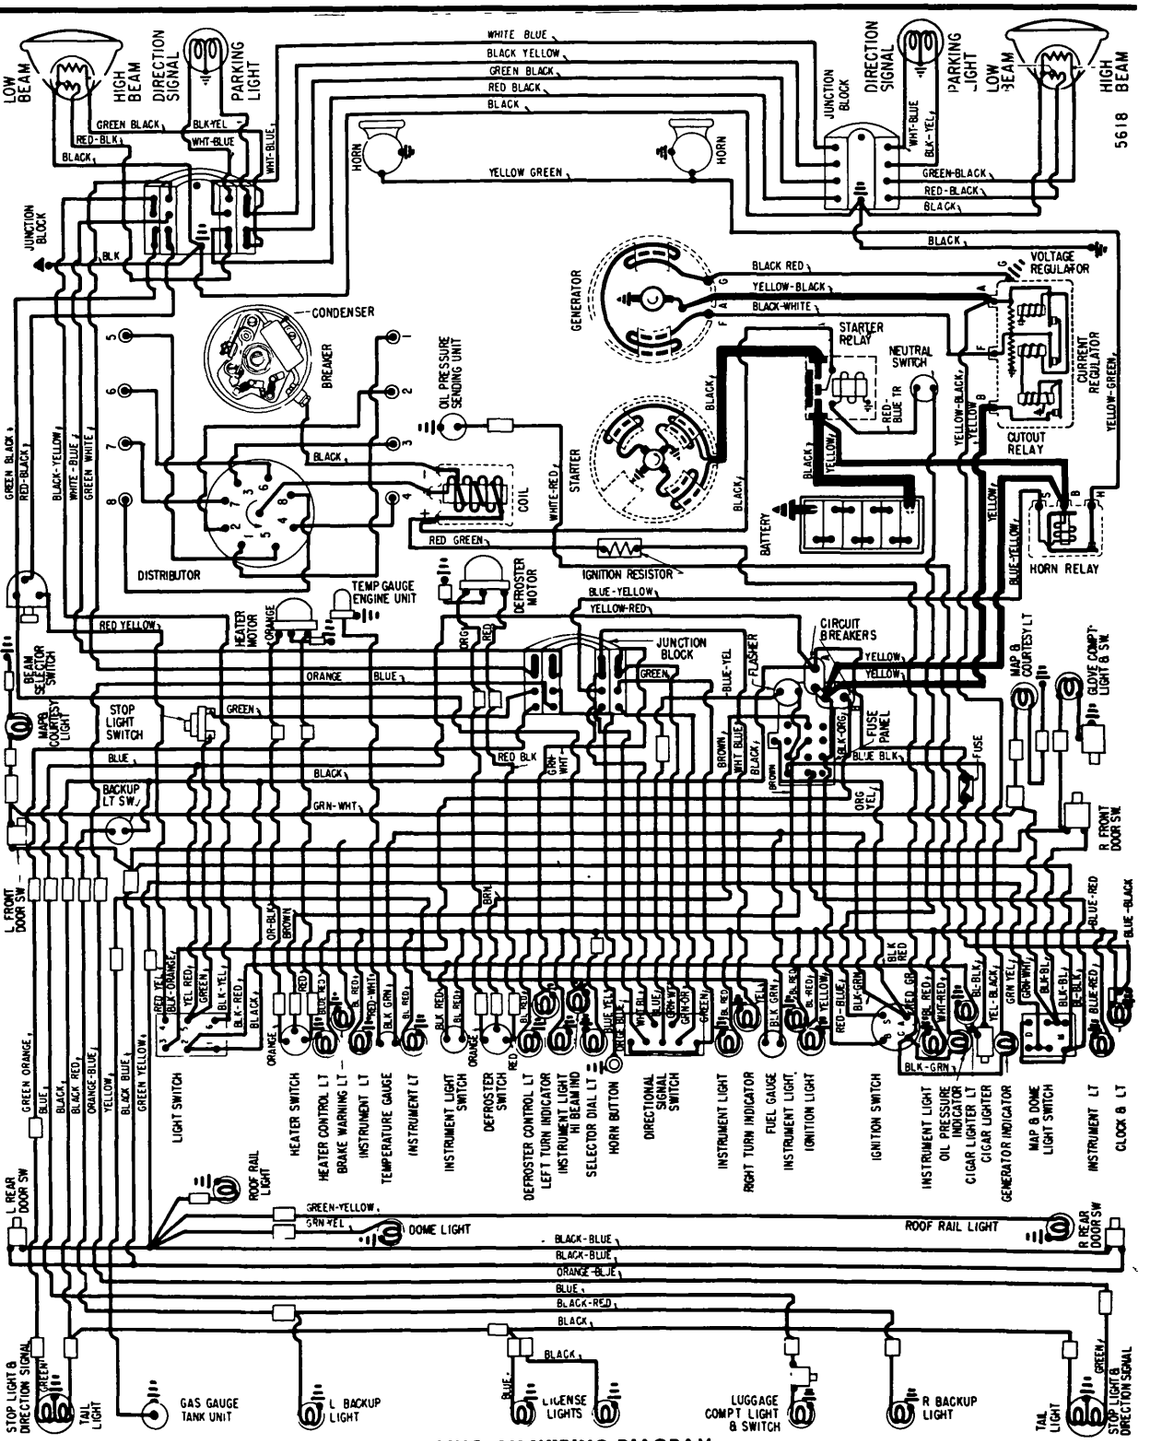
CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE



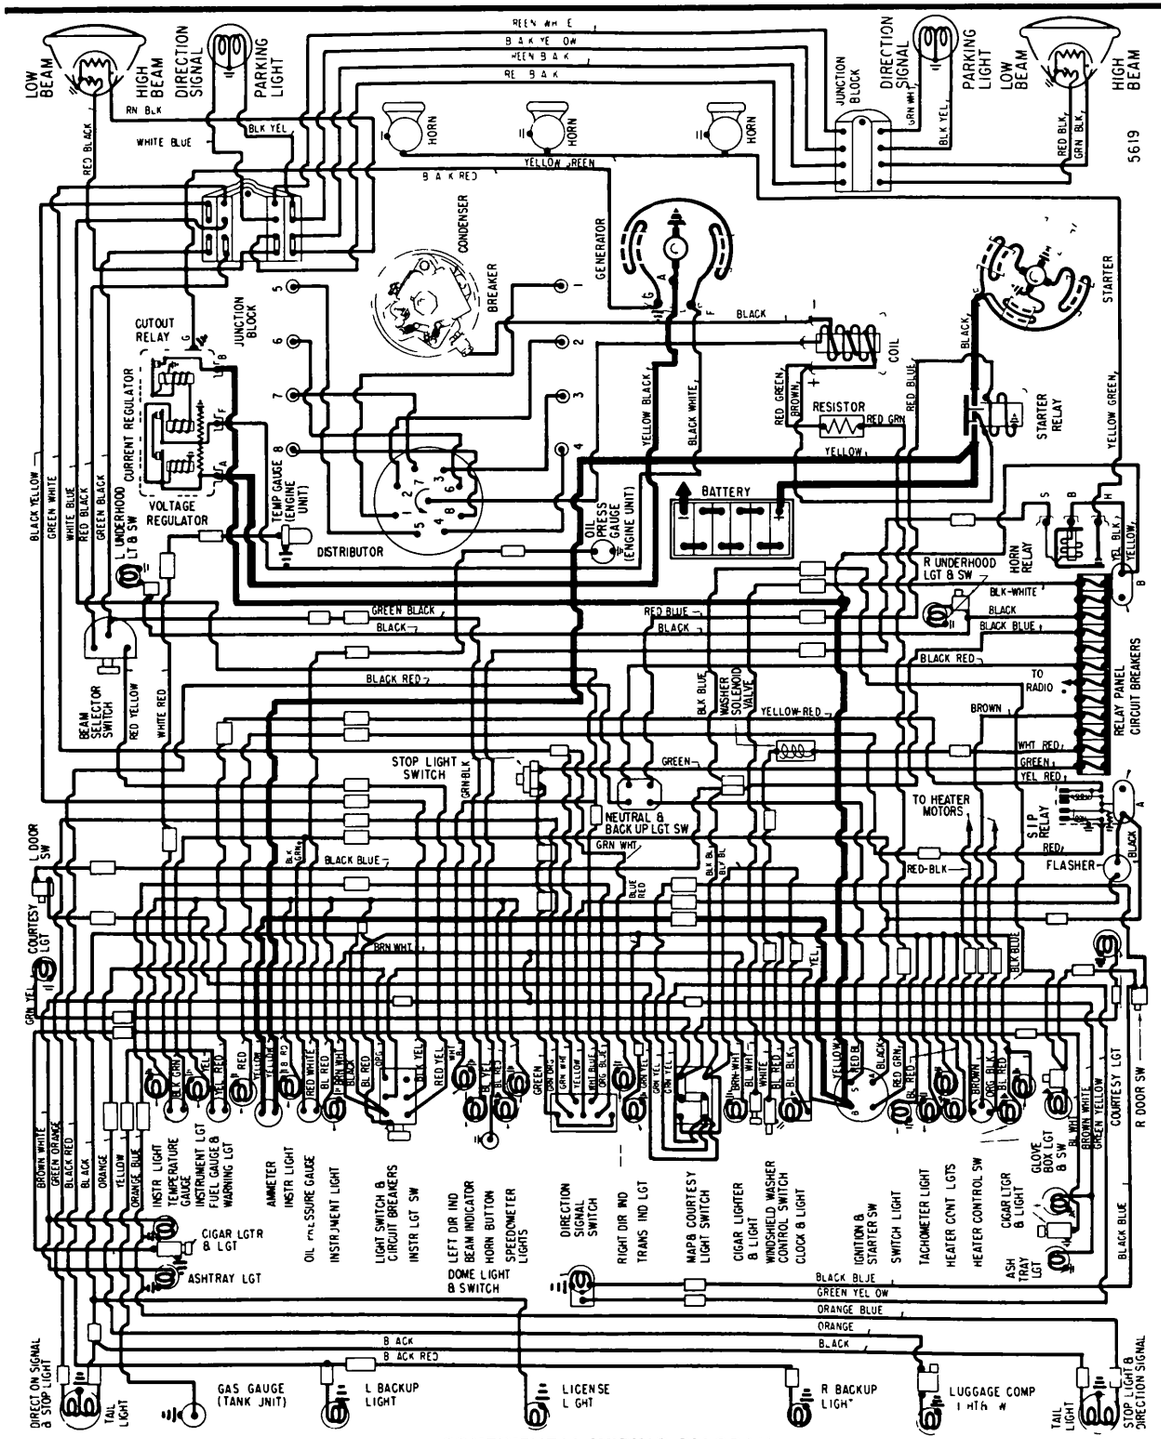
►*IDLE SPEED (AIR CONDITIONED CARS):* Automatic throttle control is incorporated on air conditioned cars and is adjusted as follows: With engine warm, air conditioning system operating, and transmission in neutral, adjust knurled nut at end of operating rod of the control assembly to obtain an idle speed of 800 RPM, tighten locknut. Check idle to make sure that it returns to normal whenever air conditioning is turned off or the transmission is shifted out of neutral.

NOTE – Engine idle should be checked and set to specifications before attempting to adjust fast idle device.



►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyl. 2-3-5-8. LEFT barrels 1-4-6-7.* **Idle Setting**–1¼ turns open (set both screws alike). **Idle Speed**–425-450 RPM with selector lever in "DR" position.

Throttle Linkage Adjustment: Set hand brake and adjust engine idle to 425 RPM with engine at normal operating temperature, fast idle cam in low idle position, and transmission in "DR" position. Adjust anti-stall dashpot (see below). Disconnect clevis pin from transmission control to accelerator shaft and transmission shaft-to-transmission rod assembly. Disconnect carburetor to transmission control rod. Insert gauge pin through bellcrank and bracket in transmission control-to-accelerator shaft assembly. Set carburetor at low idle manually. Adjust carburetor-to-transmission control rod assembly so that with trunnion pin in place at rear end of rod, trunnion at forward end will go in freely. Assemble in this position. Remove gauge pin. Pull upward gently but firmly on transmission control shaft-to-transmission rod assembly. This will position



CONTINUED ON NEXT PAGE

TURBO-DRIVE THROTTLE LINKAGE

LINC LN WIRING DIAGRAM

CONTINENTAL WIRING DIAGRAM

CONTINUED FROM PRECEDING PAGE

throttle lever in the stop position at transmission. Adjust clevis pin at forward end of transmission control-to-accelerator shaft assembly so that clevis pin enters assembly freely Lengthen transmission control shaft-to-transmission rod assembly by turning clevis 2½ turns and assemble in place With ignition off and accelerator depressed to full kickdown position, adjust length of toggle rod assembly so that the nylon bushing has a clearance of .25" (Lincoln), .10" (Continental) from top of slot in accelerator shaft assembly. Adjust lateral angle of toggle rod to a vertical plane, by loosening jam nut at lower end of rod, inserting screwdriver in slot of stud provided and turning ball stud in required direction, tighten jam nuts. *NOTE* - Toggle rod assembly is installed in lower and forward hole (Lincoln) and upper hole (Continental) of transmission control-to-accelerator shaft.

Dashpot Adjustment: Turn throttle lever set screw out until dashpot plunger bottoms, then back it off to give .045-.064" clearance between end of screw and plunger.

► *OTHER DATA: See "Holley (Ford, Lincoln, Mercury) 4-Barrel Centri-Quad" Carburetors in Carburetion Sect.*

Fuel Pump Pressure: 4-6 lbs. at 500 RPM

CARB. EQUIPMENT

Fuel Pump: (Lincoln) Lincoln No. ECU-9350-A, (Continental) No. ECV-9350-A. Fuel and vacuum type.
Pressure – 4-6 lbs. at 500 RPM.
See "Fuel Pumps" in Carburetion S ction.
Gasoline Gauge: King-Seeley Electric type.
Dash Unit – (Lincoln) Lincoln No. FDU-9280-A, (Continental) Part of instrument cluster 4049792.
Tank Unit – (Lincoln) Lincoln No. FDU-9275-A, (Continental) No. 4047440.
See "Fuel Gauges" in Carburetion Section.

BATTERY

Lincoln – Lincoln No. FDU-10655-C. *12 Volt,* 13 plate, 65 ampere hour capacity (20 hour rate).

► *LINCOLN BATTERY INSTRUCTION DECAL CAUTION*
A few cars were released with wrong instruction decal on battery box cover, indicating that positive cable grounded. 1956 Lincoln has **negativ** ground.
Continental – Lincoln No. 4047942. *12 Volt,* 13 plate, 65 ampere hour capacity (20 hr. rate).
Location – (Lincoln) In vertical compartment beneath right side of dash panel. (Continental) In engine compartment.
Battery Ground – Negative, to engine block.

► *CAUTION: This is reversed from previous Lincoln models.*

Engine Ground – Cylinder head to dash.

STARTER

Lincoln No. B6A-11002-A. Armatur – B6A-11005-A. *12 Volt.*
Drive – Bendix "Folo-Thru". Lincoln No. 1CM-11350-C.
Rotation – Counter-clockwise at commutator end.
Brush Spring T nsi n – 48-56 ozs.
Cranking Sp ed – 150-180 RPM with warm engine.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	4800 max.	12.0	100-120
	150-180 Ⓒ	8 or more	210 max

Ⓒ – Cranking speed with warm engine.

Starting Switch: Relay, Lincoln No. B6A-11450-A, controlled by Ignition & Starter Switch, Lincoln No. B5A-11572-A, and Turbo-Drive Neutral Safety Switch, located on steering column.

Turbo-Drive Neutral Safety Switch Adjustment: *See "Turbo-Drive" in Transmission Section.*

► *SELF-STARTING OF ENGINES & CONTINUOUS OPERATION OF BACK-UP LIGHTS CORRECTION:* Neutral Safety Switch Insulator Assembly has been modified to prevent above condition. Original Part No. FDK-15827-B remains the same, but modified assembly can be recognized by two ridges approximately .020" high on each side and parallel to brass strip.

GENERATOR

Lincoln No. B6A-10002-A. *12 Volt.* **Armature** – B6A 10005-B.

Performance Data

Amperes	Volts	Gen. RPM
30	15	Ⓒ 2500

Ⓒ – At 1500 Engine RPM.

Brush Spring Tension – 26-34 ozs.

Field Current – 1.5-1.6 amps. at 15 volts (Hot).

Rotation – Counter-clockwise at commutator end.

Belt Adjustment: Approximately ½" deflection on belts midway between generator and pump pulleys with normal thumb pressure.

REGULATOR

Lincoln No. B6A-10505-A. *12 Volt.*

► *SETTING NOTE:* Settings are for regulator at NORMAL OPERATING TEMPERATURE (after running engine for 20 minutes at 1500 RPM if started cold, or until temperature gauge is steady for 5 minutes if engine previously warmed up) with room temperature at 75° F.

Cut-out Relay

Cuts In – 12.0-12.8 volts.

Cuts Out – 2.0-6.0 amps. (reverse current).

Voltage Regulator

Setting – 14.6-15.4 volts.

Checking & Adjusting – *See Electrical Section.*

Current Regulator

Setting – 28-32 amperes.

Checking & Adjusting – *See Electrical Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Section.*

Direction Signals: *See Electrical Section.*

Automatic Headlight Dimmer – *See Electrical Section.*

Lighting Switch Rheostat: *(NOTE* – Toggle type used on Lincoln, push-pull type used on Continental). Remove anti-rattle bezel from switch, then remove switch from rear of dash panel.

► *DIMMER SWITCH INSTALLATION CAUTION:* A few defective dimmer switches, Part No. FDU-13740-A were installed in early production. Only switches with yellow spot should be installed in service.

Stop Light Switch Location: On forward end of brake master cylinder (integral with power brake unit). Master cylinder or power brake unit located on firewall in engine compartment.

FUSES: Interior Lights – SFE 7.5 amps.
Direction Signals – SFE 7.5 amps.
Heater Blowers – SFE 14 amps. (2 on Lincoln).
Radio – SFE 7.5 amps.
Clock – AG 1 amp.
Cigar Lighter – SFE 15 amps. (Lincoln), SFE 20 amps. (Continental).
Windshield Washer – SFE 7.5 amps.
Back-Up Lights – SFE 7.5 amps.
Underhood Lights – SFE 7.5 amps. (Continental).
Automatic Headlight Dimmer – AGC 3 amps.
Air Conditioning – SFE 20 amps. (Continental).
Radio Antenna – SFE 14 amps. (Lincoln).

CIRCUIT BREAKERS: Lighting – Two 12 ampere circuit breakers (one for headlights, one for auxiliary lights) mounted on headlight switch (Continental) on fuse panel behind instrument panel (Lincoln).
Windows & Seats – One 15 ampere for each window motor One 15 ampere common to both seat motors.
Convertible Top (Lincoln) – 30 ampere circuit breaker.
Air Conditioning (Lincoln) – 15 ampere circuit breaker.
Underhood Lights (Lincoln) – 12 ampere circuit breaker.
Stop Lights (Continental) – 12 ampere circuit breaker.

HORNS: Dual (Lincoln), Triple (Continental) horns operated by relay. *12 Volt.*

Lincoln Horns

Lincoln Nos.	Trumpet Type	Sea Shell Type
High Pitch	FDT-13832-B	FDU-13832-A
Low Pitch	FDT-13833-B	FDU-13833-A

Continental Horns

Lincoln Nos.	Trumpet Type	Sea Shell Type
High Pitch		B5T-13832-B
Low Pitch		B5T-13833-B
Third Horn	4049179	

Horn Relay – Lincoln No. 2Q-13853-A.

ENGINE

► *AIR CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air conditioning equipment or lines for access to engine. See "Air conditioning Service Cautions" in Misc. Section.*

► *VALVE STEM SEAL & CYLINDER HEAD PRODUCTION CHANGE:* Short length of valve stem seal has been increased .100" in order to shield a greater area of valve stem from oil splash. As a result of seal change it was necessary to increase length of the outside diameter of the valve guide. *New seal should be used with New Head* (New Seal, Part No. B6Q-6571-A. New Head, Part No. ECU-6049-C). Present seals can be used with either the old or new head.

ENGINE SPECIFICATIONS: 90° V8.

Bore	Stroke	Displacement
4.00"	3.66"	368 cu. ins.
Rated HP	**Compr. Ratio**	**Developed HP**
51.2	9.0-1	285 at 4600 RPM

Compression & Vacuum Reading – *See TUNE-UP.*

CYLINDER HEAD: *See "Cylinder Head & Manifold" in Lincoln Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Lincoln Special Data.*

ENGINE REMOVAL: *See "Engine" in Lincoln Spec. Data.*

OIL PAN REMOVAL: Remove oil inlet pipe hex fittings at oil pump and side of oil pan and remove pipe. Remove oil pan capscrews, then remove oil pan and gasket.

NOTE – When this operation is performed, turn crankshaft until rear counterweights of crankshaft are up. The oil pan can then be removed from front of engine.

PISTONS

Aluminum alloy, autothermic slipper type with three rings above pin. Tin-plated.

► *ORIGINAL BORE & PISTON SIZES:* Std. cylinder bore limits are 4.0000-4 0024" and TWO Standard Pistons are used for selective fitting as follows 3.9993-3.9996" Diameter (marked "2" on dome), 4.0005-4.0008" Diameter (marked "6" on dome). *NOTE* - Std. piston furnished for service in these two sizes.

Removal – Rod and piston assembly removed from above.

Fitting New Pistons: Using 1/2" wide feeler gauge inserted between piston and cylinder wall at right angle to pin on thrust side, pull should be 6-12 lbs. when using feeler gauge thicknesses as follows: New Piston in New Bore - .0015". New piston in Used Bore - .002". Used Piston in Used Bore - .003".

Replacement Pistons: Standard (Two sizes - see Original Bore & Piston Sizes above), and .020", .030", .040" Oversize.

Installing Pistons: Install all pistons with indentation on head toward front of engine. *See Rod Installation.*

PISTON PINS

Floating type with lock rings at each end.

Diameter – .9120-.9123". **Length** - 3.162-3.176".

Clearance in Piston – .0008" maximum.

Clearance in Rod – .0008" maximum. Select for light thumb press fit at 70° F.

Replacement Pins: Standard (marked Green), and .001" (marked Blue), .002" (marked Yellow) oversize.

PISTON RINGS

► *OIL CONTROL RING PRODUCTION CHANGE:* Effective engines built Jan. 6, 1956 (Continental) and Jan. 17 (Wayne) & Feb. 2, 1956 (Los Angeles) for Lincoln, new type oil control rings are being used in production. These rings are of the side sealing type.

Ring	Width	End Gap	Side Clearance
Compr.(1)	.0775-.0780"	.013-.030"	.006" max.
Compr.(2)	.0925-.0935"	.013-.030"	.006" max.
Oil (3)	.1860-.1865"	.010-.027"	Ⓒ.005" max.

Ⓒ – Early type ring. Later type ring is side sealing type. See Production Change above.

Replacement Rings: Standard size and .020", .030", .040" oversize.

► *SPACING NOTE:* Ring gaps should be spaced 120° apart, with oil ring gap to the side opposite spark plug side of cylinder bores.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

CONNECTING RODS

Length – 7.064-7.066". **Weight** - 28.36 ozs.
Journal Diameter – 2.2482-2.2486" (Color coded BLUE), 2.2486-2.2490" (Color coded RED). Use with bearing of same color.
Lower Bearing – Steel-backed, copper lead alloy lined.
Clearance – .0007-.0036".
Side Clearance – .006-.014". .017" Service max.
Replacement Bearings – Standard (2 sizes marked RED & BLUE for selective fitting) and .010", .020", .030", .040" undersize.
Installing Rods – Assemble rods to piston so indentation embossed on piston head will face front of engine. Numbered side of rods on the right bank should face right side of engine and rods for left bank will face left side of engine. Place caps on connecting rods so numbered sides match and install in same numbered cylinders

CRANKSHAFT

►*CRANKSHAFT PRODUCTION CHANGE (To Minimize Oil Leakage at Front & Rear Oil Seals):* New crankshaft has integral rear oil slinger as part of shaft. New front oil slinger may be installed on 1952-56 crankshafts. *See "Crankshaft & Main Bearings" in Lincoln Special Data.*
Journal Diameter – 2.6235-2.6239" (Color coded BLUE), 2.6239-2.6243" (Color coded RED).
Out-of-Round Limits – .0005" max. **Taper Limits** - .001".
Bearings – Steel-backed copper-lead alloy lined.
Clearance - .0008-.0036".

►*NOTE:* Any combination of Red or Blue bearing inserts may be used to obtain desired clearance. If desired clearance cannot be obtained, it will be necessary to regrind journals and install undersize bearing inserts.
Replacement Bearings: Std. (2 sizes color coded RED & BLUE for selective fitting) and .010", .020", .030", .040" undersize (Center & Rear Bearings), .020", .030" .040" undersize (Front & Intermediate Bearings).
End Thrust: Taken by No. 3 main bearing.
Thrust Bearing Alignment – *See "Crankshaft & Main Bearings" in Lincoln Special Data.*
Endplay – .012" maximum.
Crankshaft Rear Oil Seal Installation: *See "Crankshaft & Main Bearings" In Lincoln Special Data.*
Crankshaft Front Seal Installation: *See "Engine Front Cover" in Lincoln Special Data.*

CAMSHAFT

►*CAMSHAFT PRODUCTION CHANGE:* Two different camshafts used in production. New Camshaft, Part No. ECU-6250-C, replaced Camshaft, Part No. ECU-6250-B, in early production. New camshaft can be identified by by annular grooves around centers of Nos. 2 & 4 journals, instead of cross-drilled holes used previously. Similar groove has been cut in No. 3 journal to increase lubrication to journal. If new shaft installed, it will be necessary to replace EAD-6262-B bearings in No. 2 & 4 positions with new type B6Q-6262-A bearings.

Journal Diameter – 2.1240-2.1247". **Out-of-Round Limit** - .001".
Bearings – Steel-backed babbit lined bushings.
Clearance – .006" maximum. **Endplay** - .003" (restrained by thrust spring and plunger).
Replacement Bearings: Std. & .015" undersize.
Camshaft Removal: *See "Camshaft & Bearings" in Lincoln Special Data.*
Timing Chain: Width 1.25". Pitch .5". Length 25".
Deflection – 1/2".
Camshaft Setting: Timing marks on camshaft and crankshaft sprockets adjacent and in line with straightedge across shaft centers.
Timing Chain Cover Seal Installation (Crankshaft Front Seal): *See "Engine Front Cover" in Lincoln Spec. Data.*

VALVES

Valve Tappet Clearance: None in service (hydraulic). Adjustment required only when servicing valves or hydraulic lifters.
Initial Valve Tappet Clearance Adjustment–*See "Valve System" in Lincoln Special Data.*
►*TAPPET CLEARANCE ADJUSTING SCREW NOTE: "Self-locking" screws used on later cars. See "Valve System" in Lincoln Special Data.*

►*VALVE STEM SEAL PRODUCTION CHANGE: See "Valve Stem Seal & Cylinder Head Production Change" under ENGINE above.*
►*EXHAUST VALVE STEM PRODUCTION CHANGE:* Stem diameter of all standard and oversize production and service exhaust valves has been reduced .0005" in order to increase stem-to-guide clearance. *See "Valve System" in Lincoln Special Data.*

Valve	Head Diam.	Stem Diameter Ⓘ
Intake	2.000-2.010"	Ⓔ.3415-.3420" or Ⓖ.3420-.3425"
Exhaust	1.630-1.640"	Ⓔ.3400-.3405" or Ⓖ.3405-.3410"

Valve	Seat Angle	Lift ⓛ	Stem Clearance
Intake	45°	256" min.	.001-.004" max.
Exhaust	45°	256" min.	.002-.005" max

Ⓘ – Furnished with .003", .015", .030" oversize stems
NOTE – Early production exhaust valve stems, both std. and oversize were .0005" larger.
Ⓔ – Color coded RED. Use with RED valve guide.
Ⓖ – Color coded GREEN. Use with GREEN valve guide.
ⓛ – Cam lobe lift (service limit).

Valve Seat Width – 1/16-5/64" (Intake), 5/64-3/32" (Exhaust).
Oversize Valve Stem Installation: *See "Valve System" in Lincoln Special Data.*
Valve Springs: Free Length – 2-1/8".

Spring Specifications	Pressure	Length
Valve Closed	60 lbs.	1.80"
Valve Open	165 lbs.	1.38"

►*SPRING HEIGHT CORRECTION:* Measure valve spring assembled height from point where spring contacts cylinder head to point where it contacts retainer. Assembled height of spring should be 1 25/32-1 13/16". Spacers are available in steps of .030" & .060" to bring assembled height within these limits or as near to this measurement as possible.
►*SPRING SQUARENESS CAUTION:* If springs more than 1/16" out of square, with spring closed coil end on surface plate and measured with steel square, they should be replaced.
Valve Guides: Integral with cylinder head. When stem-to-guide clearance exceeds maximum (.004" intake, .005" exhaust), ream guides and install oversize valves. *See "Valve System" in Lincoln Special Data.*
Valve Lifters: Hydraulic, barrel type. Lifters can be removed from above with camshaft in engine.
Diameter–.8740-.8745". **Clearance in Block** .0025" max.
Initial Valve Clearance – *See "Valve System" in Lincoln Special Data.*
Lifter Overhaul – *See "Valve System" in Lincoln Special Data.*
Rocker Arm Assembly: *See "Valve System" in Lincoln Special Data.*
►*ROCKER ARM COVER LEAK CORRECTION (Early Cars):* Grind away approximately 1/16" of inner flange for a length of 1½" at rear of cover.
►*VALVE ROCKER ARM PRODUCTION CHANGE (Self-locking Valve Adjusting Screws). See "Valve System" in Lincoln Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.
►*VALVE TIMING NOTE: The following valve opening and closing points are with a camlift as indicated.*
Intake Valves – Open 18° Ⓒ BTDC, Close 72° Ⓔ ALDC.
Exhaust Valves– Open 59° Ⓒ BLDC, Close 31° Ⓔ ATDC.
Ⓒ – Camlift .002". Ⓔ – Camlift .004".
Valve Timing Check – With rocker cover removed, loosen adjusting locknut and screw of valve to be tested. Slide rocker arm to one side in order to have pushrod in the clear. With pushrod in tappet socket install a dial indicator in such a manner as to have actuating arm of indicator in the pushrod socket, in the same plane of pushrod movement (dial indicator used should have at least a total movement of .300" or more). Place a quadrant on the crankshaft pulley. If intake valve opening is being checked, engine is rotated slowly until dial indicator shows .002" camlift. At this point the actual opening reading in degrees is taken(18° BTDC). The engine is further rotated to check the valve closing. Dial indicator should read .004" camlift (72° ALDC)

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Lincoln Special Data.*
►*OIL LEVEL INDICATOR CAUTION:* Two types used. Indicator used with air conditioned cars has expanded anti-rattle section adjacent to tube cover and distance from cover to "Full" mark is 25.97" and is about 3" longer than that used with other cars. Distance from cover to "Full" mark on standard type is 23.01".
Crankcase Capacity) 5 qts. (refill). 6 qts. (when filter changed).
Normal Oil Pressure: 45-50 lbs. at 2000 RPM (Hot).
Pressure Regulator Valve– In pump body. Not adjustable.
Oil Pressure Indicator (Line In): Light on instrument panel. Light is on when oil pressure is low.
Oil Pressure Gauge (Contin ntal): King-Seeley Electric.
Engin Unit - (Lincoln) Lincoln No. B6A-9278-A pressure switch. (Continental) No. FDA-9278-A.
S "Oil Pressur Gauges" in Miscellan ous S ction.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Oil Pump: Gear and rotor types used. Located on left side of engine crankcase and driven by distributor drive gear.

►*OIL PUMP INSTALLATION CAUTION (Aluminum Body):* Attaching screw, Part No. 20446-S8 (5/16"-18 x 1¼") and lockwasher, Part No. 34806-S7, should be used in threaded hole of pump body instead of 1-1/8" used previously. Former screw had tendency to strip softer aluminum thread. Screw should not be longer than 1¼" to prevent possibility of its bottoming.

Pump Overhaul—*See "Oiling System" in Lincoln Special Data.*

Oil Filter: Full-flow type with pressure relief valve in center filter bolt. Replace filter element at 4000-5000 miles or when oil becomes dirty or polluted.

Replacement Filter Element—HCK-6731-A (Kit includes new gaskets).

See "Oiling System" in Lincoln Special Data.

CAUTION—Special "full-flow" filter element must be used for replacement (use of by-pass type filter element will restrict engine oil flow and result in insufficient engine lubrication).

Crankcase Ventilation: Combination oil filler and road draft tube and air filter cap, located on front of valve pushrod cover. Clean and oil the oil filler cap filter every 2000 miles.

COOLING

Water Capacity: 23 qts. total - without heater (22 qts. recommended). Additional 2.4 qts. with heater.

Pressure Valve: Lincoln No. LA-8100-A3 (14 lbs.), LA-8100-A4 (13 lbs.). Radiator filler cap, stamped with figure "14" or "13".

Thermostat: Lincoln No. EAD-8575-D (157-162° F.), B4Q-8575-B (168-173° - use with permanent anti-freeze)

Water Pump: Packless, sealed ball bearing type.

See "Water Pumps" in Lincoln Special Data.

Temperature Gauge: King-Seeley Electric.

Dash Unit – (Lincoln) Lincoln No. FDU-10883-A, (Continental) Part of Instrument Cluster, Lincoln No. 4049792.

Engine Unit – Lincoln No. B6A-10884-A (All).

See "Temperature Gauges" in Miscellaneous Section.

TURBO-DRIVE TRANSMISSION

Torque converter and three-speed automatic transmission with hydraulic control and mechanical parking lock.

See "Turbo-Drive" Transmission in Transmission Section.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Turbo-Drive" Transmission in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Turbo-Drive" Transmission in Transmission Section.*

Lubrication – Check transmission oil level every 2000 miles and maintain oil level at "Full" mark on dipstick. Drain and refill every 16,000 miles. **Use only Automatic Transmission Fluid Type A.**

Checking Fluid Level—With selector lever in "N" (Neutral) and emergency brake applied, run engine approximately four minutes at idle speed. Check to see that emergency brake is applied and that engine is on slow idle, move selector lever to the "P" (Park) position. *(NOTE*—When engine and transmission are at normal operating temperature, move selector lever through all ranges to assure fluid distribution throughout transmission). Raise hood and wipe top of oil level indicator. Remove indicator and read fluid level. Add Automatic Transmission Fluid "Type A" if necessary to bring fluid level to "Full" mark on indicator.

THROTTLE LINKAGE ADJUSTMENT: *See CARBURETOR above.*

►*OTHER "TURBO-DRIVE" SERVICE DATA: See "Turbo-Drive" Transmission in Transmission Section.*

UNIVERSALS

Spicer. Needle bearing type.

PROPELLER SHAFT

►*1955-58 LINCOLN DRIVELINE THUMP CORRECTION:* This noise occurs in front universal joint and is noticed when car is driven over a slight bump or incline under light or medium throttle. The condition may be caused by oil from transmission seeping back and locating between splines on shaft and universal slip joint. To correct, remove drive shaft and drill and tap a 1/8" pipe thread into center of front universal joint expansion plug, then install an Alemite Relief Valve, Part No. 47200, 47640, or 131100. *CAUTION - Do not thread valve too deeply into plug.*

►*LINCOLN REAR SUSPENSION "THUMP" CORRECTION:* May be caused by differential housing hitting against differential bumper. To correct, replace rear spring torque reaction bumpers, Part No. LD-55786-C, with heavier bumpers, Part No. MA-55712. Rear spring riding height should also be checked.

REAR AXLE

►*REAR AXLE PINION SEAL "SQUEAL" CORRECTION: See "Ford, Lincoln, Mercury (Integral Carrier)" in Rear Axle Section for installation of special type pinion seal.*

Own. Semi-floating hypoid gear, with Hotchkiss drive.

See "Lincoln, Mercury, Ford (Integral Carrier)" in Rear Axle Section.

Ratios – 3.07-1 (Std.), 3.31-1 (Optl. on Lincoln).

Backlash—.003-.008" with .002" maximum variation per gear set.

Axle Shaft Removal: Remove rear wheels and take out screws holding brake drum to axle shaft flange. Remove hydraulic brake lines from brake backing plate. Take out axle retainer nuts (working through opening in axle shaft flange). Use Tool 4235-C2 to remove axle shaft and bearing assembly from axle housing. Take off backing plate and gasket and remove axle being careful not to damage oil seal.

Axle Assembly Removal: Raise rear of car and remove axle shafts and drive shaft. Take off hydraulic line clips from axle housing and free line from differential housing clip. Disconnect shock absorbers and spring U-bolts. Remove axle housing assembly from car.

Wheel Bearing Adjustment: None required.

FRONT SUSPENSION

►*1956-57 LINCOLN CRACKING OR SNAPPING NOISE AT FRONT END CORRECTION:* This condition may be noticed on a hard bump or when shifting from reverse to forward speed, and may be caused by the engine shift in mounting bracket dowel holes. To correct, install a rubber shim (piece of old inner tube), cut to same size as lower surface of the front engine support, by cementing it to bottom of front support using weatherstrip cement. Coat other side of shim and install support on engine mounting bracket. Tighten to 50-65 ft. lbs.

Independent. "Ball-Joint" suspension with direct acting shock absorbers mounted within front coil springs.

See "Lincoln, Mercury, Ford (Ball Joint)" in Suspensions and Wheel Alignment Section.

Alignment Specifications	Lincoln	Continental
Kingpin Inclination	① 7°10'	① 7°
Caster	② 0°-Neg. 1½°	③Pos. 1°±¼°
Camber	③ 0°-Pos. ¾°	③Pos. ¾°±¼°
Toe-In	④ 1/8-3/16"	3/32-5/32"

① – With Pos. 3/4° camber.
② – Within 1/2° from one side of car to other.
③ – Within 1/4° from one side of car to other.
④ – Supersedes previous specification of 1/32-3/32".

Toe-Out on Turns – With wheels at maximum turning angle, outer wheel is at 26° and inner wheel is at 36°.

SHOCK ABSORBERS

Direct acting, non-adjustable. Service by replacement.

Shock Absorber Nos.	Front	Rear
Lincoln (Std.)	LD-18045-A	LD-18080-A
Lincoln (Hvy. Duty)	LD-18045-H	LD-18080-H
Continental	4048114	4048113

STEERING

►*TIRE RUBBING ON FRAME CORRECTION:* If front tires rub against frame or any other part of vehicle on a full turn, steering arm stops should be replaced with new stops, Part Nos. LD-33590-C and LD-33591-C. New stops can be identified by half-round notch located on edge of part between mounting holes.

►*LINCOLN STEERING COLUMN RATTLE CORRECTION:* Inspect upper steering column bushing and if steering column shaft-to-bushing clearance is excessive, bushing should be removed and be replaced with a spring-loaded nylon type bearing, Part No. FDT-3517-A.

Power Steering: Saginaw In-Line. *See "Saginaw In-Line" Power Steering in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Saginaw In-Line" Power Steering in Steering Section.*

Steering Gear Removal: *See "Saginaw In-Line" Power Steering in Steering Section.*

Steering Linkage: *See "Steering Linkage" in Steering Sect.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

BRAKES

Bendix Hydraulic. Duo-servo with fixed anchor pins. No eccentric adjustment. Parking lever applies rear wheel service brakes.
See "Ford, Lincoln, Mercury Bendix" in Brake Section.

► *BRAKE "SQUEAL" CORRECTION:* An anti-squeal spring, Part No. 51A-1140, is available for installation on outside of brake drum.

Drums – Diameter 12"front and rear.

Wheel Cylinder Diameter— 1 3/32". (front), 15/16" (rear).

Lining – Molded type riveted to shoe.
Width – 2.5" (front), 2" (rear). **Thickness** – 7/32".

Braking Power – 55.5% (front), 44.5% (rear).
Clearance – Tighten adjusting screw about 5 or 6 clicks after wheel stops turning (shoes tight against drum), then back adjusting screw off 12 to 14 clicks.

Brake Pedal Adjustment: Adjust eccentric bolt attaching brake pedal to master cylinder pushrod to give 1/4-7/16" free movement of pedal pad before rod moves master cylinder.

Standard Mast r Cylind r: Located on engine side of firewall.
Ch cking Fluid – Maintain fluid level to within ¼" of top of reservoir.
Removal—Disconnect brake line from brake master cylinder and depress brake pedal a few times to force out fluid. Disconnect wires leading to stop light switch and remove eccentric bolt attaching master cylinder pushrod to brake pedal. Remove capscrews and lock washers attaching master cylinder to fire wall.

Power Brakes: Bendix Vacuum Power Unit (combination vacuum power unit and master cylinder). Unit mounted on engine side of fire wall and replaces regular master cylinder.

See "Bendix Power Unit" in Brake Section.

Checking Fluid—Same as for regular master cylinder.

Removal of Power Unit—Disconnect valve pushrod from brake pedal assembly in drivers compartment. Remove master cylinder outlet fitting bolt from master cylinder.

(NOTE—It is not necessary to remove stop light switch, wires or hose assembly from outlet fitting. Do not disturb outlet fitting in master cylinder). Loosen clamp securing manifold vacuum hose to check valve on power unit. Remove hose from valve. Loosen clamp securing vacuum reserve tank hose to fitting on check valve. Remove four capscrews securing power brake assembly to bracket on dash panel and remove power brake assembly.

MISC. MECHANICAL

Windshield Wipers: Cable operated vacuum type. S *"Windshield Wipers" in Miscellan ous Section.*

Air Conditioning: Own. See *"Lincoln Air-Conditioning" in Miscellaneous Section.*

Power Window Regulators: Electric type. Reversible type motor in each window. Controlled by door switch and master control switch. S *"Pow r Window Regulators" in Miscellaneous Section.*

Power Top Control: Hydraulic-electric type with power operated latch mechanism. S *"Pow r Top Controls" in Miscellaneous Section.*

Power Seat Adjusters: Electric type. Individual motor for vertical and horizontal adjustment. S *"P w r Seat Adjusters" in Misc llane us Secti n.*

MODEL IDENTIFICATION

SERIAL NUMBER: Stamped on patent plate attached to left front body pillar between door hinges.

First Number - 3443 (Continental), 5001 (Lincoln).

►*SERIAL NUMBER NOTE (Continental).* Serial number (example *56J3443*) includes following identification data in sequence

Car	Mod l Y ar	Month	Serial No.
C ①	56	J ②	3443

① - Continental.

② - Model year began in August 1956. Letters used to indicate month of production, (letters began with "A" for Nov. 1955 and alphabetically thereafter).

►*SERIAL NUMBER NOTE (Lincoln)* Serial number (example *57WA5001L*) includes following identification data in sequence

Year	Assy. Plant	Serial No.	Eng. Type
57	WA ①	5001	L

① - Assembly Plants - **LA** - Los Angeles. **WA** - Wayne.

TUNE-UP

COMPRESSION PRESSURE: 150±10 lbs. at cranking speed.

VACUUM READING: 18-19" at 475-500 RPM in neutral.

VALVE TAPPET CLEARANCE: None in service (hydraulic).

►*VALVE TAPPET CLEARANCE NOTE:* Rocker arms have self-locking adjusting screws for initial tappet clearance adjustment.

MANIFOLD HEAT CONTROL: External valve at right exhaust manifold connection to exhaust pipe. Valve is automatic, requires no adjustment but should operate freely.

►*DUAL EXHAUST NOTE* When heat control valve closed, all exhaust gases discharge through left hand exhaust pipe and muffler (Lincoln), left hand exhaust pipe and both mufflers (Continental).

►*INTAKE MANIFOLD NOTE.* Production intake manifold has mounting hole (¼" x 18 NPSF) for new constant voltage electric heat indicator bulb sending unit. When replacing a 1957 intake manifold, use a 1956 Lincoln or Continental manifold with 3/8" x 18 NPSF threaded hole and install new constant voltage heat indicator bulb sending unit released for this manifold.

CARBURETOR AIR INTAKE DUCT ASSEMBLY: *See "Fu l Syst m Not s" in Lincoln Special Data.*

IGNITION

FIRING ORDER: 1–5–4–8–6–3–7–2.

Cylinders - RIGHT BANK 1-2-3-4. LEFT BANK 5-6-7-8.

SPARK PLUG GAP · .032-.036".

Spark Plug - Champion F-14Y 18 mm Torque to 15-20 ft lbs *NOTE* - Supersedes No 860 previously used.

►*SPARK PLUG WIRE CAUTION* New "Hypalon" insulated high temperature wires must be used on en gines without heat shields *NOTE* - Retain heat shields on Nos 3 & 4 spark plugs

►*SPARK PLUG CAUTION:* Spark plug has tapered seat and does not require a sealing gasket. It is important that plugs be tightened within limits of 15-20 ft. lbs.

COIL: Lincoln B6A-12029-B.

Ignition Current -2.5 amps. idling, 4.5 stopped.

Resistor - Lincoln B6A-12250-D. 1.30-1.40 Ohms.

►*COIL RESISTOR NOTE:* Resistor is connected in lead from ignition switch to coil. Resistor is by-passed during cranking by a lead from starter solenoid to battery terminal of coil.

DISTRIBUTOR: Lincoln FEL-12127-A, Continental FES-12127-A. New type with mechanical (centrifugal) advance and separate Vacuum Spark Control. *See "Ford, Lincoln, Mercury Distributors" in Electrical Section*

►*CONTINENTAL DISTRIBUTOR NOTE: This distributor has a tachometer drive.*

►*DISTRIBUTOR PRIMARY WIRE PRODUCTION CHANGE:* New Primary wire with improved insulation, Part No B7A-12216-B, with shiny black vinyl covering, used in production Use this wire in place of cloth covered wire previously used

Condenser - Lincoln B7A-12300-A. **Capacity** .21-.25 mfd.

Contact Point Set - Lincoln B7A-12171-A.

Breaker Gap - .014-.016".

Cam Angle - 26-28.5°.

Breaker Arm Spring Tension - 17-20 ozs.

Rotation - Counter-clockwise viewed from above.

Automatic Advance

Degrees	Distr.	RPM	Degrees	Eng.	RPM
Start		300	0		600
1½-2½		400	3-5		800
4-5		500	8-10		1000
5½-6½		800	11-13		1600
9-10		1325	18-20		2650
13-14		2000	26-28		4000

Vacuum Spark Control: On distributor housing. Linked to breaker plate.

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of Hg)
0-1	0-2	5
4-6	8-16	10
7-9	14-18	13
7-9	14-18	20

IGNITION TIMING

Setting - 5° BTDC. with engine idling at 475 RPM. *NOTE* - Maximum initial ignition timing is 8° BTDC.

►*CAUTION* DO NOT advance timing beyond these specifications

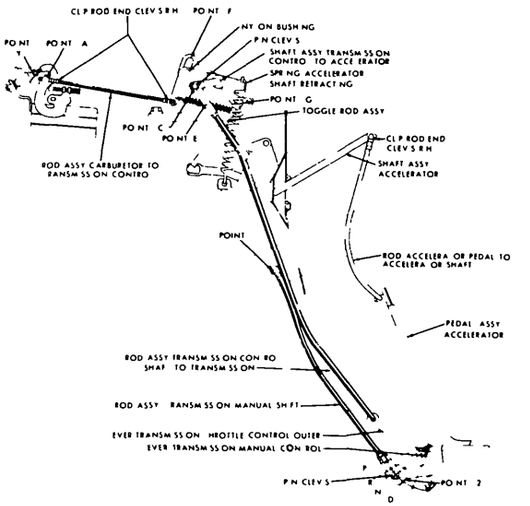
Timing Mark - Crankshaft pulley marked at TDC, 10° BTDC, and 20° BTDC with marks at 2° increments between. Pointer should be half way between the second (4°) and third (6°) marks.

CARBURETOR

Carter WCFB 2404S. 4-barrel with integral Automatic Choke.

►*AIR CLEANER BODY AND ACCELERATOR BELLCRANK INTERFERENCE CORRECTION* Rear side depression of air cleaner body may interfere with bellcrank on some early cars To correct reform air cleaner body to provide 3/16" clearance

►*CUTTING OUT ON LEFT TURN CORRECTION See "Carter WCFB Carburetors" in Carburetion Section*



►*1956-57 HARD STARTING, STALLING OR ENGINE BACKFIRE CORRECTION.* New Choke Heat Tube Part No. ECU-9890-B with larger center section radius and larger runout radius at each end of tube is available for service to correct above conditions. *NOTE* - Service Intake Manifolds ECU-9424-A and C must have original type heat tube replaced by this new type before installation.

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyl. 2–3–5–8. LEFT barrels 1–4–6–7.*

►*CARBURETOR AIR CLEANER (DRY TYPE) NOTE: Special cleaning procedure required See AIR CLEANER below*

Idle Setting - 1¼ turns open (set both screws alike). **Idle Speed Setting** - 475-500 RPM with selector lever in Neutral, 425-450 RPM with selector lever in Drive.

Idle Speed-Up Control Adjustment (Optl. & Air Conditioned Cars): With engine at normal operating temperature, transmission in "N" (Neutral) position and fast idle control switch in "ON" position, loosen locknut on control assembly shaft and adjust knurled nut to obtain engine idle speed of 800 RPM Tighten locknut securely *NOTE* - Interference between Automatic Throttle Control Lever and Control Assembly may be caused by cut out on end of lever being off center, or burrs on edge of lever Mounting bracket may twist

TURBO-DRIVE THROTTLE LINKAGE

out of alignment To correct replace bolts and nuts with the following Bolt Part No 20326-S7, Nut Part No 33797-S7, Split Lockwasher, Part No 34781-S7

Throttle Linkage Adjustment (Turbo-Drive): With engine at normal operating temperature and idle speed set at 425-450 RPM with selector lever in "DR" position, adjust Anti-stall Dashpot (see below), then proceed as follows Remove clevis pin connecting transmission control rod to control shaft (on engine bracket), insert gauge pin, Tool 77230-MB, through control shaft and bracket. Adjust carburetor-to-control shaft rod so that it freely enters hole in carburetor throttle lever. Remove gauge pin. With carburetor throttle lever in slow idle position, hold transmission control rod up so that transmission lever is against stop, adjust clevis on rod so that clevis pin enters hole in control shaft freely, then **length** n rod by turning clevis 2½ full turns, connect rod.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Dashpot Adjustment - After making Idle Mixture, Hot Idle, and Fast Idle Adjustments, hold dashpot plunger in to limit of travel. Loosen locknut securing dashpot to dashpot bracket, insert .067" Gauge (Tool T109-234) between dashpot plunger and primary throttle operating lever, rotate dashpot to obtain proper clearance between plunger and lever *CAUTION* - Improper dashpot adjustment may cause excessive rear axle differential backlash

► *OTHER DATA See "Carter WCFB Carburetors" in Carburetion Section*

FUEL PUMP PRESSURE: 4-6 lbs. at 500 RPM.

CARB. EQUIPMENT

Fuel Pump: Lincoln No. ECU-9350-B (Early), -C (Later), Continental No. ECV-9350-A. Fuel & Vacuum.
Pressure - 4-6 lbs. (Early pump), 4½-6½ (later pump) Lincoln & Continental.
See "Fuel Gauges" in Carburetion Section.

Gasoline Gauge (Lincoln): King-Seeley Electric "CV" (Constant Voltage) type with voltage regulator No. FEL-10804-A.
Dash Unit - Lincoln No. FEL-9280-A and FEL-9280-B.
Tank Unit - Lincoln No. FEL-9275-C.
See "Fuel Gauges" in Carburetion Section.

Gasoline Gauge (Continental): Included in Cluster, Lincoln No. 4049792, which includes Ammeter, Fuel, Oil, and Temperature Gauges.
See "Fuel Gauges" in Carburetion Section.

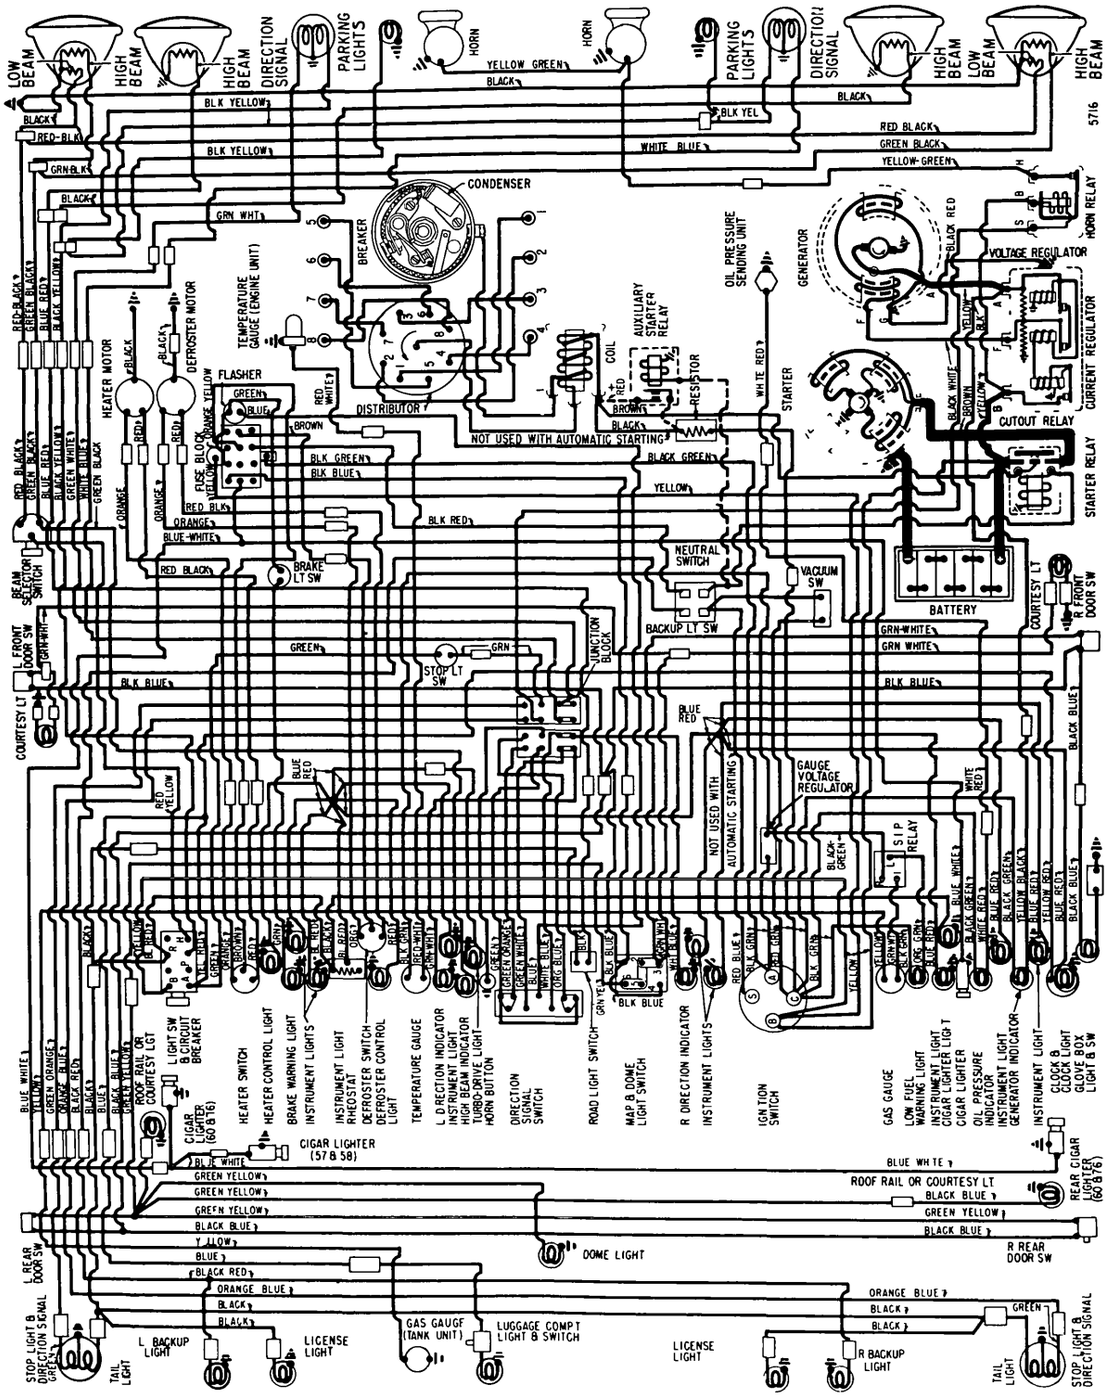
Low Level Fuel Indicator: Light on instrument panel in circuit with Ignition Switch & S.I.P. relay. Replace light bulb when inoperative.

Air Cleaner: DRY FILTER ELEMENT type. Clean every 4,000 miles and replace element every 20,000 miles.

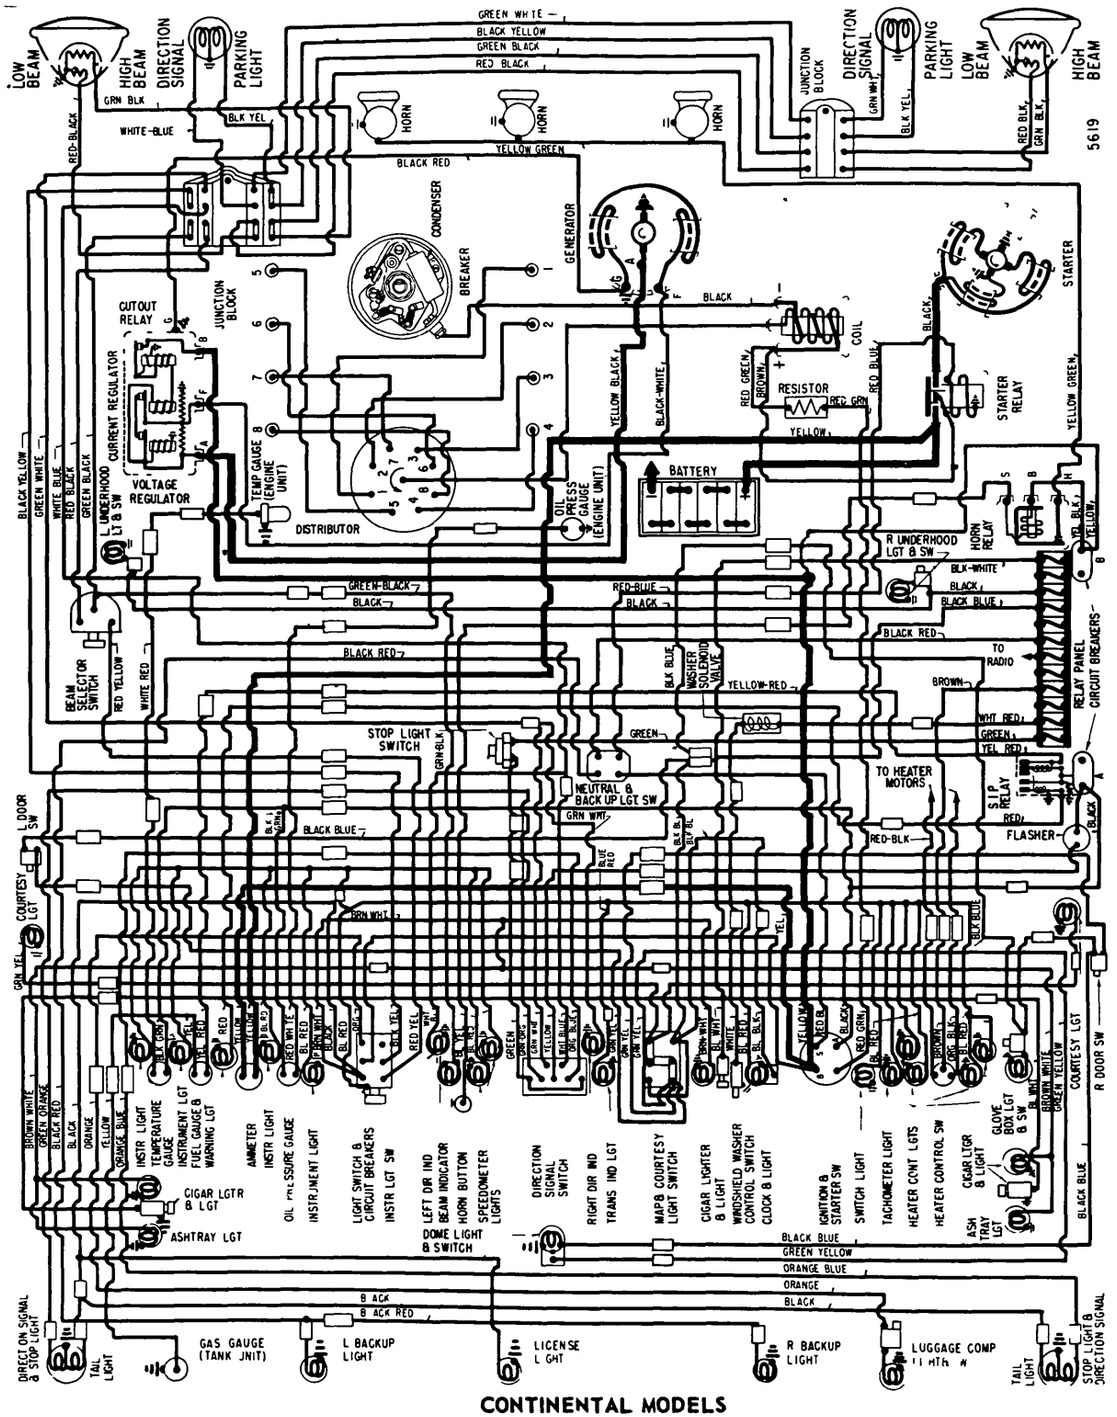
► *CLEANING CAUTION:* Clean element by tapping or shaking to remove particles of dirt. *DO NOT wash element in solvent or other liquids and DO NOT oil or lubricate.*

BATTERY

Lincoln FDU-10655-H, Continental 4050251. 12 Volt. 13 plate, 70 ampere hour capacity (20 hr. rate). Located in right front floor pan (Lincoln), Cowl panel (Engine Side) Continental.
Battery Ground - Negative. Battery to starter.
Engine Ground - Cylinder head to dash.



► *BATTERY NOTE* Late type battery can be used to replace 1956 Lincoln battery.



STARTER

Lincoln FAR-11002-B. Armature - FAC-11005-B.

► *STARTER GEAR NOISE CORRECTION* Caused by bottoming of starter pinion in converter cover ring gear. To correct, remove starter as described below, leaving three attaching bolts loose. Tighten center (outer flange) bolt to light snug fit, pry starter lower attaching flange at engine block rear outrigger away from engine block Hold starter in this position while tightening the three attaching bolts.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Drive - Bendix "Folo-Thru".
Rotation - Counterclockwise at commutator end.
Brush Spring Tension - 48-56 ozs.
Cranking Speed - 150-180 RPM with engine warm.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	4500	12.0	80

Removal: Remove from below by bending gang ignition wires away from top capscrew, removing transmission cooler line clamp below starter so lines can be held away and removing three starter capscrews. Pull out and down or up until starter drive gear clears housing.

Installation: Tape dust seal lip (use masking tape) to inner circumference of housing to hold seal in place, and reverse removal procedure.

Starting Switch: Relay, Lincoln No. B6A-11450-A, controlled by Ignition & Starter Switch, Lincoln No. 11572-A, and Turbo-Drive Neutral Safety Switch, located on steering column.

Automatic Starting (Optl.) - Vacuum Switch No. FEL 11504-B, Auxiliary Starter Relay FDT-11505-A. Provides automatic starting when ignition switch turned on. *See wiring diagram.*

Turbo-Drive Neutral Safety Switch Adjustment: *See "Turbo-Drive" in Transmission Section.*

►***1956-58 LINCOLN NEUTRAL SAFETY SWITCH SERVICE REPLACEMENT (Allowing Starting in Both Neutral and Park Positions):*** **A new neutral switch insulator assembly, Part No. FFC-15827-A, having two terminal strips which allows the car to be started in either "N" (Neutral) or "P" (Park) positions, may be installed as a service replacement.**

GENERATOR

Lincoln No. FGP-10002-A. Armature - FGP-10027-A.

Performance Data

Amperes	Volts	Gen. RPM
40	15	2390

Brush Spring Tension - 26-34 ozs.
Field Current - 1.5-1.6 amps. at 15 volts (Hot).
Rotation - Counterclockwise at commutator end.

Belt Adjustment: Approximately ½" deflection on belts midway between generator and pump pulleys at right side.

REGULATOR

Lincoln FBF-10505-A.

►*SETTING NOTE:* Settings are for regulator at NORMAL OPERATING TEMPERATURE (after running engine for 20 minutes at 1500 RPM if started cold, or until temperature gauge is steady for 5 minutes if engine previously warmed up) with room temperature at 75°F.

Cutout Relay

Cuts In - 12.0-12.8 Volts.
Cuts Out - 2.0-6.0 amps. (reverse current).

Voltage Regulator

Setting - 14.6-15.4 Volts.
Checking & Adjusting - *See "Ford, Lincoln, Mercury 12 Volt Regulators" in Electrical Section.*

Current Regulator

Setting - 38-42 ozs.
Checking & Adjusting - *See "Ford, Lincoln, Mercury 12 Volt Regulators" in Electrical Section.*

CONTINUED ON NEXT PAGE

CONTINENTAL MODELS

CONTINUED FROM PRECEDING PAGE

MISC. ELECTRICAL

Headlamps: Dual Headlights (4-Light System with Regular Headlights and auxiliary Roadlights). *See "4-Headlight System" in Electrical Section.*

Directional Signals: *See Electrical Section.*

Automatic Headlight Dimmer: *See Electrical Section.*

Lighting Switch Removal: *(NOTE* - Toggle type used on Lincoln, push-pull type used on Continental). Remove anti-rattle bezel from switch, then remove switch from rear of dash panel.

Stop Light Switch Location: On forward end of brake master cylinder (integral with power unit). Master cylinder or power unit located on firewall in engine compartment.

CIRCUIT BREAKERS: Lighting - Two 12 Ampere circuit breakers (one for headlights, one for auxiliary lights) located on headlight switch.

Air Conditioning (Lincoln) - 15 Ampere.

Power Top (Lincoln) - 30 Ampere in Motor Lift circuit, 20 Ampere in Motor Latch circuit, 10 Ampere in Motor Relay circuit.

4 or 6-Way Seat Regulator - 30 Ampere in Battery lead, 20 Ampere in each seat motor ground lead.

Window Regulators - 30 Ampere in Battery lead, 15 Ampere in each motor ground lead.

Electric Door Locks - 30 Ampere (4-Door), 15 Ampere (2-Door) in starter terminal lead, 10 Ampere in Ignition Switch lead.

FUSES: Fuse panel mounted on brake pedal support behind instrument panel with holders marked for size of fuse and circuit.

Directional Signals - SFE 7.5 amps.

Interior lamps (Glove Box, Dome, & Courtesy) - SFE 7.5 Amp.

Heater Blowers - Two SFE 14 Amp.

Radio - SFE 7.5 Amp.

Radio Antenna - SFE 14 Amp.

Cigarette Lighter - 1 Sulphur Disc (Lincoln), SFE 20 Amp. (Continental).

Back-up Lamps - SFE 7.5 Amp.

Horn Relay: Lincoln - Lincoln No. B7A-13853-A, with bracket, **Continental** - Lincoln No. 4050519 without bracket.

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section.*

►*ENGINE COOLANT LEAKAGE CORRECTION:* Coolant leakage at generator bracket rear mounting bolt can be eliminated by installation of new self-locking type bolt and lockwasher. New bolt has nylon pellet which gives increased thread tension with improved sealing qualities.

ENGINE SPECIFICATIONS: 90° V8.

Bore	Stroke	Displacement
4.00"	3.66"	368 Cu. Ins.
Rated HP	**Compr. Ratio**	**Develped HP**
51.2	10.0-1	300 at 4800 RPM

Compression & Vacuum Reading - *See Tune-Up.*

►*COMPRESSION RATIO NOTE:* Compression ratio increased by revising combustion chamber and increasing length of piston (center of piston pin bore to top of piston) .010".

CYLINDER HEAD: *See "Cylinder Head & Manifold" in Lincoln Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Lincoln Special Data.*

ENGINE REMOVAL: *See "Engine" in Lincoln Special Data.*

OIL PAN REMOVAL: Remove oil inlet pipe hex fittings at oil pump and side of oil pan and remove pipe. Remove oil pan capscrews, then remove oil pan and gasket. *NOTE*—When this operation is performed, turn crankshaft until rear counterweights of crank are up. The oil pan can then be removed from front of engine.

PISTONS

Aluminum alloy, autothermic, slipper type with three rings above pin. Tin-plated.

►*PISTON INTERCHANGEABILITY CAUTION:* 1957 pistons are .010" higher (piston pin bore to top of piston) and STD. SIZE 1956 & 1957 PISTONS ARE NOT INTERCHANGEABLE. However, 1956 Oversize Pistons (.020", .030", .040") can be used in 1957 engines.

►*ORIGINAL BORE & PISTON SIZES:* Std. cylinder bore limits are 4.0000-4.0024" and TWO Standard Pistons are used for selective fitting as follows: 3.9993-3.9996" Diameter (marked "2" on dome), 4.0005-4.0008" Diameter (marked "6" on dome). *NOTE* - Std. piston furnished for service in these two sizes.

Removal – Rod and piston assembly removed from above.

Fitting New Pistons: Using 1/2" wide feeler gauge inserted between piston and cylinder wall at right angle to pin on thrust side, pull should be 6-12 lbs. when using feeler gauge thicknesses as follows: New Piston in New Bore - .0015". New piston in Used Bore - .002". Used Piston in Used Bore - .003".

Replacement Pistons: Standard (Two sizes - see Original Bore & Piston Sizes above), and .020", .030", .040" Oversize.

Installing Pistons: Install all pistons with indentation on head toward front of engine. *See Rod Installation*

PISTON PINS

Floating type with lock rings at each end.

Diameter – .9120-.9123". **Length** - 3.162-3.176".

Clearance in Piston – .0008" maximum.

Clearance in Rod – .0008" maximum. Select for light thumb press fit at 70° F.

Replacement Pins: Standard (marked Green), and .001" (marked Blue), .002" (marked Yellow) oversize.

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr.(1)	.0775-.0780"	.013-.030"	.006" max.
Compr.(2)	.0925-.0935"	.013-.030"	.006" max.
Oil (3)	.1860-.1865"	.010-.027"	Ⓒ

Ⓒ - Side sealing type ring.

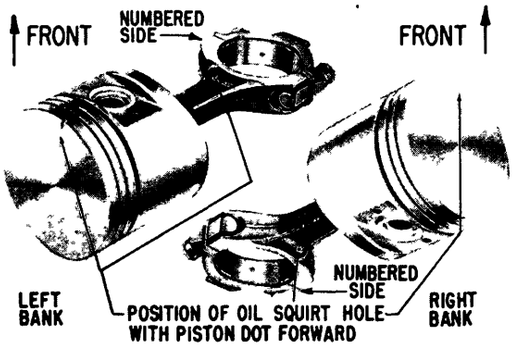
Replacement Rings: Standard size and .020", .030", .040" oversize.

►*SPACING NOTE:* Ring gaps should be spaced 120° apart, with oil ring gap to the side opposite spark plug side of cylinder bores.

CONNECTING RODS

Length – 7.064-7.066". **Weight** - 28.36 ozs.

Journal Diameter – 2.2482-2.2486" (Color coded BLUE), 2.2486-2.2490" (Color coded RED). Use with bearing of same color.



Lower Bearing – Steel-backed, copper lead alloy lined.

Clearance – .0007-.0036".

Side Clearance – .006-.014". .017" Service max.

Replacement Bearings – Standard (2 sizes marked RED & BLUE for selective fitting) and .010", .020", .030", .040" undersize.

Installing Rods – Assemble rods to piston so indentation embossed on piston head will face front of engine. Numbered side of rods on the right bank should face right side of engine and rods for left bank will face left side of engine. Place caps on connecting rods so numbered sides match and install in same numbered cylinders.

PISTON & ROD ASSY.

CRANKSHAFT

Journal Diameter – 2.6235-2.6239" (Color coded BLUE), 2.6239-2.6243" (Color coded RED).

Out-of-Round Limits – .0005" max. **Taper Limits** - .001".

Bearings – Steel-backed copper-lead alloy lined.

Clearance - .0008-.0036".

►*NOTE:* Any combination of Red or Blue bearing inserts may be used to obtain desired clearance. If desired clearance cannot be obtained, it will be necessary to regrind journals and install undersize bearing inserts.

Replacement Bearings: Std. (2 sizes color coded RED & BLUE for selective fitting) and .010", .020", .030", undersize.

►*MAIN BEARING INTERCHANGEABILITY NOTE:* 1957 rear main bearings have 9/16" oil hole (previous bearings had 11/32" oil hole). DO NOT use previous type bearings on 1957 engines (1957 bearings can be used on past models).

End Thrust: Taken by No. 3 main bearing.

Thrust Bearing Alignment – *See "Crankshaft & Main Bearings" in Lincoln Special Data.*

Endplay – .012" maximum.

Crankshaft Rear Oil Seal Installation: *See "Crankshaft & Main Bearings" in Lincoln Special Data.*

Crankshaft Front Seal Installation: *See "Engine Front Cover" in Lincoln Special Data.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

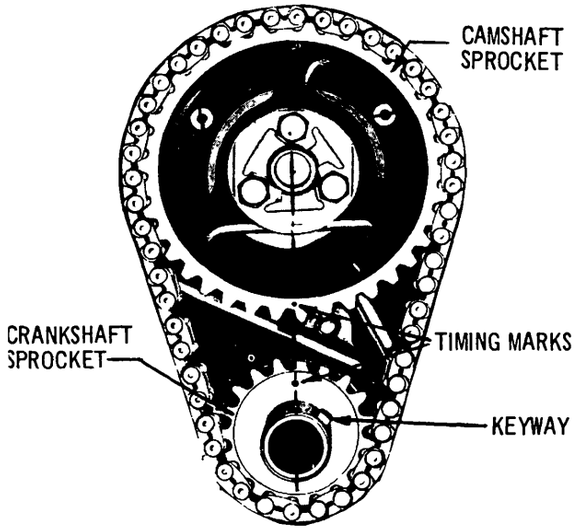
CAMSHAFT

J urnal Diamet r – 2.1240-2.1247". **Out- f-R und Limit** - .001".

B arings – Steel-backed babbit lined bushings.

Cl aranc – .006" maximum. **Endplay** - .003" (restrained by thrust spring and plunger).

R plac ment B arings: Std. & .015" undersize.



Camshaft Removal: *See "Camshaft & Bearings" in Lincoln Special Data.*

Timing Chain: Width 1.25". Pitch .5". Length 25".

D fl ction – 1/2".

Camshaft S tting: Timing marks on camshaft and crankshaft sprockets adjacent and in line with straightedge across shaft centers.

Timing Chain C v r S al Installation (Crankshaft Front Seal): *S "Engin Front Cover" in Lincoln Spec. Data.*

VALVE TIMING MARKS

VALVES

Valv Tapp t Clearanc : None in service (hydraulic). Adjustment required only when servicing valves or hydraulic lifters.

Initial Valve Tapp t Cl arance Adjustment–*See "Valve Syst m" in Lincoln Sp cial Data.*

Valv	H ad Diam.	Stem Diameter Ⓘ
Intake	2.000-2.010"	Ⓒ.3415-.3420" or Ⓖ.3420-.3425"
Exhaust	1.630-1.640"	Ⓒ.3400-.3405" or Ⓖ.3405-.3410"

Valve	S at Angle	Lift ⓓ	Stem Clearance
Intake	45°	256" min.	.001-.004" max.
Exhaust	45°	256" min.	.002-.005" max

Ⓘ – Furnished with .003", .015", .030" oversize stems
Ⓒ – Color coded RED. Use with RED valve guide.
Ⓖ – Color coded GREEN. Use with GREEN valve guide.
ⓓ – Cam lobe lift (service limit).

Valv Seat Width – 1/16-5/64" (Intake), 5/64-3/32" (Exhaust).

Valv St m S al. Valve stem seals used on both intake and exhaust valve stems. Install seal over valve stem before installing valve spring.

Ov rsiz Valv St m Installati n: *Se "Valv Syst m" in Lincoln Special Data.*

Valv Springs: Fre L ngth – 2-1/8".

Spring Specifications

	Pressure	Length
Valve Closed	60 lbs.	1.80"
Valve Open	165 lbs.	1.38"

►*SPRING HEIGHT CORRECTION:* Measure valve spring assembled height from point where spring contacts cylinder head to point where it contacts retainer. Assembled height of spring should be 1 25/32-1 13/16". Spacers are available in steps of .030" & .060" to bring assembled height within these limits.

►*SPRING SQUARENESS CAUTION:* If springs more than 1/16" out of square, with spring closed coil end on surface plate and measured with steel square, they should be replaced.

Valve Guides: Integral with cylinder head. When stem-to-guide clearance exceeds maximum (.004" intake, .005" exhaust), ream guides and install oversize valves. *See "Valve System" in Lincoln Special Data.*

Valve Lifters: Hydraulic, barrel type.

Diameter–.8740-.8745". **Clearance in Block** .0025" max.

Initial Valve Clearance – *See "Valve System" in Lincoln Special Data.*

Lifter Overhaul – *See "Valve System" in Lincoln Special Data.*

Rocker Arm Assembly: *See "Valve System" in Lincoln Special Data.*

►*ROCKER ARM COVER LEAK CORRECTION (Early Cars):* Grind away approximately 1/16" of inner flange for a length of 1½" at rear of cover.

►*VALVE ROCKER ARM PRODUCTION CHANGE (Self-locking Valve Adjusting Screws). See "Valve System" in Lincoln Special Data.*

VALVE TIMING

See "Camshaft Setting' under CAMSHAFT above.

►*VALVE TIMING NOTE: The following valve opening and closing points are with a camlift as indicated.*

Intake Valves – Open 18° Ⓒ BTDC, Close 72° Ⓒ ALDC.

Exhaust Valves– Open 59° Ⓒ BLDC, Close 31° Ⓒ ATDC.

Ⓒ – Camlift .002". Ⓒ – Camlift .004".

Valve Timing Check – With rocker cover removed, loosen adjusting locknut and screw of valve to be tested. Slide rocker arm to one side in order to have pushrod in the clear. With pushrod in tappet socket install a dial indicator in such a manner as to have actuating arm of indicator in the pushrod socket, in the same plane of pushrod movement (dial indicator used should have at least a total movement of .300" or more). Place a quadrant on the crankshaft pulley. If intake valve opening is being checked, engine is rotated slowly until dial indicator shows .002" camlift. At this point the actual opening reading in degrees is taken(18° BTDC). The engine is further rotated to check the valve closing. Dial indicator should read .004" camlift (72° ALDC)

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Lincoln Special Data.*

►*OIL LEVEL INDICATOR CAUTION:* Two types used as follows. **With ut Air C nditi ning** - Lincoln No. ECU-6750-C, with 23 3/32" from top of tube cover to "Full" mark on dipstick.

With Air C nditi ning - Lincoln No. ECU-6750-D with measurement of 23 13/16" between same two points.

Crankcas Capacity: 5 qts. (refill), 6 qts. (with filter change).

Normal Oil Pressure: 45-50 lbs. at 2000 RPM (hot).

Pressure Regulator Valve -In pump body, not adjustable.

Oil Pressure Indicator (Lincoln): Light on instrument panel. Light is on when oil pressure is low.

Oil Pressure Switch - Lincoln No. B6A-9278-B.

Oil Pressure Gauge (Continental): Included in Cluster, Lincoln No. 4049792,

Engine Unit - Lincoln No. FEM-9278-A.

See "Oil Pressure Gauges" in Miscellaneous Section.

Oil Pump: Rotor type, located on left side of engine crankcase driven by distributor drive gear.

Pump Overhaul - *See "Oiling System" in Lincoln Special Data.*

Oil Filter: Full-flow type (early), Disposable type (later).

►*OIL FILTER PRODUCTION CHANGE:* Disposable oil filter used on later cars and can be installed to replace previous full-flow type filter on earlier cars. *See "Oiling System" in Lincoln Special Data.*

Crankcase Ventilation: Combination oil filler and road draft tube and air filter cap, located on front of valve pushrod cover. Clean and oil the oil filler cap filter every 2,000 miles

COOLING

►*HIGH OPERATING TEMPERATURE CORRECTION:* High operating temperatures resulting from continuous low speeds or extreme load conditions may be improved as follows:

Cars Without Air Cond. - Replace present 4-blade fan with 5-blade fan No. LA-8600-A and install radiator No. LD-8005-D.

Cars With Air Cond. - Replace present 5-blade fan with 6-blade fan No. LA-8600-B.

Water Capacity: 22 qts. Add 3.2 qts. for heater units (Lincoln), 3.4 qts. (Continental).

Pressure Valve: Lincoln No. LA-8100-A (Lincoln), 4048840 (Continental). 12-15 lbs. operating pressure, radiator filler cap.

Thermostat: Lincoln No. EAD-8575-D (157-162°) Std. Lincoln, No. B4Q-8575-B (168-173°) Std. Continental, Optional Lincoln.

Water Pump: Packless, sealed ball bearing type.

See "Water Pumps" in Lincoln Special Data.

Temperature Gauge (Lincoln): King-Seeley Electric "CV" (Constant Voltage) type with voltage regulator No. FEL-10804-A.

Dash Unit - Lincoln No. FEL-10883-B.

Engine Unit - Lincoln No. FEK-10884-A.

Temperature Gauge (Continental): Included in Clusters, Lincoln No. 4049792,

See "Temperature Gauges" in Miscellaneous Section.

TURBO-DRIVE TRANSMISSION

Torque converter and three-speed automatic transmission with hydraulic control.

See "Turbo-Drive" Transmission in Transmission Section.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Turbo-Driv " Transmission in Transmission S ction.*

►*TESTING & TROUBLE SHOOTING: S e "Turb -Driv " Transmission in Transmission S ction.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Lubricati n – Check transmission oil level every 2000 miles and maintain oil level at "Full" mark on dipstick. Drain and refill every 16,000 miles. **Us nly Automatic Transmission Fluid Type A.**

Checking Fluid Level: Bring transmission to operating temperature by running engine with selector lever in Neutral position. Move shift lever through all ranges to assure fluid distribution, then place lever in "P" (Park) position for checking fluid level. Add Automatic Transmission Fluid Type "A" to bring level to the "Full" mark on indicator.

►*TURBO-DRIVE TRANSMISSION FLUID CAPACITY NOTE.* With the addition of a fluid cooler located ahead of radiator the capacity has been increased to 11.3 qts. When draining and refilling Turbo-Drive Transmission after overhaul, reverse flush cooler and lines

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER "TURBO-DRIVE" SERVICE DATA: See "Turbo-Drive Transmission" in Transmission Section.*

UNIVERSALS

Spicer. Needle bearing type.

PROPELLER SHAFT

►*1955-58 LINCOLN DRIVELINE THUMP CORRECTION* This noise occurs in front universal joint and is noticed when car is driven over a slight bump or incline under light or medium throttle. The condition may be caused by oil from transmission seeping back and locating between splines on shaft and universal slip joint. To correct, remove drive shaft and drill and tap a 1/8" pipe thread into center of front universal joint expansion plug, then install an Alemite Relief Valve, Part No. 47200, 47640, or 131100. *CAUTION - Do not thread valve too deeply into plug.*

REAR AXLE

Own. Semi-floating, hypoid gear, with Hotchkiss drive.

►*POWER-LOCK DIFFERENTIAL NOTE·* Optional equipment, and identified by Decal on left front door "Directed Power Differential", plus metal tag with stamped letter "T" under cover bolt, and cover marked a daub of yellow paint.
See "Lincoln (Integral Carrier)" & "Spicer Power-Lock Differential" in Rear Axle Section.

►*REAR AXLE SHAFT & BEARING REPLACEMENT CAUTION:* Rear axle shaft and bearing Lincoln No. LD-4234-B (1/16" shorter than former type) only, should be used with Power-Lock Differential. This axle shaft and bearing available for usage on all other rear axles.

►*REAR WHEEL BALANCE (POWER-LOCK DIFFERENTIAL) CAUTION:* Do not attempt to balance rear wheels on the car when car equipped with "Power-Lock"

Ratios – 3,07-1 (Std.), 3.31-1 (Optl. on Lincoln).

Backlash–.003-.008" with .002" maximum variation per gear set.

Axle Shaft Removal: Remove rear wheels and take out screws holding brake drum to axle shaft flange. Remove hydraulic brake lines from brake backing plate. Take out axle retainer nuts (working through opening in axle shaft flange). Use Tool 4235-C2 to remove axle shaft and bearing assembly from axle housing. Take off backing plate and gasket and remove axle being careful not to damage oil seal.

Axle Ass mbly R moval: Raise rear of car and remove axle shafts and drive shaft. Take off hydraulic line clips from axle housing and free line from differential housing clip. Disconnect shock absorbers and spring U-bolts. Remove axle housing assembly from car.

FRONT SUSPENSION

►*1956-57 LINCOLN CRACKING OR SNAPPING NOISE AT FRONT END CORRECTION:* This condition may be noticed on a hard bump or when shifting from reverse to forward speed, and may be caused by the engine shift in mounting bracket dowel holes. To correct, install a rubber shim (piece of old inner tube), cut to same size as lower surface of the front engine support, by cementing it to bottom of front support using weatherstrip cement. Coat other side of shim and install support on engine mounting bracket. Tighten to 50-65 ft. lbs.

Independent. "Ball-Joint" suspension with direct acting shock absorbers mounted within front coil springs.

See "Lincoln (Ball Joint)" in Suspension and Wheel Alignment Section.

Alignment Specifications	Lincoln	Continental
Kingpin Inclination	① 7°	① 7°
Caster	② 0°-Neg.1½°	③ Pos. 1°±¼°
Camber	③ 0°-Pos.¾°	③ Pos. ¾°±¼°
Toe-In	1/8" to 3/16"	3/32" to 5/32"

① - With Pos. ¾° Camber.
② - Within ½° from one side of car to other.
③ - Within ¼° from one side of car to other

Toe-Out on Turns - With wheels at maximum turning angle, outer wheel is at 26° and inner wheel is at 36°.

SHOCK ABSORBERS

Direct acting, non-adjustable. Service by replacement.

Shock Absorber Nos.	Front	Rear
Lincoln (Std.)	LD-18045-J	LD-18080-J
Lincoln (Hvy. Duty) Std.	LD-18045-K	LD-18080-K
Lincoln (Hvy. Duty) Adj.	I-500938	I-500941
Continental	4048114	4048113

►*HEAVY DUTY ADJUSTABLE SHOCK ABSORBER NOTE* To adjust shock absorbers proceed as follows

Adjustment (Front) - Remove shock absorber, fully compress it until internal couplings are mated, then turn upper shaft to align arrow on inner washer with arrow on shock absorber body to obtain desired ride control

Adjustment (Rear) - Remove **only** the lower end of rear shock absorber, compress unit until internal couplings are mated, then turn lower shaft until desired ride control is obtained.

STEERING

Power Steering: Saginaw In-Line. See *"Saginaw In-Line" Power Steering in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Saginaw In-Line" Power Steering in Steering Section.*

Steering Gear Removal: *See "Saginaw In-Line" Power Steering in Steering Section.*

Steering Linkage: *See "Steering Linkage" in Steering Sect.*

BRAKES

B ndix Hydraulic. Duo-servo with fixed anchor pins. No eccentric adjustment. Parking lever applies rear wheel service brakes.
See "Ford, Linc ln, Mercury B ndix" in Brak Section.

►*BRAKE FLUID REPLACEMENT NOTE.* Use heavy duty brake fluid HACA-19542 with SAE specification 70 R1 for most efficient brake operation. DO NOT MIX HEAVY DUTY BRAKE FLUID WITH ANY OTHER TYPE

►*BRAKE "SQUEAL" CORRECTION:* **An anti-squeal spring, Part No. 51A-1140, is available for installation on outside of brake drum.**

Drums – Diameter 12"front and rear.

Wheel Cylinder Diameter – 1 3/32" (front),,15/16" (rear).

Lining – Molded type riveted to shoe.

Width – 2.5" (front), 2" (rear). **Thickn ss** – 7/32".

Braking Power – 55.5% (front), 44.5% (rear).

Clearance – Tighten adjusting screw about 5 or 6 clicks after wheel stops turning (shoes tight against drum), then back adjusting screw off 12 to 14 clicks,

Brake Pedal Adjustment· Adjust eccentric bolt attaching brake pedal to master cylinder pushrod to give 1/4-7/16" free movement of pedal pad before rod moves master cylinder.

Standard Master Cylinder· on engine side of firewall.

Checking Fluid – Maintain fluid level to within ¼" of top of reservoir.

Removal–Disconnect brake line from brake master cylinder and depress brake pedal a few times to force out fluid. Disconnect wires leading to stop light switch and remove eccentric bolt attaching master cylinder pushrod to brake pedal. Remove capscrews and lock washers attaching master cylinder to fire wall.

Power Brakes: Bendix Vacuum Power Unit (combination vacuum power unit and master cylinder). Unit mounted on engine side of fire wall.
See "Bendix Power Unit" in Brake Section.

Checking Fluid–Same as for regular master cylinder.

Removal of Power Unit–Disconnect valve pushrod from brake pedal assembly in drivers compartment. Remove master cylinder outlet fitting bolt from master cylinder. (NOTE–It is not necessary to remove stop light switch, wires or hose assembly from outlet fitting. Do not disturb outlet fitting in master cylinder). Loosen clamp securing manifold vacuum hose to check valve on power unit. Remove hose from valve. Loosen clamp securing vacuum reserve tank hose to fitting on check valve. Remove four capscrews securing power brake assembly to bracket on dash panel and remove power brake assembly.

MISC. MECHANICAL

Windshield Wipers· Cable operated vacuum type. *See "Windshield Wipers" in Misc llaneous Section.*

Air Conditioning Own. *Se "Lincoln Air-C nditioning" in Miscellaneous Section.*

Power Window Regulators· Electric type Reversible type motor in each window Controlled by door switch and master control switch *See "Power Wind w Reguiators" in Miscellaneous Section.*

Electric Door Lock: *See "Electric Door Locks" in Miscellaneous Section*

Power Top Control: Hydraulic-electric type with power operated latch mechanism. *Se "Power Top Controls" in Misc llan ous S ction.*

P wer S at Adjusters: "4-Way" & "6-Way" electric type. Single motor with solenoid clutches. *See "Pow r S at Adjust rs" in Misc llan ous Section.*

►*JACKING & HOISTING CAUTION (ALL MODELS): B - fore jacking or h isting, s "Jacking & Hoisting Precautions" in Susp nsion & Whe l Alignment S cti n.*

MODEL IDENTIFICATION

SERIAL NUMBER: Stamped on patent plate attached to left front body pillar between door hinges. *NOTE* - Number (example below) includes identification data.

① ② ③ ④ ⑤
H 8 Y G 400001

① - Lincoln engine. ② Year 8 (1958).
③ - Assy. Plant: Y (Wixom).
④ - Body style.
⑤ - Beginning engine number.

►*BODY DESIGN NOTE:* Both Lincoln & Continental use new "Unitized Body-Frame" construction.

TUNE-UP

►*SPARK PLUG OIL FOULING & EXCESS EXHAUST SMOKE CORRECTION: S "Rocker Arms" in Lincoln Special Data.*

►*LIGHT LOAD SPARK KNOCK CORRECTION:* Light spark knock occurring on "drive-away" under light load condition can be corrected by modifying first type (FEW-12127-D) distributor. *S e DISTRIBUTOR below.*

COMPRESSION PRESSURE: 200 lbs. with variable limit between cylinders not to exceed 10 lbs.

VACUUM READING: 17-18" at engine idle.

VALVE TAPPET CLEARANCE: None in service hydraulic lifters. *S VALVE LIFTERS below.*

MANIFOLD HEAT CONTROL: Water jacketed intake manifold with thermostat controlled circulation eliminates need of heat valve. *S COOLING system for data.*

CARBURETOR AIR INTAKE DUCT ASSEMBLY: *See "Fu l Syst m N tes" in Lincoln Special Data.*

IGNITION

FIRING ORDER: 1-5-4-2-6-3-7-8. *CAUTION - #2 & #8 cylind r firing ord r r v rsed from previous models.*
Cylind rs - RIGHT BANK 1-2-3-4, LEFT BANK 5-6-7-8.

SPARK PLUG GAP: .032-.036".
Spark Plug - Champion F-11-Y. 18 mm. Tapered seat, no gasket required. Torque to 15-20 ft. lbs.

►*SPARK PLUG WIRE ROUTING NOTE:* No. 7 & No. 8 spark plug wires should be separated as far as is practical in their routing through the bracket and separator to prevent a "cross-firing" condition.

COIL: Linc ln B6A-12029-B.
Igniti n Current - 2.5 amps. idling, 4.5 stopped.
R sist r - B8E-12250-A. 1.3-1.4 ohms at 75°F.

►*COIL RESISTOR NOTE:* Resistor is connected in lead from ignition switch-to-coil. This resistor is by-passed during cranking by lead from starter solenoid-to-coil.

DISTRIBUTOR: Linc ln FEW-12127-D (Early), FEW-12127-E (Later). Same design as previous models. *See "F rd, Linc ln, Mercury Distributors" Electrical Section.*

►*DISTRIBUTOR REMOVAL CAUTION:* Intermediate drive shaft (hex sided oil-vacuum pump drive shaft) is retained by internal toothed lockwasher at upper end (lower washer also used on early cars) which should prevent shaft disengaging when distributor removed. If shaft becomes disengaged and drops into oil pan when distributor removed, make certain that lockwasher installed on shaft to prevent reoccurance.

►*DISTRIBUTOR REMOVAL NOTE:* Engine front cover capscrew nearest distributor may interfere with distributor removal on some cars. Loosen screw to remove distributor. Screw may be replaced by Screw, Part No. 20520-S8 (5/16" - 18 x 2").

►*DISTRIBUTOR-INTAKE MANIFOLD INTERFERENCE CORRECTION:* Interference between distributor terminal housing clamp and intake manifold may cause timing difficulty. Correct by grinding off intake manifold.

►*LIGHT LOAD SPARK KNOCK CORRECTION (FEW-12127-D Distr.):* Install new Vacuum Stop FEW-12202-B (supersedes No. FEW-12202-A) and change part number suffix on embossed portion of distributor housing to *"E". NOTE* - With this modification, Vacuum Advance Performance should be same as FEW-12127-E.

►*DETONATION CORRECTION (DUE TO USE OF LOW OCTANE FUEL):* Detonation which is caused by the use of low octane fuel (below 98 Octane), can be corrected by installation of Modification Kit, Part No. MJK-12127-C (FEW-12127-D Distributor), MJK-12127-D (FEW-12127-E Distributor). Each Kit contains necessary Automatic Advance springs, Vacuum Control springs, and Vacuum Control stops. After installation of springs, recalibrate distributor. *See "Automatic Advance (Modified Distributor)".* (Use Vacuum Advance indicated for FEW-12127-E). *NOTE* - If a slight knock is noticeable after modification, retard initial timing to a minimum of 3° BTDC. DO NOT retard under 3° BTDC for any reason. If the above changes do not decrease detonation to a satisfactory point, install a 160° thermostat (Part No. EDG-8575-G) in engine manifold. After modification, stamp an "M" following number on distributor model plate.

Condenser - Lincoln B7A-12300-A. **Capacity** .21-.25 mfds.
Contact Point Set - Lincoln B7A-12171-A.
Breaker Gap - .014-.016".
Cam Angle - 26-28½°.
Breaker Arm Spring Tension - 17-20 ozs.
Rotation - Counterclockwise viewed from above.

Automatic Advance
(FEW-12127-D,E)

Degrees	Distr.	RPM	Degrees	Eng.	RPM
Start		300	0		600
2½-3½		500	5-7		1000
4½-5½		600	9-11		1200
7½-8½		1000	15-17		2000
10-11		1500	20-22		3000
12½-14		2000	25-28		4000

Automatic Advance ②
(Modified FEW-12127-D & E Distrs.)

Degrees	Distr.	RPM	Degrees	Eng.	RPM
Start		300	0		600
1-2		500	2-4		1000
3½-4½		800	7-9		1600
5-6½		1000	10-13		2000
9½-11		1500	19-22		3000
14-15½		2000	28-31		4000

② - Applies only to distributors modified for low octane fuel (see "Detonation Correction" above). Use FEW-12127-E vacuum advance specifications for modified distributors.

Vacuum Spark Control: Integral type mounted on distributor housing and linked directly to breaker plate.

Vacuum Advanc ①
(FEW-12127-D)

Distr. Degrees	Eng. Degrees	Vacuum (" of Hg)
½-2½	1-5	6
3-5	6-10	8
5½-7½	11-15	10
9½-11½	19-23	14
10½-12½	21-25	18-20

Vacuum Advance ①
(FEW-12127-E)

Distr. Degrees	Eng. Degrees	Vacuum (" of Hg)
0-1	0-2	6
1-3	2-6	8
3½-5½	7-11	10
7½-9½	15-19	14
10½-12½	21-25	18-20

① - Test machine speed of 200 RPM.

IGNITION TIMING

Setting - 3-6° BTDC. *DO NOT set less than 3° BTDC.*

►*IGNITION TIMING NOTE:* First cars with unmodified FEW-12127-D distributors set timing at 7-8° BTDC.
Timing Mark - Crankshaft dampener is marked at TDC, 10° BTDC, 20° BTDC with scribed marks at 2° increments between the designated positions. Align correct mark with pointer on timing chain cover.

CARBURETOR

HOLLEY 4-BARREL

Lincoln No. EDJ-9510-A (Early), No. 5750897 (Later). 4-barrel with integral Automatic Choke.

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyls. 1-4-6-7, LEFT barrels 2-3-5-8.*

►*ENGINE STALLING (AFTER A NORMAL COLD START) CORRECTION:* May be due to incorrect choke linkage adjustment. *See "Holley 2- & 4-Barrel Carburetors" in Carburetion Section.*

►*CARBURETOR VENT REWORK (To prevent spillage of fuel under flooding conditions): See "Holley 2- & 4-Barrel Carburetors" in Carburetion Section.*

►*HIGH IDLE RPM CORRECTION:* Caused by interference between fast idle cam and choke operating rod. *See "Holley 2- & 4-Barrel Carburetors" in Carburetion Section.*

►*SLOW OPENING CHOKE CORRECTION:* Caused by binding choke or warped heat stove cover plate. *See "Holley 2- & 4-Barrel Carburetors" in Carburetion Section.*

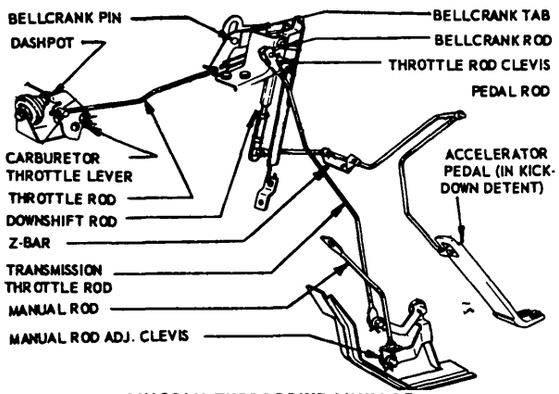
Idle Setting - Both screws (primary side only) 1-1½ turns open.
Idle Speed - 475 RPM in Neutral. Recheck idle speed in "Cruising Range" and readjust as necessary to obtain 450-475 RPM

►*OTHER DATA: See "Holley 2- & 4-Barrel Carburetors" in Carburetion Section.*

THROTTLE LINKAGE ADJUSTMENT: *CAUTION - After each step recheck tachometer. If engine RPM changes from 450-475 reset LAST adjustment.* Place selector lever in "Dr" ("Dr2" on Twin-Range), set emergency brake, start engine and allow engine and transmission to reach normal operating temperature. Install tacho-

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE



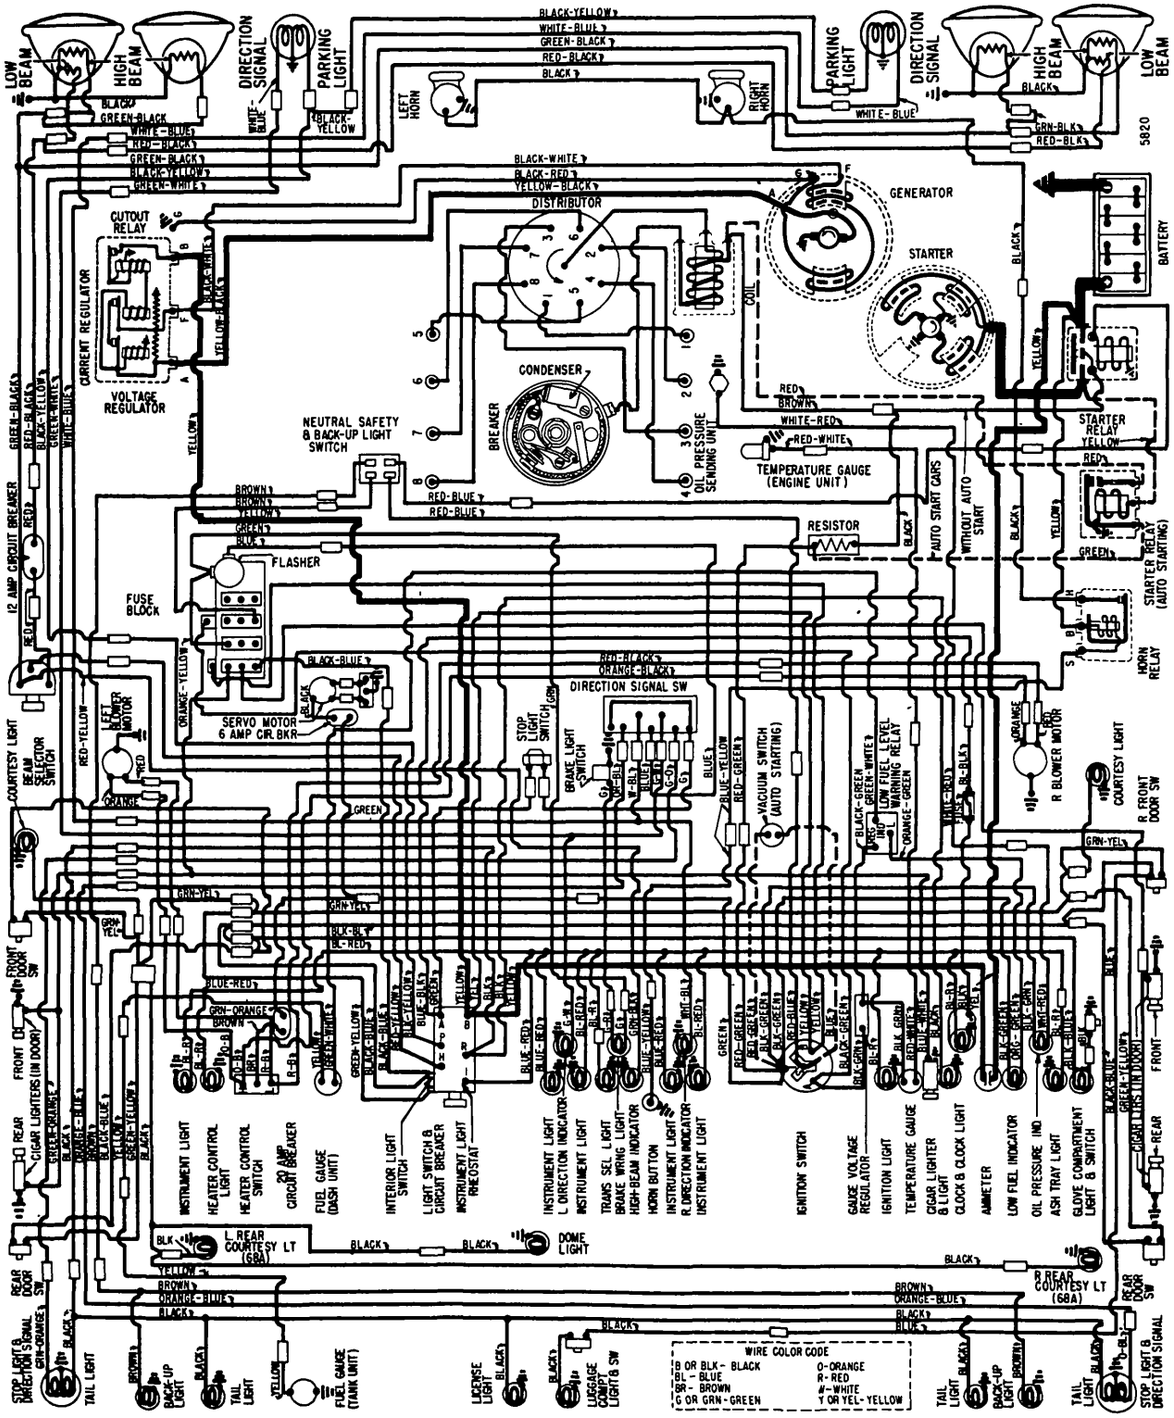
meter, disconnect throttle rod at carburetor throttle lever and transmission throttle rod clevis from bellcrank rod. Make sure carburetor throttle lever is against hot idle screw; set hot idle screw to obtain 450-475 RPM and proceed as follows:

1) Insert ¼" gauge pin through bellcrank bracket and tab. Hold carburetor throttle lever against hot idle screw and adjust throttle rod so pin freely enters hole in throttle lever. Then **lengthen rod pin one full turn** and reassemble. Remove gauge pin. Adjust dashpot so clearance between dashpot and throttle lever is .045-.065" with plunger pushed in.

2) Stop engine. Sight down from bellcrank rod to Z-bar and adjust jam nut at upper end of downshift rod so rod is vertical in relation to sides of car. Tighten jam nut. Depress accelerator pedal to full kickdown position. Downshift rod must now be vertical and top of bellcrank pin must be within .100" or 3/32" from top of bellcrank slot. Make adjustment, if necessary, at adjusting nut at center of downshift rod.

3) Install pressure gauge at rear of transmission. Pull transmission throttle rod upward. Adjust throttle rod clevis so clevis pin enters hole freely, then **lengthen clevis 3 full turns** and reassemble. *NOTE - On Single Range transmissions after Serial No. 10572, do not lengthen clevis more than 5½-6 turns. See "2-3 Upshift Slippage Correction" under TURBO-DRIVE TRANSMISSION below.*

4) Start engine and put selector lever in "Dr" ("Dr2" on Twin-Range). Accelerate to 1000 RPM. Adjust length of transmission throttle rod (lengthen clevis to increase, shorten to decrease pressure) so pressure gauge will read 80-85 lbs. *CAUTION - Do not hold at 1000 RPM too long as transmission will overheat.* Remove pressure gauge and tachometer.



LINCOLN TURBODRIVE LINKAGE

CARB. EQUIPMENT

►*FUEL PUMP PUSHROD & CAMSHAFT ECCENTRIC PRODUCTION CHANGE & NON-INTERCHANGEABILITY CAUTION:* Two pushrods and eccentrics used as follows: Pushrods, EDG-9400-A (cast bronze tip) and 5750261 (oilite bronze tip with groove 1/32" wide x

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

020" deep opposite tip) Eccentrics, EDG-6287-A (chrome plated) and 5750260 (plain finish) Use pushrod, EDG-9400-A, and eccentric, EDG-6287-A, on engines dated coded 476U to 479D On engines date coded 479H or later, use pushrod, 5750261, and either eccentric *CAUTION - DO NOT use plain finish eccentric with cast bronze tip pushrod*

►*FUEL FILTER NOTE* Replace element every 4,000 miles

►*VAPOR LOCK CORRECTION (Air Conditioned Cars)* May be caused by heat from high pressure line being transmitted to flexible fuel line from inlet side of fuel pump To correct, reroute fuel line over top of compressor, away from high pressure line

Fuel Pump: Lincoln No EDG-9350-A Fuel only

Pressure - 4 5-6 5 lbs at 500 RPM

See "Fuel Pumps" in Carburetion Section

Gasoline Gauge : King-Seeley Electric "CV" (Constant Voltage) type with gauge voltage regulator FFC-10804-B

Dash Unit - Lincoln No FFC-9280-C

Tank Unit - Lincoln No FFC-9275-C

See "Fuel Gauges" in Carburetion Section

Low Fuel Level Indicator: Light on instrument panel controlled by SIP relay, Lincoln No FFC-15854-B, in gasoline gauge circuit Lamp goes on momentarily when ignition switch turned on, lights when fuel in tank reaches 3-5 gallons

Air Cleaner: DRY FILTER ELEMENT type Clean every 2,000 miles and replace element every 20,000 miles

►*CLEANING CAUTION*· Clean element by tapping or shaking to remove dirt particles *DO NOT wash element in solvent or other liquids and DO NOT oil or lubricat*

BATTERY

Lincoln Kit No HHK-10655-A. 12 volt, 13 plate, 70 ampere hour capacity (20 hr rate)

Battery Ground - Negative, to right cylinder head

Engine Ground - Cylinder head to dash

STARTER

Lincoln No. FAY-11002-A. Armature - B6A-11005-B

►*STARTER NOISE CORRECTION* Caused by insufficient clearance between starter and cylinder block at top mounting lug which "cocks" starter when tightened Grind off top mounting lug to correct

Drive - Bendix "Folo-Thru"

Rotation - Counterclockwise at commutator end

Brush Spring Tension - 48-56 ozs

Cranking Speed - 150-180 RPM 155-190 amps

Performance Data

Torque	RPM	Volts	Amperes
0 ft lbs	4500	12 0	80
15 5 ft lbs	Lock	5 0	550

Removal: Disconnect negative cable from battery Remove two top drive endplate-to-flywheel housing capscrews and raise car Remove nut from rear engine support bracket stud and raise rear of engine 1" Remove cable from starter and lower drive endplate-to-flywheel housing capscrew Remove starter assembly by working forward and down through lower suspension arms *NOTE* - On power lubricator equipped cars remove two bracket retaining nuts and move lubricator out of way

►*REMOVAL NOTE:* If drain plug on right side of block interferes with starter removal, install ¼" recessed pipe plug, Part No 87709-S

Installation: Place rubber dust shield on flywheel housing, work starter assembly up through lower suspension arms and into position on flywheel housing Install, but do not tighten, lower capscrew Lower engine and replace mounting nut Install two upper capscrews, align assembly Tighten outer capscrew first, then the other two. Install cables and lower car

Starting Switch: Relay, Lincoln No B6A-11450-A, controlled by Ignition & Starter Switch, Lincoln No B5A-11572-A, and Auto Trans Neutral Safety Switch, No FFC-15825-A (includes switch, wire harness & terminal block), located on steering column

Automatic Starting (Optl.) - Vacuum Switch No FEL-11504-B, Auxiliary Starter Relay No FDT-11505-A Provides automatic starting when ignition switch turned on and transmission selector lever in "N" or "P" positions *See Car Wiring Diagram*

Neutral Safety Switch Adjustment: *See "Turbo-Drive" and "Twin-Range Turbo-Drive" in Transmission Section*

►*NEUTRAL SWITCH INSULATOR ASSEMBLY NOTE* Neutral Safety Switch Insulator, Part No FFC-15827-A, may be used to permit starting in both "N" and "P" positions

GENERATOR

Lincoln No. FGV-10002-A Armature - FGP-10027-A

Performance Data

Amperes	Volts	Gen RPM
40	15 0	2390

Brush Spring Tension - 32-40 ozs

Field Current - 1 5-1 6 amps at 15 volts (hot)

Rotation - Counterclockwise at commutator end

Belt Adjustment: 3/8" deflection midway between generator and pump pulleys on right side (both belts)

REGULATOR

Lincoln No. B8E-10505-C

►*SETTING NOTE* Settings are for regulator at NORMAL OPERATING TEMPERATURE (after running engine for 20 minutes at 1500 RPM if started cold, or until temperature gauge is steady for 5 minutes if engine previously warmed up) with room temperature at 75°F

Cutout Relay

Cuts In - 12 0-12 8 Volts

Cuts Out - 2 0-2 9 amps (reverse current)

Voltage Regulator

Setting - 14 6-15 4 Volts

Checking & Adjusting - *See "Ford, Lincoln, Mercury 12 Volt Regulators" in Electrical Section*

Current Regulator

Setting - 38-42 ozs

Checking & Adjusting - *See "Ford, Lincoln, Mercury 12 Volt Regulators" in Electrical Section*

MISC. ELECTRICAL

Headlamps: Dual headlights (4- Headlight System) Std *See "4-Headlight System" in Electrical Section*

Direction Signals: *See Electrical Section*

Lighting Switch Removal: Disconnect negative cable from battery. Remove instrument cluster top cover plate and lower left cover plate Depress switch shaft pin retainer and pull out switch shaft and knob assembly Remove nut retaining switch to instrument panel Pull switch down with wires attached

Stop Light Switch Location: On forward end of brake master cylinder (integral with power unit) Power unit located on firewall in engine compartment

►*CIGAR LIGHTER SHORTING CORRECTION* Caused by water in receptacle Drill 3/16" drain hole in lower right corner of lighter receptacle to correct

LIGHTING CIRCUIT BREAKERS: Used as follows

18 Ampere - Protects headlight upper & lower beams In headlight switch

12 Ampere - Protects headlight lower beams Between beam selector switch (under toe board) and headlights

12 Ampere - Protects, tail, parking, stop luggage compartment, license plate, and rear deck warning lights

FUSES· Fuses located in fuse panel on left side of brake support with exceptions note

15 Ampere - Protects right front & rear door (or quarter) cigar lighters

15 Ampere - Protects instrument panel, left front & rear door (or quarter) cigar lighters

NOTE - Sulphur disc on back of each lighter

10 Ampere - Protects windshield wiper vacuum pump motor (early cars) In lead to vacuum pump

7 5 Ampere - Protects direction signal & back-up lights

7 5 Ampere - Protects courtesy and dome lights

Horn Relay: Lincoln No B7A-13853-A (with bracket)

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION Use extreme care when disconnecting any part of air conditioning equipment or lines for access to engine See "Air Conditioning Service Cautions" in Miscellaneous Section*

ENGINE SPECIFICATIONS: Own 90° V8, overhead valves New wedge type combustion chamber formed by casting top of cylinder block at 10° angle to piston, by by flat machining bottom surface of cylinder head, and by step design piston head for valve clearance

Bore	Stroke	Displacement
4 30"	3 70"	430 cu ins
Compr. Ratio	**Rated HP**	**Developed HP**
10 5-1 ©	57 19	375 at 4800 RPM

© - 7 25-1 when Low Octane Kit installed *See NOTE below*

Compression & Vacuum Reading - *See TUNE-UP*

►*LOW OCTANE FUEL ADAPTER KIT NOTE* If necessary to lower engine compression ratio for use with

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

low octane fuels, install Kit, Part No. I-502591. Kit contains cylinder head and intake manifold gaskets and spacers, longer pushrods, cylinder head dowels and and bolts, and intake manifold bolts. Cylinder head is raised by kit and intake manifold must also be raised as well as longer pushrods and bolts used. Compression ratio changed from 10.5-1 to 7.25-1.

►*CYLINDER BLOCK REPLACEMENT NOTE:* Replacement cylinder blocks code dated 482G and later have code stamped at right rear section of oil pan rail. Blocks dated 482R and later are .020" higher and one cylinder head gasket should be used. On earlier blocks two gaskets may be used.

►*MAXIMUM ENGINE RPM CAUTION (CARS WITH AUTOMATIC TRANSMISSIONS):* DO NOT operate engine in excess of 2500 RPM with selector lever in "N" (Neutral), "P" (Park), or "R" (Reverse) as damage to clutch plates may result.

►*CYLINDER HEAD & INTAKE VALVE PRODUCTION CHANGE & REPLACEMENT CAUTION:* Engine date coded 481J and later use Cylinder Heads, Part No. 5750062. These heads have smaller diameter intake valve seats (2.060"), and Intake Valves, Part No. EDG-6507-F (head diameter 2.080-2.090") MUST BE USED with these heads. *Under no circumstances should heads and valves be intermixed, and same type heads must be used on both banks.*

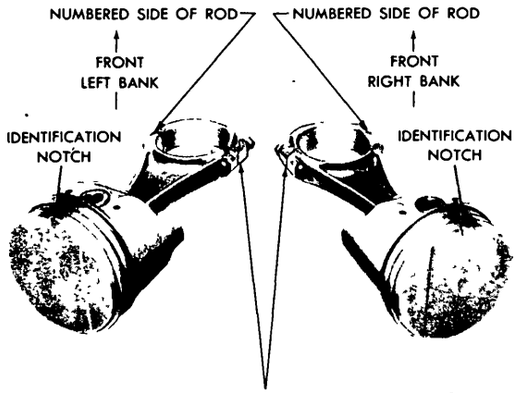
►*HEAD GASKET SERVICE REPLACEMENT CHANGE AND INSTALLATION NOTE:* Use new gasket No. B9ME-6051-A. Apply Sealer No. 8A-19554-B moderately to each side of gasket before installation.

CYLINDER HEAD: *See "Cylinder Head & Manifold" in Lincoln Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Lincoln Special Data.*

ENGINE REMOVAL: *See "Engine" in Lincoln Special Data.*

OIL PAN REMOVAL: Turn engine so No. 1 piston is 14° BTDC. Remove battery ground cable and oil dipstick. Raise car, Drain oil and remove front splash shield. Remove both front engine insulator nuts. Support front edge of oil pan on safety jack, then lower car to raise engine 2". Place 1" block of wood between insulators and engine. Raise car, remove safety jack, then remove right hand stabilizer mounting bracket bolts, nuts and washers. Pull stabilizer out and down for oil pan clearance. Remove oil pan screws, lower oil pan to crossmember. Remove lower, and loosen upper, oil pump inlet tube and screen screws so they swing freely to clear oil pan baffle. Then lower pan with forward motion.



PISTONS

New step head design, longer skirt, slipper type, steel strut, aluminum alloy. No piston pin retaining rings used. Piston pin is interference fit in rod.

►*ORIGINAL BORE & PISTON SIZES:* Standard cylinder bore limits are 4.300-4.3024". Standard size pistons furnished in two sizes for selective fit as follows: Cd 2 pistons 4.2985-4.2988". Cd 6 pistons 4.2997-4.3000". Code marked on top of piston. *Pist ns f r right and l ft hand cylind rs ar NOT int rchang abl .* **R moval** - Pistons and rods removed from above.

Clearance - .0015-.0021" selective fit.

Fitting New Pistons: Using ½" feeler gauge inserted between piston and cylinder wall, with piston inverted and 1½" below top of block and piston pin bore parallel to crankshaft, pull required to remove feeler gauge should be 5-10 lbs. when using feeler thicknesses as follows: .002" for new piston in new bore, .0025" for new piston in used bore, .003" for used piston in used bore.

POSITION OIL SQUIRT HOLE INWARD WITH PISTON IDENTIFICATION NOTCH FORWARD TOWARD FRONT OF ENGINE. CAUTION PISTONS ARE NOT INTERCHANGEABLE FROM ONE CYLINDER BANK TO THE OTHER

LINCOLN PISTON ASSEMBLY

Installing Pistons: *Pistons for right and left hand cylinders are NOT interchangeable.* Install piston so that identification notch on head is toward front of engine. *See Rod Installation.*

Replacement Pistons: Std. (2 sizes, see above), .020", .030", .040" Oversize.

PISTON PINS

Press fit in connecting rod, no retaining device.

Diameter - .9750-.9753". **Length** - 3.48-3.50".

Clearance in Piston - .0001-.0003". Wear limit .0008".

Clearance in Rod - .0008-.0016" interference fit.

Piston Pin Removal & Installation: *See "Piston Pins" in Lincoln Special Data.*

Replacement Pins: Standard size only. Also furnished with new pistons.

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr. (1)..	.0775-.0780"..	.015-.025"	.0015-.003"
Compr. (2)....	.0930-.0940".....	.015-.025".....	.001-.003"
Oil (3).....	1825-.1879"..Ⓒ	.015-.055".....	Ⓒ

Ⓒ - Control ring segments. Ⓒ - Side sealing type ring.

Installing Rings: Install second compression ring with outside counterbore down. Oil ring expander spacer gap must be opposite notch in piston head with segment gaps 1" on each side. Compression ring gaps must be 150° on each side of expander spacer gap (1" each side of piston head notch).

Replacement Rings: Furnished Std., .020", .030", .040" Oversize.

CONNECTING RODS

Length (Center-to-Center) - 6.599-6.601".

Journal Diameter - 2.5996-2.6000" (Code Red), 2.5992-2.5996" (Code Blue).

Lower Bearing - Copper-lead alloy, steel back.

Clearance - .0006-.0026". Wear limit .0037".

Side Clearance - .005-.015". Wear limit .018".

Replacement Bearings: Std. (2 sizes marked RED and BLUE for selective fit), .010", .020", .030" Undersize.

►*NOTE:* Any combination of Red or Blue bearing inserts may be used to obtain desired clearance. If desired clearance cannot be obtained, it will be necessary to regrind journals and install undersize bearing inserts.

Installing Rods: Install rod in correct numbered cylinder with notch on head of piston toward front of engine and oil squirt hole inward and rod number facing outward toward outer side of cylinder block. *NOTE* - Palnuts on bearing cap discontinued on later cars.

CRANKSHAFT

►*ENGINE MAIN BEARING BOLT SERVICE REPLACEMENT NOTE: See "Crankshaft" in Linc ln Sp cial Data.*

Journal Diameter - 2.8998-2.9002" (Code Red), 2.8994-2.8998" (Code Blue).

Out-of-Round Limits - .00025". **Tap r Limits** - .0005".

Bearings - Copper-lead alloy, steel back.

Clearance - .0009-.0029". Wear limits .0036".

Endplay - .004-.008". Wear limit .012".

End Trust - Taken by No. 3 (center) main bearing.

Replacement Bearings: Std. (2 sizes marked RED and BLUE for selective fit), .010", .020", .030" Undersize.

►*NOTE:* Any combination of Red or Blue bearing inserts may be used to obtain desired clearance. If desired clearance cannot be obtained, it will be necessary to regrind journals and install undersize bearing inserts.

Crankshaft Rear Oil Seal Installati n: *S e "Crankshaft & Main Bearings" in Lincoln Special Data.*

Crankshaft Front Seal Installati n: *See "Engine Front Cover" in Lincoln Special Data.*

CAMSHAFT

►*CAMSHAFT PRODUCTION CHANGE:* New camshaft, Part No. 5750914, entered production approximately Nov. 12, 1957. Engines having later camshaft are identified by a dot of orange paint on engine front cover and a daub of yellow paint between No. 1 bearing journal and distributor drive gear. An "X" is also stamped on later camshaft. Heavier valve springs must be used with later camshafts. *See "Valve Springs" & "Valv Timing" b low.*

►*BEARING BORE NOTE:* Bearing bores in block are stepped (largest No. 1, smallest No. 5) to permit easy

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

removal and installation of bushings. O.D. of camshaft bearings is greater to fit bores.

J urnal Diam t r - 2.264-2.265" (all journals).

Out-of-R und Limits - .001". **Wear limit** .001".

Bearings - Babbitt lined, steel back.

Cl arance - .001-.003". Wear limit .006".

End Thrust - Toward engine rear. Taken by thrust face of camshaft sprocket riding against front surface of engine block.

Camshaft R m val: *See "Camshaft & Bearings" in Lincoln Special Data.*

Replacement Bearings: Std. and .015" Undersize.

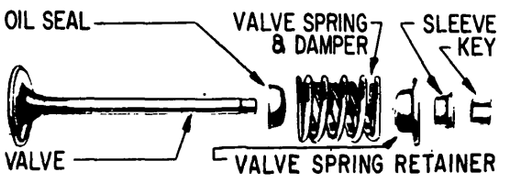
►*BEARING INSTALLATION CAUTION:* Split type bearings must have split toward top of block. No. 1 bearing must have notch in bearing facing front of engine and toward bottom of block. Bearing must seat .005-.020" inward from finished face of block.

Timing Chain Deflection - ½", measured on right side.

Camshaft Setting: Timing marks on camshaft and crankshaft sprockets adjacent and in line with straightedge across shaft centers.

Timing Chain C v r Seal Installation (Crankshaft Front S al): *See "Engin Fr nt Cover" in Lincoln Spec. Data.*

Engin Fr nt C v r Rem val & Installation: *See "Engin Fr nt C v r" in Lincoln Special Data.*



VALVES

Tappet Clearanc : Zero lash, hydraulic lifters.

Valve	Head Diam.	② Stem Diam.
Intake	①	.3711-.3718"
Exhaust	1.770-1.780"	.3693-.3700"

① - 2.140-2.150" early production (Cyl. Head No. 5750064), 2.080-2.090" later production (Cyl. Head No. 5750062).

② - Standard size valve stems. *See "Valve System" in Linc ln Special Data for versize valve stem sizes.*

LINCOLN VALVE ASSEMBLY

Valv	S at Angle	Lift	Stem Clearance
Intake	30°	①	②.0010-.0024"
Exhaust	45°	①	③.0028-.0042"

① - .4411" early production (Camshaft No. EDJ-6250-A), .4076" later production (Camshaft No. 5750914).

② - Wear limit .0045". ③ - Wear limit .0065".

Valv S at Width - .060-.080" Intake, .070-.090" Exhaust.

Valv St m S als - Umbrella type seals used on all valves. Install seals with cup side down over valve guide.

►*EXHAUST VALVE STICKING CORRECTION & VALVE STEM SEAL PRODUCTION CHANGE:* Use new .300" shorter exhaust valve stem seals, Part No. B8S-6571-BUP, to eliminate valve sticking, oil consumption, and stem and guide wear. Later cars use these seals in production.

Oversize Valve Stem Installation: *See "Valve System" in Lincoln Special Data.*

VALVE SPRINGS: Dampener springs used inside valve springs on all valves.

►*VALVE SPRING REPLACEMENT CAUTION:* When installing later camshaft (No. 5750914) valve springs, Part No. 5750053 (painted green) must also be installed.

Free Length - 2.20" (Early, Part No. EDG-6513-A, painted brown), 2.03" (Later, Part No. 5750053, painted green).

Assembled Height - 1.83" measured from surface of cylinder head spring pad to underside of spring retainer. *Do not use more than two .030" spacers to correct assembled height.*

►*SPRING SQUARENESS CAUTION:* If springs more than 1/16" out of square (spring & dampener assembly measured together), replace both springs.

Valve Spring Specifications
(Early Green Springs)

	Pressure	Length
Valve Closed	66-77 lbs. ①	1.83"
Valve Open	245-255 lbs. ②	1.43"

① - Wear limit 60 lbs. ② - Wear limit 220 lbs.

Valve Spring Specifications
(Later Green & Maroon Springs)

	Pressure	Length
Valve Closed	66-77 lbs. ①	1.83"
Valve Open	240-260 lbs. ③	1.43"

① - Wear limit 60 lbs. ③ - Wear limit 225 lbs.

Valve Guides: Integral with cylinder head. When stem-to-guide clearance exceeds maximum (.0045" intake, .0065" exhaust), ream guides and install valves with oversize stems. *See "Valve System" in Lincoln Special Data.*

VALVE LIFTERS: Hydraulic, barrel type, with no provision for clearance adjustment.

►*HIGH SPEED HYDRAULIC LIFTER NOISE CORRECTION:* Can be caused by aerated oil which will also cause oil pressure to drop (less than 45-50 lbs. at 2000 RPM). To correct, check all oil gallery plugs under air pressure for leaks. Check oil pump. pick-up tube and screen, inlet tube-screen, and all gaskets for cracks or broken conditions. Repair or replace

Diameter - .8740-.8745".

Clearance in Lifter Bore - .0005-.0020", Wear limit .0026".

Hydraulic Lifter Overhaul - *See "Valve System" in Lincoln Special Data.*

Hydraulic Lifter Operating Range Check - *See "Valve System" in Lincoln Special Data.*

ROCKER ARM ASSEMBLY: *S e "Valv Syst m" in Lincoln Sp cial Data.*

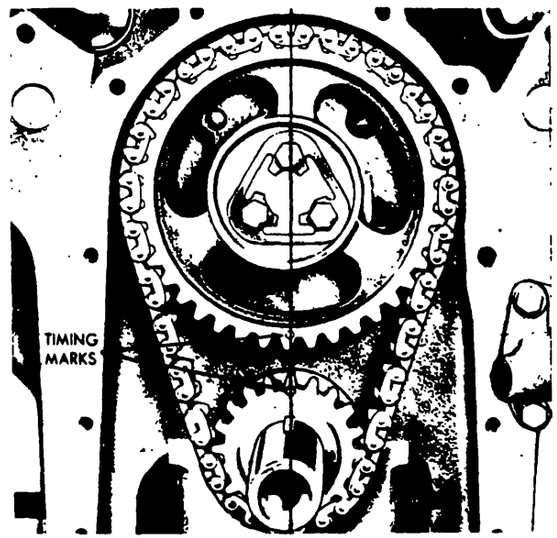
►*ROCKER ARM PRODUCTION CHANGE:* New rocker arms, Part No. B8A-6564-C, used in later production. New arms have reinforcing ribs at pushrod socket boss and oil groove on inside diameter.

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

►*VALVE TIMING NOTE: Following valve opening and closing points are with camlift as indicated.*

Valve Timing (Early Camshaft) ①



Intake Valves - Open 27° ② BTDC. Close 69° ③ ALDC.
Exhaust Valves - Open 69° ② BLDC. Close 27° ③ ATDC.

Valve Timing (Later Camshaft) ①

Intake Valves - Open 22° ④ BTDC. Close 68° ③ ALDC.
Exhaust Valves - Open 63° ⑤ BLDC. Close 27° ③ ATDC.

① - *See "Camshaft Production Change" above.*
② - .003" camlift. ③ - .005" camlift. ④ - .002" camlift.

Valve Timing Check - Remove rocker arm assembly. Install Dial Indicator Tool 6565 and Indicator Adaptor Tool 6565-B on cylinder head using Holding Fixture Tool 4201-D. Pushrod must be in lifter socket and actuating point of indicator in same plane as pushrod movement. Install quadrant on crankshaft damper. Make sure timing pointer is not bent. Turn engine slowly until lifter is on heel of camshaft lobe. Set indicator on zero and turn engine slowly until indicator registers valve opening and cam lobe lift. Compare crankshaft degrees indicated on quadrant with Valve Timing Table above. Continue to rotate engine to check valve closing specifications in same manner.

LINCOLN VALVE TIMING MARKS

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Lincoln Special Data.*

►*HIGH SPEED OIL LEAK CORRECTION:* Caused by oil being drawn out of ventilator tube. On early cars install following parts: Pushrod Cover, Part No.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

5751034 (has baffles and wire mesh filter). Half-moon Cork Seal, Part No. 5751385, between upper ventilation tube and valve cover. Oil Filler Cap, Part No. 5751388. These parts incorporated on later production cars.

Crankcase Capacity: 5 qts. refill. Add 1 qt. with filter change.

Normal Oil Pressure: 45-50 lbs. at 2000 RPM (Early), 35-50 lbs. at 1000 RPM (Later). Hot.

►*LOW OIL PRESSURE CORRECTION: See "Oiling System" in Lincoln Special Data.*

Pressure Regulator Valve - In pump body, not adjustable.

Oil Pressure Indicator: Light on instrument panel. Goes on when ignition switch turned on, goes out when oil pressure reaches pressure of switch. Light goes on when oil pressure is low.

Oil Pressure Switch - Lincoln No. B6A-9278-B.

Oil Pump: Combination oil-vacuum pump, rotor type. Mounted inside oil pan on lower left corner of block. Driven by distributor through an intermediate shaft.

►*OIL-VACUUM PUMP DRIVE SHAFT PRODUCTION CHANGE & REPLACEMENT NOTE:* Later type drive shaft, Part No. ED-5750157, has sleeve pressed on shaft to obtain proper depth in pump. Lower internal tooth locating lockwasher eliminated, but upper one must be used to prevent shaft disengagement from pump when distributor removed.

►*VACUUM PUMP NOISE CORRECTION (Similar to Connecting Rod Knock):* Disconnect vacuum hose from windshield wiper to vacuum pump (not inlet hose to intake manifold). Noise will stop if vacuum pump defective. Pump failure caused by exhaust passage plug falling out or exhaust tube falling into oil pan. To correct exhaust passage plug, tap passage with 1/8" pipe tap, 3 or 4 threads deep (DO NOT TAP DEEPER), and install 1/8" pipe plug with suitable sealer. Exhaust tube is press fit in pump housing and if loose, replace pump.

Pump Overhaul - *See "Oiling System" in Lincoln Special Data.*

Oil Filter: Full flow disposable type. Mounted on lower left front corner of cylinder block.

►*OIL FILTER INSTALLATION NOTE:* Coat gasket with light film of oil. Screw on to adaptor until snug. **Then tighten ¼-turn.** ***Do not overtighten.***

Crankcase Ventilation: Filter in oil filler cap and ventilator tube at rear of engine. Clean and oil filter in oil filler cap every 2000 miles.

COOLING

New three-stage engine warm-up and cooling system with temperature controlled water jacketed intake manifold. Additional thermostat installed in front face of each cylinder bank.

Below 140°F - Water circulates from pump to cylinder heads, intake manifold and back to pump.

140-180°F - Water circulates from pump to cylinder heads, intake manifold and cylinder blocks and back to pump.

Above 180°F - Water circulates the same as between 140-180°F except it returns to radiator for cooling. *NOTE* - Cylinder block thermostats are accessible by removing water pump.

Water Capacity: 23 qts. without heater, 26 qts. with heater and/or air conditioning.

Pressure Valve: Radiator filler cap, Lincoln No. LD-8100-A. Operating pressure 12-15 lbs.

Thermostat: 157-162° (No. EDG-8575-G), 177-182° (No. EDG-8575-H, for use with permanent type anti-freeze), located in water outlet connector. Two 137-142° Thermostats (EDG-8575-D) in front face of cylinder banks.

►*ENGINE BLOCK THERMOSTAT INSTALLATION NOTE:* Two types used. Install short thermostat entirely within cylinder block. Install long thermostat with spring projecting into water pump casting.

Water Pump: Packless, sealed ball bearing type. *See "Water Pumps" in Lincoln Special Data.*

►*WATER PUMP PRODUCTION CHANGE & REPLACEMENT NOTE (Air Conditioned Cars):* New pump, Part No. 5751567, identified by yellow paint on housing, used on later cars. Use only new pump for replacement on all air conditioned cars. Pump included in Kit, No. LJK-5751567-A, which contains all parts necessary for change over.

Temperature Gauge: King-Seeley electric, Constant Voltage ("CV") type with Gauge Voltage Regulator No. FFC-10804-B.

Dash Unit - Lincoln No. FFC-10883-B.

Engine Unit - Lincoln No. B7A-10884-A.

See "Temperature Gauges" in Miscellaneous Section.

TURBO-DRIVE TRANSMISSION

"Turbo-Drive" used on early cars, "Twin-Range Turbo-Drive" used on later cars. Torque converter and three-speed automatic transmission with hydraulic control and mechanical parking lock. Twin-Range Turbo-Drive has two manually selected Drive positions.

See "Turbo-Drive" and "Twin-Range Turbo-Drive" in Transmission Section.

►*2-3 SLIPPAGE CORRECTION (Early Cars):* When 2-3 slippage encountered on Turbo-Drive transmissions with Serial Nos. up to 10572, it is caused by excessive spring pocket depth in throttle and down shift valve and results in low main line pressure. To correct, make Throttle Linkage Adjustments (see CARBURETOR above) and check operating pressure (80-85 lbs. at 1000 RPM). *NOTE* - It may be necessary to increase throttle rod from specified 3 turns to as high as 5½-6 turns to obtain specified pressure. When 5½-6 turns does not correct operating pressure it will be necessary to replace main control valve assembly.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Turbo-Drive" and "Twin-Range Turbo-Drive" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Turbo-Drive" and "Twin-Range Turbo-Drive" in Transmission Section.*

Lubrication: Check fluid every 2000 miles. Drain and refill every 16,000 miles with Automatic Transmission Fluid Type "A".

Checking Fluid Level: Bring transmission to operating temperature by running engine with selector lever in "N" position. Move selector lever through all ranges to assure fluid distribution, then place lever in "P" position. Maintain level at "Full" mark on dipstick.

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Turbo-Drive" and "Twin-Range Turbo-Drive" in Transmission Section.*

UNIVERSALS

Spicer. Needle bearing type.

►*DRIVELINE IDENTIFICATION & REPLACEMENT NOTE:* Some drive shafts are balanced internally and identified as follows: Shafts, Part No. LF-4602-C, with 5-lb. weight at companion flange end have white band around center and daub of white paint at companion flange end. Shafts, Part No. LED-LF-4602-B, are balanced to 6-inch ounces and have a yellow line longitudinally and a yellow band around center. *NOTE - Use only shaft LF-4602-C (with 5-lb. weight) for replacement.*

►*DRIVELINE THUMP CORRECTION:* Occurs in front universal joint when car driven over slight bump or incline under light or medium throttle. Caused by transmission fluid seeping back and lodging between splines on shaft and front universal joint. To correct, install a relief valve (5-25 lbs. range, see table below) in expansion plug (drill and tap a hole in plug) in front universal joint.

Alemite Part No.	Lbs. Pressur
47200	1-5
47640	7½-15
131100	15-25

REAR AXLE

Own. Semi-floating, hypoid gear, with Hotchkiss drive. *See "Lincoln (Integral Carrier)" in Rear Axle Section.*

►*POWER-LOCK DIFFERENTIAL NOTE:* Optional equipment, and identified by an inscription on trunk lock cover. Serviced by replacement. *See "Power-Lock Differential (Cone Clutch Type)" in Rear Axle Section.*

►*REAR WHEEL BALANCE CAUTION (POWER-LOCK DIFFERENTIAL):* Do not attempt to balance rear wheels on the car when car equipped with "Power-Lock" differential.

►*REAR AXLE LUBRICATION NOTE:* Drain plug on carrier housing has been eliminated. Lubricant change recommended only on overhaul.

Axle Ratios: Standard, early 2.87-1 (43-15); Standard, later 2.89-1 (55-19); Optional 3.07-1 (43-14). *NOTE - Use 2.89-1 ratio for all service replacement.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Backlash - .003-.008" with no more than .002" variation between positions checked.

Axl Shaft Rem val: Remove wheel and nuts securing brake drum to axle flange. Remove drum Remove nuts securing wheel bearing retainer by working through hole in axle shaft flange. Pull axle shaft out of housing with Tool 4235-C2, being careful not to dislodge brake backing plate nor damage oil seal.

Axl Ass mbly R m val: Raise rear of car and support at each side of frame, directly opposite fuel tank ends, on underbody box section. Drain lubricant. Remove propeller shaft and install Tool 7657-D on transmission output shaft to prevent fluid leakage. Remove wheels, drums, and axle shafts (see above) Wire brake b ‘ing plates to underbody. Remove hydraulic lines from axle assembly (unnecessary to disconnect), and disconnect parking brake cables. Remove coil springs and insulators. Disconnect track bar and wire to underbody. Remove bolts securing trailing arms to axle housing and remove rear axle assembly.

Wh l B aring Adjustment: None required.

FRONT SUSPENSION

Ind p nd nt. "Ball Joint" suspension with direct acting shock absorbers mounted within coil springs

S "Lincoln Front Susp nsion" in Suspension & Wheel Alignment S ction

Kingpin Inclinati n - 7½° at ¾° camber, not adjustable

Cast r - 0° to Neg 1½° and equal within ½° each side

Camb r - 0° to Pos ¾° and equal within ¼° each side

T -In - 1/8-3/16"

T -Out n Turns - With wheels at maximum turning angle, outer wheel is at 28° and inner wheel is at 37°45'

REAR SUSPENSION

Coil springs mounted between underbody and trailing arms which are mounted on underbody at front and rear axle housing at rear. Shock absorbers mounted in "sea leg" fashion

Se "Lincoln R ar Suspension" in Suspension & Wheel Alignm nt Section

SHOCK ABSORBERS

Non-adjustable type standard, adjustable type optional

Shock Absorber Nos.	Front	Rear
Standard	LF-18045-A	LF-18080-B
Heavy Duty ©	I-501821	I-501824

© - Adjustable type See below

Heavy Duty Shock Absorber Adjustment - Remove Shock absorber, **compress fully** until internal couplings are mated Rotate reservoir **clockwise** to align arrow on inner washer (front), dust cover (rear) with arrow on reservoir to obtain desired ride control

STEERING

Power Steering: Saginaw In-Line (early cars), "Torsion Bar" type (beginning Serial No. 408001).

See "Saginaw In-Line" or "Torsion Bar" in Steering Section

Steering Wheel & Horn Button Removal: *See "Saginaw In-Line" or "Torsion Bar" in Steering Section*

Steering Gear Removal: *See "Saginaw In-Line" or "Torsion Bar" in Steering Section*

Steering Linkage: *See "Steering Linkage" in Steering Sect*

BRAKES

Bendix Hydraulic (with Power Unit). Duo-servo with fixed anchor pins No eccentric adjustment. Parking lever applies rear wheel service brakes

See "Ford, Lincoln, Mercury Bendix" in Brake Section

Drum Diameter - 11" front & rear

Wheel Cylinder Diameter - 1 3/32" front, 15/16" rear

Lining - Molded type riveted to shoe

Lining Width - 3 5" front and rear

Clearance - Tighten adjusting screw about 5 or 6 clicks after wheel stops turning (shoes tight against drum), then back adjusting screw off 12-14 clicks

Brake Pedal Adjustment: Adjust eccentric bolt attaching brake pedal to master cylinder pushrod to give 1/4-3/8" free movement of pedal pad before rod moves master cylinder

Power Brake Unit: Bendix Vacuum Power Unit. Combination power unit and master cylinder Mounted on engine side of firewall

S e "B ndix Pow r Unit" in Brak S ction

Ch cking Fluid - Maintain fluid level to within ¼" of top of reservoir

Removal of Power Unit - Disconnect pushrod from brake pedal assembly in driver's compartment Remove master cylinder outlet fitting bolt from master cylinder *NOTE* - *Unnecessary to remove stop light switch* Loosen clamp holding manifold vacuum hose to power unit and remove hose Disconnect booster pushrod from pedal linkage, remove nuts securing assembly to firewall. Remove power brake assembly

MISC. MECHANICAL

Windshield Wipers: Cable operated vacuum type *See "Windshield Wipers" in Miscellaneous Section*

►*ELECTRIC VACUUM PUMP NOTE*· Used on approximately 700 early cars (replaced by oil-vacuum pump - see "Oil Pump" above) When engine vacuum drops below 9" Hg electric motor starts to supply additional vacuum for windshield wipers Lubricate every 5,000 miles or if pump sluggish or blows 15 amp fuse as follows Disconnect hoses, turn on wipers, add SAE 5-W oil slowly at vacuum intake Run at least 30 seconds to exhaust old oil Reconnect hoses

Heater-Air Conditioning: Own, with electrically controlled servo motors *See "Lincoln Air Conditioning" in Miscellaneous Section*

Power Window Regulators: Electric type with reversible motor in each window (including ventilators) Continental models have electrically controlled rear window *See "Power Window Regulators" in Miscellaneous Section*

Power Top Control: Full electric type with electric latch mechanism and electrically controlled rear window *See "Power Top Controls" in Misc Section*

Electric Door Lock: *See "Electric Door Locks" in Miscellaneous Section*

Trunk Lid Lock: *See "Trunk Lid Locks" in Miscellaneous Section*

Power Seat Adjusters: "4-Way" & "6-Way" electric type Single motor with solenoid clutches *See "Power Seat Adjusters" in Miscellaneous Section*

►*JACKING & HOISTING See "Jacking & Hoisting" in Suspension Section*

MODEL IDENTIFICATION

SERIAL NUMBER· Stamped on plate attached to left front body pillar between door hinges *NOTE* - Number (example below) includes identification data

① ② ③ ④ ⑤
H 9 Y A 400001

① - Engine 430 cu in V8
② - Year - 1959
③ - Assembly Plant **Y** - Wixom
④ - Body Series **A** - Capri **B** - Premiere **C** - Continental
⑤ - Beginning Vehicle Number

Engine Production Code Number: Indicates place, day and month of engine manufacture Not used for licensing Stamped on cylinder block directly in front of left cylinder head

TUNE-UP

►*HARD COLD STARTING, STALLING, POOR COLD PERFORMANCE & SPARK PLUG FOULING See 'Carter AFB 4-Barrel Carburetor" in Carburetion Section*

►*LEAN CONDITION OR SURGING ON ACCELERATION See Carter AFB 4-Barrel Carburetor" in Carburetion Section*

►*HARD STARTING, ROUGH IDLE, FLOODING & POOR FUEL ECONOMY See 'Carter AFB 4-Barrel Carburetor' in Carburetion Section*

COMPRESSION PRESSURE· 200±20 lbs All cylinders must be equal within 10 lbs

VACUUM READING· Steady 17-18" at idle speed

VALVE TAPPET CLEARANCE· Zero lash, hydraulic lifters

MANIFOLD HEAT CONTROL Water jacketed intake manifold with thermostat controlled circulation eliminates need of heat valve

CARBURETOR AIR INTAKE DUCT ASSEMBLY· *See 'Fuel System Notes' in Lincoln Special Data*

►*CARBURETOR ICING OR PERCOLATING CORRECTION* May be caused by air intake duct valve plate sticking in fully closed position (causing percolation), or the valve plate may be sticking in a partially open position (causing icing in cold weather) Check operation of valve and replace if necessary *See 'Fuel System Notes" in Lincoln Special Data*

IGNITION

FIRING ORDER· 1-5-4-2-6-3-7-8

Cylinders - RIGHT BANK 1-2-3-4, LFFT BANK 5-6-7-8

SPARK PLUG GAP 032- 036"

Spark Plugs - Champion F-11-Y 18 mm Tapered seat, no gasket used Torque to 15-20 ft lbs

COIL: Lincoln No B6A-12029-B.

Ignition Current - 2 5 amps idling, 4 5 amps stopped

Resistor - B8A-12250-A 1 3-1 4 ohms at 75°F

►*COIL RESISTOR NOTE* Resistor is connected in lead from ignition switch to coil and is bypassed during cranking by lead from starter solenoid to battery terminal of coil

DISTRIBUTOR (Early): Lincoln N . B9S-12127-B. "Ball Bearing Breaker Plate Type" *See "Distributors" in Electrical S ction*

DISTRIBUTOR (Late): Lincoln No. B9MF-12127-B. "Pivoted Breaker Plate Type" *See "Distributors" in Electrical Section*

Condenser - Lincoln No B7A-12300-A (Dist No B9S-12127-B) No B9AF-12300-A (Dist No B9MF-12127-B)

Capacity - 21- 25 mfd

Contact Point Set - Lincoln No B7A-12171-A (Dist No B9A-12127-B & B9MF-12127-B)

Breaker Gap - 014- 016"

Cam Angle - 26-28½°

Breaker Arm Spring Tension - 17-20 ozs

Rotation - Counterclockwise viewed from above

Automatic Advance
(B9S-12127-B & B9MF-12127-B)

Degrees	Distr.	RPM	Degrees	Eng	RPM
Start		350	0		700
1-2¼		525	2-4½		1050
3-4½		750	6-9		1500
7-8¼		1200	14-16½		2400
10½-12		1600	21-24		3200
14-15½		2000	28-31		4000

Vacuum Spark Control: Integral type mounted on distributor housing and linked directly to breaker plate

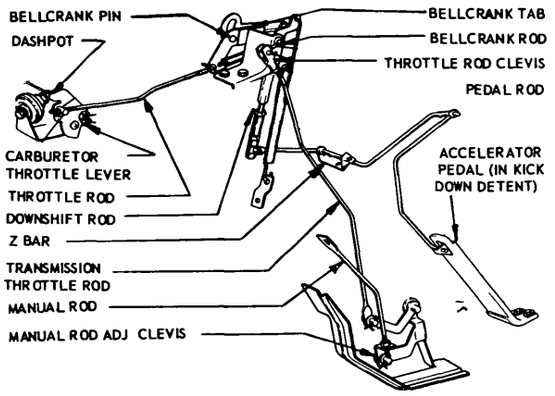
Vacuum Advance ①
(B9S-12127-B & B9MF-12127-B)

Distr Degrees	Eng Degrees	Vacuum (" of Hg)
0-3½	0-7	6½
3½-6½	7-13	9
6½-9½	13-19	12
9½-12½	19-25	16-20

① - Test machine speed of 200 RPM

IGNITION TIMING

Setting 6° BTDC (8° BTDC maximum limit)



Timing Mark - Crankshaft damper marked TDC, 10° BTDC, & 20° BTDC (long marks) with 2° increment marks (short marks) between Align correct mark with pointer on timing chain cover **Set timing with vacuum line disconnected and carburetor opening taped closed**

CARBURETOR

►*CARBURETOR APPLICATION One Carter AFB 4-Barrel Carburetor used*

Throttle Linkage Adjustment· **1)** Adjust engine to correct idle speed Insert ¼" gauge pin (Tool 77230-MB) through carburetor bellcrank bracket and tab Hold primary throttle shaft lever against hot idle screw and adjust carburetor rod at threaded end so rod freely enters throttle shaft lever Remove gauge pin *CAUTION - Improperly adjusted carburetor rod can result in poor return to idle* **Make anti-stall dashpot adjustment (see below)**

2) Stop engine Sight down from bellcrank rod to Z-bar and adjust jam nut at upper end of downshift rod so rod is vertical in relation to sides of car Tighten jam nut Depress accelerator pedal to full kickdown position Downshift rod must now be vertical and top of bellcrank pin must be within 100" or 3/32" from top of bellcrank

LINCOLN TURBODRIVE LINKAGE

slot Make adjustment, if necessary, at adjusting nut at center of downshift rod

3) Install pressure gauge at rear of transmission Pull transmission throttle rod upward Adjust throttle rod clevis so clevis pin enters hole freely, then **l ngth n clevis 3 full turns** and reassemble

4) Start engine and put selector lever in "DR2" Accelerate to 1000 RPM Adjust length of transmission throttle rod (lengthen clevis to increase, shorten to decrease pressure) so pressure gauge will read 80-85 lbs *CAUTION - Make adjustments quickly so transmission will not overheat* Remove pressure gauge and tachometer

Anti-Stall Dashpot Adjustment· **1)** With primary throttle plates in wide open position, bend dashpot inner tang (Tool T109-22), so there is 7/16" distance between top surface of bowl cover and bottom of dashpot lever

2) With primary throttle plates closed to normal idle position, bend dashpot lever in area between lever arm base and dashpot plunger, so there is 1/16-3/32" clearance between dashpot plunger operating lever and top surface of air horn

CARTER AFB 4-BARREL

Carter AFB No 2853S 4-barrel downdraft type, with internal dashpot

►*HARD COLD STARTING, STALLING, POOR COLD PERFORMANCE & SPARK PLUG FOULING See 'Carter AFB 4 Barrel Carburetor' in Carburetor Section*

►*LEAN CONDITION OR SURGING ON ACCELERATION See Carter AFB 4 Barrel Carburetor' in Carburetion Section*

►*HARD STARTING, ROUGH IDLE, FLOODING & POOR FUEL ECONOMY See Carter AFB 4 Barrel Carburetor in Carburetion Section*

►*MANIFOLD FUEL DISTRIBUTION Carburetor RICHT barrels feed Cyls 1-4-6-7, LEFT barrels 2-3-5-8*

Idle Setting - Initial setting both screws (primary side only) 1½-2½ turns open Turn screws out for richer mixture

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Idl Spe d – Initial adjustment 525-550 RPM with transmission selector lever in "N". Final adjustment 450 RPM with selector lever in either "DR" position.

►*AIR CONDITIONED CAR IDLE SPEED NOTE:* With engine at normal operating temperature, transmission selector lever in "Dr" position, and with air conditioner turned on so compressor is engaged and operating, adjust idle speed to 450-475 RPM.

Thr ttl Linkag Adjustm nt: *See CARBURETOR above.*

►*OTHER DATA: See "Carter AFB 4-Barrel Carburetor" in Carburetion Section.*

CARB. EQUIPMENT

Fu l Pump: Lincoln No. B8S-9350-A. Fuel only.

Pr ssur - 4.5-6.5 lbs.

See "Fuel Pumps" in Carburetion Section.

Gas lin Gaug : King-Seeley Electric "CV" (Constant Voltage) type with gauge voltage regulator, Lincoln No. FCC-10804-B or B9LF-10804-A.

Dash Unit (Exc. C ntinental) - Lincoln No. B9LF-9280-A.

Dash Unit (C ntin ntal) - Lincoln No. B9FL-9280-B.

Tank Unit - Lincoln No. FFC-9275-A.

See "Fuel Gauges" in Carburetion Section.

L w Fu l L v l Indicat r: Light on instrument panel controlled by S.I.P. relay, Lincoln No. FFC-18854-B.in gasoline gauge circuit. Lamp goes on momentarily when ignition switch turned on, lights when fuel in tank reaches 3-5 gallons.

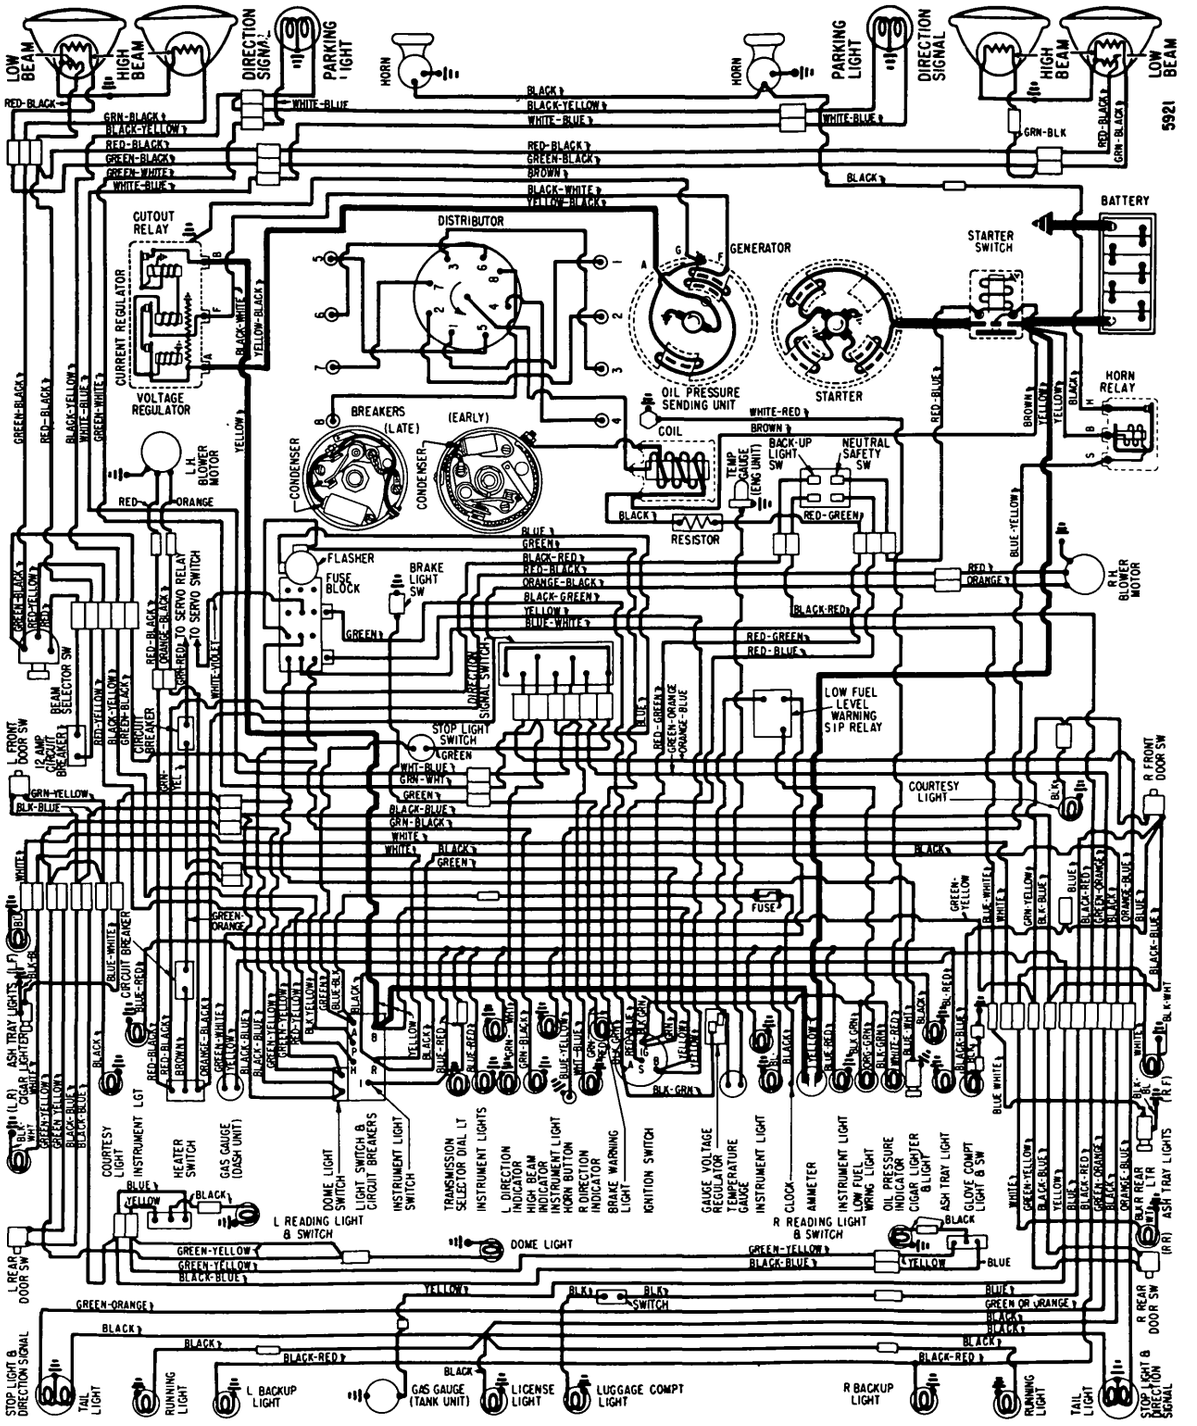
Air Cl an r: Dry filter element type. Clean every 2000 miles, replace every 20,000 miles, or sooner if required.

►*AIR CLEANER SERVICE NOTE:* Filter element can be cleaned by tapping or shaking or by using compressed air. If air is used, direct air stream against element in direction opposite that of intake air flow, using care not to rupture filtering element fibre. DO NOT wash element in solvent or other liquid and DO NOT oil or lubricate.

BATTERY

Linc ln N . FDU-10657-C. 12 volt, 13 plate, 70 ampere hour capacity (20 hr. rate).

Batt ry Ground - Negative, to right cylinder block.



Engine Gr und - At valve pushrod chamber cover.

STARTER

Linc ln No. B9S-11002-A. Armature - B6A-11005-B.

►*STARTER NOT ENGAGING RING GEAR CORRECTION:* If caused by corrosion of starter drive, thoroughly clean or replace drive unit, then apply a bead of rubber cement or Permatex No. 2 to rear surface of wide portion of starter motor-to-flywheel housing seal. Apply seal to cylinder block mating surface, then install seal, making sure that seal lies flat and is properly positioned. Install starter. Check oil pan rail at right rear corner of block to determine if a plug has been installed in the existing hole. If hole is open, install a 3/8" cup plug, Part No. UP-371058-S to seal opening. Position cup plug and tap into place with a blunt punch.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Drive - Lincoln No. 1CM-11350-C Bendix "Folo-Thru".
Rotation - Counterclockwise at commutator end.
Brush Spring Tension - 48-56 ozs.
Cranking Speed - 150-180 RPM. At normal engine operating temperature.
Current Draw - 155-190 amps at cranking speed

Performance Data

Torque	RPM	Volts	Amperes
0 ft lbs.	4500	12 0	80
15 5 ft lbs.	Lock	5 0	550

Removal: Remove battery and support assembly, then disconnect transmission control rod at accelerator shaft bracket lever Drain cylinder block, then remove nuts attaching right and left front engine support insulators to block. Raise front of engine as high as possible and remove right exhaust manifold Disconnect cable from starter and remove three attaching capscrews and remove starter *NOTE* - If car is equipped with power lubrication, remove bracket retaining nuts and position power lubricator to one side

Installation: Reverse removal procedures and note the following Install attaching screws finger tight and align starter, then tighten outer screw first Finally tighten the two inner screws

Starting Switch: Lincoln No B6A-11450, magnetic type, controlled by Ignition & Starter Switch, Lincoln No B5A-11572-A and Neutral Safety Switch, Lincoln No. FFC-15825-A

Neutral Safety Switch Adjustment: *See "Lincoln 3-Speed Automatic Transmission" in Transmission Section*

GENERATOR

Generator No.	Make	Amperes
FGV-100002-A (Early)	Lincoln	40
B9LF-10002-A (Late)	Lincoln	40
B6A-10002-D (Early)	Bosch	50
B9LF-10000-B (Late)	Delco-Remy	50

Armature (With Bearing) - Lincoln No. FGP-10027-A (Use with FGV-10002-A & B9LF-10002-A Gen)

►*1959 GENERATOR SPLASH SHIELD PRODUCTION CHANGE & SERVICE INSTALLATION NOTE:* A new splash shield, Part No B9MM-10170-A is being installed in production on later generators and may be installed on early generators to prevent water splashing on brushes and commutators. To install shield, loosen adjusting bolts and front mounting bolts, then remove rear mounting bolt. Remove wires from terminals and install shield over rear of generator, positioning it so that terminals are in center shield opening. Install and tighten bolts and wires, then adjust belt tension

►*GENERATOR MOUNTING BRACKET REMOVAL, INSTALLATION & ALIGNMENT CAUTION:* When removing generator mounting bracket, the washer and spacer combinations found between bracket and engine block or front cover must be marked for installation at the same locations to insure correct generator alignment.

►*BOSCH GENERATOR BRUSH "WHINE" CORRECTION:* Excessive brush noise or "whine" can be eliminated by installing four new brushes, Part No. B9TZ-10043-A. These new brushes are of softer material than those previously used After installation, seat brushes with a brush seating compound

Performance Data

Generator	Amps.	Volts	Gen. RPM
FGV-10002-A	40	15	2500
B9LF-10002-A	40	15	2500
B6A-10002-D	50	15	1380
B9LF-10000-B	50	14	2500

Brush Spring Tension - 32-40 ozs. (Lincoln), 16-18 ozs. (Bosch), 28 ozs (Delco-Remy)
Field Current (Lincoln) - 1.5-1.6 amps at 15 volts (hot).
Field Current (Bosch) - 1 0-1 5 amps. at 10 volts
Field Current (Delco-Remy) - 2.0-2 5 amps. at 10 volts
Rotation - Counterclockwise at commutator end.
Belt Adjustment: 3/8" deflection midway between fan and generator pulleys under normal thumb pressure.

REGULATOR

Regulator No.	Make	Use with Gen. No.
PB7M-10505-A	Lincoln	FGV & B9LF-10002-A
B6A-10505-C	Bosch	B6A-10002-D
B9LF-10505-A	Delco-Remy	**B9LF-10000-B**

►*BOSCH GENERATOR-TO-GROUND WIRE ATTACHING NOTE:* The generator-to-regulator ground wire (black with red band) must be attached to regulator base mounting screw If this ground wire is found to be connected to left hand fender apron, relocate as above

►*SETTING CAUTION* "Temperature Compensated" types Set to following specifications at 75°F ambient (engine compartment) temperature after ½ hour operation in vehicle, or after regulator heated and stabilized

LINCOLN (PB7M-10505-A)

Cutout Relay

Cuts In - 12 0-12 8 volts
Cuts Out - 5-9 amps. (discharge current).

Voltage Regulator

Setting - 14 6-15.4 volts at ambient temperature of 75°F.
Checking & Adjusting - *See "Lincoln 12 Volt Regulators" in Electrical Section.*

Current Regulator

Setting - 38-42 amps
Checking & Adjusting - *See "Lincoln 12 Volt Regulators" in Electrical Section*

BOSCH (B6A-10505-C)

Cutout Relay

Cuts In - 13.0-13.5 volts.
Cuts Out - 2-8 amps. (discharge current).

Voltage Regulator

Setting (Low Stage) - 14.1-14.6 volts at ambient temperature of 75°F.
Setting (High Stage) - 14.1-14 8 volts at ambient temperature of 75°F
Checking & Adjusting - *See "Bosch Regulators" in Electrical Section.*

Current Regulator

Setting - 47-52 amps
Checking & Adjusting - *See "Bosch Regulators" in Electrical Section*

DELCO-REMY (B9LF-10505-C)

Cut ut Relay

Cuts In - 11.8-13.0 volts.
Cuts Out - 8 amps. maximum at 12.2 volts (discharge current)

►*AMBIENT TEMPERATURE NOTE: Ambient temperature is the temp ratur of th air surrounding regulator ¼" from its cover. Se "Delco-Remy (Doubl Contact) Regulators" for checking & adjusting procedures.*

Voltage R gulat r

Setting - *NOTE - Adjust to corr ct operating voltag as indicated in following "Ambient Temperatur " table.*

Temp. °F	Volts	Temp. °F	Volts	T mp. °F	V lts
35	14.9-15.7	85	14 5-15.3	135	14.1-14.9
45	14.8-15.6	95	14.4-15.2	145	14.0-14.8
55	14.8-15.6	105	14.3-15 1	155	13 9-14 7
65	14.7-15 5	115	14.2-15 1	165	13.8-14 6
75	14.6-15 4	125	14 1-15 0	175	13.7-14.6

►*NOTE· Lower contact voltage setting should be .3- 5 volts less than the upper contact setting.*
Checking & Adjusting - *See "Delco-Remy (Double Contact) Regulators" in Electrical Section.*

Current R gulat r

Setting - *NOTE - Adjust to current value as indicated in following "Ambient Temperature" table*

Temp. °F	Amps.	Temp. °F	Amps.	T mp. °F	Amps.
35	54 6-65.0	85	48.0-56 4	135	41.4-48.0
45	53 2-63.0	95	46.6-54 6	145	40.2-46.4
55	52 0-61 6	105	45 4-53.0	155	38.8-44 8
65	50 8-60.0	115	44.2-51 8	165	37 8-43.4
75	49.2-58.0	125	42 8-49.8	175	36.2-42.0

Checking & Adjusting - *See "Delco-Remy (Double Contact) Regulators" in Electrical Section.*

MISC. ELECTRICAL

Headlamps: Dual headlights (4-Headlight System). *See "4-Headlight System" in Electrical Section.*
Direction Signals: *See Electrical Section*
Lighting Switch Removal: Disconnect negative cable from battery Remove instrument cluster top cover plate and lower left cover plate, then disconnect yellow ammeter and battery wire from top of switch. Depress switch shaft pin retainer and pull out switchand knob assembly, then remove nut securing switch assembly to instrument panel Pull switch assembly down as far as possible with wires attached.
Stop Light Switch Location: On forward end of brake master cylinder (integral with power unit on firewall).
LIGHTING CIRCUIT BREAKERS: Used as follows·
18 Ampere - Protects high and low beam headlamps and automatic dimmer. Located in headlamp switch.
12 Ampere - Protects rear lamps, parking and stop lamps, luggage compartment, license plate and rear deck warning light. Located in headlamp switch.
12 Ampere - Protects low beam circuit headlamps. Located in center of instrument panel assembly.
6 Ampere - Protects Air Conditioner and heater servo. Located at center of cowl.
10 Ampere - Protects convertible top control circuit, electric door lock, deck lid lock and deck lid unlock Located at center of cowl
30 Amp r - Protects Air Conditioner and heater blowers. Located in center of instrument panel assembly.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

30 Amp re - Protects power seats, convertible motor feed, power windows. Located at center of cowl.

FUSES: In fuse panel located on left air duct. Remove lower left cover plate on instrument panel for access to fuses

3AG 15 Ampere - Protects cigar lighter.

SFE 7.5 Amp re - Protects back-up lamps.

SFE 7.5 Ampere - Protects turn signals and indicators.

SFE 14 Amp r - Protects courtesy and dome light

H rn R lay: Lincoln No. B8C-13853-A.

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Use xtreme care when disconnecting any part of air conditioning equipment or lines for access to engine See "Air Conditioning Service Cautions" in Miscellaneous Section.*

ENGINE SPECIFICATIONS: Own 90° V8 overhead valve engine of same design used for previous models.

Bore	Stroke	Displacement
4.30"	3 70"	430 cu. ins.
C mpr. Rati	Rat d HP	Developed HP
10.0-1	59.17	350 at 4400 RPM

C mpr ssi n & Vacuum Reading - *See TUNE-UP*

►***ENGINE STALLING OR ROUGH IDLE CORRECTION:* If condition exists with high under hood temperatures and cannot be corrected by carburetor adjustment or engine timing, *see "Carter AFB Carburetors" in Carburetor Section.***

►*MAXIMUM ENGINE RPM CAUTION:* DO NOT operate engine faster than 2500 RPM in "N", "P" or "R". Will cause oil pressure build-up in front clutch resulting in partial application and damage to clutch plates. DO NOT race engine when rocking car out of snow, sand or mud.

►*CYLINDER HEAD GASKET REPLACEMENT NOTE.* **Use Cylinder Head Gasket, Part No. B9ME-6051-A for** replacement Apply Sealer, Part No 8A-19554-B moderately to both sides of gasket before installation.

►***MAXIMUM ENGINE RPM CAUTION (CARS WITH AUTOMATIC TRANSMISSIONS):* DO NOT operate engine in excess of 2500 RPM with selector lever in "N" (Neutral), "P" (Park), or "R" (Reverse) as damage to clutch plates may result.**

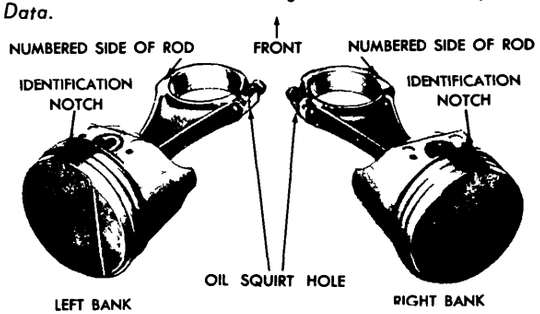
►*OIL PUMP TO CYLINDER BLOCK GASKET RESTRICTION CAUTION* When engine is being disassembled, it is recommended that the oil pump be removed and the gasket examined to make sure it is not creating an oil flow restriction. If there are indications of the gasket obstructing the oil passage or if it has not been sealing properly, replace the gasket.

►*VALVE PUSHROD COVER NOISE CORRECTION:* If a resonant engine noise is noticeable at idle speed or between 1800-2000 RPM, determine if it is originating from engine valve pushrod cover as follows With engine at idle speed, insert a hammer handle between intake manifold passage No 2 & 3 and valve pushrod cover If noise is reduced or eliminated by pushing down on handle, it is an indication the pushrod cover is vibrating To correct, cut a ¾" slit lengthwise in a piece of 1" x 2½" heater hose. Work from right side of engine and insert the piece of hose (slit end first) between manifold passage No. 2 & 3 and onto pushrod cover. Position, the hose until it is resting on "X" section of cover reinforcing ribs (slit toward front of engine).

►*VALVE TRAIN NOISE NOTE:* Excessive noise in engine valve train may be caused by the use of incorrect engine oil. The manufacturer recommends the following grades and viscosities: MS or DG grade engine oil. SAE 30 (above +70°F., air conditioned cars). SAE 20-20W (above +32°F.), SAE 10—10W (+32° F. to — 10°F.), SAE 5W (below — 10°F.).

►*ENGINE COOLANT LOSS CORRECTION (EARLY ENGINES):* On engines with early type cylinder heads having manifold-to-cylinder head studs (later heads have hex head bolts), install new type cadmium plated studs, Part No. 372404-S100. Apply Permatex No. 2 to threads (cylinder head end) of studs before installation.

►*CYLINDER HEAD PRODUCTION CHANGE:* Later cylinder heads have blind bosses instead of through holes in water jacket area at exhaust manifold attaching bolt holes. Use 3/8" - 16x1 1/4" hex head bolts, Part No. 20428-S8 and 3/8" lockwashers, Part No. 370383-S to attach exhaust manifold to cylinder head. Tighten manifold attaching bolts to 15-21 ft. lbs. (changed from 23-28 ft. lbs. for early type studs).



►*EXCESSIVE ENGINE OIL CONSUMPTION, EXHAUST SMOKING & SPARK PLUG FOULING CORRECTION:* These conditions may be caused by improperly operating vacuum check valve or by plugged cylinder head oil return holes. Correct as follows: **Vacuum Check Valve -** Check operation of vacuum check valve located on left lower side of engine (valve is identified by an exterior line running toward rear of engine, then up to wiper motor). Replace check valve if necessary. **Cylinder Head Oil Return Holes -** If excessive oil is found in rocker arm cover chambers, clean drain passages with a piece of wire, air pressure and solvent.

OIL PAN REMOVAL: Crank engine so No. 1 piston is at 14° BTDC. Remove battery ground cable and oil level dipstick Drain crankcase. Remove oil pan retaining screws and let pan rest on frame crossmember. Remove oil pump inlet tube and screen assembly screws and let assembly drop into pan. Remove pan in a lowering forward motion.

CYLINDER HEAD: *See "Cylinder Head & Manifold" in Lincoln Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Lincoln Special Data.*

ENGINE REMOVAL: *See "Engine" in Lincoln Special Data.*

LINCOLN PISTON & ROD ASSEMBLY

PISTONS

Step head, slipper type, aluminum alloy with a steel strut. Piston pin is interference fit in piston. Retaining rings are not used.

►*ORIGINAL BORE & PISTON SIZES:* Standard cylinder bore limits are 4.300-4.3024". Standard size pistons are furnished in two sizes for selective fit as follows: **Code 2 Pistons -** 4.2983"-4.2989" (Color coded Red). **Code 6 Pistons -** 4.2995-4.3001" (Color coded Blue). Color code is marked on top of piston. *CAUTION - Pistons for right and left hand cylinders are not interchangeable.*

Removal - Piston and rod assemblies remove from above. **Clearance -** .0011"-.0029". Maximum Wear Limit - .0045".

Fitting New Pistons: *See "Pistons" in Lincoln Special Data.*

Installing Pistons: *Pistons for right and left hand cylinders are NOT interchangeable.* Install piston so that identification notch on head is toward front of engine. *See Rod Installation.*

Replacement Pistons: Std. (2 sizes, see above), .020", .030", .040" Oversize.

PISTON PIN

Press fit in connecting rod, no retaining device. **Diameter -** .9750-.9753". **Length -** 3.48-3.50". **Clearance in Piston -** .0001-.0003". Wear limit .0008". **Clearance in Rod -** .0008-.0016" **interference fit.**

Piston Pin Removal & Installation: *See "Piston Pins" in Lincoln Special Data.*

Replacement Pins: Standard size. Furnished only with new pistons.

PISTON RINGS

Ring	Width	End Gap	Side Clearanc
Compr. (1)	.0775-.0780"	.015-.025"	.0015-.003"
Compr. (2)	.0930-.0940"	.015-.025"	.001-.003"
Oil (3)	.1825-.1879"	ℂ .015-.055"	ℂ

ℂ - Control ring segments. ℂ - Side sealing type ring.

Installing Rings: Install second compression ring with outside counterbore down. Oil ring expander spacer gap must be opposite notch in piston head with segment gaps 1" on each side. Compression ring gaps must be 150° on each side of expander spacer gap (1" each side of piston head notch).

Replacement Rings: Furnished Std., .020", 030", .040" Oversize.

CONNECTING ROD

Length (Center-to-Center) - 6.599-6.601". **Journal Diameter -** 2.5996-2.6000" (Code Red), 2.5992-2.5996" (Code Blue). **Lower Bearing -** Copper lead alloy, steel back. **Clearance -** .0006-.0026". **Wear Limit -** .0036". **Side Clearance -** .005-.015"

Replacement Bearings: Std. (2 sizes marked RED and BLUE for selective fit), .002", .010", .020", .030" Undersize.

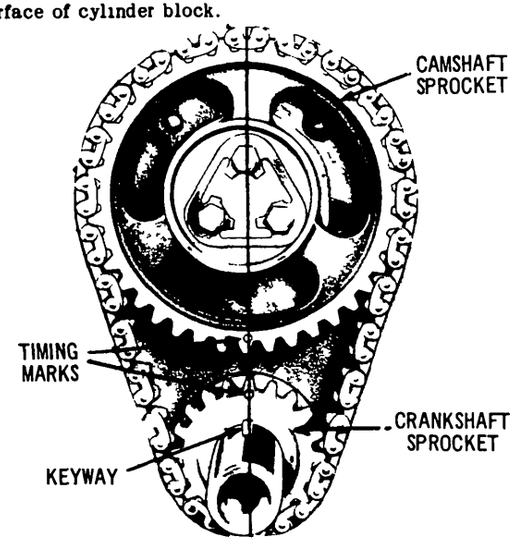
►*NOTE:* Any combination of RED and BLUE standard size or .002" Undersize bearing inserts may be used to obtain desired clearance. If desired clearance cannot be obtained, it will be necessary to regrind journals and install undersize bearing inserts.

Installing R ds: Install rod in correct numbered cylinder with notch on head of piston toward front of engine

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

and oil squirt hole in rod facing inward and rod number facing outward toward outer side of cylinder block



CRANKSHAFT

►*ENGINE MAIN BEARING BOLT SERVICE REPLACEMENT NOTE: See "Crankshaft" in Lincoln Special Data.*

Journal Diameter - 2 8998-2 9002" (Code Red), 2 8994-2 8998" (Code Blue)
Out-of-Round Limits - 00025" **Taper Limits** - 0005"
Bearings - Copper-lead alloy, steel back
Clearance - 0009- 0029" Wear limits .0038"
Endplay - 004- 008" Wear limit 012"
End Thrust - Taken by No 3 (center) main bearing
Replacement Bearings: Std (2 sizes marked RED and BLUE for selective fit), 002", 010", 020", 030" Undersize
►*NOTE* Any combination of RED and BLUE standard size or 002" Undersize bearing inserts may be used to obtain desired clearance If desired clearance cannot be obtained, it will be necessary to regrind journals and install undersize bearing inserts
Crankshaft Rear Oil Seal Installation: *See "Crankshaft & Main Bearings" in Lincoln Special Data*
Crankshaft Front Seal Installation: *See "Engine Front Cover" in Lincoln Special Data*

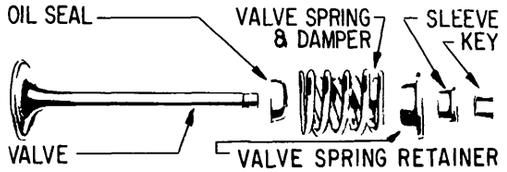
CAMSHAFT

►*BEARING BORE NOTE* Bearing bores in block are graduated in size (largest No 1, smallest No 5) to permit removal and installation of bushings O D of camshaft bearings are also graduated in size
Journal Diameter - 2 264-2 265" (All journals)
Out-of-Round Limits - 001" **Wear Limits** - 001"
Bearings - Babbitt lined, steel back
Clearance - 001- 003" **Wear Limit** - 006"
Camshaft End Thrust - Toward engine rear Taken by thrust face of camshaft sprocket riding against front surface of cylinder block.

LINCOLN VALVE TIMING MARKS

Camshaft Removal & Installation: *See "Camshaft & Bearings" in Lincoln Special Data.*
Replacement Bearings: Std and 015" Undersize
Camshaft Removal: *See "Camshaft & Bearings" in Lincoln Special Data.*
►*BEARING INSTALLATION CAUTION* No 1 bearing must have notch in bearing facing front of engine and toward bottom of block Bearing must seat 005-020" inward from finished face of block The other bearings must be installed with split in bearing facing upward toward top of cylinder block
Timing Chain Deflection - ½" maximum difference between timing chain straight position and position of chain when chain is deflected outward (all slack removed from opposite side)
Camshaft Setting: Timing marks adjacent and in line with straightedge across shaft centers
Timing Chain Cover Seal Installation (Crankshaft Front Seal): *See "Engine Front Cover" in Lincoln Special Data*
Engine Front Cover Removal & Installation: *See "Engine Front Cover" in Lincoln Special Data*

VALVES



Tappet Clearance: Zero lash, hydraulic lifters

Valve	Head Diameter	①Stem Diameter
Intake	2 080-2 090"	3711- 3718"
Exhaust	1 770-1 780"	3693- 3700"

Valve	Seat Angle	②Lift	Stem Clearance
Intake	45°	2316"	③ 0010- 0024"
Exhaust	45°	2316"	④ 0028- 0042"

① - Furnished with 003", 015" & 030" oversize stems
② - Cam lobe lift Wear loss limit 005"
③ - Wear limit 0045" ④ - Wear limit 0065"

►*VALVE REPLACEMENT NOTE* Some engines may have valves with 015" oversize stems installed in production For correct replacement, measure stem diameter approximately 1½" from stem end All valve stems are the same diameter for approximately 1" from stem end
Valve Seat Width - 070- 090" (intake & exhaust)

LINCOLN VALVE ASSEMBLY

Valve Stem Oil Seals - Umbrella type seals used on all valves Install seals with cup side down over guide
Oversize Valve Stem Installation: *See 'Valve System" in Lincoln Special Data*
Valve Springs: Damper springs used inside all valve springs **Spring Free Length** - 2 030" (approx)
►*SPRING SQUARENESS NOTE* If springs more than 1/16" out of square, replace spring and damper
►*VALVE DAMPER SPRING INSTALLATION CAUTION* To prevent valve spring clicking noise, damper spring must be installed within valve spring so end of damper spring is within a 135° arc counterclockwise to end of valve spring when viewed from above
Assembled Height - 1 83" measured from surface of cylinder head spring pad to underside of spring retainer (with valve closed) *Do not use more than two 030" spacers to correct assembled height. Measure all components affecting spring height if less than 1.83".*

Valve Spring Specifications

Valve	Lbs. Pressure	Length
Closed	① 66-77	1 83"
Open	② 240-260	1 43"

① - Wear limit 60 lbs at 1 83"
② - Wear limit 225 lbs at 1 43"

Valve Guides: Integral with cylinder head When stem-to-guide clearance exceeds maximum 0045" (intake), 0065" (exhaust), ream valve guides and install valves with oversize stems *See "Valve System" in Lincoln Special Data*
Valve Lifters: Hydraulic barrel type No adjustment
►*VALVE LIFTER PRODUCTION CHANGE* New shorter lifters having an overall height of 1 830-1 860" are being used in production replacing the previous 1 968-2 010" lifters Both types interchangeable
►*HIGH SPEED HYDRAULIC LIFTER NOISE CORRECTION* Can be caused by aerated oil which will also cause oil pressure to drop (less than 45-50 lbs at 2000 RPM) To correct, check all oil gallery plugs under air pressure for leaks Check oil pump, pick-up tube and screen, inlet tube-screen, and all gaskets for cracks or broken conditions Repair or replace
Diameter - 8740- 8745"
Clearance in Lifter Bore - 0005- 0020", Wear limit 0026"
Hydraulic Lifter Overhaul - *See "Valve System" in Lincoln Special Data*
Hydraulic Lifter Operating Range Check - *See "Valve System" in Lincoln Special Data*
Rocker Arm Assembly: *See "Valve System" in Lincoln Special Data*
►*ROCKER ARM COVER AND GASKET REPLACEMENT NOTE* New rocker arm cover gasket, Part No B9ME-6584-BUP, should be used for service replacement to reduce oil leaks at this area New gasket has round screw holes and notch on inside edge Install gasket with notch toward **front** of engine on **right** bank, to **rear** of engine on **left** bank

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above
►*VALVE TIMING NOTE Following valve opening and closing points are with camlift as indicated*

Valve Timing

Intake Valves - Open 22° ① BTDC Close 68° ② ALDC
Exhaust Valves - Open 63° ① BLDC Close 27° ② ATDC
① - 002" camlift ② - 005" camlift·
Valve Timing Check - Remove rocker arm assembly Install Dial Indicator Tool 6565 and Indicator Adaptor Tool 6565-B on cylinder head using Holding Fixture Tool 4201-D Pushrod must be in lifter socket and actuating point of indicator in same plane as pushrod movement Install quadrant on crankshaft damper Make sure timing pointer is not bent Turn engine slowly until lifter is on heel of camshaft lobe Set indicator on zero and turn engine slowly until indicator registers

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

valve opening and cam lobe lift. Compare crankshaft degrees indicated on quadrant with Valve Timing Table above. Continue to rotate engine to check valve closing specifications in same manner.

OILING SYSTEM

►***ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Lincoln Special Data.***

Crankcase Capacity: 5 qts. refill. Add 1 qt. with filter change.

N rmal Oil Pr ssur : 35-50 lbs. at 2000 RPM (Hot).

►***LOW OIL PRESSURE CORRECTION: See "Oiling Syst m" in Lincoln Special Data.***

Pr ssur R gulat r Valv - In pump body, not adjustable.

Oil Pressur Indicator: Light on instrument panel. Light goes on when ignition switch turned on or when oil pressure is low. Light goes out when oil pressure reaches switch pressure.

Oil Pr ssur Switch - Lincoln No. B6A-9278-B.

Oil Pump: Combination oil-vacuum pump, rotor type. Mounted inside oil pan on lower left corner of block. Driven by distributor through an intermediate shaft.

Pump Ov rhaul - S "Oiling System" in Lincoln Sp cial Data.

Oil Filt r: Full flow disposable type. Mounted on lower left front corner of cylinder block.

►*OIL FILTER INSTALLATION NOTE:* Coat gasket with light film of oil. Screw on to adaptor until snug. **Then tight n ¼-turn.** *Do not overtighten.*

Crankcas V ntilati n: Filter in oil filler cap and ventilator tube at rear of engine. Clean and oil filter in oil filler cap every 2000 miles.

COOLING

Three stage engine warm-up and cooling system with temperature controlled water jacketed intake manifold. Additional thermostat installed in front face of each cylinder bank.

B low 140°F - Water circulates from pump to cylinder heads, intake manifold and back to pump.

140-180° F - Water circulates from pump to cylinder heads, intake manifold and cylinder blocks and back to pump.

Ab v 180°F - Water circulates the same as between 140–180°F except it returns to radiator for cooling. *NOTE* - Cylinder block thermostats are accessible by removing water pump.

►*LOWER RADIATOR HOSE LEAKAGE CORRECTION:* Install lower radiator hose on water pump inlet so there will be at least ½" clearance between power steering belt and hose.

►*ENGINE COOLANT LOSS CORRECTION (EARLY ENGINES):* On engines with early type cylinder heads having manifold-to-cylinder head studs (later heads have hex head bolts), install new type cadmium plated studs, Part No. 372404-S100. Apply Permatex No. 2 to threads (cylinder head end) of studs before installation.

►*ENGINE OVERHEATING CORRECTION (AIR CONDITIONED CARS):* If overheating cannot be corrected by proper engine tune-up, correct thermostats or by a correctly operating cooling system, install five bladed fan, Part No. MK-8600-D, and fan shroud, Part No. B911-88145-A. Install fan with notched corner of blades toward engine. Fan shroud must be installed so it is centered around outside diameter of fan blades and with fan blades extending into shroud opening ¾-1".

Water Capacity: 23 qts. without heater, 26 qts., with heater and/or air conditioning.

Pressure Valve: Radiator filler cap, Lincoln No. LA-8100-A. Operating pressure 12-15 lbs.

Thermostat: 157-162° (No. B8E-8575-B); 175-180° (B9A-8575-A); Two 137-142° (B9S-8575-B), located in front face of cylinder banks.

Water Pump: Packless, sealed ball bearing type. ***See "Water Pumps" in Lincoln Special Data.***

Temperature Gauge: King-Seeley electric, Constant Voltage ("CV") type with Gauge Voltage Regulator, No. FFC-10804-B or B9LF-10804-A.

Dash Unit - Lincoln No. B9FL-10883-A (Lincoln), B9FL-10883-B (Continental).

Engine Unit - Lincoln No. B7A-10884-A.

See "Temperature Gauges" in Miscellaneous Section.

Power Booster Fan: Standard on Air Conditioned cars. *See "Cooling System" in Lincoln Special Data.*

TURBO-DRIVE TRANSMISSION

Torque converter and three speed automatic transmission with hydraulic control and mechanical parking lock. Twin-Range Turbo-Drive has two manually selected drive positions. *See "Lincoln 3-Speed Automatic Transmission" in Transmission Section.*

►*ERRATIC SHIFT CORRECTION (WHEN CAUSED BY DIRT OR FOREIGN MATTER IN GOVERNOR HYDRAULIC CIRCUIT): See "Lincoln 3-Speed Automatic Transmission" in Transmission Section.*

►*PRODUCTION CHANGE & REPLACEMENT PARTS CAUTION: See "Lincoln 3-Speed Automatic Transmission" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Lincoln 3-Speed Automatic Transmission" in Transmission Section.*

Lubrication: Check fluid level every 1000 miles. Drain & refill every 16,000 miles with Automatic Transmission Fluid Type "A" (Suffix A).

Checking Fluid Level: With transmission at normal operating temperature, move selector lever through all ranges to assure fluid distribution, then place lever in "P" (Park) position. Check fluid level and add recommended fluid as required to bring level to "F" (Full) mark on dipstick.

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Lincoln 3-Speed Automatic Transmission" in Transmission Section.*

UNIVERSALS

Spicer. Needle bearing type.

►*DRIVE LINE VIBRATION CORRECTION:* Inspect rear universal joint for proper seating in rear axle companion flange. The retaining strap (welded-on) between two universal joint bearing caps may not be properly aligned with groove in companion flange. If the above condition is found, disassemble joint and inspect for lubrication, wear, and damage. Be sure retaining strap is properly centered in groove in companion flange before tightening "U" bolts.

REAR AXLE

Own (Spicer Model). Semi-floating hypoid gear, torque-arm drive.

See "Lincoln Hypoid" in Rear Axle Section.

►*POWER-LOCK DIFFERENTIAL NOTE:* Optional equipment. Cars with this type axle are identified by an inscription on trunk lock cover. *See "Power-Lock Differential (Cone Clutch Type)" in Rear Axle Section.*

►*REAR WHEEL BALANCE CAUTION (POWER-LOCK DIFFERENTIAL):* Do not attempt to balance rear wheels on the car when equipped with Power-Lock Differential.

►*REAR AXLE LUBRICATION NOTE:* Lubricant change recommended only at time of overhaul. Drain plug on carrier has been eliminated.

Axle Ratios: 2.89-1 (55-19), 3.11-1 (59-19).

Backlash - .003-.008" maximum.

Axle Shaft Removal: Remove wheel and nuts securing brake drum to axle flange. Remove drum. Remove nuts securing wheel bearing retainer by working through hole in axle shaft flange. Pull axle shaft out of housing with Tool 4235-C2, being careful not to dislodge brake backing plate nor damage oil seal.

Axle Assembly Removal: Raise rear of car and support at each side of frame, directly opposite fuel tank ends, on underbody box section. Drain lubricant. Remove propeller shaft and install Tool 7657-D on transmission output shaft to prevent fluid leakage. Remove wheels, drums, and axle shafts (see above). Wire brake backing plates to underbody. Remove hydraulic lines from axle assembly (unnecessary to disconnect), and disconnect parking brake cables. Remove coil springs and insulators. Disconnect track bar and wire to underbody. Remove bolts securing trailing arms to axle housing and remove rear axle assembly.

Wheel Bearing Adjustment: None required.

FRONT SUSPENSION

Independent. "Ball-Joint" suspension with direct acting shock absorbers mounted within coil springs.

See "Lincoln Front Suspension" in Suspension & Wheel Alignment Section.

Caster - 0° to Neg. 1½°. Caster should not vary more than ½° from side to side.

Camber - 0° to Pos. ¾°. Camber should not vary more than ¼° from side to side.

Toe-In - 1/8-3/16".

Toe-Out on Turns - With wheels at maximum turning angle, outer wheel should be at 27°26', and inner wheel should be at 37°45'.

REAR SUSPENSION

Coil springs mounted between underbody and trailing arms which are mounted on underbody at front and rear axle housing at rear. Shock absorbers mounted at an angle between axle housing and underbody.

S "Linc ln R ar Suspension" in Susp nsion & Whe l Alignment S ction.

Heavy Duty ℂ	PB8L-18077-A	PB8L-18080-A

ℂ - Adjustable type See below

Heavy Duty Shock Absorber Adjustment - Remove shock absorber, **compress fully** until internal couplings are mated, then rotate reservoir **clockwise** to align arrow on inner washer (front), dust cover (rear) with arrow on reservoir to obtain desired ride control.

STEERING

►*POWER STEERING "HISSING" NOISE CORRECTION:* See *"Lincoln Torsion Bar Power Steering" in Steering Section*

Power Steering: See *"Lincoln Torsion Bar Power Steering' in Steering Section*

►*POWER STEERING PUMP PRODUCTION CHANGE·* Power steering pump used on later cars is a vane type pump mounted directly on engine crankshaft The pump reservoir is mounted on front end of left hand cylinder block and is connected to pump by tubing and hose

Steering Wheel & Horn Button Removal: *See "Lincoln Torsion Bar Power Steering" in Steering Section*

Steering Gear Removal: *See Lincoln Torsion Bar Power Steering' in Steering Section.*

Steering Linkage: *See 'Steering Linkage" in Steering Section*

BRAKES

Bendix Hydraulic. Self-adjusting, duo-servo with fixed anchor pin No eccentric adjustment Parking lever applies rear wheel service brakes
See "Bendix Automatic Adjuster Hydraulic Brakes" in Brake Section

►*BRAKE GRABBING, PULLING OR UNEVEN APPLICATION CORRECTION* Inspect brake shoe for a weld failure between shoe web and lining attaching plate, particularly near end of web Replace shoe if weld failure is found Do not attempt to reweld web

►*PARKING BRAKE RELEASE PRODUCTION CHANGE* A new vacuum controlled parking brake release is being installed in production on later cars to replace the previous "toe" release A switch, located on lower left hand corner of the instrument panel controls the new release In addition to red warning light in instrument cluster, a flasher bulb is installed in bezel of brake release switch to indicate brake application Engine must be running to release brake In an emergency, if engine is not running, parking brake can be released manually with the auxiliary mechanical release lever located on inboard side of parking brake lever by pulling auxiliary release lever rearward and up

►*POWER BRAKE UNIT PRODUCTION CHANGE* Units used on later cars are the "Disc Reaction" type, replacing the "Vacuum Reaction" type used on earlier cars.

Drum Diameter - 11" front and rear
Wheel Cylinder Diameter - 1 3/32" (front), 15/16"(rear)
Lining - Molded type riveted to shoe
Lining Width - 3½" (front & rear)

►*LINING THICKNESS PRODUCTION CHANGE* Thickness of standard lining has been increased .030" (making total lining thickness ¼") *NOTE - The new standard lining and the oversize lining furnished for service replacement are the same thickness, but are not interchangeable due to the radius grind Radius grind is different on oversize lining to match radius of a turned drum*

Clearance - *See "Bendix Automatic Adjuster Hydraulic Brakes" in Brake Section*

Brake Pedal Free play: 1/4-3/8"

Power Brake Unit: Bendix Vacuum Power Unit, vacuum reaction type (early), hydraulic disc reaction type (later) Combination power unit and master cylinder mounted on engine side of firewall *See "Bendix Power Brake Unit (Vacuum Reaction) Type" or 'Bendix Power Brake Unit (Hydraulic Disc Reaction) Type" in Brake Section*

Checking Fluid - Maintain fluid level to within ¼" of top of reservoir

Removal of Power Unit - Disconnect pushrod from brake pedal assembly in drivers compartment, then remove master cylinder outlet fitting bolt from master cylinder *NOTE - Not necessary to remove stop light switch* Loosen clamp holding manifold vacuum hose to power unit and remove hose Remove shoulder bolt retaining booster pushrod from pedal linkage. Remove nuts and lockwasher securing brake unit to firewall and remove unit

MISC. MECHANICAL

Windshield Wipers: Cable operated vacuum type *See "Windshield Wipers" in Miscellaneous Section*

Heater-Air Conditioner: Own, with electrically controlled servo motors *See "Lincoln Air Conditioning" in Miscellaneous Section*

Power Window Regulators: Electric type with reversible motor in each window (including ventilators) Continental models have electrically controlled rear window *See "Power Window Regulators" in Miscellaneous Section*

Electric Door Lock: *See "Electric Door Locks" in Miscellaneous Section*

Trunk Lid Lock: *See "Trunk Lid Locks" in Miscellaneous Section*

Power Seat Adjusters: "4-Way" & "6-Way" electric type. Single motor with solenoid clutches *See "Power Seat Adjusters" in Miscellaneous Section*

Power Top Control: Electric-Hydraulic type with reversible motor, electric controlled rear window and top compartment cover *See "Power Top Controls" in Miscellaneous Section*

►*JACKING & HOISTING CAUTION (ALL MODELS): B for jacking or hoisting, s e "Jacking & Hoisting Pr cautions" in Susp nsi n & Wh l Alignm nt S ction.*

MODEL IDENTIFICATION

SERIAL NUMBER: Stamped on Patent Plate attached to left front body pillar between door hinges. *NOTE* - Number (example below) includes identification data.

① ② ③ ④ ⑤
0 Y 72 H 400001

① - Year (1960)
② - Assembly Plant. **Y** Wixom.
③ - Body Series. See Body table below.
④ - Engine. **H** - 430" Domestic, **K** - 430" Export.
⑤ - Beginning Vehicle Number.

Body S ries Table

	4-Dr. Sedan	2-Dr. Hardtop	4-Dr. Hardtop
Lincoln	62	63	64
Premiere	72	73	74
Continental	82	83	84

	F rmal Sedan	Limousine	Convertible
Lincoln	92	99	
Continental			85

VEHICLE SPECIFICATIONS: Vehicle specification codes(on Patent Plate) contain Body Style, Color, Trim and Day and Month vehicle was assembled.

Engin Pr ducti n C d Number: Stamped on cylinder block directly in front of left hand cylinder head and indicates place, year, month, day of month and plant inspector. Not used for licensing.

TUNE-UP

►*HARD STARTING CORRECTION:* Caused by loose starter cable terminal at power box bus bar terminal. To correct, install a ¼" external tooth lockwasher and tighten terminal nut to 125-150 **In. lbs.** torque.

►*HARD HOT START CORRECTION(Early Cars): Caused by fu l p rcolation. S e CARBURETOR below.*

►*CARBURETOR ICING OR PERCOLATING CORRECTION:* May be caused by air intake duct valve plate sticking. To correct, make sure assembly is tested and operates properly. *See "Fuel System Notes" in Lincoln Special Data.*

►*DISPOSABLE FUEL FILTER RESTRICTION NOTE: S "Disposable Fu l Filter Flow Checks" under Carb. Equipm nt.*

COMPRESSION PRESSURE: 180±20 lbs. All cylinders must be equal within 10 lbs.

VACUUM READING: Steady 17-18" at idle speed.

VALVE TAPPET CLEARANCE: Zero lash, hydraulic lifters.

MANIFOLD HEAT CONTROL: Water jacketed intake manifold with thermostat controlled circulation eliminates need of heat valve.

CARBURETOR AIR INTAKE DUCT ASSEMBLY: *See "Fu l Syst m Notes" in Lincoln Special Data.*

IGNITION

FIRING ORDER: 1-5-4-2-6-3-7-8.
Cylind rs - RIGHT BANK 1-2-3-4, LEFT BANK 5-6-7-8.

SPARK PLUG GAP: .032-.036".
Spark Plugs - Champion F-11-Y. 18 mm. Tapered seat, no gasket used. Torque to 15-20 ft. lbs.

►*IGNITION FAILURE CAUTION:* Do not mistake "CORONA" discharge for "FLASH-OVER". Corona is steady blue light around insulator just above spark plug shell crimp and has no effect on ignition performance.

COIL: Linc ln N . B6A-12029-B.
Igniti n Curr nt - 2.5 amps. idling, 4.5 amps. stopped.
R sist r - COLF-12250-A. 1.3-1.4 ohms at 75°F.

►*COIL RESISTOR NOTE:* New Ignition Resistor Wire Assembly is connected to a small pigtail from ignition switch and to a multiple quick disconnect at left side of dash panel. Resistor Assembly is bypassed during cranking by lead from starter solenoid to battery terminal of coil.

DISTRIBUTOR: Lincoln No. B9MF-12127-B. Pivoted breaker plate type. *See "Lincoln Distributors" in Electrical Section.*

►*DISTRIBUTOR HOLD-DOWN CLAMP CAUTION:* Clamp nut should be tightened to 10-15 ft. lbs. only to prevent bending studs or causing oil leaks at distributor grommet.

►*ENGINE STUMBLE, HESITATION, ROUGH IDLE, OR INTERMITTENT MISFIRING CORRECTION:* Caused by "Cross-fire" due to failure of boot insulation at distributor cap. To correct, replace faulty distributor wires with wires from Kit, Part No. HJK-12259-D, identified by daub of green paint or words "Radio Resistance" lettered on wires. Distributor wires must be routed as shown in wiring diagram.

Condenser - Lincoln B9AF-12300-A. **Capacity** . 21-.25 mfd.
Contact Point Set - Lincoln No. B7A-12171-A.
Breaker Gap - .014-.016".
Cam Angle - 26-28½°. *CAUTION* - Set cam angle at idle speed (250 Distributor RPM) and with ZeroVacuum.
Breaker Arm Spring Tension - 17-20 ozs.
Rotation - Counterclockwise viewed from above.

Automatic Advance ①

Degrees	Distr. RPM	Degrees	Eng. RPM
0	375	0	750
½-1½	500	1-3	1000
6-7¼	1100	12-14½	2200
14½-15¾	2000	29-31½	4000

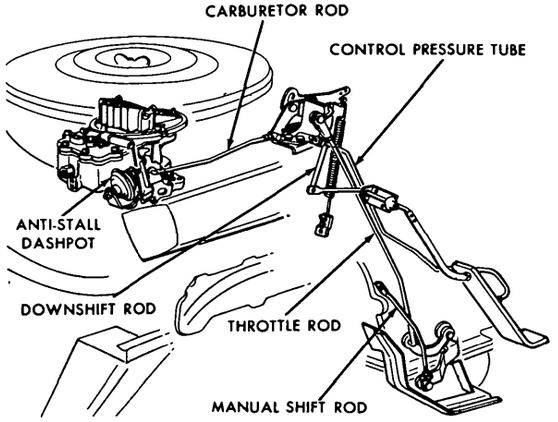
① - Adjust Test Stand to 0° at 250 RPM.

Vacuum Spark Control: Integral type mounted on distributor housing and linked directly to breaker plate.

Vacuum Advance ②

Distr. Degrees	Eng. Degrees	Vacuum (" of Hg)
0-3	0-6	6½
5-8	10-16	10
9½-12½	19-25	15

② - Adjust Test Stand to 0° at 1000 RPM and 0" of Hg.



IGNITION TIMING

Setting - 6° BTDC. Range 2°-10° BTDC. *Set with vacuum line disconnected & carburetor opening taped closed.*
Timing Mark - Early - Damper marked TDC, 10° & 20° BTDC (long marks) & 2° short marks between. Align mark with pointer on cover. **Later** - Ball pin on damper to be aligned with 0, 3, 6, 10 sawtoothed marks of pointer on cover.

CARBURETOR

►*CARBURETOR APPLICATION:* New design Carter ABD 2-Barrel Carburetor, with air horn, float bowl and body, and throttle body made of aluminum castings.

►*POOR PERFORMANCE AND ACCELERATION CORRECTION:* Caused by misaligned booster venturi or restricted accelerator pump discharge passages. To correct, s *"Cart r (ABD) 2-Bbl. Carbur tor" in Carbur tion S ction.*

AUTOMATIC TRANSMISSION THROTTLE LINKAGE

►*ENGINE STALL AND ROUGH IDLE CORRECTION:* Caused by fuel vapors entering from carburetor internal vents. To correct, install air bleed valve B8LE-9B532-A. Instructions accompany valve.

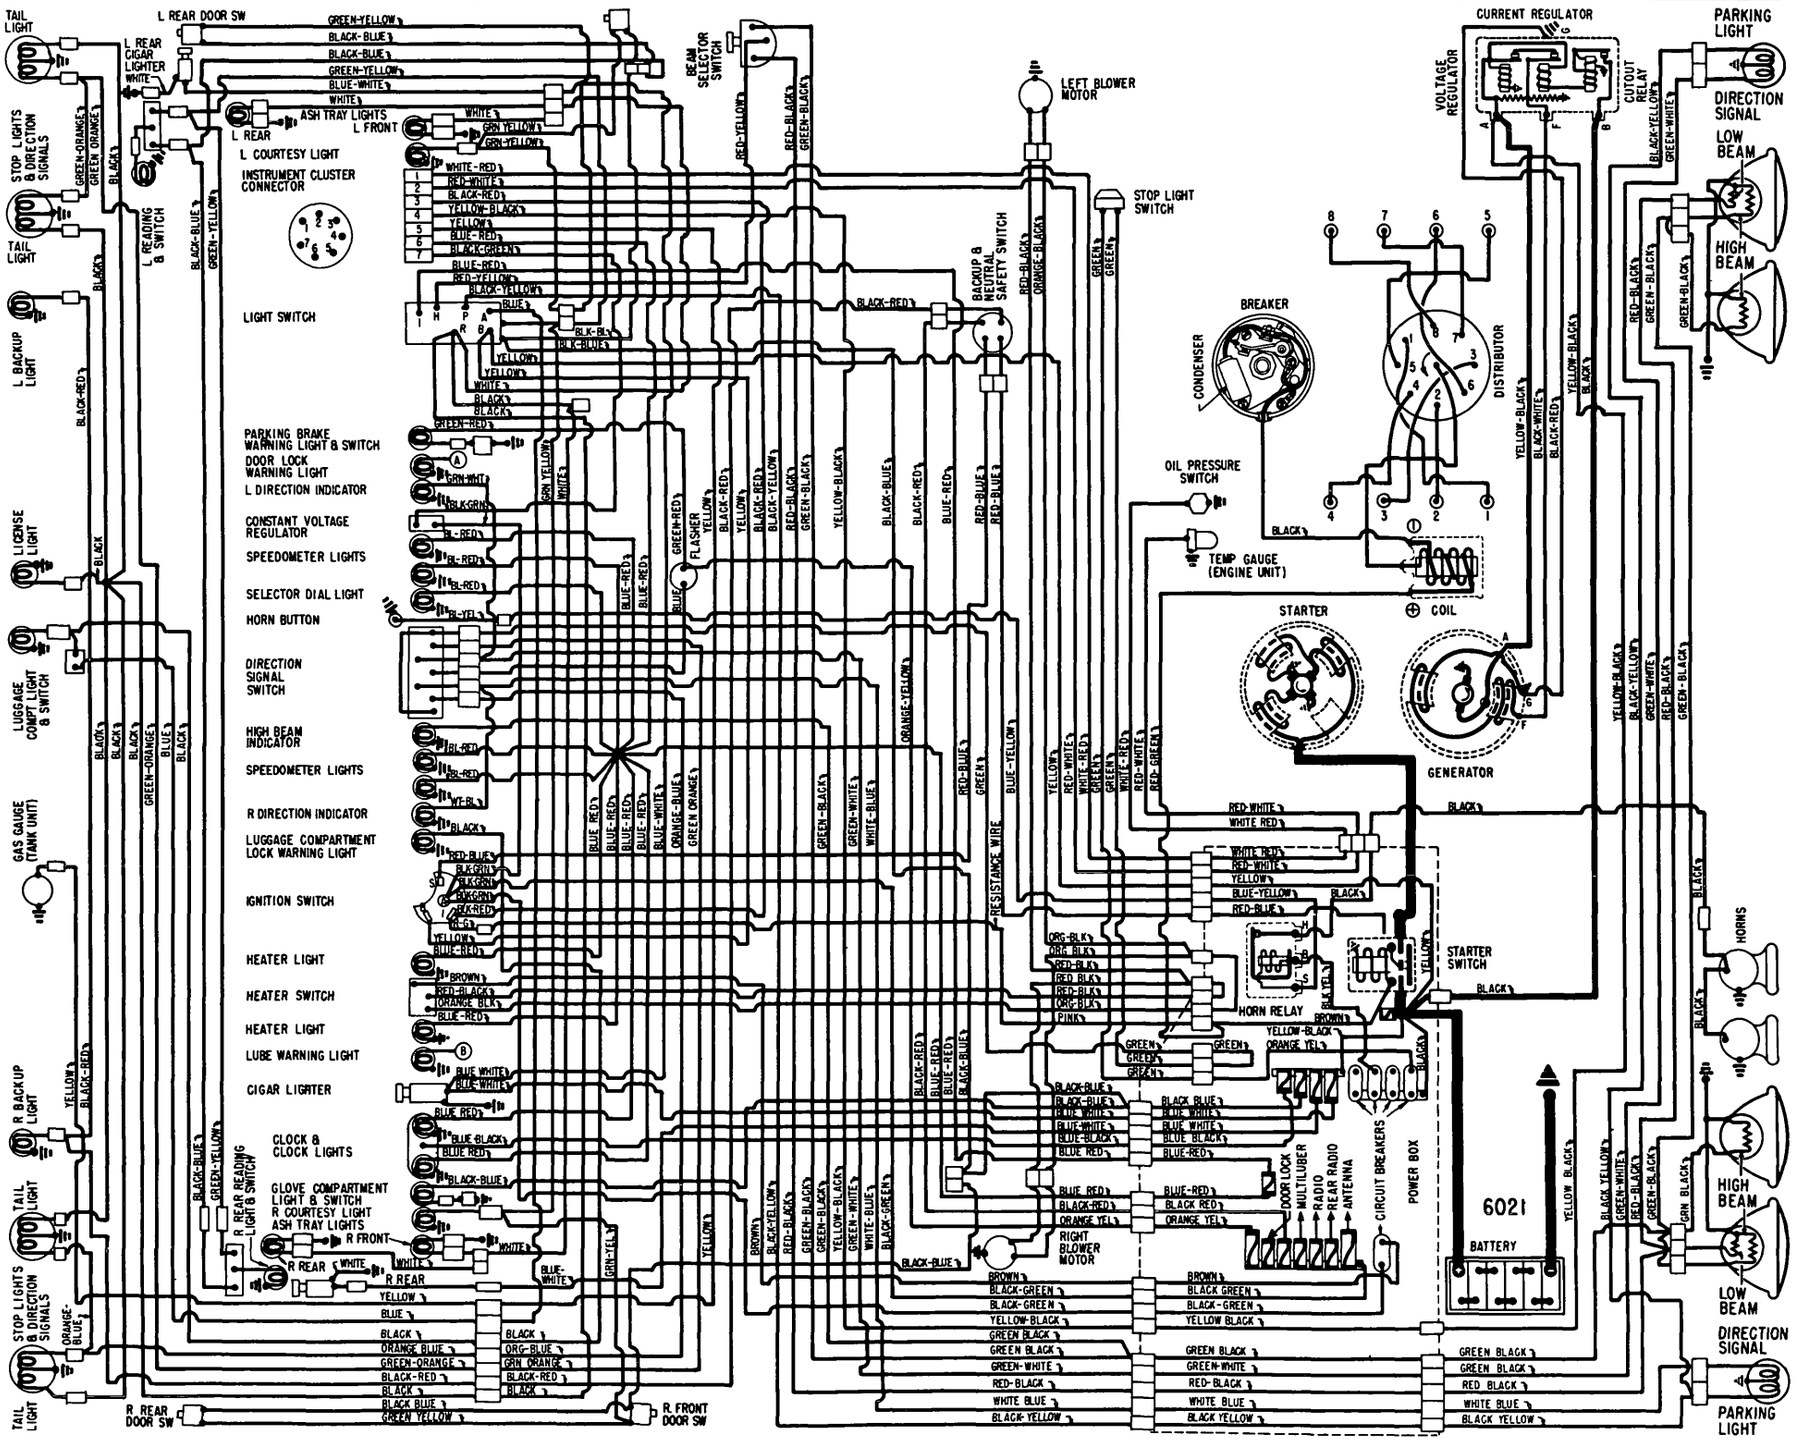
Throttle Linkage Adjustment: Make adjustments in the following sequence:

Engine RPM Adjustment - Make Anti-Stall Adjustment, see below, then adjust engine idle to 450-475 RPM with selector lever in D2 position (engine at operating temperature).

Carburetor Rod Adjustment - Disconnect transmission throttle rod at bellcrank bracket and carburetor rod at carburetor lever. Insert ¼" gauge pin, Tool 77230-MB, through alignment holes in bellcrank bracket and tab. Hold carburetor lever against hot idle adjusting screw and adjust length of carburetor rod for free fit in carburetor lever. **Lengthen carburetor rod one turn.** Remove ¼" gauge pin and reconnect rod. Recheck alignment holes and readjust carburetor rod as required. *NOTE* - Guide pin holes must be in alignment.

Throttle Rod Adjustment - Connect pressure gauge at transmission pressure tube fitting at bellcrank. Pull up on throttle rod firmly but gently. Adjust clevis so that pin enters freely,then **lengthen clevis 3½ turns** and reconnect rod. Start engine and with foot brake set firmly, selector lever in D2 position, accelerate engine to 1,000 RPM. Gauge reading should be 80-85 lbs. To correct pressure, adjust length of throttle rod. Lengthen rod to increase pressure, shorten rod to reduce pressure. *CAUTION* - Make checks quickly and return selector lever to neutral position.

Downshift Rod Adjustment - Two adjustments necessary. Specifications are with accelerator depressed to full kickdown position.



1) Adjust screw and jamnut at upper end of downshift rod so rod is vertical (crosswise) when looking down from bellcrank to "Z" bar.

2) Adjust length of downshift rod at upper end (remove from stud) so that bellcrank pin is within 3/32" from top of slot.

Anti-Stall Dashpot Adjustment: With carburetor lever against hot idle screw and dashpot plunger fully depressed, clearance between dashpot plunger and lever should be .060-.090". To adjust, loosen locknut and turn dashpot in mounting bracket.

CARTER ABD 2-BARREL

Carter ABD 2965S, SA. 2-barrel downdraft type.

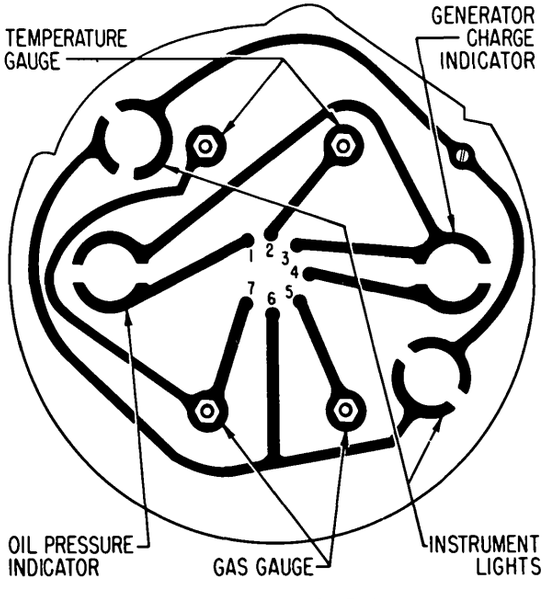
►*HARD HOT STARTING CORRECTION:* Caused by fuel inlet needle improperly seated. *See "Carter ABD Carburetors" in Carburetion Section.*

►*HARD HOT START CORRECTION (Carbs. installed prior to April 15th production):* Caused by fuel percolation. When carburetor, automatic choke and linkage adjustments, do not correct condition, install Booster Venturi Assembly Kit Part No. COLY-9A523-A and lower float level. Later carburetors have these revisions. *See "Carter ABD Carburetors" in Carburetion Section.*

►*STALLING OR LOADING AFTER SHORT OPERATION OR CHOKE VALVE CLOSING FAILURE CORRECTION:* May be caused by incorrect choke thermostatic coil spring. *See "Carter ABD Carburetors" in Carburetion Section.*

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds 1-4-6-7, LEFT barrel feeds 2-3-5-8.*

Idle Setting - 1½ turns open. Turn both screws alike. Turn screws out for richer mixture.



Idle Speed - 450-475 RPM with selector lever in D2 position.

NOTE - On Air Conditioned Cars the compressor should be in operation when idle speed is adjusted.

►*IDLE SPEED AND IDLE FUEL MIXTURE ADJUSTMENT CAUTION:* Hot idle compensating valve must be completely closed when making either adjustment. To close valve, press down on brass valve button (not on bi-metal spring).

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Carter ABD 2-Bbl. Carburetors" in Carburetion Section.*

LINCOLN INSTRUMENT CLUSTER PRINTED CIRCUIT

CARB. EQUIPMENT

Fuel Pump: Lincoln No. COLE-9350-A. Fuel only.
Pressure - 4.5-6.5 lbs. at 500 RPM.
See "Fuel Pumps" in Carburetion Section.

NEW DISPOSABLE TYPE FUEL FILTER: New disposable type fuel filter Part No. COME-9155-B is available for service replacement of filters B8S-9155-A and PB8M-9155-A (1958-59).

Installation - To save damage to filter and possibility of leaks, proceed as follows:

1) Use only the filter hex connection adjacent to mating part for applying torque.

2) Bend filter line so that normal free floating position of the end of line is in proper alignment with filter to avoid induction stress on filter case.

3) Use second wrench on filter hex connection to avoid transferring stress through filter case and tighten fuel filter inlet to fuel pump hand tight plus 2½ turns. Tighten fuel filter outlet to fuel line to 180-200 inch lbs.

Replacement - Remove fuel filter to carburetor fuel tube, and old filter assembly. Remove brass nipple from pump outlet. Install new filter in fuel pump outlet. *CAUTION - DO NOT transfer force through filter case when installing filter or fuel tube.* Assemble filter to carburetor fuel tube at filter end then to carburetor. Check for leaks.

DISPOSABLE FUEL FILTER FLOW CHECKS: Check fuel flow at both inlet and outlet side of fuel filter Minimum flow required for engine operation is 1 pint within 20 seconds at 500 RPM. Static pressure will not vary because of restricted filter. Procedure for checking fuel pump pressure remains the same.

Gasoline Gauge: King-Seeley Electric "CV" (Constant Voltage) type with gauge voltage regulator, Lincoln No. B9MF-10804-A.
Dash Unit - Lincoln No. COLF-9280-C.
Tank Unit - Lincoln No. COLF-9275-A.
See "Fuel Gauges" in Carburetion Section.

Air Cleaner: Dry filter element type. Clean every 2,000 miles, replace every 20,000 miles.

►*AIR CLEANER SERVICE NOTE:* Filter element can be cleaned by tapping or shaking or by using compressed air directed opposite to air intake flow. Use care not to rupture element. *DO NOT wash element in solvent or other liquid and DO NOT oil or lubricate.*

►*AIR CLEANER PRE-FILTER ELEMENT NOTE:* Synthetic fibre, wrap-around element Part No. B8A-9601-A is available for use with dry-type cleaner element, in abnormally dusty areas.

►*PRE-FILTER ELEMENT INSTALLATION & SERVICING:* Remove dry element and slip pre-filter element over outer surface, locating it between upper and lower gasket surfaces. To clean pre-filter element, remove it from dry element and wash or rinse it in plain water. Use a detergent to remove contaminated oil. DO NOT WASH dry element.

BATTERY

Lincoln No. HJK-10655-A. 12 volt, 17 plate, 72 ampere hour capacity (20 hr. rate).
Battery Ground - Negative, to right cylinder head.
Engine Ground - At valve pushrod chamber cover.

STARTER

Lincoln No. FAY-11002-A. Armature B6A-11005-B.
Drive - Lincoln No. ICM-11350-C. Bendix "Folo-Thru".
Rotation - Counterclockwise at commutator end.
Brush Spring Tension - 48-56 ozs.
Cranking Speed - 150-180 RPM

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	4500	12.0	85
15.5 ft. lbs.	Lock	5.0	550

Removal: Remove battery and support assembly, then disconnect transmission control rod at accelerator shaft bracket lever. Drain cylinder block, remove nuts attaching right and left front engine support insulators to block. Raise front of engine as high as possible and remove right exhaust manifold. Disconnect cable from starter and remove three attaching capscrews and remove starter.

Installation: Place dust shield in recess in flywheel housing, insert starter and drive assembly (drive end up) through lower suspension arms and work assembly into position. Install attaching capscrews finger tight, check for proper alignment and tighten capscrews (outer capscrew first).

Starting Switch: Lincoln No. B6A-11450-A, magnetic type, controlled by Ignition & Starter Switch Lincoln No. COLF-11572-A and Neutral Safety Switch Terminal Block Lincoln No. COLF-7A217-A.

Neutral Safety Switch Terminal Block Adjustment: *See "Lincoln Automatic Transmission" in Transmission Section.*

GENERATOR

Generator No.	Make	Amperes
B9LF-10002-A	Lincoln	40
B9LF-10000-B	Delco-Remy	50

Armature (With Bearing) - Lincoln No. FGP-10027-A (use with B9LF-10002-A Gen.).
Armature (Only) - Lincoln No. B9LF-10005-A (use with B9LF-10000-B Gen.).

►*CHARGING CIRCUIT FUSE NOTE:* This fuse located at starter relay in Power Box, was bypassed in production starting February 1960. Fuse may be bypassed on early cars by disconnecting black coded wire (battery terminal of generator regulator to charging system fuse terminal) from upper fuse terminal and reconnecting it to lower terminal.

Performance Data

Generator	Amps.	Volts	Gen. RPM
B9LF-10002-A	40	15	2650
B9LF-10000-B	50	14	2500

Brush Spring Tension - 32-40 ozs. (B9LF-10002-A), 28 ozs. (B9LF-10000-B).
Field Current - 1.0-1.1 Amps. (B9LF-10002-A), 2.0-2.5 Amps. (B9LF-10000-B), at 10 volts Hot.
Rotation - Counterclockwise at commutator end.

Belt Adjustment: ½" deflection midway between generator and water pump pulleys with light thumb pressure.

REGULATOR

Regulator No.	Make	Generator No.
PB7M-10505-A	Lincoln	B9LF-10002-A
COLE-10505-A	Delco-Remy	B9LF-10000-B

►*SEE CHARGING CIRCUIT FUSE CAUTION IN "GENERATOR" ABOVE.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

LINCOLN (PB7M-10505-A)

►*SETTING CAUTION:* Regulators are temperature compensated type. Set to following specifications at 75° ambient (engine compartment) temperature after one-half hour operation in vehicle or after regulator heated and stabilized.

Cutout Relay

Cuts In - 12.0-12.8 volts.
Cuts Out - 5-9 amps. (discharge current).

Voltage Regulator

Setting - 14.6-15.4 volts ambient temperature at 75°F.
Checking & Adjusting - *See "Lincoln 12-Volt Regulators" in Electrical Section.*

Current Regulator

Setting - 38-42 amps.
Checking & Adjusting - *See "Lincoln 12-Volt Regulators" in Electrical Section.*

DELCO-REMY (COLE-10505-A)

►*AMBIENT TEMPERATURE NOTE:* Ambient temperature is the temperature of the air surrounding regulator ½" from its cover.

Cutout Relay

Cuts In - 11.8-13.0 volts.
Cuts Out - 8.0 max. discharge current at 12.2 volts.

Voltage Regulator

Setting - *NOTE - Adjust to correct operating voltages as indicated in following "Ambient Temperature" table.*

Voltage Setting (Upper Contacts)

Temp. °F	Volts	Temp. °F	Volts	Temp. °F	Volts
25	15.0-15.8	85	14.5-15.3	145	14.0-14.8
35	14.9-15.7	95	14.4-15.2	155	13.9-14.7
45	14.8-15.6	105	14.3-15.1	165	13.8-14.6
55	14.8-15.6	115	14.2-15.1	175	13.7-14.6
65	14.7-15.5	125	14.1-15.0		
75	14.6-15.4	135	14.1-14.9		

►*NOTE: Lower contact voltage setting should be .3-.5 volts less than the upper contact setting.*
Checking & Adjusting - *See "Delco-Remy (Double Contact) Regulators" in Electrical Section.*

Current Regulator

Setting - *NOTE - Adjust to current value as indicated in following "Ambient Temperature" table.*

Temp. °F	Amps.	Temp. °F	Amps.	Temp. °F	Amps.
25	54.6-65.0	85	48.0-56.4	145	40.2-46.4
35	54.6-65.0	95	46.6-54.6	155	38.8-44.8
45	53.2-63.0	105	45.4-53.0	165	37.8-43.4
55	52.0-61.6	115	44.2-51.8	175	36.2-42.0
65	50.8-60.0	125	42.8-49.8		
75	49.2-58.0	135	41.4-48.0		

Checking & Adjusting - *See "Delco-Remy (Double Contact) Regulators" in Electrical Section.*

MISC. ELECTRICAL

►*CHARGING CIRCUIT FUSE PRODUCTION CHANGE:* *See Note under GENERATOR above.*

►*INSTRUMENT PANEL LIGHT FUSE CHANGE:* Lights are protected by fuse in Power Box on later cars. This change was made by routing line from Instrument Light Rheostat through a fuse in the Power Box as shown in the wiring diagram.

Instrument Cluster Hood Removal: Remove cluster hood screws (at each end and at center). On Air Cond. Cars, remove grille upper molding for access to left hand cluster screw. Remove hood by lifting it up toward steering wheel. *NOTE* - On cars with Electronic Headlight Dimmer Control, disconnect photo-tube harness lead wires at amplifier and remove harness and hood as an assembly.

Instrument Lamp Removal: *NOTE* - Brake Release, Ignition Switch, Lighting Switch, and Door Lock Switch Lamps are accessible from under the panel. Other lamps are accessible after removing hood (above).

Printed Circuit Lamps - Turn bulb socket clockwise to disengage. To install, position bulb and socket in circuit board opening and turn socket approx. 90° clockwise to lock it.

Other Under Hood Lamps - Pull socket out from cluster. To install, press socket in until seated.

Speedometer Removal: With hood removed, disconnect reset cable from lower lip of cluster. Disconnect speedometer cable at speedometer, hi-beam indicator, two speedometer lamp bulbs and socket assemblies. Remove bezel to cluster screws and lift off speedometer assembly. Remove speedometer to bezel screws and remove speedometer.

Printed Circuit Board Removal: With hood removed, remove gauge pod bezel to cluster retaining screws and lift up on gauge pod assembly. Disconnect connector and remove plate assembly-to-bezel retaining screws and separate plate assembly from bezel. Remove temperature and fuel gauge retaining nuts and remove gauges. Remove four bulbs. Remove remaining circuit board-to-plate retaining screws and remove circuit board.

►*POWER BOX NOTE:* A power box mounted on right side of dash panel in engine compartment contains fuse panel, starter and horn relays, power circuit breakers and dash panel wiring connector assemblies. Power box acts as a distribution point for all circuits. A decal inside cover gives circuit breaker and fuse application, ratings, location, and wiring color codes. Fuses may be removed by using ignition key. Heater and air conditioning circuit breakers are installed individually and can be lifted from their spring-loaded holders. Other circuit breakers are mounted on a bus bar and should be removed from holder as an assembly.

Directional Signals: *See Electrical Section.*

Lighting Switch Removal: Disconnect battery negative (ground) cable. Press inward on headlamp switch spring release button and carefully remove switch knob and shaft. Remove switch bezel nut and bezel. Lower switch below panel, note wire color codes and disconnect wires.

Stop Light Switch Location: On forward end of brake master cylinder (integral with power unit on firewall).

LIGHTING CIRCUIT BREAKERS: 12 Ampere - On main light switch, protects Parking, Rear, Instrument Panel (Early cars), License, Luggage Compartment and Ash Tray lights.

15 Ampere - Non-recycling type, in Power Box. Protects Stop Light Circuit.

FUSES: All fuses located in Power Box except as noted.

AGW-4 Amp. - Protects Instrument Lights (later cars only, see note above).

SFE 14 Amp. - Protects Courtesy, Dome. & Reading lights.

SFE 9 Amp. - Protects Radio.

3AG 10 Amp. - Protects Single Antenna.

SFE 20 Amp. - Protects Dual Antenna.

SFE 7.4 Amp. - Protects Multi-Luber.

1 AG 1 Amp. - Protects Clock.

SFE 7.5 Amp. - Protects Back-up lights.

Cigar Lighter - Sulphur Disc on back of instrument panel lighter. A 3GA-15 Amp. fuse in Power Box for each lighter in rear doors or quarters.

Horn Relay: Lincoln No. B8C-13853-A.

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air conditioning equipment or lines for access to engine. See "Air Conditioning Service Cautions" in Miscellaneous Section.*

ENGINE SPECIFICATIONS: Own V8, valve-in-head, of same design as previous models.

Bore	Stroke	Displacement
4.30"	3.70"	430 cu. in.

Compr. Ratio	Rated HP	Developed HP
10.0-1	59.17	315 at 4100 RPM

Compression & Vacuum Reading - *See TUNE-UP.*

►*ROCKER ARM COVER GASKET NOTE:* Engine should be Hot when covers are removed to prevent damage to .003-.005" thick neoprene coating on gasket. Exercise extreme care to insure that gasket particles do not fall into engine as gasket is removed. Torque cover bolt to 5-8 ft. lbs.

►*EXCESSIVE OIL CONSUMPTION & TAIL PIPE SMOKING:* Caused by engine oil entering intake manifold due to vacuum valve stuck in open position. Check vacuum valve at left side of engine crankcase and replace as necessary.

►***MAXIMUM ENGINE RPM CAUTION (CARS WITH AUTOMATIC TRANSMISSIONS):*** **DO NOT operate engine in excess of 2500 RPM with selector lever in "N" (Neutral), "P" (Park), or "R" (Reverse) as damage to clutch plates may result.**

►*HEATER & HEATER-AIR CONDITIONING CONTROL ASSEMBLY WHISTLE NOISE CORRECTION (Cars Built Prior to Sept. 20, 1959):* When whistling noise is audible during operation of vacuum servo control, replace the vacuum servo control head, Part No. COLF-18549-C (Heater only) or Part No. COLF-19980-D (Heater-Air Conditioning).

►*CYLINDER HEAD PRODUCTION CHANGE:* New cylinder head used in production Nov. 24, 1959 with new specifications for new color coded standard valves, valve head diameter, stem diameter and with constant rate valve springs which are not available for replacement. Color coded replacement valve spring and damper assembly available for replacement. *New cylinder head with new valves and springs is interchangeable with former head. One of each type head may be used on same engine.* See individual items in data following.

OIL PAN REMOVAL: Crank engine so No. 1 piston is at 14° BTDC. Remove battery ground cable and oil level dipstick. Drain crankcase. Remove oil pan retaining screws and let pan rest on frame crossmember. Remove oil pump inlet tube and screen assembly screws and let assembly drop into pan. Remove pan in a lowering forward motion.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

CYLINDER HEAD: *See "Cylinder Head & Manifold" in Lincoln Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Lincoln Special Data.*

ENGINE REMOVAL: *See "Engine" in Lincoln Special Data.*

PISTONS

Step head, slipper type, aluminum alloy with a steel strut. Piston pin is interference fit in piston. Retaining rings are not used.

►*ORIGINAL BORE & PISTON SIZES:* Standard cylinder bore limits are 4.300-4.3024". Standard size pistons are furnished in two sizes for selective fit, see revised piston sizes and clearance specifications below.

►*REVISED PISTON SIZE & CLEARANCE SPECIFICATIONS:* Std. size piston furnished in two (reduced) sizes and marked with color code on top of piston as follows: Code Red 4.2997-4.2983", Code Blue 4.2989-4.2995". *See revised clearance specification below.*

Removal - Piston & rod removed from above.

Clearanc - .0017-.0035". This supersedes previous specification of .0008-.0026".

Fitting New Pistons: *See "Pistons" in Lincoln Special Data.*

Installing Pistons: Pistons for right and left hand cylinders are NOT interchangeable. Install piston so indentation notch on head of piston is toward front of engine. *See Rod Installation.*

Replac ment Pist ns: Std. (2 sizes, see above) and .003", .020", .030", .040" Oversize.

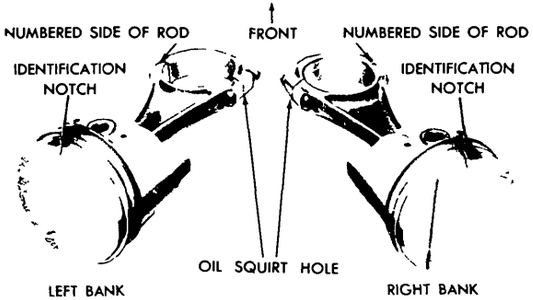
PISTON PIN

Press fit in connecting rod, no retaining device.

Diameter - .9749-.9752". **Length** - 3.48-3.50".

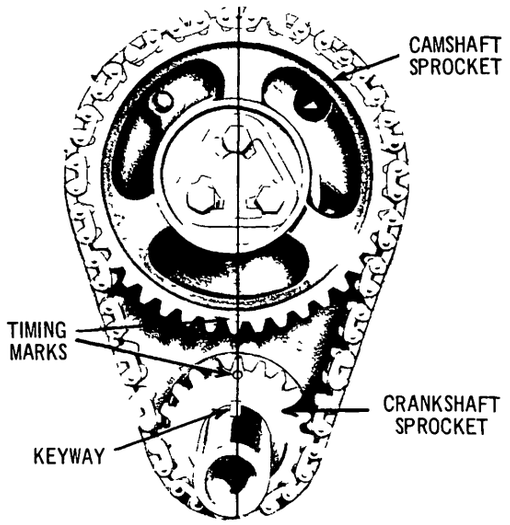
Clearanc in Piston - .0002-.0004". Wear limit .0008".

Piston Pin Removal & Installation: *See "Piston Pins" in Lincoln Special Data.*



Replac m nt Pins: Standard size. Furnished with new pistons only.

PISTON RINGS



Ring	Width	End Gap	Side Clearance
Compr. (1)	.077-.078"	.015-.030"	①.0015-.003"
Compr. (2)	.068-.069"	.015-.030"	① .001-.003"
Oil (3)	.1825-.1879"	.015-.062"	②

① - Wear limit .006". ② - Side sealing type ring.

Installing Rings: Install second compression ring with outside counterbore down. Oil ring expander spacer gap must be opposite notch in piston head with segment gaps 1" on each side. Compression ring gaps must be 150° on each side of expander spacer gap.

LINCOLN PISTON & ROD ASSEMBLY

LINCOLN VALVE TIMING MARKS

Replacement Rings: Furnished Std. .020", .030", .040" Oversize.

CONNECTING ROD

Length (Center-to-Center) - 6.599-6.601".

Journal Diameter - 2.5996-2.6000" (Code Red), 2.5992-2.5996" (Code Blue).

Lower Bearing - Copper lead alloy, steel back.

Clearance - .0007-.0028". **Wear Limit** - .0038".

Side Clearance - .005-.015". **Wear Limit** - .018".

Replacement Bearings: Std. (2 sizes marked RED and BLUE for selective fit), .002", .010", .020", .030" Undersize.

►*NOTE:* Any combination of RED and BLUE standard bearing inserts may be used to obtain desired clearance. If necessary, regrind journals and install undersize bearings.

Installing Rods: Install rod in correct numbered cylinder with notch on head of piston toward front of engine and oil squirt hole in rod facing inward and rod number facing outward toward outer side of cylinder block.

CRANKSHAFT

►***ENGINE MAIN BEARING BOLT SERVICE REPLACEMENT NOTE:*** ***See "Crankshaft" in Lincoln Special Data.***

Journal Diameter - 2.8998-2.9002" (Code Red), 2.8994-2.8998" (Code Blue).

Out-of-Round Limits - .0004". **Wear Limit** - .0006".

Bearings - Copper-lead alloy, steel back.

Clearance - .0009-.0029". **Wear Limit** - .0039".

Endplay - .004-.008" **Wear Limit** - .012"

End Thrust - Taken by No. 3 (center) main bearing.

Replacement Bearings: Std. (2 sizes marked RED and BLUE for selective fit), .002", .010", .020", .030" Undersize.

►*NOTE:* Any combination of RED and BLUE standard bearing inserts may be used to obtain desired clearance. If necessary, regrind journals and install undersize bearings

Crankshaft R ar Oil Seal Installati n: *See "Crankshaft & Main Bearings" in Lincoln Special Data.*

Crankshaft Front Seal Installation: *See "Engine Front Cover" in Lincoln Special Data.*

CAMSHAFT

Journal Diam t r - 2.264-2.265" (All journals).

Out-of-Round Limits - .0005". **Wear Limit** - .001".

Bearings - Babbitt lined, steel backed.

Clearance - .001-.003". **Wear Limit** - .006".

Endplay - Thrust to rear. Taken by thrust face of cam shaft sprocket riding against front surface of block.

►*CAMSHAFT LOBE LIFT NOTE:* Before installing oversize pushrods, check camshaft lobe lift for wear. *See CAMSHAFT & BEARINGS in Lincoln Special Data.*

Replacement Bearings: Std. and .015" Undersize.

Camshaft Removal & Installation: *See "Camshaft & Bearings" in Lincoln Special Data.*

Camshaft Setting: Timing marks should be adjacent and in line with straightedge across shaft centers.

Timing Chain Deflection: Not more than ½" deflection from straight to outward deflected position.

Timing Chain Cover Seal Installation (Crankshaft Front Seal): *See "Engine Front Cover" in Lincoln Special Data.*

Engine Front Cover Removal & Installation: *See "Engine Front Cover" in Lincoln Special Data.*

VALVES

Tappet Clearance: Zero lash, hydraulic lifters.

(Early Type Cyl. Head)

Valve	Head Diameter	① Stem Diam ter
Intake	2.080-2.090"	.3711-.3718"
Exhaust	1.770-1.780"	.3692-.3700"

Valve	Seat Angle	②Lift	Stem Clearanc
Intake	⑤45°	.2316"	③ 0010-.0024"
Exhaust	⑤45°	.2316"	④.0028-.0042"

(Late Type Cyl, Head)

Valve	Head Diamet r	①Stem Diamet r
Intake	1.955-1.965"	⑥
Exhaust	1.645-1.655"	⑦

Valve	Seat Angle	②Lift	Stem Clearance
Intake	⑤45°	.2316"	.0010-.0020"
Exhaust	⑤45°	.2316"	.0020-.0030"

① - Furnished with 003", .015", .030" oversize stems.
② - Cam lobe lift Wear limit .005".
③ - Wear limit .0045".
④ - Wear limit .0055".
⑤ - Valve face angle 44°.
⑥ - Red .3711-.3716", Green .3714-.3719".
⑦ - Red .3701-.3706", Green .3704-.3709".

►*VALVE REPLACEMENT NOTE:* Some engines may have valves with .015" oversize stems installed in production. For correct replacement, measure stem diameter approximately 1½" from stem end. All valve stems are the same diameter for approximately 1" from stem end.

Valve Seat Width - .070-.090" (intake & exhaust).

Valve Stem Oil Seals - Umbrella type seals used on all valves. Install seals with cup side down over guide.

Oversize Valve Stem Installation: *See "Valve System" in Lincoln Special Data*

Valve Springs: Valve springs with damper springs inside are standard. *NOTE - Some engines produced with new constant rate spring (without damper spring, color coded blue, and can be intermixed in an engine with other type).* Blue spring not serviced. Use either a

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

"Maroon" or "Gray" color coded spring with damper for replacement. Assembled spring height specifications remain the same for all springs.

►*SPRING SQUARENESS NOTE:* If springs more than 1/16" out of square, replace spring and damper.

►*VALVE DAMPER SPRING INSTALLATION CAUTION:* To prevent valve spring clicking noise, damper spring must be installed within valve spring so end of damper spring is within a 135° arc counterclockwise to end of valve spring when viewed from above.

Assembled Height - 1.83" measured from surface of cylinder head spring pad to underside of spring retainer (with valve closed). Do not use more than two .030" spacers if height more than 1.83". Measure all components affecting spring height if less than 1.83".

Valve Spring Specifications

Valve	Lbs. Pressure	Length
Closed	① 66-77	1.83"
Open	② 240-260	1.43"

① - Wear limit 60 lbs. at 1.83".
② - Wear limit 225 lbs. at 1.43".

Valve Guides: Integral with cylinder head. When stem-to-guide clearance exceeds maximum .0045" (Intake), .0055" (Exhaust), ream valve guides and install valves with oversize stems. *See "Valve System" in Lincoln Special Data.*

Valve Lifters: Hydraulic barrel type. No adjustment.
Diameter - .8740-.8745".
Clearance in Lifter Bore - .0005-.0020". Wear limit .005".
Hydraulic Lifter Overhaul - *See "Valve System" in Lincoln Special Data.*
Hydraulic Lifter Operating Range Check - *See "Valve System" in Lincoln Special Data.*

Rocker Arm Assembly: *See "Valve System" in Lincoln Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

►*VALVE TIMING NOTE: Following valve opening and closing points are with camlift as indicated.*

Valve Timing

Intake Valves - Open 22°①BTDC. Close 68°②ALDC.
Exhaust Valves - Open 63°①BLDC. Close 27°③ATDC.

②-.002" camlift. ② - .0045" camlift. ③ -.005" camlift.

Valve Timing Check: Install a quadrant on crankshaft damper. Remove right rocker arm assembly. Install Dial Indicator Tool 6565 and Indicator Adapter Tool 6565-AB on cylinder head using Holding Fixture Tool 4201-D. Pushrod must be in lifter socket and actuating point of indicator in same plane as pushrod movement. Make sure timing pointer is not bent. Turn engine slowly until lifter is on heel of camshaft lobe. Set indicator on zero and turn engine slowly until indicator registers valve opening and cam lobe lift. Compare crankshaft degrees indicated on quadrant with Valve Timing Table above. Continue to rotate engine to check valve closing specifications in same manner. If readings not correct, check for bent pointer, worn timing chain or sprocket before replacing camshaft.

OILING SYSTEM

►***ENGINE OILING SYSTEM: See "Engine Lubrication" and "OILING SYSTEM" in Lincoln Special Data.***

Crankcase Capacity: 5 qts. refill. Add 1 qt. with filter change.

Normal Oil Pressure: 35-55 lbs. at 2000 RPM.

►***LOW OIL PRESSURE CORRECTION: See "Oiling System" in Lincoln Special Data.***

Pressure Regulator Valve - In pump body, not adjustable.

Oil Pressure Indicator: Light on instrument panel. Light goes on when ignition switch turned on or when oil pressure is low.
Oil Pressure Switch - Lincoln No. B6A-9278-B.

Oil Pump: Combination rotor type oil pump and vane type vacuum pump mounted inside oil pan on lower left corner of block. Driven by distributor through an intermediate shaft.
Pump Overhaul - *See "Oiling System" in Lincoln Special Data.*

Oil Filter: Full flow disposable type. Mounted on lower left front corner of cylinder block. Replace element every 4000 miles or 4 months.
Installation - Coat gasket with light film of oil. Screw filter onto adapter (by hand) until snug, then tighten ¼ turn. DO NOT OVERTIGHTEN.

Crankcase Ventilation: Filter in oil filler cap and ventilator tube at rear of engine. Clean filler cap every 4000 miles.

COOLING

Three stage engine warm-up and cooling system with temperature controlled water jacketed intake manifold. Additional thermostat installed in front face of each cylinder bank.
NOTE - Cylinder block thermostats are accessible by removing water pump.

Water Capacity: 23 qts. without heater, 26 qts. with heater or air conditioning.

Pressure Valve: Radiator filler cap, Lincoln No. LA-8100-A. Operating pressure 12-15 lbs.

Thermostat: 157-162°F (No. 8BE-8575-B); 175°F (B9S-8575-A): Located in water outlet connection. Two 137-142°F (B9S-8575-B) thermostats located in front face of cylinder banks.

Water Pump: Packless, sealed ball bearing type.
See "Water Pumps" in Lincoln Special Data.

Temperature Gauge: King-Seeley electric Constant Voltage ("CV") type with Gauge Voltage Regulator No. B9MF-10804-A.
Dash Unit - Lincoln No. COLF-10883-C.
Engine Unit - Lincoln No. B7A-10884-A.
See "Temperature Gauges" in Miscellaneous Section.

Power Booster Fan: Standard on Air Conditioned cars.
See "Cooling System" in Lincoln Special Data.

TURBO-DRIVE TRANSMISSION

Torque converter and three-speed automatic transmission with hydraulic control and mechanical parking lock. Twin-Range Turbo-Drive has two manually selected drive positions. *See "Lincoln Automatic Transmission" in Transmission Section.*

►*PRODUCTION CHANGE & REPLACEMENT PARTS CAUTION: See "Lincoln Automatic Transmission" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Lincoln Automatic Transmission" in Transmission Section.*

Lubrication: Check fluid level every 2,000 miles, drain and refill every 24,000 miles. Use only Automatic Transmission Fluid Type "A", Suffix "A".

Checking Fluid Level: Bring transmission to operating temperature by running engine with selector in neutral position. Move selector lever through all ranges to assure fluid distribution, then place lever in "P" position. Maintain level at "FULL" mark on dipstick.

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Lincoln Automatic Transmission" in Transmission Section.*

UNIVERSALS

Spicer. Needle bearing type with lubrication fitting.

Propeller Shaft Alignment: *See "Propeller Shafts" in Lincoln Special Data.*

REAR AXLE

Own (Spicer Model). Semi-floating hypoid, with Hotchkiss drive.
See "Lincoln Hypoid" in Rear Axle Section.

►*POWER-LOCK DIFFERENTIAL NOTE:* Optional equipment. Cars with this type differential are identified by inscription on trunk lock cover. *See "Power-Lock Differential (Cone Clutch Type)" in Rear Axle Section.*

►*REAR WHEEL BALANCE CAUTION (Power-Lock Differential Cars):* Do not attempt to balance rear wheels on car.

►*REAR AXLE LUBRICANT NOTE:* Lubricant should be checked at 2,000 mile intervals, add lubricant (B9L-19A08 only) as necessary. Change lubricant only when differential removed for repairs.

Axle Ratio: 2.89-1 (55-19).
Backlash - .003-.008" maximum.

Axle Shaft Removal: Remove wheel and nuts securing brake drum to axle flange. Remove drum. Remove nuts securing wheel bearing retainer by working through hole in axle shaft flange. Pull axle shaft out of housing with Tool 4235-C being careful not to dislodge brake backing plate nor damage oil seal.

Axle Assembly Removal: Raise rear of car and support at each side of frame directly opposite fuel tank ends on underbody box section. Drain lubricant by removing lower bolts from cover. Remove propeller shaft and install Tool 7657-D on transmission output shaft to prevent fluid leakage. Remove wheels, drums, and axle shafts (see above) but do not secure backing plate to housing. Remove hydraulic lines from axle housing (unnecessary to disconnect) and secure backing plates (with brake assemblies and hydraulic lines) to underbody. Raise axle housing to compress shock absorbers so lower end of absorbers can be released, then lower housing. Remove "U" bolts, releasing springs, and remove housing from chassis.

Wheel Bearing Adjustment: None required.

FRONT SUSPENSION

Independent. "Ball-Joint" suspension with direct acting shock absorbers mounted within coil springs.
See "Lincoln Front Suspension" in Suspension & Wheel Alignment Section.

Caster - 0° to Neg. 1½°. Caster should not vary more than ½° from side to side.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Camber - 0° to Pos. ¾°. Camber should not vary more than ¼° from side to side.

Toe-In - 1/8-3/16".

Turning Angle - With wheels at maximum turning angle, outer wheel should be at 27°26', and inner wheel should be at 37°45'.

Wheel Bearing Adjustment: See *NOTE below for cars with Nut-lock.* Tighten adjusting nut while rotating wheel until noticeable drag is felt, then back off nut until nearest slot is aligned with cotter pin hole in spindle (1/6-1/4 turn) and install cotter pin.
NOTE - Some cars have "nut-lock" (12 sided nut with 8 castellations) installed over regular adjusting nut. To adjust wheel bearings, remove nut-lock, tighten adjusting nut to 15-20 ft. lbs. torque while rotating hub, install nut-lock on adjusting nut so that cotter pin slots are aligned with hole in spindle, then back off adjusting nut and nut-lock together (use 1 1/8" box wrench) until next slot in nut-lock aligns with hole (1/8 turn), install cotter pin.

SHOCK ABSORBERS

Non-adjustable standard, adjustable type optional.

Shock Absorber Application

Model	Front - Lincoln Part No. - Rear
Standard	COLL 18045-B..COLL 18080-B
Hvy. Duty ①	COLY 18077-A..COLY 18080-A

① - Adjustable type. See below.

Heavy Duty Shock Absorber Adjustment - Remove shock absorber, **compress fully** until internal couplings are mated, then rotate reservoir **clockwise** to align arrow on inner washer (front), on dust cover (rear) with arrow on reservoir to obtain desired ride control.

STEERING

Power Steering: *See "Lincoln Torsion Bar Power Steering" in Steering Section.*
Steering Wheel & Horn Button Removal: *See "Lincoln Torsion Bar Power Steering" in Steering Section.*
Steering Gear Removal: *See "Lincoln Torsion Bar Steering" in Steering Section.*
Steering Linkage: *See "Steering Linkage" in Steering Section.*

BRAKES

Bendix Automatic Adjuster. Duo-servo with fixed anchor pin. Parking lever applies rear wheel service brakes.
See "Bendix Automatic Adjuster Brakes" in Brake Section.

►*HISSING NOISE AT INSTRUMENT PANEL:* Caused by leak at parking brake release hoses. Relocate hoses to relieve downward tension on parking brake release control.

►*PARKING BRAKE DOES NOT STAY APPLIED:* Caused by release button stuck in bezel stamping. Remove vacuum control, dress down burrs or high spots on outside diameter of release button assembly and inside diameter of bezel. Apply a film of lubriplate on inside diameter of bezel before installation.

►*BRAKE DRUM PRODUCTION CHANGE & CAUTION:* Flared type brake drums used on later cars. DO NOT intermix two type drums. Flared type drum Part No. COLL-1102-B (front), COLL-1126-B (rear). First type drum Part No. has "Suffix A".
Drum Diameter - 11.062" Turned drum limit 11.122".
Wheel Cylinder Diameter - 1 3/32" (front), 15/16" (rear).
Lining - Molded type riveted to shoe.
Lining Width - 3½" (front & rear).
Clearance - *See "Bendix Automatic Adjuster Hydraulic Brakes" in Brake Section.*
Brake Pedal Freeplay: *¼-3/8".*

Power Brake Unit: Bendix Vacuum Power Unit, Hydraulic (Disc) Reaction type. Combination power unit and master cylinder mounted on engine side of firewall. *See "Bendix Power Brake Unit (Hydraulic Disc Reaction) Type" in Brake Section.*
Checking Fluid - Maintain fluid level to within ¼" of top of reservoir.
Removal of Power Unit - Disconnect pushrod from brake pedal assembly in drivers compartment, then remove master cylinder outlet fitting bolt from master cylinder. *NOTE - Not necessary to remove stop light switch.* Loosen clamp holding manifold vacuum hose to power unit and remove hose. Remove shoulder bolt retaining booster pushrod from pedal linkage. Remove nuts and lockwasher securing brake unit to firewall and remove unit.

MISC. MECHANICAL

Windshield Wipers: Cable operated vacuum type. *See "Windshield Wipers" in Miscellaneous Section.*
Heater-Air Conditioner: Own, with electrically controlled servo motors. *See "Lincoln Air Conditioning" in Miscellaneous Section.*
Power Window Regulators: Electric type with reversible motor in each window (including ventilators). Continental models have electrically controlled rear window. *See "Power Window Regulators" in Miscellaneous Section.*
Electric Door Lock: *See "Electric Door Locks" in Miscellaneous Section.*
Trunk Lid Lock: *See "Trunk Lid Locks" in Miscellaneous Section.*
Power Seat Adjusters: "4-Way" & "6-Way" electric type. Single motor with solenoid clutches. *See "Power Seat Adjusters" in Miscellaneous Section.*
Power Top Control: Electric-Hydraulic type with reversible motor, electric controlled rear window and top compartment cover. *See "Power Top Controls" in Miscellaneous Section.*

►*AIR CONDITIONED CAR SERVICE CAUTION: Before disconnecting any part of air conditioning equipment or lines for access to engine see "Air Conditioning Service Cautions" in Miscellaneous Section.*

MODEL IDENTIFICATION

SERIAL NUMBER: Stamped on patent plate attached to left front body pillar extension.

First Number–10001 up (each year). At both plants.

►*SERIAL NUMBER NOTE: Serial number (example #55LA10001M#) includes following identification data in sequence.*

Year①	Assy. Plant②	Serial No.	Eng. Type
55	LA	10001	M

①–Last two digits of model year.

②–See Assembly Plants following.

Assembly Plants–Indicated in serial number by following codes: **LA**–Los Angeles. **ME**–Metuchen. **SL**–St. Louis. **WA**–Wayne.

ENGINE IDENTIFICATION: One compression ratio used in 1954 engines (no specific identification). In 1955, two compression ratios were used (controlled by cylinder head design). Engine with 7.6-1 head is designated "ECK". Engine with 8.5-1 head is designated "ECL". 1955 Car model engine application is as follows:

1955 Car Model	Engine Designation
Custom	ECK
Monterey	ECK
Montclair	ECL

1955 Engine Identification Mark Location–"ECK" or "ECL" indicated on head between center rocker arm supports and in depression on lower surface. Effective Jan. 3, 1955 (ECK-B or C; or ECL-B), mark included between 1 & 2 and 7 & 8 exhaust ports toward top of head above spark plug shield (visible with mirror). All early engines had tan rocker arm covers. Beginning production Oct. 18, 1954, "ECL" engines have yellow covers, and "ECK" engines continue with tan covers.

TUNE-UP

COMPRESSION PRESSURE: (1954)–120 lbs. **(1955)**–130 lbs. (ECK); 135 lbs. (ECL). At cranking speed on all engines.

VACUUM READING: (1954)–19" at 450 RPM. **(1955)**–19-20" at 500 RPM.

VALVE TAPPET CLEARANCE: .019" (Intake & Exhaust), with engine hot. *This setting supersedes previous 1955 setting of .018" for all valves.* Preliminary cold setting .020" (Intake & Exhaust).

Valve Tappet Adjustment - *See "Valve System" in Mercury Special Data.*

►*1954 VALVE TAPPET ADJUSTING SCREW LOCKNUT CAUTION:* If adjusting screw is found **not** to extend up through rocker arm sufficiently to provide full thread engagement with locknut replace pushrods with Part No. EBU-6565-A and locknuts, Part No. EAA-6549-B.

MANIFOLD HEAT CONTROL: "Butterfly" type valve. Located at right end of crossover pipe at flange (single exhaust system), at flange joining right exhaust manifold to muffler inlet pipe (dual exhaust system). *CAUTION*–When installing, make sure counterweight portion is toward right front of engine.

IGNITION

FIRING ORDER: 1-5-4-8-6-3-7-2.
Cylinders–RIGHT BANK 1-2-3-4, LEFT BANK 5-6-7-8.

SPARK PLUG GAP: .029-.033" (Champion H-10). .032-.036" (Champion 870).
Spark Plugs (1954)–Champion H-10. 14mm., or equivalent. Tighten plugs to 24-30 ft. lbs.
Spark Plugs (1955)–Champion 870. 18mm., special.

►*1955 SPARK PLUG CAUTION: Plug is new type with tapered seat and does not require a sealing gasket. It is important that plugs be tightened to torque of 15-20 ft. lbs.*

COIL: Mercury No. 8BA-12029.
Ignition Current–3 amps. idling, 5 amps. stopped.

►*COIL HIGH TENSION LEAD CAUTION (Radio Equipped Cars):* Coil-to-Distributor lead is SPECIAL SUPPRESSOR LEAD (non-metalic with carbon impregnated nylon or rayon core) and the special length (approx. 14-1/2") is required for proper radio reception.

DO NOT SHORTEN LEAD OR USE ANOTHER TYPE FOR REPLACEMENT.

DISTRIBUTOR: Mercury No. FAE-12127-C (Early 1954); FDC-12127-A (Late 1954). FDK;12127-C (1955 "ECK" Engine); FEC-12127-A (1955 ECL Engine).

►*1954 FAE-12127-C DISTRIBUTOR OVER-ADVANCE WHEN ENGINE STARTED AT LOWER TEMPERATURE CORRECTION:* This condition noted when engine detonates excessively after starting under low temperature conditions. Install Pin & Post Assembly, Mercury Part No. FDC-12357-A which limits distributor advance to 15°-15½°. FAE-12127-C distributors that have been reworked in production are identified by the part number prefix "ED". *CAUTION*–When calibrating a corrected distributor refer to Automatic Advance Table for FDC-12127-A distributor. *See "Ford, Lincoln, Mercury Distributor" in Electrical Section for installation of Pin & Post Assembly.*

Condenser–Mercury No. FAB-12300-A. **Capacity** .21-.25 microfarad.
Contact Point Set–Mercury No. FAB-12171-B.
Breaker Gap–.014-.016".
Cam Angle–26-28.5°.
Breaker Arm Spring Tension–17-20 ozs.
Rotation–Counter-clockwise viewed from above.

Advance Performance–FAE-12127-C①
►With Distributor on Test Stand

Distr. Degrees	Vacuum (" of HG)	Distr. RPM
0	0	200
1½-2½	0.24	500
4¼-5¼	0.43	700
7¼-8¼	0.64	1000
11¾-12¾	1.13	1500
15¼-16½	1.52	2000

①–Distributors **without** correction for "Over-Advance". See Distributor Correction (above).

Advance Performance–FDC-12127-A②
►With Distributor on Test Stand

Distr. Degrees	Vacuum (" of HG)	Distr. RPM
0	0	200
1½-2½	0.24	500
4¼-5¼	0.43	700
7¼-8¼	0.64	1000
11¾-12¾	1.13	1500
15-15½	1.52	2000

②–Use this table for FAE-12127-C distributors that have been corrected for "Over-Advance". See Distributor Correction above.

Advance Performance–FDK-12127C, FEC-12127A
►With Distributor on Test Stand

Distr. Degrees	Vacuum (" of HG)	Distr. RPM
0	0	200
1/2–1-1/2	0.19	300
11-1/4–12-1/4	1.36	1000
12-1/2–13-3/4	1.59	1400
14-1/4–15-1/2	1.95	2000

►*DISTRIBUTOR ADVANCE NOTE:* Advance data above is for distributor on TEST STAND. On the engine, advance is dependent on the carburetor used (number and location of vacuum takeoff ports and Spark Control Valve vary).

►*DISTRIBUTOR INSTALLATION NOTE:* It may be necessary to crank engine slightly to engage oil pump hex shaft with distributor shaft. This will not disturb timing because distributor engages camshaft gear before distributor shaft starts to engage the oil pump drive.

Initial Distributor Timing: Rotate engine until timing mark on crankshaft dampener is lined up with pointer and #1 piston is in firing position. Install distributor with point just breaking and the rotor in position to fire #1 cylinder (vacuum advance connection boss should be at approximately right angles to crankshaft and pointing toward left side of engine).

IGNITION TIMING

Setting (1954)–3° BTDC (normal).
Setting (1955)–3° BTDC (Std. & Overdrive Trans.). 6° BTDC (Merc-o-Matic).

Timing Mark–On crankshaft dampener and pointer on engine front cover. *See Initial Distributor Timing under DISTRIBUTOR above.*

CARBURETOR

1954 MODELS

Mercury No. EBY-9510-A (Std. & O.D. Trans.). EBY-9510-H (Merc-o-Matic). "Centri-Quad" four barrel downdraft type with vacuum controlled secondary throttle valve and separate automatic choke.

►*MANIFOLD FUEL DISTRIBUTION: Carbur tor RIGHT barr ls f ed Cyls. 2-3-5-8, LEFT barr ls 1-4-6-7.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

►*CARBURETOR SERVICE REPLACEMENT NOTE:* Carburetor Assembly, Mercury Part No. ED-EBY-9510-K (with new type bowl cover to prevent fuel spill-over on sharp right turns) available for service replacement.

►*CARBURETOR "SPILL-OVER" ON SHARP RIGHT TURN CORRECTION:* To prevent spill over on cars with external vent, replace carburetor bowl cover assembly with Mercury No. ED-EBY-99983-C. *See "Lincoln-Mercury Centri-Quad" in Carburetor Section.*

►*EXTERNAL VENT PRODUCTION CHANGE:* An adjustable spring clip, Mercury Part No. EAD-99608-A used in production, and available for service on earlier carburetors to provide a means of closing off lower vent holes in accelerator pump rod for better starting in cold weather. *See "Lincoln-Mercury Centri-Quad" in Carburetor Section.*

►*CHOKE HEAT TUBE ASSEMBLY & INTAKE MANIFOLD PRODUCTION CHANGE:* New assemblies entered production in early June to prevent exhaust gas leakage into choke control heat tube assembly. Previous type heat tube assemblies are retained for service replacement on early cars, and later type heat tubes and manifold assemblies can be installed if desired. *See "Lincoln-Mercury Centri-Quad" in Carburetor Section.*

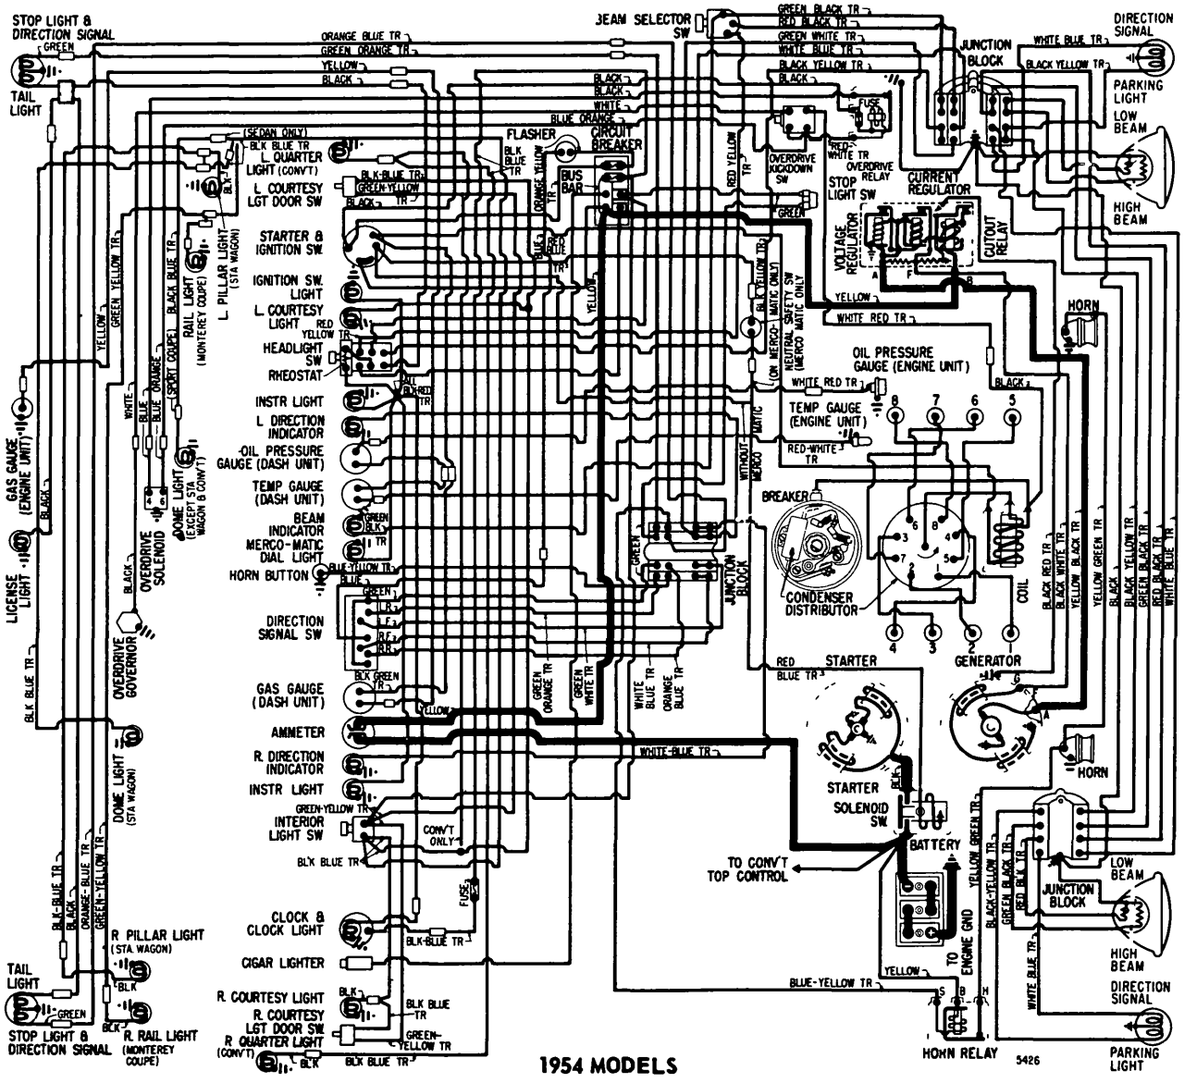
►*FAILURE TO GET FULL THROTTLE (MERC-O-MATIC CARS) CORRECTION: Remove necessary number of shims on accelerator pedal rod to obtain full throttle. NOTE—One shim must be retained to properly shim opening in toe-board.*

►*ENGINE NOT RETURNING TO IDLE SPEED (MERC-O-MATIC CARS) CORRECTION:* Check the following points and correct as necessary. (1) Ignition cable bracket assembly at left rear side of engine near engine ground strap may be interfering with "Z" bar spring support. Correct by bending bracket assembly away from "Z" bar. (2) Adjust carburetor dashpot (see Dashpot following). (3) Change location of accelerator Shaft Retracting Spring by attaching upper end of spring to ball joint and lower end of spring to lowest hole in bracket.

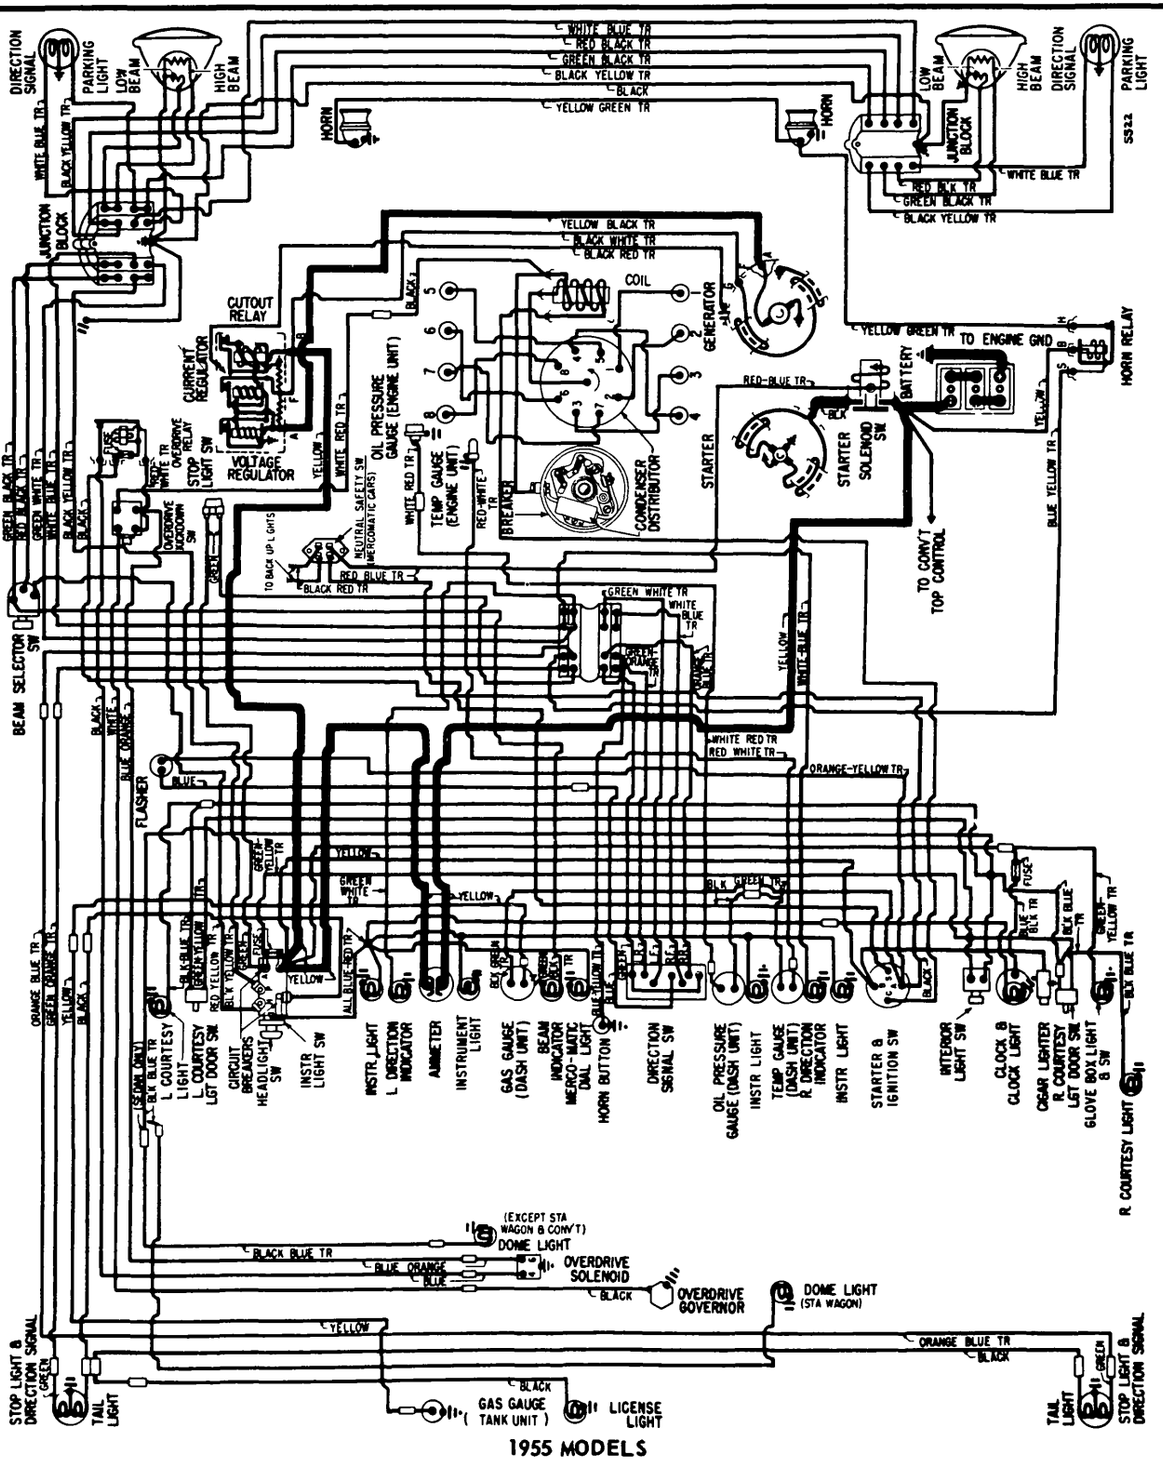
Idle Setting—Exactly 1¼ turns open (set both screws alike).

Idle Speed—With engine at normal operating temperature. 475-500 RPM (Std. & O.D. Trans.). 425-440 RPM (Merc-o-matic) with transmission selector lever in "D" (drive) position.

External Vent Seasonal Adjustment: (See "External Vent Production Change" above). On carburetors where spring clip is provided on hollow accelerator pump rod to control vent opening, adjust clip to open or close vent for best operation as follows:



Winter Operation (Temperature below 50°F)—Slide clip down on pump rod so vent is CLOSED.



Summer Operation (Temperature above 50°F)—Slide clip upward on pump rod so that full diameter of vent hole is OPEN.

Dashpot Adjustment (Merc-O-Matic Cars): Adjust engine idle speed to correct setting and turn engine off. Loosen dashpot adjusting screw locknut. Hold throttle in closed position and turn dashpot adjusting screw out (counter-clockwise) until head of adjusting screw pushes dashpot up to the end of its travel. Turn dashpot screw in 1½-2 turns to obtain .045-.064" clearance. Tighten locknut.

Throttle Linkage Adjustment (Merc-O-Matic Cars): Adjust engine idle speed to 425-440 RPM, with engine at normal operating temperature and selector lever in "Dr" position. Adjust anti-stall dashpot (see above), then turn ignition off. Disconnect carburetor-to-control shaft rod at carburetor. Remove clevis pin securing transmission control rod to transmission control shaft. Insert Gauge Pin 77230-MB through control rod and bracket (on left side of bracket). With carburetor throttle at slow idle position, adjust carburetor-to-control shaft rod so that it enters hole in carburetor throttle lever freely, and remove gauge pin. While holding carburetor throttle in slow idle position, hold transmission throttle control rod up against its stop and adjust length of rod to allow free entry of clevis pin in hole in shaft and hole in clevis at upper end of rod, **then lengthen rod by turning clevis three full turns counter-clockwise.** Install clevis pin and secure with cotter pin. Tighten clevis locknut. *NOTE—If band or clutch slippage is evident, the rod can b*

CONTINUED FROM PRECEDING PAGE

length ned an th r c mpl t turn Total l ngth ning of rod must not xceed 4 turns from STOP position

►*OTHER DATA: See "Ford, Lincoln, M rcury C ntri-Quad" in Carburetion Section*

Fuel Pump Pressure: 4-5 lbs

1955 MODELS

►*CARBURETOR PRODUCTION CHANGES: Diff r nt carburetors used as follows:*

Transmission	M rcury Carb. N .
1954 (Std & O D)	EBY-9510-A
1954 (Merc-o-matic)	EBY-9510-H
1955 Early (Std & O D)	① ECK-9510-C
1955 Late (Std & O D)	ECK-9510-G
1955 Early (Merc-o-matic)	② ECL-9510-B
1955 Early (Merc-o-matic)	③ ECK-9510-D
1955 Late (Merc-o-matic)	ECK-9510-H
1955 Late	ECK-9510-S,T

① —Use Serv Part No B5A-9510-G for replacement
② —Identical with ECK 9510-D (Part No Change only)
③ —Use Serv Part No B5A-9510-H for replacement

►*CARBURETOR INSTALLATION CAUTION (First Cars with Choke Inlet Air Tube Washer in Throttl Body). See "Lincoln & Mercury Centri-Quad" in Carburetor Section*

►*MANIFOLD FUEL DISTRIBUTION Carbur tor RIGHT barrels feed Cyl. 2-3-5-8, LEFT barrels 1-4-6-7*

►*ACCELERATOR ROD CLIP STICKING IN WIDE OPEN POSITION CORRECTION* On some early 1955 Merc-O-Matic equipped cars accelerator rod clip will not freely clear transmission splash pan when accelerator fully depressed To correct, bend top corner of splash pan forward approximately 3/4" or remove approximately 3/8" of top edge of pan Be sure to provide adequate clearance for spark plug wires running to left bank and for the lead wire to oil pressure gauge

►*AUTOMATIC CHOKE ROD ADJUSTMENT Must be correct for proper starting and automatic chok operation. See "Ford-Lincoln-Mercury Centri-Quad" Carburetor in Carburetor Section*

Idle Setting—Preliminary setting 1-1/2 turns open (set both screws alike) With engine at normal operating temperature, turn one screw at a time out until engine begins to roll from richness, then turn screw in just enough to provide smoothest idle performance

Idle Speed—(Std & O D) 475-500 RPM, (Merc-O-Matic Cars) 425-500 RPM in "Drive" range

Dashpot Adjustment (Merc-O-Matic Cars) Hold dashpot piston in to limit of travel, turn adjusting screw in or out until clearance between screw and dashpot piston rod is 045- 064'

Automatic Throttle Control Adjustm nt (Air-Condition d Cars): With engine adjusted to normal idle speed (see above) and engine at normal operating temperature

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

turn air-conditioner "ON" and place transmission selector lever in "N" (Neutral) position. Loosen adjusting screw locknut on end of operating rod and adjust knurled adjusting nut to provide an idle speed of 800 RPM. Tighten locknut. Check operation of Automatic Throttle Control to make sure idle speed returns to normal idle when transmission is shifted out of "N" (Neutral), or air-conditioner is turned off.

Throttle Linkage Adjustment (Merc-O-Matic Cars): Disconnect carburetor-to-control shaft rod at carburetor. Adjust engine idle speed to 425-450 RPM in "Dr" position, turn ignition off. Adjust dashpot (see above). Remove clevis pin that secures transmission control rod to transmission control shaft. Insert gauge pin, Tool 77230-MB, through control rod and shaft bracket. With engine at operating temperature and on slow idle, adjust carburetor-to-control shaft rod so that it enters hole in carburetor freely, **then lengthen two full turns.** Remove positioning gauge pin. While holding carburetor throttle in the slow idle position, hold control shaft-to-transmission rod up against its stop and adjust length of rod to allow free entry of clevis pin in hole in shaft of transmission control shaft. **Lengthen rod by turning clevis three complete turns in a counter-clockwise direction.** If it is not possible to obtain a forced downshift with this adjustment, control shaft-to-transmission rod assembly should be lengthened an additional 1½ turns. Install clevis pin and secure with cotter pin. Tighten clevis locknut.

►*OTHER DATA: See "Lincoln & Mercury Centri-Quad" in Carburetor Section.*

Fuel Pump Pressure: 4-5 lbs. at 900 RPM.

CARB. EQUIPMENT

►*1954 CARBURETOR AIR CLEANER INSTALLATION CAUTION:* Two types of air cleaners being used in production and should be installed as follows: "Oval" type installed with overhang portion of cleaner facing rear of engine. "Round" type installed with indentation at bottom edge and word "Front" stamped on side of cleaner facing front of engine.

►*1954 AIR CLEANER GASKET & HOLD-DOWN WING SCREW PRODUCTION CHANGE (To correct air cleaner "flexing" and wing screw breakage):* The paper gasket and wing screw have been replaced in production and for service by a neoprene gasket, Part No. 354534-S8B (oval type air cleaner). Gasket, Part No. EAD-99654-B, wing screw, Part No. 354535-S8B (round type air cleaner). When installing the neoprene gasket, apply a coat of cement to both surfaces before inserting in air cleaner.

►*FUEL GAUGE PRODUCTION CHANGE (1955) & REPLACEMENT PARTS CAUTION (1954-55):* New tank units used on late 1955 cars as listed below will minimize inaccuracies in gauge readings and can be used for service replacement on 1954 and early 1955 cars.

NOTE–Later type tank units must not be used on cars prior to 1954.

Fuel Pump: Mercury No. EBY-9350-A (1954); B5A-9350-A (1955). Fuel & vacuum.
Pressure–4-5 lbs. at 1000 RPM (1954), at 900 RPM (1955).
See "Fuel Pumps" in Carburetion Section.

Gasoline Gauges: King-Seeley Electric type.
Dash Unit–Mercury No. FDC-9280-A (1954); FDK-9280-B (1955).
Tank Unit–*See Production Change Note (above) for replacement of 1954 and early 1955 units.*

Model	First Type ①	Second Type
Exc. Sta. Wgn.	FAA-9275-A	B5A-9275-A
Station Wagon	FAA-9275-B	B5A-9275-B

①–1954 & Early 1955 Models.
See "Fuel Gauges" in Carburetion Section.

BATTERY

Mercury No. FAD-10655-C. 6 volt, 19 plate, 120 ampere hour capacity (20 hr. rate).
Location–In engine compartment on right side.
Battery Ground–Positive, to cylinder head bolt.
Engine Ground–Engine left cylinder head to dash panel.

STARTER

Mercury No. FAC-11002-G. Armature FAC-11005-B.
Drive–Mercury No. 1CM-11350-C. Bendix "Folo-Thru".
Rotation–Counter-clockwise at commutator end.
Brush Spring Tension–48-56 ozs.
Cranking Speed–115-125 RPM.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	①	6.0	70
14 ft. lbs.	Lock	3.5	700

①–With starter on engine and engine running.

Removal: Remove battery-to-starter cable. Remove attaching bolts holding steering idler arm support to frame lower support and remove idler arm assembly. Remove capscrews holding endplate to converter housing and remove starter by pulling out and down until starter drive clears housing.

Starting Switch: Mercury No. B5A-11450-A. *(NOTE–This relay is a sealed type and replaces the relay formerly used).* Mounted on frame side rail adjacent to starter and controlled by Ignition Switch and Automatic Transmission Switch.

Neutral Safety & Back-up Light Switch (1954): Mercury No. 1M-15812-B. Mounted on lower end of steering column.

Neutral Safety & Back-up Light Switch (1955): Mercury No. FDK-15825-B (Switch Terminal). Located on steering column inside passenger compartment. Supersedes previous switch location.
Adjustment–*See "Ford-matic & Merc-O-Matic" in Transmission Section.*

GENERATOR

Mercury B5C-10002-A. Armature FBC-10005-A.

Performance Data

Generator	Amperes	RPM
B5C-10002-A	40 ①	1750

①–See Regulator for maximum charging rate.
Brush Spring Tension–30 ozs.
Field Current–2.50-2.80 amps. at 6.0 volts.
Rotation–Counter-clockwise at commutator end.
Removal: Remove front splash pan to rear of front frame cross member and remove generator from below car.
Belt Adjustment: 1/2" belt deflection midway between generator and water pump pulleys with normal thumb pressure.

REGULATOR

Mercury No. FAD-10505-A.
►*SETTING NOTE:* Settings below are for regulator at NORMAL OPERATING TEMPERATURE (after 1/2 hour operation) with room temperature at 70-80°.

Cutout Relay
Cuts In–6.0-6.6 volts.

Voltage Regulator
Setting–7.4-7.8 volts.
Checking & Adjusting–*See Electrical Equip. Section.*

Current Regulator
Setting–38-42 amperes.
Checking & Adjusting–*See Electrical Equip. Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Equip. Section.*
Direction Signal: *See Electrical Equipment Section.*
Automatic Headlight Dimmer: *See "Lincoln-Mercury Headlight Control" in Electrical Equipment Section.*
Lighting Switch Removal: With control knob in the "OFF" position, press the spring release button on switch housing, turn shaft slightly and pull it out of switch.
Stop Light Switch Location: Forward end of brake master cylinder (Conventional & Power Brakes). Master cylinder located on firewall in engine compartment.

FUSES: Turn Signal–14 amps. (1954); 9 amps. (1955).
Dome & Courtesy Lights–14 amps. (1954); 9 amps. (1955).
Glove Box–14 amps.
Cigar Lighter–Special fuse in lighter base.
Clock–3 amps. (in clock lead), except 1955 Montclair.
Heater–20 amps.
Spotlight–14 amps.
Windshield Washer–14 amps. (or special 3 amps.).

CIRCUIT BREAKERS (1954): Two circuit breakers (30 amps. for headlights, 15 amps. for auxiliary) mounted on single panel located behind instrument panel.

CIRCUIT BREAKERS (1955): On headlight switch. One circuit breaker protects headlight circuit and second

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

circuit breaker protects instrument panel lights, parking lights, and stop and tail light circuits.

HORNS: Mercury No. B5A-13832-C (High Pitch), B5A-13833-C (Low Pitch). Dual horns operated by relay.

Horn Relay–Mercury No. FAA-13853-A.

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Before disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section.*

ENGINE SPECIFICATIONS: 90° V8 Valve-in head.

Engine	Bore	Stroke	Displacement
1954	3.62"	3.10"	256 cu. ins.
1955 (All)	3.75"	3.30"	292 cu. ins.

Engine	Compr.Ratio	Rated HP	Developed HP
1954	7.5-1	162.5	161 at 4400 RPM
1955 (ECK)	7.6-1	185.00	188 at 4400 RPM
1955 (ECL)	8.5-1	185.00	198 at 4400 RPM

Compression & Vacuum Reading–*See TUNE-UP.*

CYLINDER HEAD: *See "Cylinder Head & Manifold" in Mercury Special Data.*

►*1954 REPLACEMENT CYLINDER HEAD NOTE:* One head, Part No EBY-6049-D is used for replacement on on both engine banks. Install plug, EAN-6052-A in rear water passage hole if used for right bank, or adapter, B4A-10911-A for heat indicator bulb in rear passage hole if used for left bank.

►*1954 EXHAUST MANIFOLD PRODUCTION CHANGE:* Later type exhaust manifolds, Part Nos. EBY-9430-B (right hand), and EBY-9431-A (left hand), used in production and for service replacement. Bolt holes are larger and flanges are heavier to prevent breakage in service.

►*INTAKE MANIFOLD-TO-CYLINDER HEAD BOLT CAUTION:* The two bolt holes located at No. 2 and No. 10 valve push rod holes are not tapped deep enough to permit tightening the 3" bolts to correct torque specification without mutilating the two bottom threads. For this reason, only the 3/8"-16 x 2-3/4" bolts, Part No. 45528-S8, should be used at the No. 2 and No. 10 push-rod hole positions.

►*CYLINDER HEAD GASKET INSTALLATION CAUTION:* Gaskets are stamped on one side with the work "FRONT". When installing gasket on **right hand** side of cylinder block wording should be **upward** and toward front of engine. When installing on **left hand** side, wording should be **downward** and toward front of engine.

TIGHTENING TORQUES: *See "Tightening Specifications" in Mercury Special Data.*

ENGINE REMOVAL: *See "Engine" in Mercury Special Data.*

OIL PAN REMOVAL: Turn crankshaft so that rear counterweights on crankshaft are upward, remove necessary splash pans and remove oil pan.

PISTONS

Aluminum alloy, autothermic solid skirt type with three rings above pin.

Removal–Rod and piston assemblies removed from above.

Fitting New Pistons: Use 1/2" wide feeler gauge inserted between piston and cylinder wall at right angles to pin on thrust side. Feeler thickness as follows.

New Piston in New Bore–.0015" feeler. 5-10 lbs. pull.
New Piston in Used Bore–.002" feeler. 5-10 lbs. pull.
Used Piston in Used Bore–.0025" feeler. 5-10 lbs. pull.

Replacement Pistons: Standard size, .020", .030", .040" Oversize. Pistons furnished only with fitted pins.

Installing Pistons: Install piston with "F" (embossed on piston) and dimple on head toward front of engine.

PISTON PINS

Floating type with lock ring at each end.

Diameter–.9120-.9123".
Pin Fit in Piston–.0001-.0003" loose.
Pin Fit in Rod–.0001-.0003" loose.
Replacement Pins: Standard size, .001", .002" Oversize.

PISTON RINGS

1954 Models

Ring	Width	End Gap	Side Clearance
Compr #1	0930-.0935"	010-.027"	0025-.0030"
Compr #2	.0930-.0935"	.010-.027"	.0015-.0030"
Oil ①	.1860-.1865"	.010-.027"	0015-.0030"

①–Expander type ring.

1955 Models

Ring	Width	End Gap	Side Clearance
Compr. #1	.0775-.0780"	.010-.027"	.002-.0035"
Compr #2	.0775-.0780"	.010-.027"	.002-.0035"
Oil	.1860-.1865"	.010-.027"	②

②–Side sealing type ring, and side clearance is not evident.

Replacement Rings: Standard size, .020", .030", .040" Oversize.

►*1955 OIL RING INSTALLATION NOTE:* Install spring spacer in oil ring groove directly above pin hole. Butt ends together and hold in this position while installing top steel rail and bottom steel rail. Make sure top ring ends are at least 1" to **left** of spring spacer gap, and bottom rail ends at least 1" to **right.**

CONNECTING RODS

►*1955 CONNECTING ROD & BEARING PRODUCTION CHANGE:* Squirt hole in crankshaft end of rod has been moved to opposite side of rod. New service bearings have two holes drilled in them (may be used with either old or new rod hole location) *CAUTION–Bearings with one hole in them should not be used to service 1955 type rods.*

Length–6.320-6.324". **Weight**–24.05 ozs.
Crankpin Journal Diameter–2.1880-2.1888".
Lower Bearing–Steel backed, copper lead alloy lined type. Upper and lower halves interchangeable.
Clearance–.0005-.0025" (1954); .0008-.0027" (1955).
Side Clearance–.006-.016" (two rods)

Replacement Bearings: Standard (two sizes marked **red** and **blue** for selective fitting) and .010", .020", .030" Undersize.

Installing Rods: Oil squirt hole in rod **away from** camshaft side of bore on all rods. Numbers on rods and bearing caps should be together and installed in same numbered cylinder.

CRANKSHAFT

Journal Diameters–2.4980-2.4988".
Maximum Wear Limits–.0005". **Taper**–.0005".
Bearings–Steel backed copper lead alloy lined.

Replacement Bearings: Standard size (2 sizes marked **red** and **blue** for selective fitting) and .010", .020", .030" Undersize.

End Thrust: Taken by #3 main bearing. Replace bearing if endplay excessive.

Thrust Bearing Alignment–*See "Crankshaft & Main Bearings" in Mercury Special Data.*
Endplay–.002-.006".

Crankshaft Front Oil Seal Installation: *See "Engine Front Cover" in Mercury Special Data.*

Crankshaft Rear Oil Seal Installation: *See "Crankshaft & Main Bearings" in Mercury Special Data.*

►*1954 CRANKSHAFT REAR MAIN BEARING OIL SEAL PRODUCTION CHANGE:* New type seal and oil seal retainer used in later production and is not interchangeable with early type seal. *See "Crankshaft & Main Bearings" in Mercury Special Data.*

CAMSHAFT

►*CAMSHAFT IDENTIFICATION NOTE: Camshafts used in 1954-55 production and for service replacement are as follows:*

1954 (All)–B4T-6250-A (ECE-6250-A). "ECE" cast between No. 1 cam bearing and No. cam lobe.
1955 (Early)–B5A-6250-A (ECB-6250-A). "ECB" cast between No. 1 cam bearing and No. 1 cam lobe
1955 (Late)–ECK-6250-A. "ECK" cast between No. 1 cam bearing and No. 1 cam lobe. Also, a letter "C" with one dimple on each side is cast between No. 15 & 16 cam lobes.

►*1955 SERVICE REPLACEMENT CAMSHAFT CHANGE (To provide better wear characteristics):* Type of material has been changed in later type camshaft, Part No. ECK-6250-A. Other dimensions and specifications remain the same.

Journal Diameter–1.9255-1.9265".
Clearance–.001-.003".

End Thrust: Taken by thrust plate on forward end block (between camshaft sprocket and shoulder on block).
Endplay–.003-.007".

Replacement Camshaft Bearings: Finished bearings furnished Standard size, .015" Undersize. *CAUTION–Oil holes in bearings must be lined up correctly.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Camshaft Rem val & Installati n: *S "Camshaft & B arings" in M rcury Sp cial Data.*

Timing Chain: Side-guide type. Length 56 links.

►*REPLACEMENT NOTE.* Replace timing chain and sprockets when deflection on shaft side exceeds 1/2" (take up all slack on driving side, measure slack on opposite side). Remove and install chain "endless" as a unit with both sprockets.

Camshaft S tting: Timing marks on camshaft and crankshaft sprockets adjacent to timing marks on timing chain, when installed toward left side of engine as viewed from drivers seat.

Timing Chain C v r S al Installation (Crankshaft Front Seal): *S e "Engin Fr nt Cover" in Mercury Special Data.*

VALVES

►*EXHAUST VALVE STEM DIAMETER CHANGE (Production & S rvic Replacement Valves):* Stem diam ter d creased .0005" for greater stem clearance in guide S e "Valve System" in Mercury Special Data

►*1954 VALVE TAPPET ADJUSTING SCREW LOCKNUT CAUTION:* If adjusting screw is found **not** to extend up through rocker arm sufficiently to provide full thread engagement with locknut, replace pushrods with Part No. EBU-9565-A and locknuts, Part No. EAA-6549-B.

Tappet Clearanc : .019" (Intake & Exhaust), with engine at normal operating temperature.

Valv Tapp t Adjustm nt - *See "Valve System" in Mercury Special Data*

Valv	H ad Diam.	①② Stem Diam.	Length
Intake	1.775-1.785"	.3415-.3425"	5.02"
Exhaust	1 505-1.515"	.3405-.3415"	5.02"

Valv	Seat Angl	Lift	Stem Clearance
Intake	45°	③	⑤.001- 002"
Exhaust	45°	④	⑥.002-.003"

①—Exhaust valve stems (service replacement) decreased .0005" in diameter. See Exhaust Valve Change above.

②—Valves furnished with .003", .015", .030" oversize stems for service replacement.

③—.350" (1954). .377" (1955).

④—.350" (1954). .375" (1955).

⑤—.004" service maximum. ⑥—.004" service maximum

Valv Seat Width—(1954) .060-.070" (Intake), .070-.080" (Exhaust). **(1955)** .070-.090" (Intake), .060-.080" (Exhaust).

►*ROTATABLE VALVE NOTE All valves are rotatable typ . Se "Valv Syst m" in Mercury Special Data.*

Valv St m Oil Seals—"Umbrella" type oil seals used on all valves. Seals are installed with cupped side down on valve stem at guide boss on cylinder head. *Install new seals whenever valves removed or when seals become loose on valve stems.*

►*1955 VALVE STEM OIL SEAL PRODUCTION CHANGE & SERVICE REPLACEMENT NOTE:* Valve Stem Oil Seal, Part No. B5A-6571-A, with a .100" longer skirt than used previously, has been released for production and service replacement.

►*1954 VALVE STEM OIL SEAL REPLACEMENT NOTE:* Valve Stem Oil Seal, Part No. B5A-6571-A must be used when servicing 1954 models having service cylinder head, Part No. B4A-6049-F.

Valve Springs: Free Length—2.12".

Valve Spring Specifications

	Pressure	Length
Valve Closed	54-62 lbs.	1.821"
Valve Open	124-140 lbs.	1.505"

Valve Guides: Integral with cylinder head. When stem-to-guide clearance exceeds maximum (.004" Intake, .005" Exhaust), ream guides and install oversize valves. *See "Valve System" in Mercury Special Data.*

Valve Lifters: Mushroom type. Removed from below with camshaft removed.

Rocker Arm Assembly *See "Valve System" in Mercury Special Data.*

►*ROCKER ARM COVER INSTALLATION CAUTION* Covers manufactured prior to February 1, 1955 were manufactured without an inner retainer for holding cover gasket in place When replacing gasket it will be necessary to seat gasket firmly against outside flange and secure in place with fast drying cement

►*1954 ROCKER ARM SHAFT OIL OUTLET TUBE NOTE:* A new oil outlet tube, Part No. B4A-6588-B has been released for service. The new tube directs overflow oil from rocker arm shaft to No 1 pushrod hole in right cylinder head, and to No. 16 hole in left cylinder head.

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

►*VALVE TIMING NOTE: The following valve opening and closing points are with a camlift as indicated.*

1954 Models

Intake Valves—Open 8° ① BTDC. Close 44° ② ALDC.
Exhaust Valves—Open 47° ① BLDC Close 5°② ATDC.

1955 Models

Intake Valves—Open 12° ① BTDC Close 54° ② ALDC.
Exhaust Valves—Open 58° ③ BLDC Close 8° ④ ATDC.
Camlift—①—.016". ②—.019". ③—.015" ④—.017"

Valve Timing Check—Slide rocker arm to one side and install a dial indicator so reading can be taken from end of v. lve push rod (use an indicator that will read .300" or more). Install a quadrant (reading in degrees) on crankshaft pulley to check amount of crankshaft rotation. Rotate engine slowly until dial indicator reading for valve being checked is same as indicated in table above. Amount of crankshaft rotation should be the same as shown in valve timing table. As an example, check intake valve opening by rotating engine until dial indicator reads .026" cam lift. Quadrant on crankshaft should read 8° (1954), 12° (1955). Continue to rotate engine to check valve closing in degrees. Dial indicator should read .019", and quadrant 44° (1954), 54° (1955)

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engin Lubricati n" und r OILING SYSTEM in Mercury Special Data*

►*1954-55 HIGH ENGINE OIL LEVEL CORRECTION:* Install Oil Level indicator (bayonet), Part No B5A-6750-A The new oil level indicator has the markings raised 5/32" to correct complaints of high engine oil level readings.

Crankcase Capacity: 5 qts. (refill). 6 qts. (when filter changed).

Normal Oil Pressure: 45-55 lbs , at 30-40 MPH
Pressure Regulator Valve—In pump body, not adjustable.
Oil Pressure Indicator—King-Seeley Electric.

Dash Unit (1954)—Mercury No. FDC-9273-A.
Dash Unit (1955)—Mercury No. FDK-9273-B
Engine Unit (1954-55)—Mercury No. 41A-9278 (Use with FAA-13875-A Clip).
See "Oil Pressure Gauges" in Miscellaneous Section.

Oil Pump: Gear type pump located on left side of engine crankcase and driven by distributor drive gear.

Pump Overhaul—*See "Oiling System" in Mercury Special Data.*

Oil Filter. Full-flow type with pressure relief valve in center filler bolt. Replace filter element at 4000-5000 miles or when oil becomes dirty or polluted. *See "Oiling System" in Mercury Special Data*

Replacement Filter Element—Mercury No. HCK-6731-A (Kit includes new gaskets).

►*CAUTION Special "full-flow" filter element must be used for service replacement (use of by-pass type filter element will restrict engine oil flow and result in insufficient engine lubrication).*

Crankcase Ventilation Filter in oil filler cap (inlet) and road draft tube. Clean and oil every 2,000 miles or more often in dusty areas

COOLING

Water Capacity: 19 qts. (without heater) 20 qts. (with heater).

Pressure Valve: Mercury No. LA-8100-A3 (14 lbs.), LA-8100-A4 (13 lbs.). Radiator filler cap, stamped with figure "14" or "13".

Thermostat: Mercury No B4A-8575-A (157-162°F), B4A-8575-B (177-182°F —used with permanent anti-freeze). Mounted in water outlet housing at front of intake manifold

►*THERMOSTAT INSTALLATION NOTE· When installing the later type thermostat, be sure that the word "Top" is in the uppermost position to avoid foreign material settling under valve.*

Water Pump. Packless, sealed ball bearing type.
See "Water Pumps" in Mercury Special Data.

Temperature Gauge: King-Seeley Electric.

Dash Unit (1954)—Mercury No. FDC-10883-A.
Dash Unit (1955)—Mercury No. FDK-10883-B.
Engine Unit (1954-55)—Mercury No. 1A-10884-A.
See "T mperatur Gaug s" in Misc llaneous S cti n.

CONTINUED FROM PRECEDING PAGE

CLUTCH

Borg & Beck Model 10A6. Mercury No. MB-7563-A (1954). MC-7563-B (1955).
See "Borg & Beck" in Clutch Section.
Clutch Disc No.—Mercury No. MB-7550-B (1954). MC-7550-A (1955).

►*1955 CLUTCH RELEASE RETRACTING SPRING & BRACKET PRODUCTION CHANGE:* **Retracting spring bracket has been eliminated. A longer spring, Part No. MB-7523-B replaces the spring formerly used (later spring is 1" longer). Use bolt, Part No. 354390-S8 when using the later type spring.**

Pedal Adjustment: If pedal free travle is not 1 to 1-1/4", loosen clutch pedal release rod locknut (lower end) and turn adjusting nut for correct free travel, tighten locknut.

R moval: Remove transmission (see Transmission Removal below), and disengage clutch pedal retracting spring and release rod from clutch release lever. Disengage equalizer bar tension spring and remove two capscrews retaining equalizer bracket assembly to flywheel housing. Remove flywheel housing. Mark position of flywheel and pressure plate so parts may be installed in original position. Compress clutch pressure plate assembly with Tool 17563. Remove capscrews and remove pressure plate.

SYNCHRO-MESH TRANSMISSION

Own. Helical gear, constant mesh synchro-mesh (second & high), sliding gear (low & reverse).
See "Mercury Synchro-mesh" in Transmission Section.

Transmission Control: *See "Transmission Controls" in Transmission Section.*

Removal: If equipped with overdrive, remove kickdown switch retainer nut and push switch through floor. Raise car and drain transmission. On overdrive cars remove governor, solenoid, and control cable. Disconnect speedometer cable and remove speedometer drive gear. Remove transmission shift rods at transmission. Remove bolts retaining rear universal joint to companion flange and remove drive shaft. Support rear of engine and remove the detachable cross-member of the frame. Remove two top capscrews retaining transmission to flywheel housing and install a couple of studs to act as guide pins. Remove lower capscrews and slide transmission to rear as far as possible and lower front end. Remove from below car.

OVERDRIVE

Warner Model AS1-R10F. Solenoid operated type, with governor control and throttle operated kickdown. Lockout Switch not used on this model.
See "Warner R10 Overdrive" in Transmission Section.

►*1955 OVERDRIVE SOLENOID FAILURE CORRECTION: If n cessary to r plac original sol noid, additional wires r quired. S "Warner R10 Ov rdriv " in Transmissi n S ction.*

R m val: Same as for Synchro-mesh Transmission (above) after disconnecting control cable and wiring.

MERC-O-MATIC TRANSMISSION

Torque converter and three speed automatic transmission with hydraulic control and mechanical parking lock.
See "Fordomatic & Mercomatic" in Transmission Section.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Fordomatic & Mercomatic" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Fordomatic & Mercomatic" in Transmission Section.*

Lubrication—Check transmission oil level every 1000 miles and maintain oil level at "Full" mark on dipstick. Drain & refill every 15,000 miles. **Use only Automatic Transmission Fluid Type A.**

Checking Fluid Level—Apply parking brakes, place transmission selector lever in "N" (Neutral) position, run engine at idle speed for approximately four minutes. With parking brake applied and engine running at slow idle, move selector lever to "P" (Parking) position. When engine and transmission have reached normal operating temperature, move selector lever through all positions to assure fluid distribution throughout transmission. Return selector lever to "P" position. Raise hood, clean dirt away from fluid level cap, remove indicator, wipe clean and insert in tube (make sure indicator is pushed all the way down). Remove indicator and read level. Add sufficient fluid to raise level to "Full" mark on indicator. Replace indicator.

THROTTLE LINKAGE ADJUSTMENT: *See CARBURETOR above.*

►*OTHER MERCOMATIC SERVICE DATA: See "Fordomatic & Mercomatic" in Transmission Section.*

UNIVERSALS

Mechanics. Roller bearing type.

REAR AXLE

1954 (EXC. STATION WAGON)

►***REAR AXLE "CLINK" CORRECTION: See "Ford & Mercury (Separate Carrier)" in Rear Axle Section.***

►*INTERFERENCE BETWEEN REAR WHEEL & FENDER CORRECTION:* If difficulty is encountered in removing rear wheel, with tire inflated, the cause may be due to incorrect combination of rear springs and shock absorbers. See "Shock Absorbers" below.
Own. Separate Carrier, semi-floating hypoid, with Hotchkiss drive.

NOTE: Different type rear axle used on Station Wagon. See "Ford & Mercury (Separate Carrier)" in Rear Axle Section.

Ratios
Standard Transmissi n—3.90-1 (39-10) Std. ①.
Ov rdrive Transmission—4.10-1 (41-10) Std. ②.
Mercomatic Transmission—3.54-1 (39-11) Std. ③.
①—4.10-1 (41-10) Optional.
②—3.90-1 (39-10) Optional.
③—3.31-1 (43-13) Optional.

►*AXLE CARRIER & GEAR RATIO IDENTIFICATION: Carrier housing stamped with ring gear & pinion gear ratio (10/39 for 3.90-1 ratio, etc.).*
Backlash—.003-.008".

Axle Shaft Removal: Remove wheel and brake drum. Remove axle shaft retainer locking type nuts (work through opening in axle shaft flange). Use Puller and pull shaft (do not disturb brake backing plate or damage wheel bearing oil seal). Replace one nut to secure brake backing plate.

Carrier Assembly Removal: Disconnect rear universal. Remove axle shaft (see above). Remove carrier from housing.

Wheel Bearing Adjustment: None required.

1954 STATION WAGON
1955 ALL MODELS

Own. Integral Carrier. Semi-floating hypoid with Hotchkiss drive.

Model	Rati
1954 Sta. Wgn. (Conventional)	①3.91-1
1954 Sta. Wgn. (Overdrive)	②4.09-1
1954 Sta. Wgn. (Merc-O-Matic)	③3.54-1
1955 Exc. Sta. Wgn. (Conventional)	①3.73-1
1955 Exc. Sta. Wgn. (Overdrive)	④4.09-1
1955 Exc. Sta. Wgn. (Merc-O-Matic)	⑤3.15-1
1955 Sta. Wgn. (Exc. Merc-O-Matic)	④4.09-1
1955 Sta. Wgn. (Merc-O-Matic)	⑥3.54-1

①—4.09-1 Optl. ②—3.91-1 Optl. ③—3.31-1 Optl. ④—3.73-1 Optl. ⑤—3.54-1 Optl. ⑥—3.15-1 Optl.

Axle Shaft Removal: Remove wheel and brake drum. Remove axle shaft retainer locking type nuts (work through opening in axle shaft flange). Use Puller and pull shaft (do not disturb brake backing plate or damage wheel bearing oil seal). Replace one nut to secure brake backing plate.

Rear Axle Assembly Removal: Raise rear end of car and disconnect rear universal. Remove axle shafts. Disconnect brake lines at "T" on left side of axle housing. Disconnect hand brake cable, shock absorbers, spring U-bolts and shackles. Remove axle housing assembly from car.

SHOCK ABSORBERS

►*INTERFERENCE BETWEEN REAR WHEEL & FENDER CORRECTION: If difficulty is encountered in removing rear wheel, with tire inflated, th cause may be due to incorrect combination of rear springs and shock absorbers. See table below for correct application.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Shock Absorbers: Direct acting, non-adjustable. Service by replacement.

1954 Front Shock Absorbers

Model	Std.	Hvy. Duty
All (Exc. Sta. Wgn.)	MB-18045-B	MB-18045-K
Station Wagon	MB-18045-D	MB-18045-K

1955 Front Shock Absorbers

Model	Std ①	Hvy. Duty
All (Exc. Sta. Wgn.)	MC-18045-F	MC-18045-B
Station Wagon	MC-18045-E	MC-18045-C

①—Use MC-18045-G with Air Conditioning.

►*REAR SHOCK ABSORBER APPLICATION CAUTION: To avoid interference between rear wheels and fenders, springs and shock absorbers must be used in following combinations.*

1954 Rear Shock Absorbers & Springs

Model	①Shock No.	②Spring No.
All (Exc. Following)	MB-18080-A,B,E	MA-5560-F③
Convertible	MB-18080-A,B,E	MA-5560-A④
Station Wagon	MB-18080-C,D,F	MA-5560-B⑤

①—Use MB-18080-G,H (Hvy Duty), when heavy duty springs used.
②—Spring number stamped on lower spring leaf.
③—Heavy Duty Spring No. MA-5560-H
④—Heavy Duty Spring No. MA-5560-J
⑤—No Heavy Duty Spring supplied.

1955 Rear Shock Absorbers & Springs

Model	①②Shock No.	④Spring No.
All (Exc. Following)	MC-18080-F	MC-5560-G⑤
Convertible	MC-18080-F	MC-5560-F⑥
Station Wagon	MC-18080-E③	MC-5560-J

①—Use MC-18080-G (Exc. Sta. Wgn.) when heavy duty springs used
②—Use MC-18080-H on Air Conditioned Cars
③—Use MC-18080-C for heavy duty use. Heavy duty springs not furnished.
④—Spring number stamped on lower leaf.
⑤—Heavy Duty Spring No. MC-5560-H,K.
⑥—Heavy Duty Spring No. MC-5560-L.

FRONT SUSPENSION

Independent. "Ball-Joint" suspension with direct acting shock absorbers mounted within front coil springs.

See "Lincoln, Mercury, Ford (Ball-Joint)" in Front Suspension Section.

Kingpin Inclination—7° with Pos. 3/4° camber.
Caster—0° to Neg. 1-1/2°. Maximum variation between wheels is 1/2°.
Camber—0° to Pos. 3/4°. Maximum variation between wheels is 1/4°.
Toe-In—3/32" to 5/32".

Toe-Out on Turns—With outer wheel at 20°, inner wheel should be 24° (1954), 24°9' (1955).

STEERING

Manual Gear (Gemmer 305 Design). Worm & Roller type. *See "Gemmer Worm & Roller (Type 305)" in Steering Section.*

Power Steering Ford-Mercury Linkage type. Used in conjunction with standard type steering gear. *See "Ford & Mercury Power Unit" in Steering Section.*

Steering Linkage. *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal. *See "Gemmer Worm & Roller (Type 305)" in Steering Section.*

Steering Gear Removal. *See "Gemmer Worm & Roller (Type 305)" in Steering Section.*

BRAKES

►*1955 FRONT BRAKE PRODUCTION CHANGE: Front brake eccentric adjustment has been eliminated on Late 1955 cars.*

Bendix Hydraulic (Single Anchor). With Eccentric (Front Wheels—See 1955 Production Change above). **Without Eccentric (Rear Wheels).** Parking lever applies rear wheel service brakes
See "Ford-Bendix (Ford, Lincoln, Mercury)" in Brake Section.
Drums—11"
Wheel Cylinder Diameter—1 1/8" (Front), 15/16" (Rear).
Lining—Molded type riveted to shoe.
Width (Front Wheels)—2" (1954); 2½" (1955). **Rear Wheels**—1¾" (1954); 2" (1955).
Length—9.28" (All Primary Shoes), 11.94" (All Secdary Shoes).
Clearance—.010" at each end of both primary and secondary shoes (.003" maximum variation).

►*1955 BRAKE ADJUSTMENT CHANGE:* Adjustment procedure on 1955 Models are affected in that eccentric cam is now spring loaded which eliminates need for locknut to retain it in position. See Production Change above also.

Braking Power—62% (Front Whls.), 38% (Rear Whls.).

Brake Pedal Free Play Adjustment: 1/4—7/16". If play not correct after brake adjustment, loosen lock nut on the eccentric bolt attaching brake pedal to master cylinder pushrod, rotate eccentric bolt for desired clearance.

Standard Master Cylinder: Located on engine side of firewall.
Checking Fluid—Maintain fluid level to within ¼" of top of reservoir.
Removal—Disconnect brake line from master cylinder and depress brake pedal a few times to force out fluid. Disconnect wires leading to stop light switch, and remove eccentric bolt attaching master cylinder pushrod to brake pedal. Remove capscrews and lock washers attaching master cylinder to firewall.

Power Brakes: Bendix Vacuum Power Unit (combination vacuum power unit and master cylinder). Unit mounted on engine side of firewall and replaces regular master cylinder.
See "Bendix Power Unit" in Brake Section.

Checking Fluid Level—Same as for regular master cylinder.

Removal of Power Unit—Disconnect valve pushrod from brake pedal assembly in drivers compartment. Remove master cylinder outlet fitting bolt from master cylinder. (*NOTE*—It is not necessary to remove stop light switch, wires or hose assembly from outlet fitting. Do not disturb outlet fitting in master cylinder). Loosen clamp securing manifold vacuum hose to check valve on power unit. Remove hose from valve. Loosen clamp securing vacuum reserve tank hose to fitting on check valve. Remove four capscrews securing power brake assembly to bracket on dash panel and remove power brake assembly.

MISC. MECHANICAL

Air Conditioning: Own. *See "Mercury Air-Conditioning" in Miscellaneous Section.*

Windshield Wipers: Vacuum, Link & Crank Arm type. *See "Windshield Wipers" in Miscellaneous Section.*

Power Window Regulators: Electric. Reversible motor in each window. Controlled by door switch and master control switch. *See "Window Regulators" in Miscellaneous Section.*

Power Top Control: Reversible type motor (mounted under seat) drives two screw type jacks (one on each side) through flexible cables. Controlled by relay and two-way switch. *See "Power Top Controls" in Miscellaneous Section.*

Power Seat Adjusters: Electric type. Individual motor for vertical and horizontal adjustment. *See "Power Seat Adjusters" in Miscellaneous Section.*

►*SPECIAL "M 260 ENGINE" NOTE* This engine is optional equipment and has the following principal components which are special Cylinder Heads Intake Manifold and Carburetors (two 4 barrel) Camshaft Valve Train (Lifters Pushrods Springs) Fuel Pump Distributor Spark Plugs and other small parts All parts required for conversion of standard engine to this "M-260" are furnished in Optl Engine Kit No MGK-66005 AA

►*1956 AIR CONDITIONED CAR SERVICE CAUTION* *Use extreme care when disconnecting any part of air conditioning equipment or lines See "Air Conditioning Service Cautions" in Miscellaneous Section.*

MODEL IDENTIFICATION

SERIAL NUMBER Stamped on patent plate attached to left front body pillar extension

First Number—10001 Up

►*SERIAL NUMBER NOTE* *Serial number (example #56ME10001M#) includes following identification data in sequence*

Year	Assembly Plant	Serial No.	Eng. Type
56	See Below	10001	M

Assembly Plants— Indicated in serial number by the following codes **LA**—Los Angeles. **ME**—Metuchen. **SL**—St Louis. **WA**—Wayne.

ENGINE IDENTIFICATION: Five different engines used Engines can be identified by cylinder head identification letters (stamped or cast on outer side of cylinder head between spark plugs and exhaust ports) and color of component parts as follows

Engine HP & Compr. Ratio	Cyl. Head Ident.	Carb. Type	Air Clnr. Color	Valve Cover
210 HP(8 0-1)	ECZ-A	Holley	Red	Red
215 HP(8 4-1)	ECZ-B	Holley	Red	Red
225 HP(9 0-1)	ECZ-C	①	Blue	Blue
235 HP(9.0-1)②	ECZ-C	①	Blue	Silver
260 HP(9 75-1)		Holley (Two)		

①—Holley or Carter Carburetor.

②—235 HP replaced 225 HP engine beginning engine date code 162V as a result of camshaft production change. *See "Camshaft Production Change" under CAMSHAFT below.*

TUNE-UP

COMPRESSION PRESSURE. (8 0-1 Eng.) 155 lbs.,(8 4-1 Eng.) 160 lbs., (9 0-1 Eng.) 165 lbs. plus or minus 10 lbs at cranking speed.

VACUUM READING: 19-20" at 475-500 RPM in neutral.

TAPPET CLEARANCE: (Exc. M-260) .019" (Final HOT), Intake & Exhaust. (M-260). 018" (Final HOT), Intake & Exhaust.

►*TAPPET CLEARANCE ADJUSTING SCREW NOTE* *"Self-locking" screws used on later cars. See "Valve System" in Mercury Special Data.*

Valve Tappet Adjustment - *See 'Valve System in Mercury Special Data*

MANIFOLD HEAT CONTROL· Butterfly type valve mounted between right hand manifold and exhaust pipe (Single & Dual exhaust systems) When installing, make certain counterweight is toward right front

►*DUAL EXHAUST NOTE:* When valve closed, all exhaust gases are discharged through left hand exhaust pipe

IGNITION

►*IGNITION FAILURE CORRECTION* *Intermittent or* complete ignition failure can result if distributor primary wire is improperly welded to terminal lugs (insulated wire leads from terminal on distributor housing to breaker point terminal). In some cases terminal wires are crimped to wire insulation but not at all or partially welded to wire

FIRING ORDER 1-5-4-8-6-3-7-2

Cylinders—RIGHT BANK 1 2-3-4, LEFT BANK 5-6-7-8

SPARK PLUG GAP 032- 036 ' (exc M-260) 023- 028 ' (M-260 Engine)

Spark Plug—Champion 870 18mm

►*SPARK PLUG CAUTION* Spark plug has tapered seat and does not require a sealing gasket It is important that plugs be tightened within limits of 15 18 ft lbs

►*SPARK PLUG MISFIRE CORRECTION* If misfire occurs at either No 8 or No. 6 cylinders, interchange position of No 6 and No. 5 wires in all insulator blocks.

COIL **Mercury No. B6A-12029-B.** *12 Volt.*

Ignition Current—2 5 amps idling, 4 5 amps stopped

Resistor—Mercury No. B6A-12250-B On bracket attached to top of coil

►*COIL RESISTOR NOTE* Resistor is connected in lead from ignition switch to coil Resistor is by-passed during cranking by a lead from starter solenoid to battery terminal of coil

DISTRIBUTOR **Mercury No B6A-12127-D (exc M-260), FDS-12127-E (M-260 Engine)** *12 Volt* New double diaphragm pressure type with separate vacuum lines to manifold and carburetor

►*SHORTING OF DISTRIBUTOR TERMINAL PRIMARY WIRE ASSEMBLY CORRECTION* Screws which secure identification plate to housing extend inside housing and penetrate primary wire insulation, grounding wire Sharp points should be ground or filed off, replace damaged wire

Condenser—Mercury No FAB-12300-A **Capacity** 21-25 microfarad

Contact Point Set—Mercury No FAB-12171-B

Breaker Gap— 014 016

Cam Angle—26-28 5°

Breaker Arm Spring Tension—17 20 ozs

Rotation—Counter-clockwise viewed from above

Advance Performance—B6A-12127-D

►With Distributor on Test Stand

Distr Degrees	Vacuum (of HG)	Distr RPM
Plus or Minus ½	16	300
0-1	29	400
5½-6½	88	800
8½-9½	1 27	1200
11-12	1 73	1600
13-14¼	2 19	2000

►*DISTRIBUTOR INSTALLATION NOTE* It may be necessary to crank engine slightly if distributor is not seated properly in cylinder block Crank engine, while holding distributor down, until intermediate shaft is engaged and distributor drops into place

Initial Distributor Timing· Remove No 1 spark plug Hold thumb over spark plug hole until piston starts up on compression Slowly "bump" engine over with starter until timing mark is aligned with pointer Find No 1 spark plug socket in distributor cap and fit fit distributor cap to distributor housing Mark distributor housing to indicate No 1 spark plug wire position Position rotor approximately 20° counter-clockwise from mark made on distributor housing Engage distributor drive gear and install distributor in engine

IGNITION TIMING

Engine	①Std Setting
With Synchro-mesh or Overdrive	3° BTDC
With Merco-Matic Trans	6° BTDC
"M 260" Engine	12° BTDC

①—With engine idling at 475 RPM and the PRIMARY (inner diaphragm) vacuum line disconnected. *See Initial Distributor Timing abov NOTE*—Maximum recommended initial timing for Standard and Overdrive Transmissions is 6° BTDC

Timing Mark—Crankshaft pulley is marked at TDC, 10° BTDC, and 20° BTDC, with marks at 2° increments between Pointer should line up with third mark (6°) on vehicles equipped with automatic transmissions, and half-way between first and second marks (3°) on vehicles equipped with standard transmissions

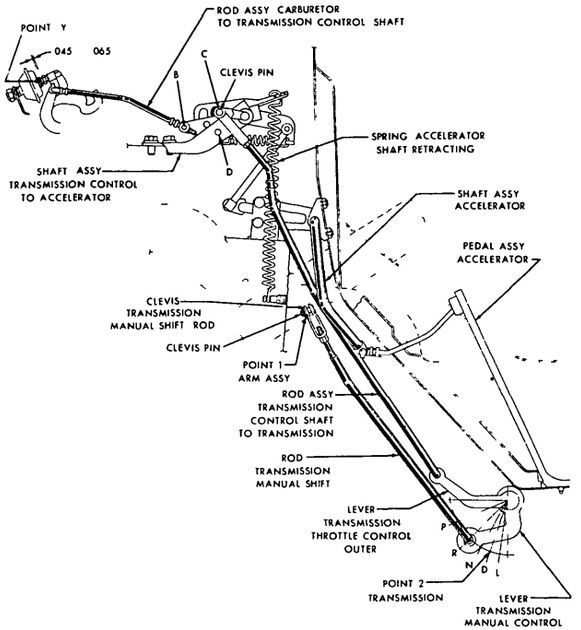
CARBURETOR

►*CARBURETOR APPLICATION NOTE* *All carburetors are 4-barrel type. Holley used on 210 & 215 HP Engines, Holley or Carter WCFB used on 225 & 235 HP Engines. TWO Holley carburetors used on special M-260 engine.*

►*HOLLEY CARBURETOR PRODUCTION CHANGES AND RECOMMENDED CHANGES FOR IMPROVED CHOKE OPERATION & HARD STARTING CORRECTION* *See "Holley (Ford, Lincoln, M rcury) 4-Barrel Centri-Quad" in Carburetion Section*

►*AUTOMATIC CHOKE STICKING (Hard Starting, Stalling, Poor Gas Mileage, or Backfiring when cold)* *May be caused by breakage of Fresh Air Heat Tube in manifold. For installation of tube, see 'Ford, Lincoln, Mercury 4-Barrel Centri-quad' in Carburetion Section*

►*IMPROPER UNLOADER ACTION (MERCOMATIC CARS)* May be caused by transmission control-to-accelerator bellcrank-to-lever spring of less than required load resulting in choke valve not opening sufficiently to unload carburetor. Replace spring with spring Part No. MC-7345B (painted Yellow) *NOTE* - This condition may also cause transmission to downshift prior to reaching detent position during heavy throttle operation

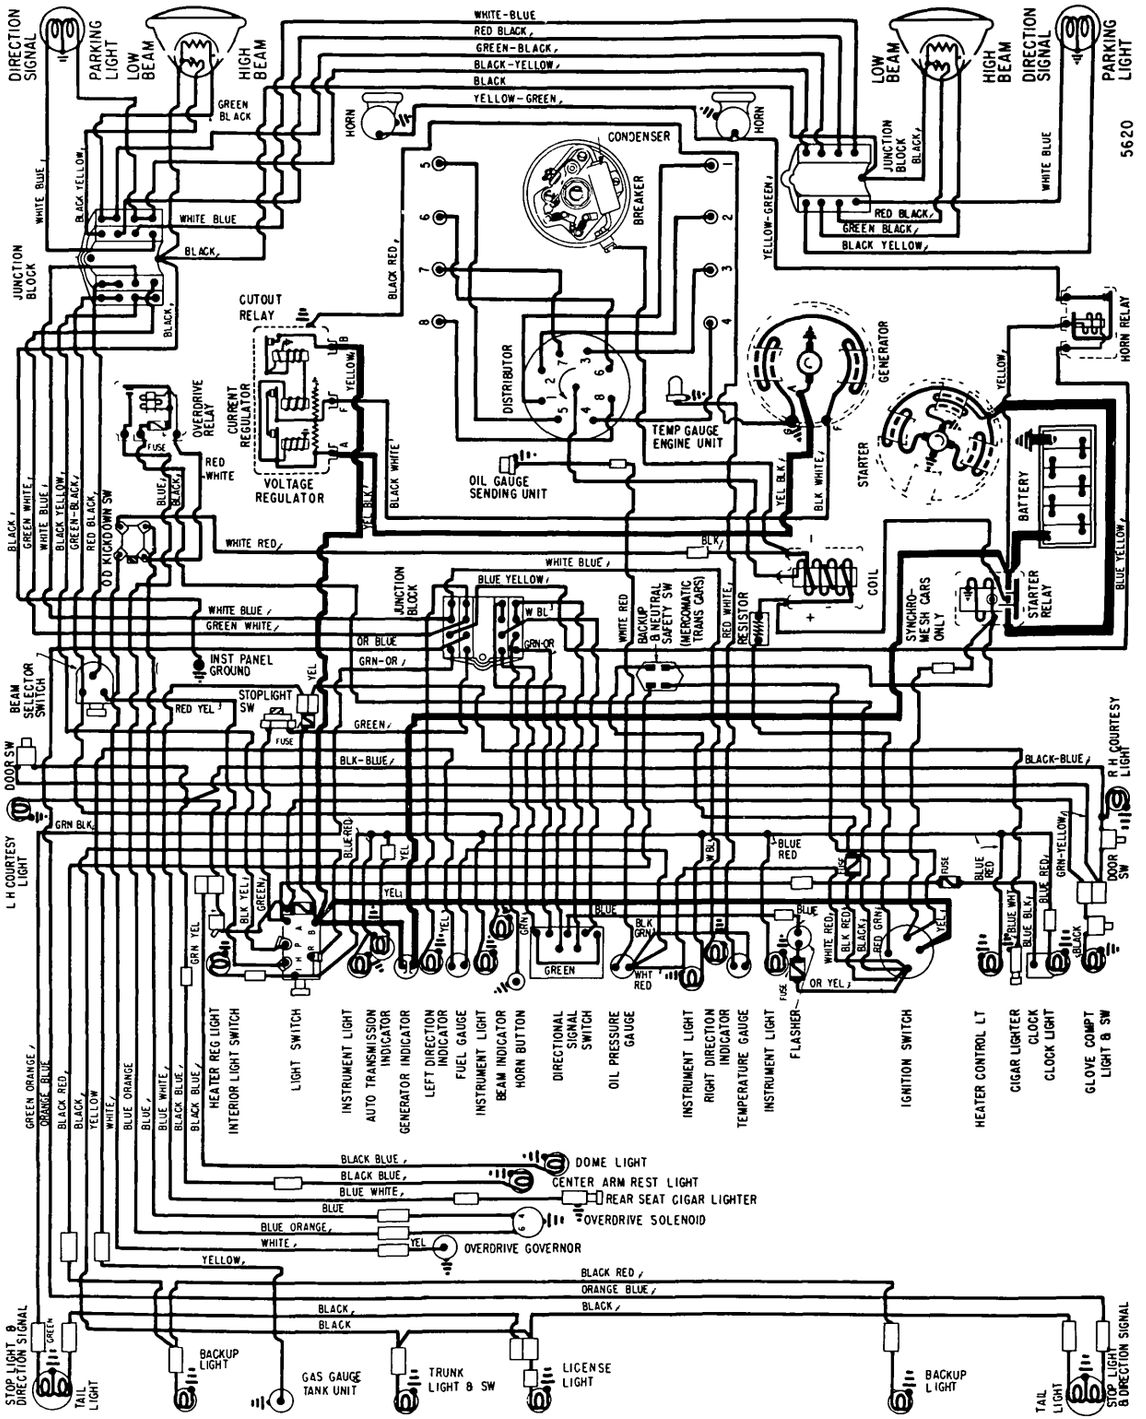


►*IDLE SPEED (AIR CONDITIONED CARS)* Automatic throttle control is incorporated on air conditioned cars and is adjusted as follows With engine warm, air conditioning system operating, and transmission in neutral, adjust knurled nut at end of operating rod of the control assembly to obtain an idle speed of 800 RPM, tighten locknut Check idle to make sure that it returns to normal whenever air conditioning is turned off or the transmission is shifted out of neutral

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

►*CARBURETOR THROTTLE LEVER BINDING OR STICKING CORRECTION:* To correct, drive choke fresh air tube into manifold fitting until it bottoms. If this does not correct condition, remove choke fresh air tube and cut approximately ¼" from manifold end of line to provide sufficient clearance for throttle lever. Remove burrs from end of line before installing in manifold fitting.



►*COLD HARD STARTING CORRECTION (Early Cars):* A few early Holley Carburetors built before 3rd week in September, 1955 (date code is shown on accelerator pump tower of float bowl cover—Example: 5-9-3 means 1955, September, 3rd week). To correct this condition, turn automatic choke cover clockwise three (3) additional notches.

MERC-O-MATIC THROTTLE LINKAGE

Thr ttl Linkag Adjustm nt (Merc-O-Matic Cars): Set hand brake and adjust engine idle to 425 RPM with engine at normal operating temperature and transmission in "DR" range. Adjust anti-stall dashpot (see below). Disconnect clevis pin from transmission control-to-accelerator shaft and transmission control shaft-to-transmission rod assembly. Disconnect carburetor-to-transmission control shaft rod at carburetor. Insert gauge pin through bellcrank and bracket in transmission control-to-accelerator shaft assembly. Set carburetor at low idle manually. Adjust carburetor-to-transmission control rod assembly so that with trunnion pin in place at rear end of rod, trunnion pin at carburetor end

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

will go in freely. Assemble in this position. With gauge pin locking bellcrank, pull upward gently but firmly on transmission control shaft-to-transmission rod assembly. This will position the throttle lever in the stop position at the transmission. Adjust clevis at upper end of transmission control shaft-to-transmission rod assembly so that clevis pin enters clevis and lever on transmission control-to-accelerator shaft assembly freely. Lengthen transmission control shaft-to-transmission rod assembly by turning clevis 3 full turns counter-clockwise and assemble in place. Remove gauge pin.

Dashpot Adjustment: Turn throttle lever set screw out until dashpot plunger bottoms, then back it off to give .045-.064" clearance between end of screw and plunger.

HOLLEY 4-BARREL

Mercury No. B6A-9510-L, M, N, Q. 4-Barrel carburetor with integral automatic choke. *M-260 NOTE* - Two 4-Barrel Carburetors, Part No. EDB-9510-C, used.

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyl. 2-3-5-8. LEFT barrels 1-4-6-7.*

Idle Setting—Preliminary setting 1¼ turns open (set both screws alike). With engine at normal operating temperature, turn one screw at a time out until engine begins to roll from richness, then turn screw in just enough to provide smoothest idle performance.

Idle Speed—475-500 RPM (Std. & O.D.); 425-450 RPM (Merc-O-Matic), in "DR" position.

Throttle Linkage Adjustment (Merc-O-Matic Cars): *See CARBURETOR above.*

►*OTHER DATA: See "Ford, Lincoln, Mercury 4-Barrel Centri-quad" in Carburetion Section.*

Fuel Pump Pressure: 3½-5½ lbs. at 500 RPM.

CARTER WCFB 4-BARREL

Carter No. 2361S, SA (Merc-O-Matic Cars). 4-Barrel, downdraft type with automatic choke. *NOTE* - Carburetor is Mercury No. ECZ-9510-D.

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyl. 2-3-5-8, LEFT barrels 1-4-6-7.*

Idle Setting—Preliminary setting 1¼ turns open (set both screws alike). With engine at normal operating temperature, set idle speed (see below). Turn one one screw at a time out until engine begins to roll from richness, then turn screw in just enough to provide smoothest idle performance.

Idle Speed—425-450 RPM, with selector lever in "DR" position.

Throttle Linkage Adjustment (Merc-O-Matic Cars): *See CARBURETOR above.*

►*OTHER DATA: See "Carter WCFB 4-Barrel" in Carburetion Section.*

Fuel Pump Pressure: 3½-5½ lbs. at 500 RPM.

CARB. EQUIPMENT

Fuel Pump: Mercury No. B5A-9350-D. Fuel & Vacuum.
Pressure – 3½-5½ lbs. at 500 RPM.
See "Fuel Pumps" in Carburetion Section.
Gas Line Gauge: King-Seeley Electric type.
Dash Unit – Mercury No. FDT-9280-A.
Tank Unit – Mercury No. B6A-9275-B (Sta. Wgn.), B6A-9275-C (Others).
See "Fuel Gauges" in Carburetion Section.

BATTERY

Mercury No. FDT-10655-C. *12 Volt,* 11 plate, 55 ampere hour capacity (20 hr. rate), **or FDU-10655-C.** *12 Volt,* 13 plate, 65 ampere hour capacity (20 hr. rate).
Battery Ground – Negative, to engine block.
►*CAUTION – This is reversed from previous models.*
Engine Ground – Cylinder head to dash.

STARTER

Mercury No. B6A-11002A. *12 Volt.* **Armature** B6A-11005-A.
►*NOISY STARTER MOTOR (Merc-O-Matic with Steel Torque Converter):* May be caused by starter motor seal, No. EBU-6436B, improperly installed or cocked.
Drive – Mercury No. 1CM-11350-C. Bendix "Folo-Thru".
Rotation – Counter-clockwise at commutator end.
Brush Spring Tension – 48-56 ozs.
Cranking Speed – 150-180 RPM with warm engine.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	4800 max.	12.0	100-120
	150-180 Ⓒ	8 or more	210 max.

Ⓒ – Cranking speed with warm engine.

Starting Switch: Relay, Part No. B6A-11450-A, controlled by Ignition and Starter Switch, Part No. B5A-11572-A, and Merc-O-Matic Neutral Safety Switch located on steering column.
►*SELF-STARTING OF ENGINE OR CONTINUOUS OPERATION OF BACK-UP LIGHTS:* May be caused by contact fingers of Neutral Switch Terminal Block touching brass strip on insulator assembly. Correct by installing new Neutral Switch Insulator Assembly No. FDK-15827-B (same number as original type) with two .020" high ridges on each side and parallel to brass strip.
Merc-O-Matic Neutral Safety Switch Adjustment: *See "Fordomatic & Merc-O-Matic" in Transmission Section.*

GENERATOR

Mercury No. B6A-10002-A. *12 Volt.* **Armature** B6A-10005-A.

Performance Data

Amperes	Volts	Gen. RPM
30	15	Ⓒ 2500

Ⓒ – At 1500 Engine RPM.
Brush Spring Tension – 26-34 ozs.
Field Current – 1.5-1.6 amps. at 15 volts (Hot).
Rotation – Counter-clockwise at commutator end.
Belt Adjustment: Approximately ½" deflection on belts midway between generator and pump pulleys with normal thumb pressure.

REGULATOR

Mercury No. B6A-10505-A. *12 Volt.*
►*SETTING NOTE:* Settings are for regulator at NORMAL OPERATING TEMPERATURE (after running engine for 20 minutes at 1500 RPM if started cold, or until temperature gauge is steady for 5 minutes if engine previously warmed up) with room temperature at 75° F.

Cut out Relay
Cuts In – 12.0-12.8 volts.
Cuts Out – 2.0-6.0 amps. (reverse current).

Voltage Regulator
Setting – 14.6-15.4 volts.
Checking & Adjusting – *See Electrical Section.*

Current Regulator
Setting – 28-32 amperes.
Checking & Adjusting – *See Electrical Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Section.*
Direction Signals: *See Electrical Section.*
Automatic Headlight Dimmer: *See Electrical Section.*
Lighting Switch Removal: With control knob in "OFF" position, press spring release button on switch housing, turn shaft slightly and pull knob and shaft out of switch. Remove screw assembly from inside bezel. Remove bezel, spacer, then remove switch from behind dash panel.
Stop Light Switch Location: On forward end of brake master cylinder (integral with power brake unit). Master cylinder or power brake unit located on firewall in engine compartment.
FUSES: Interior Lights – SFE 7.5 amps. On light switch.
Turn Signals – SFE 7.5 amps.
Heater Blowers – SFE 14 amps.
Radio – SFE 7.5 amps.
Clock – AG 1 amp.
Cigar Lighter – AGC 15 amps.
Overdrive – AGC 15 amps.
Windshield Washer – SFE 7.5 amps.
Back-Up Lights – SFE 7.5 amps.
Spotlight – SFE 7.5 amps.
Glove Box Light – SFE 7.5 amps. (on interior light circuit).
Automatic Headlight Dimmer – AGC 3 amps.
Multi-Luber – SFE 7.5 amps.
CIRCUIT BREAKERS: Lighting – On headlight switch. Combination headlight switch, circuit breaker and fuse assembly. One circuit breaker protects headlight circuit and second circuit breaker protects auxiliary lights. Fuse protects interior lighting circuit.
Windows & Seats – One 15 ampere circuit breaker for each window motor. One 15 ampere circuit breaker common to both seat motors.
Convertible Top – 30 ampere circuit breaker.
Underhood Lights – 12 ampere circuit breaker.
Air Conditioning – 15 ampere circuit breaker. *NOTE* - 20 ampere circuit breaker should be used if temperatures extremely high. Replace blower switch feed wire from 18 to 16 gauge.
HORNS: Dual horns operated by relay.

Type	High Pitch	Low Pitch
Sea Shell	B5T-13832-B	B5T-13833-B
Trumpet	FDT-13832-B	FDT-13833-B

Horn Relay – Mercury No. 2Q-13853-A.

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Use extreme care before disconnecting any part of air conditioning equipment or lines for access to engine. See "Air Conditioning Service Cautions" in Misc. Section.*
ENGINE SPECIFICATIONS: 90° V8 (All Models). *See "Engine Identification" Note "under MODEL IDENTIFICATION above.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Engin	3 r	Str k	Displac m nt
All	3.80"	3.44"	312 cu. ins.

Engine	C mpr. Ratio	Rated HP	Developed HP
ECZ-6007-F	8.0-1 ①	46.2	210 at 4600 RPM
ECZ-6007-F	8.4-1 ②	46.2	215 at 4600 RPM
ECZ-6007-F,G④	9.0-1 ③	46.2	225 at 4600 RPM
ECZ-6007-F,G④	9.0-1 ③	46.2	235 at 4600 RPM
M-260	9.75-1	46.2	260

① – Head marked "ECZ-A".
② – Head marked "ECZ-B".
③ – Head marked "ECZ-C".
④ – ECA-6007-F (Holley Carb.), ECZ-6007-G (Carter).

C mpressi n & Vacuum R ading – *See TUNE-UP above.*

CYLINDER HEAD: *See "Cylinder Head & Manifold in Mercury Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Mercury Special Data.*

ENGINE REMOVAL: S *"Engine" in Mercury Spec.Data.*

OIL PAN REMOVAL: Remove oil inlet pipe hex fittings at oil pump and side of oil pan, remove pipe. Remove oil pan capscrews, then remove oil pan and gasket.

NOTE - When this operation is performed, turn crankshaft until rear counterweights of crankshaft are up. The oil pan can then be removed from front of engine.

PISTONS

Aluminum alloy, Autothermic, solid skirt type with three rings above pin. *NOTE* - Pin is offset in piston.

►*ORIGINAL BORE & PISTON SIZES:* Std. cylinder bore limits are 3.8000-3.8024" and TWO Std. pistons used for selective fitting as follows: 3.7993-3.7996" Diam-(marked "2" on dome), and 3.8005-3.8008" Diameter (marked "6" on dome). *NOTE* - Std. piston furnished for service in these two sizes.

Removal – Pistons and rods removed from above.

Fitting N w Pistons: Use 1/2" wide feeler gauge inserted between piston and cylinder wall at right angles to pin on thrust side. Feeler thickness as follows.

N w Pist n in N w Bor –.0015" feeler. 5-10 los. pull.
N w Piston in Us d B r –.002" feeler. 5-10 lbs. pull.
Us d Pist n in Us d B r –.0025" feeler. 5-10 lbs. pull.

Replac ment Pistons: Standard (Two sizes - see Original Bore & Piston Sizes above), .0225", .0325", .0425" Oversize. Pistons are furnished with fitted pins.

Installing Pistons: Indentation or notch on top of piston must face toward front of engine. *See Rod Installation.*

PISTON PINS

Cl aranc in Pist n – .0001-.0003" loose. Select fit. Service maximum - .0008".

Cl aranc in R d – .0001-.0003" loose. Select fit. Service maximum -.0008".

R placem nt Pins: Std. (Green), .001" O.S. (Blue), .002" O.S. (Yellow).

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr. (1)	5/64"	.012-.029"	.006" max.
Compr. (2)	3/32"	.012-.019"	.006" max.
Oil (3)	3/16"	.015-.029"	①

① – Side sealing type ring

SPACING NOTE – Ring gaps should be placed 120° apart, with oil ring gap positioned so it will be on inside of "V" (high side of cylinder bore).

R placem nt Rings: Standard size, .020", .030", .040" Oversize.

CONNECTING RODS

►*ROD INSTALLATION CAUTION: Previous installation procedures have been superseded. See "Installing Rods" below.*

Journal Diameter – 2.1880-2.1884" (Color coded BLUE), 2.1884-2.1888" (Color coded RED). Use with bearing of same color.

Out-of-Round Limit – .0005". **Taper Limit** - .001".

Lower Bearing – Steel backed, copper lead lined. Upper and lower halves interchangeable.

Clearance – .0008-.0027". Service Limit .0037".

Side Clearance – Service maximum .019" (two rods).

Replacement Bearings: Standard (two sizes color coded RED and BLUE for selective fitting), .010", .020", .030" Undersize.

Installing Rods: Assemble rods to pistons with oil squirt hole in lower end of rod toward right (right bank rods numbered 1-2-3-4), toward left (left bank rods numbered 5-6-7-8) with indentation on piston head toward front of engine (all pistons). Install piston and rod assemblies in engine with numbered side of rod and bearing cap together, facing toward outside of block, and in same numbered cylinder.

CRANKSHAFT

►*1956 CRANKSHAFT PRODUCTION CHANGE (To minimize oil leaks at front and rear oil seals):* New crankshaft, No. B6A-6303C, used with separate Front Oil Slinger, No. B6A-6310B. Slingers will divert oil away from seals. *1955 NOTE* - Same design crankshaft, No. B6A-6303D, furnished for installation in 1955 cars with same Front Oil Slinger, No.B6A-6310B.

Journal Diameters – 2.6235-2.6239" (Color coded BLUE), 2.6239-2.6243" (Color coded RED).

Out-of-Round Limit – .0005". **Taper Limit** – .001".

Bearings – Steel-backed, copper lead lined.

Clearance – .0008-.0026". Service limit .0036".

Replacement Bearings: Std. size (two sizes color coded RED and BLUE for selective fitting), and .010", .020", .030" Undersize.

End Thrust: Taken by No. 3 main bearing.

Thrust Bearing Alignment – *See "Crankshaft & Main Bearings" in Mercury Special Data.*

Endplay – .010" maximum.

Crankshaft Front Oil Seal Installation: *See "Engine Front Cover" in Mercury Special Data.*

Crankshaft Rear Oil Seal Installation: *See "Crankshaft & Main Bearings" in Mercury Special Data.*

CAMSHAFT

►*CAMSHAFT PRODUCTION CHANGES:* Four different camshafts used in production and can be identified as follows.

Engine	Camshaft No.	① Identification
Early Engines (All)	B6A-6250B	ECK
Later 210 & 215 HP	B6A-6250C	ECZ
First 235 HP	EDB-6250B	② ECK
Later 235 HP	EDB-6250C	③ ECK

① – Cast in shaft.
② – Letter "E" stamped on hub end also.
③ – Letter "C" stamped on hub end also.

See "Valves" & "Valve Timing" below for camshaft differences.

J urnal Diamet r – 1.9255-1.9265".

Cl aranc – .001-.006".

End Thrust: Taken by thrust plate on forward end (between camshaft sprocket and shoulder on block).

Endplay – .003-.012".

Replacement Camshaft Bearings: Finished bearings furnished Standard size, .015" Undersize. *CAUTION– Oil holes in bearings must be lined up correctly.*

Camshaft Removal & Installation - *See "Camshaft & Bearings" in Mercury Special Data.*

Timing Chain: Side-guide type. Length 56 links.

►*REPLACEMENT NOTE:* Replace timing chain and sprockets when deflection on shaft side exceeds 1/2" (take up all slack on driving side, measure slack on opposite side). Remove and install chain "endless" as a unit with both sprockets.

Camshaft Setting: Marks on both sprockets should be aligned with similarly marked links on timing chain with both marks toward **left** side of engine (at 3 o'clock facing front of engine after installation made).

Timing Chain Cover Seal Installation (Crankshaft Front Oil Seal): *See "Engine Front Cover" in Mercury Special Data.*

VALVES

►*EXHAUST VALVE STEM DIAMETER CHANGE:* Later production exhaust valves have .0005" smaller stem diameter for increased stem clearance. *See "Valve System" in Mercury Special Data.*

►*VALVE PUSHROD REPLACEMENT CAUTION:* 1956 valve pushrods are shorter than 1954-55 pushrods (similar in appearance) and must not be interchanged. 1956 rods can be identified by two parallel radial ridges on outside of adjusting screw socket end and length of 7.98" plus or minus .010" (1954-55 rod length is 8.11" plus or minus .010").

Tappet Clearance: (Exc. M-260) –.019" (Final HOT), Intake & Exhaust. (M-260) .018" (Final HOT), Intake & Exhaust.

►*TAPPET CLEARANCE ADJUSTING SCREW NOTE: "Self-locking" screws used in rocker arms on later cars. See "Valve System" in Mercury Special Data.*

Valve Tappet Adjustment - *See "Valve System" in Mercury Special Data.*

Valve	Head Diam.	Stem Diameter ①
Intake	1.775-1.785"	②.3415-.3420" or ③.3420-.3425"
Exh.	1.505-1.515"	②.3400-.3405" or ③.3405-.3410"

Valve	Seat Angle	Lift	Stem Clearance
Intake	45°	④	⑤ .001-.002"
Exhaust	45°	④	⑥ .0025-.0035"

① – Furnished with .003", .015", .030" oversize stems.
② – Color coded RED. Use in RED valve guides.
③ – Color coded GREEN. Use in GREEN valve guides.
④ – See special table below.
⑤ – Service limit .0045".
⑥ – Service limit .0065".

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Cam Lobe Lift
(6BA-6250B & C Camshaft)

Valve	Normal Lift	⑥ Service Limit
Intake	.264"	.259" min.
Exhaust	.262"	.257" min.

(ED8-6250B Camshaft)

Intake & Exhaust	.278"	.273" min.

(ED8-6250C Camshaft)

Intake	.272"	.267" min.
Exhaust	.285"	.280" min.

⑥ – Replace camshaft if lift less than minimum.

Valve Seat Width – 1/16-5/64" (Intake), 5/64-3/32" (Exhaust).

Valve Stem Oil Seals – "Umbrella" type oil seals used on all valves. Seals are installed with cupped side down on valve stem at guide boss on cylinder head. *Install new seals whenever valves removed or when seals become loose on valve stems.*

Valve Springs Free Length – 2 09" approximately.

Valve Spring Specifications

	Pressure	Length
Valve Closed	64 lbs	1 780"
Valve Open	145 lbs.	1 390"

Valve Guides: Integral with cylinder head. When stem-to-guide clearance exceeds maximum (.004" Intake, .005" Exhaust), ream guides and install oversize valves. *See "Valve System" in Mercury Special Data.*

Valve Lifters Mushroom type. Removed from below with camshaft removed.

Rocker Arm Assembly *See "Valve System" in Mercury Special Data.*

► *ROCKER ARM & ADJUSTING SCREW PRODUCTION CHANGE* New "self-locking" adjusting screws used on later cars with new design rocker arms. Can be installed as an assembly on earlier engines. *See "Valve System" in Mercury Special Data.*

► *TORQUING NOTE (NEW TYPE ROCKER ARMS)* Torque valve adjusting screw to 7-15 ft. lbs. With each valve adjustment this will decrease. When it reaches 3 ft. lbs., rocker arm should be replaced or self-locking screw removed and standard valve adjusting screw and locknut should be installed.

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

► *VALVE TIMING NOTE The following valve opening and closing points are with a camlift as indicated in notes following tables.*

210, 215, 225 HP Eng. Valve Timing
(With 6BA-6250B & C Camshaft)

Intake Valves – Open 12° ①BTDC, Close 54° ② ALDC
Exhaust Valves – Open 58° ③BLDC, Close 8° ④ATDC
① – Camlift .016". ③ – Camlift .015".
② – Camlift .019" ④ – Camlift .018".

235 HP Eng. Valv Timing
(With ED8-6250-8 Camshaft)

Intake Valv s – Open 22° ①BTDC, Close 58° ①ALDC
Exhaust Valv s – Open 58° ①BLDC, Close 14°①ATDC.
① – Camlift .015".

235 HP Eng. Valv Timing
(With EDB-6250-C Camshaft)

Intake Valv s–Open 18° ① BTDC. Close 58° ① ALDC.
Exhaust Valves–Open 66° ② BLDC. Close 10° ③ ATDC.
① –Camlift .015". ②–Camlift .014". ③ – Camlift .017".

Valve Timing Check–Slide rocker arm to one side and install a dial indicator so reading can be taken from end of valve push rod (use an indicator that will read .300" or more). Install a quadrant (reading in degrees) on crankshaft pulley to check amount of crankshaft rotation. Rotate engine slowly until dial indicator reading for valve being checked is same as indicated in table above. Amount of crankshaft rotation should be the same as shown in valve timing table.

OILING SYSTEM

► *ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Mercury Special Data.*

► *OIL LEVEL INDICATOR CAUTION* Two different oil level indicators used. With air conditioning, indicator has expanded anti-rattle section adjacent to tube cover, and distance from cover to "Full" mark is 20.94". On cars **not** equipped with air conditioning, anti-rattle section is half-way down to "Full" mark and distance from cover to "Full" mark is 21.35".

Crankcase Capacity 5 qts. (refill). Add one quart when filter changed.

Normal Oil Pressure 45-50 lbs. at 2000 RPM (Hot)
Pressure Regulator Valve – In pump body. Not adjustable.

Oil Pressure Indicator King-Seeley Electric type.
Dash Unit – Mercury No. FDT-9273-A.
Engine Unit – Mercury No. B6A-9278-A.
See "Oil Pressure Gauges" in Miscellaneous Section.

Oil Pump Gear or rotary type pump. Located on left side of engine crankcase and driven by distributor drive gear. **Pump Overhaul** – *See "Oiling System" in Mercury Special Data*

Oil Filter Full-flow type with pressure relief valve in center filler bolt. Replace filter element at 4000-5000 mile intervals or when oil becomes dirty or polluted. *See "Oiling System" in Mercury Special Data.*

Replacement Filter Element–Mercury No. HCK-6731-A (Kit includes new gaskets).

► *CAUTION Special "full-flow" filter element must be used for service replacement (use of by-pass type filter element will restrict engine oil flow and result in insufficient engine lubrication).*

Crankcase Ventilation Filter in oil filler cap (inlet) and road draft tube Clean and oil every 2,000 miles or more often in dusty areas

COOLING

Water Capacity 19 qts. (total capacity), 18 qts.(recommended capacity). Add 1 quart for heater.

Pressure Valve Mercury No. LA-8100-A (12-15 lbs.). Radiator filler cap.

► *THERMOSTAT INSTALLATION NOTE* Install thermostat with word "TOP" up and toward front of engine to prevent a retarding of flow of coolant.

Wat r Pump· Packless, sealed ball bearing type.
Se "Wat r Pumps" in Mercury Sp cial Data.

Temp ratur Gaug King-Seeley Electric type.
Dash Unit – Mercury No. FDT-10883-A.
Engin Unit – Mercury No. B6A-10884-A.
See "Temperature Gauges" in Miscellaneous Section.

CLUTCH

Borg & Beck Model 10A6. Single plate, dry disc type.

Part	Borg & Beck No.	M rcury No.
Assembly No.	361354	MC-7563-B
Disc No.	382175	MC-7550-A

Pedal Adjustment: If pedal free travel is not 1 to 1-1/4", loosen clutch pedal release rod locknut (lower end) and turn adjusting nut for correct free travel, tighten locknut.

Removal: Remove transmission (see Transmission Removal below), and disengage clutch pedal retracting spring and release rod from clutch release lever. Disengage equalizer bar tension spring and remove two capscrews retaining equalizer bracket assembly to flywheel housing. Remove flywheel housing. Mark position of flywheel and pressure plate so parts may be installed in original position. Compress clutch pressure plate assembly with Tool 7563. Remove capscrews, pressure plate and disc.

SYNCHRO-MESH TRANSMISSION

Own. Helical gear, constant mesh, synchro-mesh (second and high), sliding gear (low and reverse).
See "Mercury Synchro-mesh" in Transmission Secti n.

► *20-45 MPH DRIVELINE RINGING NOISE CORRECTION* New sound-deadened driveshaft, Part No. MC-4602-F (Exc. Sta. Wgn.), MC-4602-G (Sta. Wgn.) is available to correct above condition on 1955-56 cars.

Transmission Control *See "Transmission Controls" in Transmission Section.*

Removal· If equipped with overdrive, remove kickdown switch retainer nut and push switch through floor. Raise car and drain transmission. On overdrive cars remove governor, solenoid, and control cable. Disconnect speedometer cable and remove speedometer drive gear. Remove transmission shift rods at transmission. Remove bolts retaining rear universal joint to companion flange and remove drive shaft. Support rear of engine and remove the detachable cross-member of the frame. Remove two top capscrews retaining transmission to flywheel housing and install a couple of studs to act as guide pins. Remove lower capscrews and slide transmission to rear as far as possible and lower front end. Remove from below car.

► *SINGLE EXHAUST SYSTEM NOTE* When removing transmission, it will be necessary to remove nuts that secure muffler inlet and exhaust pipes to exhaust manifold, and to remove manifold outlet pipe from mounting bracket at rear of manifold and move exhaust system away from working area.

OVERDRIVE

Warner Model AS1-R10F. Solenoid operated type, with governor control and throttle operated kickdown. Lockout Switch not used on this model.
See "Warner R10 Overdrive" in Transmission Section.

R moval Same as for Synchro-mesh Transmission (above) after disconnecting control cable and wiring.

CONTINUED ON NEXT PAGE

C NTINUED FROM PRECEDING PAGE

MERC-O-MATIC TRANSMISSION

Torque converter and three speed automatic transmission with hydraulic control and mechanical parking lock.

See "Fordomatic & Mercomatic" in Transmission Section.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION See "Fordomatic & Mercomatic" in Transmission Section*

►*TESTING & TROUBLE SHOOTING. See "Fordomatic & Mercomatic" in Transmission Section*

Lubricati n – Check transmission oil level every 2000 miles and maintain oil level at "Full" mark on dipstick. Drain and refill every 16,000 miles. **Use only Automatic Transmissi n Fluid Type A.**

Ch cking Fluid L vel–Apply parking brakes, place transmission selector lever in "N" (Neutral) position, run engine at idle speed for approximately four minutes. With parking brake applied and engine running at slow idle, move selector lever to "P" (Parking) position. When engine and transmission have reached normal operating temperature, move selector lever through all positions to assure fluid distribution throughout transmission. Return selector lever to "P" position. Raise hood, clean dirt away from fluid level cap, remove indicator, wipe clean and insert in tube (make sure indicator is pushed all the way down). Remove indicator and read level. Add sufficient fluid to raise level to "Full" mark on indicator.

Thr ttl Linkage Adjustment: *See CARBURETOR above*

►*OTHER MERCOMATIC SERVICE DATA See "Fordomatic & Mercomatic" in Transmission Section.*

UNIVERSALS

M chanics. Needle bearing type.

PROPELLER SHAFT

►*DRIVE LINE THUMP CORRECTION* Caused by lubrication build-up in front universal joint Correct by tapping and installing relief valve (5-25 lbs) using 1/8" pipe tap to cut threads in expansion plug of front universal slip joint DO NOT cut threads too deeply in plug as valve will interfere with output shaft

REAR AXLE

Own. Integral carrier, semi-floating hypoid type with Hotchkiss Drive

See "Ford, Lincoln, Mercury (Integral Carrier)' in Rear Axle Section.

►*REAR AXLE "CLUNK' & "SQUEAK' CORRECTION See Ford, Lincoln, Mercury (Integral Carrier)" in Rear Axle Section.*

Transmissi n	Ratios Standard	Optional
Merc-O-Matic (Sta Wgn)	3 54 1	3 15-1
Merc-O-Matic (Others)	3 15-1	3 54-1
Synchro-mesh (Sta Wgn)	4 09-1	3 73-1
Synchro-mesh (Others)	3 73-1	4 09-1
Overdrive (All)	4 09-1	3 73-1

Backlash – .003-.008"

Axl Shaft R m val Remove wheel and brake drum Remove axle shaft retainer locking type nuts (work through opening in axle shaft flange) Use Puller and pull shaft (do not disturb brake backing plate or damage wheel bearing oil seal) Replace one nut to secure brake backing plate

Rear Axle Assembly Removal Raise rear end of car and disconnect rear universal. Remove axle shafts. Disconnect brake lines at "T" on left side of axle housing. Disconnect hand brake cable, shock absorbers, spring U-bolts and shackles. Remove axle housing assembly from car.

SHOCK ABSORBERS

Direct acting, non-adjustable. Service by replacement.

Front Shock Absorbers

Model	Standard	Heavy Duty
All (Exc.Sta.Wgn.)	MC-18045-F,H	MC-18045-B,K
Station Wagon	MC-18045-E,J	MC-18045-C,L
All (Exc. Conv.& Sta.Wgn.)		MC-18045-G

Rear Shock Absorbers

Model	Standard	Heavy Duty
All (Exc.Sta.Wgn.)	MC-18080-F,J	MC-18080-G,L
Station Wagon	MC-18080-E,K	MC-18080-C,M
All (Exc.Conv.& Sta.Wgn.)		MC-18080-H

FRONT SUSPENSION

Independent. "Ball-Joint" suspension with direct acting shock absorbers mounted within front coil springs.

See "Lincoln, Mercury, Ford (Ball-Joint)" in Front Suspension Section.

Kingpin Inclination–7° with Pos. 3/4° camber.

Caster–0° to Neg. 1-1/2°. Maximum variation between wheels is 1/2°.

Camber–0° to Pos. 3/4°. Maximum variation between wheels is 1/4°.

Toe-In–3/32" to 5/32".

Toe-Out on Turns – With front wheels at maximum turning angle, outer wheel should be 27°40' (Exc. Conv.), 26°50' (Conv.), and inner wheel should be 38° (Exc. Conv.), 36° (Conv.).

STEERING

Manual, Gemmer 2 & 3-Tooth Worm & Roller (Early), **Saginaw** Recirculating Ball Nut type (Later).

See "Gemmer Worm & Roller" or "Saginaw Ball Bearing Worm & Nut" in Steering Section.

Power Steering Ford-Mercury Linkage type. Used in conjunction with standard type steering gear.

See "Ford & Mercury Power Unit" in Steering Section.

Steering Linkage *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Gemmer Worm & Roller" or 'Saginaw Ball Bearing Worm & Nut" in Steering Section.*

Steering Gear Removal *See "Gemmer Worm & Roller' or 'Saginaw Ball Bearing Worm & Nut' in Steering Section.*

BRAKES

Bendix Hydraulic, Singl Anchor (Without eccentric and fixed anchor pins). Parking lever applies rear wheel service brakes.

See "Ford, Lincoln, Mercury B ndix" in Brake Section.

Drum Diameter – 11" front and rear

Wh el Cyl. Diam ter – 1 1/8' (Front), 7/8" (Rear)

Lining – Molded type riveted to shoe.

Width – 2½" (Front wheels), 2" (Rear wheels) **Thickness** - 3/16".

Braking Power – 55 5% (Front), 44.5% (Rear)

Clearance – Adjusting screw backed off 12 to 14 clicks from point where shoes are tight against drum

Brake Pedal Free Play Adjustment 1/4–7/16". If play not correct after brake adjustment, loosen lock nut on the eccentric bolt attaching brake pedal to master cylinder pushrod, rotate eccentric bolt.

Standard Master Cylinder: on engine side of firewall.

Checking Fluid–Maintain fluid level to within ¼' of top of reservoir.

Removal–Disconnect brake line from master cylinder and depress brake pedal a few times to force out fluid. Disconnect wires leading to stop light switch, and remove eccentric bolt attaching master cylinder pushrod to brake pedal. Remove capscrews and lock washers attaching master cylinder to firewall.

Power Brakes Bendix Vacuum Power Unit (combination vacuum power unit and master cylinder). Unit mounted on engine side of firewall and replaces regular master cylinder.

See "Bendix Power Unit" in Brake Section.

►*1956-57 MERCURY (312" ENGINE) POWER BRAKE VACUUM ASSIST FAILURE:* This may be caused by the power brake vacuum check valve in intake manifold swelling shut and cutting off manifold vacuum to power brake unit Install a new type check valve, Part No MG-22049-A, identified by groove around middle of hex part of valve When installing the later type valve, also install a 3/8" x 45° elbow, Part No 353779-S between manifold fitting and check valve.

Checking Fluid Level–Same as for regular master cylinder.

Removal of Power Unit–Disconnect valve pushrod from brake pedal assembly in drivers compartment. Remove master cylinder outlet fitting bolt from master cylinder. (*NOTE*–It is not necessary to remove stop light switch, wires or hose assembly from outlet fitting. Do not disturb outlet fitting in master cylinder). Loosen clamp securing manifold vacuum hose to check valve on power unit. Remove hose from valve. Loosen clamp securing vacuum reserve tank hose to fitting on check valve. Remove four capscrews securing power brake assembly to bracket on dash panel and remove power brake assembly.

MISC. MECHANICAL

Windshield Wipers: Vacuum, Link & Crank Arm type. *See "Windshield Wipers" in Miscellaneous Section.*

Power Window Regulators· Electric Reversible motor in each window. Controlled by door switch and master control switch. *See "Window Regulators" in Miscellaneous Section.*

Power Top Control· Electric Hydraulic with reversible pump motor. *See "Power Top Controls" in Miscellaneous Section.*

P w r S at Adjusters Electric type. Individual motor for vertical and horizontal adjustment. *S "Pow r S at Adjusters" in Misc llan ous S ction.*

Air C nditi ning *See Lincoln & Mercury Air Conditioning in Miscellaneous Section*

MODEL IDENTIFICATION

SERIAL NUMBER: Stamped on patent plate attached to left front body pillar extension.
First Number - 10001 up.

► *SERIAL NUMBER NOTE: The serial number (example *57LA10001M*) includes following identification data in sequence.*

Year	Assembly Plant	Serial No.	Vehicle Name
57	See below	10001	① M

① - "M" indicates Mercury.
Assembly Plants - Indicated in serial number by following code: **LA** - Los Angeles. **ME** - Metuchen. **SL** - St. Louis. **WA** - Wayne.

► *ENGINE IDENTIFICATION:* Two different engines used: "ECZ" Safety-Surge 312 cu. ins., and "ECU" Jato-Thrust 368 cu. ins. Specifications below are marked "ECZ" or "ECU" for each particular engine.

TUNE-UP

► *INTERMITTENT ENGINE MISS:* May be caused by distributor primary lead shorting out through nylon insulation. Correct by taping lead with rubberized tape.

COMPRESSION PRESSURE: (ECZ) 170 lbs., **(ECU)** 160 lbs. at cranking speed of 150-180 RPM. *NOTE* - Supersedes previous specification of 165 and 160 lbs.

VACUUM READING: (ECZ) 19-20", **(ECU)** 18-19" with engine idling at 475 RPM in neutral.

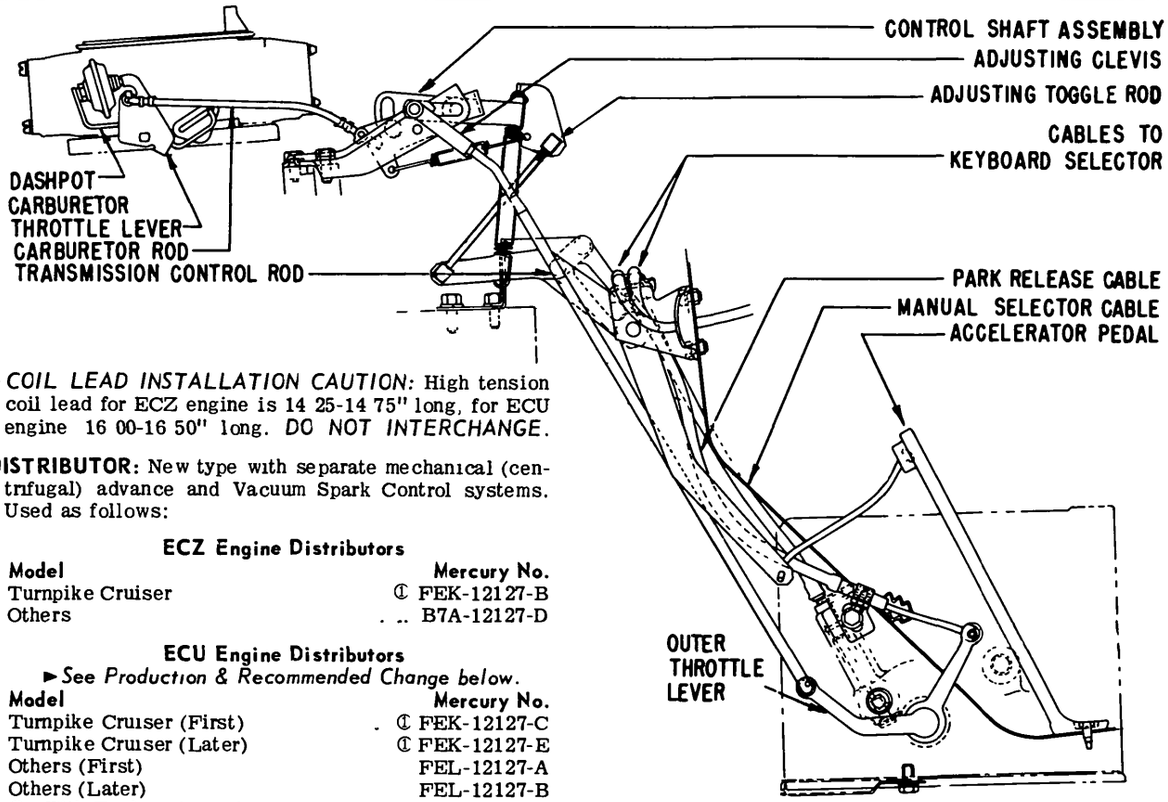
VALVE TAPPET CLEARANCE: (ECZ) .020" (Intake & Exhaust COLD), .019" (Intake & Exhaust HOT). If adjusted while engine Cold, recheck with engine Hot (after 30 minutes operation to normalize temperature). **Valve Tappet Adjustment** - *See "Valve System" in Mercury Special Data.*
(ECU) - None in service (Hydraulic Lifters).

MANIFOLD HEAT CONTROL: Butterfly type valve mounted between right hand manifold and exhaust pipe (Single & Dual exhaust systems). When installing, make certain counterweight is toward right front.

► *DUAL EXHAUST NOTE:* When valve closed, all exhaust gases are discharged through left hand exhaust pipe.

IGNITION

FIRING ORDER: 1-5-4-8-6-3-7-2.
Cylinders - RIGHT BANK 1-2-3-4, LEFT BANK 5-6-7-8.



SPARK PLUG GAP: .032-.036"
Spark Plug - Champion 860 (early), F-14Y (later) Use F-14Y for replacement.

► *SPARK PLUG CAUTION:* Spark plug has tapered seat and does not require a sealing gasket. It is important that plugs be tightened to 15-20 ft. lbs.

COIL: Mercury B6A-12029-B.
Ignition Current - 2.5 amps. idling, 4.5 amps. stopped.
Resistor - Mercury B6A-12250-D. 1.30-1.40 ohms at 75°F.

► *COIL RESISTOR NOTE:* Resistor is connected in lead from ignition switch to coil. Resistor is by-passed during cranking by a lead from starter solenoid to battery terminal of coil.

► *COIL RESISTOR GROUNDING CORRECTION:* Resistor may ground on intake manifold. To correct, bend resistor on its mounting bracket in direction of coil to give proper clearance.

MERCOMATIC TRANSMISSION THROTTLE LINKAGE

► *COIL LEAD INSTALLATION CAUTION:* High tension coil lead for ECZ engine is 14 25-14 75" long, for ECU engine 16 00-16 50" long. *DO NOT INTERCHANGE.*

DISTRIBUTOR: New type with separate mechanical (centrifugal) advance and Vacuum Spark Control systems. Used as follows:

ECZ Engine Distributors

Model	Mercury No.
Turnpike Cruiser	Ⓒ FEK-12127-B
Others	B7A-12127-D

ECU Engine Distributors

► *See Production & Recommended Change below.*

Model	Mercury No.
Turnpike Cruiser (First)	Ⓒ FEK-12127-C
Turnpike Cruiser (Later)	Ⓒ FEK-12127-E
Others (First)	FEL-12127-A
Others (Later)	FEL-12127-B

Ⓒ - With Tachometer Drive.
See "Ford, Lincoln, Mercury Distributors" in Electrical Section

Condenser - Mercury No. B7A-12300-A. **Capacity** - 21-25 mfd.
Contact Point Set - Mercury No. B7A-12171-A.
Breaker Gap - 014-016".
Cam Angle - 26-28½°.
Breaker Arm Spring Tension - 17-20 ozs.
Rotation - Counterclockwise viewed from above.

► *ECU ENGINE DISTRIBUTOR ADVANCE PRODUCTION & RECOMMENDED CHANGES (FEK-12127-C & FEL-12127-A Distributors):* These distributors can be reworked for improved performance by installing later type Distributor Weight Springs and calibrating Automatic & Vacuum Advance to "Later Production" specifications listed below. *For complete adjustment procedure, see "Ford, Lincoln, Mercury Distributors" in Electrical Section. NOTE* - Later type Distributors FEK-12127-E & FEL-12127-B have new type weight springs and "Later Production" advance specifications apply.

Distributor Advanc Springs

	Original Part No.	New Part No.
Primary Spring	B7A-12192-A	FEL-12192-A-UP
Secondary Spring	FEK-12191-A	B7A-12191-B

IGNITION TIMING

Engine	Std. Setting
ECZ (Std. & O.D.)	3° BTDC (6° BTDC Max.)
ECZ (Mercomatic)	6° BTDC
ECU	5° BTDC (8° BTDC Max.)

Timing Mark - Crankshaft pulley marked "TDC", "10° BTDC", and "20° BTDC" with 2° graduations between these marks. Align correct mark with pointer on timing chain cover.

CARBURETOR

► *CARBURETOR APPLICATION: ECZ Engines equipped with Carter AFB or Holley 4-Barrel Carburetors, ECU Engine equipped with Carter WCFB 4-Barrel Carburetor.*

► *CARBURETOR AIR CLEANER (DRY TYPE) NOTE: Special cleaning procedure required. See AIR CLEANER*

Carburetor Air Intake Duct Assembly (Thermostatic Control): Carburetor air intake duct to air cleaner has thermostatically controlled valve which provides warm air for cold engine (air taken in through muff or shroud around exhaust manifold) or cool air for warm engine (air taken in from the left radiator side air deflector) Valve should be closed at temperatures below 75°F (for air intake from rear "heated" opening) and should start to open at 85°F Valve should be fully open at 105°F (for air intake from outside through left radiator side air deflector) *See "Fuel System Notes" in Mercury Special Data*

Acc lerat r P dal Adjustm nt: Adjust toggle rod linking accelerator pedal bellcrank on firewall to bellcrank on cylinder head for shortest overall length Attach

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

one end of rod to accelerator shaft and other end to transmission control shaft Distance between bottom surface of accelerator pedal and bare floor pan should be 4" Lengthen rod to raise pedal shorten to lower. *CAUTION* - Adjust pedal height by **toggle rod only.** Shortest rod length possible must be used

Throttle Linkage Adjustment (Mercomatic Cars): With engine at normal operating temperature and idle speed set at 425-450 RPM with selector button in "D", adjust Anti-stall Dashpot (see below), then proceed as follows. Remove clevis pin connecting transmission control rod to control shaft (on engine bracket), insert gauge pin, Tool 77230-MB, through control shaft and bracket. Adjust carburetor-to-control shaft rod so that it freely enters hole in carburetor throttle lever. Then **lengthen 2 full turns** and install rod Remove gauge pin With carburetor throttle lever in slow idle position, hold transmission control rod up so that transmission lever is against its stop adjust clevis on rod so that clevis pin enters hole in control shaft freely then **lengthen** rod by turning clevis **3 full turns,** connect rod

Dashpot Adjustment (Holley & Carter WCFB Carbs.): Hold dashpot plunger in to limit of travel, loosen dashpot mounting locknut, rotate dashpot in or out on bracket until .067" feeler (Tool T109-234) can just be inserted between dashpot plunger and carburetor throttle lever (throttle closed and throttle stopscrew against stop).

Dashpot Adjustment (Carter AFB Carburetor): This model has dashpot built-in carburetor. Hold primary throttle valves in wide-open position, measure distance from top surface of bowl cover to bottom of dashpot arm lever (at dashpot plunger). This distance should be 7/16". Adjust by bending inner tang on dashpot arm.

HOLLEY 4-BARREL

Mercury No. B7A-9510-U Auto. Trans. (replaces ECZ-9510-V), ECZ-9510-AD Std. & O.D. (replaces ECZ-9510-Y). *NOTE* - Carburetor ECZ 9510-AD is B7A-9510-U with dashpot and attaching parts removed New type 4-barrel carburetor with automatic choke

►*1957 MERCURY 4-BARREL HOLLEY CARBURETOR VENT REWORK (To prevent spillage of fuel under flooding conditions): See "Holley 2 & 4-Barrel Carburetors" in Carburetion Section.*

►*POOR OR HESITANT ACCELERATION CORRECTION. See "Holley 2 & 4-Barrel Carburetors" in Carburetion Section*

►*MALFUNCTIONING CAUSED BY IMPROPER GASKET INSTALLATION CORRECTION* Throttle body-to-main body gasket may block vacuum passage from carburetor to distributor vacuum diaphragm To correct install gasket **on throttle body** and make sure **all** holes are aligned correctly

Idle Setting - Both screws (primary side only) ½-1½ turns open. Adjust each screw in sequence, turn screw in until engine begins to run rough, then turn screw out until engine begins to roll, finally turn screw in just enough for smoothest idling (favor rich side of adjustment range). Readjust both screws after rechecking idle speed, turn screws 1/8 turn in either direction for smoothest idle (screws must be within ½ turn of each other).

Idle Speed - 475-500 RPM in Neutral. On Mercomatic cars, recheck idle speed in "D" and readjust as necessary to 425-450 RPM.

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA See "Holley 2 & 4-Barrel Carburetors" in Carburetion Section*

CARTER AFB 4-BARREL

Carter AFB No. 2441S,SA. New type 4-Barrel carburetor with automatic choke

►*RICH OPERATION AT HIGH ALTITUDE CORRECTION:* Install new metering rods or jets *See "Carter AFB 4-Barrel Carburetors" in Carburetion Section*

►*ACCELERATOR PUMP SPECIFICATION CHANGE·* Changed from 27 64" to 15/32" from top of pump plunger to top of air horn

►*CHOKE SETTING SPECIFICATION CHANGE:* Changed from 2 notches to 1 notch rich from center index

Idle Mixture & Idle Speed Setting - *Same as for Holley 4-Barrel above*

Throttle Linkage Adjustment: *See CARBURETOR above*

►*OTHER DATA· See "Carter AFB 4-Barrel Carburetors" in Carburetion Section*

CARTER WCFB 4-BARREL

Carter WCFB No. 2404S,SA. 4-barrel carburetor with automatic choke

►*STUMBLE OR CUTTING OUT ON TURNS CORRECTION* May be caused by poor seal between carburetor body and air horn *See "Carter WCFB 4-Barrel Carburetors" in Carburetion Section*

Idle Mixture & Idle Speed Setting - *Same as for Holley 4-Barrel above*

Throttle Linkage Adjustment: *See CARBURETOR above*

►*OTHER DATA. See "Carter WCFB 4-Barrel Carburetors" in Carburetion Section*

FUEL PUMP PRESSURE: 3.5-5.5 lbs. at 500 RPM.

CARB. EQUIPMENT

Fuel Pump: Mercury No ECZ 9350-B (ECZ Eng) No ECU 9350-D (ECU Eng) Fuel & Vacuum

Pressure - 3½-5½ lbs (ECZ Eng), 4½-6½ lbs (ECU Eng)

See "Fuel Pumps"in Carburetion Section

Gasoline Gauge: King-Seeley Electric "CV" (Constant Voltage) type with voltage regulator No FEL-10804 A

Dash Unit - (Std) Mercury No FEK-9280-A (Turnpike Cruiser) FEK-9280 D

Tank Unit - (Std) Mercury No FEG-9275-E (Sta Wgn) FEG-9275-D (Turnpike Cruiser) FEG 9275-E

See "Fuel Gauges" in Carburetion Section

Air Cleaner: DRY FILTER ELEMENT type Clean every 4 000 miles replace element every 30,000 miles

►*CLEANING CAUTION:* Clean filter element by tapping or shaking to remove dirt particles *DO NOT wash element in solvent or other liquids and DO NOT oil or lubricate*

►*AIR CLEANER AIR LEAK CORRECTION (ECZ Eng)* Install Air Cleaner Element Seat Part No ECZ-9610-A beneath air cleaner element and body

►*HEAVY DUTY AIR CLEANER NOTE:* Heavy Duty Air Cleaner Part No EDB 9601-B available for replacement of standard Cleaners No EDB 9601 A1 & EDB 9601 A2 for use in dusty areas

BATTERY

ECZ Eng. - Mercury Kit N . MGK-10655-A. 12 volt, 11 plate, 55 ampere hour capacity

ECU Eng. - Mercury Kit No. MHK-10655-A. 12 volt, 13 plate 70 ampere hour capacity

Battery Ground - Negative to engine block

Engine Ground - Cylinder head to dash

STARTER

Mercury No. B6A-11002-A. Armature - FAC-11005-B.

Drive - Mercury No 1CM-11350-C Bendix "Folo-Thru"

Rotation - Counter-clockwise at commutator end.

Brush Spring Tension - 48-56 ozs.

Cranking Speed - 150-180 RPM., 155-190 amps.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	4500	12.0	80 max.

Starting Switch: (Synchro-mesh Trans.) - Relay No B6A-11450-A controlled by Ignition & Starter Switch No B5A-11572-A

(Auto. Trans.) - Relay Part No B6A-11450-A controlled by Neutral & Starter Switch Vacuum Starter Cutout Switch FEK-11516 A and Neutral Starter & Back-up Light Switch FEK 15812-B

Starter Removal: Disconnect battery ground cable, raise front end of car, turn wheels to full right, disconnect starter cable. Remove ignition cable mounting bracket bolt, bracket and wires. Remove starter drive end plate screws, pull starter out and upward until drive assembly clears housing, hold in vertical position, with drive end down, then rotate and lower housing between tie rod and idle arm.

Installation: Tape dust seal lip (use masking tape) to inner circumference of housing to hold it in place, and reverse removal procedure. *NOTE* - Tighten outer cap-screw first, then top and bottom capscrews to maintain alignment of starting motor with flywheel housing.

Mercomatic Neutral Safety Switch Adjustment: *See "Ford-omatic & Mercomatic" in Transmission Section*

GENERATOR

GENERATOR: As follows:

Generator No.	Armatur N
B6A-10002-H (Std)	FGT 10027-A
FGP-10002-B (Special)	FGP-10027-A

Performance Data

Generator	Amperes	Volts	GEN RPM
B6A 10002-H	30	15	2450
FGP-10002-B	40	15	2390

Brush Spring Tension - 26-34 ozs

Field Current - 1 5-1 6 amps at 15 volts (Hot)

Rotation - Counterclockwise at commutator end

Belt Adjustment: Approximately ½" deflection on belts midway between generator and water pump pulleys with normal thumb pressure

REGULATOR

REGULATOR: Used with generator as follows

Regulat r No	G nerat r N
B6A-10505-A	B6A-10002 H
FBF-10505-A	FGP-10002 B

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

►*SETTING NOTE:* Settings are for regulator at NORMAL OPERATING TEMPERATURE (after running engine for 20 minutes at 1500 RPM if started cold, or until temperature gauge is steady for 5 minutes if engine previously warmed up) with room temperature at 75°F

Cutout Relay

Cuts In - 12 0-12 8 volts
Cuts Out - 2 0-6 0 amps (reverse current)

V ltage Regulator

S tting - 14 6-15 4 volts
Checking & Adjusting - *See "Ford, Lincoln, Mercury 12 Volt Regulators" in Electrical Section*

Curr nt Regulator

S tting - 28-32 amps (B6A-10505-A), 38-42 amps (FBF-10505 A)
Checking & Adjusting - *See "Ford, Lincoln, Mercury 12 Volt Regulators" in Electrical Section*

MISC. ELECTRICAL

H adlamps: Sealed Beam 2-Headlights Std (Exc Turnpike Cruiser), 4-Headlights Std (Turnpike Cruiser) *See "4-Headlights" in Electrical Section*

Directional Signals: *See Electrical Section*

Lighting Switch R moval: Disconnect battery ground cable Depress spring and pin retainer located on top of switch pull knob and shaft assembly from switch Use wide blade screwdriver to remove switch retainer nut from face of instrument panel and remove switch

Stop Light Switch Location: On forward end of brake master cylinder (integral with power brake unit) Master cylinder or power brake unit located on firewall in engine compartment

CIRCUIT BREAKERS: 12 ampere used with dual headlights 20 ampere used with Air Conditioner Protects headlights

FUSES: Located in fuse panel behind instrument panel
Interi r Lights - SFE 7 5 ampere
Turn Signals - SFE 7 5 ampere
Heater Blow rs - SFE 14 ampere
Radio - SFE 7 5 ampere
Cl ck - Electric wind 1 AG 1
Overdrive - AGC-15 ampere
Windshi ld Wipers - SFE 7 5 ampere
Back-Up Lights - 7 5 ampere
Sp tlight - SFE 7 5 ampere
Underhood Lamps - SFE 7 5 ampere
Pow r Lubrication - SFE 7 5 ampere
H rn R lay: Mercury No B7A-13853-A

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Use extreme car when disconnecting any part of air conditioning system for access to engine. See "Air Conditioning Service Cautions" in Miscellaneous Section.*

ENGINE SPECIFICATIONS: 90° V8, Overhead Valves. "Safety Surge" (ECZ) & "Jato-Thrust" (ECU) engines.

M del	Bore	Stroke	Displacement
ECZ	3.80"	3.44"	312 cu. ins.
ECU	4.0"	3.66"	368 cu. ins.

Model	Rated HP	Compr. Ratio	Developed HP
ECZ	46.2	9.7-1	255 at 4600 RPM
ECU	51.2	10-1	290 at 4600 RPM

Compression & Vacuum Reading - *See TUNE-UP.*

►*POWER BOOSTER FAN NOTE:* Power Booster Fan is standard on some ECZ engines *See "POWER BOOSTER FAN" under "Cooling" in Mercury Special Data*

►*ENGINE OR GEAR NOISE NOTE:* Objectional engine and gear noise can be caused by metallic contact between rear engine mount retainer bracket contacting frame To correct, loosen two mounting bolts align retainer bracket hold drift between retainer and crossmember, while tightening mounting bolts to 22-28 ft lbs

►*MANIFOLD HEAT VALVE STICKING CORRECTION:* Chamfer lower edge of valve plate to eliminate contact with aligning dimple of muffler inlet pipe

►*IGNITION TIMING CAUTION:* Setting Ignition Timing in advance of specifications will burn spark plug electrodes, shorten valve life and cause excessive detonation with burned pistons *See IGNITION TIMING above*

►*CRANKCASE VENTILATION TUBE OIL LEAK CORRECTION (ECZ Eng):* When screen in tube is longer than 1 820" cover will not contact gasket causing oil leak To correct cut either end of screen to reduce length to 1 820"

►*ENGINE OPERATION IN LOW OCTANE AREAS (FOREIGN TRAVEL):* Low octane fuel Kit No I-501769 (ECZ), No ECU-99025-A (ECU) available for service to lower compression ratio

►*AIR CLEANER NOISE CORRECTION·* To eliminate noise due to air cleaner duct contacting exhaust manifold remove duct cut out "U" section at lower end to give 1/8" clearance and reinstall air duct and cleaner,

CYLINDER HEAD: *See "Cylinder Head & Manifold" in Mercury Special Data*

►*"ECU" CYLINDER HEAD BOLT & TORQUE SPECIFICATION CHANGE:* New high tension steel cylinder head bolts Part Nos B4Q-6065-A & B4Q 6066 A permit higher torque specification and reduce possibility of water and combustion chamber leaks *See "Torque Specifications" in Mercury Special Data*

TIGHTENING TORQUES: *See "Tightening Specifications" in Mercury Special Data*

ENGINE REMOVAL: *See "Engine" in Mercury Special Data*

OIL PAN REMOVAL: On early cars with front Engine Steady Rest Support, turn crankshaft so No. 1 piston is at 12° ATDC, raise car, drain oil, remove radiator splash shield, stabilizer bar mounting bolt. *NOTE* - With Automatic transmission, remove cooler line clip oil pan screw, loosen cooler outlet pipe at left hand side of radiator and right hand side of transmission. Remove steady rest bracket to frame crossmember bolt, engine front support nuts and retainers, rear engine support crossmember, raise engine 4½" ONLY, drop oil pan down, position stabilizer between oil pan and cylinder block and remove oil pan.

PISTONS

Aluminum alloy Autothermic solid skirt type with three rings above pin *NOTE* - Pin is offset in piston

►*ORIGINAL BORE & PISTON SIZES:* Original bore range is (ECZ) 3 8000-3 8024", (ECU) 4 0000-4 0024" and TWO standard size pistons are used as noted below Piston "Grade" is marked on dome

Std. Piston Sizes

Engine	Grade "2"	Grade "6"
ECZ	3 7993-3 7996"	3 8005-3 8008"
ECU	3 9991-3 9994"	4 0003-4 0006"

Removal - Pistons and rods removed from above

Fitting New Pistons: Use ½" wide feeler gauge inserted between piston and cylinder wall at right angles to pin on thrust side Feeler thickness as follows·
New Piston in New Bore - 002" feeler 5-10 lbs pull
New Piston in Used Bore - 0025" feeler 5-10 lbs pull
Used Piston in New or Used Bore - 003" feeler 5-10 lbs pull

NOTE - Specifications cover both ECZ & ECU engines and supersede previous specifications

Replacement Pistons: (ECZ) standard 0225", 0325", 0425" oversize
(ECU) Standard 020", 030", 040" oversize

►*NOTE* - Standard furnished in two sizes *See "Original Bore & Piston Sizes" above*

Installing Pistons: Indentation or notch on top of piston must face front of engine *See Rod Installation*

PISTON PINS

Floating type with lock ring at each end
Diameter - (All) 9120 9123" **Length** - (ECZ) 3 016-3 030", (ECU) 3 162 3 176"
Clearance in Piston - 0001- 0003" Service max 0008"
Clearance in Rod - 0001 0003" (ECZ), 0002- 0004" (ECU) Service max 0008"
Replacement Pins: (All) Std (Green) 001" (Blue), 002" (Yellow) Oversize

PISTON RINGS

ECZ Engine

Ring	End Gap	Side Clearance
Compr. (1)	.012-.022"	①.0035"
Compr. (2)	.012-.022"	①.003"
Oil Contr.	.015-.062"②	-

ECU Engine

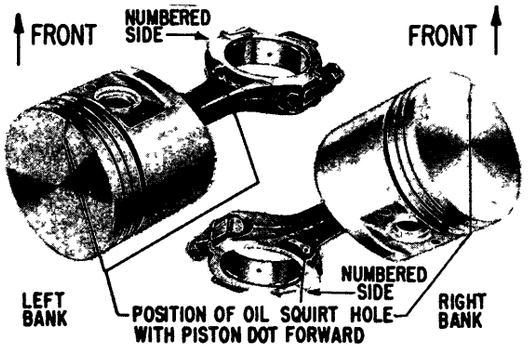
Ring	End Gap	Side Clearanc
Compr. (1 & 2)	.013-.030"	①.003"
Oil Contr.	.015-.062"②	-

① - Service maximum ② - On rails.

Replacement Rings: Standard and 020", 030", 040" oversize

CONNECTING RODS

Journal Diameter - Two (Standard) sizes as follows



Engine ①	Cod Blu	C de Red
ECZ	2 1880 2 1884"	2 1884-2 1888"
ECU	2 2482 2 2486"	2 2486-2 2490"

① - Use bearing with same Code Color

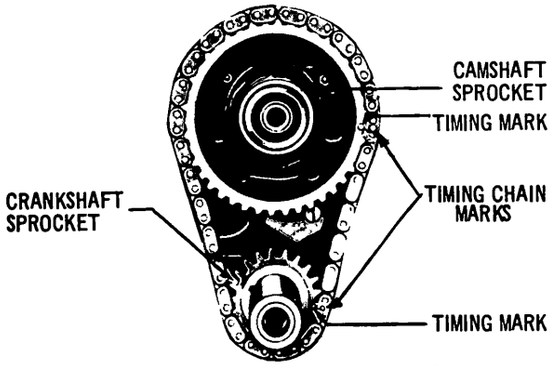
CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Bearings - Copper Lead Alloy with Steel back. Upper and lower halves interchangeable.
Clearance - .0007-.0036".
Side Clearance - .019" (ECZ), .017" (ECU).
Replacement Bearings: Two Standard Sizes (Coded Blue or Red), and .010", .020", .030" (ECZ & ECU) plus .040" (ECU) undersize.
Installing Rods: Assemble rods to piston so indentation embossed on piston head will face front of engine with numbered side of rod to right side of engine (right bank), or to left side of engine (left bank). When installing assemblies in engine, numbers on rods and caps must be together and toward outside of block.

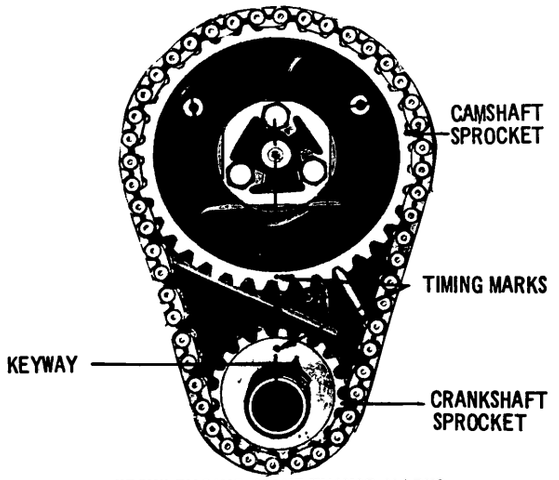
PISTON & ROD ASSEMBLIES

CRANKSHAFT



Journal Diameters: 2.6235-2.6239" (Color Coded Blue), 2.6239-2.6243" (Color Coded Red).
Bearings - Copper Lead Alloy, with steel back.
Clearance - .0008-.0026". Service max. .0036".
Replacement Bearings: Two Standard Sizes (Coded Blue or Red), and .010", .020" .030" (ECZ & ECU) plus .040" (ECU) undersize. *NOTE* - Bearings are different on the two engines.
End Thrust: Taken by No. 3 main bearing.
Thrust Bearing Alignment - *See "Crankshaft & Main Bearings" in Mercury Special Data.*
End Play - .010" (ECZ), .012" (ECU).
Crankshaft Front Oil Seal Installation: *See "Engine Front Cover" in Mercury Special Data.*
Crankshaft Rear Oil Seal Installation: *See "Crankshaft & Main Bearings" in Mercury Special Data.*

CAMSHAFT



Journal Diameter - (ECZ) 1.9255-1.9265". (ECU) 2.1240-2.1247".
Clearance - .006" maximum (ECZ). .003" (ECU).
End Thrust (ECZ): Taken by thrust plate between camshaft sprocket and shoulder of block.
End Thrust (ECU): Restrained by spring and piston located in front end of camshaft.

Replacement Camshaft Bearings: Reamed bearings furnished in Standard and .015" undersize. *NOTE* - ECZ and ECU bearings are different.

Camshaft Setting (ECZ): Timing is correct when timing marks on sprockets correspond with marks on chain when on drive side of chain.
Camshaft Setting (ECU): Timing is correct when timing marks on sprockets are adjacent and in line across shaft centers.

"ECZ" ENGINE VALVE TIMING MARKS

"ECU" ENGINE VALVE TIMING MARKS

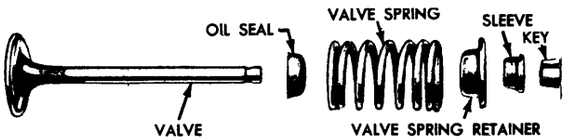
Camshaft Removal & Installation: *See "Camshaft & Bearings" in Mercury Special Data.*
Timing Chain Cover Seal Installation (Crankshaft Front Oil Seal): *See "Engine Front Cover" in Mercury Special Data.*

VALVES

Tappet Clearance: (ECZ) - .020" Intake & Exhaust (Cold), .019" Intake & Exhaust (Hot). Recheck Cold setting after engine warmed up.
(ECU) - None in service, hydraulic lifters.
Valve Tappet Adjustment - *See "Valve System" in Mercury Special Data.*

ECZ Engine

Valve	Head Diameter	① Stem Diameter
Intake	1.920-1.930"	.3416-.3423"
Exhaust	1.505-1.515"	.3403-.3410"



Valve	Seat Angle	② Lift	Stem Clearance
Intake	45°	.272"	③ .001-.002"
Exhaust	45°	.267"	④ .0023-.0037"

ECU Engine

Valve	Head Diameter	① Stem Diameter
Intake	2.000-2.010"	.3416-.3423"
Exhaust	1.630-1.640"	.3403-.3410"

Valve	Seat Angle	② Lift	Stem Clearance
Intake	45°	.261"	③ .001-.002"
Exhaust	45°	.256"	④ .0023-.0037"

① - Furnished with .003", .015", .030" OS stems.
② - Cam Lift (Service Minimum).
③ - Service maximum: .004" (ECZ), .0045" (ECU).
④ - Service maximum: .006" (ECZ), .0065" (ECU).
Valve Seat Width - 1/16-5/64" (Int.), 5/64-3/32"(Exh.).
Oversize Valve Stem Installation - *See "Valve System" in Mercury Special Data.*
Valve Servicing - *See "Valve System" in Mercury Special Data.*
Valve Stem Seals - "Umbrella" type seals used on all valves. Install seals with cupped side down on valve stem at guide boss on head.

VALVE ASSEMBLY

Valve Springs: Free Length - 2.09" (ECZ), 2.12" (ECU).

Valve Spring Specifications

ECZ Engine

	Pressure	Length
Closed	71-79 lbs.	1.780"
Open	161-177 lbs.	1.390"

ECU Engine

	Pressure	Length
Closed	60 lbs.	1.800"
Open	165 lbs.	1.380"

►*HIGH PERFORMANCE INNER VALVE SPRING (ECU):* Inner valve spring Part No. ECU-66515-A available for high speed operation, and requires use of Valve Spring Retainer No. ECZ-6514-A. Outside of valve guide is machined for usage of inner valve spring. *NOTE* - Free length 1.875". **Specifications** - 28-32 lbs. pressure at 1.62", 78-82 lbs. pressure at 1.17".
Valve Guides: Integral with cylinder head. When stem-to-guide clearance exceeds maximum (.004" Intake, .005" Exhaust), ream guides and install oversize valves. *See "Valve System" in Mercury Special Data.*
Valve Lifters: (ECZ) Mushroom type. Removed from below with camshaft removed.
Diameter - .4989-.4995".
Valve Lifters: (ECU) Hydraulic, barrel type. Lifters can be removed from above with camshaft in engine.
Diameter - .8740-.8745". **Clearance in Block** - .0025" maximum.
Lifter Overhaul (ECU) - *See "Valve System" in Mercury Special Data.*

Rock r Arm Ass mbly: S *"Valv Syst m" in Mercury Special Data*

►*ROCKER ARM COVER INTERFERENCE CORRECTION (ECZ Eng) S "Valve System" in Mercury Sp cial Data*

VALVE TIMING

S *"Camshaft S tting" under CAMSHAFT above*

►*VALVE TIMING NOTE.* Following valve opening and closing points are with cam lift as indicated

Valv Timing (ECZ)

Intake Valv - Open 18° ℂ BTDC Close 58° ℂ ALDC
Exhaust Valv - Open 66° ℂ BLDC Close 10° ℂ ATDC

Valv Timing (ECU)

Intak Valv - Open 18° ⑪ BTDC Close 72° ⑤ ALDC
Exhaust Valv - Open 59° ⑪ BLDC Close 31° ⑤ ATDC
Camlift - ℂ 015", ℂ 013", ⑤ 016", ⑪, 002", ⑤ 004"
Valve Timing Ch ck - With No 1 piston in firing position (No 1 intake valve closed), back off adjusting screw and push rocker arm to one side Mount dial indicator directly above No 1 intake valve pushrod with indicating button in pushrod socket set dial indicator at zero Place a quadrant on crankshaft pulley Rotate engine to point where dial indicator registers camlift as listed in Valve Timing table above Quadrant reading should agree with valve timing figure in table

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Mercury Special Data.*

Crankcas Capacity: 5 qts (refill) Add 1 quart when filter changed

N rmal Oil Pr ssur : 45-50 lbs at 2000 RPM (Hot)

Oil Pr ssur Indicat r: Light on instrument panel Light is on when oil pressure is low

Oil Pr ssur Switch - Mercury No FDA-9278-A
See "Oil Pressure Gaug s" in Miscellaneous Section

Oil Pump: Rotor type Located at left side of engine crankcase and driven by distributor drive gear

Pump Ov rhaul - *S e "Oiling System" in Mercury Special Data*

Oil Filt r: Full-flow type early cars disposable type late

►*OIL FILTER PRODUCTION CHANGE* Disposable oil filter used on later cars and can be installed to replace previous type full-flow filter on earlier cars For disposable filter installation see *"Oiling System" in Mercury Special Data*

Crankcase V ntilation: Filter in oil filler cap (Inlet) filter screen in road draft tube (Outlet) Clean and oil every 2 000 miles or more often in dusty areas

COOLING

Wat r Capacity: 19 quarts Add 1 quart with heater

Pressure Valve Mercury No LA-8100-A (12-15 lbs) Radiator filler cap

Thermostat (ECZ) Mercury No B4A-8575 A (157-162°F) Std , B4A 8575 B (177 182°F) High Temperature
(ECU) Mercury No B7Q-8575-A (157 162°F) Std , B4Q-8575 B (168 173°F) High Temperature

►*THERMOSTAT INSTALLATION NOTE* Install thermostat with the word "TOP" up and toward front of engine to prevent a retarding of flow of coolant

►*RADIATOR NOTE* Two types of radiator used Standard and Extra Cooling All air conditioned cars use Extra Cooling *NOTE* - Minimum clearance between fan and radiator core is 13/16" or 17/32" between fan and top tank

►*POWER BOOSTER FAN NOTE* Power Booster Fan is standard on some ECZ engines *See "POWER BOOSTER FAN" under "Cooling" in Mercury Special Data*

Water Pump: Packless, sealed ball bearing type
See "Water Pumps" in Mercury Special Data.

Temperature Gauge: King-Seeley Electric "CV" (Constant Voltage) type with voltage regulator No FEL-10804-A
Dash Unit - Ford No FEK-10883-E
Engine Unit - Mercury No FEG-10884-B
See "Temperature Gauges" in Miscellaneous Section

CLUTCH

Borg & Beck Model 10.5A6 (Std.), Long Model 11CF (Heavy Duty). Single plate, dry disc type

Cover Assembly	Mercury No.
Borg & Beck No 361378	MG-7563-A
Long No 265126	B6A-7563-A

See "Borg & Beck" and "Long" in Clutch Section

Clutch Disc	Mercury No.
Borg & Beck No 382374	MG-7550-B
Long No 287226	81T-7550-A

►*CLUTCH PEDAL AREA NOISE CORRECTION·* Install pedal assist spring with hook (on long stem of spring opening) attached to rivet of clutch pedal lever with opening **upward** This position will eliminate spring to cowl panel interference

Pedal Adjustment: If pedal free travel is not 1 to 1¼", loosen clutch pedal release rod locknut (lower end) and turn adjusting nut for correct free travel, tighten locknut

Removal: Remove transmission (see Transmission Removal below) and disengage clutch pedal retracting spring and release rod from clutch release lever Disengage equalizer bar tension spring and remove two capscrews retaining equalizer bracket assembly to flywheel housing Remove flywheel housing Mark position of flywheel and pressure plate so parts may be installed in original position Compress clutch pressure plate assembly with Tool 7563 Remove capscrews pressure plate and disc

SYNCHRO-MESH TRANSMISSION

Own Helical gear constant mesh synchro-mesh (second and high) sliding gear (low and reverse)
See "Mercury Synchro-mesh" in Transmission Section

Transmission Control: *See "Transmission Controls" in Transmission Section*

Removal· If equipped with overdrive remove kickdown switch retainer nut and push switch through floor Raise car and drain transmission On overdrive cars remove governor solenoid, and control cable Disconnect speedometer cable and remove speedometer drive gear Remove transmission shift rods at transmission Remove bolts retaining rear universal joint to companion flange and remove drive shaft Support rear of engine and remove the detachable cross-member of the frame Remove two top capscrews retaining transmission to flywheel housing and install a couple of studs to act as guide pins Remove lower capscrews and slide transmission to rear as far as possible and lower front end Remove from below car

►*SINGLE EXHAUST SYSTEM NOTE.* When removing transmission, it will be necessary to remove nuts that secure muffler inlet and exhaust pipes to exhaust manifold, and to remove manifold outlet pipe from mounting bracket at rear of manifold and move exhaust system away from working area

OVERDRIVE

Warner Model AS1-R10F. Solenoid operated type, with governor control and throttle operated kickdown Lockout Switch not used on this model
See "Warner R10 Overdrive" in Transmission Section

Removal: Same as for Synchro-mesh Transmission (above) after disconnecting control cable and wiring

MERC-O-MATIC TRANSMISSION

Torque converter and three speed automatic transmission with hydraulic control and mechanical parking lock
See "Fordomatic & Mercomatic" in Transmission S c tion

►*NO FORCED DOWNSHIFT CORRECTION (Early Cars)* Install new adjustable type accelerator rod No MG-9784-B which entered production Nov. 1956 For adjustment, *See "Fordomatic & Mercomatic" in Transmission Section*

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Fordomatic & Mercomatic" in Transmission Section*

►*TESTING & TROUBLE SHOOTING: See "Fordomatic & Mercomatic" in Transmission Section*

Lubrication - Check fluid level every 2,000 miles drain and refill every 16,000 miles. Use only Automatic Transmission Fluid Type "A"

Checking Fluid Level - Bring transmission to operating temperature by running engine with selector lever in Neutral position Move selector lever through all ranges to assure fluid distribution, then place in (P) "Park" position for checking fluid level Maintain level at "Full" mark on dipstck

Throttle Linkage Adjustment: *See CARBURETOR abov*

Manual Selector & Park Release Cable Adjustment: *S "Mercury Mercomatic Transmission Keyboard Control" in Transmission Section*

►*OTHER MERCOMATIC DATA: See "Fordomatic & Mercomatic Transmission" in Transmission Section*

UNIVERSALS

Spicer. One used at each end of drive shaft

PROPELLER SHAFT

►*DRIVE LINE THUMP CORRFCTION* Caused by lubrication build-up in front universal joint Correct by tapping and installing relief valve (5-25 lbs) using 1/8" pipe tap to cut threads in expansion plug of front universal slip joint DO NOT cut threads too deeply in plug as valve will interfere with output shaft

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

REAR AXLE

Own. New separate carrier type with straddle-mounted pinion, hypoid gear and Hotchkiss drive.
See "Ford & Mercury" in Rear Axle Section.

►*REAR AXLE LUBRICANT LEAK CORRECTION:* **Caused by leak around housing bolt threads. To correct, replace early type carrier bolts (No. 0A-44044-A) with new bolt (AJ-44044-A) with larger head and apply non-hardening sealer to threads before installation.**

Axle Ratios

Model	Standard	Optional
S-M (Exc.Sta.Wgn.)	3 70-1(37-10)	3 89-1(35 - 9)
S-M(Sta.Wgn.)	3 89-1(35 - 9)	3 70-1(37-10)
O D (Exc.Sta.Wgn.)	3 89-1(35 - 9)	
O D (Sta.Wgn.)	3.89-1(35 - 9)	3 70-1(37-10)
Mercomatic	2 91-1(32-11)	
Mercomatic(Sta.Wgn.)	3 22-1(29 - 9)	2 91-1(32-11)

NOTE - 2 91-1(32-11) supersedes 3 22-1(29-9) with ECU Engine.

Backlash - 004- 009"

Axle Shaft Removal: Remove wheel and brake drum Remove axle shaft retainer locking type nuts (work through opening in axle shaft flange) Use Puller and pull shaft (do not disturb brake backing plate or damage wheel bearing oil seal). Replace one nut to secure brake backing plate

Carrier Assembly Removal: *NOTE* - Pinion carrier assembly can be removed separately without disturbing differential carrier by disconnecting rear universal joint at companion flange, and removing five bolts that attach pinion carrier assembly to differential carrier housing. With rear universal joint disconnected, axle shafts removed (see above) remove differential carrier housing to rear axle housing bolts and lift out carrier assembly.

Wheel Bearing Adjustment: None required.

SHOCK ABSORBERS

Direct acting, non-adjustable. Service by replacement.

Front Shock Absorber

Model	Standard	Heavy Duty
All(Exc.Sta.Wgn.)	.MG 18077-R	MG 18077-Y
Sta. Wgn.	MG 18077-S	MG 18077-AA

Rear Shock Absorber

Model	Standard	Heavy Duty
All(Exc.Sta.Wgn.)	MG 18097-K	MG 18097-R
Sta. Wgn.	MG 18097-M	MG 18097-N

FRONT SUSPENSION

Independent. "Ball-Joint" suspension with direct acting shock absorbers mounted within front coil springs. *See "Ford & Mercury (Ball-Joint)" in Suspension & Wheel Alignment Section.*

Steering Axis Inclination: 7° at 0 Camber. Not adjustable.

►*CASTER & CAMBER ADJUSTMENT NOTE:* New mounting of upper control arm inner shaft (bolted to outer surface of frame bracket) changes suspension alignment procedure as follows:

Cast r - Adding 1/16" shim at front bolt changes caster Pos. ½°, adding 1 16" shim at rear bolt changes caster Neg. ½°.

Camber - Adding 1 16" shim at both front and rear bolts will change camber Pos. ¼°, removing 1/16" shim at both bolts will change camber Neg. ¼°.

Caster - 0° to Neg. 1½°. Maximum variation between wheels ½°.

Camber - 0° to Pos. ¾°. Maximum variation between wheels ¼°.

Toe-In - 3/16-5/16". Supersedes earlier data.

Toe-out on Turns - Inner wheel 20°. Outer wheel 17°6' (Manual Steering), 17°20' (Power Steering).

STEERING

►*STEERING GEAR BIND CORRECTION (Early Cars):* Install Steering Gear to Frame Spacers, Part No. MG-3566-A, as necessary to eliminate any bind in worm shaft and steering column.

Manual: Saginaw. Recirculating Ball Nut type.
See "Saginaw Worm & Nut" in Steering Section.

Power Steering: Bendix (Ford & Mercury) Linkage type. Used in conjunction with standard type steering gear. *See "Bendix Linkage Type (Ford & Mercury)" in Steering Section.*

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Saginaw Worm & Nut" in Steering Section.*

Steering Gear Removal: *See "Saginaw Worm & Nut" in Steering Section.*

BRAKES

►*BRAKE DESIGN NOTE:* Front brake anchor pin (fixed anchor type) is mounted on wheel spindle independently of backing plate (wheel cylinder mounted on anchor pin)

►*REAR WHEEL BRAKE TUBE FITTING CAUTION:* Use new brake tube fitting Part No. MG-2074-B (Exc. Sta. Wgn.), MG-2074-A (Sta. Wgn.) to provide clearance between rear wheel brake hose and shock absorber.

Bendix Hydraulic, Single Anchor (Without eccentric and with fixed anchor pins) **Early type** requires hand adjustment, **Later type** has automatic adjustment.
See "Ford, Lincoln, Mercury Bendix" or "Mercury Bendix (With Automatic Adjuster)" in Brake Section.

Drum Diameter - 11" front and rear.

Wheel Cylinder Diameter - 1 1 8" Front, 15 16" Rear.

Lining - Molded type, riveted to shoe.

Width - 3 0" (ECU) 2 5" (ECZ) front and rear.

Braking Power - 55 5% front, 44 5% rear.

Clearance - (Hand Adjusted) Expand shoes until wheel is locked. Back off adjusting screw 12-14 clicks until wheel turns free.

(Automatic Adjusted) For initial adjustment use Tool No 2081 to expand shoes until wheel is locked Hold adjusting lever away from adjusting screw (use narrow screwdriver through hole in backing plate), and back off adjusting screw until wheel turns free then one more stroke of tool (Approximately 13 strokes total). Wheel should turn free.

Brak Pedal Fr Play Adjustm nt: 1/4-7/16". If play not correct after adjustment, loosen locknut on the eccentric bolt attaching brake pedal to master cylinder pushrod and rotate eccentric bolt for desired clearance.

Standard Master Cylinder: Located on engine side of firewall.

Checking Fluid - Maintain fluid level to within ¼" of top of reservoir.

Removal - Disconnect brake line from master cylinder and depress brake pedal a few times to force out fluid. Disconnect wires leading to stop light switch, and remove eccentric bolt attaching master cylinder pushrod to brake pedal. Remove capscrews and lock washers attaching master cylinder to firewall.

Power Brakes: Bendix Power Unit (new type with hydraulic reaction valve rod). Combination vacuum power unit and master cylinder. Unit mounted on engine side of firewall and replaces regular master cylinder.
See "Bendix Power Unit" in Brake Section.

►*POWER BRAKE AUTOMATIC APPLICATION OR FAILURE TO RELEASE CORRECTION:* **Caused by incorrect installation of brake booster mounting bracket. S** *"Bendix Power Unit" in Brak S ction.*

Checking Fluid Level - Same as for regular master cylinder.

Removal of Power Unit - Release pushrod from lever assembly, master cylinder outlet fitting bolt from master cylinder. *NOTE* - DO NOT remove stop light switch or hose assembly from outlet fitting. Leave outlet fitting in master cylinder. Remove manifold vacuum hose from unit and reserve tank hose from valve fitting. Remove mounting screws and unit from bracket on dash panel.

MISC. MECHANICAL

Windshield Wipers: Vacuum, Cable & Tensioner type.
See "Windshield Wipers" in Miscellaneous Section.

Power Window Regulators: Electric. Reversible motor in each window. Controlled by door switch and master control switch. *NOTE* - Rear Window on Turnpike Cruiser and Tall Gate Window on some Station Wagons also power operated. *See "Power Window Regulators" in Miscellaneous Section*

Power Top Control: Electric-Hydraulic with reversible pump motor. *See "Power Top Controls" in Misc. Section.*

Power Seat Adjusters: "4-Way" Electric Screw and Jack type with single electric motor driving screw jack. *See "Power Seat Adjusters" in Miscellaneous Section.*

Seat-O-Matic Control - Automatic position adjustment controlled by switch on instrument panel.
See "Seat-O-Matic Power Seat Adjusters" in Miscellaneous Section.

Air Conditioning: Combination Air Conditioning-Heater System, *See "Mercury Air Conditioning" in Misc. Sect.*

►*AIR SUSPENSION CAR CAUTION: B for jacking, h isting, t wing r working und r car, se SERVICE CAUTIONS nd TOWING instructions in "Mercury Air Susp nsion" in Suspension & Wh el Alignment S ction.*

MODEL IDENTIFICATION

SERIAL NUMBER: Stamped on patent plate on left front body pillar. *NOTE* - Number (example below) includes identification data.

① ② ③ ④ ⑤
* M 8 W B 500001 *

① - Engine M 383 cu. in. K 430 cu. in.
② - Year 8 (1958).
③ - Assy. Plant W Wayne. J Los Angeles. T Metuchen. Z St. Louis. S Somerville.
④ - Body type.
⑤ - Beginning engine number.
NOTE - Asterisk used to prevent tampering with number.

►*ENGINE IDENTIFICATION NOTE:* Four engines used and are identified by Code No. on fiber tag located at lower right front cover bolt as follows:

383 cu. in.(L w T rqu) – No. 27, 29, 32, 51, 59, 411, 412, 413, 421.
383 cu. in. (High T rque) - No. 31, 49, 53, 57, 69, 416, 419.
430 cu. in. - No. 49, 56, 415, 417.

►*383" ENGINE IDENTIFICATION NOTE:* Engines with Circle "E" on date code pad (See below) have .020" lower head gasket surface and require **two** head gaskets.

►*ENGINE DATE CODE NOTE:* Engine Date Code stamped on block in front of left cylinder head. Used in manufacture and for identification. Not used for licensing.

TUNE-UP

►*LIGHT LOAD SPARK KNOCK CORRECTION:* Light spark knock occuring on "drive-away" under light load condition can be corrected by modifying distributor and resetting ignition timing. *See Distributor & Ignition Timing specificati ns below.*

►*HIGH IDLE SPEED CORRECTION (Ford Carb.):* High idle speed caused by accelerator rod clip interference at wide open throttle can be corrected by grinding or filing off throttle lever so edge of lever is concentric with hole. Lever should have not more than 1/8" radius greater than hole.

►*ENGINE DETONATION NOTE:* Fuel detonation - at cranking speed is normal with high compression ratio - at idle speed is result of incorrect distributor ignition timing. Excess fuel due to too high idle speed will cause engine to heat and run after ignition turned off.

COMPRESSION PRESSURE: 170 lbs. **(312),** 190 lbs. ± 10 lbs. **(Oth rs)** at cranking speed. Variable limit between cylinders 10 lbs.

VACUUM READING: 19-20" **(312),** 17-18" **(Others)** at idling speed.

VALVE TAPPET CLEARANCE: (312): .020" Cold, .019" Hot, intake and exhaust. **Tappet Adjustment** - Se *"Valve System" in Mercury Special Data.*
(383 & 430) None in Service. Hydraulic lifters.

MANIFOLD HEAT CONTROL VALVE: (312) - Butterfly type valve mounted between right hand manifold and exhaust pipe (Single and Dual exhaust systems). When installing, make certain counterweight is toward right front.

►*DUAL EXHAUST NOTE:* When valve closed, all exhaust gases are discharged through left hand exhaust pipe.

MANIFOLD HEAT CONTROL VALVE: (Others) - Water jacketed intake manifold with thermostat controlled circulationl eliminating need for heat valve. *See COOLING for complete data.*

►*DUAL EXHAUST NOTE:* Special cross-over type tail pipes used with air suspension.

CARBURETOR AIR INTAKE DUCT ASSEMBLY: Carburetor air intake duct with thermostatically controlled valve. Provides warm air for cold engine (below 85°F), or cool air for warm engine (above 105°). *See "Fuel System Notes" in Mercury Special Data.*

IGNITION

FIRING ORDER: (312) 1-5-4-8-6-3-7-2. **(Others)** 1-5-4-2-6-3-7-8.
Cylinders - RIGHT BANK 1-2-3-4. LEFT BANK 5-6-7-8.

SPARK PLUG GAP: .032-.036". All engines.
Spark Plug - Champion F-14-Y **(312),** F-11-Y **(Others).** Tapered seat. No gasket required. Torque to 15-20 ft.lbs.

►*SPARK PLUG WIRE ROUTING CAUTION:* No. 7 and No. 8 spark plug wires should be separated as far as is practical in their routing through the bracket and separator to prevent a "Cross-firing" condition.

►*SPARK PLUG REMOVAL CAUTION:* Grasp terminal boot above spark plug and use rotating and pulling motion to remove terminal from spark plug to save damaging radio resistance built into cable.

COIL: Mercury B6A-12029-B. All engines.
Ignition Current - 2.5 amps. idling, 4.5 amps. stopped.
Resistor - B8E-12250-A. 1.3-1.4 ohms at 75°F.

DISTRIBUTORS: Used as follows:

Engine	Mercury No.
312	FEW-12127-F
383, 430 Early	FEW-12127-A
383, 430 Late	FEW-12127-D
383, 430 Later	FEW-12127-E

►*LIGHT LOAD SPARK KNOCK CORRECTION (FEW-12127-A & D Distributors):* These distributors should be modified by installation of parts listed below and type designation changed to "E" *NOTE: Advance performance and Ignition Timing for these modified distributors will be same as FEW-12127-E data below.*
FEW-12127-A Modification: Install Primary Spring No. B8A-12192-A, Secondary Spring No. B8A-12191-A, Vacuum Spring No. B7A-12225-B, and Vacuum Stop FEW-12202-B.
FEW-12127-D Modification: Install Vacuum Stop FEW-12202-B

►*DETONATION CORRECTION (DUE TO USE OF LOW OCTANE FUEL):* Detonation which is caused by the use of low octane fuel (below 98 Octane), can be corrected by installation of Modification Kit, Part No. MJK-12127-B (FEW-12127-A Distributor), MJK-12127-C (FEW-12127-D Distributor), MJK-12127-D (FEW-12127-E Distributor). Each kit contains necessary Automatic Advance springs, Vacuum Control springs, and Vacuum Control stops. After installation of springs, recalibrate distributor. *See "Automatic Advance (Modified Distributor)".* (Use Vacuum Advance indicated for FEW-12127-E). *NOTE* - If a slight knock is noticeable after modification, retard initial timing to a minimum of 3° BTDC, regardless of transmission being used. DO NOT retard under 3° BTDC for any reason. If the above changes do not decrease detonation to a satisfactory point, install a 160° thermostat (Part No. EDG-8575-G) in engine manifold. After modification, stamp an "M" following number on distributor model plate.

Condenser - Mercury B7A-12300-A. **Capacity** .21-.25 mfd.
Contact Point Set - Mercury B7A-12171-A.
Breaker Gap - .014-.016".
Cam Angle - 26-28½°.
Breaker Arm Spring Tension - 17-20 ozs.
Rotation - Counterclockwise viewed from above.

Automatic Advance - FEW-12127-A

Degrees	Distr.	RPM	Degrees	Eng.	RPM
Start		300	0		600

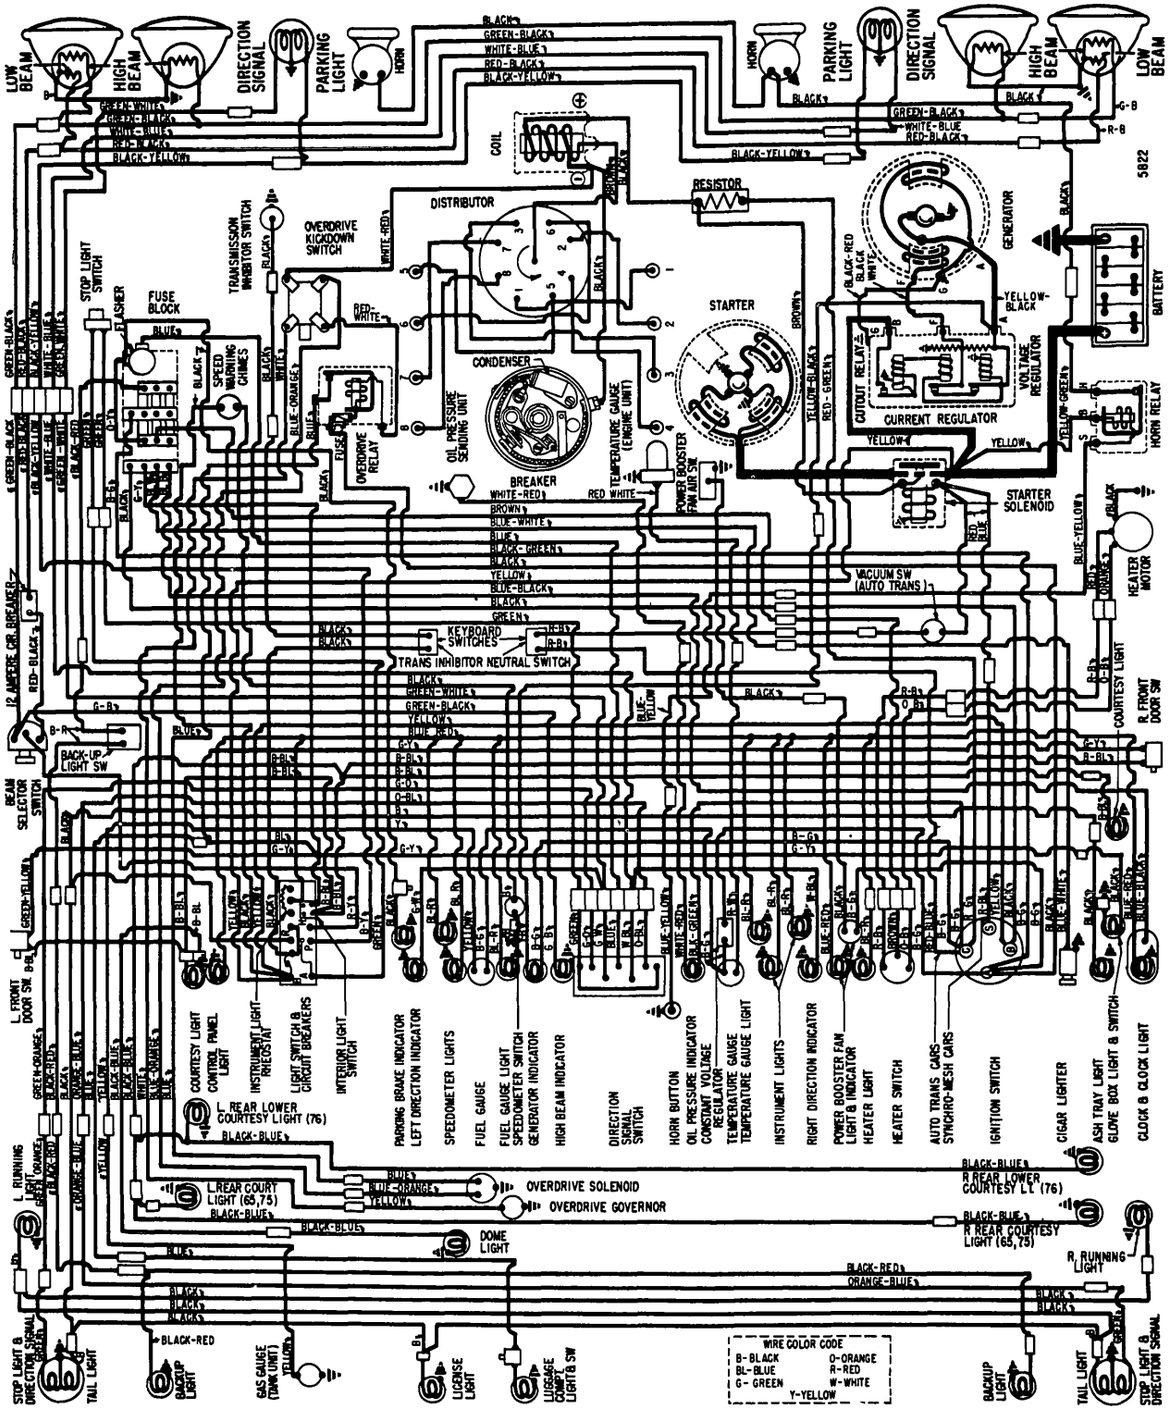
10½	21	Max. Limit

Ⓒ - With Test Machine speed of 200 RPM.

③ - Test Machine set to 0° at 1000 RPM and 0" vacuum.

►*DISTRIBUTOR REMOVAL CAUTION:* Intermediate drive shaft (hex sided oil-vacuum pump drive shaft) is retained by internal toothed lockwasher at upper end (lower washer also used on early cars) which should prevent shaft from disengaging when distributor removed. If shaft becomes disengaged and drops into oil pan when distributor removed, make certain that lockwasher installed on shaft to prevent reoccurance.

►*DISTRIBUTOR REMOVAL NOTE:* Engine front cover capscrew nearest distributor may interfere with distributor removal on some cars. Loosen capscrew to remove distributor or replace this screw with special capscrew, No. 2050-S8 (5/16"-18 x 2").



IGNITION TIMING

►*DISTRIBUTOR - INTAKE MANIFOLD INTERFERENCE CORRECTION:* Interference between distributor terminal housing clamp and intake manifold may cause timing setting difficulty. Correct by grinding off intake manifold.

►*IGNITION TIMING CAUTION: See distributor modification above for "LIGHT LOAD SPARK KNOCK CORRECTION". Ignition timing depends on model of distributor used and type of transmission. See table below.*

Engine	Trans.	Distributor	Std. Setting
312	Std. & O.D.	FEW-12127-F	3-7° BTDC
312	Automatic	FEW-12127-F	6-11° BTDC
383	Std. & O.D.	FEW-12127-A	5-7° BTDC
383	Automatic	FEW-12127-A	10-11° BTDC
383, 430	Std. & O.D.	FEW-12127-D,E	4-6° BTDC
383, 430	Automatic	FEW-12127-D,E	7-8° BTDC

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

►*IGNITION TIMING NOTE: On cars with modifi d distributors (se "D tonation Corr ction" abov), s t ignition timing to 3-6° BTDC. DO NOT set less than 3° BTDC.*

Timing Mark - Crankshaft dampener is marked at TDC, 10° BTDC, 20° BTDC, with scribed marks at 2° increments between these points. Align correct mark with pointer on timing chain cover.

CARBURETOR

►*CARBURETOR APPLICATION: Holley 2-Barrel or 4-Barr l, or Ford 4-Barr l Carburetors used. Carburetor for ach engin and typ of transmission listed in table b low.*

② - Not serviced. Use EDG-9510-E or 5750891 less dash pot.

③ - Use 5750891 less dashpot. Replaces EDG-9510-C.

⑩ - Replaces EDG-9510-E.

⑤ - Replaces EDG-9510-D.

⑥ - Replaces EDJ-9510-A.

Throttl Linkag Adjustm nts (Auto. Trans. Cars): Set hand brake firmly, install tachometer and pressure gauge then proceed with adjustments as follows:

Idl Sp ed Adjustm nt - Adjust engine idle speed to 450 RPM (carburetor control shaft disconnected) with engine at operating temperature, transmission in DRIVE (Merc-O-Matic) CRUISING RANGE (Multi-Drive) and throttle lever against hot idle screw.

Carbur t r t C ntr l Shaft Rod Adjustment - Adjust dashpot plunger, see "Dashpot Adjustment" below, then remove transmission control rod to transmission control shaft clevis pin and insert Gauge Pin Tool 77230-MB through control rod shaft and bracket. Adjust carburetor to control shaft rod so it enters freely in hole in carburetor, then lengthen rod one (1) full turn and install rod. Remove tool.

Acc l rat r Shaft t Transmission Shaft Control Rod Adjustm nt - Hold carburetor throttle rod in slow idle position, and transmission control shaft to transmission control shaft rod so clevis pin will enter hole in transmission control shaft to transmission rod freely, then lengthen accelerator shaft-to-transmission control shaft three (3) full turns (turn counterclockwise).

Transmission Control Shaft to Transmission Rod Adjustment - Apply hand brake, increase engine speed to 1000 RPM (transmission in DRIVE for Merc-O-Matic, CRUISING RANGE for Multi-Drive). Pressure gauge should read 80-85 lbs. *NOTE* - Increase pressure reading by increasing length of transmission control shaft to transmission rod (½ turn at a time) or reduce pressure by reducing length (½ turn at a time). *CAUTION - Make adjustments quickly and return to neutral position to avoid overheating transmission.* Install clevis pin with cotter pin and tighten locknut securely.

►*2-3 SLIPPAGE CORRECTION (Early Cars): See MERC-O-MATIC & MULTI-DRIVE TRANSMISSIONS below.*

Dashpot Adjustment: Loosen dashpot to dashpot bracket locknut, rotate dashpot to obtain .045-.064" clearance (312" Engine), .067" clearance using Tool 9545-B or T109-234 (383" & 430" Engines) between plunger and lever with dashpot plunger in to limit of travel and throttle lever closed. Retighten locknut.

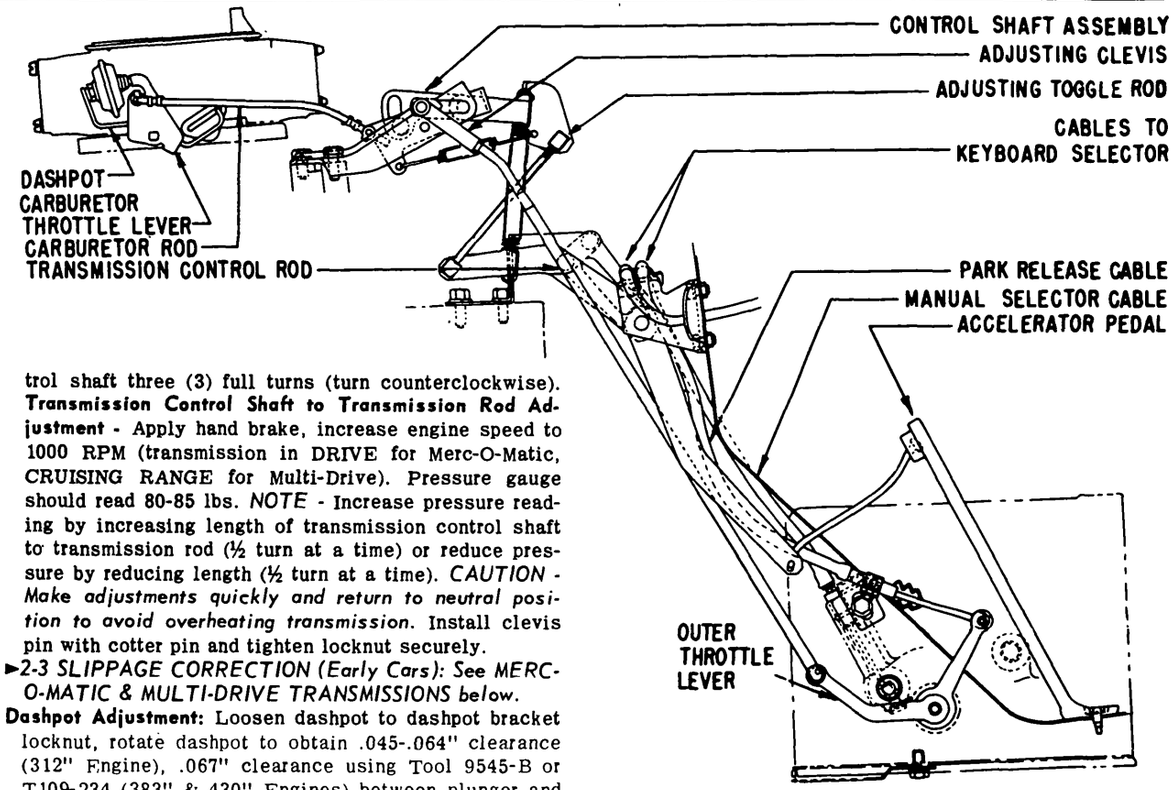
HOLLEY 2-BARREL

►*NOTE:* For model application see table above.

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyl. 2-3-5-8, LEFT barrel 1-4-6-7.*

Idle Setting - ¾-1¾ turns open. Turn idle mixture screw in until engine begins to run rough, then back off screw until engine begins to "roll" indicating too rich mixture. Turn screw in to obtain smoothest engine idle. Repeat on other screw. Final adjustment should favor "rich" side..

Idle Speed - 475-500 RPM (Std. & O.D.), 450 RPM (Merc-O-Matic in DRIVE) or (Multi-Drive in CRUISING RANGE). Adjust as necessary to secure drive range RPM.



Fuel Level - 3/32" below to 1/32" above lower edge of sight plug opening.

Accelerating Pump: Install screw in lower hole (No. 2) of pump cam for winter driving, or in upper hole (No. 1) for summer driving.

Fast Idle: Integral type operated by choke valve. No adjustment required.

Thr ttle Linkage Adjustment: *S CARBURETOR ab v .*

►*OTHER DATA: S "H ll y 2 & 4-Barr l Car bur tors" in Carbur tion S ction.*

MERCURY MERCOMATIC THROTTLE LINKAGE

FORD & HOLLEY 4-BARREL

►*NOTE:* For model application see table above.

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyl. 1-4-6-7, LEFT barrels Cyl. 2-3-5-8.*

►*ENGINE STALLING (AFTER A NORMAL COLD START) CORRECTION:* This may be due to incorrect choke linkage adjustment. *See "Holley 2 & 4-Barrel Carburetors" in Carburetion Section.*

►*CARBURETOR VENT REWORK (To prevent spillage of fuel under flooding conditions): See "Holley 2 & 4-Barrel Carburetors" in Carburetion Section.*

►*THROTTLE LEVER & SHAFT ASSEMBLY PRODUCTION CHANGE (383, 430):* Use reinforced throttle lever and shaft assembly to improve engine idle stability. Part No. 5751508 replaces EDB-9581-C (B7A-9581-B). Part No. B8A-9581-D replaces EDJ-9581-A. *NOTE* - Return spring must be under tension with inner tang on top of throttle body boss.

►*HIGH IDLE RPM CORRECTION:* Caused by interference between fast idle cam and choke operating rod retainer clip. *See "Holley 2 & 4-Barrel Carburetors" in Carburetion Section.*

►*SLOW OPENING CHOKE CORRECTION:* Caused by binding choke or heat warped stove plate cover. *See*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

"Holl y2 & 4-Barr l Carbur tors" in Carbur tion S ction.

►*FORD 4-BARREL FLOODING CORRECTION:* Caused by damaged inlet needle-to-lever connector. Repair or replace connector.

Idle Setting - Both screws (primary side only) 1½ turns open.

Idle Speed - 475-500 RPM (Std. & O.D.), 450 RPM (Merc-O-Matic in DRIVE) or (Multi-Drive in CRUISING RANGE). Adjust as necessary to secure driving range RPM.

Accelerating Pump: Place accelerating pump rod in No. 2 hole (Summer) No. 3 hole (Winter) 383 Low Torque; in No. 1 hole (Summer) No. 4 hole (Winter) 383 High Torque when equipped with Ford 4-Barrel Carb. Place accelerating pump rod in No. 1 hole (Summer) No. 2 hole (Winter) when equipped with Holley 4-Barrel Carb. Holes marked from shaft outward.

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Ford" or "Holley" 4-Barrel Carburetors in Carburetion Section.*

HOLLEY 2-BARREL
(Triple Two-Barrel Compound)

	Mercury No.
Front	5750613
Center	5750614
Rear	5750613

For complete adjustment data on these carburetors (including linkage adjustment to insure correct synchronization), *see "Mercury Triple Two-Barrel Compound" Carburetors in Carburetion Section.*

CARB. EQUIPMENT

Fuel Pump: Mercury No. ECZ-9350-B (312), Fuel & Vacuum; No. EDG-9350-B (383, 430) Fuel only.

Pressure - 4.0-6.5 lbs. (312), 4.5-6.5 lbs. (383, 430). *See "Fuel Pumps" in Carburetion Section.*

►*FUEL PUMP PUSHROD & CAMSHAFT ECCENTRIC PRODUCTION CHANGE & NON-INTERCHANGEABILITY CAUTION (383" & 430" Eng.):* Two pushrods and eccentrics used as follows: Pushrods, EDG-9400-A (cast bronze tip) and 5750261 (oilite bronze tip with groove 1/32" wide x .020" deep opposite tip). Eccentrics, EDG-6287-A (chrome plated) and 5750260 (plain finish). Use pushrod, EDG-9400-A and eccentric EDG-6287-A on engines date coded 476U to 479D. On engines date coded 479-E or later (except Mercury 479N) use pushrod 5750261 and either eccentric. *CAUTION - DO NOT use plain finish eccentric with cast bronze tip pushrod.*

Gasoline Gauge: King-Seeley Electric "CV" (Constant Voltage type with voltage regulator No. FEK-10804-A.

Dash Unit - Mercury No. FEW-9280-A (Std.). Use FEW-9280-C with fuel warning signal.

Tank Unit - Mercury No. B7A-9275-F (Exc. Sta. Wgn.), B7A-9275-G (Sta. Wgn.). Use FEY-9275-A with fuel warning signal.

See "Fu l Gaug s" in Carbur ti n S ction.

Air Cl an r: DRY FILTER ELEMENT TYPE. Clean every 2,000 miles, replace element every 20,000 miles.

►*CLEANING CAUTION:* Clean filter element by tapping and shaking to remove dirt particles. DO NOT wash element in solvent or other liquids and DO NOT oil or lubricate.

►*AIR CLEANER INSTALLATION CAUTION (312 Eng.):* Word "FRONT" should be toward front of engine on all air cleaner installations except when recess in bottom of cleaner will not clear carburetor linkage when cleaner placed on carburetor. In this case, position notch in cleaner on lug of carburetor, disregarding word "FRONT". Air inlet opening will be to right side of engine. Block out old word "FRONT" and paint "FRONT" in proper location. New air cleaner body Part No. PB8M-9609-A has "FRONT" in proper location.

BATTERY

Std. - Mercury No. MGK-10655-A. 12 volt, 11 plate, 55 ampere hour capacity.

Auto. Trans. - Mercury No. MHK-10655-A. 12 volt, 13 plate, 65 ampere hour capacity.

Air Cond. - Mercury No. MJK-10655-B. 12 volt, 17 plate, 72 ampere hour capacity. All at 20 hour rate.

STARTER

►*ENGINE STARTS AUTOMATICALLY WHEN IGNITION TURNED ON OR WITH TRANSMISSION IN OTHER THAN NEUTRAL POSITION CORRECTION: See "Mercury Keyboard Transmission Control" in Transmission Section.*

Mercury No. B6A-11002-A or FAY-11002-A. Armature - B6A-11005-B.

►*STARTER NOISE CORRECTION:* Caused by insufficient clearance between starter and cylinder block at top mounting lug which "cocks" starter when tightened. Grind off top mounting lug to correct.

Drive - Mercury No. 1CM-11350-C. Bendix "Folo-Thru".

Rotation - Counterclockwise at commutator end.

Brush Spring Tension - 48-56 ozs.

Cranking Speed - 150-180 RPM, 155-190 amps.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	4500	12	80
15.5 ft. lbs.	0	5.0	550

Starting Switch: (Synchro-mesh Trans.) - Relay No. B6A-11450-A, controlled by Ignition & Starter Switch No. B5A-11572-A.

(Auto. Trans.) - Relay Part No. B6A-11450-A, controlled by Neutral & Starter Switch, Vacuum Starter Cutout Switch No. FEW-11516-A and Neutral Starter Switch FEW-15812-A.

Starter Removal: Turn front wheels to full right, disconnect battery ground (negative) cable and raise car. Remove cable from starter and disconnect exhaust pipes at muffler (single exhaust) or exhaust pipe (dual exhaust). Remove pipe from muffler. Remove starting motor to flywheel housing screws and pull starter out and up until drive clears housing then raise in vertical position with drive end down, between engine and fender apron. Hold motor by drive assembly and rotate starter motor housing to clear drive end plate mounting bosses then lower starter between tie rod and idle arm.

Installati n: Tape dust seal lip (use masking tape) to inner circumference of housing to hold it in place, and reverse removal procedure. *NOTE* - Tighten outer capscrew first, then top and bottom capscrews to maintain alignment of starting motor to flywheel housing.

Neutral Start Switch Adjustm nt: *S "M rcury Keyboard Transmission Control" in Transmission S ction.*

GENERATOR

Mercury. 12 volt. Used as follows:

Application	Generator N.	Armatur N.
Std. & O.D.	FGZ-10002-A	FGT-10027-A
Auto. Trans.	① 2900278	2900199
Air Cond.	FGV-10002-A	FGP-10027-A

① - Or B8A-10002-A.

►*GENERATOR MOUNTING BRACKET PRODUCTION CHANGE (To reduce failur s):* Use new brackets Part No. EDG-10156-B and 5750168 in case of bracket failure. *NOTE* -- On early engines (with smaller bracket mounting surface), place one spacer Part No. 5750163 between mounting bracket and block and one spacer between bracket and engine front cover bracket mounting surface.

Performanc Data

Generator	Amperes	Gen. RPM
FGZ-10002-A	30	2450
2900278, B8A-10002-A	35	2670
FGV-10002-A	40	2390

Brush Spring Tension - 26-34 ozs.

Field Current - 1.5-1.6 amps. at 15 volt (30 & 35 Amp. Gen.), 10 volt (40 Amp. Gen.).

Rotation - Counterclockwise at commutator end.

Belt Adjustment: - Approximately 3/8" deflection midway between generator and water pump pulleys with normal thumb pressure.

REGULATOR

Mercury. 12 volt. Used as follows:

Regulator No.	G n rat r
B7A-10505-B, E	FGZ-10002-A
2900305②	B8A-10002-A, 2900278
B8E-10505-C	FGV-10002-A

② - Or B8E-10505-B.

►*SETTING NOTE:* Settings are for regulator at NORMAL OPERATING TEMPERATURE (after running engine for 20 minutes at 1500 RPM if started cold, or until temperature gauge is steady for 5 minutes if engine previously warmed up) with room temperature at 75°F.

Cutout Relay

Cuts In - 12.4-13.2 Volts (2900305), 12.0-12.8 Volts (Others).

Cuts Out - 2-6 Amps. (2900305), 2-9 Amps. (Others).

Voltage R gulat r

S tting - 14.6-15.4 Volts.

Ch cking & Adjusting - *S "Ford, Lincoln, Mercury 12 V lt R gulat rs" in Electrical S ction.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Current Regulator

Setting - 28-32 Amps. (B7A-10505-B), 33-37 Amps. (2900305), 38-42 Amps. (B8E-10505-C).

Checking & Adjusting - *See "Ford, Lincoln, Mercury 12 Volt Regulators" in Electrical Section.*

MISC. ELECTRICAL

Headlamps: Dual Headlights (4-Headlight System). *See "4-Headlight Systems" in Electrical Section.*

Directional Signals: *See Electrical Section.*

Lighting Switch Removal: Remove ground (negative) battery cable and steering wheel. Mask steering column tube assembly, area around speedometer and instrument cluster. Remove instrument cluster hood assembly to dash panel screws (four), three screws from recess above speedometer dial, and two lower screws. Remove hood assembly. Remove other three screws, windshield wiper setscrew knob, remove knob and shaft assembly. Unscrew wiper control nut, pull speedometer and instrument cluster out slightly to facilitate removal of socket and bulb assemblies. Push light switch shaft straight in to remove spring pin retainer and remove switch locknut and switch assembly.

Stop Light Switch Location: On forward end of brake master cylinder (integral with power brake unit). Master cylinder or power brake unit located on firewall in engine compartment.

LIGHTING CIRCUIT BREAKERS: 18 Ampere. Integral with lighting switch, protects headlamps.

12 Ampere. Located on left cowl panel, protects headlamp (Low beam).

12 Amp. Integral with lighting switch, protects Parking, Rear, Stop, License Plate and Instrument lamps.

FUSES: Fuses located in fuse panel on left side of brake pedal support with exception noted.

SFE 7.5 Amp. For Interior lamps, Turn Signals, Radio, Spotlight, Multi-Luber, and Instrument lights.

SFE 14 Amp. For Heater Blowers and Elec. Radio Antenna,

1 AG-1 Amp. For clock.

1 AGC 15 Amp. For cigar lighter which has sulphur Disc attached to back of lighter socket.

1 AGC 15 Amp. For Overdrive. On Overdrive Relay bracket located in engine compartment.

ENGINE

►*MAXIMUM ENGINE RPM CAUTION (CARS WITH AUTOMATIC TRANSMISSION):* DO NOT operate engine in excess of 2500 RPM with selector lever in "N" (Neutral), "P" (Park), or "R" (Reverse) as damage to clutch plates may result.

►*AIR CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Misc Ilan us Section.*

►*LOW OCTANE FUEL ADAPTER KIT NOTE (EDG, EDJ Eng.):* If necessary to lower compression ratio from 10.5-1 to 7.14-1 (EDG) or 10.5-1 to 7.25-1 (EDJ) for use with low octane fuels, install Kit Part No. I-502591 which contains cylinder head-to-block spacer, longer pushrods, new dowels, cylinder head gaskets, and longer cylinder head bolts. *NOTE* - Use cylinder head gasket on each side of spacer.

ENGINE SPECIFICATIONS: 90° V8, Overhead Valves. Three engines used - **312"** similar to 1957 (see NOTE below), **"EDG" (383")** and **"EDJ" (430")** new Marauder engines with two HP ratings for each engine. Wedge type combustion chamber formed by 10° angle of top of block and stopped design piston head. Bottom surface of cylinder head is flat machined.

►*312 ENGINE NOTE:* Engine is similar to 1957 except for Cylinder Block & Camshaft, Valve Rocker Arm & Intake Manifold Assemblies. Aluminum Intake Manifold Spacers used in place of Air Cleaner Air Valve and Duct Assembly. *SEE 1957 MERCURY "ENGINE" FOR ALL DATA EXCEPT THE FOLLOWING: Valve Tappet Clearance, Camshaft, Cam Lobe Lift, Valve Timing, and Valve Timing Check. This data is listed in engine data below.*

►*CYLINDER BLOCK REPLACEMENT NOTE (EDG, EDJ):* Replacement cylinder blocks code dated 4-82G and later have code stamped at right rear section of oil pan rail. Blocks dated 4-82R and later are .020" higher and one cylinder head gasket should be used. On earlier blocks (date coded 4-82R or not coded) two gaskets may be used.

Model	Bore	Stroke	Displacement
312	3.80"	3.44"	312 cu. in.
383	4.30"	3.30"	383 cu. in.
430	4.30"	3.70"	430 cu. in.

Model	Rated HP	Compr. Ratio	Developed HP
312	46.2	9.7-1	255 at 4600 RPM
383	59.17	10.5-1	① 312 at 4600 RPM
430	59.17	10.5-1	② 360 at 4600 RPM

① - Low torque engine, 330 at 4800 RPM high torque engine with larger carburetor.

② - 400 at 5200 RPM with three 2-Barrel carburetors.

CYLINDER HEAD: *See "Cylinder Head & Manifold" in Mercury Special Data.*

►*HEAD GASKET SERVICE REPLACEMENT CHANGE AND INSTALLATION NOTE (EDG & EDJ):* Use new gasket No. B9ME-6051-A. Apply sealer No. 8A-19554-B moderately to each side of gasket before installation.

►*CYLINDER HEAD & INTAKE VALVE CAUTION (EDJ Eng.):* All "EDJ" engines after Code Date 4-8-1-J (located on block in front of left cylinder head) have an "EDG" engine cylinder head No. 5750062 with smaller diameter intake valve seats (2.060"). Valve face diameter 2.080-2.090". *CAUTION - EDG-6507-F intake valve cannot be used with 5750064 cylinder head and EDJ-6507-F intake valve cannot be used on 5750062 cylinder head.* Cylinder head 5750062 can be used to service both EDG and EDJ engines when cylinder head equipped with EDG-6507-F intake valves. *NOTE* - Always check assembled spring height.

TIGHTENING TORQUES: *See "Tightening Specifications" in Mercury Special Data.*

ENGINE REMOVAL: *See "Engine" in Mercury Special Data.*

►*REAR ENGINE MOUNTING CAUTION (EDG):* Different rear mounting used with Edsel frame than with Mercury frame. *See "Engine Mountings" in Mercury Special Data.*

OIL PAN REMOVAL (EDG & EDJ): Turn engine so No. 1 or No. 5 piston is at TDC. Remove battery ground cable and oil dipstick. Raise car. Drain oil and remove front splash shield. Remove both front engine insulator nuts. Support front edge of oil pan on safety jack, then lower car to raise engine 2". Place 1" block of wood between insulators and engine. Raise car and remove safety jack, then remove two right hand stabilizer mounting bracket bolts, nuts and washers. Pull stabilizer out and down for oil pan clearance. Remove oil pan screws, lower oil pan to crossmember. Remove lower and loosen upper oil pump inlet tube-and-screen screws so it swings freely to clear oil pan baffle. Then lower pan with forward motion.

PISTONS

New step head design, longer skirt, slipper type, steel strut, aluminum alloy. No piston pin retaining rings used. Piston pin is interference fit in rod.

►*REVISED PISTON SIZE & CLEARANCE SPECIFICATIONS (430"):* Std. size piston furnished in two (reduced) sizes and marked with color code on top of piston as follows:

Code Red 4.2997-4.2983", Code Blue 4.2989-4.2995". *See revised clearance specification below.*

Removal - Piston and rod removed from above.

Clearance (383") - .0008-.0026" at bottom of skirt. Wear limit .005".

Clearance (430") - .0017-.0035". This supersedes previous specification of .0008-.0026".

Fitting New Pistons: *See "Pistons" in Mercury Special Data.*

Replacement Pistons: Std. *(see NOTE above)* and .020", .030" and .040" Oversize.

►*PISTON REPLACEMENT NOTE: Pistons for RIGHT & LEFT cylinder bank are NOT interchangeable.*

Installing Pistons: Install piston so that indentation on head of piston is toward front of engine. *See Rod Installation.*

►*PISTON INSTALLATION NOTE:* Pistons for RIGHT & LEFT cylinder bank are NOT interchangeable.

PISTON PINS

No retaining rings used. Pin is press fit in connecting rod. Piston and pin furnished as an assembly (oversize pins not furnished). *See Pin Fit in Rod below.*

Diameter - .9750-.9753". **Length** - 3.480-3.500".

Clearance in Piston - .0001-.0003". Light thumb press fit at 70°F. *NOTE* - When excessive replace piston.

Clearance in Rod - .0008-.0016", **interference fit.**

Piston Pin Removal & Installation: *See "Piston Pins" in Mercury Special Data.*

Replacement Pins: Standard size only. Also furnished with new pistons.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr. #1	.0775-.0780"	.015-.025"	.0015-.003"
Compr. #2	.0930-.0940"	.015-.025"	.001-.003"
Oil #3	.1825-.1879"	①.015-.055"	②

① - Control ring segments. ② - Side sealing type ring.

Installing Rings: Install second compression ring with outside counterbore down. Oil ring spacer expander gap must be opposite notch in piston head with segment gaps 1" on each side. Compression ring gaps must be 150° on each side of spacer expander gap (1" each side of piston head notch).

Replacement Rings: Furnished Std. .020", .030" & .040" Oversize.

CONNECTING RODS

Length (Center-to-Center) - 6.599-6.601".

Journal Diameter - 2.5996-2.6000" (Code Red), 2.5992-2.5996" (Code Blue).

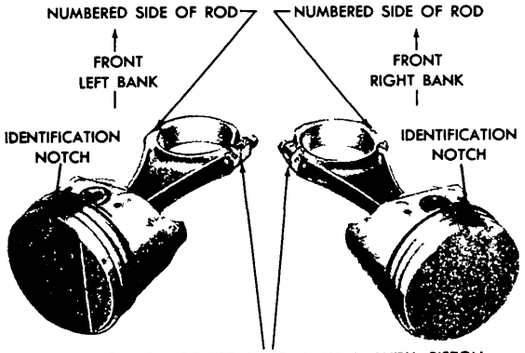
Lower Bearing - Copper-lead alloy, steel back.

Clearance - .0006-.0026". Wear limit .0037".

Side Clearance - .005-.015". Wear limit .018".

Replacement Bearings: Std. (2 sizes marked RED and BLUE for selective fit), .010", .020", .030" Undersize.

►*NOTE:* Any combination of RED and BLUE bearing inserts may be used to obtain desired clearance. If desired clearance cannot be obtained, it will be necessary to regrind journals and install undersize bearing inserts.



Installing Rods: Install rod in correct numbered cylinder with notch on head of piston toward front of engine and oil squirt hole inward and rod number facing outward toward outer side of cylinder block. *NOTE* - Pal nuts on bearing cap discontinued on later cars.

CRANKSHAFT

►*383 & 430" MAIN BEARING BOLT SERVICE REPLACEMENT NOTE: See "Crankshaft" in Mercury Special Data.*

Journal Diameter - 2.8998-2.9002" (Code Red), 2.8994-2.8998" (Code Blue).

Out-of-Round Limits - .00025". Taper Limits .0005".

POSITION OIL SQUIRT HOLE INWARD WITH PISTON IDENTIFICATION NOTCH FORWARD TOWARD FRONT OF ENGINE CAUTION PISTONS ARE NOT INTERCHANGEABLE FROM ONE CYLINDER BANK TO THE OTHER

MERCURY PISTON & ROD ASSEMBLY

Bearings - Copper-lead alloy, steel back.

Clearance - .0009-.0029". Wear limits .0036".

Endplay - .004-.008". Wear limit .012".

End Thrust - Taken by No. 3 (center) main bearing.

Thrust Bearing Alignment - *See "Crankshaft & Main Bearings" in Mercury Special Data.*

Replacement Bearings: Std. (2 sizes marked RED and BLUE for selective fit), .010", .020", .030" Undersize.

►*NOTE:* Any combination of RED or BLUE bearing inserts may be used to obtain desired clearance. If desired clearance cannot be obtained, it will be necessary to regrind journals and install undersize bearing inserts.

Crankshaft Rear Oil Seal Installation: *See "Crankshaft & Main Bearings" in Mercury Special Data.*

Crankshaft Front Seal Installation: *See "Engine Front Cover" in Mercury Special Data.*

CAMSHAFT

►*BEARING BORE NOTE (EDG, EDJ):* Bearing bores in block are stepped (largest at No. 1, smallest at No. 5) to permit easy removal and installation of bushings. O.D. of camshaft bearings is greater to fit bores.

►*CAMSHAFT PRODUCTION CHANGE (EDG, EDJ):* New camshaft No. 5750914 used beginning 12/5/1957 (Date code 4-7BE), EDG engine, and 11/14/1957 (Date code 4-7A0), EDJ engines. Engines having later camshaft are identified by dot of orange paint on engine front cover and daub of yellow paint between No. 1 bearing journal and distributor drive gear. An "X" also stamped on later camshaft.

►*CAMSHAFT INSTALLATION CAUTION (EDG, EDJ):* Split type bearings must have split toward top of block. No. 1 bearing must have notch in bearing facing toward front of block and bearing must seat .005-.020" inward from finished face of block.

Journal Diameter - **(312)** 1.9255-1.9265". **(EDG, EDJ)** 2.264-2.265".

Bearings - Babbitt lined, steel backed bushing.

Clearance - **(All)** .001-.003".

End Thrust - **(312)** Taken by thrust plate between camshaft sprocket and shoulder of block.

End Thrust - **(EDG, EDJ)** Toward rear of engine. Taken by thrust face of camshaft sprocket riding against front surface of cylinder block.

Replacement Bearings: Finished bearings furnished Std. and .015" Undersize.

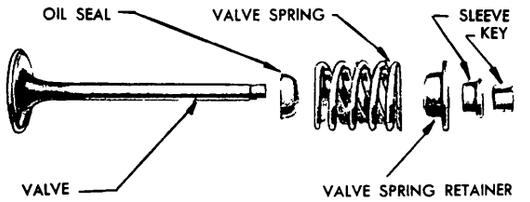
Camshaft Removal & Installation: *See "Camshaft & Bearings" in Mercury Special Data.*

Timing Chain Deflection - ½", measured on camshaft side while taking up slack on drive side. Remove and install "Endless" chain as a unit with both sprockets.

Camshaft Setting: **(312)** Install timing chain and sprockets as an assembly when timing marks on sprockets are to drive side and 12 timing chain pins between marks.

(EDG, EDJ) Install timing chain on sprockets with marks adjacent and in line across shaft centers.

Timing Chain Cover & Seal Installation (Crankshaft Front Seal): *See "Engine Front Cover" in Mercury Special Data.*



VALVES

Tappet Clearance: **(312)** .020" Intake and Exhaust (Cold), .019" Hot. **(EDG, EDJ)** None in service (Hydraulic Lifters), *See VALVE LIFTERS below.*

Valve Tappet Adjustment - **(312)** *See "Valve System" in Mercury Special Data.*

►*VALVE LIFT NOTE (312"):* Valve lift is .377" (Intake), .375" (Exhaust).

►*EDG, EDJ EXHAUST VALVE STEM SEAL PRODUCTION CHANGE (To Eliminate Valve Sticking, Stem and Guide Wear):* Install New Exhaust Valve Stem Seal (.300" shorter), Part No. B8S-6571-BUP, before replacing piston rings for oil consumption. Use standard seal EDG-6571-AUP on all Intake Valves.

MERCURY VALVE ASSEMBLY

EDG, EDJ Engines

Valve	Head Diameter	Stem Diameter
Intake	① 2.080-2.090"	3711-.3718"
Exhaust	1.770-1.780"	.3693-.3700"

Valve	Seat Angle	Lift	Stem Clearance
Intake	30°	⑤	③ .001-.0024"
Exhaust	45°	⑤	④ .0028-.0042"

① - All EDG and later EDJ. Early EDJ 2.140-2.150". *See "Cylinder Head & Intake Valve Caution" above.*

③ - Wear limit .0045".

④ - Wear limit .0065".

⑤ - See separate table below.

Cam Lobe & Valve Lift

Model	Valve Lift	Cam Lobe Lift
EDG EARLY	.4021"	.2285"
EDJ EARLY	.4411"	2506"
EDG & J LATE	.4076"	2316"

Valve Seat Width - .060-.080" (Int.), .070-.090" (Exh.).

Valve Stem Oil Seals - Umbrella type seals used on all valves. Install seals with cup side down over valve guide. *See "Exhaust Valve Stem Seal Production Change" under Valves above.*

Valve Stem Clearance Check - *See "Valve System" in Mercury Special Data.*

Oversize Valve Stem Installation - *See "Valve System" in Mercury Special Data.*

►*ROTATABLE VALVE NOTE:* All valves rotatable type. *See "Valve System" in Mercury Special Data.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Valv Springs (EDG, EDJ): Green and Maroon springs used, see specifications below. Use Maroon springs for replacement.

Fr L ngth - 2.030".

►*VALVE SPRING CAUTION:* Valve dampener springs inside valve springs on all valves.

Valv Spring Specifications

Early Green Springs

	Pressure ⑩	Length
Valve Closed	66-77 lbs. ①	1.83"
Valve Open	245-255 lbs ②	1.43"

Lat r Gr n & Maroon Springs

	Pressure ⑩	Length
Valve Closed	66-77 lbs. ①	1.83"
Valve Open	240-260 lbs. ③	1.43"

① - Wear limit 60 lbs. ② - Wear limit 220 lbs.
③ - Wear limit 225 lbs. ⑩ - Spring and dampener.

►*VALVE SPRING INSTALLATION NOTE (EDG, EDJ):* Measure assembled height of spring from cylinder head spring pad to underside of spring retainer (1.830"). If greater, install one or not more than two .030" thick spacers No. EDG-66514-A as necessary to correct height. *NOTE* - DO NOT use spacers unless assembled height is incorrect.

Valv Guid s: (EDG, EDJ) - Integral with cylinder head. When stem-to-guide clearance exceeds maximum (.0045" Intake, .0065" Exhaust), ream guides and install oversize valve. *S e "Valve System" in Mercury Special Data.*

Valv Lift rs: (EDG, EDJ) - Hydraulic lifters used in all engines. Removed from above without removing camshaft.

►*STEADY SPEED HYDRAULIC LIFTER NOISE CORRECTION (EDG, EDJ):* Caused by aerated oil or insufficient oil pressure 35-50 lbs. at 2000 RPM). Check for oil leaks at gallery plugs, oil pump mounting and pickup tube gaskets, cracked or porous oil pump body, or pickup tube assembly. Correct air leak and/or oil pressure.

►*NOISY HYDRAULIC LIFTER CORRECTION:* New .060" longer valve pushrod available. *See "Valve System" in Mercury Sp cial Data.*

Cl aranc in Lift r B re - .0005-.0020". Wear limit .0026".

Hydraulic Lift r Ov rhaul - *See "Valve System" in Mercury Special Data.*

Hydraulic Lift r Op rating Range Check - *See "Valve Syst m" in Mercury Special Data.*

R ck r Arm Ass mbly: *S e "Valve System" in Mercury Special Data.*

►*ROCKER ARM PRODUCTION CHANGE:* New rocker arm used approximately 2/1958 with reinforcing ribs and oil groove for better lubrication. New type Part No. B8A-6564-C is interchangeable with old type No. EDG-6564-B.

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT abov .

►*VALVE TIMING NOTE:* Following valve opening and closing points are with camlift as indicated.

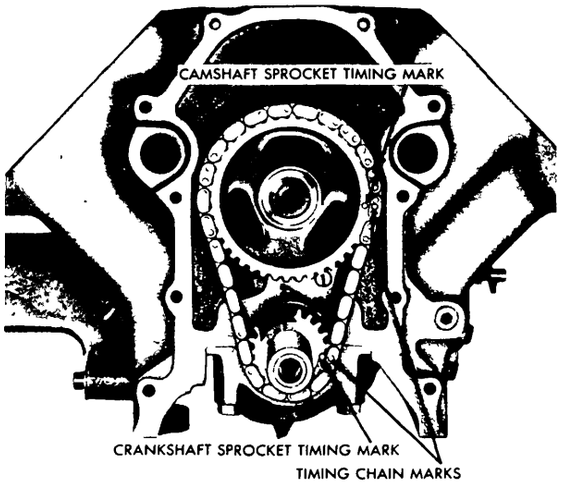
Valv Timing (312 Engin)

Intak Valv - Open 12° ① BTDC. Close 54° ② ALDC.
Exhaust Valv - Open 58° ③ BLDC. Close 8° ATDC.

Valve Timing (Early EDG Camshaft) ⑧

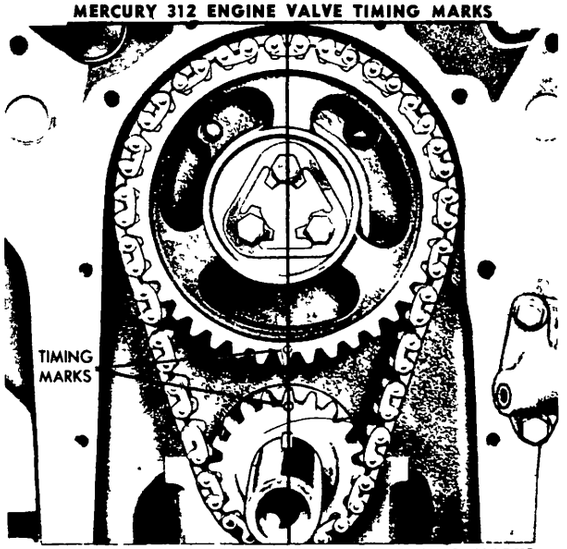
Intake Valve - Open 34° ⑤ BTDC. Close 68° ⑦ ALDC.
Exhaust Valve - Open 75° ⑤ BLDC. Close 27° ⑦ ATDC.

Valve Timing (Early EDJ Camshaft) ⑧



Intake Valve - Open 27° ⑥ BTDC. Close 69° ⑦ ALDC.
Exhaust Valve - Open 69° ⑥ BLDC. Close 27° ⑦ ATDC.

Valve Timing (Later EDG, EDJ Camshaft) ⑧



Intake Valve - Open 22° ⑤ BTDC. Close 68° ⑦ ALDC.
Exhaust Valve - Open 63° ⑤ BLDC. Close 27° ⑦ ATDC.

Camlift - ① .016", ② .019", ③ .015", ④ .017", ⑤ .002", ⑥ .003", ⑦ .005".

⑧- *See "Camshaft Production Change" above.*

MERCURY 312 ENGINE VALVE TIMING MARKS

MERCURY EDG & EDJ ENGINE VALVE TIMING MARKS

Valv Timing Ch ck (312) - Slide rocker arm to one side and install dial indicator so reading can be taken from end of valve pushrod (use an indicator that will read .300" or more). Install a quadrant (reading in degrees) on crankshaft pulley to check amount of crankshaft rotation. Rotate engine slowly until dial indicator reading for valve being checked is same as indicated in table above. Amount of crankshaft rotation should be the same as shown in valve timing table. As an example, check intake valve opening by rotating engine until dial indicator reads .016" cam lift. Quadrant on crankshaft should indicate 12°. Continue to rotate engine to check valve closing in degrees. Dial indicator should read .019" and quadrant 54°.

Valve Timing Check (EDG, EDJ) - Remove rocker arm assembly. Install Dial Indicator Tool 6565 and Dial Indicator Adapter Tool 6565-AB on cylinder head using Holding Fixture Tool 4201-D. Pushrod must be in lifter socket and actuating point of indicator in same plane as pushrod movement. Install a quadrant on crankshaft dampener. Make sure timing pointer is not bent. Turn engine slowly until lifter is on heel of camshaft lobe. Set indicator on zero and turn engine slowly until indicator registers valve opening and cam lobe lift. Compare crankshaft degrees indicated on quadrant with Valve Timing Table above. Continue to rotate engine to check valve closing specifications in same manner.

OILING SYSTEM

►***ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Mercury Special Data.***
New oil-vacuum pump located in crankcase and driven by distributor intermediate shaft.

►*OIL LEAKAGE CORRECTION (EDG, EDJ):* When oil runs over top of converter or flywheel housing proceed as follows:

1) Coat top right hand flywheel housing to engine capscrew with sealer and tighten to 40-50 ft. lbs.
2) Coat threads of both capscrews that retain accelerator shaft bracket to rear of engine, with sealer and tighten to 10-13 ft. lbs.
3) Check for distorted pushrod cover or replace gasket.

►*HIGH SPEED OIL LEAKAGE CORRECTION (EDG, EDJ):* Caused by oil vapor being drawn through ventilation system. Install new type Valve Pushrod Cover Part No. 5751034, Oil Filler Cap No. 5751388, and replace seal between upper ventilation tube and valve cover with new half moon shaped cork Seal No. 5751385.

Crankcase Capacity: 5 qts. (refill), 6 qts. (after filter change).

Normal Oil Pressure - 35-50 lbs. at 2000 RPM (Hot). *NOTE* - This supersedes previous 45-50 lbs. specification.

Oil Pressure Indicator: Light on instrument panel. Light comes on when oil pressure is low.

Oil Pressure Switch - Mercury No. B6A-9278-A.
S "Oil Pressur Gaug s" in Misc llaneous Section.

Oil Pump: Rotor type, located in crankcase and driven by distributor intermediate drive shaft. Vacuum pump

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

(when used) mounted on oil pump cover and driven by oil pump drive shaft.

►*OIL & VACUUM PUMP DRIVE SHAFT PRODUCTION CHANGE (EDG, EDJ). (To Reduce Shaft Breakage):* Install new oil and vacuum Pump Drive Shaft Part No. ED-5750157 or Oil Pump Drive Shaft No. EDG-66627-A (oil pump only). *NOTE* - Continue to use internal lockwasher at upper end of shaft to hold shaft in position when distributor is removed.

►*LOW OIL PRESSURE CORRECTION: See "Oiling System" in Mercury Special Data.*

►*VACUUM PUMP NOISE CORRECTION (EDG, EDJ):* Disconnect vacuum hose from windshield wiper to vacuum pump (not inlet hose to manifold). If noise stops, remove vacuum pump and correct as follows: If exhaust passage plug has dropped out, tap passage 3-4 threads deep using 1/8" pipe tap (DO NOT TAP DEEPER) and install 1/8" pipe plug. If exhaust tube loose in pump housing, replace pump.

Pump Overhaul - *See "Oiling System" in Mercury Special Data.*

Oil Filter: Full flow disposable type. Mounted on lower left front corner of cylinder block. Replace every 4,000 miles or before (in dusty areas) as necessary.

►*OIL FILTER INSTALLATION NOTE:* Coat gasket with light film of oil. Screw on to adapter until snug, then tighten ¼-turn. Do not overtighten.

Crankcase Ventilation: Filter in oil filler cap and road draft tube at rear of engine. Clean and oil filter, in oil filler cap every 4,000 miles. Vacuum pump exhaust supplies fresh air to crankcase.

COOLING

(EDG, EDJ) - New three-stage engine warm-up and cooling system with temperature controlled water jacketed intake manifold. Additional thermostat installed in front face of each cylinder bank.

Below 140°F - Water circulates from pump to cylinder heads, intake manifold and back to water pump.

140-180°F - Water circulates from pump to cylinder heads, intake manifold and cylinder blocks and back to water pump.

Above 180°F - Water circulates the same as between 140-180°F except it returns to radiator for cooling. *NOTE* - Cylinder block thermostats are accessible by removing water pump.

►*LOSS OF COOLANT CORRECTION (EDG, EDJ):* When water pump cover is distorted, loss of coolant may occur at 2000 RPM (Air Cond. Cars), 3000 RPM (Others) or over. Correct by replacing cover and using non-hardening permatex sealer on new gasket. Tighten cover to 6-8 ft. lbs.

►*NEW FOUR BLADE FAN REPLACEMENT NOTE:* Use new reinforced 4-blade fan assembly No. MK-8600-E (.075" less clearance) on standard cooling systems. Recommended for use on cars for high speed driving.

Water Capacity: 20.5 qts. (EDG, EDJ). Add 1 qt. with heater.

Pressure Valve: (EDG, EDJ) Radiator filler cap, Mercury No. LA 8100-A. Operating pressure 12-15 lbs.

Thermostat (312): 160°F. thermostat used on engines prior to 6/11/58 (Date Code 1-86L). After this date and code number, 180°F. thermostats were used.

Thermostat (EDG, EDJ): 157-162° (EDG-8575-G). 177-182°F (EDG-8575-H) type used with permanent type anti-freeze. Located in water outlet connector. **Two** 137-142°F thermostats (No. EDG-8575-D) installed in front face of cylinder banks.

►*ENGINE BLOCK THERMOSTAT INSTALLATION NOTE:* Two types used. Install both types with bulb extending into cylinder block.

Water Pump: Packless, sealed ball bearing type with plastic impeller.

See "Water Pumps" in Mercury Special Data.

►*WATER PUMP PRODUCTION CHANGE & REPLACEMENT NOTE (EDG, EDJ):* Air Cond. Cars produced after 4/1/1958 have a new water pump No. 5751567 which replaces pump No. EDG-88502-B. New pump identified by yellow paint on housing. Use new pump for replacement of all pumps used on air conditioned cars. DO NOT overhaul early pump EDG-88502-B. Pump included in Kit No. MJK-5751567-A.

►*POWER BOOSTER FAN NOTE:* Standard on some 312 engines, and all EDG, EDJ engines equipped with Air Conditioning. Optional on all other EDG, EDJ engines. *See "POWER BOOSTER FAN" under "Cooling" in Mercury Special Data.*

Temperature Gauge: King-Seeley electric, Constant Voltage ("CV") type with Gauge Voltage Regulator No. FEK-10804-A.

Dash Unit - Mercury No. FEW-10883-A.

Engine Unit - Mercury No. B7A-10884-A1.

See "Temperature Gauges" in Miscellaneous Section.

CLUTCH

Borg & Beck Model 10.5A6 (312), 11A8 (EDG). Single plate, dry disc type.

Cover Assembly	Mercury No.
Borg & Beck No. 361378	MG-7563-A
Borg & Beck No. 361432	MK-7563-A
Clutch Disc	**Mercury No.**
Borg & Beck No. 382817	MK-7550-B
Borg & Beck No. 382655	MK-7550-A
Borg & Beck No. 382818	MK-7550-C

►*"EDG" OVERDRIVE TRANSMISSION CLUTCH DISC PRODUCTION CHANGE (To Eliminate Vibration):* New Clutch Disc MK-7550-C used on EDG engine with Overdrive transmission, beginning 1/15/1958 to eliminate vibration. Clutch disc used on synchro-mesh and synchro-mesh with overdrive are not interchangeable.

►*CLUTCH NOISE CORRECTION (312 Eng.):* Clutch spring must be installed with long stem hook open end **upward,** to eliminate spring interference with cowl top inner panel.

Pedal Adjustment: Pedal Travel - 6¼-6¾". Adjust clutch pedal bracket up or down to correct.

Free Travel - 1-1¼". Must be made after pedal travel corrected. Loosen clutch pedal release rod locknut and turn adjusting nut, clockwise to increase free travel or counterclockwise to decrease free travel.

Removal: Remove transmission (see Transmission Removal below), and disengage clutch pedal retracting spring and release rod from clutch release lever. Disengage equalizer bar tension spring and remove two capscrews retaining equalizer bracket assembly to flywheel housing. Remove flywheel housing. Mark position of flywheel and pressure plate so parts may be installed in original position. Compress clutch pressure plate assembly with Tool 7563. Remove capscrews, pressure plate and disc.

SYNCHRO-MESH TRANSMISSION

Own. Helical gear, constant mesh, synchro-mesh (second & high), sliding gear (low & reverse).

See "Mercury Synchro-mesh" in Transmission Section.

Transmission Controls: *See "Transmission Controls" in Transmission Section.*

Removal: 1) Remove battery ground cable at battery and drain transmission.

2) On Overdrive cars, use Tool L-6919 to remove governor. Remove solenoid (turn 70° to remove from adapter). Remove overdrive cable and electrical connections.

3) Remove speedometer cable at extension or Overdrive housing, and remove shift rods.

4) On Dual Exhaust Systems - Remove left exhaust manifold to muffler pipe and muffler tail pipe from bracket and move exhaust system out of area.

5) Disconnect rear universal joint flange, remove drive shaft, front universal joint from transmission output shaft.

6) Remove front parking brake cable from equalizer lever and crossmember then remove equalizer rod from lever.

7) Remove two transmission to rear engine support clamp screws and clamp. Place jack under transmission. Raise engine and install engine support tool. Lower engine onto tool and remove engine support crossmember to frame side rails and remove crossmember.

8) Remove transmission to flywheel housing capscrews (two) and install guide pins. Remove lower capscrews, slide transmission to rear to clear main shaft and remove from car.

OVERDRIVE

Warner AS1-R10F. Solenoid operated type, with governor control and throttle operated kickdown.

See "Mercury Overdrive" in Transmission Section

Removal: *See "Synchro-mesh Transmission" above.*

AUTOMATIC TRANSMISSION

TWO types used. **Merc-O-Matic** similar to previous type except for welded Converter Assembly and design changes for new engines (two types used). **Multi-Drive Transmission** similar to Merc-O-Matic but has extra driving range for high performance.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

►*HARD SHIFTING INTO OR OUT OF "PARK" POSITION CORRECTION:* See *"Mercury Keyboard Transmission Control" in Transmission Section.*

►*OIL COOLER FITTING TIGHTENING TORQUE CHANGE & CAUTION:* Oil cooler fitting to transmission case torque has been reduced from 15-20 ft. lbs. to 12-15 ft lbs. Overtightening will cause cooler line bosses to break.

►*2-3 SLIPPAGE CORRECTION (MERC-O-MATIC):* See *"Mercury Automatic Transmission" in Transmission Section.*

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION:* See *"Mercury Automatic Transmission" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING:* See *"Mercury Automatic Transmission" in Transmission Section.*

Lubrication - Check fluid every 1,000 miles, drain and refill every 16,000 miles with Automatic Transmission Fluid Type A.

Checking Fluid Level - Bring transmission to operating temperature by running engine with transmission in Neutral position. Move shift mechanism through all ranges to assure fluid distribution, then place mechanism in "Park" position for checking fluid level. Maintain level to "Full" mark on dipstick.

Throttle Linkage Adjustment: See *CARBURETOR above.*

Manual Selector & Park Release Cable Adjustment: See *"Mercury Keyboard Transmission Control" in Transmission Section.*

►*OTHER DATA:* See *"Mercury Automatic Transmission" in Transmission Section.*

UNIVERSALS

Spicer. One used at each end of drive shaft.

PROPELLER SHAFT

►*DRIVE LINE THUMP CORRECTION:* Caused by lubrication build-up in front universal joint. Correct by tapping and installing relief valve (5-25 lbs.) using 1/8" pipe tap to cut threads in expansion plug of front universal slip joint. DO NOT cut threads too deeply in plug as valve will interfere with output shaft.

REAR AXLE

Own. Separate carrier type with straddle-mounted pinion, hypoid gear and hotchkiss drive *NOTE* - "Equa-Lock" differential optional with Automatic transmissions
See "Ford & Mercury (Deep-Offset) Hypoid" and "Mercury Equa-Lock" in Rear Axle Section

►*REAR AXLE LUBRICANT LEAK CORRECTION:* Caused by leak around housing bolt threads To correct, replace early type carrier bolts (No. 0A-44044-A) with new bolt (AJ-44044-A) with larger head and apply non-hardening sealer to threads before installation.

►*PINION OIL SEAL PRODUCTION CHANGE (To Reduce Squeal and Oil Leakage):* New 3" Seal Assembly (and other parts) used in production after 2/28/58 and can be installed in earlier cars to replace previous 4½" type seal.
See "Ford & Mercury (Deep-Offset) Hypoid" in Rear Axle Section.

►*REAR AXLE PRODUCTION CHANGE (312):* New Differential & Carrier Assembly (3.56-1 ratio) released for production (Std. or O.D. Trans.). New Assembly has smaller side bearings, 8¾" ring gear and a rear axle drive pinion bumper. The new assembly and 8¾" ring gear will not be released for service.
See "Ford & Mercury (Deep-Offset) Hypoid" in Rear Axle Section for replacement parts.

Axle Ratios

Model & Trans.	Ratio
EDG (Synchro-mesh or Overdrive)	3.56-1
EDG (Auto Trans.)	①2.91-1
EDJ (Auto. Trans.)	2.91-1
312 (Synchro-mesh or Overdrive)	3 56-1
312 (Auto. Trans.)	②3 10-1

① - With transmission PBL-7000-A, M, N; PBE-7000-A, G, H.
② - With transmission PBM-7000-E.

►*GEAR RATIO NOTE:* Gear ratio stamped on tag on rear axle housing bolt.

Backlash - .004-.009".

Axle Shaft Removal: Remove wheel and brake drum. Remove axle shaft retainer locking type nuts (work through opening in axle shaft flange). Use Puller and pull shaft (do not disturb brake backing plate or damage wheel bearing oil seal). Replace one nut to secure brake backing plate.

Carrier Assembly Removal: *NOTE* - Pinion carrier assembly can be removed separately without disturbing differential carrier by disconnecting rear universal joint at companion flange, and removing five bolts that attach pinion carrier assembly to differential carrier housing. With rear universal joint disconnected, axle shafts removed (see above) remove differential carrier housing to rear axle housing bolts and lift out carrier assembly

Wheel Bearing Adjustment: None required.

SHOCK ABSORBERS

Direct acting, non-adjustable (Std.), Heavy Duty (Optional) Adjustable Heavy Duty optional on Park Lane Series.

Replacement Shock Absorbers

	Front	Rear
(Sedans & Coupes, Exc. Park Lane)		
Std.	①MK-18077-C	①MK-18097-A
H D	③MK-18077-A	③MK-18097-E
(Station Wagons)		
Std	①MK-18077-C	②MK-18097-C
H D	④MK-18077-B	④MK-18097-D
(Park Lane, Exc. Turnpike Cruiser)		
Std.	①MK-18077-C	⑤MK-18097-Y
H D. (Adj.)	I-502422	I-502536

H.D. - Heavy Duty ① - Color Code Yellow.
② - Color Code Blue ③ - Color Code Green.
④ - Color Code White ⑤ - Color Code Orange.

Shock Absorber Adjustment (Adjustable Type): Remove shock absorbers from car, collapse fully, rotate shock absorber body (*CAUTION* - Hold piston rod from turning) in a clockwise direction until desired setting (Firm, Normal, Soft) obtained as indicated by alignment of arrows on dust shield and shock absorber body. A "click" will be audible at each setting point. *CAUTION* - Do not rotate shock absorber in counterclockwise direction which may unscrew piston rod from piston

FRONT SUSPENSION

Independent. Ball-joint type with coil springs Shock absorbers mounted between frame bracket and lower control arm directly behind spring.
See "Mercury" in Suspension & Wheel Alignment Section.

►*FRONT SUSPENSION NOISE CORRECTIONS:* Correct each type noise as follows:

1) Upper Control Arm Squeak - Caused by loss of lubricant at threaded bushing "O" ring seal. Install new type "O" ring seal as used on later cars, or replace bushings.

2) Lower Control Arm Popping or Cracking Noise - Install new type shims No. MK-3054-B (.118") or MK-3054-B (.060") as necessary at outer bushing sleeve position on lower arm. If noise caused by bushing sleeve rubbing on lower arm, install Teflon Washer, No. 371139-S between front bushing and front mounting shim bolt. *NOTE* - This washer installed in production on later cars.

3) Lower Control Arm Rubbing Noise - Caused by lower control arm front mounting bolt rubbing on stabilizer. Correct by cutting off 5/32" from end of bolt or install later type 7 11/32" bolt (first type bolt 7½" long).

King Pin Inclination - 7° with Pos. ¾° Camber.

Caster - 0° to Neg. 1½°. Must be equal within ½° on each side.

Camber - 0° to Pos. ¾°. Must be equal within ¼° on each side.

Toe-In - 3/16-5/16". Supersedes earlier data.

Toe-out on Turns - Inner wheel 20°. Outer wheel 17°6' (Manual Steering), 17°20' (Power Steering).

REAR SUSPENSION

Air Suspension Cars. Control arms used in conjunction with air springs. *See "Ford & Mercury Rear Suspension" in Suspension & Wheel Alignment Section.*

AIR SUSPENSION

Air springs replace coil springs at all four wheels *See "Front Suspension" above for alignment specifications and "Mercury Air Suspension" in Suspension & Wheel Alignment Section.*

STEERING

Manual: Saginaw Recirculating Ball Nut type
See "Saginaw Worm & Nut" in Steering Section.

Power Steering: Bendix Linkage type. Used in conjunction with standard type steering gear.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

►*PITMAN ARM TO FRAME INTERFERENCE CORRECTION:* Caused by steering gear to frame misalignment or excess forging material on pitman arm.
See "Bendix Linkage Type" in Steering Section.

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Saginaw Worm & Nut" in Steering Section.*

Steering Gear Removal: *See "Saginaw Worm & Nut" in Steering Section.*

BRAKES

Bendix Hydraulic, Single Anchor (Without eccentric and with fixed anchor pins). Automatic adjustment on all models except those equipped with 312 engine. Parking lever applies service brakes.
See "Ford, Lincoln, Mercury Bendix" or "Bendix (With Automatic Adjuster)" in Brake Section.
Drum Diameter - 11" front and rear.
Wheel Cylinder Diameter - 1 1/8" front, 31/32" rear.
Clearance - (312 Engine Cars) Hand Adjusted type. Expand shoes until wheel is locked. Back off adjusting screw 12-14 clicks until wheel turns free.
Clearance - (Automatic Adjusted type). *See "Bendix (With Automatic Adjuster)" in Brake Section.*

Brak P dal Fr Play Adjustment: ¼-7/16". If play not correct after brake adjustment, loosen locknut on the eccentric bolt attaching brake pedal to master cylinder pushrod and rotate eccentric bolt for desired clearance.

Standard Master Cylinder: Located on engine side of firewall.
Checking Fluid - Maintain fluid level to within ¼" of top of reservoir.
Removal - Remove eccentric bolt, bushing and locknut that secures pushrod to brake pedal, then remove hollow bolt that secures stop light switch and hydraulic line fitting to master cylinder. Remove four capscrews that secure master cylinder to dash panel and remove master cylinder.

Power Brakes: Bendix Power Unit (with hydraulic reaction valve rod). Combination vacuum power unit and master cylinder. Unit mounted on engine side of firewall and replaces standard master cylinder.
See "Bendix Power Unit" in Brake Section.

►*POWER BRAKE AUTOMATIC APPLICATION OR FAILURE TO RELEASE CORRECTION:* Caused by incorrect installation of brake booster mounting bracket. *See "Bendix Power Unit" in Brake Section.*

Checking Fluid Level - Same as for regular master cylinder.
Removal of Power Unit - Release pushrod from lever assembly, master cylinder outlet fitting bolt from master cylinder. *NOTE* - DO NOT remove stop light switch wires or the tube assembly from outlet fitting. Leave outlet fitting in master cylinder. Remove manifold vacuum hose from unit and reserve tank hose from valve fitting. Remove mounting screws and unit from bracket on dash panel.

MISC. MECHANICAL

Windshield Wipers: Vacuum or Electric Motor types, with Cable & Tensioner.
See "Windshield Wipers" in Miscellaneous Section.

Power Window Regulators: Electric. Reversible motor in each window. Controlled by door switch and master control switch. *NOTE* - Rear Window on Turnpike Cruiser and Tail Gate Window on some Station Wagons also power operated. *See "Power Window Regulators" in Miscellaneous Section.*

Power Top Control: Electric-Hydraulic with reversible pump Motor. *See "Power Top Controls" in Misc. Section.*

Power Seat Adjusters: "4-Way" Electric Screw and Jack type with single electric motor driving screw jack. *See "Power Seat Adjusters" in Miscellaneous Section.*
Seat-O-Matic Control - Automatic position adjustment controlled by switch on instrument panel.
See "Seat-O-Matic Power Seat Adjusters" in Miscellaneous Section.

Air Conditioning: Combination Air Conditioning-Heater System, *see "Mercury Air Conditioning" in Misc. Sect.*

MODEL IDENTIFICATION

SERIAL NUMBER: Stamped on plate attached to left front body pillar between door hinges *NOTE* - Number (example below) includes identification data as follows

① ② ③ ④ ⑤ ⑥
* N 9 W A 500001 *

① - Asterisk used at both ends of number to prevent tampering
② - Engine Type *See Table Below*
③ - Year - 1959
④ - Assembly Plant **J** - Los Angeles (No 2), **T** - Metuchen, **Z** - St Louis, **W** - Wayne
⑤ - Body Series **A** - Monterey, **B** - Montclair, **C** - Park Lane, **D** - Station Wagons
⑥ - Consecutive unit number at each assembly plant

Engine Type

Engin	Code Letter
312" (2-Bbl Carb)	P
383" (2-Bbl Carb)	N
383" (4-Bbl Carb)	M
430" (4-Bbl Carb)	L

Engine Production Code Number: Indicates place, day and month of engine manufacture Not used for licensing
312" Eng. - Stamped on front of cylinder block at push-rod cover-to-cylinder block mounting surface **383" & 430" Eng** - Stamped on cylinder block directly in front of left cylinder head

TUNE-UP

►*383' ENG SPARK PLUG FOULING & LOADING ON COLD START CORRECTION See "Ford 2 & 4-Barrel Carburetor" in Carburetion Section*
►*383' ENG RICH CONDITION, ROUGH IDLE CORRECTION See "Ford 2 & 4-Barrel Carburetor" in Carburetion Section*
►*430" ENG HARD STARTING, ROUGH IDLE, FLOODING & POOR FUEL ECONOMY See "Carter AFB 4-Barrel Carburetor" in Carburetion Section*
►*430" ENG LEAN CONDITION OR SURGING OR ACCELERATION CORRECTION See "Carter AFB 4-Barrel Carburetor" in Carburetion Section*
►*430" ENG IMPROPER RETURN TO IDLE SPEED NOTE See "Carter AFB 4-Barrel Carburetor' in Carburetion Section*

COMPRESSION PRESSURE· 312" - 170±20 lbs **383'** - 190 ±20 lbs **430'** - 200±20 lbs All cylinders must be equal within 10 lbs

VACUUM READING: Steady 19-20" (312"), 17-18"(383"& 430") at idle speed

VALVE TAPPET CLEARANCE: 312" - 020" Intake & Exhaust Cold, 019" Intake & Exhaust Hot, final check with engine temperature stabilized and engine running
Valve Tappet Adjustment - *See "Valve System' in Mercury Special Data*
383" & 430" - Zero lash, hydraulic lifters

►*SELF-LOCKING TAPPET ADJUSTING SCREW NOTE (312")* Torque required to turn screw (after interference noted) must be 3 ft lbs minimum

MANIFOLD HEAT CONTROL: 312" - Automatic thermostatic type Located in right exhaust manifold Valve must operate freely
383" & 430" - Water jacketed intake manifold with thermostat controlled circulation, eliminates need of heat valve

CARBURETOR AIR INTAKE DUCT ASSEMBLY: *See "Fuel System Notes" in Mercury Special Data*

►*CARBURETOR ICING OR PERCOLATING CORRECTION* May be caused by air intake duct valve plate sticking in fully closed position (causing percolation), or the valve plate may be sticking in partially open position (causing icing in cold weather) Check operation of valve and replace if necessary *See "Fuel System Notes" in Mercury Special Data*

IGNITION

FIRING ORDER: 312" - 1-5-4-8-6-3-7-2
383" & 430" - 1-5-4-2-6-3-7-8
Cylinders - RIGHT BANK 1-2-3-4 LEFT BANK 5-6-7-8

SPARK PLUG GAP: 032- 036"
Spark Plugs - Champion F-14-Y (312"), F-11-Y (383" & 430") 18 mm Tapered seat, no gasket used Torque to 15-20 ft lbs

COIL· Mercury No. B6A-12029-B.
Ignition Current - 2 5 amps idling, 4 5 amps stopped
Resistor - B84-12250-A 1 3-1 4 ohms at 75°F

►*COIL RESISTOR NOTE* Resistor is connected in lead from ignition switch to coil and is bypassed during cranking by lead from starter solenoid to battery terminal of coil

►*RESISTOR CORRODING & FAILURE CORRECTION* Caused by road splash To correct, install a new resistor on flat part of windshield wiper motor mounting bracket Extend and reroute wires as necessary This change made on later cars

DISTRIBUTOR: "Ball Bearing Breaker Plate Type" (Early), "Pivoted Breaker Plate Type" (Late) as follows

Distributor Application

Model	Mercury No.
312" Eng ①	B9A-12127-B
312" Eng ②	B9AF-12127-B
383" & 430" Eng ①	B9S-12127-B
383" & 430" Eng ②	B9AF-12127-B

① - "Ball Bearing Breaker Plate Type", (Early)
② - "Pivoted Breaker Plate Type", (Late)

See "Mercury Distributors" in Electrical Section
Condenser - Mercury No B7A-12300-A ("Ball Bearing Breaker Plate Type"), No B9AF-12300-A ("Pivoted Breaker Plate Type") **Capacity** - 21- 25 mfd
Contact Point Set - Mercury No B7A-12171-A (All Models)
Breaker Gap - 014- 016"
Cam Angle - 26-28½°
Breaker Arm Spring Tension - 17-20 ozs
Rotation - Counterclockwise viewed from above

Automatic Advance - 312" Engine

Degrees	Distr.	RPM	Degrees	Eng.	RPM
Start		400	0		800
1½-2½		550	3-5		1100
6-7		825	12-14		1650
8½-9½		1100	17-19		2200
12½-14		2000	25-28		4000

Automatic Advance - 383" & 430" Engines

Degrees	Distr	RPM	Degrees	Eng	RPM
Start		350	0		700
1-2¼		525	2-4½		1050
3-4½		750	6-9		1500
7-8¼		1200	14-16½		2400
10½-12		1600	21-24		3200
14-15½		2000	28-31		4000

Vacuum Spark Control: Diaphragm type Mounted on distributor and linked directly to breaker plate

①Vacuum Advance - 312" Engine

Distr Degrees	Eng Degrees	Vacuum (" of Hg)
0-3	0-6	9¼
5½-9	11-18	14
9½-12½	19-25	18

②Vacuum Advance - 383" & 430" Engines

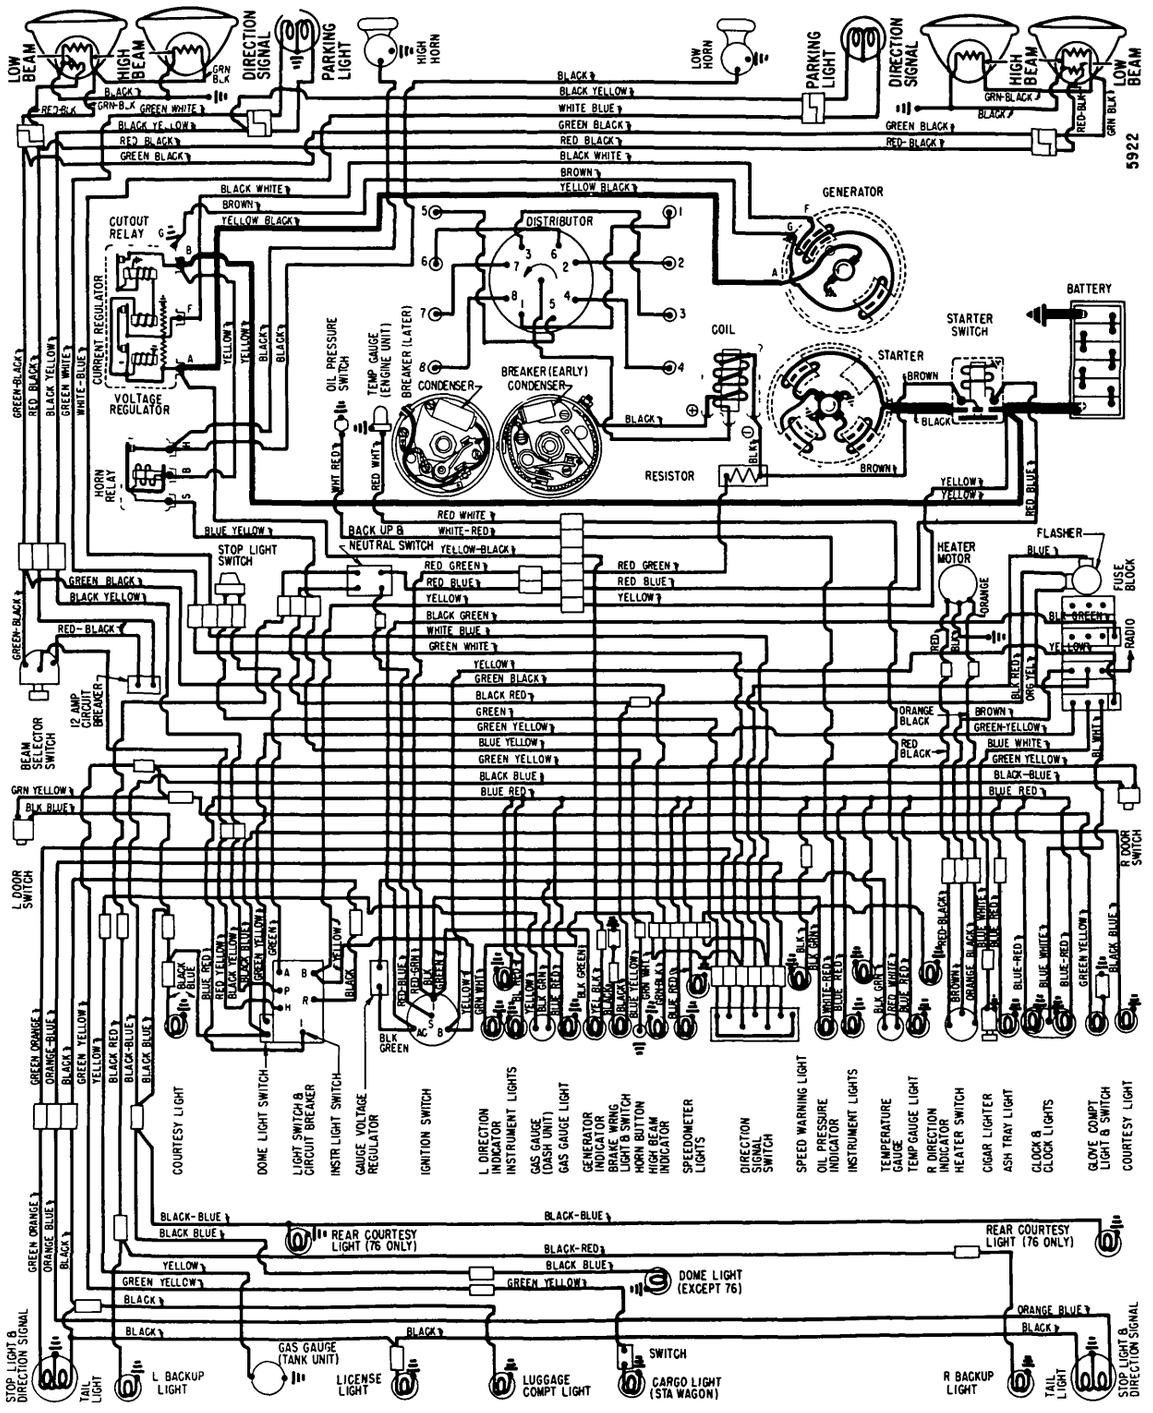
Distr Degrees	Eng Degrees	Vacuum (" of Hg)
0-3½	0-7	6½
3½-6½	7-13	9
6½-9½	13-19	12
9½-12½	19-25	16-20

① - Test machine speed of 1000 RPM
② - Test machine speed of 200 RPM

►***312" DISTRIBUTOR REMOVAL CAUTION:* When oil pump intermediate shaft retainer is loose on shaft shaft may become disengaged from oil pump as distributor is removed. To correct, remove oil pan, oil pump, oil pump intermediate shaft and remove retainer from shaft Strike retainer lightly with hammer to flatten it and reinstall in original position (1 40" from bottom of shaft).** *NOTE* **- Retainer must be tight on shaft and and bear against crankcase when pump and shaft are installed**

IGNITION TIMING

Setting - 3° BTDC (Synchro-mesh), 6° BTDC (Auto Trans) Limits 2-10° BTDC
Timing Mark - Crankshaft damper marked TDC 10° BTDC & 20° BTDC (long marks) with 2° increment marks (short marks) between Align correct mark with pointer on timing chain cover **Set timing with vacuum line disconnected and carburetor opening taped closed.**



CARBURETOR

►*CARBURETOR APPLICATION Used as follows*

Engine	Carburetor
312"	One Holley 2-Bbl
383" (Monterey)	One Ford 2-Bbl
383" (Montclair)	One Ford 4-Bbl
430"	One Carter AFB 4-Bbl

►*383" ENG SPARK PLUG FOULING & LOADING ON COLD START COPRECTION See "Ford 2 & 4-Barrel Carburetor" in Carburetion Section*
►*383" ENG. RICH CONDITION, ROUGH IDLE CORRECTION See "Ford 2 & 4-Barrel Carburetor" in Carburetion Section*
►*430" ENG HARD STARTING, ROUGH IDLE, FLOODING & POOR FUEL ECONOMY See "Carter AFB 4-Barrel Carburetor" in Carburetion Section*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

►*430" ENG. LEAN CONDITION OR SURGING ON ACCELERATION CORRECTION: See "Carter AFB 4-Barrel Carburetor" in Carburetion Section*

►*430" ENG. IMPROPER RETURN TO IDLE SPEED NOTE: See "Carter AFB 4-Barrel Carburetor" in Carburetion Section.*

►*CARBURETOR-TO-BELLCRANK ROD INSTALLATION NOTE:* Rod must be installed on accelerator shaft arm as follows: **Ford 2-Bbl. & Cart r 4-Bbl. Carbs.** On **l ft** side of arm. Use **right hand** clip, Part No. 59A-9825-A. **Ford 4-Bbl. Carb.** - On **right** side of arm. Use **l ft hand** clip, Part No. 59A-9826-AUP.

Throttle Linkage Adjustment (Aut . Trans. Cars): Adjust engine to correct idle speed with carburetor and transmission rods disconnected at bellcrank. Make anti-stall dashpot adjustment (see below). Insert ¼" gauge pin (Tool 77230-MB) through holes in bellcrank bracket and tab. Hold carburetor lever against hot idle screw and adjust carburetor rod at threaded ends so rod freely enters throttle shaft lever. Remove gauge pin. *CAUTION - Improperly adjusted carburetor rod can result in poor return to idle.* Adjust toggle rod assembly so accelerator pedal height from point where rod connects to pedal to bare floor pan is 4 3/16" Lengthen rod to raise pedal, shorten rod to lower pedal **Toggl r d must b at its shortest possible length.** *NOTE - After pedal height adjusted, check for proper kickdown operation. There will be additional movement of transmission control shaft after throttle fully opened. This will cause pin to override full throttle position in slot in transmission control-to-accelerator shaft assembly. If kickdown not obtained, lengthen toggle rod slightly.* Install tachometer on engine and pressure gauge at rear of transmission. Pull upward on throttle rod firmly but gently and adjust throttle rod clevis so pin freely enters hole in bellcrank **Then lengthen clevis 2 full turns (312'), 3½ full turns (383" & 430").** Reassemble rod Accelerate engine to 1000 RPM. Pressure gauge should read 80-85 lbs. To adjust, lengthen throttle rod clevis to increase pressure, shorten to decrease pressure. *CAUTION - Make pressure adjustment quickly so transmission will not overheat.* Remove pressure gauge and tachometer.

Anti-Stall Dashpot Adjustment (F rd & Holl y): With idle speed correctly set, loosen dashpot locknut and hold throttle in closed position Depress dashpot plunger and turn dashpot in its bracket to give 060-.090" (Ford), .045-.064" (Holley) clearance between dashpot plunger and throttle shaft lever Tighten locknut.

Anti-Stall Dashpot Adjustm nt (Carter): **1)** With primary primary throttle plates in wide open position, bend dashpot inner tang (Tool T109-22), so there is 7/16" between top of bowl cover and bottom of dashpot lever **2)** With primary throttle plates closed to normal idle position, bend dashpot lever in area between lever arm base and dashpot plunger, so there is 1/16-3/32" clearance between dashpot plunger operating lever and top surface of air horn

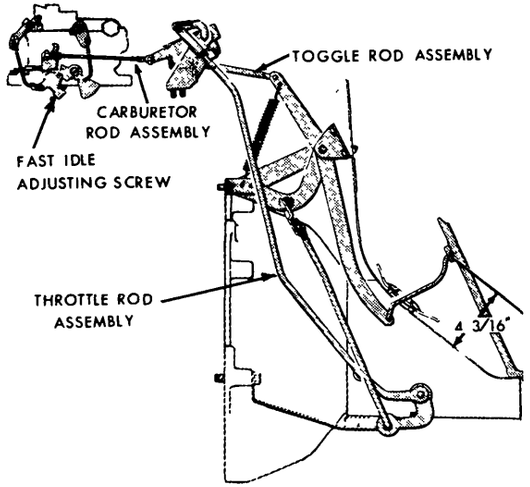
FORD 2 & 4-BARREL

2-BARREL CARBURETOR	Carbur tor No.
383" Eng. (Synchro-mesh)	PB9M-9510-H
383" Eng. (Auto. Trans.)	PB9M-9510-B
4-BARREL CARBURETOR	
383" Eng. (Auto. Trans.)	PB9M-9510-D



►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyl. 1-4-6-7, LEFT barrels feed 2-3-5-8.*

Idle S tting - Initial setting 1½ turns open. Turn screws (primary side only on 4-bbl.) out for richer mixture.

Idl Speed - 475-500 RPM (Synchro-mesh), 450 RPM (Auto. Trans. in "D").

312" ENGINE THROTTLE LINKAGE

383" & 430" ENGINE THROTTLE LINKAGE

►*AIR CONDITIONED CAR IDLE SPEED NOTE:* With engine at normal operating temperature, transmission selector lever in "Dr" position, and with air conditioner turned on so compressor is engaged and operating, adjust engine idle speed to 450-475 RPM.

Throttle Linkage Adjustment: See *CARBURETOR* above.

►*OTHER DATA: See "Ford 2 & 4-Barrel Carburetor" in Carburetion Section.*

HOLLEY 2-BARREL

Mercury No. B9ME-9510-A (312" Eng., All Trans.).

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyl. 1-4-6-7, LEFT barrel feeds 2-3-5-8.*

Idle Setting - Initial setting ¾-1¾ turns open. Turn screws out for richer mixture.

Idle Speed - 475-500 RPM (Synchro-mesh), 450 RPM (Auto. Trans. in "D").

►*AIR CONDITIONED CAR IDLE SPEED NOTE:* With engine at normal operating temperature, transmission selector lever in "Dr" position, and with air conditioner turned on so compressor is engaged and operating, adjust engine idle speed to 450-475 RPM.

Throttle Linkage Adjustment: See *CARBURETOR* above.

►*OTHER DATA: See "Holley 2 & 4-Barrel Carburetor" in Carburetion Section.*

CARTER AFB 4-BARREL

Carter AFB, No. 2853S (Mercury No. B9S-9510-A). Used on 430" Engine. 4-barrel downdraft type

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyl. 1-4-6-7, LEFT barrels feed 2-3-5-8.*

Idle Setting - Initial setting, both screws (primary side only) 1½-2½ turns open. Turn screws out for richer mixture. **Idle Speed** - 450 RPM (Auto. Trans. in "D").

►*AIR CONDITIONED CAR IDLE SPEED NOTE:* With engine at normal operating temperature, transmission selector lever in "Dr" position, and with air conditioner turned on so compressor is engaged and operating, adjust engine idle speed to 450-475 RPM.

Throttle Linkage Adjustment: See *CARBURETOR* above.

►*OTHER DATA: See "Carter AFB 4-Barrel Carburetor" in Carburetion Section.*

CARB. EQUIPMENT

Fuel Pump: Mercury No. B9AE-9350-C (312" Eng. Fuel only); PB7M-9350-A (312" Eng. Fuel & Vacuum); EDG-9350-B (383" & 430" Engs. Fuel only.

Pressure - 4-6 lbs. (312" Eng.), 4.5-6.5 lbs. (383" & 430" Engs.).

See "Fuel Pumps" in Carburetion Section.

Gasoline Gauge: King-Seeley Electric "CV" (Constant Voltage) type with gauge voltage regulator, Mercury No. FEK-10804-A.

Dash Unit - Mercury No. PB9M-9280-A.

Tank Unit - Mercury No. PB9M-9275-A.

See "Fuel Gauges" in Carburetion Section.

Air Cleaner: Dry filter element type. Clean every 2000 miles, replace every 20,000 miles, or sooner if required.

►*AIR CLEANER SERVICE NOTE:* Filter element can be cleaned by tapping or shaking or by using compressed air. If air is used, direct air stream against element in direction opposite that of intake air flow, using care not to rupture filtering element fibre. DO NOT wash element in solvent or other liquid and DO NOT oil or lubricate.

BATTERY

Std. Trans. - MGK-10655-A, 12 volt, 13 plate, 65 ampere hour capacity.

Auto. Trans. - MJK-10655-A, 12 volt, 13 plate, 65 ampere hour capacity.

Air Cond. Cars (Hvy. Duty) - HJK-10655-A or MJK-10655-B. 12 volt, 17 plate, 72 ampere hour capacity.

Battery Ground - Negative, to right hand cylinder head.

STARTER

Mercury B9S-11002-A. Armature Mercury B6A-11005-B.

►*STARTER NOT ENGAGING RING GEAR CORRECTION:* If caused by corrosion of starter drive, thoroughly clean or replace drive unit, then apply a bead of rubber cement or Permatex No. 2 to rear surface of wide portion of starter motor-to-flywheel housing seal. Apply seal to cylinder block mating surface, then install seal, making sure that seal lies flat and is properly positioned. Install starter. On 383" & 430" Engines, check oil pan rail at right rear corner of block to determine if plug has been installed in existing hole. If hole is open, install a ¾" cup plug, Part No. UP-371058-S to seal opening. Position cup plug and tap into place with a blunt punch.

Drive - Mercury No. 1CM-11350-C. Bendix "Folo-Thru".

Rotation - Counterclockwise at commutator end.

Brush Spring Tension - 48-56 ozs.

Cranking Speed - 150-180 RPM at normal engine operating temperature.

Current Draw - 155-190 amps. at cranking speed.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	4500	12.0	80
15.5 ft. lbs.	Lock	5.0	550

Removal: Disconnect battery ground cable, then disconnect throttle linkage at bellcrank. Raise car and remove battery cable at starter and engine splash shield from frame front crossmember. Remove nuts securing right and left front engine support insulators to frame. Position a safety support jack under front edge of oil pan using a block of wood between pan and jack, then raise engine approximately 1". Remove starter attaching capscrews and remove starter by pulling forward and upward until drive clears housing. Continue upward movement of starter until it is nearly upright with drive end facing down, then rotate starter while holding drive assembly to allow clearance of drive end plate mounting bosses. Lower starter between tie rod and idler arm.

Installation: Reverse removal procedure and note the following: Install attaching screws, then tighten outer screw first, finally tightening top and bottom screws. *NOTE - If outer screw is not tightened first, misalignment of starter motor may result.*

Starting Switch: Mercury No. B6A-11450-A, magnetic type, controlled by Ignition & Starter Switch, Mercury No. B5A-11572-A (Synchro-mesh & Automatic Trans.). Neutral Safety Switch, Mercury No. B9MF-7A217, located on top side of steering column under instrument panel (Automatic Trans. Cars).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Neutral Safety Switch Adjustment: *See "Mercury 3-Speed Automatic Transmission" in Transmission Section*

GENERATOR

Model	Generator No.	Amperes
312" Eng (Std) ①	PB8M-10002-B	30
312" Eng (Std) ②	B8A-10002-A	35
383" & 430" Engs (Std)	B9FM-10002-A	35
All (Early) ③	FGV-10002-A	40
All (Late) ③	B9LF-10002-A	40
All (Heavy Duty) ④	B6A-10002-D	50

B6A-10002-D	50	15	1380

Brush Spring Tension - 32-40 ozs (Exc B6A-10002-D) 28 ozs (B6A-10002-D)
Field Current - 1 45-1 50 (PBM-10002-B), 1 25-1 30 (B8A & B9FM-10002-A), 1 20-1 25 (FGV-10002-A), (B9LF-10002-A) 1 20-1 25, Amperes at 15 Volts Hot
B6A-10002-D - 1 0-1 5 amps at 10 Volts Hot

Rotation - Counterclockwise at commutator end
Belt Adjustment· 3/8" deflection midway between fan and generator pulleys under normal thumb pressure

REGULATOR

Regulator No.	Used with Gen. No.
B7A-10505-B (Mercury)	PB8M-10002-B
B8E-10505-B (Mercury)	B8A & B9FM-10002-A
PB7M-10505-A (Mercury)	FGV & B9LF-10002-A
B6A-10505-C (Bosch)	B6A-10002-D

►*BOSCH GENERATOR-TO-GROUND WIRE ATTACHING NOTE The generator-to-regulator ground wire must be attached to regulator base mounting screw*

►*SETTING CAUTION* "Temperature Compensated" type Set to following specifications at 75° ambient (engine compartment) temperature after ½ hour operation in vehicle, or after regulator heated and stablilized

MERCURY
B7A-10505-B, B8E-10505-B & PB7M-10505-A

Cutout Relay

Cuts In - 12 0–12 8 volts (PB8M-10505-B), 12 4-13 2 volts (B8E-10505-B), 12 0-12 8 volts (PB7M–10505-A)
Cuts Out - 6-9 amps (PB8M-10505-B), 2-6 amps (B8E-10505-B), 5-9 amps (PB7M-10505-A) Discharge current

Voltage Regulator

Setting - 14 6-15 4 volts at ambient temperature of 75°F
Checking & Adjusting - *See "Mercury 12 Volt Regulators" in Electrical Section*

Current Regulator

Setting - 28-32 amps (PB8M-10505-B), 33-37 amps (B8E-10505-B), 38-42 amps (PB7M-10505-A)
Checking & Adjusting - *See "Mercury 12 Volt Regulators" in Electrical Section*

BOSCH
(B6A-10505-C)

Cutout Relay

Cuts In - 13 0-13 5 volts
Cuts Out - 2-8 amps

Voltage Regulator

Setting (Low Stage) - 14 1-14 6 volts at ambient temperature of 75°F
Setting (High Stage) - 14 1-14 8 volts at ambient temperature of 75°F
Checking & Adjusting - *See "Bosch Regulators" in Electrical Section*

Current Regulator

Setting - 47-52 amps
Checking & Adjusting - *See "Bosch Regulators in Electrical Section*

MISC. ELECTRICAL

Headlamps: Dual headlights (4-Headlight System) *See 4-Headlight System in Electrical Section*
Direction Signals: *See Electrical Section*
Lighting Switch Removal· Disconnect negative cable at battery then remove trim plate located between clusters just above steering column Insert a stiff wire or suitable hook in notch at bottom of plate, then pull upward and out to snap out the plate Remove ignition switch bezel and remove switch from cluster Remove left air vent and power seat control knobs and bezels if so equipped Press inward on headlight switch spring release button and remove switch knob and shaft Remove headlight switch bezel nut and three screws securing left cluster bezel to cluster housing, then remove bezel assembly While holding headlight switch, unscrew retaining nut adapter and lower switch through opening at bottom of cluster

Stop Light Switch Location: On forward end of brake master cylinder (integral with power unit) Master cylinder or power brake unit located on firewall in in engine compartment

►*STOP LIGHTS REMAINING "ON" CORRECTION (EARLY CARS)* This condition may be due to brake pedal not returning completely To correct, remove brake pedal and install a new brake pedal bushing, Part No LE-2461-A

LIGHTING CIRCUIT BREAKERS: Used as follows
12 Ampere - Protects Electric Wiper motor Located on brake pedal support bracket
12 Ampere - Protects, parking, rear stop, license plate, and instrument panel lamp circuits Located on light switch
12 Amoere - Protects headlight low beam Located on brake pedal support bracket
18 Ampere - Protects headlights Located on light switch
20 Ampere - Protects Air Conditioning blower Located on instrument panel lower reinforcement
30 Ampere - Protects convertible top control Located on right fender apron

FUSES: In fuse panel located in back of glove box Remove cover plate from right inner side of glove box for access to fuses
1 AG 5 Ampere - Protects clock
1 AG 5 Ampere - Protects turn signal
SFE 7 5 Ampere - Protects interior light
SFE 7 5 Ampere - Protects spot light
SFE 7 5 Ampere - Protects Multi-Luber
SFE 7.5 Ampere - Protects back-up lamp
SFE 14 Ampere - Protects heater blower
SFE 15 Ampere - Protects cigar lighter

Horn Relay: Mercury No B8C-13853-A

ENGINE

312" V8

►*AIR CONDITIONED CAR SERVICE CAUTION Use extreme care when disconnecting any part of air conditioning equipment or lines for access to engine See 'Air Conditioning Service Cautions" in Miscellaneous Section*

►*EXCESSIVE ENGINE OIL CONSUMPTION, EXHAUST SMOKING & SPARK PLUG FOULING CORRECTION* These conditions may be caused by plugged cylinder head oil return holes If excessive oil is found in rocker arm cover chambers, clean drain passages with a piece of wire, air pressure and solvent

►*MAXIMUM ENGINE RPM CAUTION (AUTOMATIC TRANSMISSION CARS)* DO NOT operate engine faster than 2500 RPM with selector lever in "N", "P",or "R" Pressure build-up in front clutch will result in partial application and damage to clutch plates DO NOT race engine when rocking car out of snow, sand or mud

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

ENGINE SPECIFICATIONS: 90° V8 overhead valve of same design used on previous models

Bore	Stroke	Displacement
3 80"	3.44"	312 cu. ins.
Comp. Ratio	**Rated HP**	**Developed HP**
9 6-1	46 0	235 at 4100 RPM

Compression & Vacuum Reading: *See TUNE-UP*

CYLINDER HEAD: *See "Cylinder Head & Manifolds" in Mercury Special Data*

►***HEAD GASKET SERVICE REPLACEMENT CHANGE AND INSTALLATION NOTE:*** **Use new gasket No. B9ME-6051-A. Apply sealer No. 8A-19554-B moderately to each side of gasket before installation.**

TIGHTENING TORQUES: *See "Tightening Specifications" in Mercury Special Data.*

ENGINE REMOVAL: *See "Engine" in Mercury Special Data*

OIL PAN REMOVAL: Position No 6 piston at TDC, then drain crankcase and remove engine splash shield Remove stabilizer retaining screws and pull stabilizer down. Loosen nut holding oil tube to oil pan and disconnect tube from oil pump. Remove engine front mount crossmember nuts, then place a support stand or jack under front edge of oil pan using a piece of wood between jack and oil pan Lower car enough to raise front of engine approximately 2" and place a block of wood (1" thick) between front engine support insulators and frame. Remove pan from engine, then remove screen cover and inlet tube assembly.

PISTONS

Aluminum alloy, Autothermic, solid skirt type with three rings above pin Piston pin is offset in piston.

►*ORIGINAL BORE & PISTON SIZES:* Standard cylinder bore limits at 3.8000-2 8024". Standard size pistons are furnished in two sizes for selective fit as follows:

Code 2 Pist n - 3 7986-3 7992" (Color coded Red).
C d 6 Pistons - 3.7998-3 8004" (Color coded Blue)
Color code is marked on top of piston
Removal - Pistons and rods removed from above.
Clearanc - .0008- 0026". Maximum Wear Limit - 0045".

Fitting N w Pist ns: *See "Pistons" in Mercury Special Data.*

Installing Pist ns: Indentation or notch on top of piston must face front of engine *See Rod Installation.*

Replac m nt Pist ns: Std. (2 sizes, see above), .020", .030", .040" oversize

PISTON PIN

Floating type with lock ring at each end
Diam t r - 9120-.9123". **Length** - 3 016-3.030".
Clearanc in Pist n - 0001- 0003. Wear Limit - 0008".
Cl aranc in Rod - .0001-.0003" Wear Limit - 0008".

Replacement Pins: Std. .001", .002", oversize

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr (1)	.0775- 0780"	012-.022"	Ⓒ.0002- 0025"
Compr (2)	.0930- 0940"	012- 022"	001- 003"
Oil Contr.	1825-.1879"	.015-.055"Ⓖ	

Ⓒ - 006" maximum wear limit Ⓖ - On rails.

Installing Rings: Space ring gaps 120° apart with oil ring gap positioned so it is on the high side of cylinder bore (when piston installed in engine).

R plac m nt Rings: Std 020", 030", .040" oversize.

CONNECTING ROD

Length (C nter-t -C nt r) - 6.599-6.601".
Journal Diamet r - 2 6239–2.6343" (Code Red), 2.6235-2 6239" (Code Blue).
Lower Bearing - Copper lead alloy, steel back.
Clearance - 0008–.0029" Wear Limit - .0039".
Side Clearance - 006- 016" Wear Limit - .019".

Replacement Bearings: Std. (2 sizes marked RED and BLUE for selective fit), .002", .010", .020", .030" Undersize

►*NOTE:* Any combination of RED or BLUE standard size or .002" Undersize bearing inserts may be used to obtain desired clearance. If desired clearance cannot be obtained, it will be necessary to regrind journals and install undersize bearing inserts

Installing Rods: Assemble rods to piston so indentation embosses on piston head will face front of engine with numbered side of rod to right side of engine (right bank), or to left side of engine (left bank) When installing assemblies in engine, numbers on rods and caps must be together and toward outside of block

CRANKSHAFT

Journal Diameters - 2.6239-2.6243" (Color Coded Red) 2 6235-2.6239" (Color Coded Blue).
Out-of-Round Limits - .00025". **Taper Limit** - 001".
Bearings - Copper lead alloy with steel back.
Clearance - 0008-.0029" Wear Limit - .0037"

Replacement Bearings: Std (2 sizes marked RED and BLUE for selective fit), .002", 010", .020", .030" Undersize.

►*NOTE:* Any combination of RED or BLUE standard size or .002" Undersize bearing inserts may be used to obtain desired clearance If desired clearance cannot be obtained, it will be necessary to regrind journals and install undersize bearing inserts.

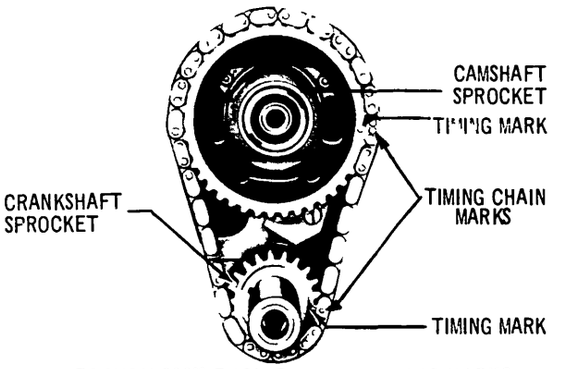
End Thrust: Taken by No. 3 main bearing
Thrust Bearing Alignment - *See "Crankshaft & Main Bearings" in Mercury Special Data*
Endplay - 002-.006" Wear Limit - 010"

Crankshaft Front Oil Seal Installation: *See "Engine Front Cover" in Mercury Special Data*

Crankshaft Rear Oil Seal Installation: *See "Crankshaft & Main Bearings" in Mercury Special Data*

CAMSHAFT

Journal Diameter - 1 925-1.9265"
Out of Round - .0007". Wear Limit - .001".
Clearance - .0010-.0025". Wear Limit - .006"



End Thrust (312"): Controlled by thrust plate and spacer between camshaft sprocket and front bearing journal.
Endplay - .001-.007".

Replacement Camshaft Bearings: Prefinished bearings furnished Std. and 015" Undersize.

Camshaft Setting: Install timing chain and sprockets as an assembly when timing marks on sprockets are to drive side and 12 timing chain pins between marks.

Camshaft Removal & Installation: *See "Camshaft & Bearings" in M rcury Special Data*

Timing Chain Cov r S al Installation (Crankshaft Front Oil Seal): *See "Engin Front Cover" in M rcury Special Data*

Exhaust	45°	420"	Ⓔ .0023- 0037"

Ⓒ - Theoretical valve lift.
Ⓖ - Wear limit 004". Ⓔ - Wear limit .006".
Valve Seat Width - .060-.080" (Intake), .070-.090" (Exhaust)
Valve Stem Oil Seals – Umbrella type seals used on all valves. Install seal with cup side down over valve guide.
Valve Stem Clearance Check - *See "Valve System" in Mercury Special Data.*

►*VALVE STEM REPLACEMENT NOTE:* Some engines may have valves with .015" oversize stems installed in production. For correct replacement, measure stem diameter approximately 1½" from stem end. All valve stems are the same diameter for approximately 1" from stem end

Oversize Valve Stem Installation: *See "Valve System" in Mercury Special Data*

Valve Springs: Free Length - 2.09"

Valve Spring Specifications

Valve	Lbs. Pressure	Length
Closed	Ⓒ 71-79	1 780"
Open	Ⓖ 161-177	1 390"

Ⓒ - Wear limit 64 lbs at 1.780"
Ⓖ - Wear limit 145 lbs. at 1.390".

Valve Guides: Integral with cylinder head. When stem-to-guide clearance exceeds maximum (see table above), ream guides and install oversize valve. *See "Valve Syst m" in Mercury Special Data*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Valv Lift rs: Mushroom type removed from below with camshaft removed
Diameter - 4989- 4995"
Rocker Arm Assembly: *See "Valve System" in Mercury Special Data*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above
►*VALVE TIMING NOTE Following valve opening and closing points are with camlift as indicated*

Valve Timing

Intake Valve - Open 18° ① BTDC Close 58° ① ALDC
Exhaust Valve - Open 66° ② BLDC Close 10° ③ ATDC
Camlift - ① - 015" ② - 013" ③ - 016"
Valve Timing Check - Install a timing quadrant on crankshaft damper *NOTE - Check for bent timing pointer and replace if bent or damaged* Back off adjusting nut on No 1 cylinder intake valve rocker arm, then slide rocker arm toward rear and secure in this position Install dial indicator on cylinder head and position actuating point of indicator in pushrod socket (in same plane as pushrod movement) Rotate engine until lifter rests on heel of camshaft lobe (pushrod in lowest position) Set indicator to zero, then rotate engine until dial indicator registers the specified cam lobe lift *(see "Valve Timing Specifications" above)* Crankshaft degrees indicated on quadrant should agree with specifications in table above Continue to rotate engine to check valve closing

OILING SYSTEM

►***ENGINE OILING SYSTEM· See "Engine Lubrication" under OILING SYSTEM in Mercury Special Data.***

Crankcase Capacity: 5 qts (refill) Add 1 quart when filter changed
Normal Oil Pressure· 35-50 lbs at 2000 RPM
Oil Pressure Indicator: Light on instrument panel Light comes on when oil pressure low
Oil Pressure Switch - Mercury No B6A-9278-A
Oil Pump: Rotor type, located at left side of engine crankcase and driven by distributor drive gear
►*312" ENGINE OIL PUMP INTERMEDIATE SHAFT PRODUCTION CHANGE & INSTALLATION NOTE See "Oiling System" in Mercury Special Data*
Crankcase Ventilation: Filter in oil filler cap (Inlet), filter screen in road draft tube (Outlet) Clean and oil every 2000 miles or more often in dusty areas

COOLING

Water Capacity: 20 qts Add 1 qt with heater
Pressure Valve: Mercury No LA-8100-A (12-15 lbs) Radiator filler cap
Thermostat: Mercury No B7A-8575-A (157-162°F), B7A-8575-B (175-180°F)
Water Pump: Packless, sealed ball bearing type
See "Water Pumps" in Mercury Special Data.
Temperature Gauge: King-Seeley electric, Constant Voltage ("CV") type with Gauge Voltage Regulator, Mercury No FEK-10804-A
Dash Unit - Mercury No PB9M-10883-A
Engine Unit - Mercury No B7A-10884-A
See Temp rature Gauges" in Miscellaneous Section

ENGINE

383" & 430" V8

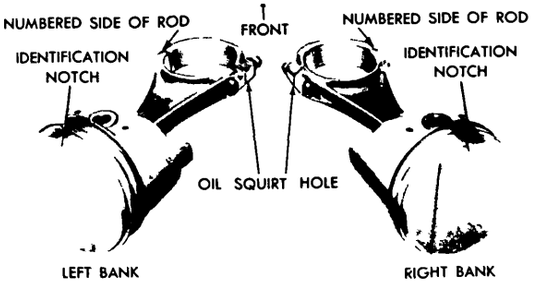
►*AIR CONDITIONED CAR SERVICE CAUTION Use extrem care when disconnecting any part of air conditioning equipment or lines for access to engine See "Air Conditioning Service Cautions" in Misc llaneous Section*

ENGINE SPECIFICATIONS: Own 90° V8 overhead valve engine of same design used for previous models

Engine	Bore	Stroke	Displacement
383"	4 30"	3 30"	383 cu ins.
430"	4 30"	3 70"	430 cu ins

Engine	Compr. Ratio	Rated HP	Developed HP
383" ①	9 2-1	59 17	280 at 4400 RPM
383" ②	9 2-1	59 17	322 at 4600 RPM
430"	9 2-1	59 17	345 at 4400 RPM

① - 2-Bbl Carb ② - 4-Bbl Carb



Compression & Vacuum Reading - *See TUNE-UP*
►*MAXIMUM ENGINE RPM CAUTION* DO NOT operate engine faster than 2500 RPM in "N", "P" or "R" Will cause oil pressure build-up in front clutch resulting in partial application and damage to clutch plates DO NOT race engine when rocking car out of snow, sand or mud
►*ROCKER ARM COVER AND GASKET REPLACEMENT NOTE* New rocker arm cover gasket, Part No B9ME-6584-BUP, should be used for service replacement to reduce oil leaks at this area New gasket has round screw holes and notch on inside edge Install gasket with notch toward **front** of engine on **right** bank to **rear** of engine on **left** bank
►*CYLINDER HEAD GASKET REPLACEMENT NOTE* Use Cylinder Head Gasket, Part No B9ME-6051-A for replacement Apply Sealer, Part No 8A-19554-B moderately to both sides of gasket before installation
►*OIL PUMP-TO-CYLINDER BLOCK GASKET RESTRICTION CAUTION* When engine is being disassembled, it is recommended that the oil pump be removed and the gasket examined to make sure it is not creating an oil flow restriction If there are indications of the gasket obstructing the oil passage or if it has not been sealing properly, replace the gasket
►*VALVE PUSHROD COVER NOISE CORRECTION* If a resonant engine noise is noticeable at idle speed or between 1800-2000 RPM, determine if it is originating from engine valve pushrod cover as follows With engine at idle speed, insert a hammer handle between intake manifold passages No 2 & 3 and valve pushrod cover If noise is reduced or eliminated by pushing down on handle, it is an indication the pushrod cover is vibrating To correct, cut a ¾" slit lengthwise in piece of 1" x 2½" heater hose Work from right side of engine and insert the piece of hose (slit end first) between manifold passage No 2 & 3 and onto pushrod cover Position the hose until it is resting on "X" section of cover reinforcing ribs (slit toward front of engine)
►*ENGINE COOLANT LOSS CORRECTION (EARLY ENGINES)* On engines with early type cylinder heads having manifold-to-cylinder head studs (later heads have hex head bolts), install new type cadmium plated studs, Part No 372404-S100 Apply Permatex No 2 to threads (cylinder head end) of studs before installation
►*CYLINDER HEAD PRODUCTION CHANGE* Later cylinder heads have blind bosses instead of through holes in water jacket area at exhaust manifold attaching bolt holes Use 3/8" - 16 x 1¼" hexhead bolts, Part No 20428-S8 and 3/8" lockwashers, Part No 370383-A to attach exhaust manifold to cylinder head Tighten manifold attaching bolts to 15-21 ft lbs (changed from 23-28 ft lbs for early type studs)
►*EXCESSIVE ENGINE OIL CONSUMPTION, EXHAUST SMOKING & SPARK PLUG FOULING CORRECTION* These conditions may be caused by plugged cylinder head oil return holes If excessive oil is found in rocker arm cover chambers, clean drain passages with a piece of wire, air pressure and solvent
CYLINDER HEAD: *See "Cylinder Head & Manifold in Mercury Special Data*
TIGHTENING TORQUES: *See 'Tightening Special Specifications" in Mercury Special Data*
ENGINE REMOVAL: *See "Engine" in Mercury Special Data*
OIL PAN REMOVAL: Position No 1 piston at 14° BTDC Disconnect ground cable at battery Remove dipstick, then disconnect throttle linkage at plastic bushing of bellcrank Drain crankcase, then remove engine splash shield Remove engine front mount-to-crossmember nuts Raise engine and place a 1" block of wood between each front mount and frame Disconnect either right or left stabilizer link at front lower suspension arm and swing out of way Remove oil pan retaining capscrews and let oil pan rest on crossmember Remove oil pump inlet tube and screen assembly screws and let assembly drop into pan Remove pan by dropping it down and moving it forward

PISTONS

Step head, slipper type aluminum alloy with a steel strut Piston pin is interference fit in piston Retaining rings are not used

►*ORIGINAL BORE & PISTON SIZES* Standard cylinder bore limits are 4 300-4 3024" Standard size pistons are furnished in two sizes for selective fitting as follows
►*REVISED PISTON SIZE & CLEARANCE SPECIFICATIONS (430")* Std size piston furnished in two (reduced) sizes and marked with color code on top of piston as follows
Code Red 4 2997-4 2983", Code Blue 4 2989-4 2995"
See revised clearance specification below
Removal - Piston and rod removed from above
Clearance (383") - 0008- 0026" at bottom of skirt Wear limit 005"
Clearance (430") - 0017- 0035" This supersedes previous specification of 0008- 0026"

CONTINUED ON NEXT PAGE

MERCURY PISTON & ROD ASSEMBLY

CONTINUED FROM PRECEDING PAGE

Fitting N w Pist ns: *Se "Pistons" in M rcury Special Data.*

Installing Pist ns: *Pistons for right and left hand cylinders are NOT interchangeable.* Install piston so that identification notch on head is toward front of engine. *See Rod Installation below.*

R plac m nt Pist ns: Std. (2 sizes, see above), .020", .030", .040" Oversize.

PISTON PIN

Press fit in connecting rod, no retaining device.

Diam ter - .9750-.9753". **Length** - 3.48-3.50".

Cl aranc in Pist n - .0001-.0003". Wear Limit-.0008".

Cl aranc in Rod - .0008-.0016" **interference fit.**

Pist n Pin R moval & Installation: *See "Piston Pins" in Mercury Special Data.*

R plac ment Pins: Standard size. Furnished only with new pistons.

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr. (1)	.0775-.0780"	.015-.025"	.0015-.003"
Compri (2)	.0930-.0940"	.015-.025"	.001-.003"
Oil (3)	.1825-.1879	① .015-.055"	②

① - Control ring segments ② - Side sealing type ring.

Installing Rings: Install second compression ring with outside counterbore down. Oil ring spacer expander gap must be opposite notch in piston head with segment gaps 1" on each side. Compression ring gaps must be 150° on each side of spacer expander gap (1" each side of piston head notch).

R plac m nt Rings: Furnished Std. .020", .030" & .040" Oversize.

CONNECTING ROD

L ngth (C nt r-T -C nt r) - 6.599-6.601".

J urnal Diameter - 2.5996-2.6000" (Code Red), 2.5992-2.5996" (Code Blue).

L wer Bearing - Copper lead alloy, steel back.

Cl aranc - .0006-.0026". Wear Limit - .0036".

Sid Cl aranc - .005-.015".

R placem nt B arings: Std. (2 sizes marked RED and BLUE for selective fit), .002", .010", .020", .030" Undersize.

►*NOTE:* Any combination of RED and BLUE standard size or .002" Undersize bearing inserts may be used to obtain desired clearance. If desired clearance cannot be obtained, it will be necessary to regrind journals and install undersize bearing inserts.

Installing R ds: Install rod in correct numbered cylinder with notch on head of piston toward front of engine and oil squirt hole in rod facing inward and rod number facing outward toward outer side of cylinder block.

CRANKSHAFT

►*383 & 430" MAIN BEARING BOLT SERVICE REPLACEMENT NOTE: S "Crankshaft" in Mercury Special Data.*

Journal Diam ter - 2 8998-2.9002" (Code Red), 2 8994-2.8998" (Code Blue).

Out- f-R und Limits - 0005" **Taper Limit** - 001"

B arings - Copper lead alloy, steel back.

Cl aranc - .0008-.0029". Wear Limit - .0038".

Endplay - .004-.008". Wear Limit - .012"

End Thrust - Taken by No. 3 (center) main bearing.

Replac m nt B arings: Std. (2 sizes marked RED and BLUE for selective fit), .002", 010", 020", .030" Undersize.

►*NOTE.* Any combination of RED and BLUE standard size or .002" Undersize bearing inserts may be used to obtain desired clearance. If desired clearance cannot be obtained, it will be necessary to regrind journals and and install undersize bearing inserts.

Crankshaft Rear Oil Seal Installation: *See "Crankshaft & Main Bearings" in Mercury Special Data.*

Crankshaft Front Seal Installation: *See "Engine Front Cover" in Mercury Special Data.*

CAMSHAFT

►*BEARING BORE NOTE:* Bearing bores in block are graduated in size (largest No. 1, smallest No. 5) to permit removal and installation of bushings. O.D. of camshaft bearings are also graduated in size.

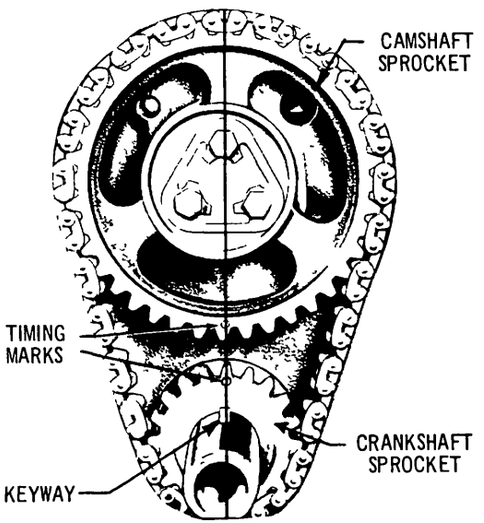
Journal Diameter - 2.264-2.265" (all journals).

Out-of-Round Limits - .001".

Bearings - Babbitt lined, steel back.

Clearance - .001-.003". Wear Limit - .006".

End Thrust: Toward engine rear. Taken by thrust face of camshaft sprocket riding against front surface of cylinder block



Replacement Bearings: Std. and .015" Undersize.

►*BEARING INSTALLATION CAUTION:* No. 1 bearing must have notch in bearing facing front of engine and toward bottom of block Bearing must be .005- 020". inward from finished face of block. The other bearings must be installed with split in bearing facing upward toward top of cylinder block.

Camshaft Removal & Installation: *See "Camshaft & Bearings" in Mercury Special Data.*

Timing Chain Deflection - ½" maximum difference between timing chain straight position and position of chain when chain is deflected outward (all slack removed from opposite side).

Camshaft Setting: (312") Setting is correct when timing marks on sprockets are on drive side with 12 timing chain pins between marks.

MERCURY 383" & 430" ENGINE VALVE TIMING MARKS

Camshaft Setting: (383", 430") Timing marks on sprockets must be adjacent and in line with straightedge across shaft centers.

Timing Chain Cover Seal Installation (Crankshaft Front Seal): *See "Engine Front Cover" in Mercury Special Data.*

Engine Front Cover Removal & Installation: *See "Engin Front Cover" in Mercury Special Data.*

VALVES

Tappet Clearance: Zero lash, hydraulic lifters.

Valve	Head Diameter	①Stem Diameter
Intake	2.080-2.090"	.3711-.3718"
Exhaust	1.770-1.780"	.3693-.3700"

Valve	Seat Angle	②Lift	Stem Clearanc
Intake	45°	.2316"	③ .0010-.0024"
Exhaust	45°	.2316"	④ .0028-.0042"

① - Furnished with 003", .015" & .030" oversize stems

② - Cam lobe lift. Wear loss limit .005".

③ - Wear limit .0045". ④ - Wear limit .0065".

►*VALVE REPLACEMENT NOTE:* Some engines may have valves with .015" oversize stems installed in production. For correct replacement, measure stem diameter approximately 1½" from stem end.

Valve Seat Width - .070-.090" (intake & exhaust).

Valve Stem Oil Seals - Umbrella type seals used on all valves Install seals with cup side down over valve guide.

Oversize Valve Stem Installation: *See "Valve System" in Mercury Special Data.*

Valve Springs: Damper springs used inside all valve springs.

Spring Free Length - 2.030" (approx.).

►*SPRING SQUARENESS NOTE:* If springs more than 1/16" out of square, replace spring and damper.

►*VALVE DAMPER SPRING INSTALLATION CAUTION:* To prevent valve spring clicking noise, damper spring must be installed within valve spring so end of damper spring is within 135° arc counterclockwise to end of valve spring when viewed from above.

Assembled Height - 1.83" measured from surface of cylinder head spring pad to underside of spring retainer (with valve closed). *Do not use more than two 030" spacers to correct assembled height.*

Valve Spring Specifications

Valve	Lbs. Pressure	Length
Closed	① 66-77	1 83"
Open	② 240-260	1.43"

① - Wear limit 60 lbs. at 1.83".

② - Wear limit 225 lbs. at 1.43".

Valve Guides: Integral with cylinder head. When stem-to-guide clearance exceeds maximum .0045" (intake), .0065" (exhaust), ream valve guides and install valves with oversize stems. *See "Valve System" in Mercury Special Data*

Valve Lifters: Hydraulic barrel type. No adjustment

►*VALVE LIFTER PRODUCTION CHANGE:* New shorter lifters having an overall height of 1.830-1.860" are being used in production replacing the previous 1.968-2.010" long lifters. Overhaul procedures for the two types are the same and both types of lifters are inter-

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

changeable and may be used in any combination in the same engine

►*HIGH SPEED HYDRAULIC LIFTER NOISE CORRECTION* Can be caused by aereated oil which will also cause oil pressure to drop (less than 45-50 lbs at 2000 RPM) To correct, check all oil gallery plugs under air pressure for leaks Check oil pump, pick-up tube and screen, inlet tube-screen, and all gaskets for for cracks or damage

Diameter - 8740- 8745"

Clearance in Lifter Bore - 0005- 0020" Wear Limit - 0026"

Hydraulic Lifter Overhaul - *See "Valve System" in Mercury Special Data*

Hydraulic Lifter Operating Range Check - *See "Valve System" in Mercury Special Data*

ROCKER ARM ASSEMBLY: *See "Valve System" in Mercury Special Data*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above

►*VALVE TIMING NOTE Following valve opening and and closing points are with camlift as indicated*

Valve Timing

Intake Valves - Open 22° ℄ BTDC Close 68° ℗ ALDC
Exhaust Valves - Open 63° ℄ BLDC Close 27° ℗ ATDC

℄ - 002" camlift ℗ - 005" camlift

Valve Timing Check - Remove rocker arm assembly Install Dial Indicator Tool 6565 and Indicator Adaptor Tool 6565-B on cylinder head using Holding Fixture Tool 4201-D Pushrod must be in lifter socket and actuator point of indicator in same plane as pushrod movement Install timing quadrant on crankshaft damper Make sure timing pointer is not bent Turn engine slowly until indicator registers valve opening and camlobe lift (as indicated in "Valve Timing" table above) Compare crankshaft degrees indicated on quadrant with Valve Timing Table above Continue to rotate engine to check valve closing specifications in same manner

OILING SYSTEM

►***ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Mercury Special Data.***

►***LOW OIL PRESSURE CORRECTION: See "Oiling System" in Mercury Special Data.***

Crankcase Capacity: 5 qts refill Add 1 qt with filter change

Normal Oil Pressure: 35-50 lbs at 2000 RPM (hot)

Pressure Regulator Valve - In pump body, not adjustable

Oil Pressure Indicator: Light on instrument panel

Oil Pressure Switch - Mercury No B6A-9278-B

Oil Pump: Rotor type, located in crankcase and driven by an intermediate shaft from distributor drive gear

Pump Overhaul - *See 'Oiling System' in Mercury Special Data*

Oil Filter: Full flow disposable type Mounted on lower left corner of cylinder block

►*OIL FILTER INSTALLATION NOTE* Coat gasket with light film of oil Screw onto adaptor until snug **Then tighten ¼ turn ONLY not overtighten.**

Crankcase Ventilation: Filter in oil filler cap (see note below) and ventilator tube at rear of engine Clean and oil filter in filler cap every 2000 miles

►*HEAVY DUTY OIL FILLER CAP & FILLER CAP ELEMENT NOTE* For extreme dusty or sandy conditions, install special oil filler cap, Part No B8WH-6766-A with paper filter element, Part No B8WH-6768-A Replace element every 4000 miles or sooner if needed

COOLING

Three stage engine warm-up and cooling system with temperature controlled water jacketed intake manifold Additional thermostat installed in front face of each cylinder bank

Below 140°F - Water circulates from pump to cylinder heads, intake manifold and back to pump

140-180°F - Water circulates from pump to cylinder heads, intake manifold and cylinder blocks and back to pump

Above 180°F - Water circulates the same as between 140-180°F except it returns to radiator for cooling

NOTE - Cylinder block thermostats are accessible by removing water pump

►*LOWER RADIATOR HOSE LEAKAGE CORRECTION* Install lower radiator hose on water pump inlet so there will be at least ½" clearance between power steering belt and hose

►*ENGINE COOLING LOSS CORRECTION (EARLY ENGINES)* On engines with early type cylinder heads having manifold-to-cylinder head studs (later heads have hex head bolts), install new type cadmium plated studs, Part No 372404-S100 Apply Permatex No 2 to threads (cylinder head end) of studs before installation

Water Capacity: 20½ qts without heater, 21½ qts with heater and/or air conditioning

Pressure Valve: Radiator filler cap, Mercury No LA-8100-A Operating pressure 12-15 lbs

Thermostat: 157-162° (No B8E-8575-B), 175-180° (B9A-8575-A) Two 137-142° (B9S-8575-B), located in front face of cylinder banks

Water Pump: Packless, sealed ball bearing type

See "Water Pumps" in Mercury Special Data.

Temperature Gauge: King-Seeley electric, Constant Voltage ("CV") type with Gauge Voltage Regulator, No FEK-10804-A

Dash Unit: Mercury No PB9M-10883-A

Engine Unit: Mercury No B7A-10884-A

See "Temperature Gauges" in Miscellaneous Section

Power Booster Fan: *Standard on air conditioned cars See "Cooling System" in Mercury Special Data*

CLUTCH

Borg & Beck Model 10.5A6 (312" Eng.), 11A8 (383" Eng.). Single plate, dry disc type Mercury part numbers

Engine	Cover Assembly	Clutch Disc
312"	B9M-7563-B	MK-7550-B
383"	B9M-7563-A	B9M-7550-A

See "Borg & Beck Clutches" in Clutch Section

Pedal Adjustment: 6¼-6½" (total travel) To adjust move clutch pedal bumper and bracket up or down

NOTE - This adjustment must be made before adjusting clutch pedal free travel

Free Travel - ¾-1" To adjust (after pedal travel is adjusted) loosen clutch pedal release rod locknut and turn adjusting screw clockwise to increase free travel or counterclockwise to decrease free travel

Removal: With transmission removed, disengage clutch pedal retracting spring from clutch release lever, then remove screws retaining equalizer bracket assembly to flywheel housing Remove flywheel housing cover and mark position of flywheel and pressure plate assembly for reference at installation Compress clutch pressure plate assembly with Tool 7563, then remove cap-screws, pressure plate and disc *NOTE - If tool is not available, install three wedges between clutch fingers and pressure plate housing* Remove clutch pilot bearing from flywheel with Tool 7600-E Remove clutch release bearing and hub from lever assembly in flywheel housing

SYNCHRO-MESH TRANSMISSION

Own Helical gear, constant mesh, synchro-mesh (second & high), sliding gear (low & reverse)

See "Mercury Synchro-mesh" in Transmission Section

Transmission Controls: *See "Transmission Controls" in Transmission Section*

Removal: 1) Raise car and drain transmission *NOTE - On cars with dual exhaust, disconnect left hand exhaust pipe from manifold, then remove muffler outlet pipe from mounting bracket at rear of muffler Move exhaust system from under car*

2) Disconnect speedometer cable at transmission extension housing and transmission shift rods at transmission Disconnect drive line at rear universal joint flange and remove drive shaft and universal joint from transmission output shaft Remove front parking brake cable from equalizer lever and retaining clip from rear crossmember, then remove cable from crossmember Remove equalizer rod from lever

3) Remove rear engine support clamp, then position a transmission lift under transmission and lift engine sufficiently for installation of a support tool With transmission lift secured to transmission, remove bolts securing engine support crossmember to frame side rails and remove crossmember Remove two top transmission-to-flywheel housing screws and install two studs as guide pins Remove lower transmission-to-flywheel housing screws and remove transmission

AUTOMATIC TRANSMISSION

Two types used **Merc-O-Matic,** similar to previous type except for welded converter assembly and design changes for different engines **Multi-Drive,** similar to Merc-O-Matic but has extra "DR" (Drive) range position for performance

►*REAR PUMP NOISE CORRECTION & PUMP PRODUCTION CHANGE See "Mercury 3-Speed Automatic Transmission" in Transmission Section*

►*ERRATIC SHIFT CORRECTION (WHEN CAUSED BY DIRT OR FOREIGN MATTER IN GOVERNOR HYDRAULIC CIRCUIT) See "Mercury 3-Speed Automatic Transmission" in Transmission Section*

►*PRODUCTION CHANGE & REPLACEMENT PARTS CAUTION See "Mercury 3-Speed Automatic Transmission" in Transmission Section*

►*TESTING & TROUBLE SHOOTING See "Mercury 3-Speed Automatic Transmission" in Transmission Section*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Lubrication: Check fluid level every 1000 miles Drain & refill every 16,000 miles with Automatic Transmission Fluid Type "A" (Suffix A)

Checking Fluid L v l: With transmission at normal operating temperature, move selector lever through all ranges to assure fluid distribution, then place lever in "P" (Park) position Check fluid level and add recommended fluid as required to bring level to "F" (Full) mark on dipstick

Thr ttl Linkage Adjustment: *See CARBURETOR above*

►*OTHER DATA See "Mercury 3-Speed Automatic Transmission" in Transmission Section*

UNIVERSALS

Spic r. Needle bearing type

►*DRIVE LINE VIBRATION CORRECTION* Inspect rear universal joint for proper seating in rear axle companion flange The retaining strap (welded on) between two universal joint bearing caps may not be properly aligned with groove in companion flange If the above condition is found, disassemble joint and inspect for lubrication, wear, and damage

►*DRIVE LINE "THUMP" or "GRUNT" NOISE CORRECTION* This condition may be caused by improper lubrication on transmission output shaft and slip yoke splines To correct, remove drive shaft and universal joint assembly and apply a liberal coating of Special Purpose Lubricant, Part No B8A-19589-A on output shaft and slip yoke splines

REAR AXLE

►*REAR AXLE "GROAN" WHEN STARTING IN REVERSE OR LOW UNDER LOAD CORRECTION* Add Rear Axle Lubricant Additive, Part No C1AA-19B546-A

Own. Same design used on previous models *See "Ford & Mercury (Deep Offset) Hypoid" in Rear Axle Section*

Axl Ratios

M d l & Trans.	Ratio
312" (Synchro-mesh) Std	3 56-1
312" (Synchro-mesh) Optl	3 89-1
312" (Auto Trans) Std	3 10-1
383" (Synchro-mesh) Std	3 22-1
383" & 430" (Auto Trans) Std ①	2 69-1
383" & 430" (Auto Trans) Std ②	2 71-1
383" & 430" (Auto Trans) Optl	2 91-1

① - Early ② –Later

►*GEAR RATIO NOTE* Gear ratio stamped on tag on rear axle housing bolt

Backlash - 004- 009"

Axl Shaft R m val: Remove wheel and brake drum Remove axle shaft retainer locking type nuts (work through opening in axle shaft flange) Use Puller and pull shaft (do not disturb brake backing plate or damage wheel bearing oil seal)

Carri r Ass mbly R m val: *NOTE* - Pinion carrier assembly can be removed separately without disturbing differential carrier by disconnecting rear universal joint at companion flange, and removing five bolts that attach pinion carrier assembly to differential carrier housing With rear universal joint disconnected, axle shafts removed (see above) remove differential carrier housing to rear axle housing bolts and lift out carrier assembly

Wheel B aring Adjustm nt: None required

SHOCK ABSORBERS

Direct acting, non-adjustable type used on all models

Model Front Sh ck Abs rbers	Part No.
Monterey & Montclair (All) Std	B9M-18077-B
Monterey & Montclair (All) Air Cond	B9MM-18077-D
Other Models, Std	B9MM-18077-D
All Models, Heavy Duty	B9M-18077-A
Model Rear Shock Absorbers	**Part No.**
All Models (Exc Following) Std	B9M-18080-A
Park Lane (All) Std	B9MM-18080-T
Station Wagon (All) Std	B9MM-18080-S
All Models (Exc Sta Wgn) Hvy Duty	B9M-18080-C
All Models with Air Cond	B9MM-18080-T

FRONT SUSPENSION

Independent. "Ball-Joint" suspension with direct acting shock absorbers mounted within coil springs *See "Mercury Front Suspension" in Suspension & Wheel Alignment Section*

►*"CLUNKING" NOISE CORRECTION See "Mercury Front Suspension' in Suspension & Wheel Alignment Section*

Caster - 0° to Neg 1½° Caster should not vary more than ½° from side to side

Camber - 0° to Pos ¾° Camber should not vary more than ½° from side to side

Toe-In - 1/16-3/16"

Toe-Out on Turns - With inner wheel at 20°, outer wheel should be 17°30' (Manual Steering), 17°18' (Power Steering)

STEERING

Manual Steering: Saginaw Recirculating ball type *See "Saginaw Ball Bearing Worm & Nut" in Steering Section*

Power Steering: Bendix linkage type *See "Bendix Linkage Type" in Steering Section*

►*POOR RECOVERY FROM LEFT HAND TURN CORRECTION (312" ENG) See "Bendix Linkage Type" in Steering Section*

►*STEERING WHEEL SHAKE & SHAFT RATTLE CORRECTION* May be caused by steering column shaft bearing not being properly preloaded To correct, loosen nuts retaining steering column to brace on underside of column, then press down firmly on wheel and tighten nuts on brace *NOTE* When installing steering gear assembly (after service), preload the bearing as follows Push steering gear up toward wheel to compress rubber insert in flex coupling, then tighten steering gear-to-frame bolts to 34-42 ft lbs

►*STEERING COLUMN RATTLE CORRECTION* If caused by play between shift rod and shift tube arm, install a spacer (either flat or wave type) on manual shift rod pin to eliminate looseness

Steering Linkage: *See "Steering Linkage" in Steering Section*

Steering Gear Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section*

BRAKES

Bendix hydraulic, single anchor (without eccentric and with fixed anchor pin) Automatic adjustment on all models Parking brake applies rear wheel brakes

See "Bendix Automatic Adjuster Hydraulic Brakes' in Brak Section

►*POWER BRAKE INSUFFICIENT ASSIST CORRECTION If this condition is caused by vacuum leak in booster assembly, see "Bendix Hydraulic (Disc) Reaction Type Power Unit" in Brake Section*

Drum Diameter - 11"

Wheel Cylinder Diameter - 1 1/8" (front), 31/32" (rear)

Lining - Molded type riveted to shoe

Lining Width - 3" (front), 2½" (rear)

►*LINING THICKNESS PRODUCTION CHANGE* Thickness of standard lining has been increased 030" (making total lining thickness ¼") NOTE - The new standard lining and the oversize lining furnished for service replacement are the same thickness but are not interchangeable due to the radius grind Radius grind on oversize lining is different to match turned drum

Clearance - Special procedures required *See "Bendix Automatic Adjuster Hydraulic Brakes" in Brake Section*

Brake Pedal Freeplay Adjustment (Standard Brakes): Adjust eccentric bolt on brake pedal lever (connects master cylinder pushrod to brake pedal lever) to obtain 1/4-7/16" free travel

Brake Pedal Height Adjustment (Power Brakes): Adjust eccentric bolt on brake pedal lever (connects power brake unit pushrod to brake pedal lever) so that letter "E" on head of bolt is in an upright position

Standard Master Cylinder: on engine side of firewall

Checking Fluid - Maintain fluid level to within ¼" of top of cylinder

Removal - Disconnect master cylinder pushrod at brake pedal lever, then remove hollow bolt securing outlet fitting to master cylinder Remove capscrews securing master cylinder to firewall and remove master cylinder

Power Unit: *See 'Bendix Hydraulic (Disc) Reaction Type Power Unit" in Brake Section*

Checking Fluid Level - Same as for standard master cylinder (above)

Removal - Remove outlet fitting bolt from end of master cylinder, then disconnect manifold vacuum hose from power unit Under the instrument panel, remove eccentric capscrew and locknut securing pushrod to brake pedal lever, then remove capscrews and lockwashers holding power brake assembly to bracket and remove assembly

MISC. MECHANICAL

Windshield Wipers: Cable operated electric type *See "Windshield Wipers" in Miscellaneous Section*

Power Window Regulators: Electric type with reversible motor in each window Controlled by door switch and master control switch *NOTE* - Tail gate window on some station wagon models also power operated *See "Power Window Regulators" in Miscellaneous Section*

Power Top Control: Electric-hydraulic with reversible pump motor *See "Power Top Controls" in Miscellaneous Section*

Power Seat Adjusters: 4-Way Power Seat - Solenoid controlled ball nut and screw type with single electric motor . *See "Power Seat Adjuster" in Miscellaneous Section*

Seat-O-Matic Control - 4-way seat control with automatic position adjustment controlled by switch on instrument panel *See "Seat-O-Matic Power Seat Adjusters" in Miscellaneous Section*

Air Conditi ning: *See "Mercury Air Conditioning" in Miscellaneous Section*

MODEL IDENTIFICATION

SERIAL NUMBER: Stamped on Patent Plate attached to left front body pillar between door hinges *NOTE* - Number (example below) includes identification data

① ② ③ ④ ⑤
O W 32 N 500001

① - Year (1960)
② - Assembly Plant **J** Los Angeles **T** Metuchen **Z** St Louis **W** Wayne
③ - Body Series See Body table below
④ - Engine **M** 430" Domestic **F** 430" Export **N** 383" Domestic **E** 383" Export **P** 312"
⑤ - Beginning Vehicle Number

Body Series Table

	2-Dr. Sedan	4-Dr. Sedan	Convertible
Monterey	31	32	35
Montclair		42	
Parklane			55
	2-Dr. Hardtop	**4-Dr. Hardtop**	**Sta. Wagon**
Monterey	33	34	
Montclair	43	44	
Parklane	53	54	
Commuter			37
Colony Park			57

VEHICLE SPECIFICATIONS: Vehicle specification codes (on Patent Plate) contain Body Style, Color, Trim, and Date of Assembly

Engine Production Code Number: Indicates - Engine Plant, Year, Month, Day, and Plant Inspector Not used for licensing

312" - Early - On front of cyl block at pushrod valley cover **Later** - On left front corner of cyl block just below cyl head

383" & 430" - On cyl block in front of left cyl head

TUNE-UP

►*ENGINE DETONATION CORRECTION (312" Engine using Regular Gasoline)* Check and adjust the following items in order Recheck engine performance after each step to determine if detonation corrected.
1) Check cooling system for correct pulley, fan, and thermostat Make certain radiator filled with water
2) Check operation of manifold heat control valve
3) Set ignition timing at 2° BTDC (minimum setting) and check distributor advance performance
4) Replace 180 °F thermostat with 160 °F type
5) If above steps DO NOT correct detonation, install TWO head gaskets on each cylinder bank using sealer on head and block sides of gaskets only Reset ignition timing to normal setting.

►*DISPOSABLE FUEL FILTER RESTRICTION NOTE: See "Disposable Fuel Filter Flow Checks" under Carburetor*

COMPRESSION PRESSURE: 312" & 383" - 160±20 lbs , **430"** - 180±20 lbs All cylinders to be even within 10 lbs

VACUUM READING: 17-18" Hg at specified engine idle RPM

VALVE TAPPET CLEARANCE: 312" - 019" Intake & Exhaust Cold, 018" Intake & Exhaust Hot Final check with engine temperature stabilized and engine running
Valve Tappet Adjustment - *See "Valve System" in Mercury Special Data*

383" & 430" - Zero lash, hydraulic lifters

►*SELF-LOCKING TAPPET ADJUSTING SCREW NOTE (312").* Torque required to turn screw (after interference noted) must be 3 ft lbs minimum

MANIFOLD HEAT CONTROL: 312" - Automatic thermostatic type Located in right exhaust manifold Valve must operate freely

►*NOISY & STICKING CONTROL VALVE NOTE* To correct and prevent recurrence, use mixture of penetrating oil and graphite such as "Lock-Ease" applied to shaft at each chassis lubrication

383" & 430" - Water jacketed intake manifold with thermostat controlled circulation, eliminates need of heat valve

CARBURETOR AIR INTAKE DUCT ASSEMBLY: *See FUEL SYSTEM NOTES in Mercury Special Data.*

IGNITION

FIRING ORDER: 312" - 1-5-4-8-6-3-7-2
383" & 430" - 1-5-4-2-6-3-7-8
Cylinders - RIGHT BANK 1-2-3-4, LEFT BANK 5-6-7-8

SPARK PLUG GAP: 032- 036"
Spark Plugs - Champion F-14-Y (312"), F-11-Y (383" & 430") 18 mm Tapered seat, no gasket used Torque to 15-20 ft lbs

►*IGNITION FAILURE CAUTION·* Do not mistake "CORONA" discharge for "FLASH-OVER" Corona is steady blue light around insulator just above spark plug shell crimp and has no effect on ignition performance

COIL: Mercury No. B6A-12029-B.
Ignition Current - 2 5 amps idling, 4 5 amps stopped
Resistor - COLF-12250-A 1 3-1 4 ohms at 75°F

►*COIL RESISTOR NOTE:* New Ignition Resistor Wire Assembly is connected to a small pigtail from ignition switch and to multiple quick disconnect at left side of dash panel Resistor Assembly is bypassed during cranking by lead from starter solenoid to battery terminal of coil

DISTRIBUTOR: Mercury No. COAF-12127-A (312"), COMF-12127-C (383"), B9MF-12127-B (430").
See "Mercury Distributors" in Electrical Section

►*ENGINE STUMBLE, HESITATION, ROUGH IDLE, OR INTERMITTENT MISFIRING CORRECTION (383", 430" Eng)* Caused by "Cross-fire" due to failure of boot insulation at distributor cap To correct, replace faulty distributor wires with wires from Kit, Part No HJK-12259-D, identified by daub of green paint or words "Radio Resistance" lettered on wires Distributor wires must be routed as shown in wiring diagram *NOTE - Also see "Ford 2-Barrel Carburetor"*

►*DISTRIBUTOR HOLD-DOWN CLAMP CAUTION·* Clamp nut should be tightened to 10-15 ft lbs only to prevent bending studs or causing oil leaks at distributor grommet

Condenser - Mercury No B9AF-12300-A (All) **Capacity** 21- 25 mfd
Contact Point Set - Mercury No B7A-12171-A
Breaker Gap - 014- 016"
Cam Angle - 26-28½° *CAUTION* - Set cam angle at idling speed (250 Distributor RPM) and with Zero vacuum
Breaker Arm Spring Tension - 17-20 ozs
Rotation - Counterclockwise viewed from above

Automatic Advance COAF-12127-A

Degrees	Distr.	RPM	Degrees	Eng	RPM
0		500	0		1000
1¼-2¼		800	2½-4½		1600
5-6¼		1300	10 12½		2600
10¼-11¾		2000	20½-23½		4000

① - Adjust test stand to 0° at 300 RPM

② Automatic Advanc - COMF-12127-C

0-3			0-6	6½
5-8			10-16	10
9½-12½			19-25	15

③ - Adjust test stand to 0° at 1000 RPM and 0" Hg

IGNITION TIMING

Setting - Range 2-10 ° BTDC 3° BTDC (312" Synchromesh), 10 ° BTDC (312" Auto Trans), 6° BTDC (383" & 430") *Set with vacuum line disconnected and carb opening taped closed*

►*ENGINE DETONATION CORRECTION (312" Engine):* See *TUNE-UP above.*

Timing Mark - 312" & Early 383" & 430" - Damper marked TDC, 10° & 20° BTDC (long marks) & 2° short marks between Align mark with pointer on cover **Lat r 383" & 430"** - Ball pin on damper to be aligned with 0, 3, 6, 10 sawtoothed marks of pointer on cover

CARBURETOR

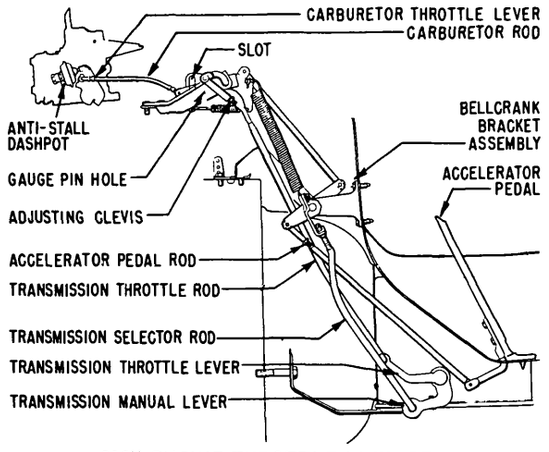
►*CARBURETOR APPLICATION: Us d as follows:*

Engine	Carbur t r
312"	Holley 2-Bbl
383"	Carter 2-Bbl. or Ford 2-Bbl.
430"	Carter 2-Bbl.

►*CARTER CARBURETOR NOTE. N w d sign ABD typ . See below.*

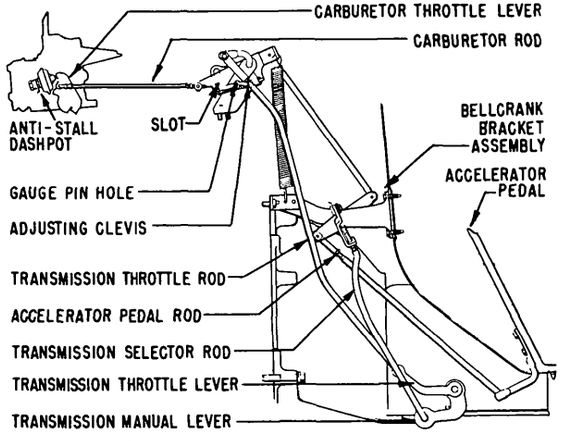
►*HARD HOT START CORRECTION (Cart r ABD Carbs. installed prior to April 15th production)* Caused by fuel percolation. When carburetor, automatic choke and linkage adjustments do not correct condition, install Booster Venturi Assembly Kit Part No COLY-9A523-A and lower float level Later carburetors have these revisions. S *"Cart r ABD Carbur tors" in Carbur ti n S ction.*

CONTINUED ON NEXT PAGE



CONTINUED FROM PRECEDING PAGE

Thr ttl Linkag Adjustment: Make adjustments in the following sequence:



Engin RPM Adjustment - Make Anti-Stall Dashpot Adjustment, see below, then adjust engine idle speed to 450-475 RPM with selector lever in D (Merc-O-Matic), D2 (Multi-Drive) position (engine at operating temperature).

Carburet r R d Adjustm nt - Disconnect transmission throttle rod at bellcrank bracket and carburetor rod at carburetor lever. Insert ¼" gauge pin, Tool 77230-MB, through alignment holes in bellcrank bracket and tube. Hold carburetor lever against hot idle adjusting screw and adjust length of carburetor rod for free fit in carbu-lever. **L ngthen carburetor rod one turn.** Remove ¼" gauge pin and reconnect rods. Recheck alignment holes and readjust carburetor rod as required. *NOTE* - Guide pin holes must be in alignment.

Throttl R d Adjustm nt - Connect pressure gauge at transmission pressure tube fitting at bellcrank. Pull up on throttle rod firmly but gently. Adjust clevis so that pin enters freely, then **l ngthen clevis 3½ turns** and connect rod. Start engine and with foot brake set firmly, selector lever in D (Merc-O-Matic) D2 (Multi-Drive) position, accelerate engine to 1,000 RPM. Gauge reading should be 80-85 lbs. To correct pressure, adjust length of throttle rod. Lengthen rod to increase pressure, shorten rod to decrease pressure. *CAUTION* - Make checks quickly and return selector lever to neutral position.

312" ENGINE THROTTLE LINKAGE

383" & 430" ENGINE THROTTLE LINKAGE

Pedal Height & Kickdown Adjustment: Adjust accelerator rod length to obtain 4 3/16" clearance between bottom surface of pedal and bare floor pan. Shorten rod to raise pedal, lengthen rod to lower pedal. Transmission control shaft must continue to move after throttle is completely opened (pin will override full throttle position in slot in transmission control to accelerator shaft assembly). When kickdown not obtained, shorten accelerator rod slightly (to increase pedal travel).

Downshift Rod Adjustment - Two adjustments necessary. Specifications are with accelerator depressed to full kickdown position.

1) Adjust screw and jamnut at upper end of downshift rod so rod is vertical(crosswise)when looking down from bellcrank to "Z" bar.

2) Adjust length of downshift rod at upper end (remove from stud) so that bellcrank pin is within 3/32" from top of slot.

Anti-Stall Dashpot Adjustment: With carburetor lever against hot idle screw and dashpot plunger fully depressed, clearance between dashpot plunger and lever should be .060-.090". To adjust, loosen locknut and turn dashpot in mounting bracket.

HOLLEY 2-BARREL

Model	Carburetor No.
312" All Trans. (Early)	ℂ B9ME-9510-A
312" All Trans. (Late)	ℂ COME-9510-A
312" Std. Trans.	② COME-9510-F

ℂ - For Std. Trans. remove dashpot and attaching parts.
② - Use B9ME-9510-A or COME-9510-A by removing dashpot and attaching parts.

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyl. 1-4-6-7, LEFT barrel feeds 2-3-5-8.*

Idle Setting - 1-1½ turns open. Turn screws out for richer mixture.

Idle Speed - 500-525 RPM (Synchro-mesh), 450-475 RPM (Auto. Trans.). Selector lever in D (Merc-O-Matic), D2 (Multi-Drive) position.

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Holley 2 & 4-Barrel Carburetors" in Carburetion Section.*

FORD 2-BARREL

Model	Carburetor No.
383" Less Air Cond. (Early)	COME-9510-G
383" Less Air Cond. (Later)	COME-9510-K
383" Air Cond.	COME-9510-J

►*ROUGH IDLE AND STUMBLE CORRECTION (Ford 2-Barrel Carb.):* Caused by improperly installed vacuum transfer (balance) tubes. To correct, *see "Ford 2 & 4-Barrel Carburetors" in Carburetion Section. NOTE - Also see "Distributor" above.*

►*CARBURETOR FLOODING CORRECTION & FLOAT PRODUCTION CHANGE: See "Ford 2 & 4-Bbl. Carburetors" in Carburetion Section.*

►*HESITATION OR STUMBLE CORRECTION (Ford 2-Barrel Carb.): To correct, see revis d accelerator pump adjustment procedure in "Ford 2 & 4-Barrel Carburetors" in Carburetion Section.*

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyl. 1-4-6-7, LEFT barrel feeds 2-3-5-8.*

Idle Setting - Initial setting 1½ turns open. Turn screws out for richer mixture.

Idle Speed - 450-475 RPM with selector lever in D (Merc-O-Matic) D2 (Multi-Drive) position.

►*IDLE SPEED NOTE:* On Air Cond. Cars set idle speed as follows with air conditioner in operation for a minimum of 20 minutes.

1) Loosen locknut securing curved bimetal to idle adjusting screw.

2) Loosen idle adjusting screw locknut and turn screw to secure idle speed of 450-475 RPM, then tighten adjusting screw locknut.

3) Tighten bimetal locknut securely while holding bimetal so opening of curve is toward front of carburetor.

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Ford 2 & 4-Barrel Carburetors" in Carburetion Section.*

CARTER ABD 2-BARREL

Carter ABD No. 2965S, SA (Mercury No. COLE-9510-D).

►*STALLING OR LOADING AFTER SHORT OPERATION OR CHOKE VALVE CLOSING FAILURE CORRECTION:* May be caused by incorrect choke thermostatic coil spring. *See "Carter ABD Carburetors" in Carburetion Section.*

►*POOR PERFORMANCE & ACCELERATION CORRECTION:* Caused by misaligned booster venturi or restricted accelerator pump discharge passages. *See "Carter ABD Carburetors" in Carburetion Section.*

►*HARD HOT STARTING CORRECTION:* Caused by fuel inlet needle improperly seated. *See "Carter ABD Carburetors" in Carburetion Section.*

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyls. 1-4-6-7, LEFT barrel feeds 2-3-5-8.*

Idle Setting - Initial setting 1-1½ turns open. Turn both screws out for richer mixture.

Idle Speed - 450-475 RPM in "D" or "D2".

►*IDLE SPEED & MIXTURE ADJUSTMENT CAUTION:* Hot idle compensating valve must be closed when making either adjustment. To close valve, press down on brass valve button (not on bi-metal spring).

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Carter ABD 2-Barrel Carburetor" in Carburetion Section.*

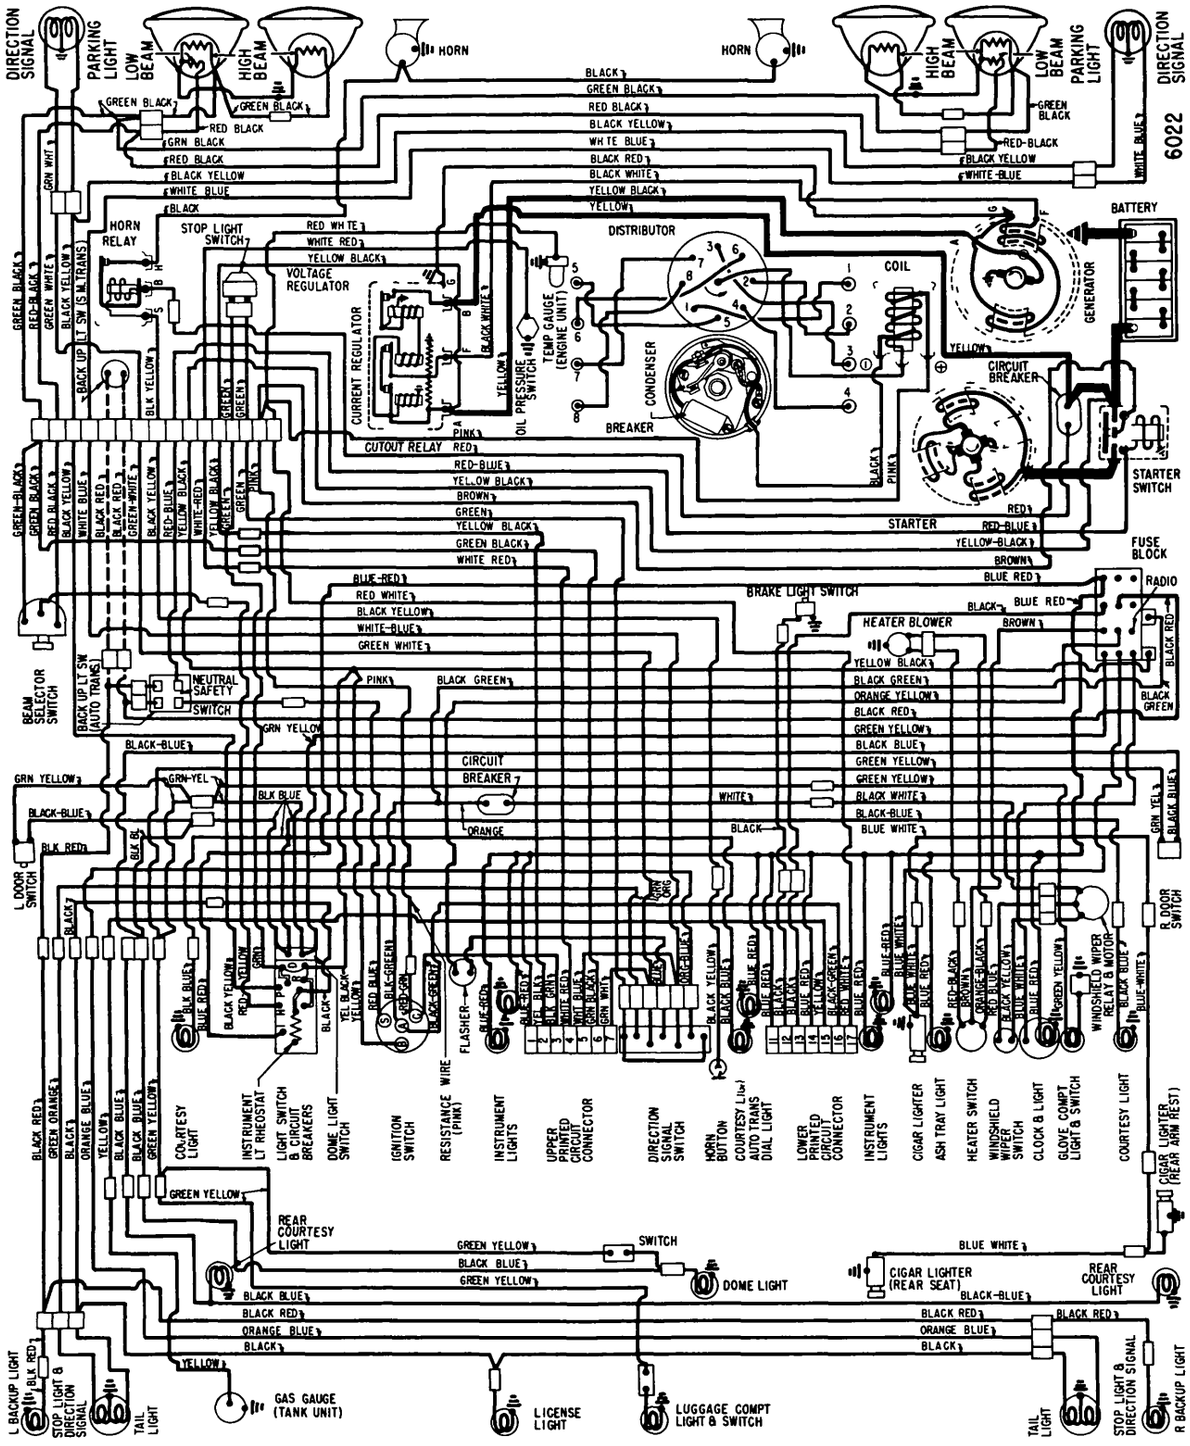
CARB. EQUIPMENT

Fuel Pump: Mercury No. COME-9350-A (312"), EDG-9350-B (383", 430"). Fuel only.

Pressure - 4.0-6.0 lbs. (312"), 4.5-6.5 lbs. (383", 430") at 500 RPM.

See "Fuel Pumps" in Carburetion Section.

NEW DISPOSABLE TYPE FUEL FILTER: New disposable type fuel filter Part No. COME-9155-B is available for service replacement of filters B8S-9155-A and PB8M-9155-A (1958-59).



Installation - To save damage to filter and possibility of leaks, proceed as follows:

1) Use only the filter hex connection adjacent to mating part for applying torque.

2) Bend filter line so that normal free floating position of the end of line is in proper alignment with filter to avoid induction stress on filter case.

3) Use second wrench on filter hex connection to avoid

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

transferring stress through filter case and tighten fuel filter inlet to fuel pump hand tight plus 2½ turns Tighten fuel filter outlet to fuel line to 180-200 inch lbs

Replacement - Remove fuel filter to carburetor fuel tube, and oil filter assembly Remove brass nipple from fuel pump outlet Install new filter in fuel pump outlet *CAUTION - DO NOT transfer force through filter cas when installing filter or fuel tube* Assemble filter to carburetor fuel tube at filter end, then to carburetor Check for leaks

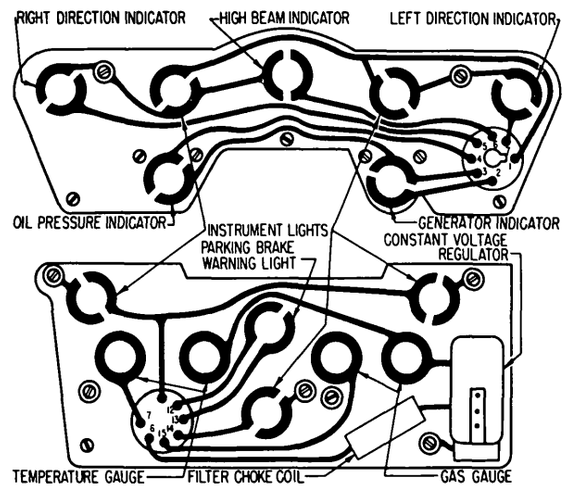
DISPOSABLE FUEL FILTER FLOW CHECKS: Check fuel flow at both inlet and outlet side of fuel filter Minimum flow required for engine operation is 1 pint within 20 seconds at 500 RPM Static pressure will not vary because of restricted filter Procedure for checking fuel pump pressure remains the same

Gasoline Gauge: King-Seeley Electric "CV" (Constant Voltage) type with gauge voltage regulator, Mercury No COMF-10804-A

Dash Unit - Mercury No COMF-9280-A

Tank Unit - Mercury No PB9M-9275-A

See "Fuel Gauges" in Carburetion Section



Air Cleaner: Dry filter element type Clean every 4000 miles, replace every 20,000 miles or sooner if required

►*AIR CLEANER SERVICE NOTE·* Filter element can be cleaned by removing it from body and tapping or shaking it or by using compressed air If air is used, direct air stream against element in direction opposite to intake air flow using care not to rupture filtering element fibre *DO NOT use solvents and DO NOT oil paper or screen of element*

►*AIR CLEANER PRE-FILTER ELEMENT NOTE* Synthetic fibre, wraparound element Part No B8A-9601-A is available for use with dry-type cleaner element, in abnormally dusty areas

►*PRE-FILTER ELEMENT INSTALLATION & SERVICING·* Remove dry element and slip pre-filter element over outer surface, locating it between upper and lower

CONTINUED ON NEXT PAGE

MERCURY INSTRUMENT CLUSTER PRINTED CIRCUITS

CONTINUED FROM PRECEDING PAGE

gasket surfaces. To clean pre-filter element, remove it from dry element and wash or rinse it in plain water. Use a detergent to remove contaminated oil. DO NOT WASH dry element.

BATTERY

(312") Mercury No. B9A-10654-D. 12 volt, 11 plate, 55 ampere hour capacity (20 hr. rate).
(383",430") Mercury No. B9A-10654-F. 12 volt, 11 plate, 70 ampere hour capacity (20 hr. rate).
NOTE - 12 volt, 17 plate, 75 ampere capacity, optional.
Battery Ground - Negative to right cylinder head.
Engine Ground - At valve chamber pushrod cover.

STARTER

Mercury No. FAY-11002-A. Armature B6A-11005-B.
Drive - Mercury No. 1CM-11350-C. Bendix "Folo-Thru".
Rotation - Counterclockwise at commutator end.
Brush Spring Tension - 48-56 ozs.
Cranking Speed - 150-180 RPM at normal engine operating temperature
Current Draw - 155-190 amps. at cranking speed.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	4500	12.0	①80
15.5 ft lbs.	Lock	5.0	550

① - 85 amps. with 430" engine.

Removal: Disconnect battery ground cable, then disconnect throttle linkage at bellcrank. Raise car and remove battery cable at starter and engine splash shield from frame front crossmember Remove nuts securing right and left front engine support insulators to frame Position a safety support jack under front edge of oil pan using a block of wood between pan and jack, then raise engine approximately 1" Remove starter attaching capscrews and remove starter by pulling forward and upward until drive clears housing Continue upward movement of starter until it is nearly upright with drive end facing down, then rotate starter while holding drive assembly to allow clearance of drive end plate mounting bosses Lower starter between tie rod and idler arm

Installation: Reverse removal procedure and note the following Install attaching screws, then tighten outer screw first, finally tightening top and bottom screws
NOTE - If outer screw is not tightened first, misalignment of starter motor may result.

Starting Switch: Mercury No B6A-11450-A, magnetic type, controlled by Ignition & Starter Switch, Mercury No. COLF-11572-A, Neutral Safety Switch, Mercury No. COMF-7A217-B located on top side of steering column under instrument panel (Automatic Trans Cars).

Neutral Safety Switch Adjustment: *See "Mercury Automatic Transmissions" in Transmission Section.*

GENERATOR

Generator	Armature	Amperes
B9A-10002-A①	FGT-10027-A	30
COAF-10002-A	PB8M-10027-A	35
B8QH-10002-A②	FGP-10027-A	40
COMF-10002-A	PB8M-10027-A	35
B9LF-10002-A	FGP-10027-A	40
B6A-10002-D③Bosch	B6C-10005-A	50

① - Identification 2900650.
② - Identification FGP-10002-B.
③ - Identification FCG-10002-A.

►*CHARGING CIRCUIT FUSE NOTE:* This fuse located on starter relay was bypassed in production starting February 1960. Fuse may be bypassed on earlier cars by disconnecting YELLOW coded wire (charging line from generator regulator to charging system fuse terminal) and reconnecting this wire to lower terminal of the 30 Amp. Horn Relay Circuit Breaker.

Performance Data

Generator	Amperes	Volts	RPM
All (Exc. Bosch)	①	15.0	2525
Bosch	50	15.0	1380

① - 30, 35 or 40.

Brush Spring Tension - (Bosch) 16-18 ozs., (Others) 32-40 ozs.
Field Current - (Bosch) 1.2-1.8 amps. at 12 volts, (Others) 1.0-1.1 amps at 10 volts. Hot.
Rotation - Counterclockwise at commutator end.
Belt Adjustment: ½" deflection between generator and water pump pulleys with normal thumb pressure.

REGULATOR

Regulator	Generator
B7A-10505-B	30 Ampere
COMF-10505-A	35 Ampere
PB7M-10505-A	40 Ampere
B6A-10505-C (Bosch)	50 Ampere

►*SEE CHARGING CIRCUIT FUSE CAUTION ABOVE.*

Cutout Relay

Cuts In - 12.0-12.8 volts (30 & 40 amp.), 12.4-13.2 volts (35 amp.), 13.0-13.5 volts (50 amp.).
Cuts Out - 6-9 amps. (30 amp.), 2-6 amps. (35 amp.), 5-9 amps. (40 amp.), 2-8 amps. (50 amp.).

Voltage Regulator

Setting - (Bosch) 14.1-14.6 volts (Low stage), 14.1-14.8 volts (High stage); (Others) 14.6-15.4 volts, at ambient temperature of 75°F.
Checking & Adjusting - *See "Bosch 12-Volt Regulators" or "Mercury 12-Volt Regulators" in Electrical Section.*

Current Regulator

Setting - 28-32 amps (30 amp.), 33-37 amps (35 amp.), 38-42 amps. (40 amp.), 47-52 amps (50 amp.).
Checking & Adjusting - *See "Bosch 12-Volt Regulators" or "Mercury 12-Volt Regulators" in Electrical Section.*

MISC. ELECTRICAL

►*CHARGING CIRCUIT FUSE PRODUCTION CHANGE: See Note under GENERATOR above.*

►*INSTRUMENT PANEL LIGHT FUSE CHANGE* - Lights are protected by fuse in Fuse Panel on later cars This change was made by routing line from Instrument Light Rheostat to lights through a fuse in the fuse panel as shown in wiring diagram.

Speedometer & Hood Assembly Removal: Mask hood area to avoid scratching finish. Remove two hood and speedometer assembly-to-instrument panel screws Lift hood and speedometer assembly off dowel pins and disconnect speedometer cable at upper printed circuit board plug connector. Remove speedometer and hood assembly. Remove speedometer assembly to hood retaining screws and remove speedometer assembly, mask and dial. Remove speedometer to case screws and one small screw in front face of speedometer and remove speedometer.

Instrument Lamp Removal: To remove upper circuit board bulbs and lower circuit board center bulbs, partially remove speedometer and hood assembly, see above. Some lamp bulbs located in lower circuit board and right and left clusters are accessible through opening at bottom of clusters.

Circuit Board Lamp Removal - Carefully turn bulb socket (clockwise) to disengage socket and bulb from board. To reinstall, place socket and bulb in board opening and turn socket 90° (clockwise) to lock it.

Other Cluster Lamp Removal - All remaining sockets can be removed by pulling socket out of cluster. To reinstall, place socket in opening and press in until seated.

Upper Circuit Board Removal: Remove speedometer and hood assembly, see above. Remove circuit board to speedometer case retaining screws and remove board.

Lower Circuit Board Removal: Remove speedometer and hood assembly, see above. Disconnect connector, then from underneath or through top of panel, remove 6 retaining screws and remove board from top of panel.

Direction Signals: *See Electrical Section.*

Lighting Switch Removal: Disconnect negative (ground) cable at battery Use paper clip to remove Ignition switch lock cylinder, remove bezel and lower Ignition switch under panel. Press inward on headlamp switch spring release button and carefully remove switch knob and shaft. Remove headlamp switch bezel nut. Remove two screws securing left cluster bezel to cluster housing. Pull left cluster bezel away from panel. Hold headlamp switch and unscrew switch retaining nut adapter. Lower switch through opening at bottom of cluster. Note switch wiring color code and disconnect wires from switch.

Stop Light Switch Location: On forward end of brake master cylinder (integral with power unit) Master cylinder or power unit located on firewall in engine compartment.

LIGHTING CIRCUIT BREAKERS: 18 Ampere. On light switch. Protects Headlights.
12 Ampere. On light switch. Protects Parking, Rear, Instrument Panel (Early cars), License, and Luggage Compartment lights.
12 Ampere. On brake pedal support bracket Protects electric windshield wiper.
30 Ampere. On starter relay. Protects Horn Relay and Horns

FUSES: In fuse panel located in back of glove box.
AGW-4 Amp. On Fuse Panel (later cars). Protects Instrument Panel lights
SFE 7.5 Amp. Interior lights
SFE 7.5 Amp. Turn Signals.
1AC-5 Amp. Radio
SFE-14 Amp. Heater Blower
SFE-7.5 Amp. Spotlight.
1AG-2 Amp. Clock.

►*CHARGING CIRCUIT FUSE - See GENERATOR above.*

Horn Relay: Mercury No B8C-13853-A.

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air conditioning equipment or lines for access to engine. See "Air Conditioning Service Cautions" in Miscellaneous Section.*

►*CYLINDER HEAD PRODUCTION CHANGE:* New cylinder head used in production Nov. 24, 1959 with new specifications for new color coded standard valves, valve head diameter, stem diameter and with constant

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

rate valve springs which are not available for replacement. Color coded replacement valve spring and damper assembly available for replacement. *New cylinder head with new valves and springs is interchangeable with former head. One of each type head may be used on same engine.* See individual items in data following.

ENGINE SPECIFICATIONS: Own V8, valve-in-head, of same designs used previously.

Engine	Bore	Stroke	Displacement
312"	3.80"	3.44"	312 cu. in.
383"	4.30"	3.30"	383 cu. in.
430"	4.30"	3.70"	430 cu. in.

Engine	Compr. Ratio	Rated HP	Developed HP
312"	8.9-1	46.00	205 at 4000 RPM
383"	8.5-1.	59.17	280 at 4200 RPM
430"	10.0-1	59.17	310 at 4100 RPM

Compression & Vacuum Reading - *See TUNE-UP.*

►*ROCKER ARM COVER GASKET NOTE:* Engine should be hot when covers are removed to prevent damage to .003-.005" thick neoprene coating on gasket. Exercise extreme care to insure that gasket particles do not fall into engine as gasket is removed. Torque cover bolt to 5-8 ft. lbs.

►*LOW OIL PRESSURE & WORN BEARINGS CORRECTION (383", 430" Eng.):* Caused by oil pump relief valve spring wearing into plug. If plug worn, replace it with Plug Part No. COAE-6A616-A and use Spring COME-6670-A.

CYLINDER HEAD: *See "Cylinder Head & Manifolds" in Mercury Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Mercury Special Data.*

ENGINE REMOVAL: *See "Engine" in Mercury Special Data.*

OIL PAN REMOVAL: 312" - Position No. 6 piston at TDC. Drain crankcase and remove engine splash shield. Remove stabilizer retaining screws and pull stabilizer down. Remove nut holding inlet tube to oil pump. Loosen nut holding tube to oil pan. Remove oil pan retaining screws and remove oil pan, screen cover and inlet tube assembly.

383" & 430" - Position No. 1 piston at 14° BTDC. Disconnect battery ground cable at battery, remove dipstick and disconnect throttle linkage and kickdown rod at bellcrank. Drain crankcase. Remove engine splash shield. Remove engine front mount-to-crossmember nuts. Raise engine and place 1" block of wood between each front mount and frame. Disconnect either right or left stabilizer link at front lower suspension arm and swing out of way. Remove oil pan retaining screws and let pan rest on crossmember. Remove oil pump inlet tube and screen assembly screws and let assembly drop into pan. Remove pan in a lowering forward motion.

PISTONS

Aluminum alloy, Autothermic, solid skirt type with three rings above pin. *NOTE* - 383" & 430" pistons have step design head and piston pins are interference fit in rod.

►*ORIGINAL BORE & PISTON SIZES:* Std. cylinder bore as follows:

(312") 3.8000-3.8024", **(383" & 430")** 4.3000-4.3024". *NOTE* - Std. size pistons furnished in two sizes and marked by color code on top of piston as follows: **(312")** Code Red 3.7986-3.7992", Code Blue 3.7998-3.8004".

(383") Code Red 4.2983-4.2989", Code Blue 4.2995-4.3001".

►*REVISED PISTON SIZE & CLEARANCE SPECIFICATIONS (430"):* Std. size piston furnished in two (reduced) sizes and marked with color code on top of piston as follows:

Code Red 4.2997-4.2983", Code Blue 4.2989-4.2995". *See revised clearance specification below.*

Removal - Piston and rod removed from above.

Clearance (312") - .0011"-.0029", at bottom of skirt.

Clearance (383") - .0008-.0026" at bottom of skirt. Wear limit .005".

Clearance (430") - .0017-.0035". This supersedes previous specification of .0008-.0026".

Fitting New Pistons: *See "Pistons" in Mercury Special Data.*

Installing Pistons: Indentation notch in head of piston must be toward front of engine. *See Rod Installation. NOTE* - 383" & 430" pistons are not interchangeable from left to right bank.

Replacement Pistons: (All) Std. (2 sizes see above). **(312")** .003", .0225", .0325", .0425" Oversize. **(383")** .003", .020", .030" Oversize. **(430")** .003", .020", .030", .040" Oversize.

PISTON PIN

(312") Floating type with lock ring at each end.

(383", 430") Press fit in connecting rod, no retaining device.

Diameter - (312") .9120-.9123". **(383", 430")** .9749-.9752".

Length - (312") 3.010-.3.030". **(383",430")** 3.480-3.500".

Clearance in Piston - (312") .0001-.0003". **(383",430")** .0002-.0004". Wear limit (All) .0008".

Clearance in Rod - (312") .0001-.0005". **(383",430")** Interference fit. Minimum torque required to seat pin 20 lbs.

Removal & Installation (383" & 430") - *See "Piston Pins" in Mercury Special Data.*

Replacement Pins: (312") Std., .001", .002" Oversize. **(383", 430")** Standard with new piston only.

PISTON RINGS

312" Engine

Ring	Width	End Gap	Side Clearance
Compr.(1)	.0770-.0780"	.012-.027"	① .0020-.0025"
Compr. (2)	.0930-.0940"	.012-.027"	① .001-.003"
Oil	3-Piece	.015-.062"	③

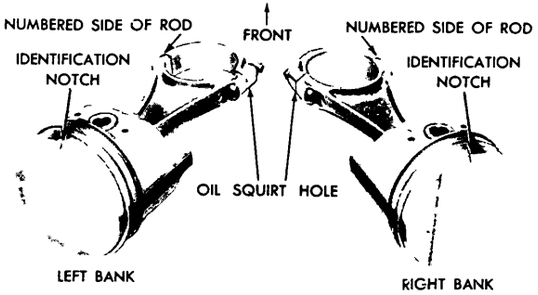
383" & 430" Engine

Ring	Width	End Gap	Side Clearance
Compr. (1)	.0770-.0780"	②	① .0015-.0030"
Compr. (2)	.068-.069"	②	① .001-.003"
Oil	3-Piece	.015-.062"	③

① - Wear limit .006".
② - .013-.028" (383"), .015-.030" (430").
③ - Snug. Side sealing type.

Replacement Rings: Std., .020", .030", .040" Oversize.

CONNECTING ROD



Length (Center-to-Center) - (312") 6.250-6.254", **(383", 430")** 6.599-6.601".

Journal Diameter (312") - 2.1884-2.1888" (Red), 2.1880-2.1884" (Blue).

Journal Diameter (383",430") - 2.5996-2.6000" (Red) 2.5992-2.5996" (Blue).

Lower Bearing - Copper lead alloy, steel back.

Clearance (312") - .0005-.0024". Wear limit .0034".

MERCURY PISTON & ROD ASSEMBLY

Clearance (383",430") - .0007-.0028". Wear limit .0038".

Side Clearance (312") - .006-.016". Wear limit .019".

Side Clearance (383",430") - .005-.015". Wear limit .018".

Replacement Bearings: Std. (2-Sizes Red & Blue), and .002", .010", .020", .030" (All), plus .040" (383" & 430") Undersize.

►*NOTE:* Any combination of RED and BLUE standard bearing inserts may be used to obtain desired clearance. If necessary, regrind journals and install undersize bearings.

Installing Rods: (All Engines) Numbered side of rod must face to outside of engine with notch in piston head toward front of engine.

CRANKSHAFT

►*383 & 430" MAIN BEARING BOLT SERVICE REPLACEMENT NOTE: See "Crankshaft" in Mercury Special Data.*

Journal Diameter (312") - 2.6235-2.6243" (Red), 2.6239-2.6243" (Blue).

Journal Diameter (383", 430") - 2.8998-2.9002" (Red), 2.8994-2.8998" (Blue).

Out-of-Round Limits - .0006". **Taper Limit** - .001".

Bearings - Copper-lead Alloy, steel back.

Clearance - (312") .0004-.0029". Wear limit .0042". **(383", 430")** 0009-0029" Wear limit .0039".

End Thrust (All): Taken by No. 3 (center) main bearing

Endplay - (312") .002-.006", **(383" & 430")** .004-.008".

Thrust Bearing Alignment - *See "Crankshaft & Bearings" in Mercury Special Data.*

Replacement Bearings: (All) Std. (2-Sizes Red and Blue), .002", .010", .020", .030" Undersize.

►*NOTE:* Any combination of RED and BLUE standard bearing inserts may be used to obtain desired clearance. If necessary, regrind journals and install undersize bearings.

Crankshaft Rear Oil Seal Installation: *See "Crankshaft & Main Bearings" in Mercury Special Data.*

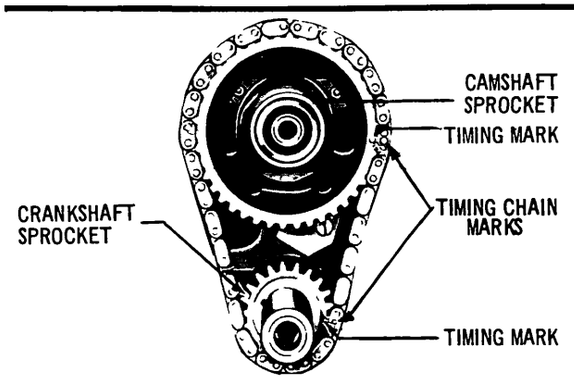
Crankshaft Front Seal Installation: *See "Engine Front Cover" in Mercury Special Data.*

CAMSHAFT

►*BEARING BORE NOTE (383" & 430"):* Bearing bores in block are graduated in size (largest No. 1, smallest No. 5) to permit removal and installation of bushings.

Journal Diameter - **(312")** 1.9255-1.9265". **(383", 430")** 2.264-2.265".

Out-of-Round Limits - **(All)** .001"



Bearings - Babbitt lined, steel back.

Clearance - **(All)** .001-.003". Wear limit 006".

End Thrust (312"): Controlled by thrust plate and spacer between camshaft sprocket and front bearing journal.

Endplay - .001-.007".

CONTINUED ON NEXT PAGE

MERCURY 312" ENGINE VALVE TIMING MARKS

CONTINUED FROM PRECEDING PAGE

End Thrust (383", 430"): Toward rear of engine. Taken by thrust face of camshaft sprocket contacting front surface of block.

R placem nt Bearings: (All) Std., .015" Undersize.

Camshaft R moval & Installation: *See "Camshaft & B arings" in M rcury Sp cial Data.*

Timing Chain D flecti n: Not more than ½" deflection from straight to outward deflected position.

Camshaft S tting: (312") Setting is correct when timing marks on sprockets are on drive side with 12 timing chain pins between marks.

Camshaft Setting: (383", 430") Timing marks on sprockets must be adjacent and in line with straightedge across shaft centers.

Timing Chain Cov r S al Installation (Crankshaft Front Seal): *See "Engin Front Cover" in Mercury Special Data.*

Engin Fr nt Cov r Removal & Installation: *See "Engine Front Cover" in M rcury Special Data.*

VALVES

Tapp t Clearance: (312") .020" (Cold), .019" (Hot).

Valv Tapp t Adjustment - (312) *See "Valve System" in M rcury Sp cial Data.*

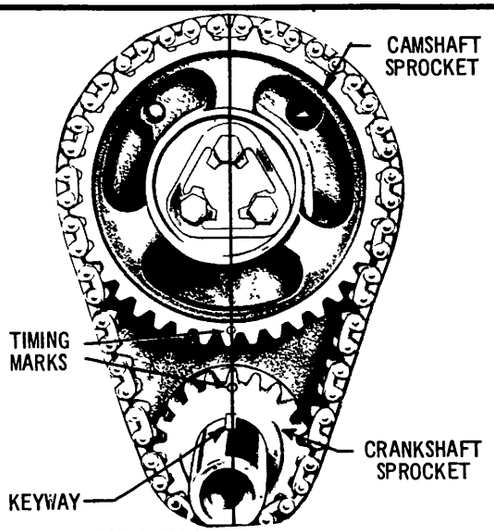
(383", 430") Zero lash, hydraulic lifters.

312" Engine

Valv	H ad Diam t r	①Stem Diameter
Intake	1.642-1.652"	.3416-.3423"
Exhaust	1.505-1.515"	.3398-.3405"

Valve	②S at Angl	③Lift	Stem Clearance
Intake	45°	③.264"	⑤.0010-.0024"
Exhaust	45°	⑨.262"	⑥.0028-.0042"

383" & 430" Early Type Engine



Valv	Head Diamet r	①Stem Diameter
Intake	2.080-2.090"	.3711-.3718"
Exhaust	1.770-1.780"	.3693-.3700"

Valv	②Seat Angl	③Lift	Stem Clearance
Intake	45°	⑦.2316"	⑤.0010-.0024"
Exhaust	45°	⑦.2316"	⑥.0028-.0042"

383" & 430" Late Type Engine

Intake	1.955-1.965"	⑨
Exhaust	1.645-1.655"	⑩

Valve	②Seat Angl	③Lift	Stem Cl aranc
Intake	45°	.2316"	.0010-.0020"
Exhaust	45°	.2316"	.0020-.0030"

MERCURY 383" & 430" ENGINE VALVE TIMING MARKS

①- Furnished .003", .015", .030" Oversize.
②- Valve face angle 44°.
③- Wear limit .259". ⑨- Wear limit .257".
⑤- Wear limit .0045". ⑥- Wear limit .0055".
⑦- Wear limit .2266". ③- Cam lobe lift.
⑨- Red .3711-.3716", Green .3714-.3719".
⑩- Red .3701-.3706", Green .3704-.3709".

Valve Seat Width - (All) .070-.090" Intake and Exhaust.

Valve Stem Oil Seals - Umbrella type seals used on all valves. Install seal with cup side down.

Valve Stem Clearance Check - *See "Valve System" in Mercury Special Data.*

Oversize Valve Stem Installation: *See "Valve System" in Mercury Special Data.*

Valve Springs: Valve springs with inner damper springs are standard. *NOTE - Some engines produced with new constant rate spring (without damper spring, color coded blue, and can be intermixed in an engine with other type).* Blue spring not serviced. Use either a "Maroon" or "Gray" color coded spring with damper for replacement. Assembled spring height specifications remain the same for all springs.

►*SPRING SQUARENESS NOTE:* If springs more than 1/16" out of square, replace spring and damper.

►*VALVE DAMPER SPRING INSTALLATION CAUTION:* To prevent valve spring clicking noise, damper spring must be installed within valve spring so end of damper spring is within 135° arc counterclockwise to end of valve spring when viewed from above.

Spring Free Length - (312") 2.09", **(383",430")** 2.03".

Valve Spring Specifications - 312"

Valve	Spring Pressure	Length
Closed	71-79 lbs. ①	1.780"
Open	161-177 lbs. ②	1.390"

Valve Spring Specifications - 383" & 430"

Valve	Spring Pressure	Length
Closed	66-77 lbs. ③	1.830"
Open	240-260 lbs. ⑨	1.430"

①- Wear limit 64 lbs. at 1.780".
②- Wear limit 145 lbs. at 1.390".
③- Wear limit 60 lbs. at 1.830".
⑨- Wear limit 225 lbs. at 1.430".

Ass mbl d H ight - (312") 1 3/4-1 25/32". **(383",430")** 1 13/16-1 55/64". Measured from surface of cylinder head spring pad to underside of spring retainer (with valve closed). *DO NOT use more than two .030" thick spacers to correct assembled height.*

Valve Guides: Integral with cylinder head. When stem-to-guide clearance exceeds maximum (see table above), ream guides and install oversize valve. *See "Valv System" in Mercury Special Data.*

Valve Lifters: (312") Mushroom type, removed from below. **(383",430")** Hydraulic, removed from above.

Diameter - (312") .4983-.4989". **(383",430")** .8740-.8745".

Clearance in Bore - (All) .0005-.0020".

Hydraulic Lifter Overhaul: *See "Valve System" in Mercury Special Data.*

Hydraulic Lifter Operating Range Check: *See "Valv System" in Mercury Special Data.*

Rocker Arm Assembly: *See "Valve System" in Mercury Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

►*VALVE TIMING NOTE: Following valve opening and closing points are with camlift as indicated.*

Valve Timing Specifications (312")

Intake Valves - Open 12°①BTDC. Close 54°②ALDC.
Exhaust Valves - Open 58°③BLDC. Close 8°⑨ATDC.

Valve Timing Specifications (383",430")

Intake Valves - Open 22°⑤BTDC. Close 68°⑥ALDC.
Exhaust Valves - Open 63°⑤BLDC. Close 27°⑦ATDC.

①- Camlift .016". ②- Camlift .019".
③- Camlift .015". ⑨- Camlift .018".
⑤- Camlift .002". ⑥- Camlift .045".
⑦- Camlift .005".

Valve Timing Check: Install a quadrant on crankshaft damper. **On 312"** back off No. 2 intake valve adjusting screw and slide rocker arm to one side. Install dial indicator. **On 383" & 430"** remove right rocker arm assembly. Install Dial Indicator Tool 6565 and Indicator Adapter Tool 6565-AB on cylinder head using Holding Fixture Tool 4201-D. On all engines pushrod must be in lifter socket and actuating point of indicator in same plane as pushrod movement. Make sure timing pointer is not bent. Turn engine slowly until lifter is on heel of camshaft lobe. Set indicator on zero and turn engine slowly until indicator registers valve opening and cam lobe lift. Compare crankshaft degrees indicated on quadrant with Valve Timing Table above. Continue to rotate engine to check valve closing specifications in same manner. If readings not correct, check for bent pointer worn timing chain or sprocket before replacing camshaft.

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Mercury Special Data.*

►*LOW OIL PRESSURE CORRECTION: See "Oiling System" in Mercury Special Data.*

Crankcase Capacity: 5 qts. refill. Add 1 qt. with filter change.

Normal Oil Pressure: 35-55 lbs. at 2000 RPM (hot).

Pressure Regulator Valve - In pump body, not adjustable.

Oil Pr ssure Indicat r: Light on instrument panel. Light comes on when ignition switch turned on, or when oil pressure is low.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Oil Pressure Switch - Mercury No. B6A-9278-B.

Oil Pump: Rotor type. (312") Located at left side of engine crankcase and driven by distributor drive gear. (383", 430") Located in crankcase and driven by an intermediate shaft from distributor drive gear.

Pump Overhaul - *See "Oiling System" in Mercury Special Data.*

Oil Filter: Full flow, disposable type. Mounted on lower left front corner of cylinder block. Replace element every 4000 miles.

Installation - Coat gasket with light film of oil. Screw filter onto adapter (by hand) until snug, then tighten ¼ turn. DO NOT OVERTIGHTEN.

Crankcase Ventilation: Filter in oil filler cap (and filter screen in road draft tube 312" engine) and road draft tube at rear of engine. Clean filler cap every 4000 miles.

COOLING

►*383" & 430" ENGINES COOLING SYSTEM NOTE:* These engines have three stage engine warm-up and cooling system with temperature controlled water jacketed intake manifold. Additional thermostat installed in front face of each cylinder bank.

NOTE - Cylinder block thermostats are accessible by removing water pump.

Water Capacity: 20 qts. (312"), 20.5 qts. (383", 430") without heater. Add 1 qt. for heater.

Pressure Valve: Radiator filler cap, Mercury No. LA-8100-A. Operating pressure 12-15 lbs.

Thermostat: (312") 157-162°F (No. B7A-8575-A), 178°F (No. B7A-8575-B). (383", 430") 157-162°F (No. B8E-8575-E), 178°F (No. B9S-8575-A). All located in water outlet connector. (383", 430") 137-142°F (No. B9S-8575-B) thermostat located in front face of each cylinder block.

Water Pump: Packless, sealed ball bearing type.

See "Water Pumps" in Mercury Special Data.

Temperature Gauge: King-Seeley electric, constant voltage ("CV") type with Gauge Voltage Regulator No. COMF-10804-A.

Dash Unit - Mercury No. COMF-10883-A.

Tank Unit - Mercury No. B7A-10884-A.

See "Temperature Gauges" in Miscellaneous Section.

Power Booster Fan (383", 430"): Standard on air conditioned cars.

See "Cooling System" in Mercury Special Data.

CLUTCH

Borg & Beck Model 10.5A6. Single plate, dry disc type. Mercury Part Numbers.

Engine	Cover Assembly	Clutch Disc
312"	B9M-7563-B	MK-7550-B

See "Borg & Beck Clutches" in Clutch Section.

Pedal Adjustment: 6¼-6½" (total travel). To adjust, move clutch pedal bumper and bracket up or down.

NOTE - This adjustment must be made before adjusting clutch pedal free travel.

Free Travel - ¾-1". To adjust (after pedal travel is adjusted) loosen clutch pedal release rod locknut and turn adjusting screw clockwise to increase free travel or counterclockwise to decrease free travel.

Removal: With transmission removed, disengage clutch pedal retracting spring from clutch release lever, then remove screws retaining equalizer bracket assembly to flywheel housing. Remove flywheel housing cover and mark position of flywheel and pressure plate assembly for reference at installation. Compress clutch pressure plate assembly with Tool 7563, then remove cap-screws, pressure plate and disc. *NOTE - If tool is not available, install three wedges between clutch fingers and pressure plate housing.* Remove clutch pilot bearing from flywheel with Tool 7600-E. Remove clutch release bearing and hub from lever assembly in flywheel housing.

SYNCHRO-MESH TRANSMISSION

Own. Helical gear, constant mesh, synchro-mesh (second & high), sliding gear (low & reverse).

See "Mercury Synchro-mesh" in Transmission Section.

Transmission Controls: *See "Transmission Controls" in Transmission Section.*

Removal: 1) Raise car and drain transmission. *NOTE - On cars with dual exhaust, disconnect left hand exhaust pipe from manifold, then remove muffler outlet pipe from mounting bracket at rear of muffler. Move exhaust system from under car.*

2) Disconnect speedometer cable at transmission extension housing and transmission shift rods at transmission. Disconnect drive line at rear universal joint flange and remove drive shaft and universal joint from transmission output shaft. Remove front parking brake cable from equalizer lever and retaining clip from rear crossmember, then remove cable from crossmember. Remove equalizer rod from lever.

3) Remove rear engine support clamp, then position a transmission lift under transmission and lift engine sufficiently for installation of a support tool. With transmission lift secured to transmission, remove bolts securing engine support crossmember to frame side rails and remove crossmember. Remove two top transmission-to-flywheel housing screws and install two studs as guide pins. Remove lower transmission-to-flywheel housing screws and remove transmission.

AUTOMATIC TRANSMISSION

Two types used. **Merc-O-Matic,** similar to previous type except for welded converter assembly and design changes for different engines. **Multi-Drive,** similar to Merc-O-Matic but has extra "DR" (Drive) range position for performance.

►*PRODUCTION CHANGE & REPLACEMENT PARTS CAUTION: See "Mercury 3-Speed Automatic Transmission" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Mercury 3-Speed Automatic Transmission" in Transmission Section.*

Lubrication: Check fluid level every 2000 miles. Drain and refill every 24,000 miles with Automatic Transmission Fluid Type "A" Suffix "A".

Checking Fluid Level: With transmission at normal operating temperature, move selector lever through all ranges to assure fluid distribution, then place lever in "P" (Park) position. Check fluid level and add recommended fluid as required to bring level to "F" (Full) mark on dipstick.

Throttle Linkag Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Mercury 3-Speed Automatic Transmission" in Transmission Section.*

UNIVERSALS

Spicer. Needle bearing type.

Propeller Shaft Alignment: *See "Propeller Shaft Notes" in Mercury Special Data.*

REAR AXLE

Own. Same design as used on previous models.

See "Ford & Mercury (Deep Offset) Hypoid" in Rear Axle Section.

►*REAR AXLE "GROAN" WHEN STARTING IN REVERSE OR LOW UNDER LOAD CORRECTION:* Add Rear Axle Lubricant Additive, Part No. C1AA-19B546-A

Axle Ratios

Model & Trans.	Ratio
312" (Synchro-mesh) Std.	3.56-1
312" (Auto. Trans.) Std.	3.10-1
383", 430" (Auto. Trans.)	2.71 or 2.91-1

►*GEAR RATIO NOTE:* Gear ratio stamped on tag on rear axle housing bolt.

Backlash - .004-.009".

Axle Shaft Removal: Remove wheel and brake drum. Remove axle shaft retainer locking type nuts (work through opening in axle shaft flange). Use Puller and pull shaft (do not disturb brake backing plate or damage wheel bearing oil seal). Replace one nut to secure brake backing plate.

Carrier Assembly Removal: *NOTE* - Pinion carrier assembly can be removed separately without disturbing differential carrier by disconnecting rear universal joint at companion flange, and removing five bolts that attach pinion carrier assembly to differential carrier housing. With rear universal joint disconnected, axle shafts removed (see above) remove differential carrier housing to rear axle housing bolts and lift out carrier assembly.

Wheel Bearing Adjustment: None required.

SHOCK ABSORBERS

Direct acting, non-adjustable type used on all models.

Model	Front	Rear
312" Std.	COMY-18124-B	COMY-18125-D
312" With AC	COMY-18124-A	COMY-18125-C
383", 430" Less AC	COMY-18124-A	COMY-18125-C
Sta. Wgn. Std.		COMY-18125-B
All, Hvy. Duty	B9MY-18124-A	①B9MY-18125-A

① - Includes Shock Absorber No. B9MM-18080-U for Station Wagons. Use Shock Absorber No. B9M-18080-C for others.

FRONT SUSPENSION

Independent. "Ball-Joint" suspension with direct acting shock absorbers mounted within coil springs.

See "Mercury Front Suspension" in Suspension & Wheel Alignment Section.

Caster - 0° to Neg. 1½°. Caster should not vary more than ½° from side to side.

Camber - 0° to Pos. ¾°. Camber should not vary more than ½° from side to side.

Toe-In - 1/16-3/16".

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

T -Out n Turns - With inner wheel at 20°, outer wheel should be 17°30' (Manual Steering), 17°18' (P ower Steering).

Wheel B aring Adjustm nt: Tighten adjusting nut while rotating hub until noticeable drag is felt, then back off adjusting nut until nearest slot in nut is aligned with cotter pin hole in spindle, install cotter pin.

STEERING

Manual St ring: Saginaw. Recirculating ball type. *S e "Saginaw Ball B aring Worm & Nut" in Steering S ction..*

P w r St ring: Bendix linkage type. *See "Bendix Linkage Type" in Steering Section.*

Steering Linkag : *See "Steering Linkage" in Steering Section.*

St ring G ar R m val: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

BRAKES

Bendix hydraulic, single anchor (without eccentric and with fixed anchor pin). Automatic adjustment on all models. Parking brake applies rear wheel brakes. *See "Bendix Automatic Adjuster Hydraulic Brakes" in Brake Section.*

Drum Diam t r - 11".
Wheel Cylinder Diameter - 1 1/8" front, 31/32" rear.
Lining - Molded type riveted to shoe.
Lining Width - 3" front, 2½" rear.
Clearance - Special procedures required. *See "Bendix Automatic Adjuster Hydraulic Brakes" in Brake Section.*

Brake Pedal Freeplay Adjustment: Adjust eccentric bolt on brake pedal lever (connects master cylinder pushrod to brake pedal lever) to obtain 1/4-7/16" free travel.

Standard Master Cylinder: On engine side of firewall.
Checking Fluid - Maintain level to within ½" of top of reservoir.
Removal - Remove eccentric bolt, bushing, and locknut that secures master cylinder pushrod to brake pedal. Remove pushrod and bushing. Remove hydraulic line outlet fitting, stop light wires and switch. Remove two screws and remove master cylinder from dash panel.

Power Brakes: *See "Bendix Hydraulic (Disc) Reaction Type Power Unit" in Brake Section.*
Checking Fluid Level - Same as for standard master cylinder (above).
Removal - Remove master cylinder outlet fitting from master cylinder. *NOTE - When removing booster assembly only, support mast r cylinder with prop and do not disconnect outlet fitting, eliminating need for bleeding.* Remove manifold vacuum hose at power unit and reserve tank hose at fitting, then remove capscrew and locknut securing pushrod to brake lever assembly. Remove two master cylinder screws and remove master cylinder. Remove power brake assembly from dash panel.

MISC. MECHANICAL

Windshield Wipers: Cable operated electric type. *Se "Windshield Wipers" in Miscellaneous Section.*

Power Window Regulators: Electric type with reversible motor in each window. *NOTE* - Tail gate window on some station wagon models also power operated. *Se "Power Window Regulators" in Miscellaneous Section.*

Power Top Control: Electric-hydraulic with reversible pump motor. *See "Power Top Controls" in Miscellaneous Section.*

Power Seat Adjusters: 4-Way Power Seat - Solenoid controlled ball nut and screw type with single electric motor. *See "Power Seat Adjuster" in Miscellaneous Section.*

Air Conditioning: *See "Mercury Air Conditioning" in Miscellaneous Section.*

MODEL IDENTIFICATION

Model	Engine	Series
Ranger (& Villager Sta. Wgn)	361"	A
Pacer (& Bermuda Sta. Wgn.)	361"	B
Corsair	410"	C
Citation	410"	D

SERIAL NUMBER: Stamped on Patent Plate on left front body pillar. *NOTE* - Number (example below) includes identification data as follows:

①②③④ ⑤
* W 8 R H 700001 *

① - Engine W 361 cu. in. X 410 cu. in.
② - Year 8 (1958)
③ - Assembly Plant (see below)
④ - Body type.
⑤ - Beginning engine number.

Assembly Plant

E - Mahwah	S - Somerville
J - Los Angeles	U - Louisville
K - Kansas City	W - Wayne
R - San Jose	

►*ENGINE IDENTIFICATION NOTE:* Two engines used. E-400 (361 cu. in. displacement), E-475 (410 cu. in. displacement) Specifications below marked 361 and 410 for each engine.

►*ENGINE PRODUCTION CODE NUMBER:* Date code used in manufacturing and for engine identification. Not used for licensing. Located as follows:

361 Engine - Stamped on machined surface at front of block just below right cylinder head.

410 Engine - Stamped on machined surface at top of left water inlet passage in block just below cylinder head.

TUNE-UP

►*IGNITION CROSSFIRE CORRECTION:* To prevent crossfire between # 7 & # 8 cylinders, route spark plug wires as follows: The sequence should be 7-5-6-8 from left to right in bracket on intake manifold and from front to rear in bracket on rocker cover.

►*ENGINE DETONATION CORRECTION (All Engines):* Can be corrected as follows:

1) Distributor Modification (361 & 410 Engines) - *See DISTRIBUTOR below.*

2) Ignition Timing Change (361 & 410 Engines) - *See IGNITION TIMING below.*

3) Lowering Compression (410 Engine) - Compression ratio can be lowered by installing two head gaskets. *See ENGINE below.*

COMPRESSION PRESSURE: 180 lbs. (361), 200 lbs. (410), at cranking speed.

VACUUM READING: 19-20" (361), 17-18" (410), at specified engine idle.

VALVE TAPPET CLEARANCE: None in service, hydraulic lifters.

MANIFOLD HEAT CONTROL: 361 Eng. Thermostatic exhaust valve in right exhaust manifold.

410 Eng. - Water jacketed intake manifold with thermostat controlled circulation, eliminates need of heat valve. *S COOLING syst m for complet data.*

CARBURETOR AIR INTAKE DUCT ASSEMBLY: Thermostatically controlled air intake supplying warm air for cold engine and cold air for warm engine. *See "Fu l System Notes" in Edsel Special Data.*

IGNITION

FIRING ORDER: 1-5-4-2-6-3-7-8 (All engines.).
Cylinders - RIGHT BANK 1-2-3-4, LEFT BANK 5-6-7-8.
SPARK PLUG GAP: .032-.036".
Spark Plug - Champion F-11-Y. 18 mm. Tapered seat. no gasket required. Torque to 15-20 ft. lbs.
COIL: Edsel No. B6A-12029-B.

►*IGNITION COIL REPOSITIONING FOR INCREASED EFFICIENCY (Early Cars):* Turn coil rearward in mounting bracket so ridge on front of coil is against bracket and terminals face toward fan. Reroute battery and distributor wires in front of distributor and reposition heater hoses.

Ignition Current - 2.5 amps. idling, 4.5 amps. stopped.
Resistor - B8E-12250-A. 1.3-1.4 ohms at 75°F.

►*COIL RESISTOR NOTE:* Resistor is connected in lead from ignition switch to coil and is bypassed during cranking by lead from starter relay to coil side of resistor.

DISTRIBUTOR: Has conventional mechanical (centrifugal) advance and separate Vacuum Spark Control. Tachometer drive used on some distributors. *See "Ford, Lincoln, Mercury Distributors" in Electrical Section.*

Engine	Edsel Distributor No.
361③	① B8A-12127-F, ② B8E-12127-C (Tach.)
410 Early ③	④ FEW-12127-D, ⑤ FFA-12127-C (Tach.)
410 Later	FEW-12127-E, ⑥ B8E-12127-E (Tach.)
410 Serv. Repl. (No Tach.)	FEW-12127-H

① - Engr. No. FEU-12127-D replacing FEU-12127-H.
② - Engr. No. FEV-12127-A replacing FEY-12127-A.
③ - See Distributor Modification below.
④ - Replaces FFA-12127-A & replaced by FEW-12127-E.
⑤ - Replaces FFA-12127-B & replaced by B8E-12127-E.
⑥ - Engr. No. FFA-12127-D.

►*DISTRIBUTOR MODIFICATIONS TO CORRECT DETONATION (All Engines):* These modifications should be made in conjunction with changes in Ignition Timing or in Compression Ratio as detailed under IGNITION TIMING and ENGINE below.

1) 361 Engine Distributors FEU-12127-H & FEY-12127-A. To correct detonation occurring during light throttle acceleration, remove distributor and install parts furnished in Vacuum Stop Repair Kit, No. B8E-12202-B, as follows: Unscrew vacuum spring retainer nut, remove and save advance spacer washers, remove spring and fiber advance stop, discard the stop. Install new fiber stop, original spring, and new spring spacer. Adjust Centrifugal Advance and Vacuum Advance to **361 Engine** specifications (below). *NOTE* - If necessary, sand or file end of fiber stop to obtain maximum vacuum advance, and add or remove original spacer washers to obtain correct vacuum advance performance. *After above modification completed, stamp new number on distributor housing: FFU-12127-D (FEU-12127-H Distr.), FEV-12127-A (FEY-12127-A Distr.).*

2) 410 Engin Distribut rs FFA-12127-A & FFA-12127-B. To correct detonation occurring during light throttle acceleration, first check and adjust Centrifugal Advance and Vacuum Advance to **Tabl N . 1** specifications (below). If distributors being overhauled, install following new parts: Secondary Advance Spring B8A-12191-A, Vacuum Spring B7A-12225-B, and Vacuum Stop Repair Kit B8E-12202-C. Adjust Centrifugal Advance and Vacuum Advance to **Tabl N . 2** specifications (below). *After above modification completed, stamp new number on distributor housing: FEW-12127-E (FFA-12127-A Distr.), FFA-12127-D (FFA-12127-B Distr.).*

3) 410 Engine Distributors FEW-12127-D & FFA-12127-C. To correct spark knock or detonation, rework distributors using parts furnished in Vacuum Stop Repair Kit B8E-12202-C plus original spacer washers. Check and adjust Centrifugal Advance and Vacuum Advance to **Table No. 2** specifications (below). *Aft r above modification completed, stamp new number on distributor housing: FEW-12127-E (FEW-12127-D Distr.), FFA-12127-D (FFA-12127-C Distr.).*

Condenser - Edsel B7A-12300-A. **Capacity** .21-.25 mfd.
Contact Point Set - Edsel No. B7A-12171-A.
Breaker Gap - .014-.016".
Cam Angle - 26-28½°.
Breaker Arm Spring Tension - 17-20 ozs.
Rotation - Counterclockwise viewed from above.

10½-12½	21-25	17½-20

① - Distributor RPM of 200.
② - Distributor RPM of 1000.

►*DISTRIBUTOR REMOVAL CAUTION:* Intermediate drive shaft (hex sided oil-vacuum pump drive shaft) is retained by internal toothed lockwasher at upper end (lower washer also used on early cars) which should prevent shaft disengaging when distributor removed. If shaft becomes disengaged and drops into oil pan when distributor removed, make certain that lockwasher installed on shaft to prevent recurrence.

►*DISTRIBUTOR-INTAKE MANIFOLD INTERFERENCE CORRECTION:* Interference between distributor terminal housing clamp and intake manifold may cause timing setting difficulty. Occurs especially after raising heads when installing low octane export kit. Correct by grinding off intake manifold.

IGNITION TIMING

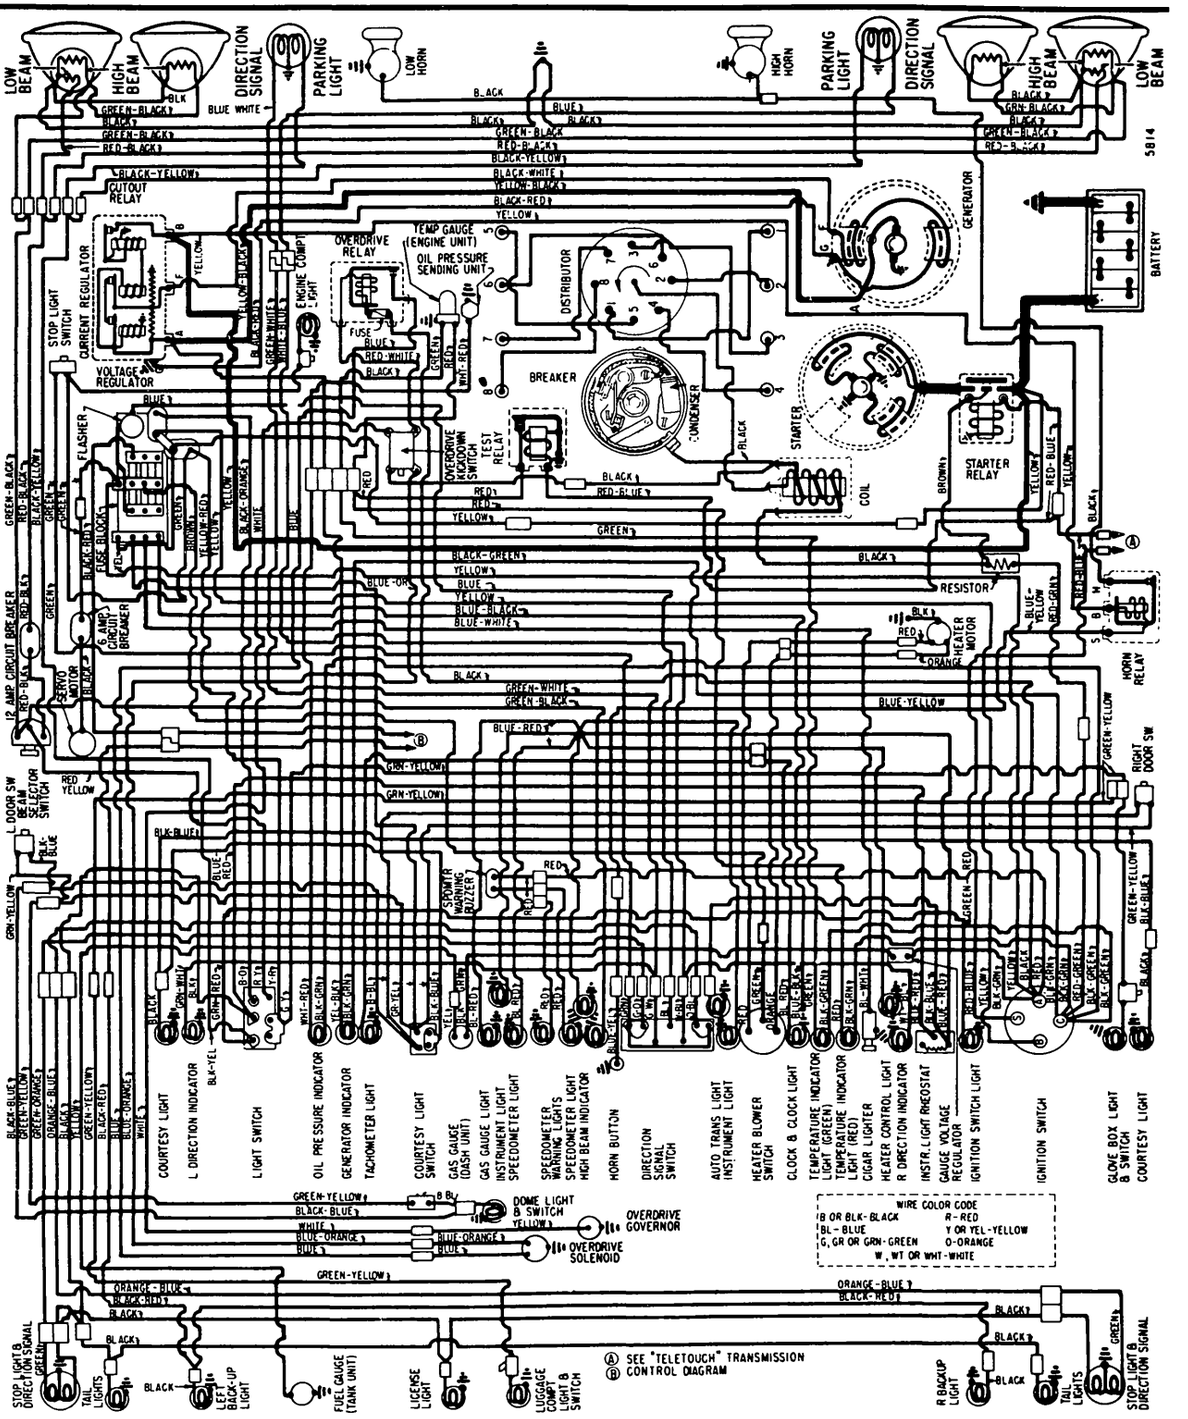
Engin	Std. Setting
361 (Synchro-mesh & O.D.)	0-6° BTDC
361 (Auto. Trans.)	3-8° BTDC
410 (Auto. Trans.)	3-8° BTDC

►*ENGINE DETONATION CORRECTION:* If engines detonate on light throttle acceleration, timing can be modified within above range. *For engines with earlier typ distributors, s Distributor Modification under DISTRIBUTORS abov .*

Timing Mark - On crankshaft pulley as follows:

361 Eng. - TDC and 10° BTDC with 2° increments between.

410 Eng. - TDC, 10° BTDC and 20° BTDC with 2° increments between.



CARBURETOR

►*CARBURETOR APPLICATION NOTE: Holley and Ford 4-Barr l Carbur tors us d. Carburetor for each engine and typ of transmission as follows:*

Eng. & Trans.	Carburetor	Edsel No.
361 Std. Trans. ①	Holley	B8E-9510-A
361 O.D. & Auto. Trans.	Ford	B8A-9510-E
410	Holley	B8E-9510-B

① - Add Dashpot and bracket for Auto. Trans.

CONTINUED ON NEXT PAGE

EDSEL RANGER & PACER WIRIN DIAGRAM

CONTINUED FROM PRECEDING PAGE

►*THROTTLE LEVER INTERFERENCE CORRECTION:* Caused by interference in area of throttle rod hole which may cause retaining clip to fall off and allow control rod to fall out. To correct, file or grind edge of throttle lever in area of throttle rod hole.

►*NO FORCED DOWNSHIFT CORRECTION (361" ENGINE):* May be caused by accelerator pedal being below 4.09" in height. If pedal height cannot be obtained in normal way proceed as follows: Remove accelerator pedal rod and unscrew clevis and locknut. Add ¾" of threads to rod with ¼"-28 die. Reinstall and adjust pedal height. If threaded end of rod binds on clevis pin cut ½" from threaded end of rod.

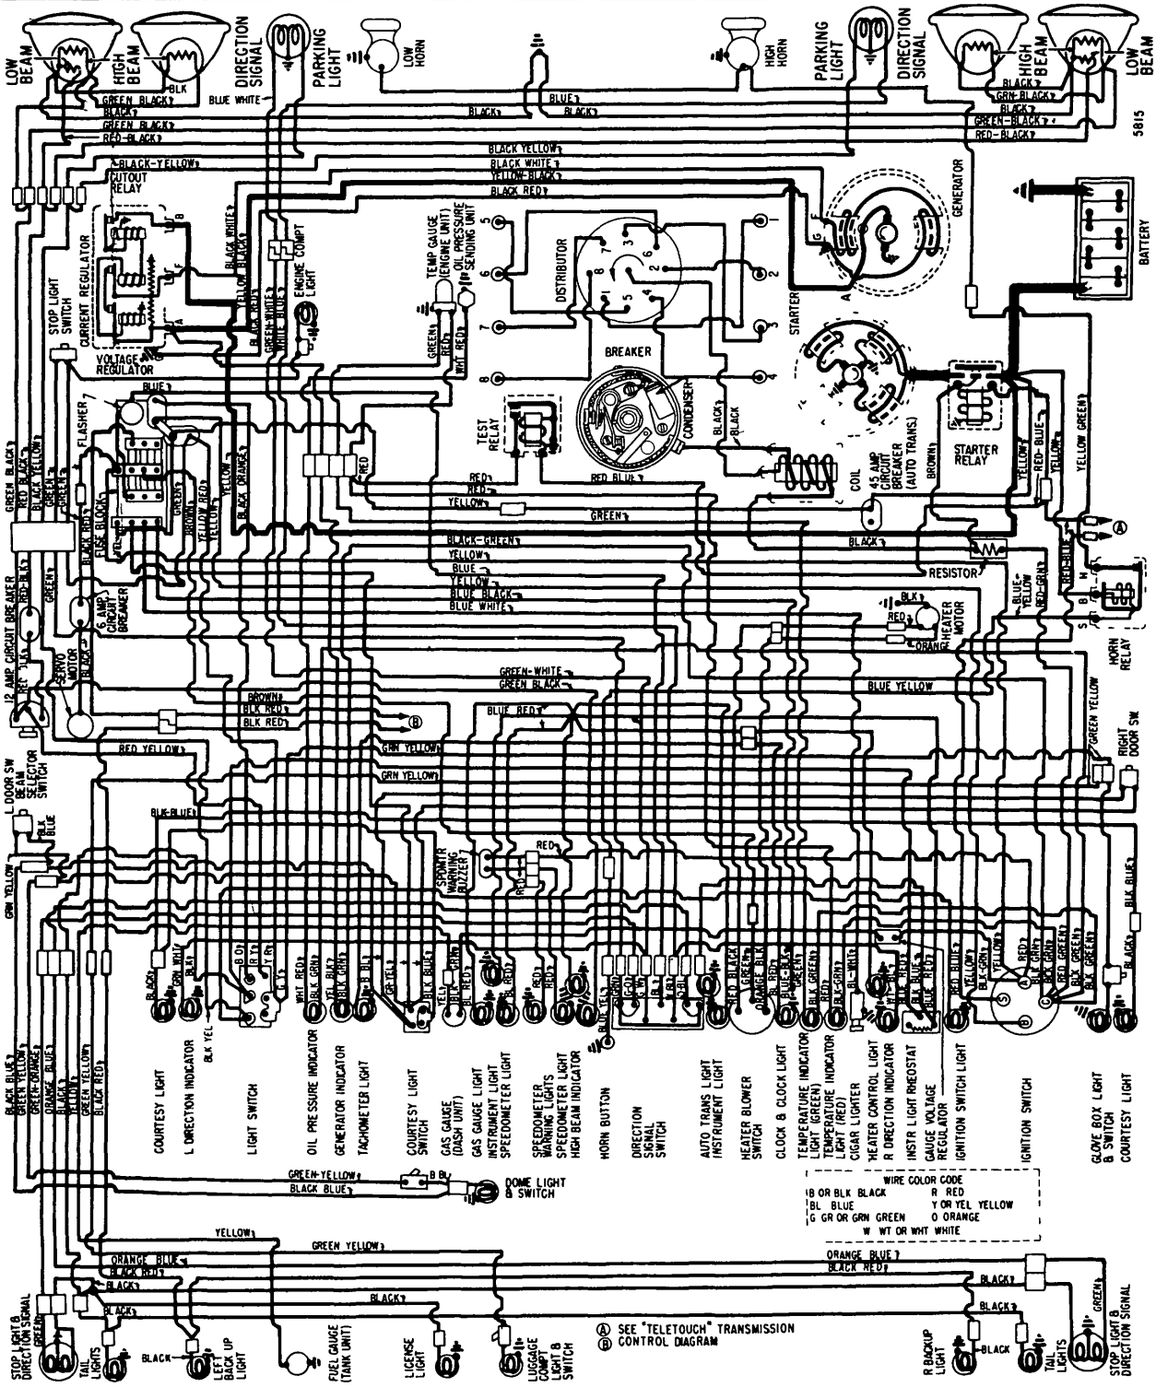
Thr ttle Linkage Adjustment (Auto. Trans. Cars): With engine idle speed correctly set at 450-475 RPM in Dr (Drive) range and Anti-stall dashpot correctly adjusted (see below), disconnect carburetor control rod at point "B" of control shaft. Disconnect transmission throttle control rod at point "C" of transmission throttle shaft assembly. Insert gauge pin through throttle shaft and bracket. With engine at slow idle, adjust carburetor control rod so it will enter hole in control shaft freely at point "B" on diagram, then **lengthen carburetor contr l rod two turns,** remove gauge pin, connect control rod to control shaft. Hold control shaft against slow idle stop, lift transmission control rod up against its stop, adjust rod length so clevis pin slips freely into clevis assembly at point "C" then **lengthen rod by turning clevis 3½ turns (361), 4 turns (410),** install clevis pin. Increase engine speed to 1000 RPM and note pressure gauge reading. If pressure below 80-85 lbs. lengthen throttle control rod. *NOTE - Do not exceed 4½ turns (361"), 4 turns (410").* If pressure high shorten rod ½-turn at a time until correct pressure obtained. Install cotter pin, tighten clevis locknut, remove pressure gauge.

Pedal Height Adjustment: Lengthen or shorten accelerator shaft rod to obtain a distance from accelerator pedal to floor of 4.09" (361"), 3.98" (410").

Dashpot Adjustment: Loosen dashpot locknut, fully close throttle (fast idle cam in slow idle position). Turn dashpot in or out to obtain .045-.065" between dashpot plunger and throttle lever with dashpot plunger fully depressed.

FORD & HOLLEY 4-BARREL

►*NOTE* - For model application see table above.



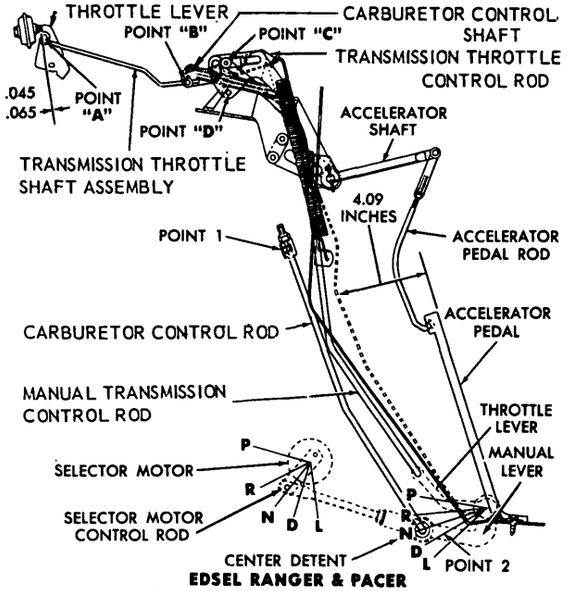
►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyl. 1-4-6-7, LEFT barrels feed 5-2-3-8.*

►*HIGH IDLE RPM CORRECTION:* Caused by interference between fast idle cam and choke operating rod. *See "Holley 2 & 4-Barrel Carburetors" in Carburetion Section.*

►*CARBURETOR VENT REWORK (To prevent spillage of fuel under flooding conditions): See "Holley 2 & 4-Barrel Carburetors" in Carburetion Section.*

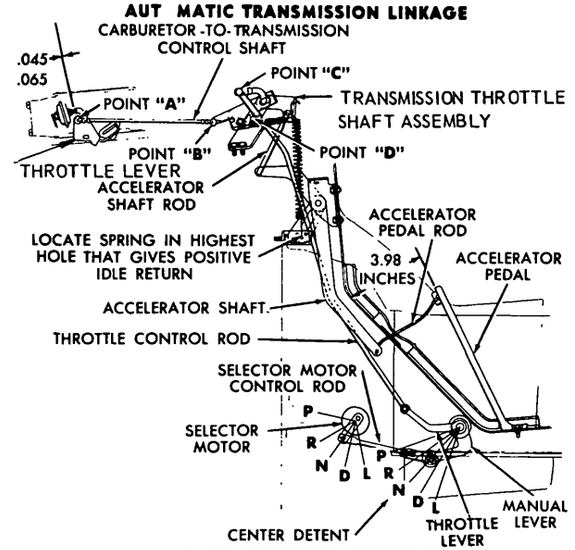
►*ENGINE STALLING (AFTER A NORMAL COLD START) CORRECTION:* May be due to incorrect choke linkage

CONTINUED ON NEXT PAGE



EDSEL C RSAIR & CITATION WIRING DIAGRAM

CONTINUED FROM PRECEDING PAGE



adjustment. *See "Holley 2 & 4-Barrel Carburetors" in Carburetion Section.*

►*SLOW OPENING CHOKE CORRECTION:* Caused by binding choke or warped heat stove cover plate. *See "Holley 2 & 4-Barrel Carburetors" in Carburetion Section.*

►*1958 EDSEL CHOKE COIL HOUSING (FORD CARBURETORS) CHANGE & ADJUSTMENT NOTE:* A new choke coil housing assembly, Part No. PB8M-9848-A, identified by the letters "TD" embossed in center of bakelite housing is available for service replacement of the previous cover, Part No. EDC-9848-A. Initial adjustment of the new choke coil housing is at "Index" mark.

EDSEL RANGER & PACER AUTOMATIC TRANSMISSION LINKAGE

EDSEL CORSAIR & CITATION AUTOMATIC TRANSMISSION LINKAGE

Idle Setting - Both screws (primary side only) 1¼ turns (Ford), 1½ turns (Holley) open.

Idle Speed - 475-500 RPM in Neutral. On Auto. Trans. Cars, recheck idle speed in Dr (Drive) and readjust as necessary to obtain 450-475 RPM.

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Ford & Holley 2 & 4-Barrel Carburetors" in Carburetion Section.*

CARB. EQUIPMENT

Fuel Pump: Edsel No. B8A-9350-A (361" Eng. fuel only), No. B8A-9350-B (361" Eng. fuel & vacuum), No. EDG-9350-B (410" Eng. fuel only).

Pressure - 4.5-6.5 lbs. at 500 RPM.

See "Fuel Pumps" in Carburetion Section.

►*FUEL PUMP PUSHROD & CAMSHAFT ECCENTRIC PRODUCTION CHANGE & NON-INTERCHANGEABILITY CAUTION (410" ENGINE):* Two pushrods and eccentrics used as follows: Pushrods, EDG-9400-A (cast bronze tip) and 5750261 (oilite bronze tip with groove .020" deep ½" from tip). Eccentrics, EDG-6287-A (chrome plated) and 5750260 (plain finish). Use pushrod, EDG-9400-A, and eccentric, EDG-6287-A, on engine date coded 79E or before. On engines date coded later than 79E, use pushrod, 5750261, and either eccentric. *CAUTION - DO NOT use plain finish eccentric with cast bronze tip pushrod.*

►*FUEL FILTER NOTE:* Replace element every 4,000 miles.

Gasoline Gauge: King-Seeley Electric "CV" (Constant Voltage) type with Gauge Voltage Regulator FEK-10804-A.

Dash Unit - Edsel No. B8E-9280-A (Ranger & Pacer), B8E-9280-B (Corsair & Citation).

Tank Unit - Edsel No. B7A-9275-F Std. (Exc. Station Wagons), B7A-9275-G Std. (Station Wagons). B8E-9275-A Fuel Warning Signal (Exc. Station Wagons), B8E-9275-B Fuel Warning Signal (Station Wagons). *See "Fuel Gauges" in Carburetion Section.*

Low Fuel Level Indicator (Optl. Equip.): Light on instrument panel controlled by S.I.P. relay in gasoline gauge circuit. Lamp goes on momentarily when ignition switch turned on, lights when fuel in tank reaches 3-5 gallons.

Air Cleaner: DRY FILTER ELEMENT type. Clean every 5,000 miles and replace element every 10,000 miles.

►*CLEANING CAUTION:* Clean element by tapping or shaking to remove dirt particles. *DO NOT wash element in solvent or other liquids and DO NOT oil or lubricate.*

BATTERY

Synchro-mesh & O.D. - Edsel Kit No. B6A-10654-A. 12 volt, 11 plate, 55 ampere hour capacity (20 hr. rate).

Auto. Trans. - Edsel Kit No. B8E-10654-B. 12 volt, 13 plate, 65 ampere hour capacity (20 hr. rate).

Optional - Edsel Kit N. B8E-10654-A. 12 volt, 17 plate, 72 ampere hour capacity (20 hr. rate).

Battery Ground - Negative to engine block.

Engine Ground - Engine to dash.

STARTER

Edsel N. B6A-11002-A. Armature - B6A-11005-B.

►*STARTER NOISE CORRECTION (410" ENGINE):* Caused by insufficient clearance between starter and cylinder block at top mounting lug which "cocks" starter when tightened. Grind off top mounting lug to correct.

►*STARTER RELAY FREEZING CORRECTION (410" ENGINE):* Caused by water accumulation in relay. To correct, move relay into horizontal position on horizontal part of fender apron next to battery.

►*STARTER OPERATION DURING "N" TO "R" SHIFTS CORRECTION (TELETOUCH CONTROL): See "Edsel Teletouch" in Transmission Section.*

Drive - Edsel 1CM-11350-C. Bendix "Folo-Thru" type.

Rotation - Counterclockwise at commutator end.

Brush Spring Tension - 48-56 ozs.

Cranking Speed - 150-180 RPM. 155-190 amps.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	4500	12.0	85
15.5 ft. lbs.	Lock	5.0	550

►*STARTER REMOVAL NOTE:* If additional clearance required to remove starter, disconnect steering idler arm bracket from frame and lower steering linkage. Disconnect right exhaust pipe from manifold and pry pipe downward until it clears studs, then move to right as far as possible.

Starting Switch: Relay, Edsel No. B6A-11450-A, controlled by Ignition & Starter Switch, Edsel No. B5A-11572-A, and Auto. Trans. Neutral Safety Switch, No. B8E-15825-A, located on steering column. *NOTE - Neutral Safety Switch used only with lever type transmission control. Integral part of Teletouch control.*

Neutral Safety Switch Adjustment: *See "Edsel Single-Range Automatic Transmission" in Transmission Section.*

GENERATOR

Application	Generator	Armature
361" Eng.	B6A-10002-H	FGT-10027-A
410" Eng.	2900278	2900199
361" Eng. (Optl.)	FGP-10002-B	FGP-10027-A
410" Eng. (Optl.)	FGV-10002-A	FGP-10027-A

Performance Data

Generator	Amperes	Volts	Gen. RPM
B6A-10002-H	30	15	1095
2900278	35	15	1190
FGP-10002-B, FGV-10002A	40	15	1067

Brush Spring Tension - 26-34 ozs.

Rotation - Counterclockwise at commutator end.

Belt Adjustment: Approximately 3/8" deflection midway between generator and pump pulleys on right side.

REGULATOR

Regulator	Generator
B7A-10505-B	B6A-10002-H
2900305	2900278
B8E-10505-C	FGP-10002-B, FGV-10002-A

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Cutout Relay

Cuts In - 12.4-13.2 volts (B7A-10505-B & 2900305), 12.0-12.8 volts (B8E-10505-C).

Cuts Out - 2-9 amperes (B7A-10505-B, B8E-10505-C), 2-6 amperes (2900305). Reverse current.

Voltage Regulator

Setting - 14.6-15.4 volts.

Checking & Adjusting - *See "Ford, Edsel, Lincoln, Mercury 12-Volt Regulators" in Electrical Section.*

Current Regulator

Setting - 28-32 amps. (B7A-10505-B), 33-37 amps. (2900305), 38-42 amps. (B8E-10505-C).

Checking & Adjusting - *See "Ford, Edsel, Lincoln, Mercury 12-Volt Regulators" in Electrical Section.*

MISC. ELECTRICAL

Headlamps: Dual headlights (4-Headlight System) Std. *See "4-Headlight System" in Electrical Section.*

Direction Signals: *See Electrical Section.*

Lighting Switch Removal: Remove two screws from back of switch and work switch carefully out from back of instrument panel.

Stop Light Switch Location: On forward end of brake master cylinder (located on firewall in engine compartment).

CIRCUIT BREAKERS: Used as follows:

18 Ampere - Protects Headlights (High Beam). In fuse panel.

12 Ampere - Protects Headlights (Low Beam). At left side of cowl.

12 Ampere - Protects Parking, Tail, Stop & Instrument lights. In fuse panel.

FUSES: Located in fuse panel mounted on brake pedal support at left of steering column with exceptions noted.

15 Ampere - Protects Overdrive circuit. On Overdrive Relay.

15 Ampere - Protects rear cigar lighter.

7.5 Ampere - Protects interior lights.

7.5 Ampere - Protects direction signals.

1 Ampere - Protects clock.

Sulphur Disc or Circuit Breaker - Protects front cigar lighter. On back of lighter socket.

Horn Relay: Edsel No. B8C-13853-A (with bracket).

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air conditioning equipment or lines for access to engine. See "Air Conditioning Service Cautions" in Miscellaneous Section.*

►*INTAKE MANIFOLD OIL LEAK CORRECTION (361" ENGINE):* To correct oil leak between intake manifold and cylinder block, install new seals, Part No. B8A-9422-B (front), B8A-9423-B (rear), which are thinner and have two (not one) sealing beads on manifold side.

►*361" ENGINE NOISE CORRECTION: See "Engine" in Edsel Special Data.*

►*ENGINE KNOCK AT IDLE SPEED CORRECTION (361" ENGINE):* May be caused by excessive camshaft endplay caused by lack of camshaft thrust button or thrust button spring too weak. To correct install Kit, Part No. B8A-6275-A, which contains new thrust button, spring, retainer clip (to secure spring to retaining bolt), fuel pump eccentric retaining bolt and washer.

►*INTAKE MANIFOLD-CYLINDER HEAD GASKET PRODUCTION CHANGE & REPLACEMENT NOTE (361" ENGINE):* Later cars use one-piece "Steelbestos" gasket, Part No. B8A-9439-B, to replace three-piece laminated type used previously. Use new type gasket for service replacement.

►*410" ENGINE "DRUMMING" OR "GRINDING" NOISE CORRECTION:* This condition may be caused by a vacuum pump-to-oil pump bolt contacting the oil pan assembly. To correct, grind off approximately ¼" from longest bolt boss on vacuum pump. Grind boss square with housing to ensure that lock tab seats properly. *NOTE - Later type pumps have this correction made in production.*

ENGINE SPECIFICATIONS: 90° V8, Overhead Valves. Two engines used. Combustion chamber in cylinder head on 361" Eng. and in cylinder block on 410" Eng. The 361 Intake Manifold also acts as cover for pushrod chamber. 410 Intake Manifold is water jacketed and does not have exhaust heat passages.

Model	Bore	Stroke	Displacement
361	4.05"	3.50"	361 cu. in.
410	4.20"	3.70"	410 cu. in.

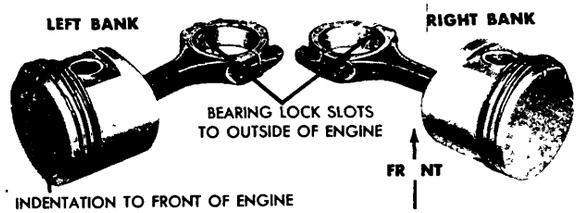
Model	Rated HP	Compr. Ratio	Developed HP
361	52.49	10.5-1	303 at 4600 RPM
410	56.45	10.5-1	345 at 4600 RPM

Compression & Vacuum Reading - *See TUNE-UP.*

CYLINDER HEAD: *See "Cylinder Head & Manifold" in Edsel Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Edsel Special Data.*

ENGIN REMOVAL: *See "Engine" in Edsel Special Data.*



OIL PAN REMOVAL: Turn engine so No. 1 or No. 5 piston is at TDC. Remove dipstick, drain crankcase and remove stabilizer bar. Remove engine mount to frame nuts and raise engine approximately 2" and block in this position. Remove oil pan bolts and lower oil pan on frame crossmember. Remove oil pickup tube bolts and drop oil screen and tube into oil pan. Move oil pan forward and down and remove from under car.

PISTONS

Aluminum alloy with two compression rings and one three-piece oil control ring (serrated springs and two steel rails). 361" Eng. pistons are interchangeable (right & left), 410" Eng. pistons are NOT interchangeable (right & left).

Removal - Pistons and rods removed from above.

Clearance - .0015-.0021" selective fit. Measured at bottom of skirt (361" Eng.), at center of skirt (410" Eng.).

EDSEL PISTON & ROD ASSEMBLY

Fitting New Pistons: With ½" feeler gauge inserted between piston and cylinder wall, with piston inverted and 1½" below top of block, and piston pin bore parallel to crankshaft, pull required to remove .002" feeler should be 5-10 lbs. (new piston in new bore).

Installing Pistons: *NOTE - On 410" Engines, pistons for right and left hand cylinders are NOT interchangeable.* Install piston so that identification notch on head is toward front of engine. *See Rod Installation.*

Replacement Pistons: Std. & .020", .030", .040" Oversize.

PISTON PINS

361" Engine - Bronze piston pin bushing in connecting rod, piston pin retaining rings in piston.

410" Engine - Piston pin press fit in connecting rod, no retaining device used.

Diameter - .9750-.9753".

Length - 3.156-3.170" (361" Eng.), 3.480-3.500" (410" Eng.).

Clearance in Piston - .0001-.0003". Light thumb press fit at 70°F.

Clearance in Rod (361" Eng.) - .0001-.0003". Light thumb press fit at 70°F.

Clearance in Rod (410" Eng.) - .0008-.0016" interference fit.

Piston Pin Removal & Installation: *See "Piston Pins" in Edsel Special Data.*

Replacement Pins: 361" Eng. - Furnished Std., .001" (code Blue), .002" (code Yellow) Oversize.

410" Eng. - Furnished only with new pistons.

PISTON RINGS

361" Engine

Ring	Width	End Gap	Side Clearance
Compr. (1)	.0775-.0780"	.013-.023"	.002-.0035"
Compr. (2)	.0930-.0935"	.013-.023"	.002-.004"
Oil (3)	.1811-.1879"	① .015-.055"	②

410" Engine

Ring	End Gap	Side Clearance
Compr. (1)	.015-.025"	.0015-.003"
Compr. (2)	.015-.025"	.001-.003"
Oil (3)	① .015-.055"	②

① - Steel rails. ② - Side sealing type ring.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Installing Rings (410" Engine): Install second compression ring with outside counterbore down. Oil ring expander spacer gap must be opposite notch in position head with segment gaps 1" on each side. Compression ring gaps must be 150° on each side of expander spacer gap (1" each side of piston head notch).

Replacement Rings: Furnished Std., .020", .030", .040" Oversize.

CONNECTING RODS

Length (Center-to-Center) - 6.538-6.542" (361" Eng.), 6.599-6.601" (410" Eng.).

Journal Diameter (361" Eng) - 2.4384-2.4388" (Code Red), 2.4380-2.4384" (Code Blue).

Journal Diameter (410" Eng.) - 2.5996-2.6000" (Code Red), 2.5992-2.5996" (Code Blue).

Lower Bearing - Copper-lead alloy, steel back.

Clearance - .0006-.0024" (361" Eng.), .0007-.0025" (410" Eng.).

Side Clearance - .006-.016" (361" Eng.), .006-.014" (410" Eng.).

Replacement Bearings: Std. (2 sizes marked RED and BLUE for selective fit), .010", .020", .030" Undersize; and also .040" Undersize for 361" Engine.

►*NOTE:* Any combination of Red or Blue bearing inserts may be used to obtain desired clearance. If desired clearance cannot be obtained, it will be necessary to regrind journals and install undersize bearing inserts.

Installing Rods (361" Eng.): Install piston and rod assembly with notch in top of piston toward front of engine and bearing lock slots toward outside of engine.

Installing Rods (410" Eng.): Install rod in correct numbered cylinder with notch on head of piston toward front of engine and oil squirt hole inward and rod number facing outward toward outer side of cylinder block.

CRANKSHAFT

Journal Diameter (361" Eng.) - 2.7488-2.7492"(Code Red), 2.7484-2.7488" (Code Blue).

Journal Diameter (410" Eng.) - 2.8998-2.9002" (Code Red), 2.8994-2.8998" (Code Blue)

Out-of-Round Limits - .00025". **Taper Limits** - .0005".

Bearings - Copper-lead alloy, steel back.

Clearance - .0006-.0024" (361" Eng.), .0008-.0026" (410" Eng.).

Endplay - .002-.006"(361"Eng.), .004-.008"(410"Eng.), **End Thrust** - Taken by No. 3 (center) main bearing.

Thrust Bearing Alignment - *See "Crankshaft" in Edsel Special Data.*

Replacement Bearings: Std. (2 sizes marked RED and BLUE for selective fit), .010", .020", .030", .040" Undersize. *NOTE - 410" Engine only No. 3 bearing furnished in .040" Undersize.*

►*NOTE:* Any combination of Red or Blue bearing inserts may be used to obtain desired clearance. If desired clearance cannot be obtained, it will be necessary to regrind journals and install undersize bearing inserts.

Crankshaft Rear Oil Seal Installation: *See "Crankshaft & Main Bearings" in Edsel Special Data.*

Crankshaft Front Seal Installation: *See "Engine Front Cover" in Edsel Special Data.*

CAMSHAFT

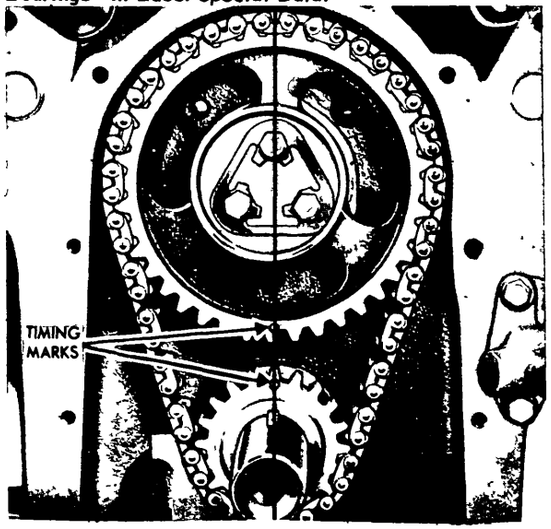
►*CAMSHAFT PRODUCTION CHANGE:* New camshafts, Part Nos. B8A-6250-B (361" Eng.), No. 5750914 (410" Eng.), were used in production beginning approximately Nov. 15. 1957. Early production cars having later type camshaft will be identified by an orange dot of paint on engine front cover and by a stripe of yellow paint around camshaft behind front bearing, and/or an "X" stamped on rear face of No. 5 bearing journal. Heavier valve springs must be used when later type camshaft is installed in 410" Engine. *See "Valve Springs" & "Valve Timing" below.*

►*BEARING BORE PRODUCTION CHANGE & NOTE;* On all 410" Engines and on later production 361" Engines, bearing bores in block are stepped (largest No. 1, smallest No. 5) to permit easy removal and installation of bushings. O.D. of camshaft bearings is greater to fit bores.

Journal Diameter - 2.123-2.124" (361" Eng.), 2.264-2.265" (410" Eng.).

Bearings - Babbitt lined, steel back.

Clearance - .001-.003".



Endplay (361" Eng.) - Taken by thrust button attached to engine front cover.

Endplay (410" Eng.) - Toward engine rear. Taken by thrust face of camshaft sprocket riding against front surface of cylinder block.

Replacement Bearings: Furnished Std. & .015" Undersize.

►*BEARING INSTALLATION CAUTION:* Split type bearings must have split toward top of block. No. 1 bearing must have notch in bearing facing front of engine and toward bottom of block. Bearing must seat .005-.020" inward from finished face of block.

Camshaft Removal & Installation: *See "Camshaft & Bearings" in Edsel Special Data.*

EDSEL VALVE TIMING MARKS

Timing Chain (361" Eng.) - Width .86", Pitch .5", Length 48 links.

Timing Chain (410" Eng.) - Length 52 links.

Timing Chain Deflection - .5" maximum (all engines), measured on right side.

Camshaft Setting: Timing marks on camshaft and crankshaft sprockets adjacent and in line with straightedge across shaft centers.

Timing Chain Cover Seal Installation (Crankshaft Front Seal): *See "Engine Front Cover" in Edsel Special Data.*

Engine Front Cover Removal & Installation: *See "Engine Front Cover" in Edsel Special Data.*

VALVES

Tappet Clearance: Zero lash, hydraulic lifters.

361" Engine

Valve	Head Diam.	① Stem Diam.
Intake	2.022-2.032"	.3711-.3718"
Exhaust	1.551-1.561"	.3693-.3700"

Valve	Seat Angle	② Lift	Stem Clearance
Intake	30°	③ .2265"	④ .0010-.0024"
Exhaust	45°	③ .2265"	⑤ .0028-.0042"

410" Engine

Valve	Head Diam.	① Stem Diam.
Intake	2.080-2.090"	.3711-.3718"
Exhaust	1.770-1.780"	.3693-.3700"

Valve	Seat Angle	② Lift	Stem Clearance
Intake	30°	⑥ .2506"	④ .0010-.0024"
Exhaust	45°	⑥ .2506	⑤ .0028-.0042"

① - Standard size valve stems. *See "Valve System" in Edsel Special Data for oversize valve stem sizes.*

② - Cam lobe lift. Wear limits .005".

③ - Early camshaft. Later camshaft .232". *See "Camshaft Production Change" above.*

④ - Wear limit .0045".

⑤ - Wear limit .0065".

⑥ - Early camshaft. Later camshaft .2316". *See "Camshaft Production Change" above.*

Rotatable Valves - *See Illustration.*

Valve Seat Width - .060-.080" Intake, .070-.090" Exhaust.

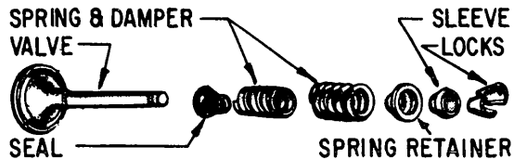
Valve Stem Seals - Umbrella type seals used on all valves. Install seals with cup side down over valve guide.

Oversize Valve Stem Installation: *See "Valve System" in Edsel Special Data.*

VALVE SPRINGS: Dampener springs used inside valve springs on all valves.

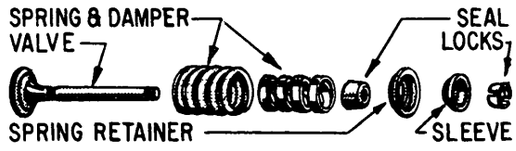
►*410" ENGINE VALVE SPRING REPLACEMENT CAUTION:* When installing later camshaft (No. 5750914), valve springs, Part No. 5750053 (painted green) must also be installed.

Free Length (361" Eng.) - 2.26".



Free Length (410" Eng.) - 2.20"(Early, Part No. 5750011 painted brown), 2.03" (Later, Part No. 5750053, painted green or maroon).

CONTINUED ON NEXT PAGE



CONTINUED FROM PRECEDING PAGE

Assembled Height - 1.78" (361"Eng.), 1.83" (410" Eng.) measured from surface of cylinder head spring pad to underside of spring retainer. *Do not use more than two .030" spacers to correct assembled height.*

►*SPRING SQUARENESS CAUTION:* If springs more than 1/16" out of square (spring & dampener assembly measured together), replace both springs.

EDSEL 361 ENGINE VALVE ASSEMBLY

EDSEL 410 ENGINE VALVE ASSEMBLY

Valve Spring Specifications

361" Engine

	Pressure	Length
Valve Closed	94-99 lbs.	1.78"
Valve Open	180-198 lbs.	1.38"

410" Engine (Brown Springs)

	Pressure	Length
Valve Closed	66-77 lbs. ①	1.83"
Valve Open	245-255 lbs. ②	1.39"

410" Engine (Later Green & Maroon Springs)

	Pressure	Length
Valve Closed	66-77 lbs. ①	1.83"
Valve Open	240-260 lbs. ③	1.43"

① - Wear limit 60 lbs. ② - Wear limit 220 lbs.

③ - Wear limit 225 lbs.

Valve Guides: Integral with cylinder head. When stem-to-guide clearance exceeds maximum (.0045" intake, .0065" exhaust), ream guides and install valves with oversize stems. *See "Valve System" in Edsel Special Data.*

VALVE LIFTERS: Hydraulic, barrel type, with no provision for clearance adjustment.

►*HIGH SPEED HYDRAULIC LIFTER NOISE CORRECTION:* Can be caused by aerated oil which will also caused oil pressure to drop (less than 45-50 lbs. at 1000 RPM). To correct, check all oil gallery plugs under air pressure for leaks. Check oil pump, pick-up tube and screen, inlet tube-screen, and all gaskets for cracks or broken conditions. Repair or replace as necessary.

Diameter - .8740-.8745".

Clearance in Lifter Bore - .0005-.0020".

Hydraulic Lifter Overhaul - *See "Valve System" in Edsel Special Data.*

Hydraulic Lifter Operating Range Check - *See "Valve System" in Edsel Special Data.*

ROCKER ARM ASSEMBLY: *See "Valve System" in Edsel Special Data.*

►*PUSHROD REMOVAL NOTE:* All pushrods except the six in the 5/8" holes can be removed by using Valve Spring Compressor, Tool 6513-J, with rocker shaft assemblies installed. Six pushrods in 5/8" holes can be removed only after rocker shaft assemblies removed.

►*ROCKER ARM SHAFT SQUEAK CORRECTION (361" ENGINE):* Replace original shafts (.840-.841" diam.) with new shafts (.839-.840" diam.). Early and later shafts carry same part no. and identified only by measurement.

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

361" Eng. Valve Timing (Early Camshaft)

Intake Valves - Open 17° BTDC. Close 59° ALDC.

Exhaust Valves - Open 57° BLDC. Close 19° ATDC.

361" Eng. Valve Timing (Later Camshaft)

Intake Valves - Open 22° BTDC. Close 68° ALDC.

Exhaust Valves - Open 68° BLDC. Close 22° ATDC.

410" Eng. Valve Timing (Early Camshaft)

Intake Valves - Open 27° BTDC. Close 69° ALDC.

Exhaust Valves - Open 69° BLDC. Close 27° ATDC.

410" Eng. Valve Timing (Later Camshaft)

Intake Valves - Open 22° BTDC. Close 68° ALDC.

Exhaust Valves - Open 63° BLDC. Close 27° ATDC.

Valve Timing Check - Remove rocker arm assembly. Install Dial Indicator, Tool 6565, on cylinder head using Holding Fixture, Tool 4201-D (if necessary). Install Indicator Adaptor, Tool 6565-AB, on end of pushrod. Pushrod must be in lifter socket and actuation point of indicator in same plane as pushrod movement. Install quadrant on crankshaft damper. Make sure timing pointer is not bent. Turn engine slowly until lifter is on heel of camshaft lobe. Set indicator on zero and turn engine slowly until indicator registers valve opening. Compare crankshaft degrees indicated on quadrant with Valve Timing Table above. Continue to rotate engine to check valve closing specifications in same manner.

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Edsel Special Data.*

►*HIGH SPEED OIL CONSUMPTION CORRECTION (410" ENGINE):* Caused by oil being drawn out of crankcase ventilator. To correct, install new oil filler cap, Part No. 5751386.

►*410" ENGINE VACUUM PUMP NOISE CORRECTION (Similar to Connecting Rod Knock):* Disconnect vacuum hose from windshield wiper to vacuum pump (not inlet hose to intake manifold). Noise will stop if vacuum pump defective. Pump failure caused by exhaust passage plug falling out or exhaust tube falling into oil pan. To correct exhaust passage plug, tap passage with 1/8" pipe tap, 3 or 4 threads deep (DO NOT TAP DEEPER), and install 1/8" pipe plug with suitable sealer. Exhaust tube is press fit in pump housing and if loose, replace pump.

Crankcase Capacity: 5 qts. refill. Add 1 qt. with filter change.

Normal Oil Pressure: 45-50 lbs. at 1000 RPM (hot).

Pressure Regulator Valve - In pump body, not adjustable.

Oil Pressure Indicator: Light on instrument panel. Goes on when ignition switch turned on, goes out when oil pressure reaches pressure of switch. Light goes on when oil pressure is low (approx. 7 lbs.).

Oil Pressure Switch - Edsel No. B6A-9278-B.

Oil Pump: Rotor type. Later 410" engines have combination oil-vacuum pump. Mounted inside oil pan on lower left corner of block. Driven by distributor through an intermediate shaft.

Pump Overhaul - *See "Oiling System" in Edsel Special Data.*

Oil Filter: Full flow disposable type. Mounted on lower left front corner of cylinder block.

►*OIL FILTER INSTALLATION NOTE:* Coat gasket with light film of oil. Screw on to adaptor until snug. **Then tighten ½-turn by hand.** *Do not overtighten.*

Crankcase Ventilation: Filter in oil filler cap and ventilator tube at rear of engine.

COOLING

410" Engine: New three-stage engine warm-up and cooling system with temperature controlled water jacketed intake manifold. Additional thermostat installed in front face of each cylinder bank. Operates as follows:

Below 140°F - Water circulates from pump to cylinder heads, intake manifold and back to pump.

140-180°F - Water circulates from pump to cylinder heads, intake manifold and cylinder blocks and back to pump.

Above 180°F - Water circulates the same as between 140-180°F except it returns to radiator for cooling.

NOTE - Cylinder block thermostats are accessible by removing water pump.

Water Capacity: 18½ qts. (361" Eng.), 22 qts. (410" Eng.). Add 1 qt. for heater.

Pressure Valve: Radiator filler cap, Edsel No. LA-8100-A. Operating pressure 12-15 lbs.

Thermostat (361" Eng.): 157-162° (No. B7A-8575-A), 177-182° (No. B7A-8575-B, for use with permanent type anti-freeze), located in water outlet connector.

Thermostat (410" Eng.): 157-162° (No. EDG-8575-G, early cars), 177-182° (No. EDG-8575-H, later cars and for use with permanent type anti-freeze), located in water outlet connector. One 137-142° thermostat (No. EDG-8575-D) in front face of each cylinder bank.

Water Pump: Packless, sealed ball bearing type.

See "Water Pump" in Edsel Special Data.

Temperature Gauge: Two indicator lights (red & green) on instrument panel controlled by Proving Light Relay, Edsel No. B7T-10800-A, on firewall in engine compartment on left side. Sending unit located at front

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

of right cylinder head (361" Eng.), at rear of intake manifold (410" Eng.). When ignition switch turned on, ENG. HOT (Red) light goes on, testing circuit. With engine running after a cold start, ENG. COLD (Green) light goes on until engine temperature reaches approximately 115°F. If temperature goes above approximately 233°F, red light will go on.

Engine Unit - Edsel No. B8E-18208-A (361" Eng.), No. B8E-18208-B (410" Eng.).

CLUTCH

Long 11CF. Single plate, semi-centrifugal type.

C v r Ass mbly - Long No. 267454, Edsel No. B8A 7563-A.

Clutch Disc - Long No. 288347, Edsel No B8E-7550-A. *See "Long Clutches" in Clutch Section.*

P dal Adjustm nt: Adjust pedal bumper and bracket to give 6 3/8-6 5/8" pedal travel. With pedal in fully released position, distance between assist spring eye centers should be 10 3/32"±1/8".

P dal Fr Trav l - With engine stopped free travel should be 1 1/8-1 3/8". Adjust clutch release lever rod adjusting nut clockwise to increase, counterclockwise to decrease, free travel. Start engine and accelerate to 3000 RPM. Pedal free travel must be at least ½" to prevent pressure plate fingers contacting release bearing. Adjust as necessary.

Rem val: Remove transmission (see SYNCHRO-MESH TRANSMISSION below). Remove flywheel housing cover and release lever retracting spring, slide release bearing and hub off release lever. Mark cover and flywheel for reinstallation. Loosen cover-to-flywheel bolts evenly and alternately and remove clutch assembly through bottom of flywheel housing. Remove release lever and anti-rattle spring.

SYNCHRO-MESH TRANSMISSION

Own. Helical gear, constant mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse).
Se "Edsel Synchro-mesh" in Transmission Section.

Transmission C ntr ls: *S e "Transmission Controls" in Transmission Section.*

R m val: Disconnect propeller shaft at rear axle and slide off transmission output shaft. Insert Tool 7657-D into extension oil seal to prevent lubricant leakage. Disconnect speedometer and shift rods at transmission. Disconnect engine rear support from transmission extension, raise and support engine and remove frame crossmember. Remove two transmission-to-flywheel housing lower bolts and install Guide Pins, Tool 7975, in holes. Remove top bolts. Slide transmission to rear until input shaft clears flywheel housing and then remove from car.

OVERDRIVE

Warn r R10. Solenoid operated type, with governor control and throttle operated kickdown
See "Edsel Overdrive" in Transmission Section

Ov rdriv C ntr l: *See "Overdrive Controls" in Transmission Section.*

Rem val: Same as for synchro-mesh transmission (above) after disconnecting control cable and wiring.

AUTOMATIC TRANSMISSION

Single range automatic transmission with welded torque converter and three-speed automatic transmission similiar to Fordomatic. Hydraulically controlled with mechanical parking lock.
See "Edsel Single-Range Automatic Transmission" in Transmission Section.

►*NO FORCED DOWNSHIFT CORRECTION (RANGER & PACER): May be caused by improper accelerator pedal height. See CARBURETOR above.*

►*TESTING & TROUBLE SHOOTING: See "Edsel Single-Range Automatic Transmission" in Transmission Section.*

Lubrication: Check fluid every 1000 miles, drain and refill every 25,000 miles with Automatic Transmission Fluid Type "A".

Checking Fluid Level: Bring transmission to operating temperature by running engine with transmission in Neutral position. Move shift mechanism through all ranges to assure fluid distribution, then place mechanism in "Park" position for checking fluid level. Maintain level to "Full" mark on dipstick.

Throttle Linkage Adjustment: *See CARBURETOR above.*

Teletouch Selector Motor Linkage Adjustment: *See "Edsel Teletouch" in Transmission Section.*

►*OTHER DATA: See "Edsel Single-Range Automatic Transmission" in Transmission Section.*

UNIVERSALS

Spicer. Needle bearing type, with lubrication fittings.
Lubrication - Lubricate through fittings with 2¼ ozs. universal joint lubricant.

REAR AXLE

Own. Separate carrier type with straddle mounted pinion, hypoid gear, and Hotchkiss Drive.
See "Edsel Rear Axle" in Rear Axle Section.

►*"POWER TRANSFER" DIFFERENTIAL NOTE:* Optional on all models. *See "Edsel & Mercury Power Transfer Differential" in Rear Axle Section.*

►*REAR AXLE NOISE & LUBRICANT LEAKAGE CORRECTION:* Install new drive pinion oil seal and rear universal joint companion flange. *See "Edsel Rear Axle" in Rear Axle Section.*

Axle Ratios	361	Sta. Wgn.	410
Std Trans .	① 3 56-1	② 3.70-1	
O D Trans	② 3 70-1	② 3.70-1	
Auto Trans.	2 91-1	③ 3.22-1	2.91-1

① - 3 70-1 Optl ② - 3 56-1 Optl. ③ - 2.91-1 Optl.

Backlash - 004- 009"

Axl Shaft R m val: Remove wheel and brake drum. Work through hole in axle shaft flange and remove locknuts holding wheel bearing outer retainer and brake backing plate to flange on axle housing. Pull axle shaft from housing with Puller, Tool 4235-C, being careful not to dislodge brake backing plate.

Differential Carrier Removal: Remove axle shafts (see above) and propeller shaft. Clean dirt from carrier and axle housing, remove locknuts and washers holding carrier to housing and remove carrier being careful not to let dirt enter carrier or housing.

Wheel Bearing Adjustment: None required.

FRONT SUSPENSION

Independent. "Ball Joint" suspension with direct acting shock absorbers mounted within coil springs.
See "Edsel Front Suspension" in Suspension & Wheel Alignment Section.

Caster - Pos. ½° to Pos. 1½° (361" Eng.); 0° to Neg. 1½° (410" Eng.) Maximum variation between wheels ½° (¼° preferred).

Camber - Pos. ½° to Pos. 1½° (361" Eng.); 0° to Pos. ¾° (410" Eng.). Maximum variation between wheels ½° (¼° preferred).

Toe-In - 1/32-1/8" (361" Eng.); 1/16-3/16" (410"Eng.).

Toe-Out on Turns - Outer wheel 20°, inner wheel 23½° (361" Eng.), 24¾° (410" Eng.).

SHOCK ABSORBERS

Direct acting, hydraulic. Non-adjustable, serviced by replacement.

Shock Absorber Application ①

Car Model	Front	R ar
Station Wagons	B8E-18124-B	B8E-18125-C
Ranger & Pacer (Std)	B8E-18124-A	B8E-18125-B
Ranger & Pacer (H.D.) ②	B8E-18124-G	B8E-18125-G
Corsair & Citation (Std.)	B8E-18124-C	B8E-18125-A
Corsair & Citation (H.D.)	B8E-18124-H	B8E-18125-H

① - Edsel Kit Nos. ② - B7A-18124-F also used.

STEERING

Manual: Saginaw. Recirculating Ball Nut type.
See "Saginaw Ball Bearing Worm & Nut" in Steering Section.

Power Steering: Bendix Linkage Type/ Saginaw In-Lin , or Torsion Bar types used.
See "Bendix Linkage Type", "Saginaw In-Line" and "Torsion Bar" in Steering Section.

►*POWER STEERING PUMP PRODUCTION CHANGE & IDENTIFICATION NOTE:* Later type pumps used to correct noise identified by green or yellow stripe on top of pump or date coded later than K20K (Ranger & Pacer), L13K (Corsair & Citation). *See "Eaton Roll Type Ste r ing Pump" in Steering Section*

Steering Wheel & Horn Button Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

Steering Gear Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

Ste ring Linkag : *See "Steering Linkag " in Steering S ction*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

BRAKES

Bendix Hydraulic (with Automatic Adjusters). Duo-servo with fixed anchor pins. No eccentric adjustment. Parking lever applies rear wheel service brakes.
See "Bendix Automatic Adjuster Brakes" in Brake Section.
Drum Diameter - 11" front & rear.
Wheel Cylinder Diameter - 1.125" front, .906" rear.
Lining - Molded type riveted to shoe. **Length** - 9.3" primary, 11.93" secondary. **Thickness** - .187".
Lining Width (Ranger & Pacer) - 2.5" front, 2" rear.
Lining Width (Corsair & Citation) - 3" front, 2" rear.
Clearance - (Manual Adjustment After Overhaul) - Hold adjusting lever away from adjusting screw, back off adjusting screw when dragging sound heard. Expand shoes until drum lightly drags at one point. Replace cover, drive car in reverse and apply brake five or six times for final adjustment.

Brake Pedal Adjustment: Adjust eccentric bolt attaching brake pedal to master cylinder pushrod to give ¼-½" free movement of pedal pad before rod moves master cylinder. Tighten locknut to 25-30 ft. lbs.

Standard Master Cylinder: Located on engine side of firewall.

Checking Fluid - Maintain fluid level to within ½" of top of filler neck.

Removal: Disconnect rubber boot from end of master cylinder in passenger compartment. *NOTE - Disconnect pushrod only if rod being serviced.* Disconnect brake line and wires from master cylinder. Force as much fluid as possible from cylinder. Remove bolts holding master cylinder to firewall and remove from car.

Power Brake Unit: Bendix Vacuum Power Unit. Combination power unit and master cylinder. Mounted on engine side of firewall.
See "Bendix Power Unit" in Brake Section.

Checking Fluid - Same as for standard master cylinder.

Removal: Disconnect pushrod from brake pedal lever. Remove outlet connector bolt (unnecessary to remove wires or brake line from outlet fitting). Disconnect vacuum hoses from inlet tubes on side of cylinder. Remove screws holding booster to adapter on firewall and remove from car.

MISC. MECHANICAL

Windshield Wipers (Ranger & Pacer): Cable operated vacuum type (early), Linkage vacuum type (later).
Windshield Wipers (Corsair & Citation): Electric type (early), Cable operated vacuum type (later).
See "Windshield Wipers" in Miscellaneous Section.
►*ELECTRIC WINDSHIELD WIPER WIRING NOTE:* If motor found wired directly to power source, reroute through accessory terminal of ignition switch.
Heater-Air Conditioning: Own, with electrically controlled servo motors. *See "Edsel Air Conditioning" in Miscellaneous Section.*
Power Window Regulators: Electric type with reversible motor in each window. *See "Power Window Regulators" in Miscellaneous Section.*
Power Top Control: Electro-hydraulic type. *See "Power Top Controls" in Miscellaneous Section.*
Power Seat Adjuster: "4-Way" electric type. *See "Power Seat Adjusters" in Miscellaneous Section.*
Electric Door Lock: *See "Electric Door Locks" in Miscellaneous Section.*
Trunk Lid Lock: *See "Trunk Lid Locks" in Miscellaneous Section.*

Engin Pr duction C d Number· Indicates place, day and month of engine manufacture. Not used for licensing Stamped on left front corner of cylinder block directly below cylinder head

TUNE-UP

COMPRESSION PRESSURE: 150±10 lbs at cranking speed All cylinders must be equal within 10 lbs

VACUUM READING: 18-19" steady at idle speed with transmission in neutral

VALVE TAPPET CLEARANCE: 019" Intake & Exhaust (Hot & Cold) Adjust all tappets to 019" clearance while engine is cold, then again check all tappets for 019" clearance after running engine for 30 minutes to normalize temperature

►*SELF LOCKING VALVE TAPPET ADJUSTING SCREW NOTE* Special threads on adjusting screw provide interference fit 3 ft lbs (36 in lbs) interference when center section of screw threads is fully engaged with rocker arm threads Replace screw and/or rocker arm as necessary when interference is below this specification

MANIFOLD HEAT CONTROL: Automatic thermostatic type with counterweight Valve is closed when engine is at normal temperature and running at slow idle, and opens when operating at high RPM Spring is installed with ¾ turn windup and hooked over stop pin

IGNITION

FIRING ORDER· 1-5-3-6-2-4

SPARK PLUG GAP: 032- 036"

Spark Plugs - Champion 870 18 mm Torque to 15-20 ft lbs

►*SPARK PLUG CAUTION.* Spark plug has tapered seat and does not require a sealing gasket It is important that plugs be tightened within range of 15-20 ft lbs

COIL: Ford No. B6A-12029-B.

Ignition Current - 2 5 amps idling, 4 5 amps stopped

Resistor - Edsel No B8A-12250-A (1959) Resistance wire in harness (1960) 1 3-1 4 ohms at 75°F

►*RESISTOR NOTE* 1959 resistor is mounted on firewall and connected in lead from ignition switch to coil 1960 resistance wire is incorporated in harness Resistor is bypassed during cranking by lead from starter solenoid to battery terminal of coil

DISTRIBUTOR: Edsel No. FET-12127-D (1959 & Early 1960 Synchro-mesh Cars), COAF-12127-G (1960 Synchro-mesh), COAF-12127-F (1960 Auto. Trans.). "Loadomatic" type of same design used on Ford 6 Cyl Cars except for COAF-12127-F (Step-Stop type) *See Edsel "Loadomatic" and "Step-Stop Distributors" in Electrical Section.*

Condenser - Ford No 7RA-12300-C **Capacity** 21- 25 mfd

Contact Point Set - Ford No FAA-12171-A

Breaker Gap - 024- 026"

Cam Angle - 35-38°

Breaker Arm Spring Tension - 17-20 ozs

Rotation - Clockwise viewed from above

Advance Performance (Loadomatic Distr.)
►With Distributor on Test Stand

Distr Degrees	Vacuum (" of Hg)	Distr RPM
0	38	450
2½-3½	79	650
6¾-7¾	2 85	1100
8¾-9¾	4 33	1400
10¼-11¼	5 99	1800

Advance Performance (Step-Stop Distr.)

Distr Degrees	Vacuum (" of Hg)	Distr RPM
3½-4½	1 08	800
6¼-7¼	1 70	1000
7½-8½	2 38	1200
7½-8½	5 63	2000
9-10½ ①	6 50	1450

① - Maximum 13°

►*DISTRIBUTOR INSTALLATION CAUTION:* Be sure oil pump intermediate shaft engages the seat in the oil pump It may be necessary to turn over the engine with starter after distributor drive gear is partially engaged, in order to engage intermediate shaft fully in oil pump

IGNITION TIMING

Initial Distributor Timing: Set engine crankshaft so that No 1 Cylinder is at TDC after compression stroke (with timing mark in line with pointer) Install distributor so that rotor points to the No 1 Spark Plug Wire Terminal in distributor cap Rotate distributor body clockwise until contact points just start to open then tighten screws Check with timing light

Std. Ignition Setting
(88-92 Octane Research Method Fuel)

Synchro-mesh Cars 2° BTDC Min
Auto Trans Cars 2° BTDC Min , 6° BTDC Normal

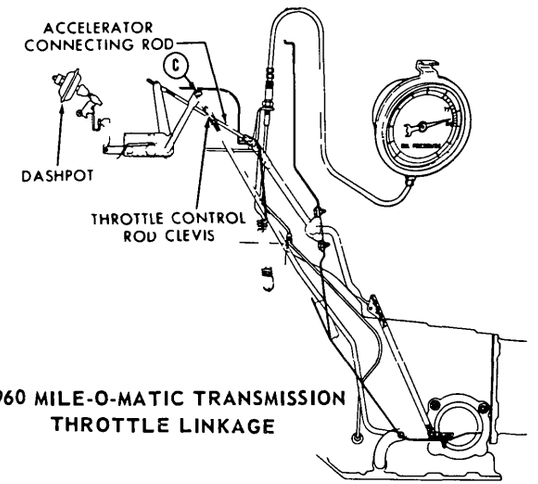
(93 or greater Octane Research Method Fuel)

Synchro-mesh Cars 4° BTDC Normal, 10° BTDC Max
Auto Trans Cars 6° BTDC Normal, 10° BTDC Max

Timing Mark - Vibration damper marked "TDC" and "3", "5", "7", "9" degrees BTDC Align correct mark with pointer on engine front cover

CARBURETOR

►*CARBURETOR APPLICATION One Holley "Visi-Flo" 1-barrel carburetor used.*



►*1959 GASOLINE ECONOMY CORRECTION: Caus d* by air restriction in air cleaner cover fibre pad and screen To correct, remove air cleaner and discard fibre pad and screen

►*1959 METERING JET CHANGE TO IMPROVE FUEL ECONOMY (Auto Trans Cars)* Main metering jet can be changed to No 60 (superseding No 62) for improved economy on Automatic Transmission Cars only *NOTE* - Carburetors code tagged AAA9BC or later have this new jet installed in production *See "Holley Visi-Flo Carburetor" in Carburetion Section*

Throttle Linkage Adjustment (1959 Auto. Trans.): Adjust engine idle speed to 450-475 RPM (transmission in "D") and make anti-stall dashpot adjustment (see below) With engine stopped and carburetor on hot idle, disconnect accelerator shaft connecting rod at bellcrank. Adjust threaded pin at bellcrank so top corner of accelerator pedal is 3½" from floor mat. Adjust threaded pivot at rear end of connecting rod so rod is parallel with centerline of engine. Remove lock from clevis pin on upper end of throttle control rod and loosen clevis locknut Remove clevis and pull throttle control rod upward so throttle lever will be held against internal stop in transmission Turn throttle rod clevis until pin enters hole in lever and lengthen throttle rod 2±½ turns Connect throttle control rod, tighten locknut, install clevis lock

Throttle Linkage Adjustment (1960 Auto. Trans.): Adjust idle speed to 450-475 RPM (Transmission in "D") and make anti-stall dashpot adjustment (see below) Connect a tachometer to engine, remove valve cap from schrader valve at accelerator bellcrank and attach pressure gauge, Tool 77820-B, and adapter, Tool 77820-C, to pressure tube With parking brake set and

CONTINUED ON NEXT PAGE

1960 MILE-O-MATIC TRANSMISSION THROTTLE LINKAGE

CONTINUED FROM PRECEDING PAGE

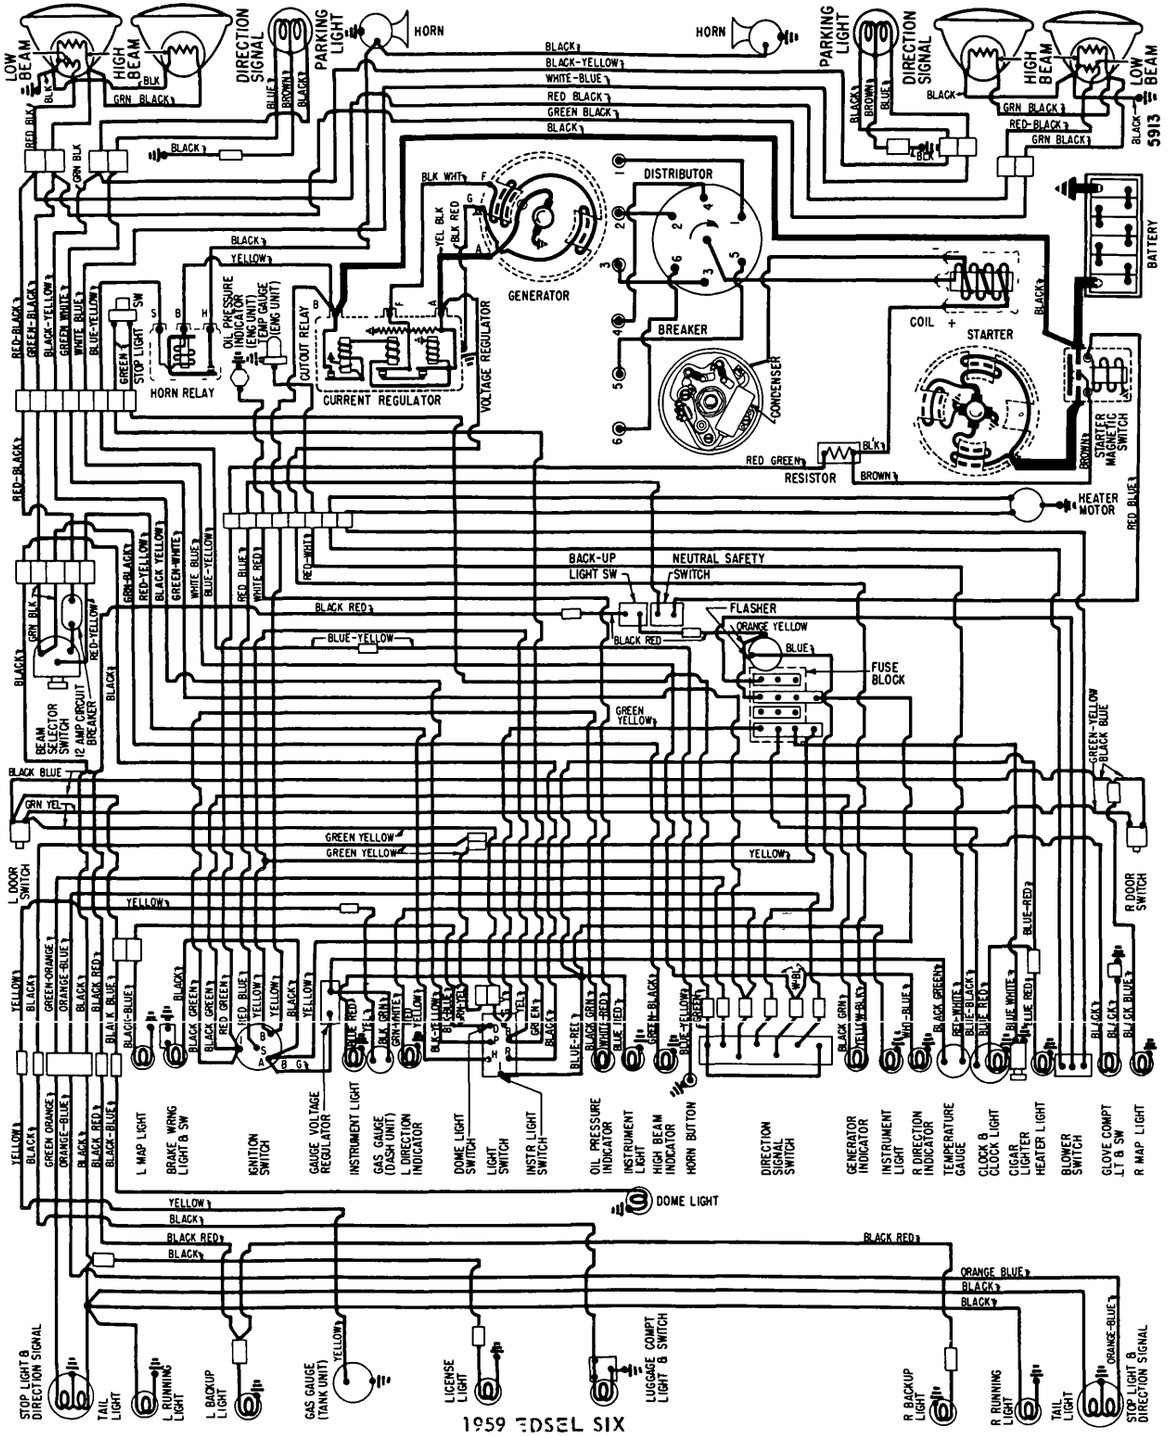
transmission in "D", accelerate to 1000 RPM Pressure gauge should read 77-84 lbs To adjust, lengthen throttle control rod to increase, shorten to decrease pressure With engine stopped and carburetor or hot idle, disconnect accelerator shaft connecting rod at bellcrank Adjust threaded pin at bellcrank so top corner of accelerator pedal is 3½" from floor mat Adjust threaded pivot at rear end of connecting rod so rod is parallel with centerline of engine

Anti-Stall Dashpot Adjustment: *CAUTION - Two types used Adjust each type as follows:*

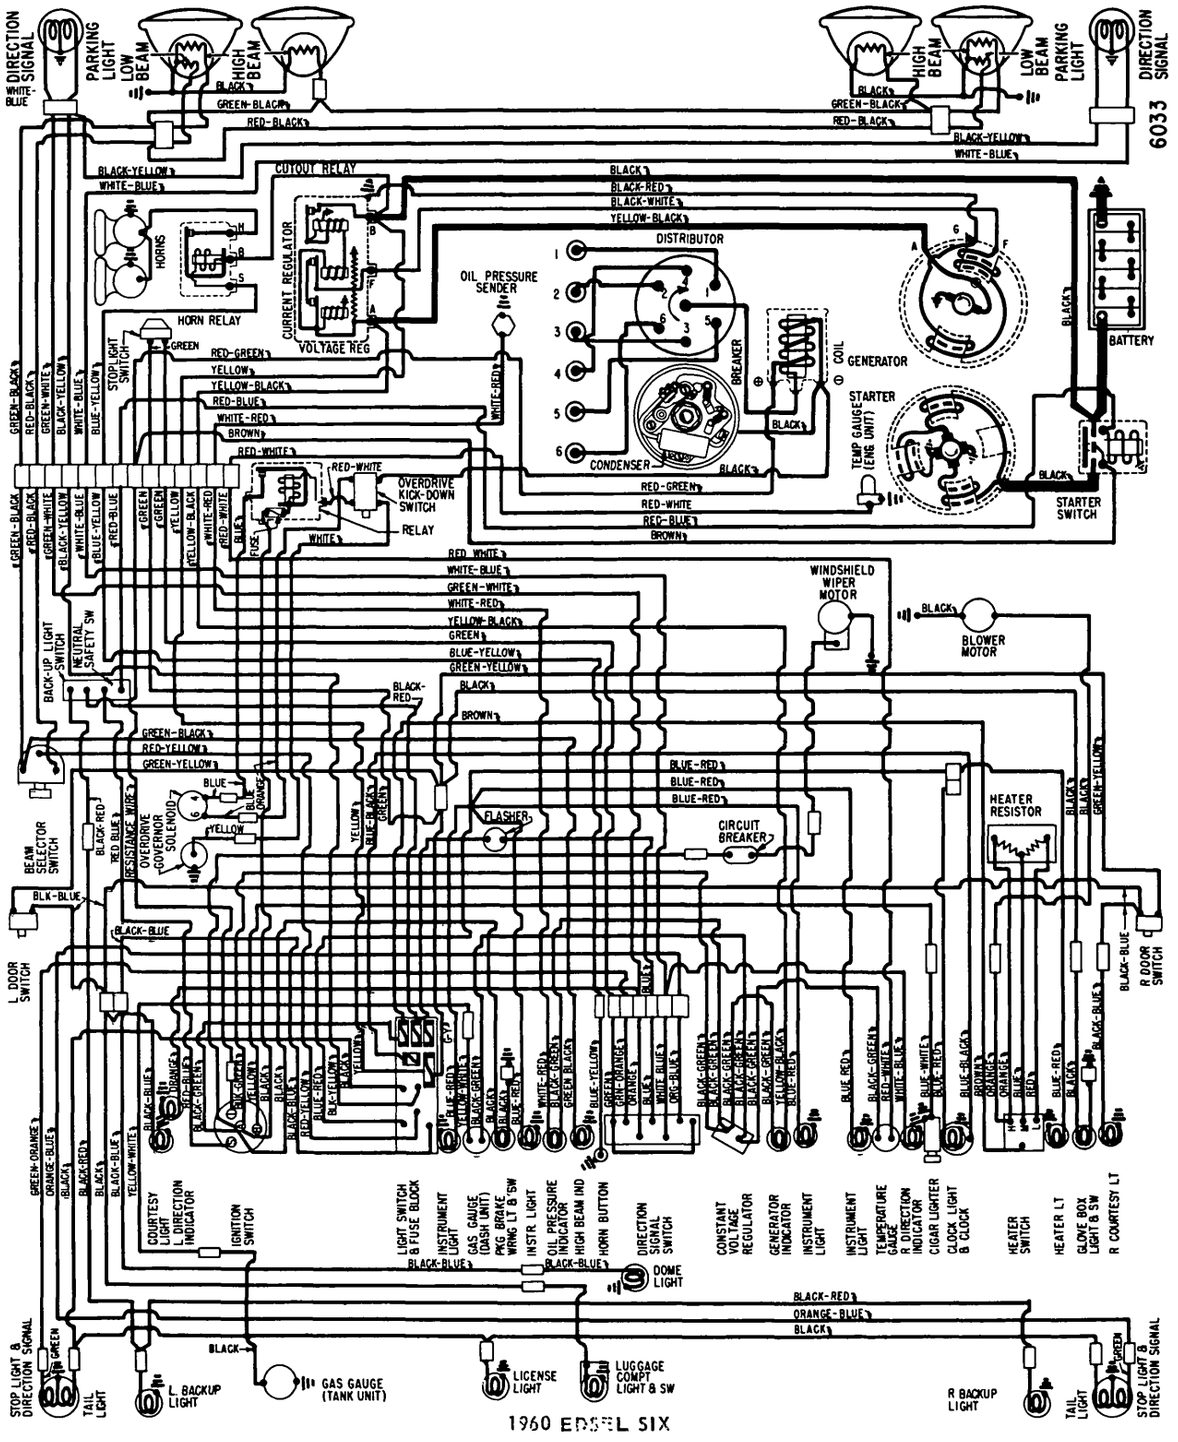
"One-Second" Type (Before Nov. 16, 1958) - With carburetor throttle lever against hot idle stopscrew, depress dashpot plunger fully with throttle valve closed Clearance between end of plunger and adjusting screw should be 045- 064". Adjust by loosening locknut and turning adjusting screw.

"Two-Second" Type (Identified by figure "42" stamped n hex stud or by square stud instead of hex stud) - Check and adjust in same manner as first type above Setting should be 060- 090"

HOLLEY "VISI-FLO"



H lley Visi-Flo. Edsel No. B9A-9510-F (Identified by N . B9EA-9510-C).



M del	Edsel Carburetor No.
1959 (All Cars)	B9A-9510-F
1960 Synchro-mesh (Early)	COAE-9510-E
1960 Synchro-mesh (Later)	COAE-9510-U
1960 Auto. Trans. (Early)	COAE-9510-G
1960 Auto. Trans. (Later)	COAE-9510-Z

Idle Setting - Initial setting ¾-1¾ turns open Turn adjusting screw in until engine begins to run roughly from lean mixture, then turn screw out until engine begins to roll from rich mixture Turn screw in until engine runs smoothly Favor a slightly rich mixture, rather than a lean setting

Idl Sp d - 475-500 RPM (Synchro-mesh), 450 RPM (Mile-O-Matic in "D"). *S e Note following.*

CONTINUED ON NEXT PAGE

1960 EDSEL SIX

CONTINUED FROM PRECEDING PAGE

►*ROUGH IDLE (Auto. Trans. Cars):* If roughness or vibration noted when engine idling in "D", tailor the speed to the individual car as follows: Set parking brake, place selector lever in "D", adjust idle RPM until roughness and vibration eliminated or improved. Idle speed may vary between 475 and 525 RPM.

Fuel Level - 11/16" ± 1/32" below power valve mounting surface (Tool T52L-9550-AEE).

Accelerating Pump - Inner hole for average or hot weather operation, outer hole for cold weather operation.

Fast Idle: Integral type operated by choke valve. No adjustment required.

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Holley Visi-Flo Carburetors" in Carburetion Section.*

CARB. EQUIPMENT

FUEL FILTER: Disposable type, mounted in carburetor fuel inlet line. Replace every 12,000 miles or 1 year, whichever is first.

►*FUEL PUMP GASKET LEAKAGE NOTE:* Use Gasket B5A-9417-AUP (.020" thick) only and tighten mounting bolts to 12-15 ft. lbs.

Fuel Pump: (1959) Edsel No. B8A-9350-E (Fuel only), B9A-9350-B (Fuel & Vacuum), **(1960)** Edsel No. COAE-9350-C (Fuel only), COAE-9350-D (Fuel & Vacuum).
Fuel Pump Pressure - 3.5-5.5 lbs. at 500 RPM.
See "Fuel Pumps" in Carburetion Section.

Gasoline Gauge: King-Seeley Electric "CV" (constant voltage) type with Gauge Voltage Regulator, Edsel No. B9AF-10804-A (1959), B9MF-10804-A (1960).

►*INACCURATE FUEL GAUGE READING CORRECTION:* Make sure correct fuel tank sending unit installed. *See below.*

Dash Unit - Edsel No. PB9E-9280-A (1959), COKF-9305-B (1960).

Tank Unit - Edsel No. B7A-9275G (1959), COAF-9A294-B (1960 Sta. Wgn.), COAF-9A294-C (1960 Other Models). *See "Fuel Gauges" in Carburetion Section.*

Air Cleaner: Dry filter element type. Clean every 4000 miles. Replace every 20,000 miles (1959), 24,000 miles (1960).

►*CLEANING CAUTION:* Clean filter element by tapping and shaking to remove dirt particles. DO NOT wash element in solvent or other liquids and DO NOT oil or lubricate. *NOTE* - Compressed air may be used if applied in opposite direction to intake air flow and if filtering element is not damaged.

BATTERY

Edsel No.	Plates	Ampere Hour Cap.
B8E-10654-B (1959)	13	65
B9A-10654-D (1960)	11	55
B9A-10654-E (1960)	13	65

All 12 Volt. Ampere hour capacity is 20 hour rate.
Battery Ground - Negative, to engine block.
Engine Ground - Cylinder head to dash.

STARTER

Edsel B6A-11002-A (1959) & FAY-11002-A (1960).
Armatur - Edsel No. B6A-11005-B (1959-60).
Driv - Edsel 1CM-11350-C. Bendix "Folo-Thru".

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Rotati n - Counterclockwise at commutator end
Brush Spring T nsi n - 48-56 ozs
Cranking Sp d - 150-180 RPM, 190 amperes max

Performance Data

Torque	RPM	Volts	Amperes
0 ft lbs	Ⓒ	12 0	80
15 5 ft lbs		5 0	550

Ⓒ - With starter on engine and engine idling

Starting Switch: Edsel B6A-11450-A. Magnetic type Controlled by combination Ignition & Starting Switch
NOTE - Neutral safety switch on automatic transmission cars

Neutral Safety Switch (Auto. Trans. Cars): Edsel No B9A-15812-A1 (1959), COAF-7A247-A & B (1960) Located on steering column
N utral Safety Switch Adjustment - *See "Edsel Automatic Transmission" in Transmission Section.*

GENERATOR

(Standard) B9A-10002-A. (Air Cond. Cars) B8A-10002-A.

Performance Data

G nerator	Amperes	Eng. RPM
B9A-10002-A	30	2550
B8A-10002-A	35	2550

Brush Spring Tension – 32-40 ozs
Field Current - 1 0-1 1 amperes at 10 volts (hot)
R tation - Counterclockwise at commutator end
B lt Adjustment: ½" deflection midway between generator and water pump pulleys with normal thumb pressure
NOTE - Supersedes previous specification of ¼"

REGULATOR

R gulator	Generator
B7A-10505-B	B9A-10002-A
B8E-10505-B	B8A-10002-A

►*SETTING CAUTION* "Temperature Compensated" type Set to following specifications at 75°F, ambient (engine compartment) temperature, after ½ hour operation in vehicle, or after regulator heated and stabilized

Cutout Relay

Cuts In - 12 4-13 2 volts (All)
Cuts Out - 6-9 amps (B7A-10505-B), 2-9 amps (B8E-10505-B)

Voltage Regulator

Setting - 14 6-15 4 volts (All)
Checking & Adjusting - *See "Edsel Regulators" in Electrical Section*

Current Regulator

Setting - 28-32 amps (B7A 10505-B), 33 37 amps (B8E-10505-B)
Checking & Adjusting - *See "Edsel Regulators" in Electrical Section*

MISC. ELECTRICAL

H adlamps: Dual headlights (4-Headlight System) *S e "4-Headlight System" in Electrical Section*
Dir ctional Signals: *See Electrical Section*
Lighting Switch Removal: Remove battery ground cable at battery With knob in "OFF" position, press spring-release button on switch body, turn shaft slightly and pull it out of switch Remove retaining nut and switch Note switch wiring color code for reinstallation, then remove wires
Stop Light Switch location· On forward end of brake master cylinder (located on firewall in engine compartment)
CIRCUIT BREAKERS: 18 Amp r - Headlight high beams On lighting switch
12 Amp re (1959) & 15 Amp r (1960) - Headlight low beams and windshield wiper motor on left coil side panel.
12 Amper (1959) & 15 Amp r (1960) - Back-up, Parking, Tail, Stop, License & Instrument lights on lighting switch

FUSES: *NOTE - All fuses located in fuse panel which is on right side of brake pedal support bracket*
14 Ampere - Heater Blower Motor
15 Ampere - Cigar Lighter
7.5 Ampere - Interior lights
7.5 Ampere - Direction Signals
7.5 Ampere - Radio (Signal Seeking)
7.5 Ampere - Spotlight
7.5 Ampere - Power Lubricator.
5.0 Ampere - Radio (Push Button)
1 Ampere - Clock

ENGINE

►*AIR CONDITIONING CAR SERVICE CAUTION Use extreme care when disconnecting any part of air conditioning equipment or lines for access to engine See "Air Conditioning Service Cautions" in Miscellaneous Section*

ENGINE SPECIFICATIONS: Own 6 Cyl , valve-in-head

Bore	Stroke	Displacement
3 62"	3 60"	223 cu in
Compr. Ratio	**Rated HP**	**Developed HP**
8 4-1	31 54	145 at 4000 RPM

Compression & Vacuum Reading - *See TUNE-UP*

►*ROCKER ARM COVER OIL LEAK CORRECTION* When cover inner gasket retainer interferes with proper seating of gasket, grind off retainer edge to provide clearance and install new gasket

►*ORIGINAL BORE & PISTON SIZES See "Pistons" in Edsel Special Data*

CYLINDER HEAD: *See 'Cylinder Head & Manifold" in Edsel Special Data*
TIGHTENING TORQUES: *See "Tightening Specifications' in Edsel Special Data*
ENGINE REMOVAL: *See 'Engine' in Edsel Special Data*
OIL PAN REMOVAL: Drain crankcase, remove oil level dipstick, stabilizer bar, and flywheel inspection cover Remove oil pan retaining screws and remove pan

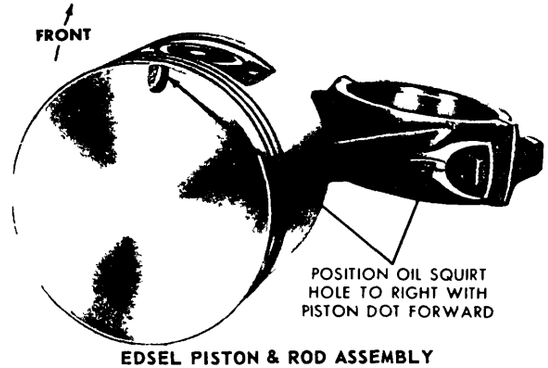
PISTONS

Autothermic type Solid skirts with three rings
Removal - Pistons and rods removed from above
Fitting New Pistons: Clearance - 0008-0026" at bottom of skirt Use ½" wide ribbon feeler gauge inserted between piston and cylinder wall at right angle to pin on thrust side, piston inverted and bottom of piston skirt 1½" below top of block To test minimum clearance, use 0015" feeler and 4 lbs pull, to test maximum clearance use 003" feeler and 4 lbs pull
Replacement Pistons· Furnished in 2 Std sizes (Red-Grade 2, Blue-Grade 6) and 020", 030", 040" Oversize with fitted pins

►*PISTON & PIN REPLACEMENT CAUTION* Engines produced after April 13th, 1959 have a lighter weight piston pin, Part No EAA-6135-B When installing present Piston & Pin Assemblies (with heavier pin No B5A-6135-A) in these engines, replace pin with later lighter type, No EAA-6135-B
Installing Pistons: Install piston with indentation in head of piston toward front of engine *S Rod Installation*

PISTON PINS

Floating type with lock ring at each end
See "PISTON & PIN REPLACEMENT CAUTION" under PISTONS
Diameter - 9120- 9123" **Length** - 3 016-3 030"
Pin Fit in Piston - 0001- 0003" wear limit 0008"
Pin Fit in Rod Bushing - 0001- 0003", wear limit 0008"
Replacement Pins: Standard and 001", 002" oversize



PISTON RINGS

Ring	Width	End Gap	Sid Cl aranc
Compr #1,2	3 32"	010- 027"	002- 0035"
Oil #3	3/16"	015- 062"	Ⓓ

Ⓓ- Side sealing type ring
Replacement Rings: Standard, 020", 030", 040", 060" oversize (Expander type)

CONNECTING R DS

Journal Diameter - (Red) 2 2984-2 2988", **(Blue)** 2 2980-2 2984"
Clearance - 0004- 0023", wear limit 0033"
Side Clearance - 003- 009" wear limit 012"

EDSEL PISTON & ROD ASSEMBLY

Replacement Bearings· Standard in 2 sizes (Red and Blue) and 002" 020" 030" Undersize
►*STANDARD SIZE NOTE* **Red** marked bearings increase clearance **Blue** marked bearings decrease clearance
Installing Rods Install rod with squirt hole to right and piston indentation toward front of engine

CRANKSHAFT

Journal Diameter - (Red) 2 4984-2 4988", **(Blu)** 2 4980-2 4984"
Bearings - Steel backed copper lead alloy
Clearance - 0005- 0025" Wear limit 0035"
Replacement Bearings· Standard in 2 sizes (Red and Blue) and 002", 020", 030" Undersize
►*STANDARD SIZE NOTE* **Red** marked bearings increase clearance **Blue** marked bearings decrease clearance Use mixed set (Red & Blue) if necessary to obtain selective fit
End Thrust· Taken on rear intermediate #3 bearing
Thrust B aring Alignm nt - *S e Crankshaft & Main Bearings" in Edsel Special Data*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

End Play - 004- 008", wear limit 012"

Crankshaft Rear Oil Seal Installation: See *"Crankshaft & Main Bearings" in Edsel Special Data*

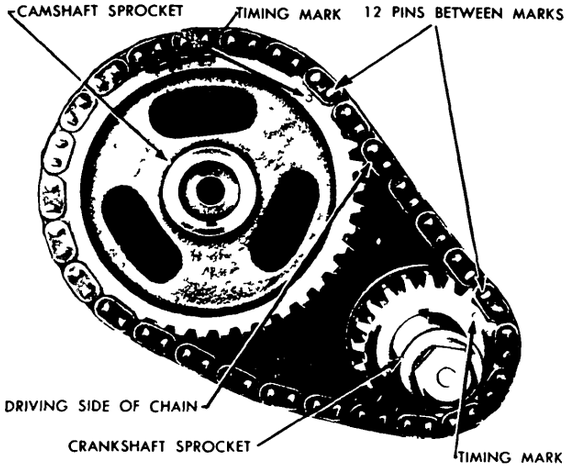
Crankshaft Front Oil Seal Installation: See *"Engine Front Cover" in Edsel Special Data*

►*OIL SLINGER NOTE:* A crankshaft front oil slinger is incorporated on all cars and truck engines to reduce oil leakage at front oil seal Slinger is held in place by crankshaft pulley hub and cylinder front cover To remove slinger, remove cylinder front cover and slide slinger off crankshaft

CAMSHAFT

Journal Diameter - 1 9255-1 9265"

Clearance - 001- 003" wear limit 006"



End Thrust: Taken by thrust plate and spacer behind camshaft sprocket *NOTE* - Chamfer on inside of spacer must be toward camshaft journal

Replacement Bearings: Finished bearings furnished Standard, and 015" undersize *CAUTION* - Rear intermediate (#3) bearing not interchangeable with other bearings

Camshaft Removal & Installation: See *"Camshaft & Bearings" in Edsel Special Data*

Timing Chain: Side-guide type 56 links

Camshaft Setting: Sprockets marked by "O" at one tooth Mesh chain so that there are 12 pins between "O" marks on driving side of chain

EDSEL VALVE TIMING MARKS

Engine Front Cover Oil Seal (Crankshaft Front Seal): See *"Engine Front Cover" in Edsel Special Data*

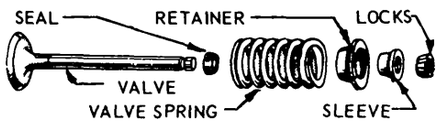
Engine Front Cover Removal: See *"Engine Front Cover" in Edsel Special Data*

VALVES

Tappet Clearance - 019" Intake & Exhaust (Hot or Cold)

Valve	Head Diameter	①Stem Diameter
Intake	1 775-1 785"	3416- 3423"
Exhaust	1 505 1 515"	3403- 3410"

Valves	Seat Angle	②Lift	③Stem Clearance
Intake	45°	273"	001- 0024"
Exhaust	45°	273"	0023- 0037"



①- Furnished with 003", 015", 030" oversize stems

②- Cam lobe lift Wear limit, 268"

③ - Wear limit (Intake) 0045" (1959), 0055" (1960) (Exhaust) 0065" (1959-60)

►*VALVE REPLACEMENT CAUTION* 015" oversize valves used in some engines Measure all valves (1" or more from stem end) for stem diameter before selecting valve replacement

►*ROTATABLE VALVE NOTE. All valves are rotatable type* See *"Valve System" in Edsel Special Data*

EDSEL VALVE ASSEMBLY

Valve Stem Seals - Umbrella type seals used on both intake and exhaust valve stems cupped side down

Valve Seat Width - Intake 060- 080" (1959), 070- 090" (1960) **Exhaust** 070- 090" (1959-60)

Valve Springs: Free Length - 2 09" approximately

Valve Spring Specifications

Valve	Spring Pressure	Length
Closed	①71 79 lbs	1 780"
Open	②161-177 lbs	1 390"

①- Wear limit 64 lbs at 1 780"

②- Wear limit 145 lbs at 1 390"

►*VALVE SPRING INSTALLATION NOTE·* Measure valve spring assembled height from machined surface of cylinder head spring pad to spring retainer contact surface If assembled height is 1 25/32" or greater, install necessary 030" spacer or spacers between cylinder head valve spring pad and valve spring to bring assembled height to recommended dimension of 1 3/4-1 25/32"

Valve Guides: Integral with cylinder head When stem-to-guide clearance exceeds maximum (see table above) ream guides and install oversize valves See *"Valve System" in Edsel Special Data*

Valve Lifters: Mushroom type Removed from below with camshaft out

Clearance - 0008- 0024" wear limit 0045"

Rocker Arm Assembly: See *"Valve System" in Edsel Special Data*

VALVE TIMING

See *"Camshaft Setting" under CAMSHAFT above*

►*VALVE TIMING NOTE:* The following valve opening and closing points are with camlift as indicated

Intake Valves - Open 17° ①BTDC Close 53° ②ALDC

Exhaust Valves - Open 61° ①BLDC Close 9° ②ATDC

①- Camlift 016" ②- Camlift 019"

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Edsel Special Data.*

Crankcase Capacity: 4 quarts (refill) 5 quarts (when filter element changed)

Normal Oil Pressure : 45 50 lbs at 2000 RPM

Pressure Regulator Valve - In pump body not adjustable

Oil Pressure Indicator - Indicator light on instrument panel, operated by engine unit Edsel B6A-9278-B

Oil Pump: Gear type pump located in crankcase

Pump Overhaul - *See "Oil Pump" in Edsel Special Data*

Oil Filter: "Disposable" type Replace at 4,000 mile intervals

Disposable Filter Replacement - Coat gasket face of filter with oil thread filter on insert by hand until gasket contacts adapter surface then tighten filter an additional one half turn

Crankcase Ventilation: Filter in oil filler cap (inlet), an outlet pipe in rear of crankcase at left side

COOLING

►*OVERHEATING DURING EXTENDED IDLE CORRECTION* To correct above condition, install extra cooling water pump pulley B7A-8509-D with fan belt B7A-8620-E identified by EBP-8620-E

Water Capacity: 15 qts Add 1 qt for heater

Pressure Valve· Edsel No LA-8100-A 14 lb radiator filler cap

►*RADIATOR PPESSURE CAP CAUTION* Vented and non-vented type caps used in production Use vented type only for replacement The vent on a vented type cap will be away from vent seat when cap is held in upright position

Thermostat: Edsel No B7A-8575-A (157-162°F) Std , B7A-8575-B (177-182°F) for use with permanent anti-freeze

►*THERMOSTAT INSTALLATION NOTE:* Install thermostat with valve pivot shaft in a vertical position to insure best operation

Water Pump: Packless sealed ball bearing type

See "Water Pump" in Edsel Special Data

Temperature Gauge: King-Seeley Electric "CV" (constant voltage) type with Gauge Voltage Regulator, Edsel No B9AF-10804-A (1959), B9MF-10804-A (1960)

Dash Unit - Edsel No PB9E-10883-A (1959), COKF-10883-A (1960)

Engine Unit - Edsel No FEG-10884-B1 (1959), FEG-10884-B (1960)

See "Temperature Gauges" in Miscellaneous Section

CLUTCH

Long 9½CF (Std.), 11CF (Heavy Duty). Single plate, semi-centrifugal type

Cover Assembly	Long No.	Edsel No.
9½CF	268954	1A-7563-A
11CF	266978	B7A-7563-C
Clutch Disc	**Long No.**	**Edsel No.**
9½CF	288849	B8A-7550-A
11CF	288851	B8A-7550-B

See "Long Clutches" in Clutch Section

Clutch Disc - Long 288849 (9½ CF), 288851 (11CF)

Pedal Adjustment: If total pedal travel is less than 6 5/8" or more than 6 7/8", reposition pedal bumper and bracket until travel is within limits Adjust spring link to give assist spring length of 9¾-10" (between spring eye centers) with pedal fully released against bumper

Free Travel - 1 1/8-1 3/8" Loosen locknut on clutch pedal release rod, turn adjusting nut until correct travel is obtained *NOTE* - Check free travel by oper-

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

ating engine at 3,000 RPM with transmission in neutral position There should be a minimum of ½" free travel under these conditions

Removal: Remove transmission, *see "Synchro-mesh Transmission" below,* then remove flywheel housing cover and release lever retracting spring Slide release bearing and hub off release lever Mark clutch cover and flywheel for reinstallation Loosen six cover bolts uniformly to release spring tension Remove cover and pressure plate through opening in flywheel housing

SYNCHRO-MESH TRANSMISSION

Own. Helical gear, constant mesh, synchro-mesh (second & high), sliding gear (low & reverse)

See Edsel Synchro mesh in Transmission Section

Transmission Control: *See Transmission Controls in Transmission Section*

Removal: Raise car and disconnect drive shaft at rear joint flange Slide drive shaft off transmission output shaft Insert Tool T57L-7657-A over output shaft and into seal Disconnect speedometer cable at extension housing, gear shift rods from transmission levers Remove parking brake equalizer lever from bracket and remove brake cable from bracket on crossmember Remove extension housing to engine rear support bolts and raise rear of engine and remove engine rear support and frame crossmember as a unit Place jack under transmission and remove transmission to flywheel housing bolts Slide transmission and jack to rear to clear input shaft and remove transmission from beneath car

MILE-O-MATIC TRANSMISSION

Two-Speed simplified type, with torque converter and two speed automatic transmission

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION See "Edsel & Ford Two-Speed Automatic" in Transmission Section*

►*TESTING & TROUBLE SHOOTING See 'Edsel & Ford Two-Speed Automatic' in Transmission Section*

Lubrication - Check fluid level every 2 000 miles Drain and refill every 24,000 miles Use Automatic Transmission Fluid, Type A Suffix A

Checking Fluid Level - Bring transmission to operating temperature by running engine with selector lever in Neutral position Move selector lever through all ranges to assure fluid distribution then place lever in "P" (Park) position for checking fluid Maintain level at Full mark on dipstick

Throttle Linkage Adjustment *See CARBURETOR above*

►*OTHER DATA See 'Edsel & Ford Two-Speed Automatic' in Transmission Section*

UNIVERSALS

Mechanics Needle bearing type

►*CAUTION* Rear universal joint companion flange nut controls pinion bearing preload (must be adjusted whenever nut is loosened) *See 'Edsel, Ford & Mercury' in Rear Axle Section*

►*REAR UNIVERSAL JOINT INSTALLATION CAUTION* To eliminate possibility of early failure, the bearing retaining strap must be correctly positioned in cast recess in rear axle flange prior to tightening attaching "U" bolts

REAR AXLE

Own Separate carrier type semi-floating, hypoid with Hotchkiss Drive "Equa-Lock" (Power Transfer) type differential Optional *See Edsel, Ford & Mercury (Dep-Offset) Hypoid" or "Ford Equa-Lock Differential" in Rear Axle Section*

Axle Ratios - 3 56-1 (32-9), 3 89-1 (35-9) Std Trans, 3 56-1 (32-9) Auto Trans

Backlash - 004- 009"

Axle Shaft Removal· Remove wheel and brake drum Remove axle bearing retainer locking type nuts (work through opening in axle shaft flange) Use puller No 4235N and pull axle shaft (do not disturb brake backing plate or damage wheel bearing oil seal) Replace one nut to secure brake backing plate

Carrier Assembly Removal: Remove axle shafts (see above) and drive shaft Remove locknuts which attach carrier to housing and remove carrier from housing

SHOCK ABSORBERS

Direct acting, non-adjustable Serviced by replacement

Edsel Shock Absorber Nos.

Model	Front	Rear
Sta Wgn (1959)	PB9E-18077-C	B9KK-18097-B
Others (1959)	PB9E-18077-B	①PB9E-18097-C
Sta Wgn (1960)	②COKK-18077-D	②COKK-18097-D
Others (1960)	COKK-18077-A	COKK-18097-A

① - PB9E-18080-A (1959 Heavy Duty)

② - 1960 Heavy Duty COKK-18077-F (Front), COKK-18097-E,G (Rear)

FRONT SUSPENSION

Independent. "Ball Joint" suspension with direct acting shock absorbers mounted within coil springs

See "Edsel, Ford, Mercury" in Suspension & Wheel Alignment Section

Caster - 0° to Pos 1° Maximum variation between wheels ½°

Camber - Pos ½° to Pos 1½° Maximum variation between wheels ¼°

Toe-In - 1/16-1/8" *NOTE* When checking toe-in on cars with power steering engine should be running so that power steering control valve will be properly centered

Toe-Out on Turns - Outer wheel 20°, inner wheel 24¼°

STEERING

►*SHIFT LEVER SHAKE AND RATTLE CORRECTION* When alignment of shift tube in bushings does not correct noise install Vibration Damper Spring No B6A-77205-A between shift tube and steering column under steering column to dash panel grommet

Manual· Own Recirculating ball worm and nut

See 'Saginaw Ball Bearing Worm & Nut" in Steering Section

Power Steering· Linkage type Used in conjunction with standard steering gear

See Bendix Linkage Type Power Steering in Steering Section

►*POWER STEERING POOR RECOVERY FROM LEFT TURN CORRECTION See 'Bendix Linkage Type Power Steering Unit' in Steering Section*

►*POWER STEERING PUMP HOSE INTERFERENCE WITH LEFT HORN CORRECTION* On early cars correct by repositioning horn 2 3/8" higher

Steering Linkag *See Steering Linkage in Steering Section*

Steering Wheel & Horn Button Removal *See 'Saginaw Ball Bearing Worm & Nut in Steering Section*

Steering Gear Removal: *See 'Saginaw Ball Bearing Worm & Nut' in Steering Section*

BRAKES

Bendix Hydraulic (With Automatic Adjuster). Duo-servo with fixed anchor pins No eccentric adjustment Parking lever applies rear wheel service brakes

See Bendix Automatic Brake Adjuster' in Brake Section

Drum Diameter - 11" front and rear

Wheel Cylinder Diameter - 1 1/8" front, 15/16" (Exc Sta Wgn) 31/32" (Sta Wgn) rear

Lining - Molded asbestos type, riveted to shoe

Lining Length - 9 5/16" Primary (Front & Rear) 12" Secondary (Front & Rear)

Lining Width - 2 5" Front Wheel, 2" Rear Wheel (1959)

Thickness - 7/32"

Braking Power - 55 5% front, 44 5% rear

Clearance - (Manual Adjustment After Overhaul) - Turn adjusting screw upward (from backing plate side) until wheel is locked Hold adjusting lever away from screw and back off screw until wheel turns free, then back off 1 more stroke (approximately 12 strokes total)

Brake Pedal Adjustment: Loosen locknut on eccentric bolt and rotate bolt to obtain ¼-7/16" free travel Hold bolt securely and tighten locknut to 22-28 ft lbs

Standard Master Cylinder· Located on engine side of firewall

Checking Fluid - Maintain fluid level to within ½" of top of reservoir

Removal - From passenger compartment side remove eccentric bolt, bushings, and locknut that secure pushrod to brake pedal From engine compartment side remove hollow bolt attaching stop light switch and hydraulic fitting to master cylinder Remove four attaching screws and remove master cylinder

Power Brake (1959): "Bellows" Typ - Pedal assist power unit with vacuum bellows and control valve mounted on drivers side of dash panel Connected directly to brake pedal lever *See "Edsel Bellows Type Power Unit" in Brake Section*

Checking Fluid Level - Same as standard master cylinder

Removal - Disconnect vacuum hose from top of unit Remove valve adjusting eccentric with flat washer, spring and bushing Remove nylon bushing from power unit valve housing Remove nuts and screws (attaching bracket to dash panel), and remove power unit *NOTE* - Master cylinder can then be removed in usual manner

Power Brake (1960): Bendix Combination power unit and master cylinder located on engine side of firewall *See "Bendix Hydraulic (Disc) Reaction Type Power Unit" in Brake Section*

Removal - Take out bolt securing brake pedal to power unit (in drivers compartment) In engine compartment, disconnect stop light switch wires, brake line, and vacuum hose Remove nuts and lockwashers attaching unit to firewall and slide unit forward and out

MISC. MECHANICAL

Refer to 1959-60 Edsel V8 Car Model Pages (following)

MODEL IDENTIFICATION

SERIAL NUMBER: Stamped on plate on left front body pillar. *NOTE* - Number (example below) includes identification data as follows

1959 SERIAL NUMBERS

① ② ③ ④ ⑤
C 9 U C 700001

① - Engine. **C** - 292" V8 **B** - 332" V8 **W** - 361" V8
② - Year - 1959
③ - Assembly Plant **U** - Louisville.
④ - Body Series Identification. See table below.
⑤ - Consecutive Unit Number.

Body Series Identification

Body Series	Code Letter
Ranger 2-Door Sedan	C
Ranger 4-Door Sedan	F
Ranger 2-Door Hardtop	G
Ranger 4-Door Hardtop	H
Corsair 4-Door Sedan	S
Corsair 2-Door Hardtop	W
Corsair 4-Door Hardtop	X
Corsair Convertible	R
Villager Fordor 6 Pass. Station Wagon	T
Villager Fordor 9 Pass Station Wagon	V

1960 SERIAL NUMBERS

① ② ③ ④ ⑤
O U 13 W 700001

① - Year - 1960
② - Assembly Plant - **U** Louisville
③ - Body Series see below)
④ - Engine Type (see below)
⑤ - Starting unit number (all series)

Body Series Identification

Body Type	Code Number
Ranger 2-Door Sedan	11
Ranger 4-Door Sedan	12
Ranger 2-Door Hardtop	13
Ranger 4-Door Hardtop	14
Ranger 2-Door Convertible	15
Villager 4-Door Station Wagon (6 Pass)	17
Villager 4-Door Station Wagon (9 Pass)	18

Engine Identification

Engine	Code Letter
292" 2-Bbl Carb	W
292" 2-Bbl Carb (Export)	T
352" 4-Bbl Carb	Y
352" 4-Bbl Carb (Export)	G

Engine Production Code Number: Indicates place, day and month of engine manufacture Not used for licensing Located as follows **292"** - Stamped on front of block at pushrod cover-to-cylinder block mounting surface **332", 352" & 361"** - Stamped on left front of block below cylinder head

TUNE-UP

►*SPARK PLUG FOULING & HESITATION ON DRIVE-AWAY CORRECTION See "Ford 2 & 4-Barrel Carburetors" in Carburetion Section*

►*LOSS OF POWER ON ACCELERATION CORRECTION (All Engines)* May be caused by kinked flexible fuel line at pump To correct, cut kink out of line and reconnect *NOTE* - It may be necessary to bend fuel tank line so it faces pump

►*HARD COLD START CORRECTION (Ford Carb)* Caused by damaged or misaligned choke plate in air horn, preventing complete closing of choke To correct replace or realign choke plate

►*332" ENGINE DETONATION CORRECTION: Distributor must be modified. See DISTRIBUTOR below.*

COMPRESSION PRESSURE: 292 - 160±20 lbs **352, 332 & 361** 180±20 lbs All cylinders must be equal within 20 lbs

VACUUM READING: Steady 19-20" at idle speed

VALVE TAPPET CLEARANCE: 292 - 019" Intake & Exhaust (Cold) After engine temperature stabilized running at 1200 RPM for 30 minutes, clearance should be 018" Intake & Exhaust

Tappet Adjustment - *See "Valve System" in Edsel Special Data*

332, 352 & 361 - Zero lash, hydraulic lifters

►*SELF-LOCKING TAPPET ADJUSTING SCREW NOTE (292")* Torque required to turn screw (after interference noted) must be 3 ft lbs minimum

MANIFOLD HEAT CONTROL: Automatic thermostatic type in right exhaust manifold Valve must operate freely

IGNITION

FIRING ORDER: 292" - 1-5-4-8-6-3-7-2
332, 352 & 361 - 1-5-4-2-6-3-7-8
Cylinders - RIGHT BANK 1-2-3-4, LEFT BANK 5-6-7-8

SPARK PLUG GAP: 032-036"
Spark Plugs - **292** - Champion F-14-Y **332, 352 & 361** - F-11-Y 18mm Torque to 15-20 ft lbs Tapered seat, no gasket used

COIL: Ford No. B6A-12029-B.
Ignition Current - 2 5 Amps idling, 4 5 Amps stopped
Resistor - **(1959)** Edsel No B8A-12250-A **(1960)** Resistance wire connected between ignition switch and coil Bypassed during cranking by lead from starter solenoid to battery terminal of coil Resistance 1 3-1 4 ohms at 75 °F (1959-60)

DISTRIBUTOR: Edsel (Early 1959) - Same type as used on previous V8 models **(Later 1959 & All 1960)** - New pivot plate type Both have centrifugal & vacuum spark advance *See "Distributors" in Electrical Section*

Engine	Distr Part No.	① Engineering No.
292 (Early 1959)	B9A-12127-B	B9FA-12127-A
292 (Later 1959)	B9AF-12127-B	B9AF-12127-B
332 (Early 1959)	B8A-12127-G	FEU-12127-J
332 (Later 1959)	B9AF-12127-A	B9AF-12127-A
361 (Early 1959)	B8A-12127-K	FEU-12127-N
361 (Later 1959)	B9AF-12127-D	B9AF-12127-D
292 (1960)	COAF-12127-A	
352 (1960)	COAF-12127-B	

① - Stamped on distributor housing for identification

►*332" ENGINE DETONATION CORRECTION* If detonation occurs due to low octane fuel, install new weight springs, Part No B8QH-12192-C, for **both** primary and secondary weights and recalibrate distributor according to special table below. *CAUTION - DO NOT retard timing below 2° BTDC nor exceed 10° BTDC*

Condenser - 1959. Edsel No B7A-12300-A (292 & Early 332 and 361), B9AF-12300-A (Later 332 & 361) **1960** Edsel No B9AF-12300-A **Capacity** -21-25 mfd

Contact Point Set - Edsel No B7A-12171-A
Breaker Gap - 014-016"
Cam Angle - 26-28½° *CAUTION* - Set cam angle at 250 Distr RPM and zero vacuum Cam angle may vary 6° through range of vacuum advance
Breaker Arm Spring Tension - 17-20 ozs
Rotation - Counterclockwise viewed from above

IGNITION TIMING

1959 Std. Ignition Setting
(88-92 Octane Research Method Fuel)

292 Std. Trans.	2°BTDC Min.
292 Auto. Trans.	2°BTDC Min., 6° BTDC Normal
332 All Trans.	2°BTDC Min., 6° BTDC Normal

(93 or greater Octane Research Method Fuel)

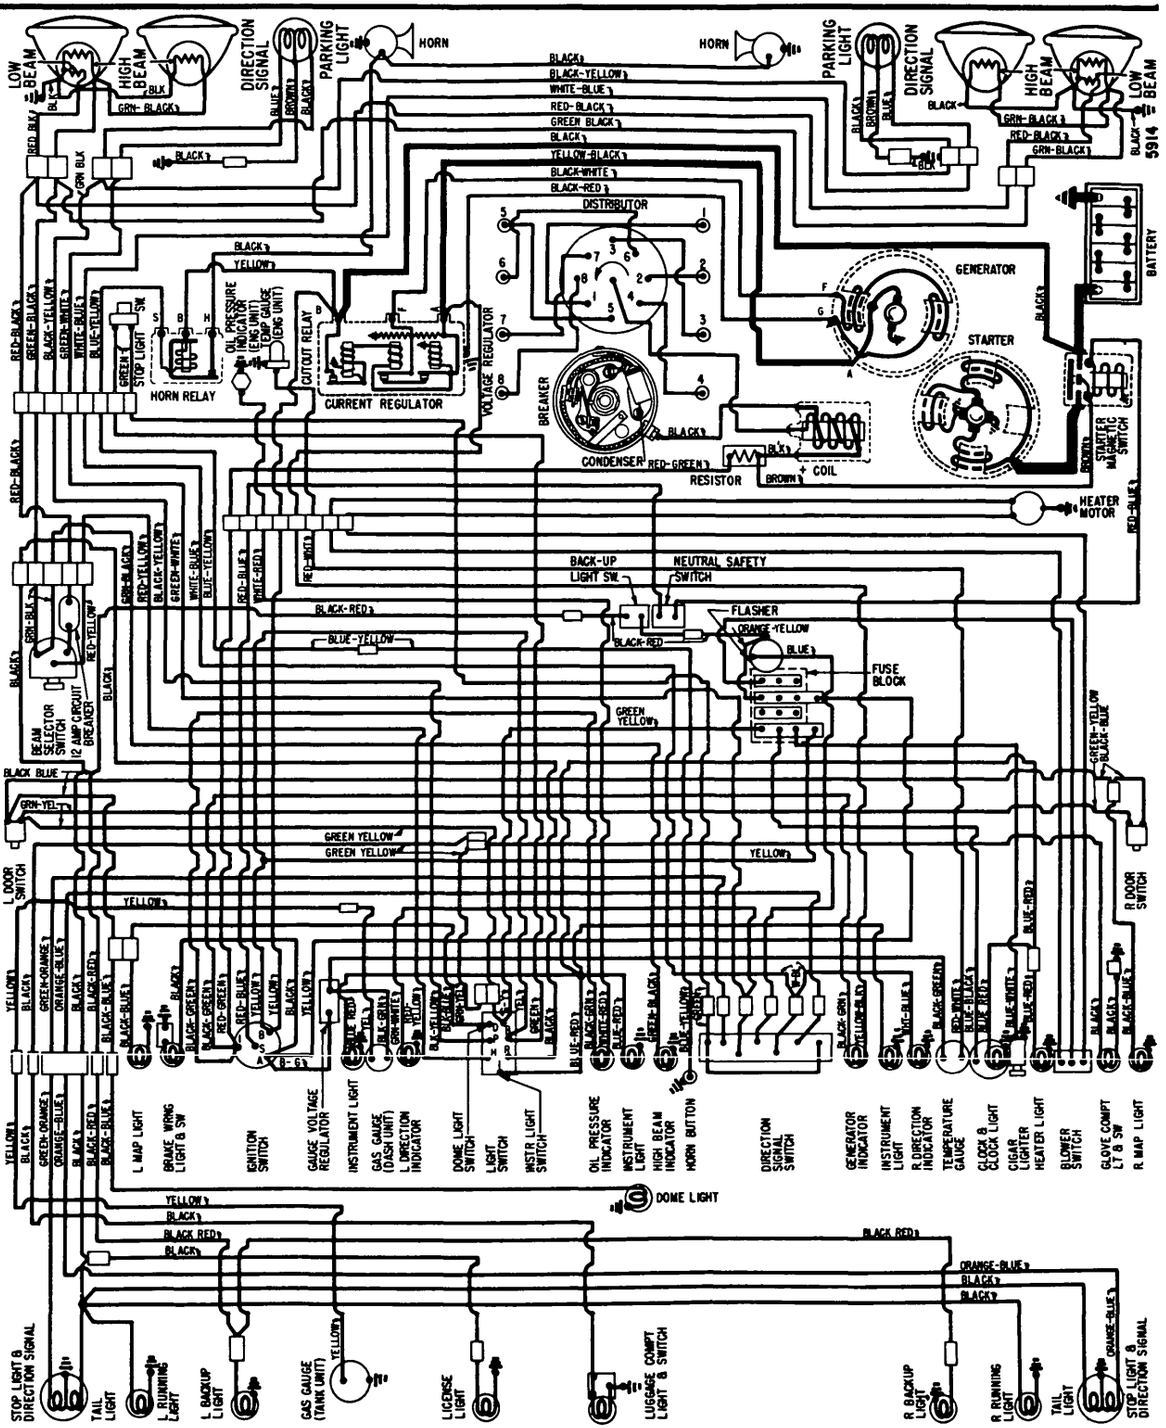
292 Std. Trans.	3° BTDC Normal, 10°BTDC Max.
292 Auto. Trans.	6° BTDC Normal, 10°BTDC Max.
332 All Trans.	5° BTDC Normal, 10°BTDC Max.

(96 or greater Octane Research Method Fuel)

361 Std. Trans.	3° BTDC Normal, 10° BTDC Max.
361 Auto. Trans.	6° BTDC Normal, 10°BTDC Max.

1960 Std. Ignition Setting

All Engs. Std. Trans.	℄3° BTDC
All Engs. Auto. Trans.	℄6° BTDC



℄ - Allowable range 2-10° BTDC.

Timing Mark - Three long marks, TDC, 10° BTDC, and 20° BTDC with short marks for 2° increments between. **Set timing with vacuum line disconnected.**

CARBURETOR

►*CARBURETOR APPLICATION:* Ford 2-Barrel Carburetor used on 292 Engine. Ford & Holley 2-Barrel Carburetors used on 332 Engines. Ford 4-Barrel Carburetors used on 352 & 361 Engines.

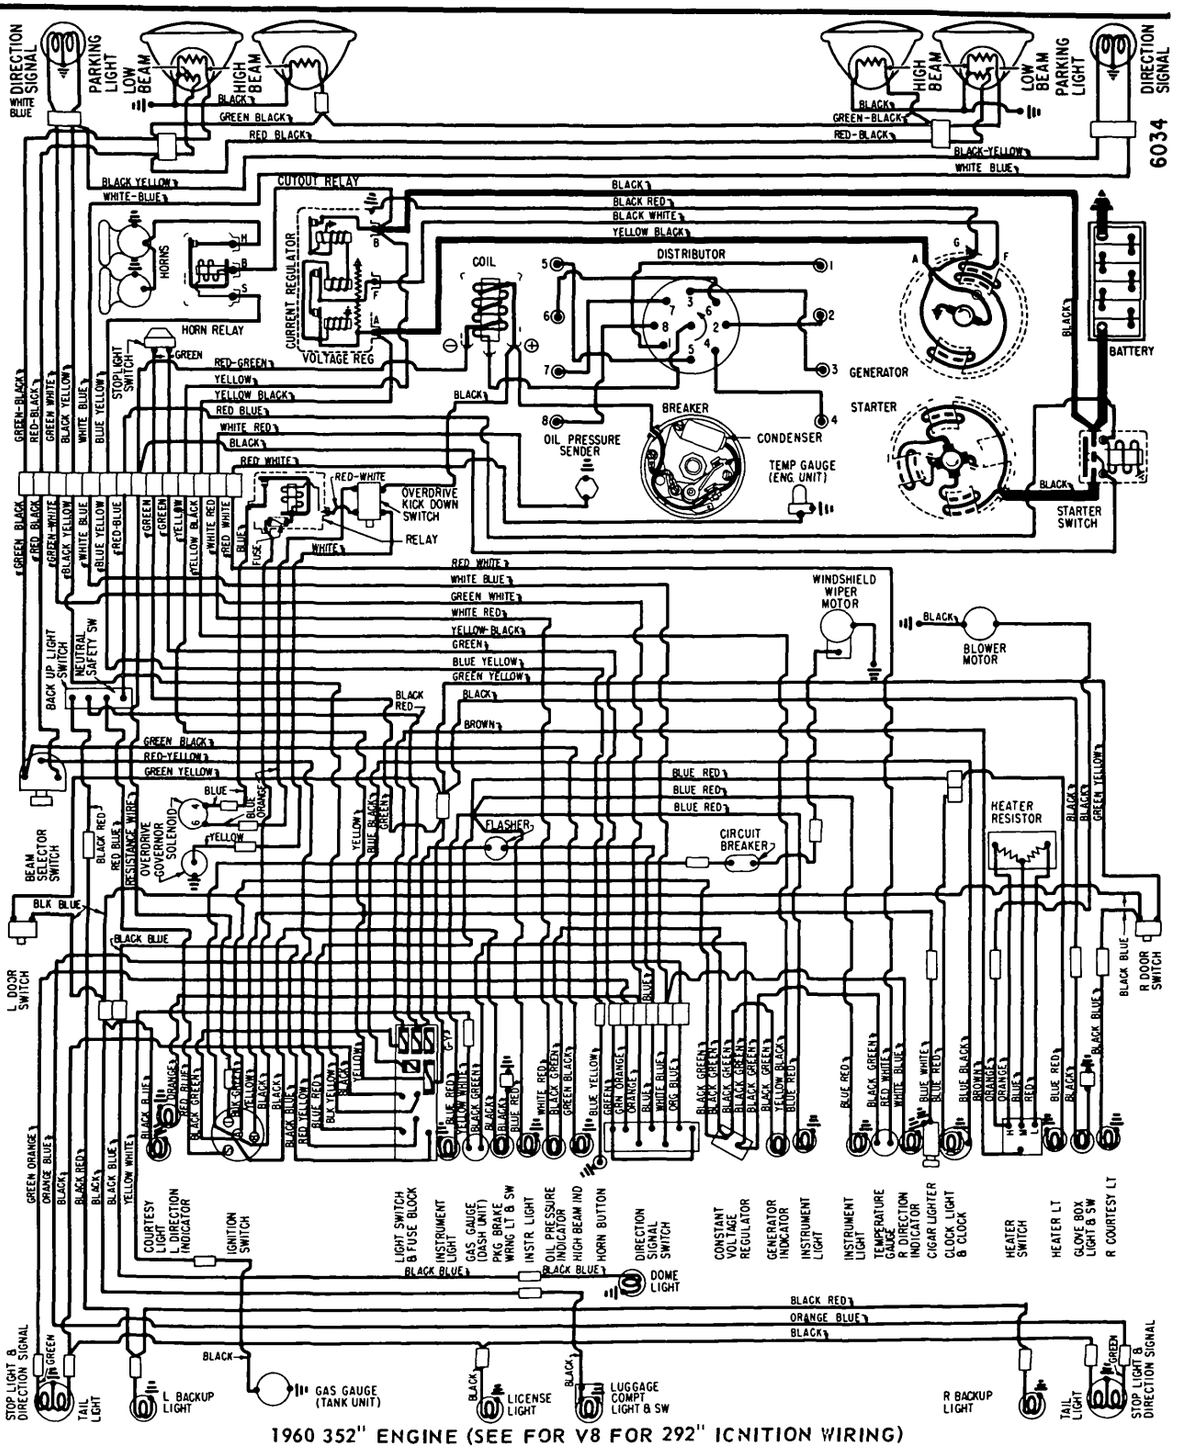
CONTINUED ON NEXT PAGE

1959 EDSEL V8 WITH 332" & 361" ENGINES (SEE FORD V8 FOR 292" ENGINE IGNITION WIRING)

CONTINUED FROM PRECEDING PAGE

Throttle Linkage Adjustment (1959 Mile-O-Matic Trans.): Adjust engine to correct idle speed. Insert (¼") gauge pin Tool 77230-MB through bellcrank bracket and tab Hold lever firmly against hot idle adjusting screw. Adjust carburetor rod assembly so gauge pin can be reinserted freely with carburetor rod connected and spring tension applied to linkage Remove pin and **lengthen rod 1 full turn.** *NOTE* - When making throttle rod adjustment, holes will not be aligned **Make Anti-Stall Dashpot Adjustment (See below).** Adjust pedal height by loosening locknut on accelerator shaft connecting rod and turning trunnion until top corner of pedal is 3½" from floor mat. Tighten locknut. Disconnect throttle control rod at clevis on bellcrank and loosen locknut on rod. Pull upward firmly on rod to hold transmission lever against internal stop. Adjust clevis so clevis pin enters freely, **then lengthen rod 2 full turns** (± ½ turn if necessary to correct shift points)

Throttle Linkage Adjustment (1959 Dual-Power): Adjust engine to correct idle speed. Insert ¼" gauge pin (Tool 77230-MB) through carburetor bellcrank and tab Hold carburetor lever firmly against hot idle adjusting screw and adjust carburetor connecting link so gauge pin holes align when link attached to throttle lever. Remove pin. *CAUTION - Improperly adjusted carburetor rod can result in a poor return to idle speed.* **Make anti-stall dashpot adjustment (see below).** Raise car and install pressure gauge at rear of transmission. Pull upward on throttle rod firmly but gently and adjust throttle rod clevis so that clevis pin freely enters hole in bellcrank **Lengthen clevis 2 (±½) full turns.** Reassemble Start engine, set brake, and put selector lever in "Dr2". With engine speed of 1000 RPM, gauge should read 80-85 lbs. Lengthen throttle rod clevis to increase, shorten to decrease pressure. *CAUTION - Make pressure test quickly so transmission will not overheat.*



Accelerator Pedal Height Adjustment - Loosen locknut on accelerator shaft connecting rod and adjust rod by turning threaded trunnion until top corner of accelerator pedal is 3½" from floor mat. Tighten locknut

Throttle Linkage Adjustment (1960 Automatic Trans.):

1) Adjust engine to correct idle speed with transmission in "D" (Mile-O-Matic), "D2" (Dual-Power) and make sure carburetor is off fast idle Make anti-stall dashpot adjustment (see below) Stop engine Disconnect transmission throttle rod from bellcrank and carburetor rod from carburetor lever Insert ¼" gauge pin, Tool 77230-MB, through carburetor bellcrank bracket and lever Hold carburetor lever firmly against hot idle adjusting screw and adjust length of carburetor rod so gauge pin fits freely in carburetor lever **Then lengthen rod one full turn.** Remove gauge pin, connect carburetor and transmission throttle rods

2) Connect a tachometer to engine remove valve cap from schrader valve at accelerator bellcrank and attach pressure gauge, Tool 77820-B and adapter Tool 77820-C to pressure tube With parking brake set and transmission in "D" (Mile-O-Matic), "D" (Dual-Power) accelerate to 1000 RPM Pressure gauge should read 77-84 lbs (Mile-O-Matic), 80-85 lbs (Dual-Power) To

CONTINUED ON NEXT PAGE

1960 352" ENGINE (SEE FOR V8 FOR 292" ICNITION WIRING)

CONTINUED FROM PRECEDING PAGE

adjust, lengthen throttle control rod to increase, shorten to decrease pressure

3) Loosen locknut on accelerator shaft connecting rod and turn threaded trunnion so top corner of accelerator pedal is 3½" from floor mat Tighten locknut

Anti-Stall Dashpot Adjustment: *CAUTION - Two types used Adjust each type as follows*

"One-Second" Type (Before Nov. 16, 1958) - With Carburetor throttle lever against hot idle stopscrew, depress dashpot plunger fully with throttle closed Clearance between end of plunger and adjusting screw should be 035- 050" Adjust by loosening locknut and turning adjusting screw

"Two Second" Type - Identified by figure "42" stamped on hex stud or by square stud instead of hex stud (Holley Carb. 332 Eng.), by yellow paint on dust shield boot retaining spring (Ford Carb. 292, 332, 361 Engines) - Check and adjust in same manner as first type above Setting should be 060- 090"

1959 FORD 2 & 4-BARREL

2-BARREL CARBURETOR	①Ident No.	Carb. No.

B8E-10505-B (35 Amp)	B8A-10002-A
COMF-10505-A (35 Amp)	COAF-10002-A
COAF-10505-B (40 Amp)②	COAF-10002-B

① - Regulators must be used with indicated generators
② - Delco-Remy type, double contact

Cut ut R lay

Cuts In - 12 4-13 2 volts (30 & 35 amps), 11 8-13 0 volts (40 amp Delco-Remy)
Cuts Out - 6-9 amps (30 & 35 Amps), 8 amps Max at 12 2 volts (40 Amp Delco-Remy) discharge current

Voltag R gulator

Setting - 14 6-15 4 volts at ambient 75°F On Delco-Remy (40 Amp), 1- 3 volts lower when operating on lower contacts
Checking & Adjusting - *See "Ford" & "Delco-Remy" Regulators in Electrical Section*

Current Regulator

Setting (30 Amp.) - 28-32 amperes
Setting (35 Amp.) - 33-37 amperes
Setting (40 Amp.) - 43-51 5 amperes at 85°F
Checking & Adjusting - *See "Ford" & "Delco-Remy" Regulators in Electrical Section*

MISC. ELECTRICAL

Headlamps: Dual Headlights (4-Headlight System) *See "4-Headlight System" in Electrical Section*
Directional Signals: *See Electrical Section*
Lighting Switch Removal: Remove battery ground cable at battery With knob in "OFF" position, press spring-release button on switch body, turn shaft slightly and and pull it out of switch Remove retaining nut and switch Note switch wiring color code for reinstallation, then remove wires
Stop Light Switch Location: On forward end of brake master cylinder (located on firewall in engine compartment)

CIRCUIT BREAKERS: 18 Ampere - Headlights on lighting switch (1959 Low Beams, 12 Ampere)
12 Ampere - Back-up, Parking, Tail, Stop, License, and instrument lights in 1959, located on lighting switch
15 Ampere - Interior lights, Parking, Tail, Stop License, and Instrument lights in 1960 located on Main Light Switch
12 Ampere - Electric windshield wiper motor (1959-60) located on left cowl side panel

FUSES: *NOTE* - All fuses located in fuse panel which is on right side of brake pedal support bracket
14 Ampere - Heater blower motor
15 Ampere - Cigar lighter (1959), Sulphur disc fuse (1960)
7.5 Ampere - Interior lights (1959 only)
7.5 Ampere - Directional Signals (1959 only)
14 Ampere - Directional Signals (1960 only)
7.5 Ampere - Radio (Signal Seeking), Spotlight & Power Lubricator
5.0 Ampere - Radio (Push Button)
1 Ampere - Clock

ENGINE

►*AIR CONDITIONING CAR SERVICE CAUTION Use extreme care when disconnecting any part of air conditioning equipment or lines for access to engine See 'Air Conditioning Service Cautions" in Miscellaneous Section*

►*OIL CONSUMPTION, EXHAUST SMOKING, SPARK PLUG FOULING CORRECTION* Caused by plugged cylinder head oil return drain holes To correct, remove rocker arm covers insert wire into hole to loosen obstruction Use solvent and compressed air to clean out passages Remove and clean sludge from oil pan and change oil filter

►*332" & 361" ENGINE NOISE CORRECTION Se "Engin Front Cov rs" in Eds l Sp cial Data*

ENGINE SPECIFICATIONS: Own V8, valve-in-head **292 Y-V8. 332, 352 & 361 V8** of same designs used previously

Compression & Vacuum Reading - *See TUNE-UP*

CYLINDER HEAD· *See 'Cylinder Head & Manifold" in Edsel Special Data*
TIGHTENING TORQUES: *See "Tightening Specifications' in Edsel Special Data*
ENGINE REMOVAL· *See 'Engine" in Edsel Special Data*

►*ROCKER ARM COVER GASKET REMOVAL NOTE* For easy removal of gasket which has neoprene coating, be sure engine is warm as gasket has a tendency to stick on a cold engine

►*ENGINE OVERHEATING CORRECTION* May be caused by radiator lower hose collapsing because of improperly installed contour spring Properly installed, contour spring must have large diameter end at radiator connection and must be 1½" from each end of hose

OIL PAN REMOVAL 292" - Drain crankcase and remove stabilizer bar Disconnect oil pump inlet tube at oil pump Remove oil pan retaining screw and remove pan
332, 352, 361 - Crank engine so piston No 1 or 5 is at TDC Remove dipstick, drain crankcase and remove stabilizer bar Remove engine front mount-to-frame bolts and raise engine approximately 2" Remove oil pan retaining screws and let pan rest on crossmember Remove bolts holding oil pump screen pick-up tube to pump and let screen and tube fall into pan Move pan forward and remove it

►*OIL PAN REMOVAL NOTE (332,352,361)* When oil pan is removed remove oil pump and inspect mounting gasket to insure that it has not been restricting oil flow and that it may not have been sealing properly If at fault replace with gasket No B8A-6659-A

►*OIL PAN LEAK CORRECTION (1959 292 Eng)* When oil leak occurs at the two rear oil pan retaining screws they should be replaced with 2 Studs No 88351-S8 (5/16"-18-24 x 7/8"), Lockwashers No 34806-S7 (5/16"and 2 Nuts No 33798-S8 (5/16" - 24 Hex) Use oil resistant type sealer on studs

PISTONS

Autothermic design, aluminum alloy with two compression and one oil ring
Removal - Pistons and rods removed from above
Clearance - **(292)** 0008- 0026" at bottom of skirt Wear limit 005"
(332,352,361) 0011- 0029" at bottom of skirt Wear limit 005"
Fitting New Pistons - To test minimum and maximum

Lower Bearing - Steel-backed, copper lead alloy lined type. Upper and lower halves interchangeable.

Clearance - (292) (1959) 0008-.0027", (1960) .0005-.0024" **(352)** .0007-.0028". **(332,361)** .0009-.0028".

Side Clearance - 006-.016" (All Engs.). Wear limit .019".

Replacement Bearings. Standard size (two sizes marked Red and Blue) and .002", .010", .020", .030"(All Engs.) plus .040" (332,352,361) Undersize.

►*NOTE:* Any combination of Red or Blue bearing inserts may be used to obtain desired clearance. If desired clearance cannot be obtained, it will be necessary to regrind crankshaft journals and install undersize bearing inserts.

Installing Rods: Install piston and rod assembly with notch in top of piston toward front of engine and bearing lock slots (292) or numbered side of rod (332,361) toward outside of engine.

CRANKSHAFT

Journal Diameter - (292) (Red) 2.4984-2.4988", (Blue) 2.4980-2.4984". **(332,352,361)** (Red) 2.7488-2.7492", (Blue) 2.7484-2.7488".

Out-of-Round Limit - 00025". **Taper Limit -** .0005".

Bearings - Copper lead alloy, steel backed.

Clearance - (292) .0006-.0032", **(332,352,361)** .0007-.0029".

End Thrust - Taken by No. 3 (center) main bearing.

Endplay - (1959) .002-.006". **(1960)** .004-.008".

Replacement Bearings: Standard size (2 sizes marked Red & Blue) and .002", .010", .020", .030",(All Engs.) plus .040" (332,352,361) Undersize.

►*NOTE:* Any combination of Red or Blue bearing inserts may be used to obtain desired clearance. If desired clearance cannot be obtained, it will be necessary to regrind journals and install undersize bearing inserts.

Crankshaft Rear Oil Seal Installation: *See "Crankshaft & Main Bearings" in Edsel Special Data.*

Crankshaft Front Seal Installation: *See "Engine Front Cover" in Edsel Special Data.*

CAMSHAFT

Journal Diameter - (292) 1.9255-1.9265", **(332, 352)** 2.1238-2.1248", **(361)** 2.123-2.124".

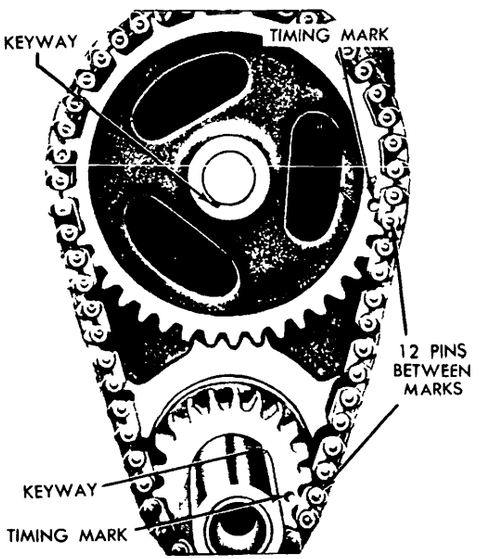
Bearings - Steel backed babbitt lined bushings.

Clearance - (All) .001-.003".

Endplay - (292) Controlled by thrust plate behind sprocket.

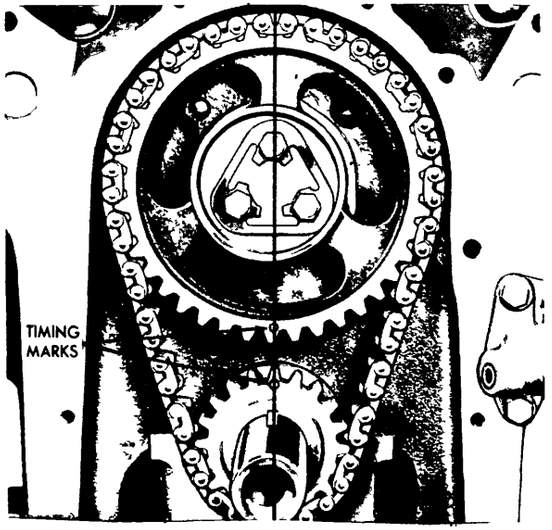
(332, 352, 361) Controlled by flange on camshaft front and thrust button and spring between eccentric bolt and front cover.

Replacement Bearings: Standard and .015" Undersize.



►*BEARING INSTALLATION CAUTION:* Align oil holes in bearing with oil holes in block. No. 1 bearing must be installed .005-.020" below front face of cylinder block.

Camshaft Removal & Installation: *See "Camshaft & Bearings" in Edsel Special Data.*



Timing Chain - Links, 56 **(292),** 48**(332,352,361).** Side guide type.

►*TIMING CHAIN REPLACEMENT NOTE:* Replace chain and/or sprockets when deflection on slack side exceeds

Valv	H ad Diameter	① Stem Diameter
Intake	2 022-2 037"	3711- 3718"
Exhaust	1 551-1 561"	3693- 3700"

Valv	Seat Angl	② Lift	Stem Cl aranc
Intake	30°	232"	③ 0010- 0024"
Exhaust	45°	232"	⑨ 0028- 0042"

① - Furnished with 003", 015" & 030" oversize stems
② - Cam lobe lift Wear loss limit 005"
③ - Wear limit 0045" ⑨ - Wear limit 0055- 0065"

►*VALVE REPLACEMENT NOTE* Some engines may have valves with 015" oversize stems To determine correct replacement valve, measure old valve stem approximately 1½" from stem end (all valves same diameter for 1" from stem end).

►***332" & 361" ENGINE INTAKE & EXHAUST VALVE REPLACEMENT CAUTION: See "Valve System" in Edsel Special Data.***

Valve Seat Width - (1959) 060- 080" Intake, 070- 090" Exhaust **(1960)** 070- 090" Intake & Exhaust

Valve Stem Oil Seals - Umbrella type seals used on all valves Install seals with cup side down over valve guide

►*ROTATABLE VALVE NOTE* All intake and exhaust valves are rotatable type
See "Valve System" in Edsel Special Data

Oversize Valve Stem Installation: *See "Valve System" in Edsel Special Data*

Valve Springs: Install with closed coil end toward cylinder head

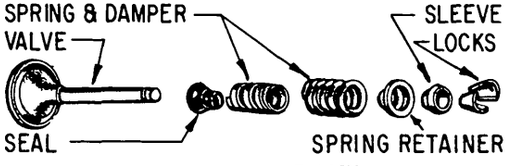
Free Length - (292) 2 09", **(332,361)** 2 03", **(352)** 2 26"

Valve Spring Specifications - 292"

Valve	Spring Pressure	Length
Closed	71-79 lbs. ①	1 780"
Open	161-177 lbs ②	1 390"

Valve Spring Specifications - 332, 352, 361 Engs

Valve	Spring Pressure	Length
Closed	94-104 lbs. ③	1.820"
Open	180-198 lbs. ⑨	1.420"



① - Wear limit 64 lbs at 1 780".
② - Wear limit 145 lbs at 1.390".
③ - Wear limit 85 lbs at 1 820".
⑨ - Wear limit 162 lbs at 1 420".

Out of Square Limit - 062" (All engines)

►*VALVE SPRING INSTALLATION NOTE* Measure valve spring height from machined surface of cylinder head spring pad to under side of spring retainer Assembled height should be **(292)** 1 780", **(332, 352, 361)** 1 820", Install 030"spacer between cylinder head valve spring pad and valve spring to bring assembled height to specification *CAUTION* - DO NOT install spacers unless necessary to bring measurement to specification

Valve Guides: Integral with cylinder head When stem-to-guide clearance exceeds maximum (see table above), ream guides and install oversize valves *See "Valve System" in Edsel Special Data*

Valve Lifters (Mechanical): (292) Mushroom type Remove from below after camshaft removed

EDSEL V8 VALVE ASSY.

Clearanc -- 0008- 0024" Wear limit 0045"

Valv Lift rs (Hydraulic): (332,361) Barrel type Can be removed from above without removing camshaft

Clearance - 0005- 0020"

►*HYDRAULIC LIFTER NOTE* Two different lifters used with different body length Later lifter has approximately 1/8" shorter body length Both lifters can be used interchangeably in one engine

Lifter Overhaul - *See "Valve System" in Edsel Special Data*

Hydraulic Lifter Operating Range - With lifter collapsed, operating range should be 078- 218"
See "Valve System" in Edsel Special Data

Rocker Arm Assembly: *See "Valve System" in Edsel Special Data*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above

►*VALVE TIMING NOTE* The following valve opening and closing points are with camlift as indicated

Valve Timing - 292" Eng.

Intake Valves - Open 12° ① BTDC. Close 54° ② ALDC.
Exhaust Valves - Open 58° ③ BLDC Close 8° ⑨ ATDC

Valve Timing - 332' Eng.

Intake Valves - Open 17° ⑤ BTDC Close 59° ⑥ ALDC
Exhaust Valves - Open 57° ⑤ BLDC Close 19° ⑥ ATDC.

Valve Timing - 352 & 361 Engs.

Intake Valves - Open 22° ⑤ BTDC. Close 68° ⑥ ALDC
Exhaust Valves - Open 68° ⑤ BLDC. Close 22° ⑥ ATDC.
① - Camlift 016" ② - Camlift 019" ③ - Camlift 015"
⑨ - Camlift 018" ⑤ - Camlift 002" ⑥ - Camlift .005"

Valve Timing Check: Install a quadrant on crankshaft damper. **On 292"** back off No. 1 intake valve adjusting screw and slide rocker arm to one side Install dial indicator **(332, 352, 361)** remove right rocker arm assembly Install Dial Indicator Tool 6565 and Indicator Adapter Tool 6565-AB on cylinder head using Holding Fixture Tool 4201-D On all engines pushrod must be in lifter socket and actuating point of indicator in same plane as pushrod movement Make sure timing pointer is not bent Turn engine slowly until lifter is on heel of camshaft lobe Set indicator on zero and turn engine slowly until indicator registers valve opening and cam lobe lift Compare crankshaft degrees indicated on quadrant with Valve Timing Table above Continue to rotate engine to check valve closing specifications in same manner If readings not correct, check for bent pointer, worn timing chain or sprocket before replacing camshaft

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Edsel Special Data*

Crankcase Capacity: 5 qts refill, add 1 qt with filter change

Normal Oil Pressure: 45-50 lbs (292), 35-50 lbs (332 352, 361), all at 2000 RPM

Pressure Regulator Valve - In oil pump body, not adjustable

Oil Pressur Indicat r - Indicator light on instrument panel operated by Oil Pressure Switch, Edsel No B6A-9278-B Lights when ignition switch turned on, goes out when engine starts and pump pressure reaches 7 lbs

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Oil Pump: Rotor type Located outside crankcase on left side (292), front inside crankcase (332,352,361) Driven by distributor through intermediate drive shaft
Pump Overhaul - *See "Oil Pump" in Edsel Special Data*
Oil Filter: Disposable type
Disposable Filter Replacement - Coat gasket face of filter with oil, thread filter on insert by hand until gasket contacts adapter surface, then tighten filter an additional one-half turn *CAUTION* - DO NOT overtighten Run engine and check for leaks
Crankcase Ventilation: Filter in oil filler and breather cap (Inlet) all models Road draft outlet pipe for crankcase ventilation, all models Service filler cap by cleaning with solvent and resaturating with engine oil at 4 000 mile intervals

►*AUTOMATIC TRANSMISSION DIPSTICK INTERCHANGEABILITY CAUTION* Mile-O-Matic dipstick has steel colored cap and is 19¼" long Dual-Power dipstick has copper colored cap and is 18 43/64" long DO NOT INTERCHANGE

COOLING

Water Capacity: 19 qts Add 1 qt for heater
Pressure Valve: Edsel No LA-8100-A 12-15 lb radiator filler cap
Thermostat: Edsel B7A-8575-A (157-162°F) Std B7A-8575-B (177-182°F) for use with permanent type anti-freeze
►*THERMOSTAT INSTALLATION NOTE* Install thermostat in water outlet manifold with area stamped "TOP" up and toward front of engine
Water Pump: Packless, sealed ball bearing type
See "Water Pumps" in Edsel Special Data.
Pump Removal - Drain cooling system, disconnect radiator lower hose and heater hose at water pump Remove fan belt, fan, fan spacer (292) and pulley On Power steering Cars, remove power steering pump, mounting bracket and hoses (secure against fender) Remove water pump retaining bolts and remove pump
Temperature Gauge: King-Seeley Electric Constant Voltage ("CV") type, with gauge voltage regulator Edsel No B7A-10804-A (1959) B9MF-10804-A (1960), or FEG-10804-B
Dash Unit - (1959) Edsel No PB9E-10883-A, **(1960)** Edsel No COKF-10883-A
Engine Unit - Edsel No B7A-10884-A
See "Temperature Gauges" in Miscellaneous Section

361 (1959-60 Canada)	288347	B8E-7550-A

See "Long CF" Clutches in Clutch Section

Pedal Adjustment: If total pedal travel is less than 6 5/8" or more than 6 7/8", reposition pedal bumper and bracket until travel is within limits
Pedal Free Travel - With engine stopped free travel should be 1 1/8-1 3/8" Adjust clutch release lever rod adjusting nut clockwise to increase, counterclockwise to decrease, free travel Start engine and accelerate to 3000 RPM Pedal free travel must be at least ½" to prevent pressure plate fingers contacting release bearing Adjust as necessary
Removal: Remove transmission (see SYNCHRO-MESH TRANSMISSION below) Remove flywheel housing cover and release lever retracting spring, slide release bearing and hub off release lever Mark cover and flywheel for reinstallation Loosen cover-to-flywheel bolts evenly and alternately and remove clutch assembly through bottom of flywheel housing Remove release lever and anti-rattle spring

SYNCHRO-MESH TRANSMISSION

Own. Helical gear, constant mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse)
See "Edsel Synchro-mesh" in Transmission Section
Transmission Controls: *See "Transmission Controls" in Transmission Section*
Removal: Disconnect propeller shaft at rear axle and slide off transmission output shaft Insert Tool 7657-D into extension oil seal to prevent lubricant leakage Disconnect speedometer and shift rods at transmission Disconnect engine rear support from transmission extension, raise and support engine and remove frame crossmember Remove two transmission-to-flywheel housing lower bolts and install Guide Pins, Tool 7975, in holes Remove top bolts Slide transmission to rear until input shaft clears flywheel housing and then remove from car

AUTOMATIC TRANSMISSION

Two types used **Mile-O-Matic.** New, simplified type with torque converter and two-speed automatic transmission **Dual-Power.** Dual range automatic transmission with welded torque converter and three-speed automatic transmission
See "Edsel Automatic Transmissions" in Transmission Section

►*DUAL POWER REAR PUMP NOISE CORRECTION* *See "Edsel Automatic Transmissions" in Transmission Section*

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION* *See "Edsel Automatic Transmissions" in Transmission Section*

►*TESTING & TROUBLE SHOOTING* *See "Edsel Automatic Transmissions" in Transmission Section*
Lubrication: Check fluid level every 2000 miles, drain and refill every 24,000 miles (Mile-O-Matic), 16,000 miles (Dual-Power) Use only Automatic Transmission Fluid Type "A", Suffix "A".
Checking Fluid Level - Bring transmission to operating temperature by running engine with selector lever in neutral position Move selector lever through all ranges to assure fluid distribution, then place lever in "P" Maintain level at "Full" mark on dipstick
Throttle Linkage Adjustment: *See CARBURETOR above*
►*OTHER DATA* *See "Edsel Automatic Transmissions" in Transmission Section*

UNIVERSALS

Mechanics. Needle Bearing type
►*CAUTION* Rear universal joint companion flange nut controls pinion bearing preload (must be adjusted whenever nut is loosened) *See "Edsel, Ford & Mercury" in Rear Axle Section*
►*REAR UNIVERSAL JOINT INSTALLATION CAUTION:* To eliminate possibility of early failure, the bearing retaining strap must be correctly positioned in cast recess in rear axle flange prior to tightening attaching "U" bolts

REAR AXLE

Own. Separate carrier type, semi-floating, hypoid, with Hotchkiss Drive "Equa-Lock" (Power Transfer) type differential Optional
See "Edsel, Ford & Mercury (Dp-Offset) Hypoid" or "Ford Equa-Lock Differential" in Rear Axle Section

	Axle Ratios	
Engine	Synchro-mesh Trans.	Auto. Trans.
292	3.56:1	3.10:1
332	3.56, 3.70:1	2.91, 3.10:1
352 & 361		2.69, 2.91:1

Ring & Pinion Teeth for each ratio - 2.69 (35-13), 2.91 (32-11), 3.10 (31-10), 3.56 (32-9), 3.70 (37-10)
Backlash - .004-.009"
Axle Shaft Removal: Remove wheel and brake drum Remove four axle bearing retaining locking type nuts (work through opening in axle shaft flange) Use puller No 4235N and pull axle shaft (do not disturb brake backing plate or damage wheel bearing oil seal) Replace one nut to secure brake backing plate
Carrier Assembly Removal: Remove axle shafts (see above) and drive shaft Remove self-locking nuts which secure carrier to housing and remove carrier from housing

SHOCK ABSORBERS

Direct acting, non-adjustable Serviced by replacement

Edsel Shock Absorber Nos. ①

Model	Front	Rear
Exc Sta Wgn (1959)	PB9E-18077-B	PB9E-18097-C
Sta Wgn (1959)	PB9E-18077-C	PBKK-18097-B
Exc Sta Wgn (1960)	COKK-18077-A	COKK-18097-A
Sta Wgn (1960)	COKK-18077-D	COKK-18097-D
Sta Wgn (H D 1959)		PB9E-18080-A
Sta Wgn (H D 1960)	COKK-18077-F	COKK-18097-E, G

① - Shock absorber and bushing (Std.), Shock absorber and washer (Heavy Duty)

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

FRONT SUSPENSION

Ind p nd nt. "Ball Joint" suspension with direct acting shock absorbers mounted within coil springs. *See "Eds l, Ford, Mercury" in Suspension & Wheel Alignment Section.*

Cast r - 0° to Pos. 1°. Maximum variation between wheels ½°.

Camb r - Pos. ½° to Pos. 1½°. Maximum variation between wheels ¼°.

T -In - 1/16-1/8". *NOTE* - When checking toe-in on cars with power steering, engine should be running so that power steering control valve will be properly centered.

Toe-Out n Turns - Outer wheel 20°, inner wheel 24¼°.

►*FRONT WHEEL BEARING ADJUSTMENT PROCEDURE & CAUTION:* Rotate drum back and forth and tighten nut until there is a noticeable drag, then back off spindle nut to line up ne arest slot with hole in spindle (about 1/6 to 1/4 turn), install cotter pin.

STEERING

►*SHIFT LEVER SHAKE AND RATTLE CORRECTION:* When alignment of shift tube in bushings does not correct noise, install Vibration Damper Spring No. B6A-77205-A between shift tube and steering column under steering column to dash panel grommet.

Manual: Own. Recirculating ball worm and nut. *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

P w r Ste ring: Linkage type. Used in conjunction with standard steering gear. *See "B ndix Linkage Type Power Steering" in Steering Section.*

►*POWER STEERING POOR RECOVERY FROM LEFT TURN CORRECTION: See "Bendix Linkage Type Power Steering Unit" in Steering Section.*

Steering Linkage: *See "Steering Linkage" in Steering S ction.*

Steering Wh l & H rn Button Removal: *See "Saginaw Ball B aring Worm & Nut" in Steering Section.*

Steering G ar R m val: *S "Saginaw Ball B aring Worm & Nut" in Steering Section.*

STEERING: Ste ring Gear Lubrication Procedure - Use following procedure when checking or filling steering gear with lubricant: Turn steering wheel to full left turn position, remove filler plug, remove **lower** sector cover attaching bolt from housing. Agitate fluid with a screwdriver to dissipate air bubbles, check fluid level which should be even with **lower sector cover bolt hole.** Add fluid as required (LA-19578-A) to bring level up to edge of bolt hole. Cycle steering gear by turning wheel to full right turn position and then back to full left turn position, recheck fluid level. Replace lower sector cover bolt and filler plug.

BRAKES

Bendix. Hydraulic, single anchor (with fixed anchor pin). Automatic adjustment on all models. Parking brake applies rear wheel brakes. *See "Bendix Automatic Adjuster Hydraulic Brakes" in Brake Section.*

Drum Diameter - 11" front and rear.

Wheel Cylinder Diameter - 1 1/8" front, 15/16"(Exc. Sta. Wgn.) 31/32" (Sta. Wgn.) rear.

Lining - Molded asbestos type, riveted to shoe.

Lining Width - (1959) 2.5" Front, 2" Rear. **(1960)** 3" Front, 2.5" Rear.

Lining Length - 9 5/16" Primary (Front and Rear). 12" Secondary (Front and Rear). **Thickness** - 7/32".

Braking Power - 55.5% front, 44.5% rear.

Clearance - (Manual Adjustment After Overhaul) - Turn adjusting screw upward (from backing plate side) until wheel is locked. Hold adjusting lever away from screw and back off screw until wheel turns free, then back off 1 more stroke (approximately 12 strokes total).

Brake Pedal Adjustment: Loosen locknut on eccentric bolt and rotate bolt to obtain 1/4-7/16" free travel. Hold bolt securely and tighten locknut to 22-28 ft. lbs.

Standard Master Cylinder: Located on engine side of firewall.

Checking Fluid – Maintain fluid level to within ½" of top of reservoir.

Removal - From passenger compartment side, remove eccentric bolt, bushings, and locknut that secure pushrod to brake pedal. From engine compartment side, remove hollow bolt attaching stop light switch and hydraulic fitting to master cylinder. Remove four attaching screws and remove master cylinder.

P w r Brak s: Piston type, combination vacuum booster and master cylinder unit located on engine side of firewall and connected to brake pedal by pushrod. *See "Bendix Power Unit Hydraulic (Disc) Reaction Type" in Brake Section.*

Checking Fluid Level - Same as for standard master cylinder.

Removal - 1) Remove master cylinder outlet fitting from master cylinder. If only booster assembly is to be removed, suspend master cylinder from hood inner panel. This eliminates necessity of disconnecting outlet fitting and consequently bleeding is not required during assembly.

2) Loosen clamp that secures manifold vacuum hose to power unit. Remove hose from unit.

3) Loosen clamp that secures vacuum reserve tank hose to fitting on unit. Remove hose from fitting.

4) Remove capscrew and locknut that secures pushrod to brake lever assembly.

5) Remove two master cylinder attaching nuts and lockwashers and lift off master cylinder.

6) Remove four capscrews and lockwashers that secure power brake assembly to bracket on dashpanel. Remove power brake assembly.

7) To install, reverse procedure.

MISC. MECHANICAL

Windshield Wipers: Electric & Vacuum types with Link & Arm type linkage. *See "Windshield Wipers" in Miscellaneous Section.*

Air Conditioning: *See "Air Conditioning" in Miscellaneous Section.*

Power Window Regulators: Electric type with reversible motor in each window. *See "Power Window Regulators" in Miscellaneous Section.*

Power Top Control: Electric-hydraulic type. *See "Power Top Controls" in Miscellaneous Section.*

Power Seat Adjusters: 4-Way electric type. *See "Power Seat Adjusters" in Miscellaneous Section.*

TIGHTENING SPECIFICATIONS

Water Manifold (1959-60)	25-30

Ⓒ - No lockwasher used on later cars.

ENGINE MOUNTINGS

1954-56 MODELS

ENGINE MOUNTINGS: The engine and transmission assembly must rest in a normal position which does not impose any side strain on the three rubber mountings. To adjust, tighten engine front mounting pad stud nuts under supports on frame and tighten mounting bracket-to-crankcase bolts. Loosen upper mounting pad-to-bracket bolts. Disconnect torque tube from torque ball, then tighten transmission support-to-frame X member attaching bolts. Tighten transmission mounting pad-to-transmission support and to transmission rear bearing retainer. Tighten thrust pad-to-thrust plate stud nuts (rear) and loosen thrust pad-to-transmission support stud nuts (front). Remove shims located between thrust pad and transmission support. Shake engine sideways to let assembly rest freely and normally on all mounting pads, then install sufficient shims between thrust pad and transmission support to snugly fill the existing space. Tighten thrust pad front stud nuts and connect torque tube to torque ball. Tighten front mounting pad-to-bracket bolts.

1957-60 MODELS

ENGINE MOUNTINGS: Adjustment - (Twin Turbine or Synchr -m sh Transmission Cars). 1) Disconnect exhaust pipes at manifolds. Loosen thre thrust bracket-to-thrust pad nuts and tw mounting pad-to-support nuts. Loosen four engine front mount-to-frame crossmember bolts.

2) Make sure that transmission support-to-frame shims are in original position and that support is in original position fore and aft. Make sure that support-to-frame bolts and thrust bracket-to-rear bearing retainer bolts are tight.

3) Check relationship of thrust bracket and thrust pad. If gap exists between bracket and pad, engine and transmission fore and aft location is not correct and must be adjusted. When no gap exists, fore and aft position of engine and transmission is correct.

4) When gap exists, tighten three thrust pad-to-support nuts to impose a forward thrust on engine. Raise engine slightly and pry forward to allow front mounts to normalize. Then tighten two mounting pad-to-support nuts.

5) Check both front engine mounts for gap between mount and frame. When gap exists with bolts loose, the space must be filled with shims. Tighten engine mount-to-frame bolts. Reassemble exhaust system.

(Triple Turbine). 1) Disconnect exhaust pipes from manifolds. Loosen two outboard mount bolts on each side (Mount-to-support weld nuts). Loosen mount stud nuts inside support on each side. Loosen four engine front mount-to-frame crossmember bolts.

2) Make sure transmission support-to-frame shims are in original position and that support is in original position fore and aft. Make sure support-to-frame bolts are tight and that mount-to-transmission bolts and nuts are tight.

3) Check relationship of thrust surfaces of mounts and transmission support. When a gap exists, fore and aft position of engine and transmission is not correct, and must be adjusted. If gap exists, tighten the two mount-to-support weld nut bolts on each side to impose a forward thrust on engine. Raise engine slightly and pry forward to allow front engine mounts to normalize. Tighten mount stud nuts inside the support on each side.

4) Check front engine mounts for gap between mount and frame. Install shims equal to gap, then tighten mount-to-frame bolts. Reinstall exhaust system.

TORQUE BALL ADJUSTMENT

1954-55 MODELS

TORQUE BALL: Operates between inner and outer retainer bolted to transmission rear bearing retainer. Universal joint seal is provided at front of torque tube. Shims provided between front flanged ends of inner and outer retainers for adjustment.

►*CAUTION: Correct adjustment of the torque ball is extremely important to insure correct operation. Ball is adjusted during reassembly as directed below.*

Disassembly: With rear axle assembly disconnected and moved back out of way, mark edge of torque ball outer retainer to insure reinstallation in original position, then remove torque ball boot, torque ball, retainers, and gaskets from rear bearing retainer. Clean and inspect spherical surface of torque ball and inner and outer retainers, inspect seal and gasket at forward end of torque tube, replace all worn and damaged parts. **Reassembly & Adjustm nt** - Proceed as follows:

►*1954-55 OIL SEAL NOTE:* Propeller shaft oil seal used on these models not interchangeable with previous models. The later seal fits tight in torque tube front flange with lip edge toward front of car, and rides on sleeve pressed shaft stub. This seal eliminates former universal joint oil seal and propeller shaft spline seal.

1)—Install guide pins in upper bolt holes in transmission rear bearing retainer.

►**NOTE—Guide Pins are headless pins ⅜" x 1⅜" having ⅜"-16 threads ½" long and screwdriver slot cut in unthreaded end.**

2)—Install one shim (with 3 notches in outer edge) and inner ball retainer (with oil drain hole and notch in edge down) on guide pins.

3)—Oil bearing surfaces of retainers and torque ball with transmission lubricant.

4)—Install torque ball (with "TOP" mark up), and outer retainer (align marks made before disassembly).

5)—Use Installing Tool J-2597 (Except 1953 and later models with seal in propeller shaft housing—See 1954–55 Oil Seal Note above), and push tool (sleeve and plug) through rear side of torque ball until feather edge of seal is on plug (sleeve will drop off plug). Assemble torque ball and outer retainer (with TOP marks up) on guide pins, fill space between flanges of inner and outer retainers with shims (see Torque Ball Shims below). See that oil seal has seated on universal joint.

Torque Ball Shims—Five thicknesses (marked by notches on outer edge) as follows:

4 Notches .....002-.004"	3 Notches .....004-.006"
2 Notches .....009-.011"	1 Notch .....011-.013"
Unmarked.....013-.015"	

6)—Install thrust plate and bolts in retainers (remove guide pins and install short bolts at these holes). DO NOT TIGHTEN BOLTS.

►*ADJUSTING TOOL NOTE:* A "Hardwood Club" should be used to move universal joint during tightening and to measure the tightness of the torque ball for correct adjustment. Make this club to the following dimensions:

1954-55 **Models**—Diameter 1¼". Length 18½". Turn 2⅝" of one end of club down to 1" diameter then measure 14⅜" from offset and cut a 3/16" groove around large diameter of club.

7)—Tighten retainer bolts evenly while continually moving torque ball by means of hardwood club inserted in end of universal joint. Use a soft mallet and tap outer retainer if ball binds while tightening bolts. *CAUTION—For proper centering of ball and retainers, torque ball must be moved while tightening retainer bolts.*

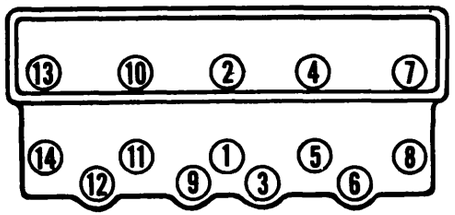
8)—Attach spring scale to club at groove located 14⅜" from end of universal joint and test pull required to move torque ball when all bolts are tight. A drag of 15 to 25 lbs with scale in groove 14⅜" from universal joint. If torque ball tension not within these limits, repeat centering operation and recheck tension. Adjust by adding or removing shims (see Torque Ball Shims above).

9)—Install torque ball boot by turning large end over small end, engage small end in groove on flange of torque ball then turn large end to front to engage rear end of outer retainer.

C NTINUED ON NEXT PA E

CONTINUED FROM PRECEDING PAGE

10)—Reinstall shims between thrust plate and thrust pad and tighten thrust plate stud nuts.



11)—Reinstall rear axle assembly.

CYLINDER HEAD & MANIFOLD

1954-60 MODELS

►*1958-60 ROCKER ARM COVER INSTALLATION CAUTION:* Install cover toward center of engine against flange to eliminate possibility of rocker arm-to-cover interference.

CYLINDER HEAD & GASKET: When handling the thin crimped steel gasket, use care not to damage lacquered surface coat or kink sealing rings stamped in gasket. *(CAUTION* - Do not coat lacquered surface of gasket with any sealing material and DO NOT RE-USE THE OLD GASKET as stamped sealing rings are flattened in a used gasket). Right and left cylinder heads are identical except that the water inlet port is open at front end and is plugged at rear end as installed on engine. After installation of cylinder head, tighten bolts to correct specifications in same sequence. After engine warmed up to correct operating temperature, recheck bolts for correct torque.

BUICK V8 CYLINDER HEAD

►*1956-60 CYLINDER HEAD REMOVAL NOTE:* All cylinder head bolts and pushrods cannot be removed with head in place. When removing head, pull pushrods part way out and tape in place. These same pushrods must be in head before head installation.

1954-55 MODELS

MANIFOLD GASKETS: Gaskets are used on the intake manifold (to head) only. When installing a new exhaust manifold, coat the manifold with a mixture of graphite and oil. In production a special compound is used for this purpose and the original manifold can be re-installed without using additional compound.

►***CAUTION—Do not remove the exhaust manifold while it is hot because warpage is liable to occur.***

1958 V8 MODELS

►*INTAKE MANIFOLD INSTALLATION CAUTION:* Engines with Nos. 551888 to 561999 and starting with 569701 continuously do not use flat washers between intake manifold and cylinder head as intake manifolds on these cars are cast flat at bolt hole position.

PISTONS

1954-55 MODELS

►*REPLACEMENT PISTON CAUTION (1954, 1955):* Use of 1955 type Press-fit Piston Pin does not change piston specifications for these models. Pistons are interchangeable (within year model limitations) and the only precautions necessary are that the piston fit in the cylinder, and the piston pin fit in the piston, are correct as specified on the Buick car model pages.

PISTON PINS

1954-60 MODELS

►*REPLACEMENT PISTON PIN CAUTION (1954,55):* Press-fit Piston Pins (used in production on later 1955 cars) are furnished in Standard Size only as listed below and can be identified by absence of clamp bolt groove. These pins must be used only with Press-fit Connecting Rod Part No. 1162054. Standard Size Clamp-bolt Piston Pins can be used with both type connecting rods but should be checked for size (Diameter .9397-.9394") before any attempt is made to use them with the press-fit connecting rod. Oversize piston pins (.003" & .005" Oversize furnished in Clamp-bolt Type only with groove) can be used only with the clamp-bolt type rod. *BOTH types of pins will be furnished for service.*

Model	Press-fit Piston Pins	Part No.
Series 40 (Std. size only)		1166391
Series 50, 60, 70 (Std. Size only)		1162051

►*1954-56 PISTON PIN NOTE:* Install Piston Support Sleeve J-6047-5 in Fixture Base Plate J-6047-1 with plain flat end upward (late 1955-56 pistons), opposite end with two machined flats upward (1954 and early 1955 pistons).

►*1957-60 PISTON PIN NOTE:* Install Piston Support J-6047-17 in press with radial side up. Guide Pin Tools J-6047-16 & 18 are not used for pin removal.

Pin Removal: Place piston on Support and press pin out using Drive Pin J-6047-4.

Pin Installation: Place support in base plate of press with full radial face upward, using Guide Pin J-6047-16 (364" Eng.), J-6047-18 (401" Eng.). Place rod in piston, with spurt notch on same side as valve depressions in piston dome. Lubriplate pin and enter in boss, forcing rod against opposite boss. Place small end of Drive Pin J-6047-4 in top end of pin and place assembly in press. With all parts aligned correctly, force pin through rod and piston bosses until guide pin stops downward travel. Rotate piston on pin to check pin fit in piston.

CONNECTING ROD & BEARINGS

1954-55 MODELS

►*REPLACEMENT CONNECTING ROD CAUTION (1954 & EARLY 1955 MODELS):* Press-fit connecting rod No. 1162054 (with press-fit type piston pin) used in late 1955 and serviced for 1954 and early 1955 type replacement. When used for replacement of earlier type, a standard size piston pin must be used and special removal and installation procedure as given above must be followed.

CRANKSHAFT & MAIN BEARINGS

1954-57 MODELS

CRANKSHAFT REAR OIL SEAL: Braided fabric seal fitted in groove behind slinger groove in crankcase and bearing cap. Vertical joint between cap and crankcase fitted with cork seals at each side.

Installation—With crankshaft removed, place new braided fabric seal in groove in crankcase with both ends extending out from bearing parting line, force seal in groove with hammer handle or smooth piece of wood so that seal seats within 1/16" of crankcase. Cut ends of seal off flush with crankcase (use razor blade or sharp knife). Repeat operation for bearing cap. Coat vertical grooves in cap with gasket cement (allow to set until tacky), use new cork gasket and fit into groove with putty knife (ends will project beyond cap). Place cap in vise to lightly compress seals in grooves, cut ends of cork seals flush with cap surface. Coat cork gaskets with vaseline, install cap in crankcase.

►***CAUTION—Engine must be operated at slow speed when first started after new braided seal installed.***

1958-60 MODELS

►*REAR MAIN BEARING OIL SEAL PRODUCTION CHANGE AND CAUTION:* Larger crankshaft oil seal journal diameter and larger diameter seal used on later cars. Engines with slotted drain hole in rear main bearing cap have the larger seal and the seal diameter in crankshaft is 2.625". Groove in block increased to accomodate larger seal. Small groove block with large seal journal diameter is satisfactory, but DO NOT USE a larger groove block with a small diameter crankshaft seal journal as an oil leak will develop.

CRANKSHAFT REAR OIL SEAL: Braided fabric seal fitted in groove behind slinger groove in crankcase and bearing cap. Vertical joint between cap and crankcase fitted with cork seals (1959), Neoprene seals (1960) at each side.

Installation - Place new braided fabric seal in groove in crankcase with both ends extending out from bearing parting line. Force seal in groove with hammer handle or smooth piece of wood so that seal seats within 1/16" of crankcase. Cut ends of seal flush with crankcase. Repeat operation for bearing cap. On 1959 Models coat vertical grooves in cap with gasket cement (allow to set until tacky), use new cork gasket and fit into groove with putty knife (ends will project beyond cap). Place cap in vise to lightly compress seals in grooves and cut ends of cork seals flush with cap surface. Coat cork gaskets with vaseline, install in crankcase. On 1960 Models, Neoprene seals are slightly undersize (but swell when oil soaked) and slightly longer than grooves in cap. Lightly lubricate the neoprene seals and install in cap with upper end protruding approximately 1/16". After cap installed force seals up into cap with blunt instrument to be sure of a seal at the parting line between cap and case.

1957 MODELS

VIBRATION DAMPENER: Reinstallation - Check depth of threaded holes in hub (7/8" bolt requires a depth of 56", a 1" bolt a depth of 72") Check that holes do not contain chips or foreign material and that bolts do not bottom in holes Tighten bolts to specifications

Standard Cars - Use flat washer and spring washer under head of bolt with flat washer against dampener pulley

Air Cond. Cars - Use two 060" or one .090" reinforcing plate with 1" bolt and lockwasher.

ENGINE FRONT COVER

1954-60 MODELS

TIMING CHAIN COVER: Removal - Drain cooling system, remove radiator core, shroud, fan belt, fan and pulley, vibration dampener. Remove all bolts attaching tim-

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

ing chain cover and water pump manifold to upper and lower crankcase and cylinder heads. *NOTE* - DO NOT REMOVE water pump from chain cover. Remove cover and manifold carefully, making sure not to damage lower crankcase gasket.

1954-60 MODELS

FRONT OIL SEAL: Installation—After removing braided fabric packing with a screw driver and tapping pressed steel shedder out of timing chain cover, work the new packing into the shedder, then drive shedder into recess in timing chain cover using Installer Tool J-5250-1. Push the Packing Expander Tool J-5250-2 through the seal to expand packing into place. Apply a light coat of vaseline to packing.

►*CAUTION: Engine must be operated at slow speed when first started after new braided seal installed.*

FLYWHEEL

ALL MODELS

FLYWHEEL REPLACEMENT: Flywheel or Ring Gear can be replaced separately on Synchro-mesh Cars (gear is shrink fit on flywheel), but must be replaced as an assembly on Dynaflow Drive Cars (gear is welded in place and not furnished separately).

►*FLYWHEEL REPLACEMENT NOTE:* **364" Auto. Trans. and 401" engine flywheels not interchangeable. 401" flywheel identified by four scallops cut in edge of flywheel between 1 O'clock and 9 O'clock leg, while 364" Auto. Trans. flywheel has all sides straight.**

Ring Gear Replacement (Synchro-mesh Cars): Remove old ring gear by drilling 5/16" hole in gear between two teeth, split the gear at this point with a chisel and remove the old gear. Polish several spots on new ring gear with emery cloth, heat gear uniformly on a hot plate or with a torch until polished spots turn blue which will indicate a temperature of approximately 600°F. *(CAUTION*—Heating gear in excess of 800°F. will destroy factory heat treatment). Install ring gear on flywheel with beveled end of teeth out or away from shoulder, allow gear to cool.

Installation of Flywheel (All Models): Make certain that flywheel and crankshaft flange are clean and free from burrs which might cause run-out (remove burrs with a mill file). Install flywheel and tighten all bolts evenly to 50-55 ft.lbs. torque. On Dynaflow Drive Cars, check flywheel run-out (see below). On all cars, check engine for vibration after transmission installed and correct any unbalance caused by replacement of parts. *See ENGINE BALANCING.*

Flywheel Run-out (Dynaflow Drive Cars): Mount dial indicator on flywheel housing so that indicating stem bears on rear ground face of flywheel at inner side of large holes in rim. Turn flywheel making certain that crankshaft end thrust held in one direction and note run-out at flywheel face. Run-out must not exceed .015". If run-out exceeds .015" and cannot be corrected by tapping high side of flywheel with a mallet, remove flywheel and check for dirt or burrs between flywheel and face of crankshaft flange. If run-out still exceeds .015" after re-installation of flywheel, check run-out of crankshaft flange rear face.

ENGINE BALANCING

1954-60 MODELS

►*IF VIBRATION NOTED AFTER INSTALLATION OF CRANKSHAFT, FLYWHEEL, AND OTHER ROTATING PARTS, CORRECT THIS UNBALANCED CONDITION AS FOLLOWS:*

►*CAUTION:* Procedure below will correct minor unbalance caused by replacement of individually balanced parts. Extreme vibration caused by parts abnormally out of balance, or different in weight from corresponding parts, should be corrected by replacement of these parts.

Critical Speed of Vibration—Determine speed at which vibration is most evident (use tachometer) and operate engine at this speed to check results from the following corrective procedures.

SYNCHRO-MESH ENGINE UNBALANCE CORRECTION:

1)—If clutch assembly has been removed and re-installed, make certain all clutch cover bolts are same type and length and that lockwasher used with each bolt. See that alignment marks on clutch cover and flywheel (made before clutch removal) are together. If vibration not caused by clutch, mark clutch cover and flywheel and remove clutch assembly.

2)—Operate engine with clutch removed and check for vibration. If vibration eliminated (indicating unbalance is in clutch), re-install clutch and balance the assembly as directed in step (3) following. If vibration still present, balance the flywheel as follows: Install one clutch cover bolt in successive flywheel bolt holes and operate engine with bolt in each location until a position is found in which vibration is eliminated (this test weight can be varied by using a shorter bolt or by adding washers to the bolt). When engine runs smoothly, remove bolt and drill shallow holes on DIAMETRICALLY OPPOSITE side of flywheel *(CAUTION*—use 3/8" drill and DO NOT drill any hole more than 1/4" deep). When engine runs smoothly, re-install clutch as follows:

3)—Install clutch assembly *(CAUTION*—align marks made before removal), operate engine and check for vibration. If vibration noted, balance clutch by installing plain washer successively under each mounting bolt lockwasher until engine runs smoothly. *NOTE*—If necessary, plain washers can be installed on two adjacent bolts to obtain sufficient weight for clutch balance.

DYNAFLOW DRIVE ENGINE UNBALANCE CORRECTION: *See Buick "Variable Pitch Dynaflow Drive" in Transmission Section.*

VALVE SYSTEM

1956 MODELS

OIL FLOW REDUCTION TO VALVE MECHANISM: Install plug, Part No. 1343643 (with .077" orifice) in both cylinder heads as follows: Remove rocker arm and shaft assembly from each cylinder head. Install plug, Part No. 1343643 in oil feed hole located within counterbore of front rocker arm mounting bracket bolt hole (this oil passage angles downward toward bottom of head, between front center head bolt and front valve). Drive plug into place with a 3/16" diameter punch or rod so that open end of plug is flush with edge of oil hole.

1954-60 MODELS

►*1954 ROCKER ARM SHAFT PRODUCTION CHANGE FOR IMPROVED VALVE STEM LUBRICATION:* Rocker arm shaft diameter reduced .001" (First Type Diameter .810-.811", Later Type Diameter .809-.810"). Later type shaft was used in production on later cars and is furnished for replacement on ALL engines.

ROCKER ARM ASSEMBLY: One assembly mounted on each cylinder head (see illustration).

Disassembly: Remove cotter pin, flat washer, and spring washer from each end of shaft. Pull mounting bolts out of support brackets, slide shaft out of rocker arms and brackets.

Reassembly: See illustration for location of parts. Install longer spring at center of shaft and install rocker arms with offset (slant) toward center of shaft (two types of rocker arms used—see table below for proper location of each type). Turn shaft so that notch in one end of shaft is upward or toward top of bracket and install bolt through bracket and shaft to maintain this position *(CAUTION*—Notch must be upward to place rocker shaft oil holes in proper relationship to rocker arms).

1954-57 R ck r Arms

Part No.	Location
1343454	4 Right Front & 4 Left Rear
1343455	4 Left Front & 4 Right Rear

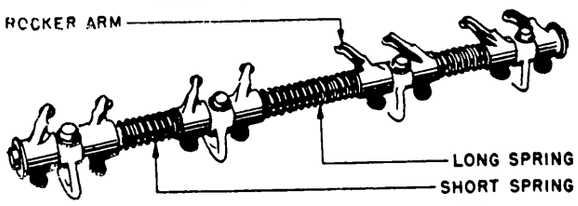
1958 R ck r Arms

Part No.	L cati n
1169374	4 Right Front & 4 Left Rear
1169375	4 Left Front & 4 Right Rear

1959-60 R cker Arms

Part No.	Locati n
1173808	4 Right Front & 4 Left Rear
1173809	4 Left Front & 4 Right Rear

Installation: Make certain that notch in one end of rocker arm shaft is upward, position assembly on head with dowels engaging blind holes in brackets, tighten all bracket bolts evenly to 30-35 ft.lbs.



HYDRAULIC LIFTERS

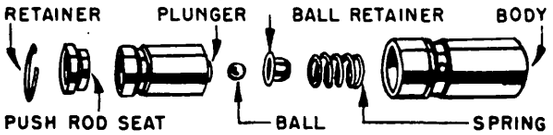
1954-60 MODELS

HYDRAULIC VALVE LIFTERS: Barrel type, consisting of plunger and valve assembly operating within a cylinder formed by valve lifter body. Oil is introduced to this unit through lifter oil gallery in block.

Removal: Remove the air cleaner, then disconnect all pipes and wires from carburetor and intake manifold, remove carburetor and manifold as an assembly. Thoroughly clean cylinder heads, rocker arm covers, and adjacent areas to prevent dirt entering engine. Remove rocker arm covers and

CONTINUED ON NEXT PAGE

BUICK V8 ROCKER ARM ASSEMBLY
(ONE ASSEMBLY FOR EACH BANK)



CONTINUED FROM PRECEDING PAGE

rocker arm assemblies, remove pushrods. Remove valve lifter cover, lift out individual valve lifters ***and place them in numbered compartments of a holding fixture to insure re-installation in original position in engine.***

Disassembly: Use a push rod to hold down the push rod seat in lifter while removing plunger retainer from body with Retainer Remover J-5238. Remove push rod seat and plunger from lifter body. Body bore above plunger may be caked with carbon and varnish. In this case, place lifter in large end of Plunger Remover Tool J-4160-A, with plunger inward. While holding lifter with thumb, rap open end of remover against a block of wood with just enough force to jar plunger from body.

►***IMPORTANT NOTE***—Disassemble one lifter at a time to avoid interchanging parts. Be careful not to score or nick lifter parts.

Cleaning and Inspection: Wash all parts in a suitable carbon solvent and remove all trace of carbon and varnish. Inspect plunger and lifter body for scoring or other damage that would prevent free movement. Inspect lower end of lifter body for nicks or identations. If any exist, replace complete lifter assembly. Dry lifter parts with air, then install plunger in lifter body without other parts and check for free movement. Plunger should drop of own weight into body bore.

BUICK HYDRAULIC VALVE LIFTER

Reassembly: Test check ball travel before reassembling lifter (see Testing below). It is recommended that all parts be rinsed in clean kerosene and then assembled without drying (this will eliminate all lint and dust adhering to parts). Hold plunger in vertical position with feed hole up, install check ball, ball retainer, spring, and body over the plunger. Invert assembly and install push rod seat and plunger retainer in end of body, use handle of tool J-5238 to depress these parts until retainer engages groove in body. Test lifter for "leak down rate" (see Testing below). Protect lifter assembly by wrapping in clean paper until it is installed in the engine.

Testing: (Check Ball Travel)—Install Sleeve KMO-30-K on Test Fixture J-5095, to mount dial indicator so that stem of indicator bears squarely on upper end of pin in attachment. Place a new ball check in seat in lifter plunger, then hold plunger and ball firmly against attachment arm with plunger centered over pin and stepped flange. While holding ball and plunger firmly in place, set dial indicator to "0." Remove plunger and ball, place ball in retainer, and install these parts on plunger. Center plunger over pin and stepped flange of check attachment and while pressing plunger and retainer firmly against attachment arm, note dial indicator reading. Ball travel must be .004-.008" to insure satisfactory lifter operation.

►***CHECK BALL TRAVEL NOTE:*** **Current type of ball retainers eliminate need for check ball travel check unless retainer is badly worn or damaged.**

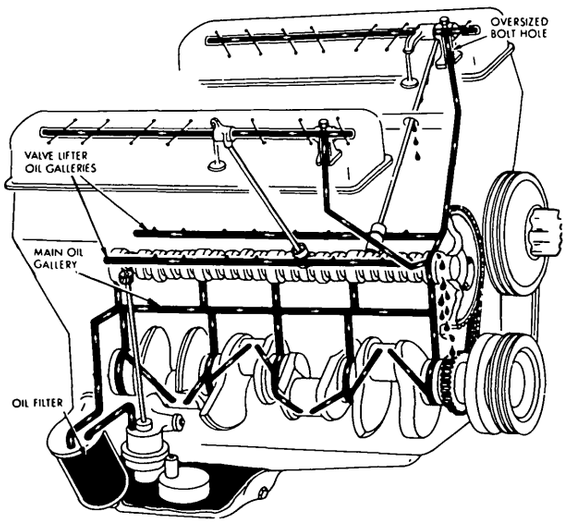
Leakdown Rate - 1) Clean cup of Test Fixture J-5095 and fill it to ½" of top with "Hydraulic Lifter Test Fluid" (Kent-Moore No. J 5268).

2) Remove rubber washer (used for larger lifters) and install Gauge Sleeve J 5180-5 in cup and install Buick V8 Gauge Rod Nose J-5181-15 in ram.

3) Swing arm out of way, raise ram and place lifter (top side up) in Sleeve J-5180-5. *NOTE* - Lifter must be completely covered by fluid during test.

4) Lower ram to rest in lifter pushrod seat, then lower weight arm to rest on roller of ram.

5) Operate lifter plunger, through full travel to force all air out of lifter, until considerable resistance is built up in lifter and a definite grab point is felt at top of stroke when indicator pointer is at bottom of scale.



6) Finally operate lifter plunger approximately 10 additional strokes to be sure all air is out of lifter. *NOTE* - When one stroke (of last ten) has noticeable weak resistance, replace check ball and repeat above procedure.

7) Remove weight arm to allow lifter plunger to come up to its retainer, then lower arm to rest on ram roller. As pointer starts moving upward, start rotating fluid cup by turning handle one revolution every two seconds.

8) Use stop watch to check time required for pointer to move from lower to upper mark on scale (Marked Buick V8).

9) Leakdown rate (time between marks) must be between 12 and 40 seconds for satisfactory lifter operation.

►***LIFTER REPLACEMENT CAUTION:*** A doubtful lifter should be checked 3-4 times before deciding to replace it.

BUICK ENGINE OILING SYSTEM

OILING SYSTEM

ENGINE LUBRICATION

ENGINE LUBRICATION: Force feed type with oil supplied under full pressure to crankshaft, connecting rods, and camshaft bearings, and under controlled volume to valve lifters, rocker arm bearings and pushrods. All other moving parts are lubricated by gravity flow or splash. *See "Engine Oil Flow" diagram.*

OPERATION: Gear type oil pump at lower side of crankcase (at rear end) draws oil from crankcase sump through screen (or over top of screen if clogged) and delivers it through oil passages in pump body and crankcase to full flow filter. By-pass ball type valve in filter base opens to by-pass filter element when clogged or when difference in oil pressure between inlet and outlet ports is 4½-5½ lbs. Oil from filter passes into main oil gallery (full length of crankcase below camshaft) and through drilled passages in crankcase at full pressure to all crankshaft and camshaft bearings, where it is distributed to all moving parts of engine.

Crankshaft, Connecting Rods & Pistons - Holes drilled in crankshaft carry oil from main bearings to connecting rod bearings. Pistons and cylinder walls are lubricated by oil forced through squirt hole in parting surface of connecting rod that registers with hole in crankshaft at each revolution of crankshaft. Pistons are lubricated by splash.

Camshaft, Sprockets, Lifters - Oil from front camshaft bearing, flows down front face of crankcase to drop on sprocket that transfers it to chain. Oil holes in crankcase and camshaft front bearing align with groove in camshaft bearing journal which meters flow of oil from main gallery to valve lifter oil galleries in each bank of cylinders. The full length of cylinder bank oil gallery cuts into lower sides of all valve lifter guide holes to supply low pressure oil to each lifter.

Rocker Arms, Valves & Pushrods - These items receive low pressure oil from valve lifter gallery through connecting passages drilled in front end of cylinder block and head. Oil passage in cylinder head ends in a counterbored recess surrounding front rocker arm shaft bracket bolt. Oversize bolt hole in bracket permits oil to flow into hollow rocker arm shaft (plugged at each end). Holes in rocker arm shaft allow oil to flow to each rocker arm. Oil is metered to pushrod ball seat and to valve stem through drilled holes in rocker arm. Excess oil drains off and returns to oil pan through pushrod opening in cylinder head and block.

OIL PUMP

1954-56 MODELS

OIL PUMP: Gear Type. Driven by distributor shaft which is driven from camshaft through spiral gears.

Disassembly: Carefully pry screen out of housing, remove attaching screws and remove parts in following order: Pump Inlet, Gasket, Screen Housing, Gasket. Body Cover, Shaft & Gear, and Idler Gear. Remove plug on side of body and take out pressure regulator spring and valve.

Cleaning & Inspection: Wash screen and all pump parts in solvent and dry with air. See that oil pressure valve operates freely in body and that hole is not oversize, check spring for wear, distortion or collapsed coils. Inspect pump body, gears, and shaft for wear or scoring. Check gear end clearance by installing gears in body and placing straightedge

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

across cover flange. Clearance between straightedge and face of gears must be less than .004" and gears must turn freely. For other clearances, see table:

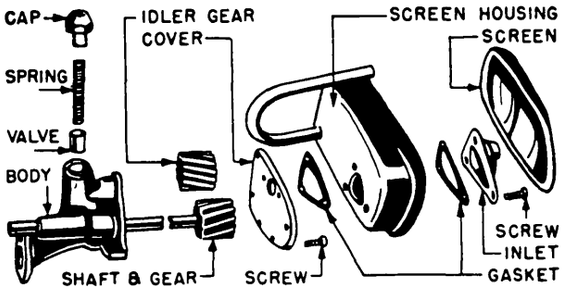
Oil Pump Clearances

Drive Shaft Bearing Clearance	.001-.0025"
Idler Gear Bearing Clearance	.001-.0025"
Driving Gear Backlash	.003-.006"
Pump Gears Backlash	.006-.012"
Pump Gear End Clearance in Body	.0005-.004"
Regulator Valve Clearance in Body	.003-.006"

Reassembly: Reverse disassembly procedure above.

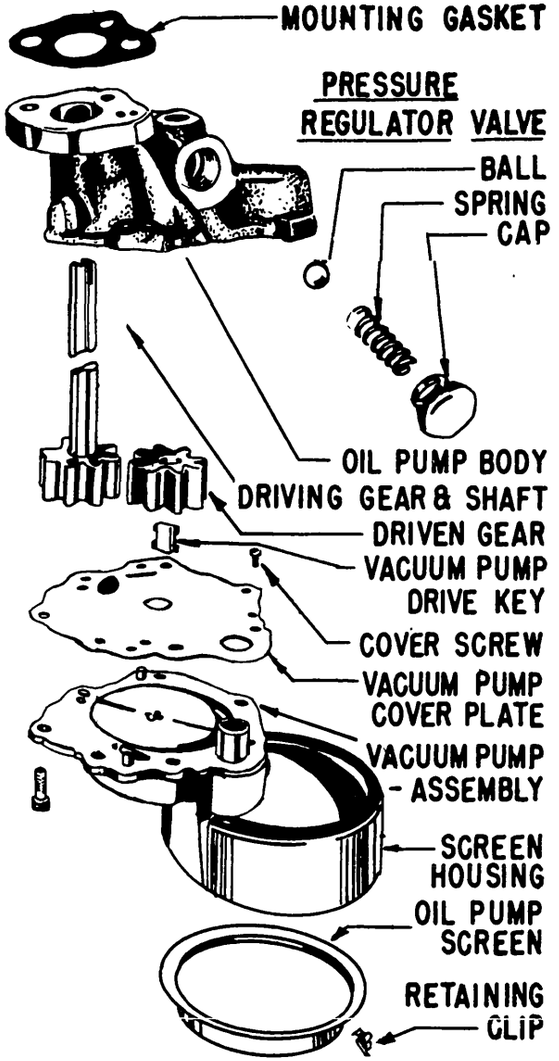
Installation: Install oil pump with gasket on crankcase, turning pump shaft as required to engage driving tongue on distributor shaft. Install pump attaching bolts with lockwashers, then tighten bolts alternately a little at a time with one hand while turning pump shaft back and forth through gear lash with other hand. Pump shaft must be free of bind when bolts are securely tightened. If shaft binds, rap pump body lightly with a rawhide mallet.

1957-60 MODELS



OIL PUMP: 1957-58 models have combination gear type oil pump and a vane type vacuum pump. Vacuum pump is driven by key between oil pump driven gear and vacuum pump rotor. Oil pump shaft is coupled to ignition distributor shaft which is driven by camshaft. 1959-60 models have same type oil pump with a cover in place of the vacuum pump and no drive key in idler gear.

Disassembly: On 1957-58 models, remove vacuum pump assembly with end cover (see vacuum pump following). On 1959-60 models, remove cover from pump body. On all models, remove oil pump shaft and gear and idler gear from pump body. Remove regulator cap spring and ball.



Cleaning & Inspection: Clean all parts in solvent and blow dry with air Check ball must be free in pump body and fit hole its entire length Spring should not be collapsed worn on side or broken. Replace gears, body cover or shaft if worn or scored

Reassembly: Install gear and shaft assembly in pump body. On 1957-58 models, install idler gear with vacuum pump driving grooves toward pump cover. On 1959-60 models, install idler assembly in pump with chamfered end of idler gear teeth inward away from cover.

Gear Clearance - .005". Distance between gears and straightedge placed across pump body.

TYPICAL 1954-56 BUICK OIL PUMP

TYPICAL 1957-60 OIL & VACUUM PUMP

Shaft Endplay - .0005-.005". With vacuum pump attached.

►*OIL PUMP INSTALLATION CAUTION:* After complete assembly and installation on engine, check pump shaft for bind by turning with screwdriver through distributor mounting hole. Remove any bind in shaft rotation by tapping pump body with rubber mallet.

VACUUM PUMP

1957-58 MODELS

VACUUM PUMP: Vane type in combination with oil pump. Driven by driving key from oil pump driven gear. *SERVICED ONLY BY COMPLETE ASSEMBLIES. NOTE* - If vacuum pump severely damaged check oil pump idler gear and driving key.

IGNITION NOTES

1954-56 MODELS

SPARK PLUG CABLE WIRING AFTER WORK ON ENGINE (To prevent mis-firing): Cables should be arranged in following order in grommets on cylinder head to prevent consecutively firing plug cables from being adjacent to each other:

Right Bank Cables—Arrange cables in following order in grommet on head and at entrance to spark plug cover: 3, 5, 7, 1 (front to rear). Arrange #1 plug cable over rear cover stud and #5 spark plug, under #3 spark plug, and over front cover stud. Arrange #3 plug cable under rear cover stud and #5 spark plug. This will prevent #1 and #3 cables from being parallel.

Left Bank Cables—Arrange cables in following order in grommet on head and at entrance to spark plug cover: 4, 6, 2, 8 (front to rear). Arrange #2 plug cable under rear cover stud and #6 spark plug, and over #4 spark plug. Arrange #4 plug cable over rear cover stud and under #6 spark plug.

DETONATION CORRECTION (ALL SERIES): Proceed as follows:

1) Check spark plug cable wiring (see above).
2) Check for excessive oil consumption. Correct as necessary.
3) Check initial distributor setting and if necessary reset to 5° BTDC.
4) Check to see if centrifugal and vacuum advance of distributor falls within specified limits. Check distributor for dwell angle variation. Dwell should not vary more than 3° total between idle speed and 1500 RPM.
5) Make sure fuel is highest octane conveniently available.
6) If the above procedures do not correct the detonation the initial distributor setting may be retarded to TDC without any noticeable loss in performance or economy. If detonation still occurs, remove all traces of carbon from combustion chambers.

1956 MODELS

CHECKING TIMING MARK LOCATION: If the timing mark on the balancer is suspected of being off, it may be checked by removing the balancer and checking the timing mark in relation to keyway. Draw a straight line approximately 7" long on a clean piece of white paper, then using a compass, draw a 1½" diameter circle in center of straight line. Place balancer (with pulley mounting bolt holes upward) over circle drawn on paper so that centerline passes through center of balancer keyway. The timing mark should be located .100" (approx. 3/32") clockwise from centerline at outside diameter of balancer.

►*CHECKING FOR PROPER DISTRIBUTOR CAM (Improper cam will cause rotor tip to burn badly at one corner):* Remove rotor and hold straight edge (6" steel rule) flat against the counter-clockwise edge of rotor positioning slot and angling down towards the breaker cam. If correct cam is installed, the straight edge will be on the counter-clockwise side of the nearest cam lobe. If improper cam is installed, the straight edge will be toward the clockwise side of the nearest lobe.

CONTINUED ON NEXT PAGE

C NTINUED FR M PRECEDING PAGE

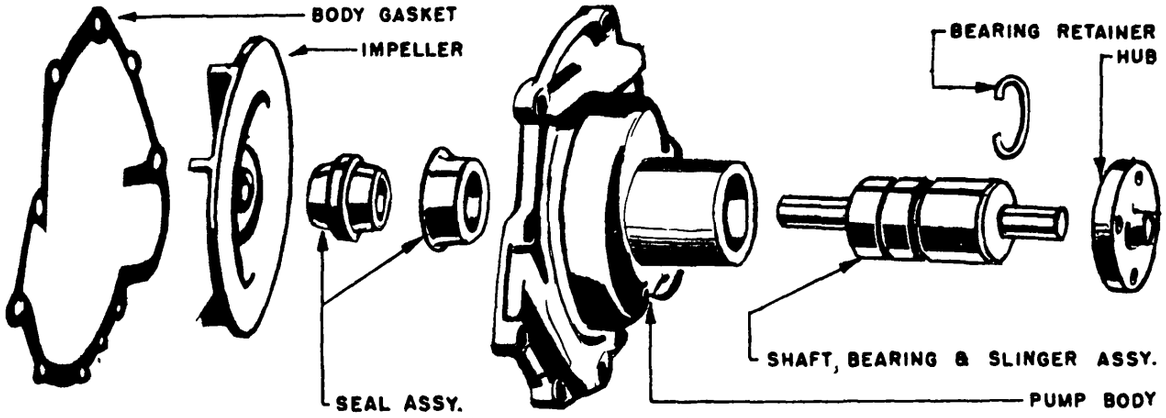
ELECTRICAL NOTES

1956 MODELS

DIRECTIONAL SIGNAL SWITCH STICKING CORRECTION: If the trip mechanism in signal switch housing sticks, and does not return to "off" position after a turn is completed, it may be caused by centering pins being bent or trigger spring hanging up on lever. Correct as follows: Remove steering wheel and check centering pins for straightness. Remove trigger spring and sand off any burrs under the tangs. Lubricate trigger spring with Lubriplate, and reassemble, making sure spring operates freely in tangs.

COOLING SYSTEM

WATER PUMP



1954-57 MODELS

WATER PUMP: Ball bearing, packless type Non-adjustable seal Bearing is factory lubricated and sealed so that no lubrication required in service

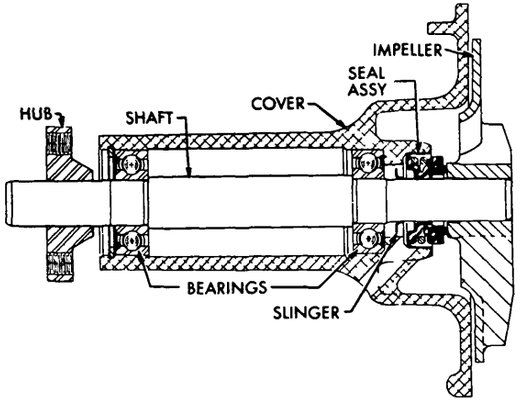
TYPE: Ball bearing, packless type Non-adjustable seal consists of a rubber bellows and spring which bears against a sleeve in pump body Bearing consists of a double row ball bearing held on shaft by a bearing retainer. Bearing is factory lubricated and sealed so that no lubrication required in service

OVERHAUL: Disassembly—Remove pump cover assembly and gasket from timing chain cover Remove impeller from pump shaft, using suitable puller *(NOTE*—Puller with two hooks preferred, one with three hooks may be used) Remove carbon washer, rubber bellows and spring from brass sleeve that is pressed into pump housing It is not necessary to remove brass sleeve if in good condition. If sleeve doubtful, remove by driving it out with punch inserted through vent hole in pump body Thoroughly clean pump cover to remove rust, old gasket, etc *Do not soak in cleaning solvent as this may leak into pump shaft bearing and destroy lubricant.* Check pump shaft bearing for endplay, or roughness in operation. If bearing not serviceable, press fan hub off shaft, remove bearing retainer, then press bearing out toward FRONT of pump cover

Reassembly: If old pump shaft bearing removed, press new bearing in against shoulder in pump cover, long end first, then install bearing retainer. Use care to start fan hub squarely on front end of bearing shaft and press it into position 13/64" (1953-56), 1/4" (1957) from end of the shaft. If the brass seal sleeve removed from pump body, carefully press the new sleeve seal in place with thick-walled tube that bears fully against the flange. *NOTE* - External spring seal used alternately in production If old sleeve not removed, separate new seal sleeve from seal bellows by soaking in hot water to soften cement used to hold seal parts together for ease of handling Install carbon washer, bellows and spring assembly in old sleeve in pump body, being careful to engage the two notches in washer with driving dents in brass sleeve Coat face of carbon washer and impeller hub with rust preventative or Seco oil, then support pump on fan end of shaft, press impeller on shaft until rear face of impeller is flush with end of shaft Install pump cover with new gasket

1954-57 WATER PUMP

Tighten pump cover bolts with lockwashers uniformly



1958-60 MODELS

►*NOTE:* 1958 pump is same as later models except it is serviced as a complete assembly

WATER PUMP: *NOTE* - Water pump cover is die cast aluminum in which pump bearings are shrunk fit The cover, shaft, bearings, and hub are not servicable Seal and impeller are only servicable parts

Disassembly - Pull impeller from pump shaft (avoid end thrust on bearings) Remove carbon washer, rubber bellows and spring from brake sleeve When necessary to replace sleeve, use drift through vent hole in pump body *NOTE* - DO NOT use solvent to clean parts as it will destroy bearing lubricant

Reassembly - Press new brass seal sleeve into body using thick walled tube. When old sleeve not removed, separate new seal sleeve from seal bellows by soaking it in hot water to soften cement. Install bellows and spring in sleeve with notches in washer engaging driving dents of sleeve Coat face of washer and impeller hub with rust preventative and press impeller on shaft until rear face is flush with end of shaft *CAUTION - Avoid any thrust on shaft bearings*

1958-60 WATER PUMP

Installation - Clean gasket surfaces and use new gasket. Bolts with lockwashers must be tightened uniformly.

CLUTCH NOTES

1957-58 MODELS

Equalizer Position - Adjust cable adjusting sleeve so that a ½" x 2½" pin inserted through gauging hole in equalizer (from bottom) and two holes in equalizer bracket will be held in holes

Pedal Adjustment: Check condition of pull back yoke and over-center springs See that over-center spring eyebolt is fully tightened Linkage must not bind and must be well lubricated

Release Rod Adjustment - Remove release rod adjusting end cotter key and washer return spring release rod to yoke clevis pin and spring washer Loosen adjusting jam nut and adjust end until pin fits freely with yoke held to rear then **lengthen** release rod (by rotating adjusting end) 4 turns This will provide release bearing and lever clearance Tighten adjusting jam nut and replace parts removed

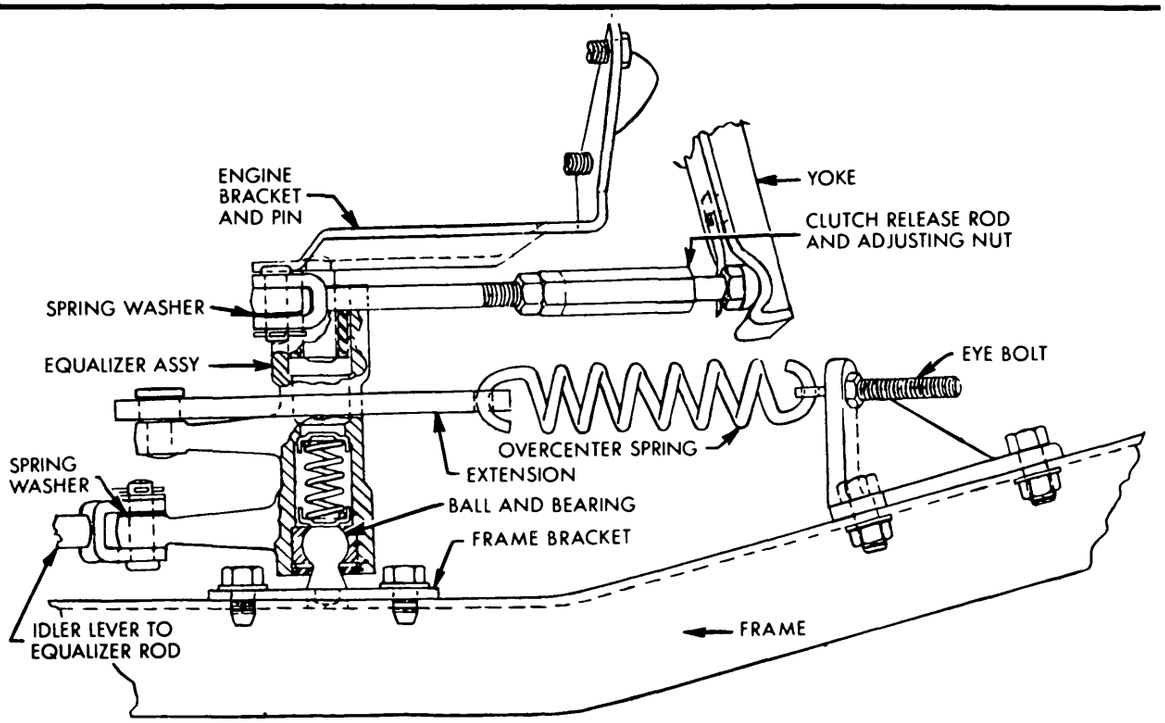
Cable Adjustment - Loosen cable pulley mounting bolt and align cable pulley with both upper and lower portions of cable as necessary Tighten bolts To adjust cable hold both upper and lower cables from twisting loosen adjusting sleeve jam nuts turn sleeve clockwise (from top) to tighten cable Tension is correct when gauging pin drops from holes in equalizer and bracket Tighten nuts This will provide pedal lash (free play) of 1 1/8 1 1 4" *Do not mistake tension of pedal return spring as an indication of lack of pedal lash*

1959-60 MODELS

Overcenter Adjustment: *NOTE - Clutch pedal must return fully against its stop Raise car and use ¼" drill rod or suitable ¼" spacer to measure clearance between overcenter spring extension and clutch equalizer (should be ¼" approximately)* To adjust, back-off release rod jam nut and adjusting nut ¾" Place ¼" spacer between spring extension and equalizer, then lower car and back-off pedal rod locknut under instru-

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE



ment panel. Remove clevis pin (clutch pedal to pedal rod clevis) so equalizer will rotate slightly so overcenter spring extension is against the ¼" spacer. Rotate pedal rod clevis as necessary so clevis pin will enter clutch pedal and clevis freely with clevis pulled to rear. *NOTE - Before clevis will rotate freely, pedal rod and clevis pin must be pushed forward, taking up slack in linkage.* Install clevis pin with spring washer, plain washer and cotter pin. Tighten pedal rod locknut. Raise car and remove spacer. Adjust pedal lash, *see below.*

Pedal Lash Adjustment (Freeplay): *NOTE - Return spring must pull pedal firmly against pedal bumper. Pedal linkage must be free and equalizer overcenter spring eye bolt must be fully tightened.* To adjust pedal lash (freeplay), check "Overcenter Adjustment" *see above,* then loosen adjusting nut jam nut on clutch release rod. Turn adjusting nut so that when equalizer is rocked over center by hand, total free movement at outer end of clutch release yoke is ¼". Tighten adjusting jam nut. ¼" movement at end of clutch yoke will give correct lash (freeplay) at pedal (1 1/8" to 1 1/4"). *CAUTION - DO NOT mistake the tension due to pedal return spring as an indication of lack of pedal lash (freeplay).*

BRAKE NOTES

1956 MODELS

PARKING BRAKE RELEASE ROD TRUNNION ADJUSTMENT: Disconnect battery and lower the fuse block to gain access to release rod trunnion. With parking brake in fully released position, disconnect trunnion from release rod lever trigger. Push trigger toward cowl as far as possible, and while holding trigger in this position, lengthen release rod by turning trunnion until it extends approximately ¼" beyond hole in trigger while holding release rod lightly against spring pressure. Connect trunnion to release rod lever trigger. After this adjustment has been performed, approximately 1/8" clearance should exist between knob and escutcheon. Clearance at this point can be obtained by loosening screw in knob and positioning knob as required to obtain specified clearance. Tighten knob screw.

1959-60 BUICK CLUTCH LINKAGE

►*AIR CONDITIONED CAR SERVICE CAUTION: Before disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section.*

MODEL IDENTIFICATION

Series	Model Designation
40	SPECIAL
50	SUPER
60	CENTURY
70	ROADMASTER
M/100 (1954)	SKYLARK

SERIAL NUMBER: Stamped on plate on left front door pillar post and on left front frame side rail.

Starting Serial Number (Each Year)–001001 (at each plant).

►*1954 SERIAL NUMBER NOTE: Beginning 4/1/54, the serial number includes identification data as indicated below.*

►*SERIAL NUMBER NOTE: Serial number (example 4B-2001001) includes the following identification data in sequence:*

Series ①	Year ②	Assy. Plant ③	Serial No.
4	B	2	001001

①–See Series Designation following.

②–Year designation "A" (1954), "B" (1955).

③–See Assembly Plant Designation following.

Series Designation

4–40 Special	6–60 Century
5–50 Super	7–70 Roadmaster & M/100 Skylark

Assembly Plant Designation

1	Flint	5	Wilmington
2	South Gate	6	Atlanta
3	Linden	7	Framingham
4	Kansas City	8	Arlington

ENGINE NUMBER: Stamped on outside of left bank of cylinders on extension of top face of block between middle branches of exhaust manifold.

Starting Engine Number– V-273956 (1954), **V-720080** (1955). Followed by a suffix numeral as indicated in Series Designation above.

►*1955 ENGINE NUMBER NOTE: The "V" Engine Number Prefix not used after Engine Number 1,000,000.*

►*ENGINE NUMBER NOTE:* Dash following engine number indicates that cylinder bores and pistons are .010" Oversize. *NOTE*–Do not confuse dash with vertical groove on pad designating Series 40 engine.

TUNE-UP

►*1954 SKYLARK MODEL 100 NOTE: All specifications for this model are same as Series 70 except as noted.*

►*DETONATION CORRECTION (ALL SERIES): See "Ignition Notes" in Buick Special Data.*

►*SPARK PLUG CABLE ROUTING (To Prevent Misfiring): See "Ignition Notes" in Buick Special Data.*

COMPRESSION PRESSURE: At cranking speed (140 RPM). All cylinders must be equal within 10 lbs.

	Synchro-mesh		Dynaflow	
Series	1954	1955	1954	1955
40	130 lbs.	140 lbs.	145 lbs.	155 lbs.
50,60,70	150 lbs.	155 lbs.	160 lbs.	170 lbs.

VACUUM READING: Steady 18-20" at idling speed.

VALVE TAPPET CLEARANCE: None in service (hydraulic).

MANIFOLD HEAT CONTROL: Thermostatically controlled valve in forward end of left exhaust manifold. Valve must operate freely.

Checking Thermostatic Coil Spring–With engine at 70°F., unhook end of spring from anchor stud on manifold, hold valve closed. End of spring should be 3/8 turn clockwise from anchor stud (3/8 turn "wind-up" to engage spring on stud). Replace thermostatic spring if setting incorrect or if distorted or otherwise damaged.

IGNITION

FIRING ORDER: 1-2-7-8-4-5-6-3.

Cylinders–RIGHT BANK 1-3-5-7, LEFT BANK 2-4-6-8.

SPARK PLUG GAP: .030-.035".

Spark Plugs–AC No. 44-5. 14mm. Torque to 22-28 ft. lbs.

COIL: Delco-Remy 1115082. *12 Volt.*

Ignition Current–2.5 amps. idling, 4.5 stopped.

Resistor–Delco-Remy 1927809. On cowl near ignition coil. Resistance 1.4-1.65 ohms at 75°F.

►*COIL RESISTOR NOTE*–Resistor is connected in lead from ignition switch-to-coil. This resistor is by-passed during cranking by a lead from starter solenoid-to-coil.

DISTRIBUTOR: Delco-Remy 1110849. *12 Volt.*

Condenser–Delco-Remy 1869704 (Closed-end terminal), 1928111 (Open-end terminal). **Capacity** .18-.23 mfd.

Contact Point Set–Delco-Remy 1924499.

Breaker Gap–.0125-.0175".

Cam Angle–26-33° (with .016" gap).

►*BREAKER GAP CAUTION*–Manufacturer recommends final check with feeler gauge or dial indicator if dwell meter used to set point gap.

Breaker Arm Spring Tension–19-23 ozs.

Rotation–Clockwise viewed from above.

►*DISTRIBUTOR REMOVAL NOTE*–Removal of distributor can be facilitated by use of Special Wrench J-5727 (Kent-Moore) or S-9832 (Snap-On).

Automatic Advance

Degrees	Distr. RPM	Degrees	Eng. RPM
0-1.5	375	0-3	750
6-8	850	12-16	1700
9.5-11.5	1450	19-23	2900
11-13.5	1750	22-27	3500

Vacuum Spark Control: Delco-Remy 1116090.

Plunger Travel–7/32".

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	6.5-8.5
9-10.5	18-21	11.5-15

IGNITION TIMING

Setting–5° BTDC exactly.

►*IGNITION TIMING CAUTION–Lower engine idle speed to not exceed 350 RPM when setting ignition timing with timing light. Reset to 450 RPM when completed.*

Timing Mark–Timing indicator marked with four lines indicating 0°, 2.5°, 5°, 7.5° BTDC, located on right side of timing chain cover below fuel pump. Line up mark on Fan Drive Pulley (Series 40), Harmonic Balancer (Other Series) with correct line (5°) on timing indicator for normal operating conditions.

CARBURETOR

►*CARBURETOR APPLICATION: Various carburetors used on 1954-55 cars as follows:*

Series	Carburetor Make & Typ
40 (1954-55)	①Carter WCD or Stromberg AAVB
40 (Late 1955)	①Carter WGD or Stromberg WW
50 (1954)	① Carter WCD or Stromberg AAVB
60, 70 (1954)	②Carter WCFB or Stromberg 4AUV
50, 60, 70 (1955)	②Carter WCFB or Rochester 4GC

①–2-Barrel Carburetor. ②–4-Barrel Carburetor.

►*1954 DYNAFLOW CARS THROTTLE LINKAGE ADJUSTMENT:* The procedure for adjusting throttle linkage on 1954 Dynaflow cars is the same as for "Dynaflow Cars (Without Overtravel)" below, except for adjustment on "stretch-link".

►*1954-55 SYNCHRO-MESH THROTTLE LINKAGE ADJUSTMENT NOTE:* The procedure for adjusting throttle linkage on synchro-mesh cars is the same as for "Dynaflow Cars (Without Overtravel)" below, except for adjustment on "stretch-link", stator control linkage and dashpot.

►*1955 THROTTLE LINKAGE ADJUSTMENT (DYNAFLOW CARS):* The throttle operating rod contains an adjustable spring loaded stretch link which may be optionally adjusted to provide "overtravel" for delayed action of the variable pitch stator In production the stretch link is locked solid to eliminate overtravel and the throttle linkage is adjusted so that the stator shifts to high angle performance position just as wide open throttle is reached. If car is operated consistently at high speed it may be preferred to have the high angle shift occur after wide open throttle is reached. In this case "overtravel" may be obtained as outlined in "Adjustment With Overtravel" below. *CAUTION–Adjust throttle linkage WITHOUT overtravel on all Synchro-mesh cars.*

THROTTLE LINKAGE ADJUSTMENT: With floor mat properly installed and all throttle linkage well lubricated and operating freely, adjust throttle stop screw for proper HOT idling speed of 450 RPM. Turn engine off and check operation of unloader (adjust if necessary). Proceed as follows:

1) Disconnect throttle return spring and throttle operating rod from lever on equalizer shaft. Back off stator pick-up lever adjusting screw until screw end is flush with lever surface.

2) Adjust throttle operating rod in rod end at carburetor so that approximately 5/8" of thread is exposed, then tighten lock nut.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

3) For Adjustment Without Over-travel—Turn rear end of throttle operating rod until stretch link is locked While another person presses accelerator pedal firmly against the floor mat hold throttle lever in wide open position and hold rear end of operating rod at hole in throttle lever Rod must be approximately 1/16" **short** of entering hole in lever Change position of lever on shaft as required to obtain this condition then tighten clamp bolt securely

4) For Adjustment With Over-travel (Do not Use on Synchro-mesh Cars)—Turn rear end of throttle operating rod until rod can be stretched approximately 7/16' against tension of stretch link spring measured at forward end of link While another person holds throttle UPWARD as far as possible, hold throttle lever closed to HOT idle position and hold rear end of throttle operating rod at hole in throttle operating lever Rod must extend 1/16' BEYOND hole in lever Change position of lever on shaft as required to obtain this condition, then tighten clamp bolt securely

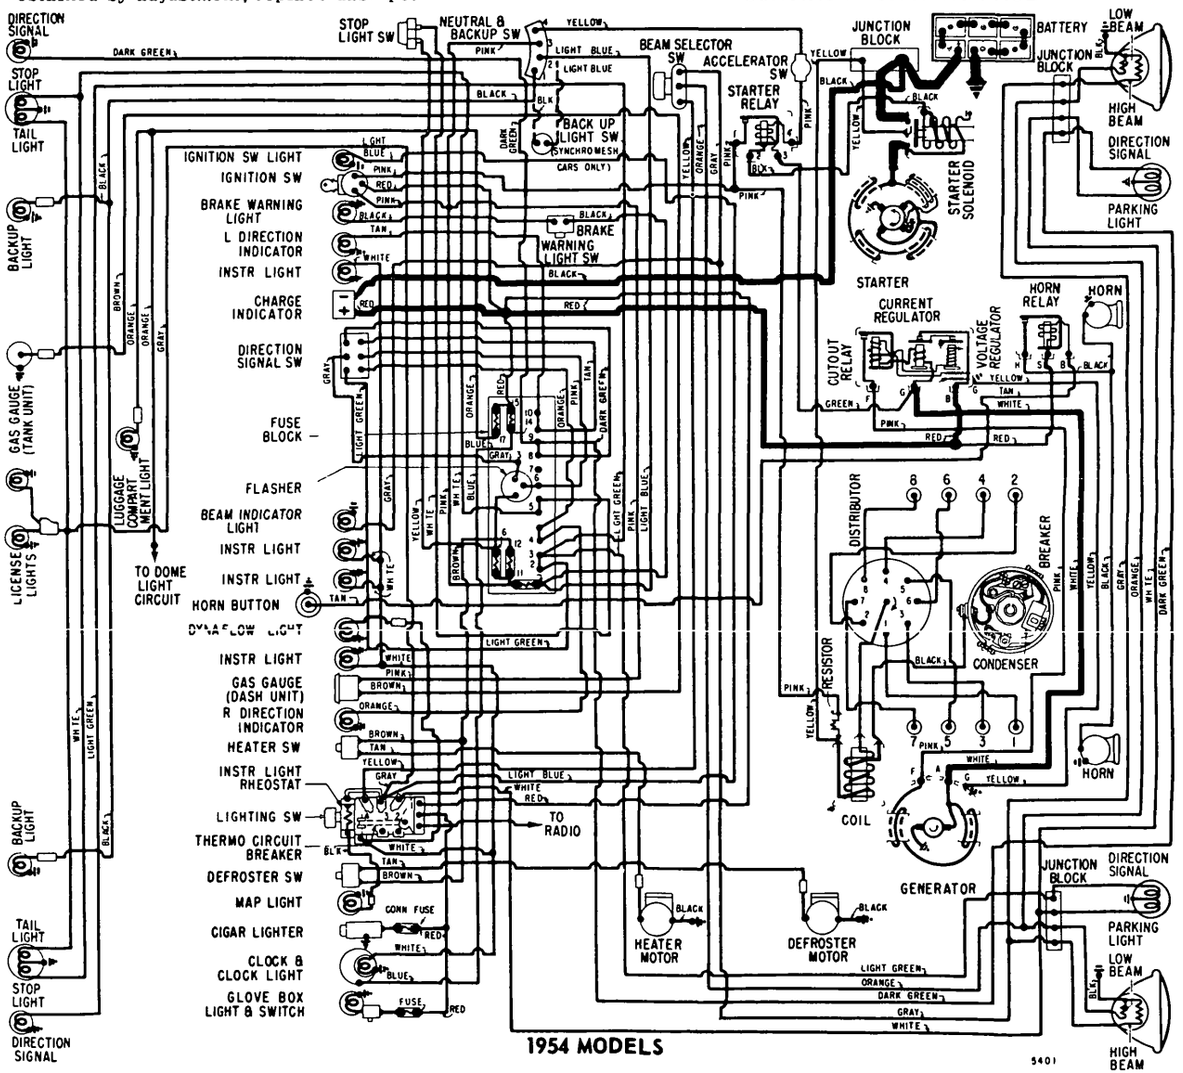
5) Connect operating rod to operating lever, snap retaining clip over rod and connect return spring With throttle closed to HOT idle position, check clearance between equalizer shaft lower lever and the stop lug in the shaft-to cowl mounting bracket A minimum clearance of 1/16" (Carter), 3/16' (Rochester) must exist at this point

6) Hold choke valve closed while accelerator pedal is pressed to floor mat to check operation of unloader If clearance between lower lever and stop lug is less than 1/16 , or choke unloader does not operate properly, readjust the operating rod length at rod end on throttle lever or change position of upper lever on equalizer shaft one serration at a time until proper settings are obtained

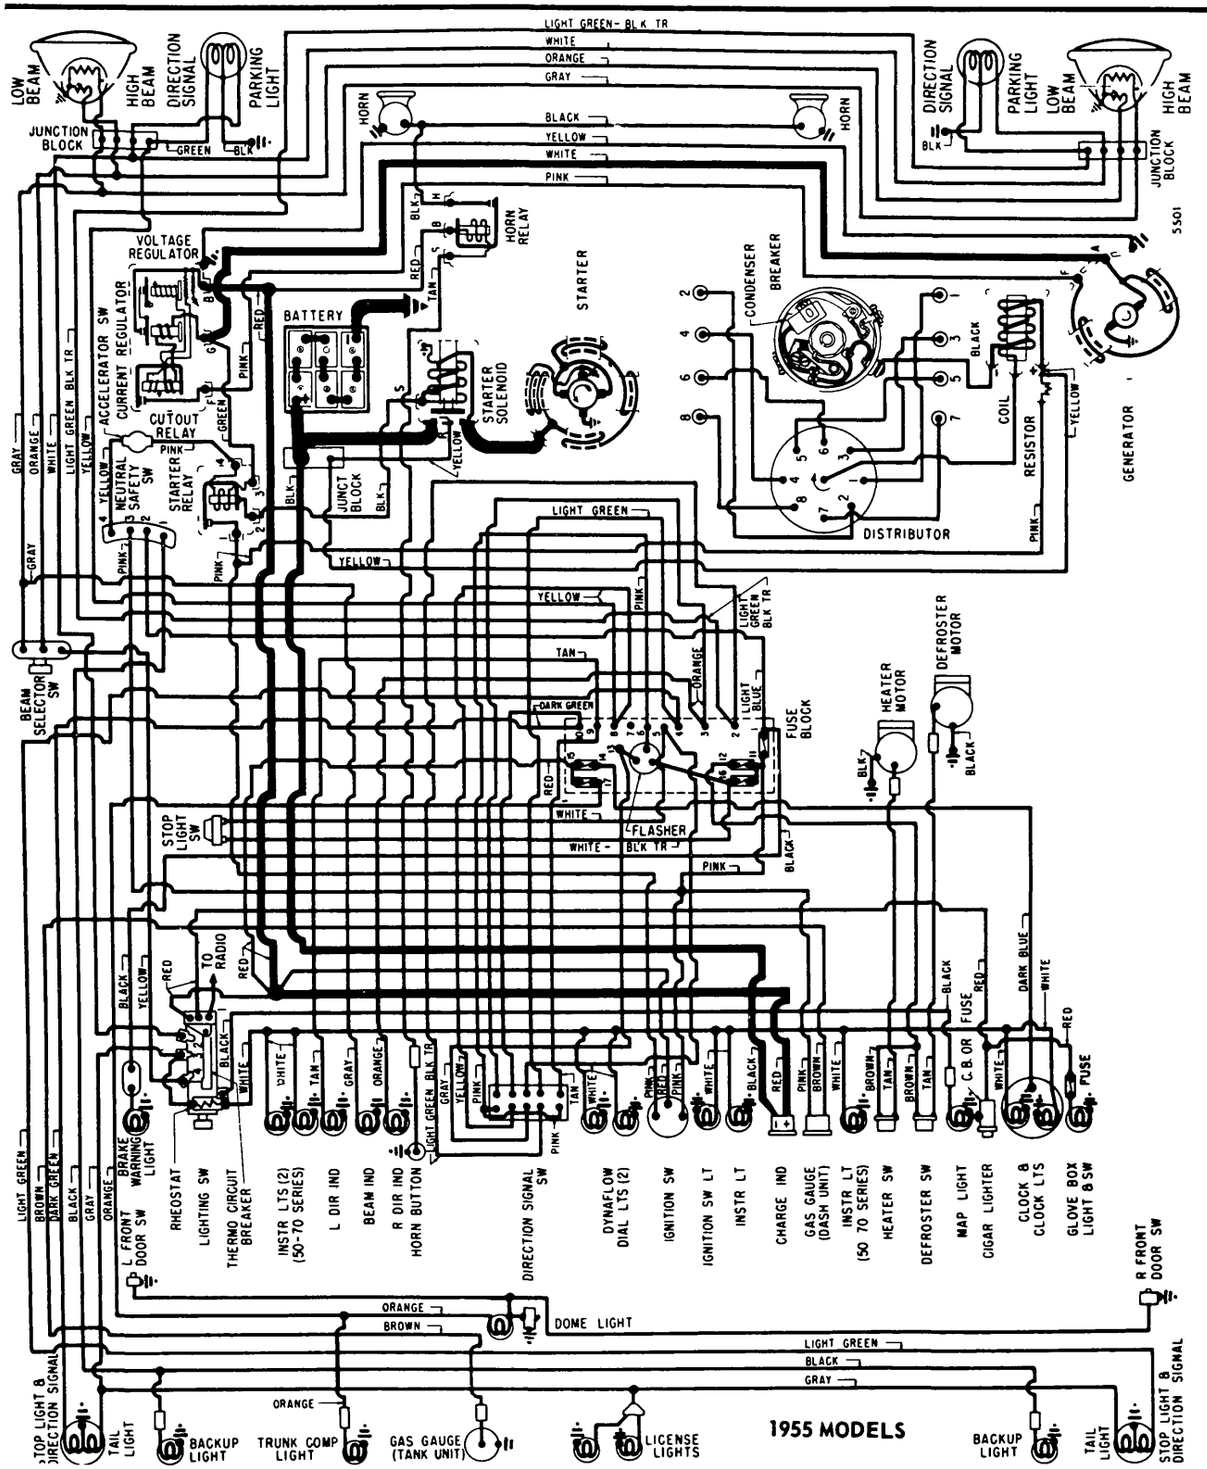
7) On Dynaflow Cars have accelerator pedal depressed firmly against floor mat, then turn stator pick-up lever adjusting screw against stator operating lever, raising lever until all vertical play is removed from stator operating control rod Turn screw back ½ turn to provide a slight clearance between stator control valve operating lever and the **bottom side** of its stop pin on the high accumulator

8) Finally check for smooth operation of linkage from fully closed to wide open position of throttle valve Make sure that throttle closes firmly against stop screw *NOTE—On Dynaflow Cars (Without Over-Travel), and on Synchro-mesh Cars, throttle valve should be wide open when accelerator pedal strikes floor mat. On Dynaflow Cars (With Over-trav l), the stop on throttl lever must strike boss on throttle body before accelerator pedal can be pressed to floor against tension of stretch spring.*

DASHPOT ADJUSTMENT (Dynaflow Cars) Adjust dash pot only after throttle linkage has been adjusted and engine is at normal operating temperature Rotate fast idle cam to extreme cold idle position (choke closed), hold throttle lever against a 030' feeler gauge placed between stop screw and highest step of fast idle cam Adjust dash pot until it just clears arm of throttle lever, tighten lock nut. With transmission in Direct Drive and brakes firmly applied speed engine up to about 1500 RPM and immediately release throttle, noting engine operation as throttle valves close If engine stalls from too rapid closing of throttle valves, move dash pot forward until its action prevents engine stalling If excessive time is required for throttle valves to reach closed position, move dash pot rearward. Tighten lock nut after each adjustment If proper control cannot be obtained by adjustment, replace dash pot



CARTER 2-BARREL WCD



Carter WCD 2081S (Early 1954), 2081SA (Late 1954), 2179S (Early 1955). *NOTE—See "Carter WGD Carburetor" below for Late 1955 Carburetor.*

►*1954 METERING ROD PRODUCTION CHANGE FOR IMPROVED PERFORMANCE (Early 2081S Carburetors): Metering rods changed from No. 75-994 to 75-1107. See "Carter WCD Carburetor" in Carburetion Section.*

►*1954 COLD STUMBLE OR LOW SPEED BUCK ON SYNCHRO-MESH CARS (Cars with 2081S Carburetors):* Correct by changing Choke Cover & Coil Assembly and installing reducer bushing in choke warm air orifice hole in bowl cover *See "Carter WCD Carburetor" in Carburetion Section NOTE—Later 2081SA carburetors have these changes.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

►*1955 SERIES 40 (SYNCHRO-MESH) CARS WARM-UP PERFORMANCE IMPROVEMENT & ROUGH IDLE CORRECTION: See "Carter WCD Carburetor" in Carburetion Section.*

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyl 1-4-6-7, LEFT barrel 2-3-5-8.*

Idle Setting–One turn (½-1½) open Adjust both screws alike Turn screws out for richer mixture.

Idle Speed–450 RPM (With selector lever in Neutral on Dynaflow Cars)

Float Level–15/64" (2081S, SA), 3/16" (2179S) from top of each float to gasket seat on cover with needle valve seated (invert float assembly to check) Use Gauge T109-240 (15/64"), T109-162 (3/16") installed directly under floats and adjust floats vertically to just clear horizontal portion of gauge and laterally so side of floats barely touch gauge uprights

Accelerating Pump–Install pump connector link in outer hole of pump arm for long stroke

Fast Idle: *CAUTION–Two different setting required:* 1) Loosen choke lever clampscrew on choke shaft Insert Gauge T109-29 (020') between lip of fast idle cam and boss on throttle body, hold choke valve closed and remove slack from linkage by pressing choke lever toward closed position, tighten choke lever clamp screw.

2) With choke valve tightly closed and fast idle screw on high step of cam, adjust fast idle screw as follows If carburetor on bench, adjust for a throttle opening of 025' (Gauge T109-189), between edge of valve and wall on side opposite idle ports If carburetor on engine, adjust idle speed to 1800 RPM

Automatic Choke Setting: Centered (At Index).

Throttle Linkage Adjustment: *See "Carburetor" abov .*

►*OTHER DATA: See "Carter WCD Carburetor" in Carburetion Section*

Fuel Pump Pressure: 4½-5½ lbs at pump outlet, 4-5 lbs at carburetor inlet

CARTER 2-BARREL WGD

Carter WGD 2292S (Late 1955 Cars). *NOTE–S "Carter WCD Carburetor" above for Early 1955 Carburetor.*

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyl. 1-4-6-7, LEFT barrel 2-3-5-8.*

Idle Setting–¼-1¼ turns open. Adjust both screws alike. Turn screws out for richer mixture.

Idle Speed–450 RPM (With selector lever in Neutral on Dynaflow Cars).

Float Level–¼" from top of float (center) to gasket seat on cover with needle valve seated (invert float assembly to check) Use Gauge T109-31 and adjust float so side is parallel to edge of casting.

Accelerating Pump–No seasonal adjustment.

Fast Idle: .015" (Gauge T109-44) clearance between lower edge of throttle valve and carburetor bore with adjusting screw on high step of fast idle cam.

Automatic Choke Setting: Centered (at Index).

Throttle Linkage Adjustment: *See "Carburetor" above.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

►*OTHER DATA: See "Carter WGD Carburetor" in Carburetion Section.*

Fuel Pump Pressure: 4½-5½ lbs. at pump outlet, 4-5 lbs. at carburetor inlet.

STROMBERG 2-BARREL AAVB-267

Stromberg AAVB, Code 7-96 (1954), 7-102 & 7-102A (Early 1955). *NOTE–See "Stromberg WW" below for Late 1955 Carburetors.*

►*MANIFOLD FUEL DISTRIBUTION:* Carburetor RIGHT barrel feeds Cyl 1-4-6-7, LEFT barrel 2-3-5-8.

Idl Setting–1¼ turns open Adjust both screws alike Turn screws out for richer mixture

Idl Speed–450 RPM (With Selector Lever in Neutral).

Fl at Level–5/64 "above vertical guides on Gauge T-24971, or 1 7/16' from bowl cover gasket to top edge of float with assembly inverted

Accelerating Pump–Pump rod in middle hole of throttle lever

Fast Idle Setting: Close choke valve against a No. 51 drill (Code 7-96), No 54 drill (Code 7-102 & 7-102A) placed between wall of air horn and center of upper edge of choke valve and hold valve firmly against drill. See that fast idle cam spring holds cam upward against end of fast idle rod. Close throttle until stop screw contacts fast idle cam. If screw does not clear edge of highest step on fast idle cam and bear against second step, adjust by bending fast idle rod at large curve.

Lever Clearance–Close choke valve against a No. 53 drill, adjust clearance between ear on locking lever and lug on loose lever on fast idle cam stud so that these levers just clear as throttle valve is opened. Adjustment is made by bending end of loose lever up or down as required.

Automatic Choke Setting: Centered (at index).

►*OTHER DATA: See "Stromberg AAVB Carburetor" in Carburetion Section.*

Throttle Linkage Adjustment: *See "Carburetor" above.*

Fu l Pump Pressure: 4½-5½ lbs. at pump outlet, 4-5 lbs. at carburetor inlet.

STROMBERG WW

Stromberg WW, Code 7-104 (Late 1955). *NOTE–See Stromberg AAVB Carburetor" above for Early 1955 Carburetors.*

Idle Setting–1¾ turns open Adjust both screws alike. Turn screws out for richer mixture.

Idle Speed–450 RPM (With selector lever in Neutral on Dynaflow Cars).

Automatic Choke Setting: Centered (at index).

Thr ttle Linkage Adjustment: *See "Carburetor" above.*

►*OTHER DATA: See "Stromberg WW Carburetor" in Carburetion Section:*

Fuel Pump Pressure: 4½-5½ lbs. at pump outlet, 4-5 lbs. at carburetor inlet.

STROMBERG 4-BARREL

Str mb rg 4-AUV, C d 7-98 (1954). Four barrel downdraft type with automatic choke .

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barr ls f d Cyl. 1-4-6-7. LEFT barrels 2-3-5-8.*

Idle Setting–1 1/8 turns open (two screws–primary side only). Set both screws alike. Turn screws out for richer mixture.

Idle Speed–450 RPM (With selector lever in Neutral).

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Stromberg 4A 4-Barrel Carburetor" in Carburetion Section.*

Fuel Pump Pressure: 4½-5½ lbs at pump outlet, 4-5 lbs. at carburetor inlet

CARTER 4-BARREL WCFB

Carter WCFB 2082S (1954), 2197S (Early 1955), 2358S (Late 1955). Four barrel downdraft type with automatic choke.

►*1954 ACCELERATING PUMP LEATHER TURNING BACK (Causing improper acceleration performance and throttle resistance on Early Cars): See "Carter WCFB Carburetors" in Carburetor Section.*

►*1954 METERING ROD CHANGE: See "Carter WCFB 4-Barrel Carburetor" in Carburetor Section.*

►*1955 CARBURETOR CHOKE PISTON CHANGE TO IMPROVE WARM-UP PERFORMANCE (First Cars): See "Carter WCFB 4-Barrel" in Carburetion Section.*

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyls. 1-4-6-7, LEFT barrel 2-3-5-8.*

Idle Setting–½-1½ (1954) ¾-1¾ (1955) turns open (two screws–primary side only). Set both screws alike. Turn screws out for richer mixture.

Idle Speed–450 RPM (With selector lever in Neutral).

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Carter WCFB 4-Barrel Carburetor" in Carburetion Section.*

Fuel Pump Pressure: *4½-5½ lbs. at pump outlet, 4-5 lbs. at carburetor inlet.*

ROCHESTER 4-BARREL 4GC

Rochester 4GC, No. 7006200 (1955). Four barrel downdraft type with automatic choke.

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyl. 1-4-6-7. LEFT barrel 2-3-5-8.*

Idle Setting–Adjust idle mixture needle valves for smooth idle and check for correct idle speed

Idle Speed–450 RPM (With selector lever in Neutral).

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Rochester 4GC Carburetor" in Carburetion Section.*

Fuel Pump Pressure: 4½-5½ lbs. at pump outlet, 4-5 lbs. at carburetor inlet.

CARB. EQUIPMENT

Fuel Pump: AC **Replacement No. 9763** (Fuel & Vacuum).
Pressure–4½-5½ lbs. at pump outlet, 4-5 lbs. at carburetor inlet.
See "Fuel Pumps" in Carburetion Section.

Gasoline Gauge: AC Electric type.

Dash Unit (1954)–AC No 1518011 (Series 40, 60, 100); AC No. 1518877 (Series 50, 70).

Dash Unit (1955)–AC No. 1518212 (Series 40 & 60); AC No. 1518203 (Series 50 & 70).

Tank Unit (1954-55)–AC 1518138 (Series 40, 60, 100); AC No. 1518137 (Series 50 & 70).
See "Fuel Gauges" in Carburetion Section.

BATTERY

1954-Delco 3EM60W. *12 Volt,* 11 plate, 60 ampere hour capacity (20 hr rate).
1955-Delco 3KM60. *12 Volt,* 9 plate, 60 ampere hour capacity (20 hr. rate).

Battery Ground–Negative (-) terminal.
Engine Ground–Between engine and cowl.

STARTER

Delco-Remy 1107621. *12 Volt.* **Armature**–1926626.
Drive–Overrunning clutch (solenoid pinion shift).
Rotation–Counter-clockwise at commutator end.
Brush Spring Tension–30-40 ozs.

	Performanc Data		
Torque	RPM	Volts	Amperes
0 ft. lbs.	3500	10.1	95
11 ft. lbs.	Lock	5.2	460

Starting Switch: Delco-Remy Solenoid 1119760. *12 Volt.* Starter solenoid controlled by separate relay, Delco-Remy 1116876, and Accelerator Vacuum Switch (on carburetor) *See "Starter Controls" in Electrical Equipment Section.*

Accelerator Vacuum Switch: Carter 192-11U (Carter & Stromberg 2-Barrel), 192-21U (Carter 4-Barrel), Stromberg 386030 (Stromberg 4-Barrel) .
Accelerator Vacuum Switch Setting–*See data n ach carburetor type in Carburetion S cti n.*

Dynaflow Neutral Safety & Back-Up Light Switch: (1954) Delco-Remy 1998025 at lower end of steering column. (1955) Delco-Remy 1998101, mounted on steering column jacket under cowl. Switches are connected in starter control circuit so that starter operative only when selector lever in "N" Neutral, or "P" Parking position.

Adjustment–*See "Buick Dynaflow Drive" in Transmission Section.*

►*NEUTRAL SAFETY & BACK-UP LIGHT SWITCH CONNECTION CAUTION: Wires must be connected in correct order as shown on wiring diagram.*

GENERATOR

Delco-Remy 1102008 (Without Air-Conditi ning). 1102006 (With Air-Conditioning). *12 Volt.*

Generator No.	Armatur N .
1102008 ℄	1923535
1102006	1925210

℄–With pulley. Delco-Remy 1102005(without pulley).

Performance Data–C ld

Amperes	Volts	RPM
30 ℄	14 .	2150

℄–Not maximum. See Regulator.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Brush Spring Tension—24-32 ozs.

Field Current—1.48—1.62 amperes at 12 volts.

Rotation—Counter-clockwise at commutator end.

Belt Adjustment: 3/8" belt deflection with normal thumb pressure midway between generator and fan pulleys.

REGULATOR

Delco-Remy 1118825. *NOTE—Regulator is "1118825 Series". Specifications below are for "Normal" settings.*

Cut-out Relay

Cuts In—12.8 volts (hot).

Contact Gap—.020".

Air Gap—.020" (with contacts just closed).

Voltage Regulator

Setting—14.5 volts (hot).

Air Gap—.075" with armature pressed down to point where contacts just opening.

Checking & Adjusting—*See Electrical Equip. Section.*

Current Regulator

Setting—30 amperes (hot).

Air Gap—.075" with armature pressed down to point where contacts just touching.

Checking & Adjusting—*See Electrical Equip. Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Equip. Section.*

Direction Signal: *See Electrical Equip. Section.*

Lighting Switch Removal: Disconnect battery cable from junction block and disconnect wires from lighting switch. Pull switch knob out to last notch, then depress spring loaded latch button on switch body while pulling rod and knob assembly out of switch. Remove switch mounting nut with wrench J1589 and remove switch and escutcheon from instrument panel.

Stop Light Switch: (Location)—On brake pipe distributor fitting near master cylinder on left side at transmission support.

FUSES: Located on fuse panel under cowl unless otherwise specified.

Back-Up Light—9 amps.

Dome & Luggage Compartment Light—20 amps.

Electric Clock—2 amps.

Heater & Defroster—9 amps.

Parking Brake Warning Signal—9 amps.

Stop & Directional Signal Lamps—9 amps.

Cigar Lighter—Special Fuse (in back of lighter).

Glove Box Light—2 amps. (in wiring connector).

Air Conditioner Feed—20 amps. (in wiring connector near controls).

Air Conditioner Temp. Control—2 amps. (in wiring connector near controls).

Power Brake Vacuum Pump—14 amps. (in wiring connector near fuse block).

CIRCUIT BREAKER: 22 amps. Located in headlamp switch.

HORNS: Delco-Remy 1999755 (Low Note), 1999756 (High Note). *12 Volt.*

Horn Relay: Delco-Remy 1116781. *12 Volt.*

Contacts Close—2.75-4.0 volts.

Contact Gap—.025". **Air Gap**—.015" (closed).

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Before disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section.*

►***1954 IMPROVED VALVE STEM LUBRICATION: Rocker Arm shaft diameter decreased on later engines. See "Valve System" in Buick Special Data.***

►***1955 ENGINE KNOCK ON STARTING CORRECTION:* This noise may be present after starting an engine that has not been in operation for at least 30 minutes, and may last as long as 10 seconds. This noise is usually accompanied by a lack of oil pressure and disappears when pressure rises. It is recommended that bearing clearances be checked and undersize inserts be installed where clearance is found to exceed .0025". *Before proceeding with the above bearing check, make sure that the exhaust heat manifold control thermostat spring is not broken as this condition may cause the same noise as bearings.***

ENGINE SPECIFICATIONS: Own 90° V8 (All Series).

Series	Bore	Stroke	Displmnt.	Rated HP.
40	3.625"	3.2"	264 cu.ins	42.05
50, 60, 70	4.000"	3.2"	322 cu.ins.	51.2

Series	Compr.Ratio	Developed HP
1954 40 Synchro-mesh	7.2-1	143 at 4200 RPM
1954 40 Dynaflow	8.1-1	150 at 4200 RPM
1954 50 Synchro-mesh	8.0-1	177 at 4100 RPM
1954 50 Dynaflow	8.5-1	182 at 4100 RPM
1954 60 Synchro-mesh	8.0-1	195 at 4100 RPM
1954 60 & 70 Dynaflow	8.5-1	200 at 4100 RPM
1955 40 Synchro-mesh	7.5-1	
1955 40 Dynaflow	8.4-1	188 at 4800 RPM
1955 50 Synchro-mesh	8.4-1	
1955 50 Dynaflow	9.0-1	236 at 4600 RPM
1955 60 Synchro-mesh	8.4-1	
1955 60 & 70 Dynaflow	9.0-1	236 at 4600 RPM

Compression & Vacuum Reading—*See TUNE-UP.*

►*ENGINE IDENTIFICATION NOTE:* See Engine Number for suffix digit designating each series. Series 40 engine also has vertical groove 3/8" wide and 1/8" deep) cast in engine number pad approximately 1¼" to rear of pad centerline.

►*ENGINE COMPRESSION RATIO NOTE:* Same cylinder head used for all engines, different compression ratios secured by use of different pistons (Series 40), different head gaskets (50,60). *See Cylinder Head and Piston data below.*

►*ENGINE PARTS INTERCHANGEABILITY:* Parts are interchangeable on Series 50, 60, 70 engines and are also used in Series 40 engine with following exceptions: Cylinder Block, Pistons, Pins, Rings, Harmonic Balancer (Pulley used on Series 40), Camshaft, & Flywheel.

ENGINE MOUNTINGS: *See "Engine Mountings" in Buick Special Data*

OIL PAN REMOVAL: Disconnect steering idler arm bracket from right frame side rail and lower steering linkage for clearance, then remove pan. *CAUTION*—Do not allow bracket to turn on idler arm (will change toe-in adjustment).

►*OIL PAN PRODUCTION CHANGE & REPLACEMENT PARTS NOTE:* Later type oil pans for production cars and for service replacement have 18 attaching bolt holes which replaces the early type pan having 24 attaching bolt holes. Both type pans are interchangeable

CYLINDER HEAD & GASKET: Cylinder Head No. 1391745 (1954) used on all 1954 engines. Cylinder Head No 1391947 (1955) used on all 1955 engines. Different compression ratios secured by using special head gasket as listed below (except Series 40 where same gasket used with different pistons).

Series	Compr.Ratio	Cyl. Head Gasket No.
1954 40 (All)	7.2-1 & 8.1-1	1343484 (.015")
1954 50, 60	8.0-1	1343995 (.045")
1954 50, 60, 70	8.5-1	①1343484 (.015")
1955 40 (All)	7.5-1 & 8.4-1	1165307 (.015")
1955 50, 60	8.4-1	1391261 (.045")
1955 50,60,70	9.0-1	①1165307 (.015")

①—Low Compression (Export) No. 1343995 (.045").

Cylinder Head & Gasket Installation—*See "Cylinder Head & Manifold" in Buick Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Buick Special Data.*

PISTONS

Pistons—Aluminum alloy, dome head, cam ground, full skirt with transverse slots in oil ring groove, Anodized finish.

►*SERIES 40 PISTON CAUTION: Special HIGHER DOME pistons used in high compression (8.1-1 & 8.4-1) engines. Lower compression (7.2-1 & 7.5-1) pistons can be identified by letters "L.C." on top shoulder of piston on valve side.*

►*ORIGINAL CYLINDER BORE CAUTION:* Engines with ⅛" long dash following engine number have .010" Oversize Cylinder Bore and Pistons. Standard cylinder bore size (40) 3.6235-3.6265", (50, 60, 70) 3.9985-4.0015".

►*REPLACEMENT PISTON NOTE:* Pistons not changed by Piston Pin Production Change (See Piston Pins below for later Press-fit type) and same piston and pin fitting data applies to both types.

Removal—Pistons and rods removed from above.

►*CAUTION*—Mark pistons, rods, and bearing caps with cylinder number before removal to insure correct reinstallation. Use Rod Bolt Guides (short guide J-5239-1 on lower bolt, long guide J-5239-2 on upper bolt) to retain bearing shell and assist in pushing assemblies out.

Fitting New Pistons: Clearance .0007-.0017". If micrometer used on pistons, measure at top and bottom of skirt 90° from pin hole (top diameter very slightly

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

less than bottom in service). Use .003" x ½" x 12" feeler gauge to fit pistons with cylinder block in normal position. Insert feeler on lower side of bore 90° from piston pin hole. Pull to withdraw feeler should be 7-13 lbs. at 70°F. (piston and bore clean and dry).

Replacement Pistons: Standard ("High Limit" or maximum diameter production size) and .005", .010", .020", .030" Oversize. *NOTE*–Pistons furnished only with fitted pins.

Installing Pistons: Assemble pistons on rods with valve depressions in head on same side as clamp bolt in rod. Install pistons with valve depressions toward camshaft. *See Rod Installation.*

PISTON PINS

►***1955 PISTON PIN PRODUCTION CHANGE & REPLACEMENT CAUTION:*** Clamp-bolt Piston Pins (clamped in rod) used on 1954 & Early 1955 cars, Press-fit Piston Pins (pressed in rod) used on later 1955 Cars *See "Piston Pins" in Buick Special Data for non-interchangeability cautions and special servicing data.*

Diameter–.940". **Length**–3.100" (40), 3 400" (others)
Clearance in Piston– 0003- 0005" or easy finger push fit at 70°F. *NOTE*–Pin fit in piston is same for both early Clamp-bolt and later Press-fit pins.

Piston Pin Removal & Installation (Later Press-fit type Pins): *See "Piston Pins" in Buick Special Data. CAUTION–Pistons may be damaged if special proc dure and tools not used.*

Replacement Pins: (Clamp-bolt Type) Std. & .003", .005" Oversize. **(Press-fit Type)** Std. size only. Fitted pins furnished with all pistons.

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr	.078'	010- 020"	002- 004'
Oil	186"	015- 035"	0035 0095

►*OIL RING NOTE* Ring is three-piece (two rails and spacer) with expander. New rings are cemented assembly for ease in handling (will separate in service).

Replacement Rings: Production type rings furnished singly and in sets Standard & .010", .020", .030' Oversize. Special Service Ring sets furnished Standard (use up to .019" O.S.), & .020", .030" Oversize.

Installing Rings: Compression ring groove or bevel (on inner edge) upward. Oil ring expander gap ends should be at either end of piston pin (in unslotted portion of groove) and side rail gaps must be on valve depression side of piston (upward when installed in cylinder).

CONNECTING RODS

►***1955 CONNECTING ROD PRODUCTION CHANGE & REPLACEMENT CAUTION:*** **Different rods used with 1954 and Early 1955 Clamp-bolt Piston Pin and Later 1955 Press-fit Piston Pin. Later type rods only will be furnished for service. *See "Piston Pins" in Buick Special Data for special pin removal and installation data.***

Length–6" **Weight**–22.16 ozs.
Crankpin Journal Diameter–2.249-2.250"
Out-of-round limit .0015".
Bearings–Durex 100A, steel backed, full precision type. Both halves interchangeable. No shims.
Clearance–.0002- 0023' (service limit .003")
Side play–.004- 008' (total for both rods)

Replacement Bearings: Standard & .001", .002", .020", .021" Undersize. Size is stamped on back of bearing at or near tang.

Installing Rods: *See Installing Pistons above.* Install bearing cap with ridge on edge of cap on same side as conical boss on web of rod, install assemblies in engine with this ridge & boss toward other connecting rod on same crankpin and with rod clamp bolt toward camshaft (valve depressions in piston head must also be toward camshaft).

CRANKSHAFT

►***1955 WORN REAR MAIN BEARING THRUST SURFACE CORRECTION (caused by misalignment of rear main bearing cap):*** **Align the thrust faces as follows: Assemble crankshaft and all main bearing caps leaving rear main bearing caps loose. Use a bar or wedge and force crankshaft as far to rear as possible (this will align front thrust faces since bearings and caps are free to move axially). Force crankshaft as far forward as possible and while holding crankshaft in the forward position, tighten rear main cap bolts to specified torque.**

►*CRANKSHAFT & FLYWHEEL UNBALANCE OR VIBRATION (After replacement of parts - Synchro-mesh & Dynaflow Cars): See "Engine Balancing" in Buick Special Data.*

Journal Diameter–2.498-2-499". Five bearings. Out-of-round limit .0015".
Bearings–Durex 100A, steel backed, full precision type. Both halves interchangeable. No shims.
BEARING NOTE–Bearing upper halves can be rotated out and in by using tool KMO-734 in oil hole.
Clearance–.0005-.003' (service limit .0036").

Replacement Bearings: Standard & .001", .002" Undersize. *NOTE*–First four bearings identical and interchangeable. Rear bearing longer and flanged.

End Thrust: Taken by rear (#5) flanged bearing.
Endplay–.004-.008".

Crankshaft Rear Main Bearing Oil Seal: *See "Crankshaft & Main Bearings" in Buick Special Data.*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Buick Special Data*

FLYWHEEL REPLACEMENT: *See "Flywheel" in Buick Special Data*

CAMSHAFT

►***CAMSHAFT REPLACEMENT CAUTION:*** Replacement camshafts are alloy iron and are furnished in kits (containing new pushrods, distributor drive gear, and special lifters) as follows: No. 1388706 (Series 40), 1388887 (1954 Series 50, 60, 70, 100 & 1955 Series 50 & 60, Synchro-Mesh), 1388888 (1955 Series 50, 60, & 70 Dynaflow). Parts not interchangeable.

►***CAMSHAFT IDENTIFICATION NOTE & NON-INTERCHANGE CAUTION:*** **Camshafts are identified by grooves in land just forward of No. 3 journal as follows: 1954-55 Series 40–1 groove 1954-55 Series 50, 60 Synchro-mesh–No groove. 1954 Series 50, 60, 70 Dynaflow–No groove. 1955 Series 50, 60, 70 Dynaflow–2 grooves. Do NOT use Series 40 camshaft in other engines.**

Journal Diameters–(1) 1.685-1.686", (2) 1.655-1.656", (3) 1.625-1.626", (4) 1.595-1.596", (5) 1.565-1.566".
Bearings–Steel-backed, babbitt lined bushings.
Clearance– 0005-.0035" (service limit .0015-.004").

End Thrust: Spacer ring installed on shaft between front bearing journal and thrust plate bolted to crankcase behind camshaft sprocket. **Endplay**–.004-.008'.

Timing Chain: Link Belt. **Width** .688", **Pitch** .500" **Length** 26" or 52 links.

Camshaft Setting: Mesh chain on sprockets with two copper-plated washers (12 links apart) in line with "O" marks on sprockets with marks toward left side of engine. Turn camshaft so that keyway is straight downward, turn crankshaft so that #1 and #4 pistons are on top dead center, install sprockets and chain as an assembly.

Engine Front Cover Removal: *See "Engine Front Cover" in Buick Special Data*

Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Buick Special Data.*

VALVES

Tappet Clearance: None in service (hydraulic).

Valve	Head Diameter	Stem Diameter	Length
Intake	1 750"	3720"	4 704"
Exhaust	1 375'	3715"	4 704"

Valve	Seat Angle	Lift	Stem Clearance
Intake	45°	①	.0025"
Exhaust	45°	②	0030'

①–Series 40 - 358" Series 50, 60, 70 - 378"

②–Series 40 - 350" Series 50, 60 (Synchro-mesh) 350" Series 50, 60, 70 (Dynaflow) - 378'

Valve Seat Width–1/16" (3/64-5/64").

►*VALVE GRINDING CAUTION:* If height of valve stem end raised .075" by valve grinding, height must be reduced by grinding end of stem or replacing valve to insure correct operation of hydraulic lifter.

Valve Springs: Double springs used on all valves. Install springs with closed-coil end toward cylinder head.

Valve Spring Specifications

Valve	Inner Spring Lbs.Press.	Inner Spring Length	Outer Spring Lbs.Press.	Outer Spring Length
Closed	19.5-24.5	1.53"	37.5-42.5	1.5"
Open	53-59	1.15"	85-91	1.12"

Valve Guides: Drive old guides out from combustion chamber side using Driver J-269. Install new guides from top of head using Valve Guide Aligner J-5240-2 over guide hole and installer J-5240-1 to drive guide down until installer shoulder contacts top of aligner which will position guide correctly in head. Finish ream guides with Valve Guide Reamer J-129-3.

Hydraulic Valve Lifters: Barrel type.
Diameter–.8425". **Clearance in Block**–.0015-.003".
Lifter Overhaul & Testing–*See "Valve System" in Buick Special Data*

►*VALVE GRINDING CAUTION See Valves (above).*

Rocker Arm Assembly: *See "Valve System" in Buick Special Data.*

CONTINUED FROM PRECEDING PAGE

VALVE TIMING

S *"Camshaft S tting" und r CAMSHAFT abov .*

1954-55 Series 40 ①

Intak Valv s—Open 25° BTDC. Close 67° ALDC.
Exhaust Valv s—Open 70° BLDC. Close 42° ATDC.

1954-55 S ries 50, 60 (Synchro-mesh) ①
1954 Seri s 50, 60, 70 (Dynaflow) ①

Intake Valves—Open 25° BTDC. Close 77° ALDC.
Exhaust Valv s—Open 70° BLDC. Close 42° ATDC.

1955 Seri s 50, '60, 70 (Dynaflow) ①

Intak Valv —Open 28° BTDC. Close 79° ALDC.
Exhaust Valv s—Open 75° BLDC. Close 42° ATDC.
①—Timing points are with valve .004" off seat.

Valve Timing Check—Timing chain cover must be removed to check chain and sprocket marks. *See Camshaft Setting under CAMSHAFT above.*

OILING SYSTEM

►*ENGINE OILING SYSTEM: See "Engine Lubrication" under OILING SYSTEM in Buick Special Data.*

Crankcas Capacity: 6 qts. (refill), 8 qts. (dry engine). NOTE— 1 qt. additional for dry filter.

Normal Oil Pr ssure: 35 lbs. at 35 MPH.

Pressure Regulator Valve: In oil pump body. Not adjustable.

Oil Pr ssur Indicator—(1954) AC No. 1508046 (Series 50 & 70). No. 1508115 (Series 40, 60, 100). **(1955)** AC No 1508238 (Series 40, 60). No. 1508226 (Series 50, 70). Not electrical.

Oil Pump· Helical gear (early cars), spur gear (later cars), in crankcase at rear of engine
Pump Overhaul—*See "Oiling System" in Buick Special Data.*

Oil Filt r: Full-flow. On pad at right rear of engine. NOTE—Ball check valve in filter base by-passes oil directly to engine when pressure differential between inlet and outlet ports reaches 1½ - 5½ lbs.
Replac m nt Filt r El ment—AC No. PF-122.

Crankcas Ventilati n: Filter element in oil filler cap (air intake) and in rear end of valve lifter cover (air outlet) to which ventilator pipe is connected.

COOLING

Wat r Capacity: (Synchro-mesh Cars) 16 5 qts (without heater), 18 qts. (with heater), **(Dynaflow Cars)** 18 5 qts. (without heater), 20 qts. (with heater)

Pr ssur Valve: AC No 850549 (7 lb —Without Air Conditioning), No 850559 (13 lb —With Air Conditioning) Radiator Filler Cap

Th rm stat: Pellet type in water manifold above pump. (Std.) Buick No. 1391226 opens at 157-162°F. (High Temp.) Buick No. 1391225 opens at 177-182°F.

Wat r Pump: Packless, sealed ball bearing type.
See "Water Pumps" in Buick Special Data

Pump Removal—Remove fan blade assembly, spacer, and pulley from pump shaft hub, then remove pump co er assembly and gasket from timing chain cover.

T mp ratur Gaug (1954): AC No 1512808 (Series 40, 60, 100), No 1512736 (Series 50, 70) Not electric
Se "Temperature Gaug s" in Miscellaneous Section.

Temp ratur Gauge (1955): AC No 1512971 (Series 40, 60), No 1512948 (Series 50, 70) Not electric. *See "Temperature Gauges" in Miscellaneous Section.*

CLUTCH

Own. (Series 40) "Crown" spring, (Series 50, 60) conventional springs.
See "Buick Crown Spring" & "Buick Single Plate" in Clutch Section.

Clutch Disc No.—1393704 (Series 40), 1391632 (Series 50, 60).

Pedal Adjustment—Free travel ⅞-1". Adjust by loosening locknut and turning adjusting nut on release rod at clutch fork.

Removal—Remove rear axle and transmission (See below), take off clutch underpan, disconnect linkage at yoke, remove clutch release bearing support by taking out spring washer in housing, pull out yoke (with release bearing) from fulcrum, mark clutch and flywheel, remove cover mounting screws.

►*Series 40 Installation Note — Install release bearing with rounded surface to contact "Crown" spring.*

SYNCHRO-MESH TRANSMISSION

Own. Series 40 transmission differs in design and size with series 50, 60 *See "Buick 40" and "Buick 50" Synchro-mesh in Transmission Section*

Transmission Control: *See "Transmission Controls" in Transmission Section.*

Removal:· Disconnect and remove rear axle assembly. On Series 40 only, place shift lever in neutral, and remove toggle spring and extension, shift lever and selector lever for increased clearance. All cars, remove thrust pad and shims from trans. support. Disconnect discharge and suction lines from compression on "Air-Conditioned" cars, to prevent damage to flexible adapters. *See "Frigidaire Air-Conditioning" in Miscellaneous Section before disconnecting lines.* Remove nuts securing transmission to support. Lift engine to raise transmission off of support. Remove support noting location and number of shims. Remove transmission to flywheel housings bolts, pull transmission back and lower to remove.

DYNAFLOW DRIVE

1954 Series—"Twin-Turbine" Dynaflow Drive. Torque converter and hydraulically operated planetary transmission *See "Buick (Twin Turbine) Dynaflow" in Transmission Section.*

1955 Series—"Variable Pitch" Dynaflow Drive. Torque converter and hydraulically operated planetary transmission. A two position (high & low) stator is used in the torque converter to multiply engine output torque when required (controlled by accelerator pedal at wide open position). *See "Buick (Variabl Pitch) Dynaflow" in Transmission Section.*

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Buick Twin Turbine Dynaflow" (1954), "Buick Variable Pitch Dynaflow" (1955) in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Buick Variable Pitch Dynaflow Drive" in Transmission Section.*

Throttle Linkage Adjustment and Dash Pot Setting on Dynaflow Drive Cars. *See "Tune-up".*

Lubrication—Check fluid level in transmission every 1000 miles, drain and refill every 25,000 miles.

Checking Fluid Level—Engine must be idling with selector lever at "P" (parking) and transmission at normal operating temperature. Add oil to "Full" mark on dip stick only.

Capacity—10 quarts.(Add 1¾ pints for dry transmission). *Use only Special Buick Oil for Dynaflow Drive or Automatic Transmission Fluid Type A.*

►*OTHER DYNAFLOW SERVICE DATA: See "Buick Twin Turbine Dynaflow" (1954), "Buick Variable Pitch Dynaflow" (1955) in Transmission Section.*

UNIVERSALS

Saginaw & Spicer. One used (in torque ball at rear of transmission).

Torque Ball Adjustment—*See Buick Special Data.*

REAR AXLE

Own Make: Semi-floating type with Hypoid gear and torque tube drive.
See "Buick Hypoid" in Rear Axle Section.

►*REAR AXLE HOUSING FILLER PLUG TIGHTENING CAUTION Plug will break if tightened excessively. Correct torque is 20-30 ft. lbs.*

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTIONS· See "Buick Hypoid" in Rear Axle Section.*

►*1955 SERIES 50, 60 & 70 REAR AXLE RATIO PRODUCTION CHANGE AND SERVICE REPLACEMENT NOTE·* A 3 36-1 ratio rear axle ring gear and pinion replaces the 3 4-1 ratio unit used in early cars *See "Buick Hypoid" in Rear Axle Section.*

	Rear Axle Ratio		
Model	Series	Synchro-mesh	Dynaflow
1954-55	40	3 9-1	3 6-1
1954, Early 1955	50 & 60	3 9-1	3.4-1
1954, Early 1955	70		3 4-1
Late 1955	50 & 60	3 9-1	3 36-1
Late 1955	70		3.36-1
1954	100		3.6-1

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

R ar Axl Rati N t –*Ratio is stamp d on bottom of axl h using. Example 3/9 indicat s a 3.9 to 1 ratio.*
Backlash–.008-.010" desired, .008-.012" maximum.
Axle Shaft Removal: Axle shaft lock washer at inner end of axle. *See "Buick Hypoid" in Rear Axle Section for disassembly procedure.*
R ar Axle Assembly Removal: Raise rear end of car and place car on stands. Disconnect parking brake cable at rear brake sheave and at bracket on front end of torque tube, hydraulic brake line from pipe at X member and remove retainer. Disconnect lower end of shock absorber links, rear radius rod at axle end, lower end of chassis springs, and torque tube from torque ball. Hoist rear end of car and roll axle assembly out.
Wheel Bearing Adjustment–None
R ar Suspension: *See "Buick Rear Suspension" in Rear Axle Section.*

SHOCK ABSORBERS

Delco. Direct-acting hydraulic (front). Double acting "parallel cylinder" (rear). New independent front shocks mounted within coil springs.

Buick Shock Absorber Nos.

Model	Front	① Rear
40, 60 (Exc 49, 69) Std	5515818	5594488, 89
49, 69	5329769	5519694, 95
50, 70 Std	5329769	5519694, 95
40, 60 (Exc 49, 69) ②	5329769	5519694, 95
50, 70 ②	1076248	5511194, 93

①-Right and Left respectively.
②-Used with Export High & Overload Spring.

FRONT SUSPENSION

Independent. New design with Direct Acting Shock Absorbers. Independent upper control arm with Shock Absorbers within coil springs.

See "Buick" in Front Suspension Section.

►*FRONT STABILIZER BAR INTERFERENCE WITH RADIATOR OUTLET HOSE:* Install necessary spacer between bar and frame to provide a clearance of 3/16" between bar and hose Longer bracket mounting bolts mounting bolts will be required for proper assembly

►*ADJUSTMENT CAUTION: Check Spring height and position of Idler Arm before changing adjustments.*

King Pin Inclination–0° crosswise at 7/8° Camber.
Caster–1/4° Neg. desired. (1/2° Pos. to 3/4°Neg.).
Camber–3/8° Pos. desired. (7/8° Pos. to 5/8° Neg.) Both wheels to be within 3/4° of each other.

Toe-In: (1954) 0" to 1/16". **(1955)** 1/16" to 1/8" *1955 NOTE–This supersedes previous setting of 0"-1/16".*
Toe-out on Turns–Outer wheel 20°, inner wheel 22½° ± 3/4°.

STEERING

Manual: Saginaw Ball Bearing Worm & Nut. Recirculating ball worm and nut type.
See "Saginaw Ball Bearing Worm & Nut" in Steering S ction.

►*1955 STEERING COLUMN RATTLE CORRECTION (SHIFT CONTROL HOUSING): S "Buick Variabl Pitch Dynaflow" in Transmission S ction.*

Power Steering: Saginaw (GM) Hydraulic. Recirculating ball nut and worm type plus extended pitman shaft with gear sector in mesh with power rack. Power rack pinned to piston rod of hydraulic power cylinder. *See "Saginaw (GM) Power Steering" in Steering Section.*
Steering Linkage: *See "Steering Linkage" in Steering Section.*
Steering Wheel & Horn Button Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*
Steering Gear Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

BRAKES

Bendix Hydraulic (Single Anchor): Conventional two shoe with short molded lining front (Primary) and long molded lining rear (Secondary). Parking "Step-On" lever applies rear wheel service brakes.
See "Bendix Hydraulic (Without Eccentric)" in Brake Section.

►*BRAKE LINING REPLACEMENT CAUTION (POWER BRAKE MODELS)* Special front wheel primary linings are used which can be identified by BROWN edge

NOTE–Rear wheel primary linings are same as used on cars without Power Brakes and have WHITE edge All secondary linings (with & without Power Brakes) have YELLOW edge

Drums–Diameter 12" Rebore limits. .060
Wheel Cyl. Diameter–Front 1-1/8", Rear 1".
Replacement Lining & Shoes–Linings or shoes with linings come in Standard and .030" oversize, and differ between Regular and Power brakes, as well as between car Series.

Lining Width & Thickness

Model	Front	Rear
50,60,M/100	2.25" X 0.187"	2.25" X 0.187"
40	2.25" X 0.187"	1.75" X 0.187"
70	2.50" X 0.25"	2.25" X 0.187"

Braking Power–57% Front, 43% Rear.
Clearance–Heavy drag and back off 15 to 17 notches.

Standard Master Cylinder–On bracket on left side of frame near transmission support.

Checking Fluid–Access hole in front floor pan at left corner of drivers seat. (Move seat back and fold mat to expose hole cover). Fluid level should be ½-1" below top of filler opening.
Removal–Remove from beneath car. Not necessary to disturb other parts.

P w r Brak s (1954): Kelsey-Hayes Vacuum Suspended type power brake cylinder (replaces conventional master cylinder) *S "Buick Power Unit" in Brak S ction.*

P w r Brak s (1955): Moraine Air Suspended type power brake unit (replaces conventional master cylinder). A separate vacuum reservoir is located under hood on left side *See "Moraine Pow r Unit" in Brake Section*

Checking Fluid–Maintain fluid level 1" below top of separate reservoir tank on left side under engine hood.

Removal of Power Unit–Remove cranking motor splash pan. Disconnect return spring, loosen lock nut on cylinder push rod, remove clevis pin at brake pedal, then unscrew push rod from cylinder push rod. Disconnect air inlet hose at air filter on brake cylinder and disconnect hoses from vacuum tee on opposite side of cylinder Disconnect reservoir to hydraulic cylinder pipe and allow reservoir and pipe to drain. Disconnect distributor to cylinder pipe and allow to drain. Discard old fluid and cover pipe ends with tape. Remove nuts and lock washers attaching power cylinder to its support and remove cylinder from car

Electric Vacuum Pump (1954): Moraine or Trico. Pump is connected in engine intake manifold vacuum line and supplements vacuum supply or provides vacuum when engine not running *S "Buick P w r Unit" in Brake Section.*

MISC. MECHANICAL

Windshield Wipers–Cable operated Vacuum type, *S "Windshield Wipers" in Miscellaneous Section.*

Air Conditioning–Frigidaire type with solenoid controlled compressor clutch (compressor operates only with air-conditioning switch turned on. *S "Frigidaire Air-Conditioning" in Miscellaneous Section.*

Power Window Regulators: Two systems used:
Electric (1954-55)–Reversible motor in each window. *See "GM Electric Window R gulators" in Misc l-laneous Section.*
Hydro-Lectric (1954)– Window raised hydraulically, lowered by return spring Motor and pump assembly mounted on left side of firewall. *S "Hydro-L ctric Top Control (With Window & S at C ntr l)" in Miscellaneous Section.*

Power Seat Adjusters: Two systems used:
Electric (1954-55)–Individual motors for vertical and horizontal adjustment *Se "GM El ctric S at R gulators" in Miscellaneous S ction.*
Hydro-Lectric (1954)–Hydraulic type with individual cylinders for vertical and horizontal adjustment *S "Power Top Control (With Window & S at Contr l)" in Misc llan ous S ction.*

P w r T p C ntr l: Hydro-Lectric type *S "Pow r Top Control" in Misc llaneous S ction.*

►*AIR CONDITIONED CAR SERVICE CAUTION: B for disconn cting any part f air conditioning equipment or lines f r acc ss to ngine, see "Air C nditioning S rvice Cauti ns" in Miscellaneous Section.*

MODEL IDENTIFICATION

SERIAL NUMBER: Stamped on plate on left front door pillar post and on left frame side rail.
Starting Serial Numb r–001001 (at each plant).

►*SERIAL NUMBER NOTE: Serial number (example 4C2001001) includes the following identification data in s quence:*

Series ①	Year ②	Assy. Plant ③	Serial No.
4	C	2	001001

①–See Series Designation following.
②– Year designation (1956).
③–See Assembly Plant Designation following.

S ries Designation

4–40 Special	6–60 Century
5–50 Super	7–70 Roadmaste

Assembly Plant Designation

1	Flint	5	Wilmington
2	South Gate	6	Atlanta
3	Linden	7	Framingham
4	Kansas City	8	Arlington

ENGINE NUMBER: Stamped on outside of left bank of cylinders on extension of top face of block between middle branches of exhaust manifold.

►*ENGINE NUMBER NOTE: Dash following engine number indicates that cylinder bores and pistons are .010" Oversize. NOTE–Do not confuse dash with vertical groov on pad designating Series 40.*

TUNE-UP

►*DETONATION CORRECTION (ALL SERIES): See "Ignition Not s" in Buick Special Data.*

►***STALLING & LOADING UP DURING FIRST FEW MILES IN COLD WEATHER CORRECTION (CARS WITH ROCHESTER CARBURETOR): Install Choke Modification Kit, Part No. 7009948. See "Rochester 4GC Carbur t r" in Carbur tion Section.***

►***ROUGH ENGINE IDLE CORRECTION: This condition may b caus d by th us of an incorrect vacuum switch pist n which all ws a vacuum leak at the switch. Th piston used n Carter 4-Barrel Carb., has a horizontal sl t while the piston used with all other carbur tors is sl tt d v rtically.***

►***SPARK PLUG CABLE ROUTING (To prevent misfiring): S "Igniti n Not s" in Buick Special Data.***

COMPRESSION PRESSURE: 140 lbs. (Series 40 Synchromesh); 160 lbs. (Series 40 Dynaflow); 170 lbs. (Other Series). At cranking speed (140 RPM). All cylinders must be equal within 10 lbs.

VACUUM READING: 15.5" (minimum) with engine idling at 450 RPM. *NOTE - This is lower than for previous mod ls and is caus d by new engine design.*

VALVE TAPPET CLEARANCE: None in service (hydraulic).

MANIFOLD HEAT CONTROL: Automatic thermostatic type located in right exhaust manifold. Valve must operate freely.

IGNITION

►*BURNED DISTRIBUTOR ROTOR TIP CORRECTION (May b caus d by impr per distribut r cam):* If distributor rotor is badly burned at one corner of the tip, check to determine if the proper cam is being used. *See "Ignition Notes" in Buick Special Data.*

FIRING ORDER: 1-2-7-8-4-5-6-3.
Cylinders–RIGHT BANK 1-3-5-7. LEFT BANK 2-4-6-8.

SPARK PLUG GAP: .030-.035".
Spark Plugs - AC 44. 14 mm. Torque to 25 ft. lbs.

COIL: Delco-Remy 1115087. *12 Volt.*
Ignition Current–2.5 amps. idling, 4.5 amps. stopped.
Resistor–Delco-Remy 1927809. On cowl near ignition coil. Resistance 1.4-1.65 ohms, at 75°F.

►*COIL RESISTOR NOTE: Resistor is connected in lead from ignition switch-to-coil. This resistor is by-passed during cranking by a lead from starter solenoid-to-coil.*

DISTRIBUTOR: Delco-Remy 1110861. *12 Volt.*
Condenser–Delco-Remy 1869704 (Closed-end terminal), 1928111 (Open-end terminal). **Capacity** .18-.23 mfd.
Contact Point Set–Delco-Remy 1924499.
Breaker Gap–.0125-.0175".
Cam Angle–26-33° (with .016" gap).

►*BREAKER GAP CAUTION:* Manufacturer recommends final check with feeler gauge or dial indicator if dwell meter used to set point gap.
Breaker Arm Spring Tension–19-23 ozs.
Rotation–Clockwise viewed from above.

►*DISTRIBUTOR REMOVAL NOTE:* Removal of distributor can be facilitated by use of Special Wrench J-5727 (Kent-Moore) or S-9832 (Snap-On).

Automatic Advance

Degrees Distr.	RPM	Degrees Eng.	RPM
0-1.5	375	0-3	750
6-8	850	12-16	1700
9.5-11.5	1450	19-23	2900
11-13.5	1750	22-27	3500

Vacuum Spark Control: Delco-Remy 1116090.
Plunger Travel–7/32".

►*1956 DISTRIBUTOR 1110861 VACUUM ADVANCE CHECKING CAUTION:* When checking vacuum advance on these models, distributors marked by a daub of green paint on the vacuum unit will have a different advance curve (vacuum advance operates at a lower Engine RPM). This is due to installation of a different Vacuum Control Diaphragm Spring No. 1921119 (replacing original spring No. 1930435) for slight improvement in low speed economy and performance.

Vacuum Advance

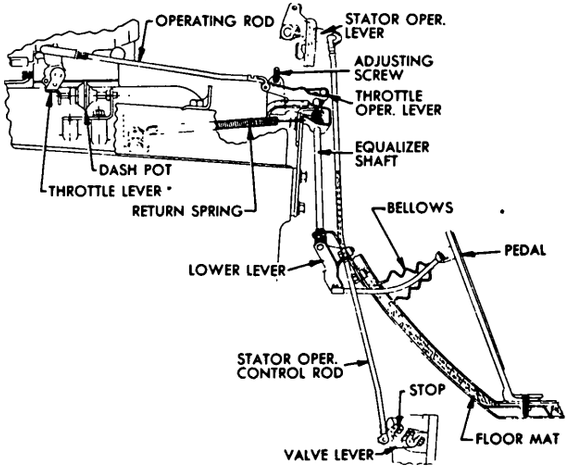
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	6.5-8.5
9-10.5	18-21	11.5-15

IGNITION TIMING

Setting–5° BTDC exactly.

►*DETONATION CORRECTION:* Ignition timing can be retarded to TDC without noticeable loss in performance.

►*IGNITION TIMING CAUTION: Lower engine idle speed to not xceed 350 RPM when setting ignition timing with timing light. Reset to 450 RPM wh n completed.*
Timing Mark–Timing indicator marked with four lines indicating 0°, 2.5°, 5°, 7.5° BTDC, located on right side of timing chain cover below fuel pump. Line up mark on fan drive pulley (Series 40), harmonic balancer (other series) with correct line (5°) on timing indicator for normal operating conditions.



►***CHECKING FOR IMPROPERLY LOCATED TIMING MARKS ON ENGINE BALANCER: See "Ignition Notes" in Buick Special Data.***

CARBURETOR

►*CARBURETOR APPLICATION: "Carter" and "Stromberg" 2-Barrel carburetors used on Series 40. "Carter" and "Rochester" 4-Barrel carburetors used on other Series.*
